## Target = Distinction

### Drug Tariff Advisor Bot

#### Introduction

The **healthcare** sector **domain** continuously seeks enhancements in the delivery of information and services to both providers and patients. Access to accurate and timely information about drug tariffs and healthcare products is crucial for efficient healthcare management. The Drug Tariff Advisor Bot aims to streamline the information by leveraging advanced natural language processing technologies to provide instant, reliable answers to inquiries about drug tariffs and healthcare products.

#### Objective:

The primary objective of the Drug Tariff Advisor Bot is to provide healthcare professionals and patients with immediate access to critical information for drug tariffs and healthcare product pricing in England.

#### Key uses include:

- Quickly answering common questions regarding drug prices and availability, which can enhance decision-making and planning for healthcare providers.
- Assisting pharmacy staff and healthcare providers in managing inventory and cost predictions based on the latest tariff information.
- Reducing the time spent by healthcare professionals in searching for product-specific information, thus improving operational efficiency.

#### Approach:

The project involves several steps:

- **Data Collection:** Utilize NHS England's Drug Tariff information from the provided link.  
Link:  
<https://faq.nhsbsa.nhs.uk/knowledgebase/category/?articlecategory=Drug%20Tariff&id=CAT-01087&parentid=>
- **Bot Development:** Use **Azure Cognitive Services Language Studio** to build a Custom Question Answering Bot.
- **Integration:** Deploy the bot on Azure and integrate it with a channel such as Facebook, Team for easy access by users.
- **Testing & Feedback:** Conduct testing with bot's responses & compare against the website.

#### Azure Cognitive Language Studio:

##### **Azure Cognitive Services Language Studio:**

A platform offering machine learning and AI algorithms for natural language processing.

**Custom Language Models:** Tools provided by the platform to create tailored language models without needing deep data science expertise.

**Custom Question Answering Feature:** A feature that enables the development of sophisticated bots that can understand and respond to user queries conversationally.

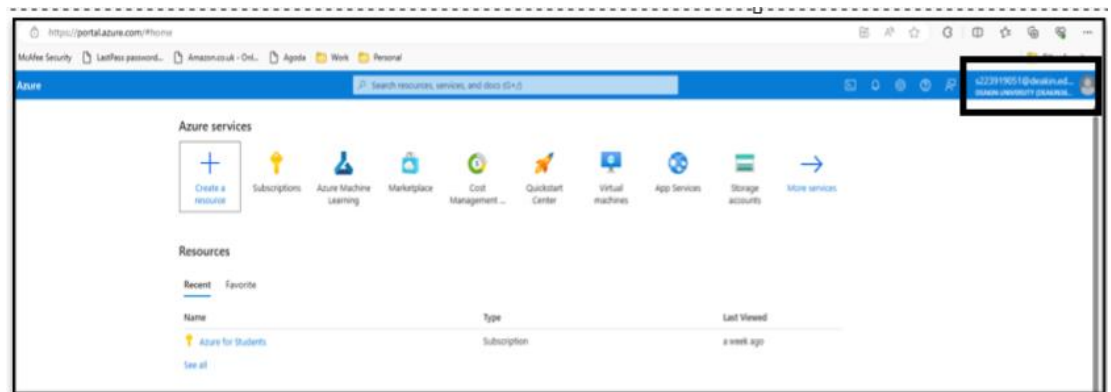

**Drug Tariff Advisor Bot:** A bot that will leverage this service to accurately interpret and answer complex questions related to **NHS England's** Drug Tariff and healthcare product prices.

### Creating Azure Cognitive Language Studio:

- **Sign in to Azure Portal:** Azure Portal and sign in with Microsoft account Deakin credentials.

Link: <https://portal.azure.com/>

### Landing Page:

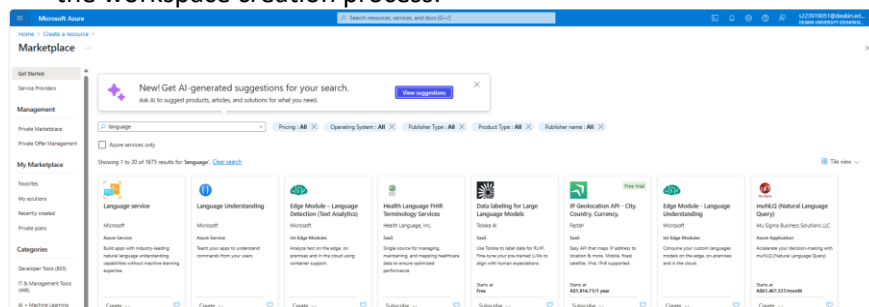

- **Create a New Workspace:**

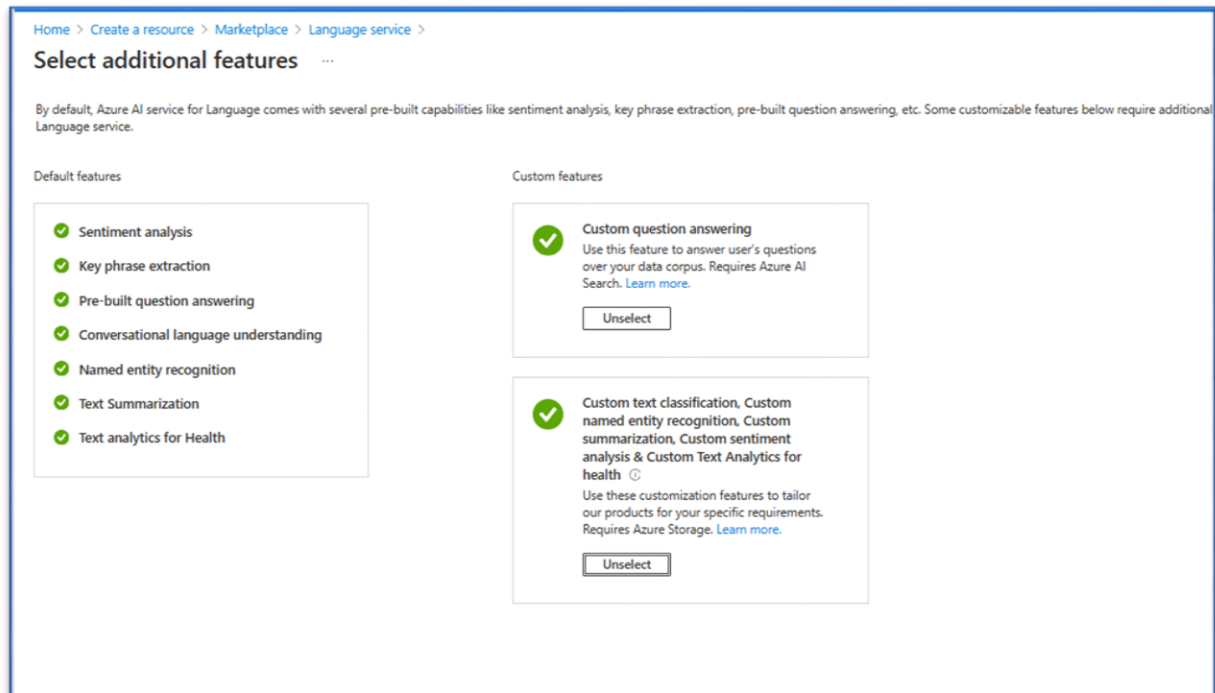

- Click on **Create a resource** at the top-left corner.

- Search for **Language Service** & select **Create** from Azure Machine Learning to initiate the workspace creation process.

- Select **Custom question answering** and **Custom text classification, Custom named entity recognition, Custom summarization, Custom sentiment analysis & Custom Text Analytics for health** and then click **continue to create resource** as we our bot domain is **healthcare**

- **Configure the Project workspace:**

### Subscription

**Azure Student:** Limited access to Azure resources without charge.

### Resource Group

**RG-S223919051-Task6:** A collection of resources managed as a single unit.

### Instance Details

**Region:** Central India

**Name:** ID-S223919051-Task

**Pricing Tier:** Free F0

### Custom Question Answering

**Azure Search Region:** Central India

**Azure Search Pricing Tier:** Free F0

### Storage Account Details

**Storage Account:** New

**Storage Account Name:** sts223919051task

**Storage Account Type:** Standard LRS

### Responsible AI Notice

Acknowledged and agreed to Microsoft's Responsible AI Notice.

Microsoft Azure

## Create Language

Basics Network Identity Tags Review + create

Unlock insights from unstructured text using advanced natural language processing. Use sentiment analysis to find out what customers think of your brand. Find topic-relevant phrases using key phrase extraction and identify the language of the text with language detection. Detect and categorize entities in your text with named entity recognition.

## Summary

Using an Azure Student subscription.

Resources are under the "RG-S223919051-Task6" resource group.

Language resource ("ID-S223919051-Task") is in Central India on a free tier.

Azure Search is also in Central India on a free tier.

