

Learn a 5 Step process to...

ACHIEVE 2 GRADES HIGHER IN GCSE MATHS

FOR PARENTS WHO WANT
THEIR CHILD TO EXCEL IN
GCSE MATH

Once your child learns these 5 techniques Their CONFIDENCE will SKY-ROCKET!

Dear Parent,

What you are about to discover has come from over 6 years of teaching experience in GCSE Maths, Physics and also A level Maths.

I am going to share with you 5 fast ways to help your child achieve 2 grades higher that have already worked for many of the students I have had the pleasure of teaching.

You see we live in a world where our students need more than just going to school and their classroom teacher in order to thrive in education. The world is evolving and future jobs and careers are becoming more competitive than ever.

Once your child learns these 5 techniques Their **CONFIDENCE** will **SKY-ROCKET!**

The education of our children matters! Actually their whole life depends on it.

Which is why it's never been more important to set them up for success than ever before.

So my goal with this guide is to equip you with 5 fast and actionable strategies to start helping your child achieve their desired grade in GCSE Math

And if you are wondering why is GCSE Math so important.

Here's why....

A student who achieves a higher level in GCSE Math has a much wider choice of subjects to study at a higher level and Math qualifications are very highly regarded by both universities and employers.

Why Should You Listen To ME?

Hi, I'm Zainab Abid, the Founder of Educate Cloud—an online tutoring organisation dedicated to helping students excel in GCSE and A-Level Maths and Physics. Alongside me is a brilliant team of subject-specialist tutors who also teach Biology, Chemistry, and English with the same passion and excellence.

I studied Engineering at King's College London and have since built years of experience working with some of the UK's leading tutoring platforms, including MyTutor, where I've received numerous 5-star reviews. I'm currently completing a specialist teaching qualification, which has allowed me to gain classroom experience and teach Maths in school settings as well. I also hold an Enhanced DBS certification and have worked across schools and institutions, delivering high-quality tuition both online and in-person.

So whether you're aiming for top grades or simply looking to build your confidence in Maths or Science, know this—you're in very safe hands.

Here's why I decided to get into tutoring Math

Reason #1 - I love seeing my students in their eureka moments, when after so much time spent struggling they finally get it. The satisfaction is unreal!

Reason #2 - I want students to think for themselves, a lot of the school education in the UK is done through spoon feeding students and I want to change this to bring about more problem solvers.

Reason #3 - Math is AMAZING! There is so much skills that Math can bring about in students, it helps with logical thinking, problem solving, and analytical skills, just to name a few.

Now over the years I started to notice a trend....

The students I taught that were able to do **5 key things** always managed to do better than those students who didn't focus on these 5 keys areas.

So I started to focus on these methods consistently with all of the students I've worked with and the results were incredible...

And now my mission is to help more students with these 5 key skills by getting this guide into the hands of more parents who want the best for their children like you... So let's get started!

Here's Some Comments From Students / Parents

"Zainab is very enthusiastic about the subject and lessons. She always suggests other methods which make the topic easier to learn.

She's approachable and flexible in her approach. My son's confidence has grown and he's enjoying the subject. He always looks forward to his lessons. Highly recommended"

Zainab is motivated and my daughter really likes her. She gives her enough homework for the whole week which I like, and she comes out of her way to help Safira before her tests and to accommodate her needs when she can't attend lesson. Really pleased.

Very passionate tutor and has really encouraged my daughter with her maths. She is always willing to go above and beyond to support her learning. Thank You.

Hi, I just wanted to let you know that I recently won 'maths student of the year award' at my school out of over 400 students!! I definitely wouldn't have achieved that without your help in the maths tutoring sessions so thank you so much for your help!!

Zainab Abid has worked wonders for my grandson (13) in his maths proficiency and confidence. This is what he says: " Zainab has been my online maths tutor for two years and I've really enjoyed working with her. She always explains things very well and some topics that appear difficult soon become clear. She is patient and understanding and takes an interest in you as a person. She's my favourite maths teacher ever!"

16:25

Ok, thank you for being an amazing maths tutor! You've definitely really helped me and have made me confident for my exams!

10:24

My husband and I just wanted to thank you for your help. Hudah is feeling much more reassured and he has less worry and tears before chemistry lessons at school now. As his parents, we just wanted you to know how appreciative we are. You have made a tremendous difference. Hudah also says you have a very kind and approachable manner. We are so grateful to you.

