# ZIPF MANEUVERS

ON NON-REPRINTABLE MATERIALS

Andrew C. Wenaus  
Germán Sierra

with an introduction by Steven Shaviro

ERRATUM PRESS  
ACADEMIC DIVISION

In Memory of Aaron Swartz

1986-2013

A live word does not denote an object but chooses freely, as if  
for an abode, this or that object notion, thingness, a dear body.  
And around the thing, a word wanders freely, as a soul around  
the abandoned but not forgotten body.

- Osip Mandelstam

# INTRODUCTION TO: ZIPF MANEUVERS

What are words worth? This is a straightforward question, albeit one without any easy answer. Words have worth, or value, in many disparate senses and in many disparate situations. Words may serve to designate things and actions; they may convey information; they may express feelings, intentions, and moods; they may work as displays of virtuosity or as forms of propaganda; they may serve as parts of larger structures, such as sentences, paragraphs, philosophical arguments, poems, and books; and so on and so forth. The worth and value of words may be different in all these instances.

Also, worth and value can themselves be measured in many sorts of ways: in terms of money, in terms of efficiency, in terms of moral character, in terms of intrinsic beauty and aesthetic achievement, et cetera. The same word or words may have different meanings and effects in different circumstances: "Fire!" means one thing when issued as a command to a squad of men holding rifles, and another thing when shouted out in a crowded theater. Indeed, it means still another thing when sung in a hit single: "Fire", by The Crazy World of Arthur Brown, which reached #2 on the US Billboard Hot One Hundred chart in 1968, second only to the Beatles' "Hey Jude".

But there's even more to the question of what words are worth. We also need to consider the difference between spoken words and written words, not to mention sung words. And even beyond that, we need to reckon with the ambiguities intrinsic not only to particular words, but to the nature of language itself. The English language, or any other human language, consists of a store of words, together with complex rules for putting them together (syntax and grammar). Most linguists accept Noam Chomsky's assertion that these rules include the possibility of recursion: sentences can refer reflexively to other sentences, allowing for meta-levels of complexity.

In addition, there's the question of appreciating language in and for itself. What does it mean to appreciate a particular linguistic style, especially a complex one like that of William Faulkner or Marcel Proust? We know that words are all too often subordinated to their meanings, so that they function like windows, letting us better apprehend the world beyond them. But words can also be loved and appreciated in and of themselves, and for themselves. We can regard words as opaque pictures instead of as transparent windows. We can listen to spoken words themselves, or look at or look at written words themselves, instead of merely listening and looking *through* them. To give an

example: Butterflies are beautiful animals; but the English word *butterfly* is also beautiful in its own right; and the equivalent German word *Schmetterling* even more so.

I ask the question with which this Introduction begins in all sincerity. But I also could have put those four words in quotation marks. If I had done so, I might have gotten into trouble. For in that case, I would be quoting a line from another hit song, "Wordy Rappinghood" by Tom Tom Club, which reached #1 on the US Billboard Top Eighty chart (officially known as "Dance Club Songs") in 1981. Song lyrics are legally subject to copyright; they may not be quoted without permission.

Sometimes permission to cite is freely granted. In 2003, when my book *Connected, or What It Means to Live in the Network Society* (University of Minnesota Press) was published, I received permission in writing (duly noted on the copyright page) to quote several lines of lyrics from songs on the hip hop album *Deltron 3030*, a collaboration between MC Del tha Funkee Homosapien, producer Dan the Automator, and DJ Kid Koala. In this particular instance, I was fortunate that the copyright holder, Happy Hemp Music (ASCAP), gave me permission to quote the lyrics without charging me a fee. But copyright holders are not obligated to give any such permission; they are free to deny permission to cite altogether, or to charge however much they want for the privilege. For instance, fifteen or so years ago, the Rolling Stones charged UK £500 for the right to quote one line from a song of theirs, and Beatles charged UK £735 for the same privilege.<sup>1</sup> The prices are likely much higher today.

So it is a good thing that I did not actually quote lyrics from "Wordy Rappinghood" at the beginning of this Introduction. I simply stated a question in my own words; and those words only accidentally, or contingently, resembled those of an actually-existing song lyric. I should note that, while the doctrine of "fair use" allows me to cite, without penalty, several lines from a novel that I am discussing as a literary critic, no such exemption exists in the case of song lyrics or poetry. Here, quoting a single line of three or four words, even with full attribution, is enough to constitute copyright violation.

Had I actually quoted song lyrics without permission, then, I could have been liable for both civil and criminal penalties. Civil penalties can include statutory damages of at least \$750 and up to \$30,000 per work infringed, as well as an additional fine of up to \$150,000 per work infringed for willful infringement. Criminal penalties can include fines of up to \$250,000 per

<sup>1</sup> Morrison, Blake (2010). "Blake Morrison on the cost of quoting lyrics". *The Guardian*, April 30, 2010. <https://www.theguardian.com/books/2010/may/01/blake-morrison-lyrics-copyright>.

offense, as well as up to five years in prison for first-time offenders.<sup>2</sup> I should note that these penalties are for a first offense; the punishment for repeated acts of copyright violation can be considerably more severe.