Using an existing standard LRS storage account named "sts223919051task".

Certified review and agreement with the Responsible AI Notice by Microsoft.

- **Review and Create:** After configuring the details click on **Review + create** button. Once Azure validates configuration. Click on **Create** button to deploy workspace.

**Review:**

Next steps

[Go to resource group](#)

Let's move forward with the Python SDK to develop the **Drug Tariff Advisor Bot**.

#### Pre-requisites:

Install pre-requisites for **Azure Cognitive Language Studio** in Anaconda prompt.

- pip install azure-ai-language-questionanswering
- pip install python-dotenv
- pip install azure-storage-blob

 **azure-ai-language-questionanswering:** This Python package is used to install the Azure AI Language Question Answering library in Python. This library provides tools to interact with the Azure Cognitive Services Language Studio's Question Answering service. It allows developers to build, test, and refine bots that can understand and respond to user queries in a conversational manner

 **python-dotenv:** This package reads key-value pairs from a .env file and sets them as environment variables, enhancing the security and flexibility of application's configuration management.

 **azure-storage-blob:** This package is used for Azure's Blob Storage Service to store the files.

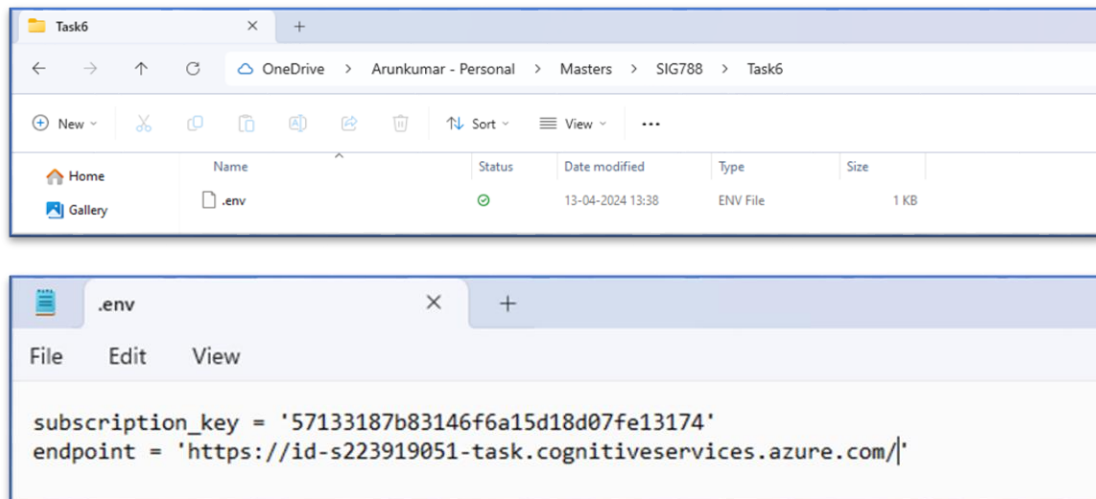

#### Configure .env file:

For Azure Computer Vision services, follow these steps to enhance security:

-  After deployment, copy Key1 (**subscription\_Key**) and the **endpoint**.
-  Paste these into a **.env** file in working directory.
-  These will be assigned as environment variables and can be read directly in Python code.

This method ensures **subscription\_key** and **endpoint** are not displayed to users, enhancing the security of application. Please refer to the snapshot of the **.env** file.

#### FAQ & Dataset selection for Bot:

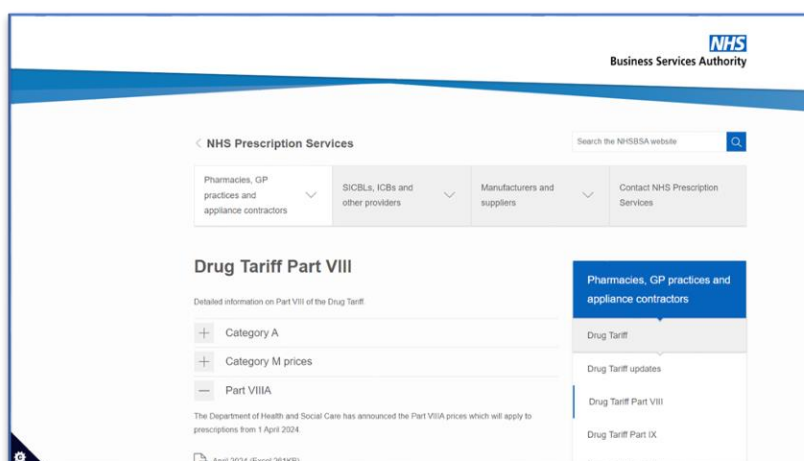

I've curated the **PART VIIIA** dataset from the **Drug Tariff** and merged it with the **FAQs** to create a custom **Q&A** for the **Drug Tariff Advisor bot**. This bot will provide timely and accurate information about drug tariffs and healthcare products, which is vital for efficient healthcare management.

The **Drug Tariff** in NHS England is a comprehensive guide that details the reimbursement prices for medications and appliances dispensed under NHS prescriptions. It plays a key role in the financial and operational management of NHS prescription services.

**PART VIIIA** of the Drug Tariff is a specific section that lists generic and certain branded medicines that are not available as generics. These items are reimbursed based on fixed prices determined by the **NHS Business Services Authority**. This section is crucial for pharmacies as it ensures consistent reimbursement for these products.

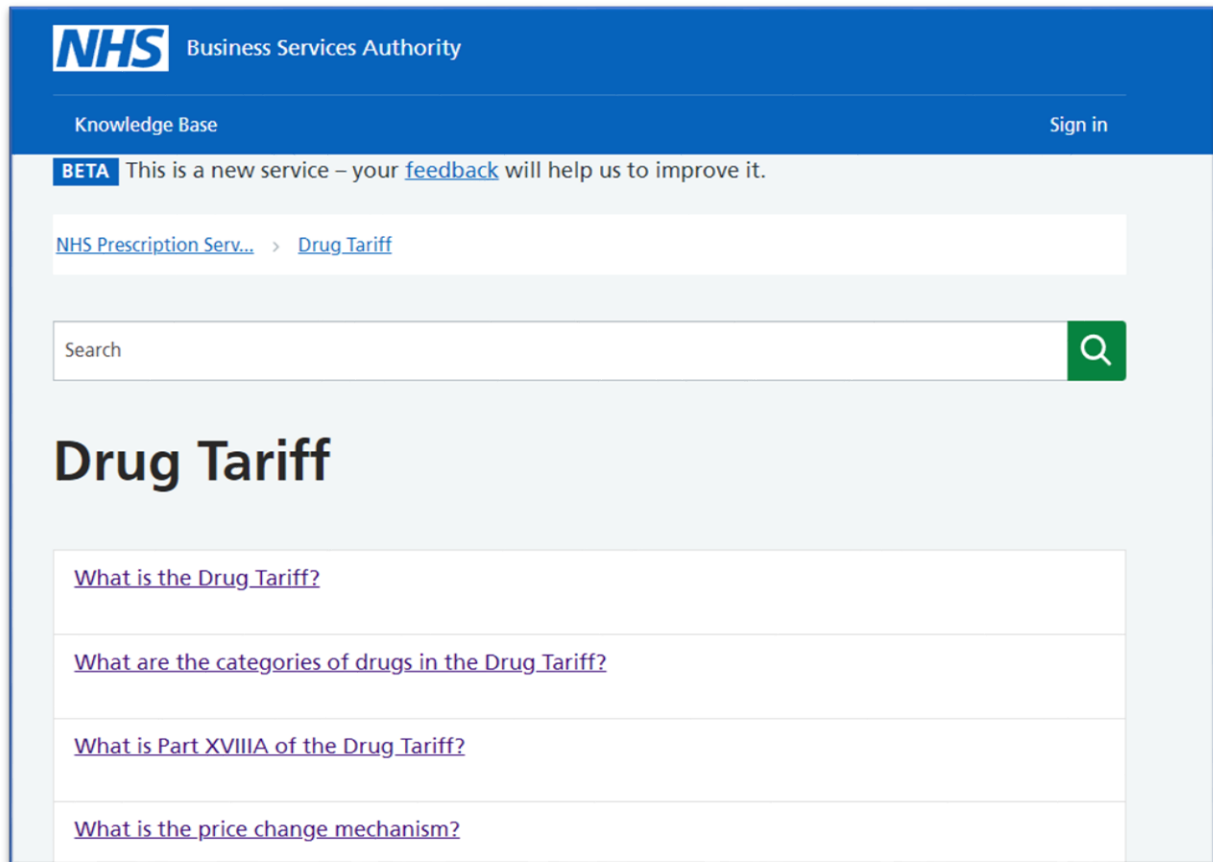

The **Drug Tariff** is a monthly publication produced by NHS Prescription Services. It's available in both **electronic** and **PDF formats** and can be accessed online a few days before the start of each month. This allows for the inclusion of any necessary updates or changes in drug pricing. It is regularly communicated to contractors through the **NHS's digital platforms**.

