

Laerdal Multivenous IV Arm

The Laerdal Multi-Venous IV Training Arm is a life-like adult arm reproduction with replaceable skin and veins. It is designed for peripheral intravenous therapy. The arm is part of a complete IV therapy training kit that includes a full-size right arm.

The arm is designed to help participants practice and gain proficiency in essential nursing skills and procedures like venipuncture, IV administration, blood collection, infusion, and intravenous injection.

Description of features:

- Venipuncture possible in the antecubital fossa or dorsum of the hand
- Peripheral IV line insertion and removal
- Accessible veins include median, basilic and cephalic
- Palpable veins enable site selection and preparation
- Infusible veins allow peripheral therapy with IV bolus or push injection method
- Peripheral IV line maintenance including assessment and rotation of site and dressing, solution and tubing change
- Replaceable skin and multi-vein system ensures longevity of model
- Articulates to adult manikins
- One additional spare skin and vein set provided as standard
