Life Cycle of a Frog

Middle Primary Beginner Science

EMBRYO

An egg is fertilized by

the sperm from a male

frog to form an embryo.

TADPOLE

An embryo grows into a tadpole. Tadpoles are aquatic and use their tail for swimming.

FROGLET

loses its tail. A froglet

As a tadpole grows, it looks like a small frog.

FROGSPAWN

Frogspawn are the eggs laid by female frogs. They can lay thousands of eggs at a time.

ADULT FROG

Once fully grown, an adult frog will find a mate and continue the reproductive process.