#### Dataset:

## FAQs

The **FAQs**, which are in hyperlink format, have been selected. Their questions and answers have been integrated with the dataset questions mentioned below.

## Data Preparations:

For the creation of the **Drug Tariff Advisor bot** services using **Azure Language Service**, I've performed the following steps:

- Loaded the **Part VIII A dataset** directly from the NHS digital site using Python. This dataset includes alternative question options, allowing Azure AI Language to detect them as such when the answers are the same. Here's the Python code used:

```
# Read NHS Dataset (Part VIII A)
df = pd.read_csv('https://www.nhsbsa.nhs.uk/sites/default/files/2024-03/Part%20VIII A%20Apr%2024.xls.csv', skiprows=2)
df.head()
```

- Applied **data preprocessing** to format the dataset into a QnA structure suitable for loading into Azure Cognitive Language Studio.
- Copied each question from the **NHS FAQs section** into a notepad and prepared the corresponding questions and answers. These were then appended to the above dataset. The specific codes for this process will be detailed in the code section.

- Included **greetings** (like 'hi', 'hello', 'greetings') and **end notes** ('bye', 'good bye', etc.) in the dataset to facilitate a more conversational interaction with the bot.

### Python SDK:

#### File Processing:

Import the necessary libraries in Python SDK:

```
# To read the secret keys for Authentication
import os
from dotenv import load_dotenv
from azure.core.credentials import AzureKeyCredential

# To create new project
from azure.ai.language.questionanswering.authoring import AuthoringClient

# to create a question-answering client, and to ask questions using the knowledge base
from azure.ai.language.questionanswering import QuestionAnsweringClient
from azure.ai.language.questionanswering import models as qna

# dataframe
import pandas as pd

# Blob Storage
from azure.storage.blob import BlobServiceClient, BlobClient, ContainerClient
```

#### Setting up Working directory

```
# Setting Working Directory
os.chdir(r'C:\Users\arunk\OneDrive\Masters\SIG788\Task6')
print(os.getcwd())
```

#### Read NHS PART VIIIA drug tariff file

```
# Read NHS Dataset (Part VIIIA)
df = pd.read_csv('https://www.nhsbsa.nhs.uk/sites/default/files/2024-03/Part%20VIIIA%20Apr%2024.xls.csv', skiprows=2)
df.head()
```

	Medicine	Pack size	Unnamed: 2	VMP Snomed Code	VMPP Snomed Code	Drug Tariff Category	Basic Price

  },
  {
    "Question": "Goodbye",
    "Answer": "Farewell! Contact us again if you need more help."
  },
  {
    "Question": "See you",
    "Answer": "See you next time! Take care!"
  },
  {
    "Question": "Good night",
    "Answer": "Good night! Sleep well."
  }
]

```

```

# create dataframe from dictionary
greetingsdf = pd.DataFrame(qna_greetings_and_farewells)

# merge dataframe with dataset QnA
final_qna_df = pd.concat([final_qna_df, greetingsdf], ignore_index=True)

```

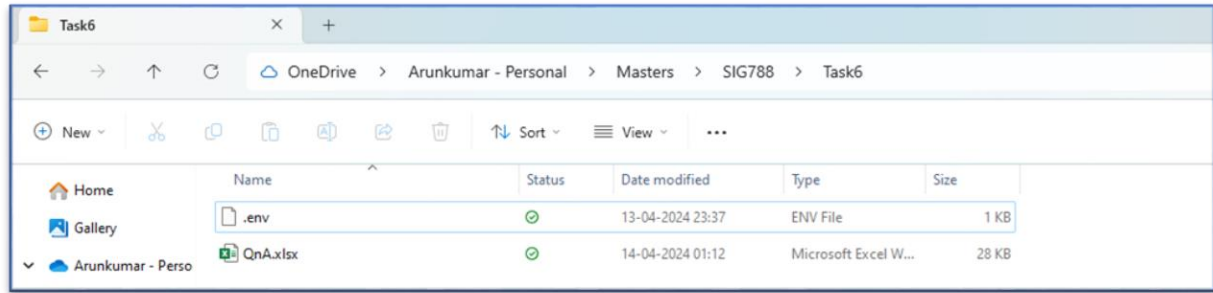

QnA file to working Directory:

```

# Create the final QnA pair to working directory
final_qna_df.to_excel('QnA.xlsx', index=False)

```

Authentication:

Load environment variables and create clients

```
# get service secrets
load_dotenv()
endpoint = os.environ.get("endpoint")
key = os.environ.get("subscription_key")

# Please note, we will create two clients, one for creating the project (Authoring) and one
# for querying it (Question Answering)

authoring_client = AuthoringClient(endpoint, AzureKeyCredential(key))
qna_client = QuestionAnsweringClient(endpoint, AzureKeyCredential(key))
```

```
# get service secrets
load_dotenv()
endpoint = os.environ.get("endpoint")
key = os.environ.get("subscription_key")

# Please note, we will create two clients, one for creating the project (Authoring) and one for querying it (Question Answering)

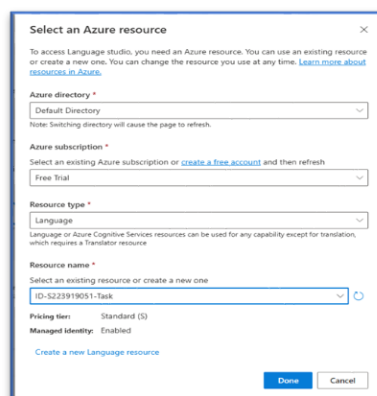

authoring_client = AuthoringClient(endpoint, AzureKeyCredential(key))
qna_client = QuestionAnsweringClient(endpoint, AzureKeyCredential(key))

authoring_client, qna_client

(<azure.ai.language.questionanswering.authoring._patch.AuthoringClient at 0x17dcb6d03d0>,
 <azure.ai.language.questionanswering._patch.QuestionAnsweringClient at 0x17dcb7b7390>)
```

Language service portal:

1. Sign in to the portal
2. Select Azure resource

3. Create the project in Python SDK and validate the same in Python SDK and Language portal.

```
# Create new project, add knowledge base and deploy it.
authoring_client = AuthoringClient(endpoint, AzureKeyCredential(key))

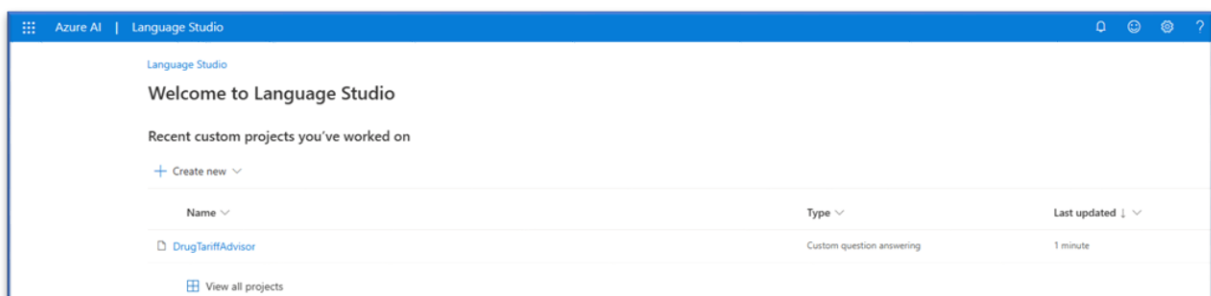

with authoring_client:

    # Step 1: create project
    print("\n***** Creating a new project *****")
    project_name = "DrugTariffAdvisor"
    project = authoring_client.create_project(
        project_name=project_name,
        options={
            "description": "FAQs & Pricing information of Drug Tariff in England",
            "language": "en",
            "multilingualResource": True,
            "settings": {
                "defaultAnswer": "no answer, please contact arunkumarbalaraman@outlook.com"
            }
        }
    )

