1. Introduction

TiViMate is one of the best, if not the best, IPTV players available. Very user friendly and has the ability to customize it just the way you want, you can set it up so it resembles the cable or satellite guide you're used to. With the right provider, you may find this is the only app you need for all your TV including live TV and Video on Demand (movies, and TV series).

TiViMate was developed to be used on android streaming devices, Fire TV devices are a modified android but works very well. TiViMate was not designed to be used on touch screen such as phones and tablets. Although I have heard some people have successfully installed and used it on touch screen devices, I would not recommend it as there are players designed for touch screen and work much better on that type of device.

Note: TiViMate is only a player, just like a DVD player, you must insert a DVD to get it to play, in TiViMate, you must enter a playlist (provider) to get it to play.

The best source for installing TiViMate with the latest version is through the official website, tivimate.com.

You can get older versions of TiViMate for free through Downloader:

Downloader Short codes:

TiViMate 4.7.0 Official:366972

TiViMate 4.6.1 Official:278077

TiViMate 4.5.1 Official:127188

TiViMate Companion 40213

2. Free vs Premium

The free version will only allow for one playlist and no VOD (movies and TV series), and all the editing functions are locked. Upgrading to the premium version unlocks all functions and allows you to load multiple playlists, including the VOD.

You can use your premium subscription on up to five different devices. The devices do not have to be on the same network or the same type device. You can either use one device to set everything up then move all your settings to the other devices or you can run all five with complete different playlists and customization.

These are some of the benefits of TiViMate Premium:

Support for multiple playlists

Favorites management

Catch-up option

Customizable EPG update intervals

Customizable panel transparency and timeout

Manual channel sorting

Turning on the most recently viewed channel on app launch

Auto frame rate (AFR)

Scheduled recording

Reminder to automatically play channels

Parental control function

Advanced remote control option

Ability to change the appearance

Ability to change fonts, background color, and selection color

Data backup

Data restoration

Much more!

I will cover how to get TiViMate Premium later, after you've gotten it installed and your first playlist loaded.

3. Playlists

Playlists are the providers of the service, since TiViMate refers to them as playlists, that's what I will call them here. The quality of TiViMate is very dependent on the quality of the playlist. There are three different types of playlists that can be used with TiViMate. 1. m3u which is one single URL line usually ending in m3u or m3u8 but can sometimes be a bit.ly short code or similar. 2. Xstream Code which uses a URL, user name, and password, many times the URL will end with a port number such as :80. 3. Stalker Portal Code, uses a URL and a MAC address, many times the URL will end with /c. The type of playlist has nothing to do with quality, that is just the way you access the playlist.

Note: don't waste a lot of time on a playlist, there are thousand of them available. If it buffers a little or the EPG isn't working good, there are some things you can try to get them working, but after a couple tries and it still doesn't work, just delete it and move on with another one.

Here are some free playlist you can try to help you get started. Enter these an m3u playlists.

Pluto (US), for other countries, change the us to uk or all.

