01

**Trading at zones where institutional
investors accumulate positions**

01. Trading at extreme levels marked by hedge funds or institutions involves identifying key price zones where large financial entities execute significant trades. These levels often indicate areas of high liquidity, institutional interest, and potential price reversals.

02

**Signature Trading Setups by
Institutions**

Hedge Fund Trading setups

Liquidity Grab Strategy

Watch for price manipulation near institutional zones before reversals. follow the three-step approach for entry and exit

BOR

Enter trades when price breaks key institutional levels

Mean Reversion

Trade against extreme price movements when institutions take profits

Analyzing Market Trends

studying historical price movements and patterns to predict future market behavior, using tools like charts and indicators for informed decision- making.

03

**Risk Management and Capital
Allocation**

Importance of Risk Management

Risk-Reward Ratio

Aim for a minimum 1:2 and above risk-reward ratio
Higher ratios improve profitability over time

Position Sizing

Allocate only a small percentage of your capital per trade
Avoid overexposure to a single Trade

Stop-Loss & Take-Profit Orders

Set stop-loss orders to limit downside risk.

Use take-profit levels to lock in gains before market reversals.

Capital Allocation Strategies

01

Position Sizing Techniques

Position sizing determines the amount of capital to allocate to each investment, balancing risk and potential returns while avoiding overexposure to any single asset.

02

Use of Stop-Loss Orders

Stop-loss orders automatically sell assets when they reach a specified price, protecting investment capital and helping manage losses in volatile market conditions.