    # Output 1: View the project details

    print("view created project info:")
    print("\tname: {}".format(project["projectName"]))
    print("\tlanguage: {}".format(project["language"]))
    print("\tdescription: {}".format(project["description"]))
```

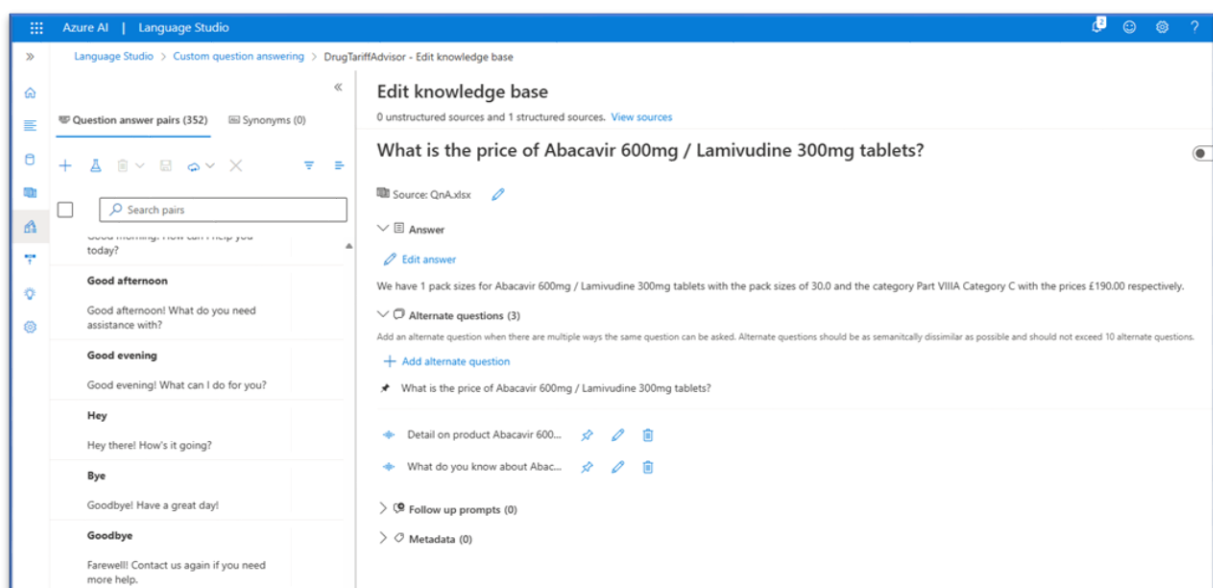

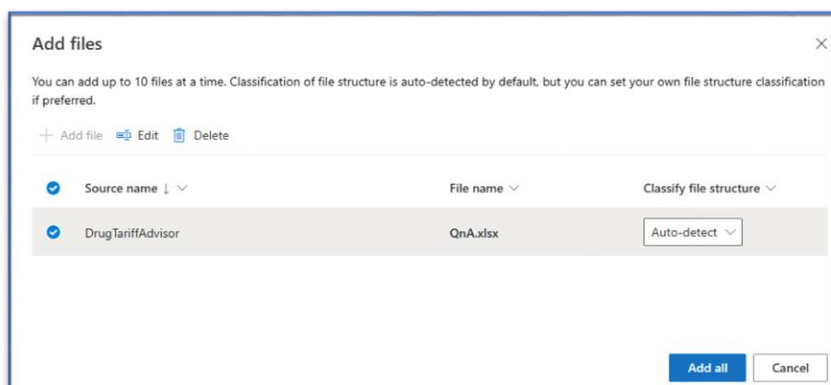

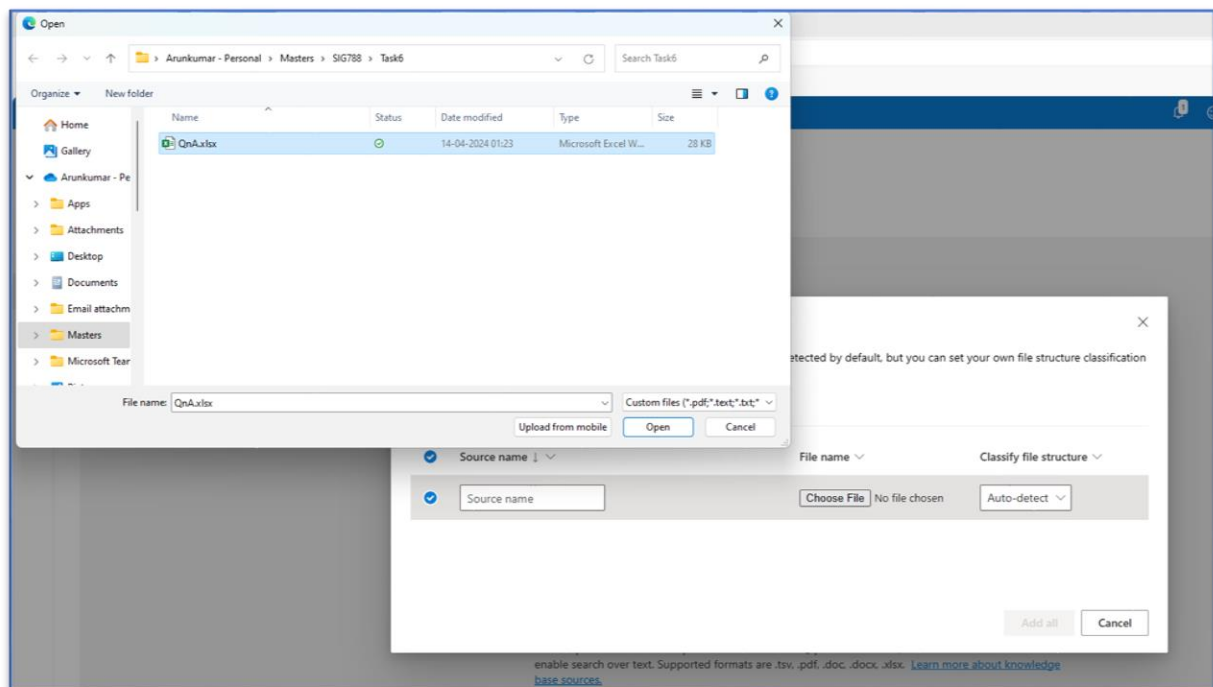

```
***** Creating a new project *****
view created project info:
    name: DrugTariffAdvisor
    language: en
    description: FAQs & Pricing information of Drug Tariff in England
```

4. The project is loaded and the source Excel file, created in the previous steps, is added. This is then verified in the portal and confirmed in the 'Edit Knowledge Base'.

In the Knowledge Base, it's evident that all the questions from the Excel file have been added. This includes dataset questions, FAQs, and greetings.

The screenshots below clearly show that all the QnAs from the Excel file, along with the alternate questions, FAQs, and greetings, have been successfully loaded

Deploy the project:

```
with authoring_client:
    # Step 3: deploy the project

    print("\n***** Deploying the project *****")

    deployment_poller = authoring_client.begin_deploy_project(
        project_name=project_name,
        deployment_name="production"
    )
    deployment_poller.result()

    # list all deployments
    deployments = authoring_client.list_deployments(
        project_name=project_name
    )

    print("view project deployments")
    for d in deployments:
        print(d)
```

```
***** Deploying the project *****

```

**Azure AI | Language Studio**

Language Studio > Custom question answering > DrugTariffAdvisor - Deploy knowledge base

## Deploy knowledge base

Deploy knowledge base and create a bot in a few clicks.

Deploy Get prediction URL

✓ Your knowledge base is now deployed. You can get your prediction URL or create a bot.

Knowledge base status			
State: ①	Deployed ✓	Resource:	ID-S223919051-Task
Deployment Date: ①	4/14/2024 ✓	Location:	eastus
Deployment Time: ①	1:37:42 AM ✓	Tier:	Standard (S)

**Next steps: Create a bot**

Step 1: [Read the documentation](#) to learn more about creating bots.

Step 2: Go to Azure to create a bot.

[Create a bot](#)

Test the project:

Testing the project with 1 question to ensure the model is working

```
# 1. Test by asking a question
qna_client = QuestionAnsweringClient(endpoint, AzureKeyCredential(key))

with qna_client:
    question= "Detail on product Abatacept 125mg/1ml solution for injection pre-filled disposable devices?"
    output = qna_client.get_answers(
        question=question,
        top=3,
        confidence_threshold=0.5,
        include_unstructured_sources=True,
        short_answer_options=qna.ShortAnswerOptions(
            confidence_threshold=0.5,
            top=1
        ),
        project_name=project_name,
        deployment_name="test"
    )
    if output.answers:
        best_candidate = [a for a in output.answers if a.confidence and a.confidence > 0.5][0]
        print("Q: {}".format(question))
        print("A: {}".format(best_candidate.answer))
    else:
        print(f"No answers returned from question '{question}'")

Q: Detail on product Abatacept 125mg/1ml solution for injection pre-filled disposable devices?
A: We have 1 pack sizes for Abatacept 125mg/1ml solution for injection pre-filled disposable devices with the pack sizes of 4.0 and the category Part VIIIA Category C with the prices £1209.60 respectively.
```

Testing with Chit-Chat:

```
# 2. Testing by initiating a chit-chat.

qna_client = QuestionAnsweringClient(endpoint, AzureKeyCredential(key))
with qna_client:
    first_question= "Hello"

    output = qna_client.get_answers(
        question=first_question,
        top=3,
        confidence_threshold=0.5,
        include_unstructured_sources=True,
        short_answer_options=qna.ShortAnswerOptions(
            confidence_threshold=0.5,
            top=1
        ),
        project_name=project_name,
        deployment_name="test"
    )
    if output.answers:
        best_candidate = [a for a in output.answers if a.confidence and a.confidence > 0.2][0]
        print(u"Q: {}".format(first_question))
        print(u"A: {}".format(best_candidate.answer))

    print("\n*****\n")
    else:
        print(f"No answers returned from question '{first_question}'")
```

```

if best_candidate.qna_id:
    followup_question = "What is the Drug Tariff?"

    output = qna_client.get_answers(
        question=followup_question,
        top=3,
        confidence_threshold=0.5,
        answer_context=qna.KnowledgeBaseAnswerContext(
            previous_question=first_question,
            previous_qna_id=best_candidate.qna_id
        ),
        short_answer_options=qna.ShortAnswerOptions(
            confidence_threshold=0.5,
            top=1
        ),
        include_unstructured_sources=True,
        project_name=project_name,
        deployment_name="test"
    )
    if output.answers:
        print(u"Q: {}".format(followup_question))
        print(u"A: {}".format(output.answers[0].answer))

print('\n*****\n')
else:
    print(f"No answers returned from question '{followup_question}'")

```

```

Q: Hello
A: Hi there! What can I help you with?