That's great. She has a lot of potential and can do really well. She liked your teaching method as compared to the previous tutor, she was using power points and websites for her lessons like in her school, you explained the sums to her which she needed and liked a lot!

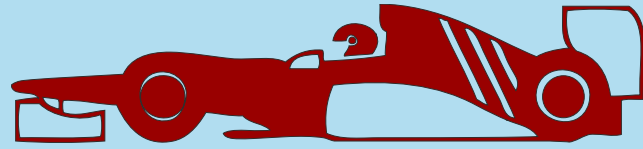

Thank you very much for your sincere execution of the lesson today! Even though you have mentioned that this first lesson is free but the way the lesson went and you guys went over an hour, we are going to pay you.

I found Zainab's classes extremely helpful as her lessons were very concise and I could grasp the content in minutes. She's an amazing tutor and with her help, I moved from a grade 5 to 7 in physics!

01:55

Zainab is a brilliant teacher in both maths and physics, her lessons are appropriate for my daughters level of understanding and she keeps the sessions interesting and engaging for her. Besides that, the homework provides an additional boost for her learning as she manages to go over the topics in her own time once the session is completed, and Zainab is wonderful in explaining the topics so that she can understand and remember them easily. I have seen an improvement in both subjects since she started with the tuitions only a few months ago. I would most certainly recommend Zainab to anyone who wishes to improve on these two subjects.

FORMULA 1 MATH SCHEME

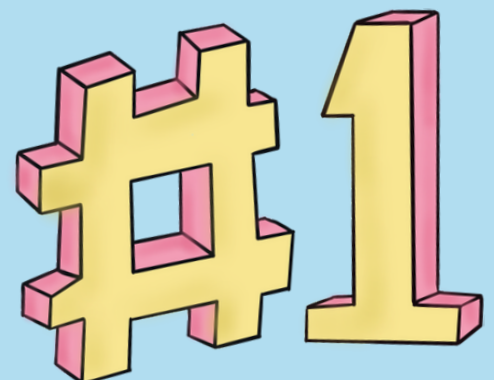

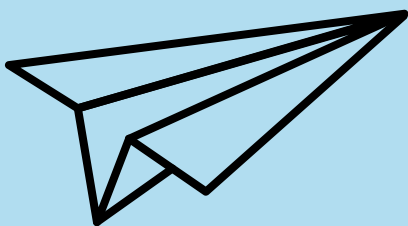

1 - ASSESS

2 - TAILOR

3 - PRACTICE

4 - REVIEW

5 - CONQUER

STEP ONE

ASSESS

ASSESS

.....

Most students do not know where exactly they are or they don't always know exactly what topics they've covered and what's left to do. Basically they aren't tracking their work.

And as a result here's what happens is that students are left clueless about what they should focus on.

Assessing is an old, tried and tested method where teachers are able to check their students' understanding on certain subjects. Assessments can reveal exactly how developed a student's understanding is and in turn can help teachers to know exactly what can help their students improve their grades.

So here is what your child needs to focus on instead - they need to carefully find out what topics they know and what they don't know as well as their exact current grade.

This will help your child because it will help them to find out exactly what their focus should be on and where they need help most.

ASSESS

.....

Just like when we go to the doctor, we get diagnosed first and then get advice or the prescription. That's the exact same process for effective teaching.

So the first thing that is going to help your child achieve a top grade is to find out exactly where they are.

My top tips to help them master this:

- 1) Get a GCSE Math Checklist
- 2) Attempt a full GCSE Math Past Paper
- 3) Mark and Highlight all the Topics as Red/ Orange/ Green depending on how you find them

Fri

Sat

TAILOR

.....

Most students don't have a plan of what they will study in any given slot. They just sit and study whatever without having a clear plan of what they want to study.

And as a result here's what happens is that they are spending sometimes what's hours of their time studying things but not covering their weaker areas and this leads to huge amounts of time being wasted and students still unable to cover the topics on the specification

If you think about it it's kind of like making a garment without the exact measurements of the body which the garment will fit on.

So here is what your child needs to focus on instead, they will need to first find out their best learning style, set out slots of study each week and then create a Study Plan that suites them starting with the topics which they find the weakest. Of course it's best to work on the basic foundational knowledge first so they have something to build upon.

TAILOR

.....

