POD

The POD (Point Of Drive) is Cedstunt's on-board remote driving unit, designed to safely perform complex driving sequences without a driver inside the vehicle.

It allows a professional driver to control a vehicle remotely, in real time, from a secured position, while maintaining full driving precision and repeatability.

Compatible with all vehicle types and configurable mounting positions.
The POD can be installed on any type of vehicle and mounted in multiple positions, including roof-mounted, front-mounted, or side-mounted configurations, depending on production and camera requirements.