*****

Q: What is the Drug Tariff?
A: NHS Prescription Services produces the Drug Tariff on a monthly basis on behalf of the Department of Health and Social Care (DHSC).

The Drug Tariff outlines:

what will be paid to pharmacy contractors for NHS services provided either for reimbursement or for remuneration rules to follow when dispensing value of the fees and allowances you will be paid drug and appliance prices you will be paid

The preface of the Drug Tariff contains additions, deletions and any other alterations to the Drug Tariff.

Definitions:

This section outlines the meaning of common terms used in the Tariff.

Where to access the Drug Tariff

The Drug Tariff is available in two versions on our website, a PDF version and the electronic Drug Tariff (eDT).

The PDF version is a duplicate of the paper tariff. This can be downloaded and used offline.

The electronic tariff requires a continuous connection to the internet. There are no page numbers, and the format is different to the paper Tariff.

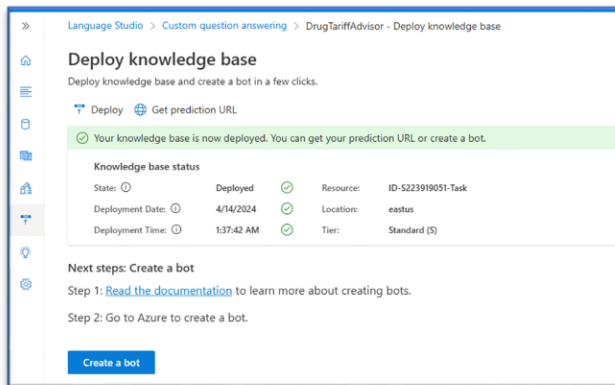

*****

```

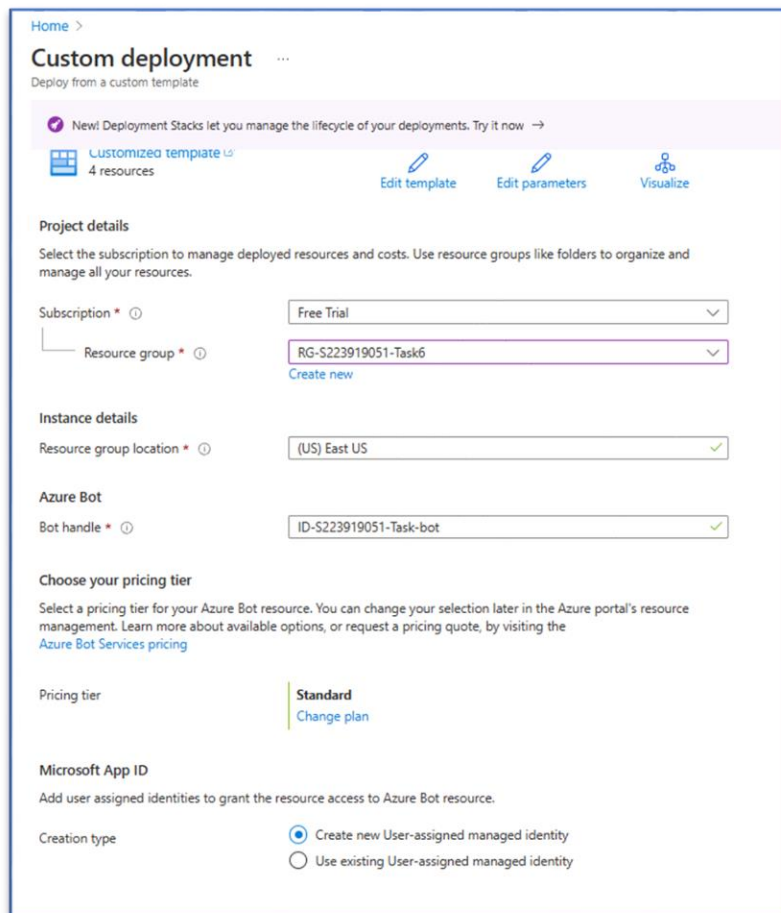

Create the bot:

As now we have tested in Python SDK with the question, let's create the bot service in Azure portal.

## 1. Click Create a Bot.

## 2. Create custom deployment to create a bot

## 3. Click Next and Provide the following

- App Name
- SDK Language to C#
- Select create new app service plan
- Get & update the Language resource Key from the Language deployed resource
- Then click on review + Create
- Then after validation click **Create**

Home > Custom deployment ...  
Deploy from a custom template

New! Deployment Stacks let you manage the lifecycle of your deployments. Try it now →

Basics Web App Review + create

App Service

App name \* ID-S223919051 ✓  
.azurewebsites.net

SDK language selection \* C# ✓

App Service Plan

App Service plan pricing tier determines the location, features, cost and compute resources associated with your app.  
[Learn more](#)

Creation type  
☒ Create new app service plan  
☐ Use existing app service plan

**i** The pricing tier currently defaults to 'S1 Standard'. It can be modified by visiting the app service plan resource page once the resource has been created, or you can choose an existing plan in your subscription.

App Settings

In App Service, these app settings are variables passed as environment variables to the bot code.

Resource Group Name RG-S223919051-Task6

Custom deployment ...  
Deploy from a custom template

charge or bill my current payment method for the fees associated with the offering(s), including applicable taxes, with the same billing frequency as my Azure subscription, until I discontinue use of the offering(s); and (c) agree that, if the deployment involves 3rd party offerings, Microsoft may share my contact information and other details of such deployment with the publisher of that offering.

Microsoft assumes no responsibility for any actions performed by third-party templates and does not provide rights for third-party products or services. See the [Azure Marketplace Terms](#) for additional terms.

