

Type A MSC

The type A Magnetic Stripe card is a high coercivity magnetic stripe card that assists in the evaluating the quality of wet fluorescent magnetic particle inspection baths and dry magnetic particles. The card acts as a test piece and supplement to the ASTM D-96 settling tube, AS 5282 ring, and other tests of magnetic particle materials.

Type 2000 MSC

The Type 2000 Magnetic Stripe Card is used for instantly evaluating the performance of the wet fluorescent magnetic particle inspection bath. This card can be used to quantitatively evaluate the performance of the fluorescent magnetic materials by displaying the number of indications that can be observed after the material has been applied to the stripe. Magnetic Stripe Cards

are recognized as a tool for evaluation of wet fluorescent magnetic particle inspection systems in ASTM E 709 "Standard Guide for Magnetic Particle Examination," Appendix X4; as well as in ASTM E 3024 "Standard Practice for Magnetic Particle Testing for General Industry," Appendix X2.