<https://i.mjh.nz/PlutoTV/us.m3u8>

Pluto

<https://bit.ly/PlutoEtc>

Stirr

<https://i.mjh.nz/Stirr/all.m3u8>

Samsung TV

<https://i.mjh.nz/SamsungTVPlus/all.m3u8>

Plex

<https://i.mjh.nz/Plex/all.m3u8>

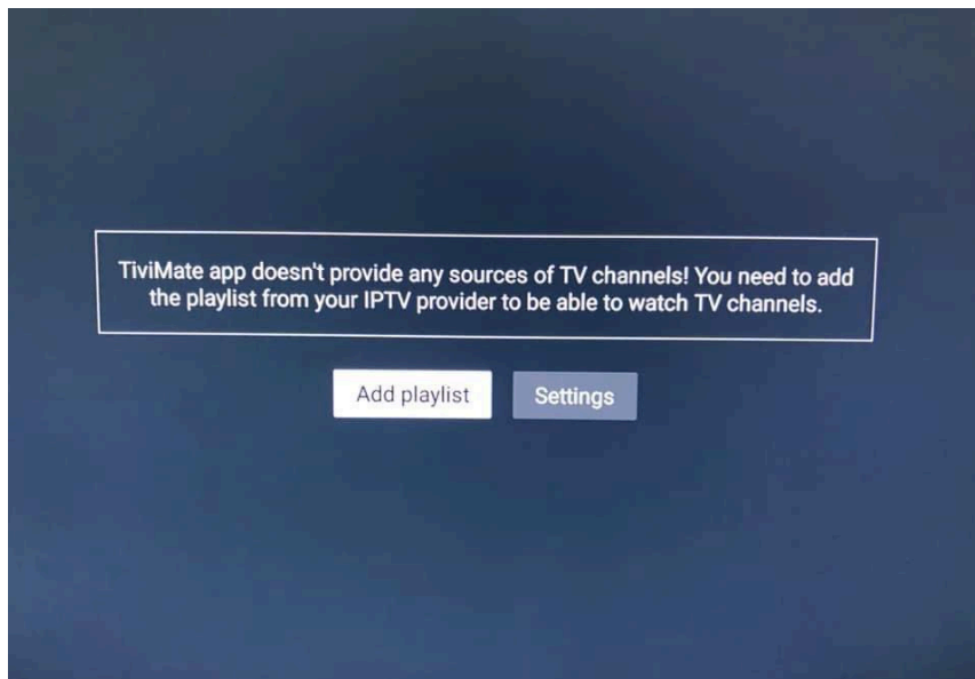

PBS

<https://i.mjh.nz/PBS/all.m3u8>

You may find something you can use here: <https://github.com/iptv-org/iptv>

4. Step by Step Setup

1. Open the TiViMate app

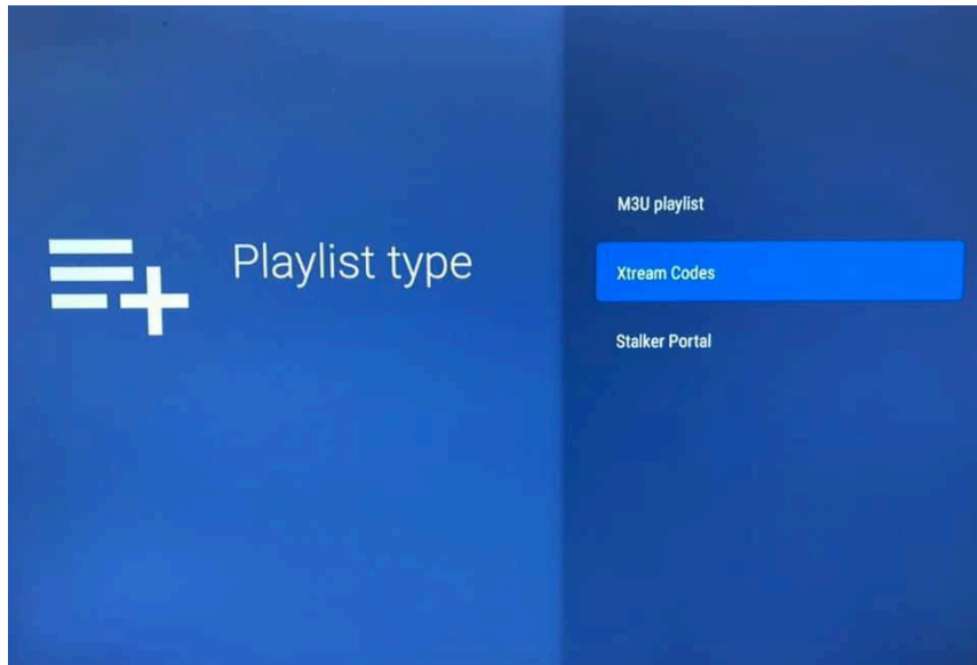

2. Choose Add Playlist

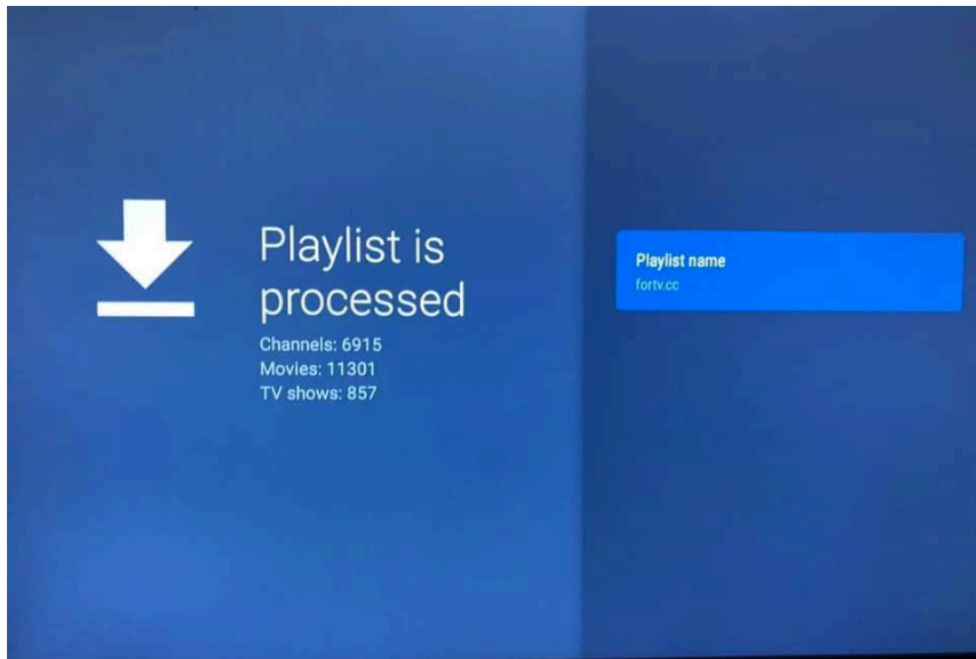

If using the M3U playlist, click on it and enter your URL, then click next.

If using Xstream Codes, enter your Server Address (URL), click next, enter your user name, click next, enter your password, click next, then scroll to the right and click on next.

If using Stalker Portal, click Enter URL, then hit Next twice. Enter the provided MAC address, replace the one that was auto generated as it won't work. Then hit Next twice.

3. Click Next, you will then see Playlist is processed message with Channel count and your Playlist name. Click Done.

4. The TV Guide will import and you are able to start viewing!