Deploying this template will create one or more Azure resources or Marketplace offerings. You acknowledge that you are responsible for reviewing the applicable pricing and legal terms associated with all resources and offerings deployed as part of this template. Prices and associated legal terms for any Marketplace offerings can be found in the [Azure Marketplace](#); both are subject to change at any time prior to deployment.

Neither subscription credits nor monetary commitment funds may be used to purchase non-Microsoft offerings. These purchases are billed separately.

If any Microsoft products are included in a Marketplace offering (e.g. Windows Server or SQL Server), such products are licensed by Microsoft and not by any third party.

Basics

Subscription	Free Trial
Resource group	RG-S223919051-Task6
Resource group location	East US
Bot handle	ID-S223919051-Task-bot
Pricing tier	Standard
Creation type	Create new User-assigned managed identity

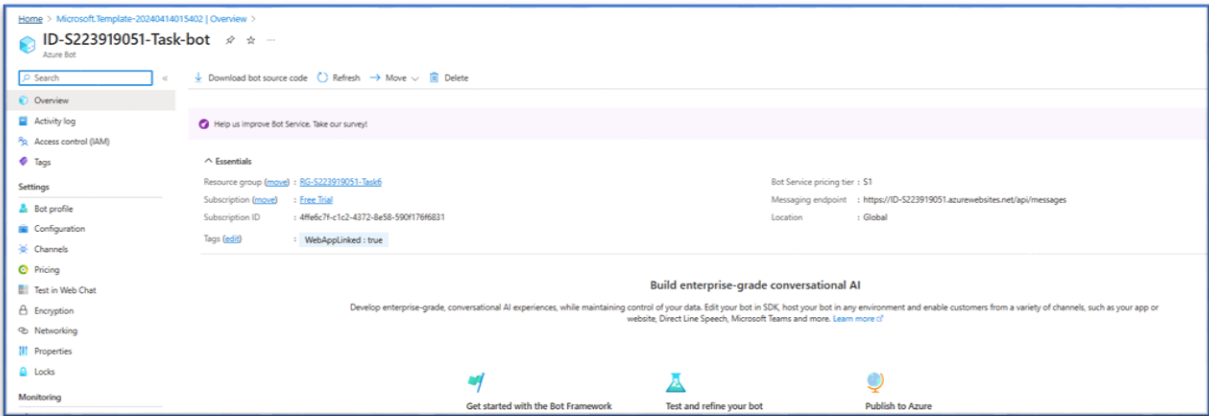

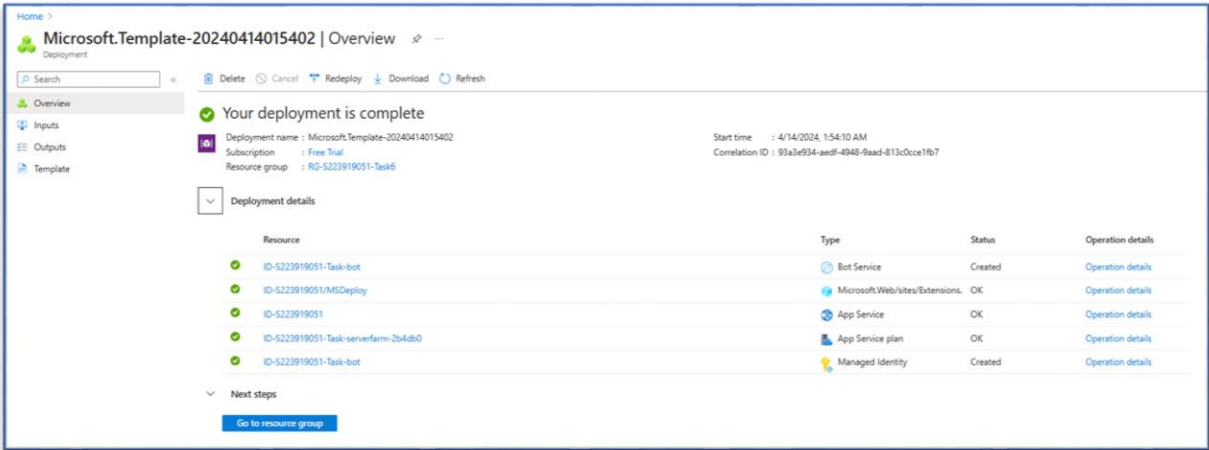

Web App

App name	ID-S223919051
SDK language selection	C#
Creation type	Create new app service plan
Language Resource Key	.....
Language project name	DrugTariffAdvisor
Language service endpoint hostname	https://ID-S223919051-Task.cognitiveservices.azure.com

Schema Transformation Version  

This determines how Bot Service converts messages sent between your bot and channels. [Learn more](#)

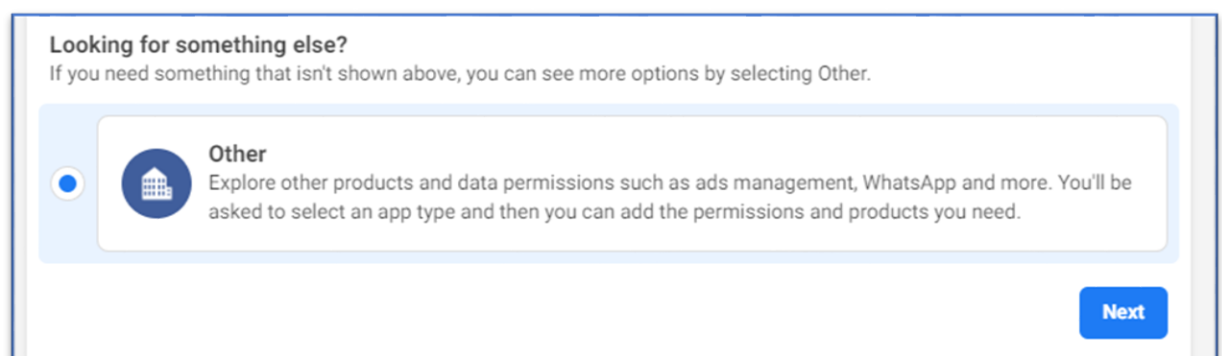

No OAuth Connection settings defined

Channel:

1. Click on Facebook channel & then go to <https://developers.facebook.com/>
2. Login into the facebook developer using the personal username and password.
3. Click on create new app

4. Select Other & next

5. Click Consumer and click next

**Create an app** ✕ Cancel

**Type**

**Select an app type**  
The app type can't be changed after your app is created. [Learn more](#)

**Consumer**  
Connect consumer products and permissions, like Facebook Login and Instagram Basic Display to your app.

**Business**  
Create or manage business assets like Pages, Events, Groups, Ads, Messenger, WhatsApp, and Instagram Graph API using the available business permissions, features and products.

## 6. Name the App "" and create app

**Add an app name**  
This is the app name that will show on your My Apps page and associated with your app ID. You can change the name later in Settings.

DrugTariffAdvisor 17/30

**App contact email**  
This is the email address we'll use to contact you about your app. Make sure it is an address you check regularly. We may contact you about policies, app restrictions or recovery if your app is deleted or compromised.

aku692@gmail.com

**Business portfolio - Optional**  
Connecting a business portfolio to your app is only required for certain products and permissions. You'll be asked to connect a Business Account when you request access to those products and permissions.

No Business Manager account selected

By proceeding, you agree to the [Meta Platform Terms](#) and [Developer Policies](#).

Previous Create app

## 7. Add Product to app set up messenger & Configure the object.

**Messenger API Setup**  
Follow the steps to set up your API. Once finished, your Facebook Business Page can start sending and receiving messages.

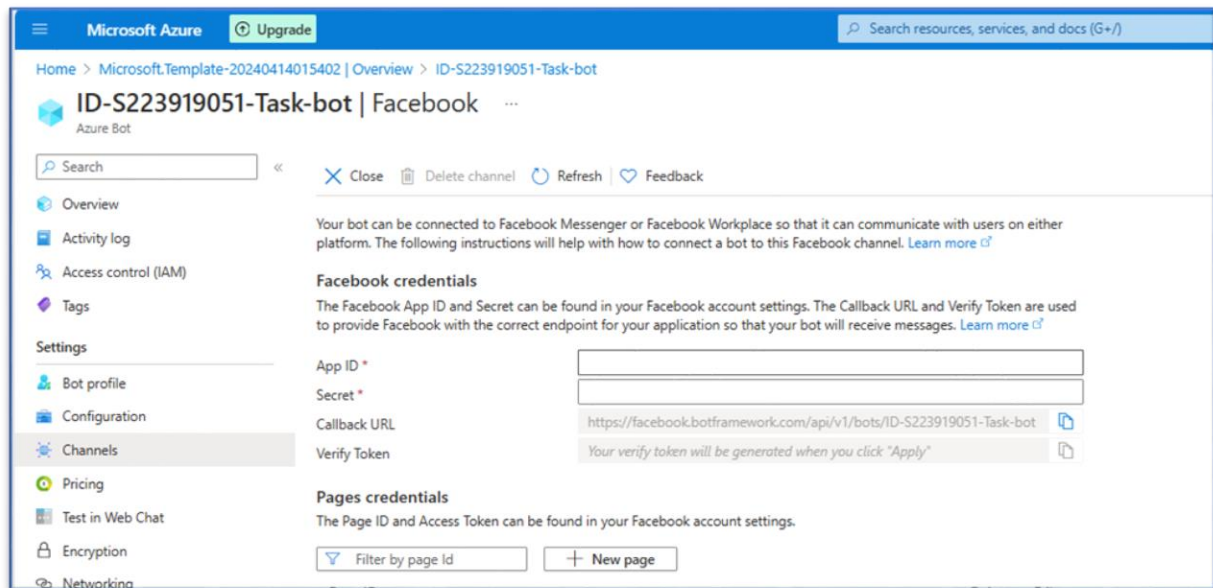

**Messenger Platform**  
Welcome to the Messenger Platform!  