This will help your child because it will help them to know what needs to be done in each study period.

So the second thing that is going to help your child achieve their top grades is to tailor their study plan to what suites them.

My top tips to help them master this:

- 1) Find out what your child's learning style is.
- 2) Create a timetable in which you set aside time each week in which your child will focus on their Maths
- 3) Finally create a tailored study plan of what exactly your child will study each week.

STEP THREE

.....

PRACTICE

keep
Practicing

PRACTICE

You might have heard the statement practice makes perfect numerous times, well it just does that, any one that's achieved anything in life has only done so through vigorous practice. Maths is a prime example in which practice plays an extra special role.

Most students however do not practice near enough to what they should be doing and as a result they aren't able to master topics and achieve top grades.

After much research Kaufman stated that it takes only 20 hours to master a skill when the practice done is efficient and productive.

So here is what your child needs to focus on to ensure that any practice their doing doesn't just go to waste- they need to ensure their practice is done systematically according to the tailored plan which they have set for themselves and secondly they need to make sure that they follow the Try, Check, Repeat method when they practice.

This will help your child because it will help them to mastery level on each specific topic so it sticks for longer.

PRACTICE

.....

Just like with any sport, it requires you to try, fail, repeat multiple times, it's the same with Math, as was once said by Zig Ziglar: "Repetition is the mother of learning, the father of action which makes it the architect of accomplishment"

My top tips to help them master this:

- 1) Try a question pack with different levels on a certain topic
- 2) Then check what you've tried and highlight/ collect your incorrectly answered questions
- 3) Finally repeat those same questions after a some time

STEP FOUR

REVIEW

REVIEW

Most students do not go back over old topics which they think they may have mastered in the past which leads to them going from 100 all the way to 0 in just a weeks time and results in all their effort wasted.

Combating 'The Forgetting Curve' is study which shows that learners will forget an average of 90% of what they have learned within the first month.

A method to combat this is one of spaced repetition which embeds material straight into your long-term memory such that you are able to remember content for longer and when exam time comes answer questions much more confidently.

REVIEW

My top tips to help students to Combat the Forgetting Curve:

- 1) Learn only what you NEED to know
- 2) Make learning interactive and fun
- 3) Use Spaced repetition to reinforce content regularly.

STEP FIVE

CONQUER

CONQUER

To Conquer and consolidate your learning ensuring you are 100% exam ready is a difficult concept which many students are unable to nail.

Consequently many students find themselves having studied hard all year but unable to recall topics in an exam because of Exam hall anxiety, personal health or last minute stresses

If you think about it it's kind of like an athlete who is ready for the race and has practiced multiple times but come the day of the race he sees the crowd, the track and due to his overwhelm fails to achieve what he has the capability of doing.

Parents often tend to undermine is the importance of a child's physical and mental health as well as the importance of free time and relaxation during Exam Season.

So your child will need help to know exactly how to tackle the weeks and months before the exam. This will include mindset practices as well as what nutrition their bodies should be taking in and generally their physical well being.

CONQUER

So the second thing that is going to help your child to smash those exams is to work on their well-being in all aspects.

My top tips to help students to Conquer their Exams:

- 1) Create the perfect atmosphere to study
- 2) Don't neglect your personal well-being, this includes sleep, exercise and nutrition.
- 3) Try some fantastic Mindset Hacks which are amazing at making you go into your exam confidently.

YOUR NEXT STEP

.....

A BIG THANKS for taking the time to read this guide - I know how frustrating / upsetting it can be watching your child struggle with Math.

But the fact that you are here reading this guide says a lot about you.

You are ready to do something about it. And for that I want to reward you.

Whilst this guide will definitely help. It isn't going to be the 'magic bullet' to help your child improve 2 whole grades in Math

So here's something that might...

Each week I open up time to speak with 10 parents and create what I like to call a 'Student Success Session'.

YOUR NEXT STEP

.....

It's a completely personalised plan to help your child achieve their desired grades.

I'll even be able to suggest some options where I can perhaps help your child excel in their planning, practice and review stages.

After we create this personalised plan together you can choose to get my help implementing it or even use what we create on your own.

So if you are ready to help your child feel more:

- Confident in their Math Classes
- Able to do more in less time
- Finally improve 2 whole grades in Math
-

Let's take that next step and have a quick 15-30-minute chat to get your child the help they need and deserve.

I look forward to speaking with you.
