

The Water Cycle

Middle Primary Beginner Science

Label the water cycle. Answer the questions below by circling True or False.

condensation

collection

evaporation

precipitation

1. Evaporation happens when the sun heats water in oceans and lakes, turning it into water vapor that rises.

True

False

2. Condensation is when water vapor in the air gets cold and forms clouds or tiny drops.

True

False

3. Precipitation only means rain and never includes snow or hail falling from clouds.

True

False

4. Evaporation cools the water down so it stays liquid in puddles on hot days.

True

False

The Water Cycle - Solutions
