Donna, Enid, and Mary,
for their love,
support, and encouragement*

Brief Contents

- 1** The Environment and Conceptual Framework of Financial Reporting
- 2** The Accounting Information System
- 3** Income Statement, Related Information, and Revenue Recognition
- 4** Balance Sheet and Statement of Cash Flows
- 5** Accounting and the Time Value of Money
- 6** Cash and Receivables
- 7** Valuation of Inventories: A Cost-Basis Approach
- 8** Inventories: Additional Valuation Issues
- 9** Acquisition and Disposition of Property, Plant, and Equipment
- 10** Depreciation, Impairments, and Depletion
- 11** Intangible Assets
- 12** Current Liabilities and Contingencies
- 13** Long-Term Liabilities
- 14** Stockholders' Equity
- 15** Dilutive Securities and Earnings per Share

- 16** Investments
- 17** Revenue Recognition
- 18** Accounting for Income Taxes
- 19** Accounting for Pensions and Postretirement Benefits
- 20** Accounting for Leases
- 21** Accounting Changes and Error Analysis
- 22** Statement of Cash Flows
- 23** Full Disclosure in Financial Reporting

APPENDIX **A** Private Company Accounting

APPENDIX **B** Specimen Financial Statements:
The Procter & Gamble Company

APPENDIX **C** Specimen Financial Statements:
The Coca-Cola Company

APPENDIX **D** Specimen Financial Statements:
PepsiCo, Inc.

COMPANY INDEX

SUBJECT INDEX

LIST OF ACCOUNTS

From the Authors

Students and finance professionals often refer to our text as the “Bridge to the Profession” because it has provided millions of students with the knowledge and skills helpful for them to excel in their future careers. One major reason for the text’s success is that we continue to evaluate each new edition and ask the question “How can we make *Intermediate Accounting* better”? Here are examples of why we believe that we have improved not only the content but also the pedagogy of the Eighteenth Edition to help students master this subject material. This is why we are extremely excited about its publication.

- **Readability.** We have spent considerable time enhancing the readability of the text. We have broken down the content into shorter, more digestible sections by adding subheadings, bullet points, and more illustrations and tables. We also have created a more conversational tone throughout the text, often talking directly to the student and thoroughly explaining the solutions for the in-text examples.
- **Real-World Emphasis.** A proven way to help students master the subject is to explain the concepts of financial reporting using real companies whenever possible. Many of our examples use real-world companies like **Microsoft, Nike, Kmart, Home Depot, and Starbucks** to illustrate the significant financial reporting issues. In addition, our Accounting Matters feature provides up-to-date illustrations of how accounting is used in practice to provide information on the financial health of companies. Engaging discussions of contemporary issues related to the Covid-19 pandemic and impairments; new ways to compensate employees; disclosure of environmental, social, and governance (ESG) issues; and revenue recognition are just a few of the many Accounting Matters topics highlighted in the text.
- **Learn by Doing.** We have asked many students and instructors whether there is a secret for success in this course. A common response turns out to be not much of a secret—“Do the homework!” The more time students spend on the homework assignments using the various tools in this text, the more likely they will learn the essential concepts. Therefore, in addition to the homework at the end of the chapter, we have provided in the text discussion opportunities for students to work on the concept at the point of learning. As a result, a student can read the concept, followed by an example of how this concept should be applied, followed by an opportunity to practice.
- **Content Upgrades.** The topical content of the chapters has two major changes.
 1. **We have merged Chapters 1 and 2 from the previous edition into one chapter.** This consolidation should be helpful to students as it provides in one chapter the framework for concepts used in subsequent chapters.
 2. **We now provide more information related to revenue recognition in Chapter 3.** We view this material in Chapter 3 as useful to students who will not take the second part of *Intermediate Accounting*. We continue with the highly acclaimed comprehensive chapter on revenue recognition later in the text.

The more time students spend using the various tools in this text, the more likely they will learn the essential concepts. Therefore, we have provided in the text discussion opportunities for students to work on the concept at the point of learning. As a result, a student can read the concept, followed by an example of how this concept should be applied, followed by an opportunity to practice.

In addition, we made significant changes to the chapters on receivables; property, plant, and equipment; current liabilities; stockholders equity; investments; and dilutive securities.

We want to thank Laura Wiley and Kristen Fuhremann for their help in developing the many changes to this new edition. Laura and Kristen assisted us with updating and streamlining chapter content. They also considered the content from a learning perspective to help us identify how we can help students to best navigate the complex topics covered in the text.

