

Toxicology Panel

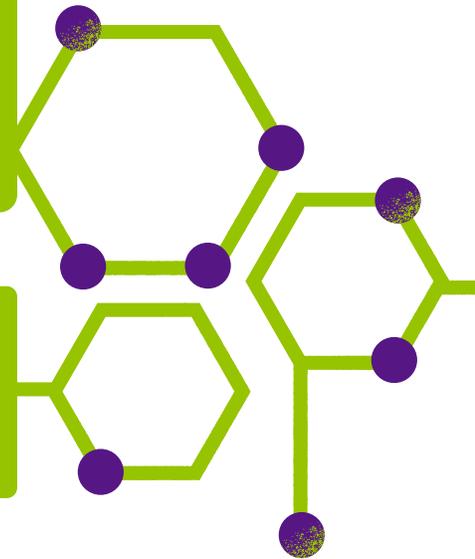

Our toxicology panel looks for 100+ metabolites in 30 different categories.

This test can be ordered in minutes using our online portal. Toxicology results are available on the portal in real time.

Results are formatted into an easy-to-read report that lists medications and drugs detected based on the metabolites observed. A summary on the first page provides quick access to the most relevant information.

Detects metabolites for various types of drugs, both prescribed and recreational, using liquid-chromatography/mass spectrometry to cover 30 different categories of drugs.

Results in 5-7 business days

Simple urine sample or oral swab

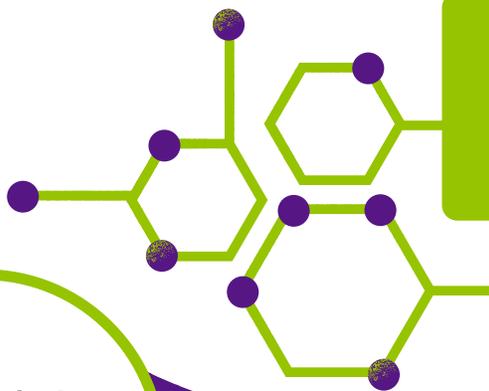

Primary Care Physicians can use this test to help with both patient medication management and pain management.

Psychiatrists can also benefit from this type of test to determine medication adherence.

This panel can be used and ordered by any provider who deals with medication management and drug addiction.

Metabolites, detected even in minute quantities, are detected after specimen collection using a urine sample or an oral swab. This information is formatted into an easy-to-read report that informs clinicians which medications and drugs have been detected. The most relevant information is on the first page of the report, allowing for quick access. This type of testing is useful for medication management, pain management, and drug addiction.

Highly accurate test with double-verified negative *and* positive results.
