INTRODUCTION AND GENERAL INFORMATION

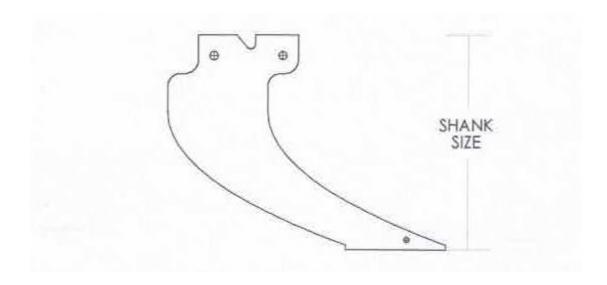

This catalog contains a list of parts for R&R Subsoilers having a 7-digit serial number with the first three numbers being 448 or higher. However, if you are ordering parts for an earlier manufactured Subsoiler, this catalog may still be used as a guide. Most parts, but not all, shown in this catalog are compatible with earlier machines.

When ordering parts, it is very important to know your model # and serial #. They are located on the ID plate on the tongue near the front of your machine. The serial # is also stamped on the top of the connecting plates of the tongue and beam.

Whenever Subsoiler model numbers appear in this catalog, they are followed by the letters MD, HD, EHD, or SHD. These letters are the designation for Medium Duty, Heavy Duty, Extra Heavy Duty, or Super Heavy Duty, respectively. In earlier publications, these letter designations may or may not have appeared.

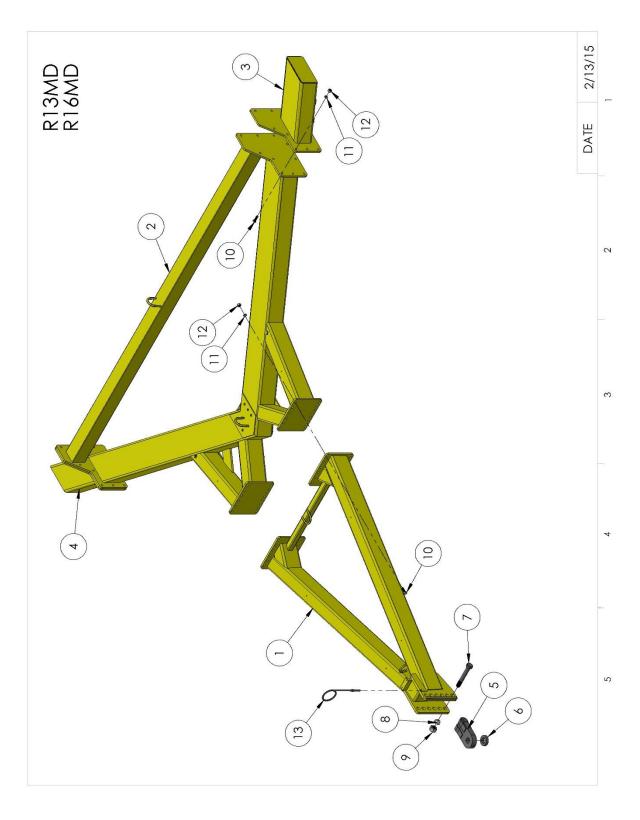

Once the model number is known, this catalog is used simply by reviewing the drawings of the major group that contains the desired part. The key number of the drawing is referenced to the part number. NOTE: Several parts may appear to be the same but may have more than one part number. This is because the material comprising the part will be different.

Several part numbers are determined by the size of the shank on your machine. The size of the shank is shown by the sketch below:

Several parts are designated left or right. The left or right side of the machine is determined by standing behind the machine facing the tractor. All bolts are National Course, Grade 8, unless otherwise specified.

It is important that you always use our factory made parts listed in the catalog. Over the years, we have developed a Subsoiler that is both strong and durable with an emphasis on productivity. Much of this development has occurred in the area of material selection and high quality fabrication. Keep your R&R Subsoiler operating at its fullest capability. When ordering parts for you Subsoiler, always use the R&R part number and description found in this catalog.