Usually, so heavy a sentence as five years imprisonment is only imposed in the United States in cases that involve “using or carrying a firearm during a crime of violence or drug trafficking”.<sup>3</sup> Evidently, modern society takes the issue of copyright violation quite seriously; quoting a line of somebody else’s poem or song lyrics is a crime of similar gravity to bank robbery, arson, or assaulting an officer of the law.

Who is the victim in cases of copyright violation? When I referred in an earlier paragraph to “somebody else’s poem or song lyrics”, I was not being sufficiently specific. The question of *who owns* a certain text, or any other string of words, is not always a simple and obvious one. The person who actually conceived and wrote a given text is not necessarily the owner, and is not even always recognized as the author. For instance, the Beat poet Lew Welch wrote one of the most famous lines in advertising history: “Raid Kills Bugs Dead”, a slogan widely used in insecticide commercials for fifty years, from 1956 to 2016. But these words do not “belong” to Welch, and never did. The legal creator of the slogan was the advertising agency for which Welch worked as an employee: Foote, Cone & Belding (FCB). And FCB, in its own turn, supplied the slogan to S. C. Johnson & Son, the company that manufactures the Raid brand of insecticide. Indeed, in 1986 this corporation registered the slogan as a trademark.<sup>4</sup>

In other words, just as the workers in an automobile factory do not own the cars that they have made, so the author of a text does not necessarily own the words that he or she has generated. Texts, like other commodities, can be alienated from their primary producers, in just the way Marx and Engels described. Often, the words of a text are owned, not by the writer, but instead by the publisher, broadcaster, or distributor. And even in cases where the author is granted copyright over the words themselves, ancillary rights are usually not included. Let me illustrate this with a personal example. I wrote a book about music videos, including a chapter on two music videos for songs written and performed by FKA twigs. I wanted to use a still image from one of these videos on the cover of the book. The director of the music video gave

<sup>4</sup> Wikipedia (2024). “Raid (insecticide)”. [https://en.wikipedia.org/wiki/Raid\\_\(insecticide\)](https://en.wikipedia.org/wiki/Raid_(insecticide)).

me permission; the producer of the music video gave me permission; and agents for FKA twigs also gave me permission. However, I was unable to obtain permission to reproduce the image from the record label that distributed the music video, and the album on which the song appeared. As a result, I was unable to use the image for the cover of my book.

All this brings me to *Zipf Maneuvers*, the book for which the current essay is the Introduction. This book is designed to accompany the re-release of Kenji Siratori's novel *Blood Electric*. Siratori is an experimental writer, and his words and paragraphs resist intelligibility. As Andrew Wenaus puts it, Siratori's often violent and affectively charged words "establish forceful interpretive reaction. However, this reaction is one that cannot be situated into a more structured semantic context". Instead, Siratori's language must be regarded "as a semantically void literary space". The words of Siratori's English prose are individually recognizable, but they do not congeal into meaningful representations. In this regard, Wenaus compares Siratori's work to the writing of such twentieth-century experimental authors as Antonin Artaud and William Burroughs.

At this point, given my adherence to the protocols of academic critical writing, the reader will expect me to provide a reference to Wenaus' text. However, there is a reason I will not do so. Andrew Wenaus and Germán Sierra have both published excellent scholarly articles about Siratori's writing, and their original intention was to append these essays to the new edition of *Blood Electric*. However, they were stymied by the copyright issues that I described earlier in this essay. In both cases, the copyrights to their previously published articles are held by large and powerful publishing companies. Due to the articles' prior publication in literary journals, Sierra's essay is owned by Springer/Nature, and Wenaus' essay is owned by Bloomsbury. When asked for permission to republish the essays alongside Siratori's original text, both publishers demanded large fees: indeed, they asked for payments that far exceed whatever monetary amount Wenaus and Sierra might reasonably expect to receive from this republication. (Ironically enough, it is fairly easy to find both essays online, and to download them for free to one's own machine).

The book in hand, *Zipf Maneuvers*, has been produced as a response to this situation. The title refers to a discovery by the linguist George Kingsley Zipf, who found that, in a given body of language, if you list all the words in the order of how frequently they are used, their frequency tends to be inversely proportional to their order in the list. That is to say, according to Zipf's Law the second-most-common word will be used roughly half as often as the first-

most-common word, the third-most-common-word will be used roughly one third as often as the first, and so on.

Wenaus and Sierra therefore wrote an algorithm that divided their essays into individual words, and recorded the frequency and the positions of each. In the original essays, the word “the” was used 308 times, the word “of” was used 271 times; and so on, all the way down to the more than five thousand words that were used only once each. The relative frequencies of all these words do not precisely fit into the distribution predicted by Zipf; but Zipf’s Law is only an approximation, not an exact rule, and the numbers are close enough.

*Zipf Maneuvers* starts with a “Proem” that gives the Python script used to generate the data that constitute the main body of the text. In theory – though this would be quite difficult in practice – the contents of *Zipf Maneuvers* can be used to reconstitute the original texts. In this way, the book conforms to the “no-hiding theorem” of quantum mechanics, which states that information can be transformed, but can never be destroyed. The words are all there. Wenaus and Sierra have conformed to the often ridiculous strictures of copyright law, while at the same time reasserting their own acts of authorship, and their own claims, as literary critics, to respond to Siratori’s texts.
