

William Edward Piers. (Born 31 Oct. 1974). MEDICAL ISSUES. (As of June 2025). P.1-2

[Listed most recent date first]. [Record numbers]. [Pages]. (Copies of medical records available).

FULL EYE EXAMINATION and TESTING, (Pearson Eye and Medical Institute), 18 November 2024, MRN #28455, Diagnosis # HI 8.513, H40.053, H40.013:
Borderline open angle Glaucoma.

ENDOSCOPY, ESOPHAGEAL, EGD, 15 April 2024, Account # 110915, Accession # 24-01985:
Esophageal hiatal hernia. Mild Chronic Gastritis.
14 Biopsies of irregularly shaped fragments; 6 mid esophagus, 4 distal esophagus, 2 duodenal bulb, 2 stomach antrum, (8mm max).
Trouble/pain swallowing, often food gets stuck and causes great pain until it clears, must drink while eating, always need to clear throat and cough up food particles after.

EYE EXAM, 27 June 2023, B.O.P., Texarkana F.C.I., DR. A. Howell:
Prescription glasses issued, Blurry vision. Possible Glaucoma.

ABDOMEN, CT SCAN, 02 May 2022, Report # 0502-0206:
Lower thorax; small calcified granuloma right lower lobe.
Liver; Punctuate granulomatous calcification.
Bones / Joints; multiple sclerotic foci of the osseous pelvis, likely bone islands. Soft tissues; Tiny fat containing umbilical hernia.

COLONOSCOPY, 03 Nov. 2021, Account # 110915:
Erythema and friability with abscess and linear ulcers in the terminal ileum, potentially consistent with Crohn's disease, pathology showed focal acute ileitis with mucosal erosion and ulcer exudate.

ANA SCREEN IFA, Blood Test 12 Nov. 2021, Client # 33897:
Test Positive, suggestive of Autoimmune Disease, 1:8 H.

LEFT FOOT, Radiology, X-Ray, 01 March 2022, Accession # 030122-02:
Metatarsus primus varus with severe hallux valgus and osseous/soft tissue bunion noted. There is a bone island in the left second metatarsal head. There is a left trigonum measuring 10 mm.

LEFT HIP, Radiology, M.R.I., Report # 0826-0353, 26 Aug 2021, X-Ray, Accession # 202#BOP 00138266, 10 Dec. 2019, X-Ray, Accession # 202BOP609769224, 23 Feb. 2017:
Subcentimeter sclerotic bone islands in the pelvis and both proximal femurs, posterolateral paralabral degeneration inferiorly, possibly a labral tear, small adjacent joint effusion and 2-3 mm paralabral cyst, subchondral edema in left humeral neck. Subchondral sclerosis and cystic changes at acetabular roof. Pincer type cam-morphology of acetabular and femoral head/neck junction respectively.

RIGHT EAR, Biopsy Pathology Report, 28 sept. 2016, Account # 04352285:
Actinic Keratosis with-extensive serum crust.

ALLERGEN PROFILE (limited test not all listed), Test, 19 sept. 2016, Acct # 04352285, (reconfirmed Quest Diagnostics, 12 Jul. 2022, Client # 33897):
Fusarium proliferatum, Aureobaeidi pullulans, Peanut, Corn, sesame seed, shellfish.

ADDITIONAL DATA: 26 Nov. 2014:
Prosthetics/Orthotics approved. B.O.P. Record: of Scabies (contracted when wrongly shipped to Oakdale immigration yard for 6 months, 2021 by because of initiating my filing for medical care / a 'compassionate release'), headache, Geographic tongue, Anxiety disorder pain in joints, Medical housing history for bottom tier and lower bunk.

ADDITIONAL MEDICAL ISSUES:**P.2-2**

(Many issues for years and getting worse as time goes by).

Always exhausted and tired. Can not breath fully. Constant joint pain. Sensitive to loud noise. Often get bright 'stars' and 'strings' in my field of vision. Have 'floaters' in my right eye. Constant headache of varied intensity and usually nauseous, (headache and nausea has gotten much worse since I traveled by air). Can not exercise other than walking. Constant sinus infection and yellowed mucus. Awoken throughout the night and trouble breathing. Continuing erratic skin sores, scars and eruptions and mottling/texturing over my body, face and head, (since contracting scabies in 2021). Feel as if someone died and I hurt inside and behind eyes, feel sad most of the time and fight all day to keep it inside as I can not show any misery on the outside having to stand strong, (since day one of being wrongly imprisoned and growing worse with time and each injustice I have to deal with. All throughout the day I must clear my nose and throat of mucus which is usually yellow to green, (since Covid 19').

DISABILITIES:

CONSCIOUSNESS; Constantly very tired and slight of breath with a pain in my chest.

HEAD; Constant headaches and nausea with both increasing with motion.

THROAT; It hurts to swallow and I must take a sip of water every time and, food gets stuck in my throat and sometimes at my stomach opening and only clears after a few minutes of great pain.

INTESTINAL; I have to use the bathroom with great urgency when I must.

HIP (Left side); It hurts to use stairs and ladders or put much of a load on my left hip.

I stand all day as it hurts to sit unless my left hip/leg is parallel with my body.

SKELETAL; Hands, elbows, knees, feet and left bunion hurt.

PAIN; In pain all of the time from head to foot.