The Messenger Platform offers a rich set of APIs, web plug-ins, and a complete webview that give you everything you need to build awesome experiences. Reach people across every device and platform they use, support multiple communication channels, create hybrid experiences that incorporate automated and live chat, and more, all in Messenger.  
To ensure quality and prevent abuse of the platform, all Messenger apps must be submitted for review before they can interact with everyone on Messenger. During development you will be able to send messages to anyone that has been granted either the administrator, developer or tester role for your app.  
To get started, please read the [developer documentation](#) for complete details. Your access to and use of the platform are subject to [Platform Policies](#) and [Developer Policies](#), together with all other applicable terms and policies.

**Increase traffic to Messenger**  
Create ads to help more people discover your experience in Messenger. [Learn more](#)

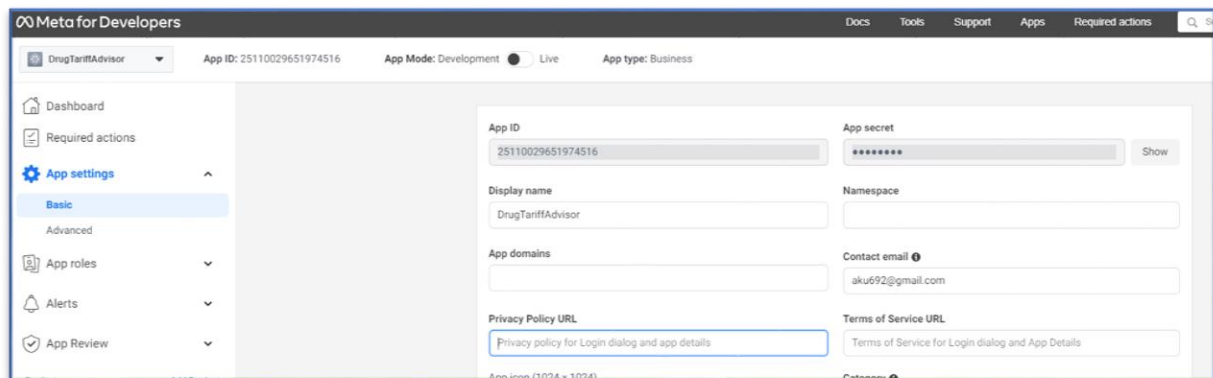

## 8. Configuration:

**1. Configure webhooks**  
Configure a custom webhook URL or use services that help you set up an endpoint. [Learn more.](#)

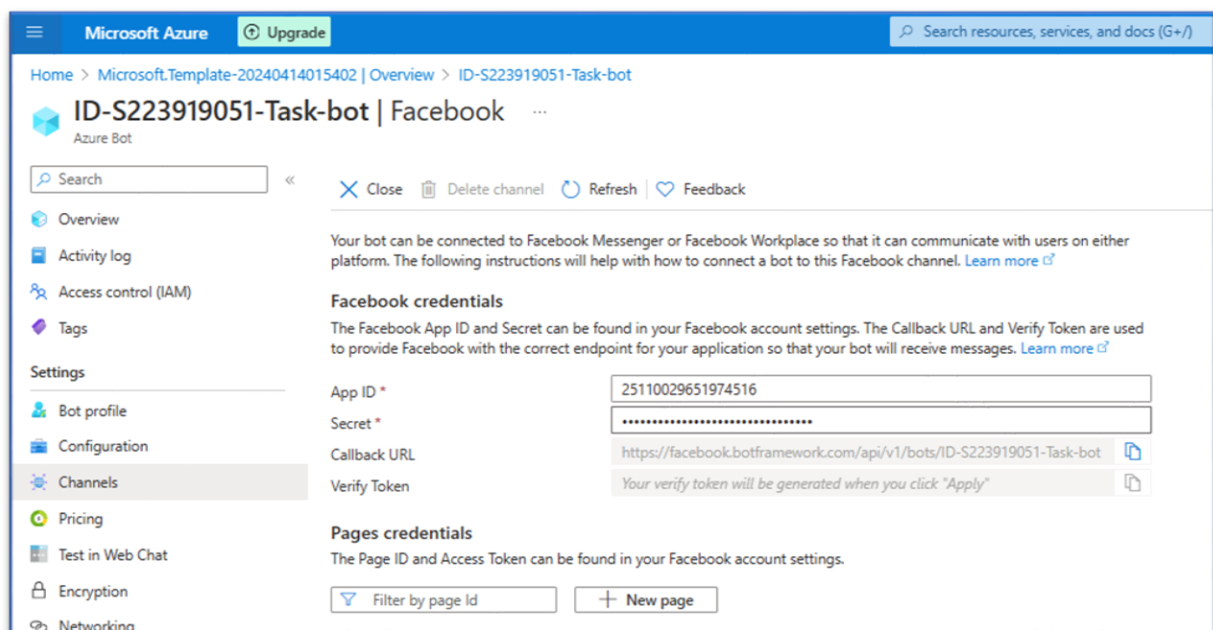

Configuring webhooks by getting into the Azure portal to create facebook channel

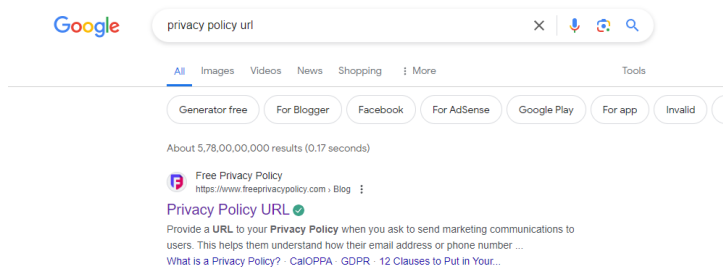

Get the AppID and Secret from the Facebook developer page in app setting basic.

Updated the same in Azure portal

Then go to Facebook developer & before we need to create the privacy policy URL  
Goto <https://app.freeprivacypolicy.com/>

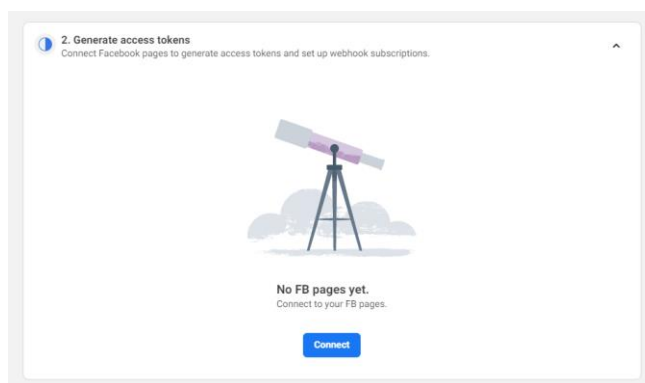

Click on free privacy policy URL & click generate the URL and update the same in the facebook developer Privacy policy URL & select category and save changes

 A screenshot of the "Privacy Policy Generator" website. The title is "Privacy Policy Generator". Below it, it says "Almost done. Let us know where you want us to send you the Privacy Policy." There is a section titled "Your e-mail address to receive the Privacy Policy" with the text "You will receive the Privacy Policy to this email address". Below this is a text input field containing "aku692@gmail.com". There is a section titled "Price for this Privacy Policy: 0 USD (it's free)". Below this are two buttons: "Go Back" and "Generate". At the bottom, there is a disclaimer: "By clicking 'Generate', you agree to our Terms of Use, our Privacy Policy and our Disclaimer."

 A screenshot of the Facebook Developer App Settings form. The form has two columns. The left column contains: "App ID" (25110029651974516), "Display name" (DrugTariffAdvisor), "App domains" (empty), "Privacy Policy URL" (https://www.freepolicygenerator.com/live/16f8554e-d883-44ed-b2bb-f3), "App icon (1024 x 1024)" (a placeholder icon), and "Verifications" (Business verification). The right column contains: "App secret" (a masked string with a "Show" button), "Namespace" (empty), "Contact email" (aku692@gmail.com), "Terms of Service URL" (Terms of Service for Login dialog and App Details), "Category" (Business and pages), and "Save changes" button.

Now click on generate access token in Messenger API settings to generate the access token for the azure portal

