Subtract Like Fractions

Upper Primary Beginner Maths

Example: When the denominator is the same, you can subtract the numerators to solve subtraction problems.

Numerator
Denominator
$$\frac{9}{10} - \frac{2}{10} = \frac{7}{10}$$
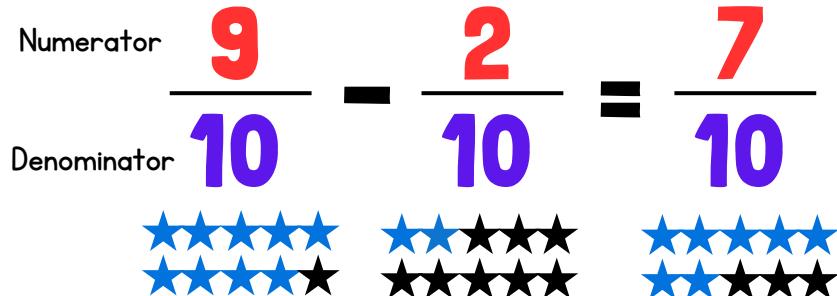

Solve and simplify fractions to its lowest terms

1. $\dfrac{14}{15} - \dfrac{13}{15} = $ ___

2. $\dfrac{6}{11} - \dfrac{5}{11} = $ ___

3. $\dfrac{7}{11} - \dfrac{4}{11} = $ ___

4. $\dfrac{6}{13} - \dfrac{2}{13} = $ ___

5. $\dfrac{9}{17} - \dfrac{8}{17} = $ ___

6. $\dfrac{8}{10} - \dfrac{7}{10} = $ ___

7. $\dfrac{5}{6} - \dfrac{3}{6} = $ ___

8. $\dfrac{12}{25} - \dfrac{8}{25} = $ ___

9. $\dfrac{11}{18} - \dfrac{4}{18} = $ ___

10. $\dfrac{13}{22} - \dfrac{8}{22} = $ ___

Subtract Like Fractions - Solutions

Example: When the denominator is the same, you can subtract the numerators to solve subtraction problems.

Numerator

Denominator

$$\frac{9}{10} - \frac{2}{10} = \frac{7}{10}$$
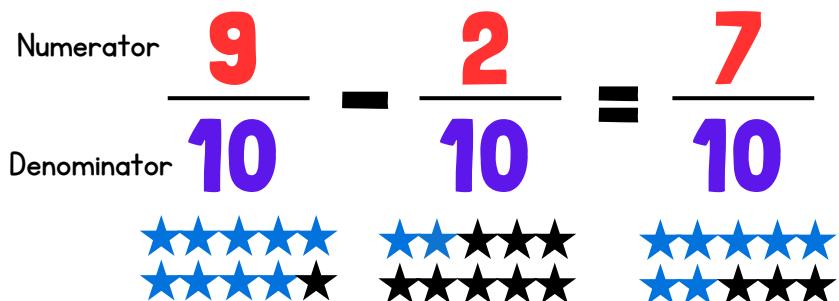

Solve and simplify fractions to its lowest terms

1. $\dfrac{14}{15} - \dfrac{13}{15} = \dfrac{11}{15}$

2. $\dfrac{6}{11} - \dfrac{5}{11} = \dfrac{1}{11}$

3. $\dfrac{7}{11} - \dfrac{4}{11} = \dfrac{3}{11}$

4. $\dfrac{6}{13} - \dfrac{2}{13} = \dfrac{4}{13}$

5. $\dfrac{9}{17} - \dfrac{8}{17} = \dfrac{1}{17}$

6. $\dfrac{8}{10} - \dfrac{7}{10} = \dfrac{1}{10}$

7. $\dfrac{5}{6} - \dfrac{3}{6} = \dfrac{1}{3}$

8. $\dfrac{12}{25} - \dfrac{8}{25} = \dfrac{4}{25}$

9. $\dfrac{11}{18} - \dfrac{4}{18} = \dfrac{7}{18}$

10. $\dfrac{13}{22} - \dfrac{8}{22} = \dfrac{5}{22}$

Note: These fraction problem need to be simplified.

$$\frac{5}{6} - \frac{3}{6} = \frac{2}{6} = \frac{1}{3}$$
