IGNARIS

Security and Intelligence, Built Without Compromise

At Ignaris, we combine elite cybersecurity expertise with advanced AI engineering and Machine Learning to protect, optimize, and future-proof your business.

About Us

At Ignaris, we believe in execution, not excuses.
We are a lean, highly technical team of cybersecurity specialists and AI engineers — built to solve hard problems with precision and impact.

No inflated teams. No sales layers. When you work with us, you work directly with the experts designing and delivering your solution.

Cybersecurity Services

Red Team Operations

Simulate the adversary. Strengthen your defense.
We execute tailored attack simulations to uncover weaknesses in your people, processes, and technology — the way real-world adversaries would.
Impact: Gain a clear view of your defenses under fire, without the damage of an actual breach.

Penetration Testing

No noise. Only insight.
From networks to web apps to internal systems, we deliver precise testing backed by clear, actionable reporting.
Impact: Know exactly what to fix — and what truly matters — without drowning in false positives.

Secure Infrastructure

Build resilience from the ground up.
We design and deploy IDS/IPS, hardened firewalls, and security architectures aligned with industry and client frameworks.
Impact: Operate on a secure, compliant foundation without slowing down operations.

Compliance & Audits

Audit-ready. Always.
We perform in-depth assessments across your systems to identify compliance gaps against standards such as ISO 27001, ISO 9001, NIST, SOC 2, HIPAA, and others — helping you maintain continuous compliance and minimize risk.
Impact: Stay ahead of fines, failures, and downtime.

Cybersecurity Training

Empower your team. Reduce risk.
We provide hands-on, tailored training for developers, IT staff, and executives — from best practices to simulated attack scenarios.
Impact: Build internal expertise that strengthens defenses and reduces human error.

Code Reviews

Manual. Meticulous. Mission-critical.
Automated tools miss what humans catch. Our experts perform deep manual reviews to eliminate hidden vulnerabilities in your applications.
Impact: Ensure software is battle-tested before production.

AI & Machine Learning Engineering Services

Custom Machine Learning Systems

We assess the viability and engineer models for real-world impact.
From raw data pipelines to deployable models, we design ML systems tailored to your business challenges, ensuring accuracy, reliability, and scalability.
Impact: Transform data into actionable intelligence that drives decisions.

AI Engineering

LLMs, tuned for your world.
From fine-tuning large language models to orchestrating smaller workflows with LangChain, n8n, and beyond, we make AI fit seamlessly into your operations.
Impact: Gain tailored intelligence integrated into your existing ecosystem.

Automation Workflows

Cut friction. Accelerate execution.
We design AI-powered automation pipelines that connect tools, eliminate bottlenecks, and reduce manual overhead.

Intelligent Interfaces

Chatbots that actually understand.
We build context-aware assistants — internal or customer-facing — capable of handling real tasks, not just scripted responses.