Then create the sign in to the facebook account to authenticate and create the page access token and ID then in **Azure portal** updated the page ID and Access Token and click **Apply**

### Configure the page ×

Page ID \*

Access Token \*

Close Delete channel Refresh Feedback

Your bot can be connected to Facebook Messenger or Facebook Workplace so that it can communicate with users on either platform. The following instructions will help with how to connect a bot to this Facebook channel. [Learn more](#)

**Facebook credentials**  
The Facebook App ID and Secret can be found in your Facebook account settings. The Callback URL and Verify Token are used to provide Facebook with the correct endpoint for your application so that your bot will receive messages. [Learn more](#)

App ID \*

Secret \*

Callback URL

Verify Token

**Pages credentials**  
The Page ID and Access Token can be found in your Facebook account settings.

+ New page

Page ID	Delete	Edit
115912323141537		

**Facebook Workplace**  
Facebook Workplace is a business-oriented version of Facebook which allows employees to easily connect and collaborate. It contains live videos, news feeds, groups, messenger, reactions, search, and trending posts. To use Facebook Workplace with your bot, you must create a Workplace account and a custom integration to connect the bot. [Learn more](#)

This would create the Facebook channel in the Azure Bot

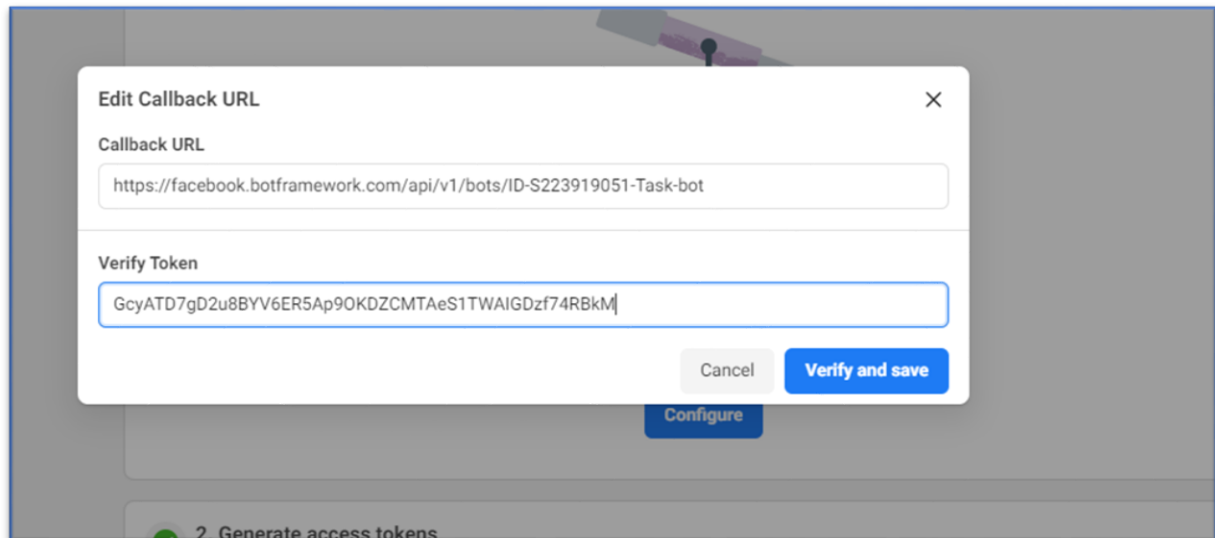

Get bot embed codes Refresh Feedback

You are using the updated channels page. Let us know what you think by providing feedback Feedback

This bot is connected with the following channels.

Channel	Health status	Details	Actions
Direct Line	Healthy	REST API for communicating directly with a bot	
Facebook	Healthy	Support for Text Messaging via Facebook	<a href="#">Open in Messenger</a>
Web Chat	Healthy	Embeddable Web Chat control	

Then go back to Facebook developer to configure the Webhooks by providing the Callback URL and token created in the Microsoft azure portal.

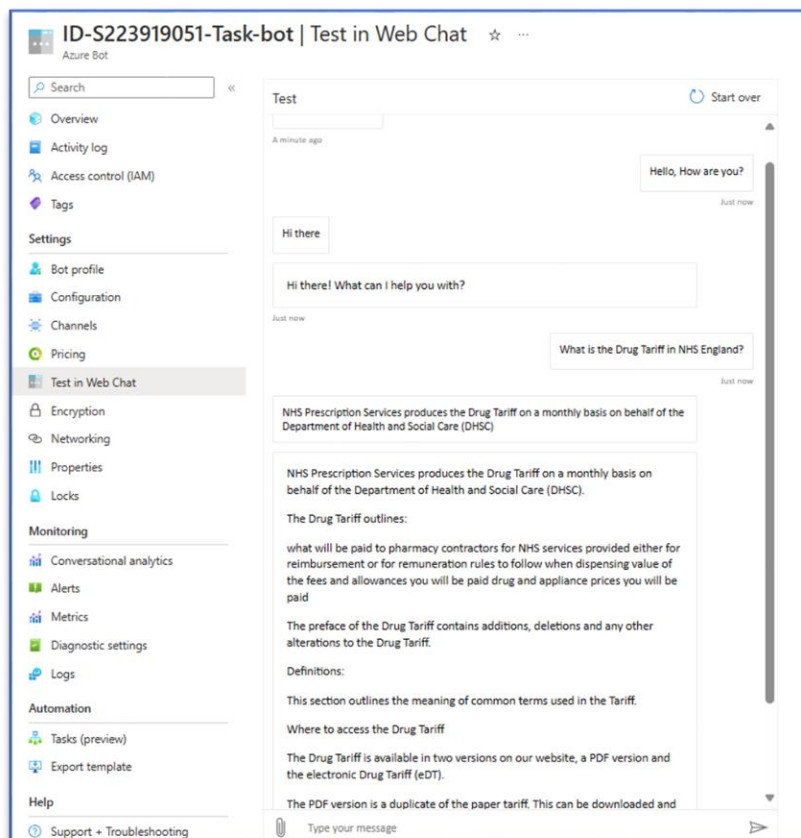

Click verify and save.

We are all set to open the messenger and test the model but we will test the bot in the Webchat and then in the messenger.

### Webchat Test

Click test in Webchat:

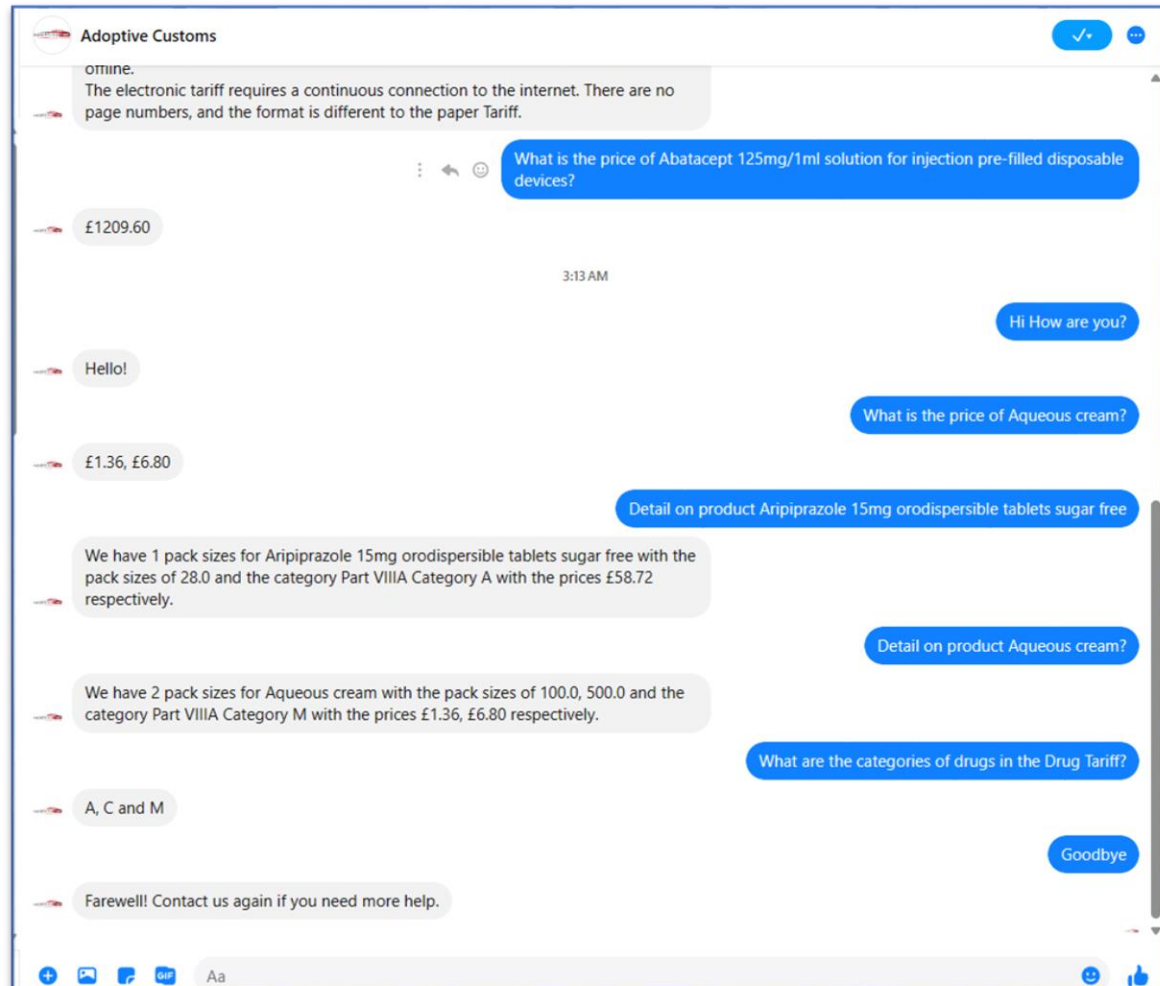

### Facebook Messenger Test:

Go to Channels, and click on open in messenger and fire questions to DrugAdvisorBot services.

Below is the outcome of the service.

As successfully completed the project, now let's delete the resource and resource group to ensure the billing is under control.

### Conclusion:

The Drug Tariff Advisor Bot, powered by Azure Cognitive Language Studio, provides healthcare professionals in England with easy access to up-to-date drug tariff information. It enhances decision-making and streamlines inventory management, contributing to healthcare efficiency.

### Potential future enhancements include:

- Integrating with other healthcare platforms for a unified user experience.
- Adapting the bot for different languages and regional drug tariffs.
- Implementing a feedback mechanism for continuous improvement.
- Exploring advanced NLP features for enhanced interactivity.

## Clean up Activity:

As completed the project, cleaning up the resources and resource group to reduce cost on the Azure Student subscription.