We are excited about *Intermediate Accounting*, Eighteenth Edition. We believe it meets an important objective of providing useful information to educators and students interested in learning about GAAP. Suggestions and comments from users of this text will be appreciated. Please feel free to e-mail any one of us.

About the Authors

Don Kieso

DONALD E. KIESO, PhD, CPA, received his bachelor's degree from Aurora University and his doctorate in accounting from the University of Illinois. He has served as chairman of the Department of Accountancy and is currently the KPMG Emeritus Professor of Accountancy at Northern Illinois University. He has public accounting experience with Price Waterhouse & Co. (San Francisco and Chicago) and Arthur Andersen & Co. (Chicago) and research experience with the Research Division of the American Institute of Certified Public Accountants (New York). He has done post-doctorate work as a Visiting Scholar at the University of California at Berkeley and is a recipient of NIU's Teaching Excellence Award and four Golden Apple Teaching Awards. Professor Kieso is the author of other accounting and business books and is a member of the American Accounting Association, the American Institute of Certified Public Accountants, and the Illinois CPA Society. He has served as a member of the Board of Directors of the Illinois CPA Society, then AACSB's Accounting Accreditation Committees, the State of Illinois Comptroller's Commission, as Secretary-Treasurer of the Federation of Schools of Accountancy, and as Secretary-Treasurer of the American Accounting Association. Professor Kieso is currently serving on the Board of Trustees and Executive Committee of Aurora University, as a member of the Board of Directors of Kishwaukee Community Hospital, and as Treasurer and Director of Valley West Community Hospital. From 1989 to 1993, he served as a charter member of the National Accounting Education Change Commission. He is the recipient of the Outstanding Accounting Educator Award from the Illinois CPA Society, the FSA's Joseph A. Silvoso Award of Merit, the NIU Foundation's Humanitarian Award for Service to Higher Education, a Distinguished Service Award from the Illinois CPA Society, and in 2003 an honorary doctorate from Aurora University.

Jerry Weygandt

JERRY J. WEYGANDT, PhD, CPA, is the Arthur Andersen Alumni Emeritus Professor of Accounting at the University of Wisconsin—Madison. He holds a Ph.D. in accounting from the University of Illinois. Articles by Professor Weygandt have appeared in the *Accounting Review*, *Journal of Accounting Research*, *Accounting Horizons*, *Journal of Accountancy*, and other academic and professional journals. These articles have examined such financial reporting issues as accounting for price-level adjustments, pensions, convertible securities, stock option contracts, and interim reports. Professor Weygandt is author of other accounting and financial reporting books and is a member of the American Accounting Association, the American Institute of Certified Public Accountants, and the Wisconsin Society of Certified Public Accountants. He has served on numerous committees of the American Accounting Association and as a member of the editorial board of the *Accounting Review*; he also has served as President and Secretary-Treasurer of the American Accounting Association. In addition, he has been actively involved with the American Institute of Certified Public Accountants and has been a member of the Accounting Standards Executive Committee (AcSEC) of that organization. He has served on the FASB task force that examined the reporting issues related to accounting for income taxes and served as a trustee of the Financial Accounting Foundation. Professor Weygandt has received the Chancellor's Award for Excellence in Teaching and the Beta Gamma Sigma Dean's Teaching Award. He is a member of the board of directors of Artis-Naples. He is the recipient of the Wisconsin Institute of CPA's Outstanding Educator's Award and the Lifetime Achievement Award. He also received the American Accounting Association's Outstanding Educator Award.

Terry Warfield

TERRY D. WARFIELD, PhD, is the PwC Chair in Accounting at the University of Wisconsin—Madison. He received a B.S. and M.B.A. from Indiana University and a Ph.D. in accounting from the University of Iowa. Professor Warfield's area of expertise is financial reporting, and prior to his academic career, he worked for five years in the banking industry. He served as the Academic Accounting Fellow in the Office of the Chief Accountant at the U.S. Securities and Exchange Commission in Washington, D.C. from 1995–1996. Professor Warfield's primary research interests concern financial accounting standards and disclosure policies. He has published scholarly articles in *The Accounting Review*, *Journal of Accounting and Economics*, *Research in Accounting Regulation*, and *Accounting Horizons*, and he has served on the editorial boards of *The Accounting Review*, *Accounting Horizons*, and *Issues in Accounting Education*. He has served as president of the Financial Accounting and Reporting Section, the Financial Accounting Standards Committee of the American Accounting Association (Chair 1995–1996), and on the AAA-FASB Research Conference Committee. He also served on the Financial Accounting Standards Advisory Council of the Financial Accounting Standards Board and as a trustee of the Financial Accounting Foundation. Professor Warfield has received teaching awards at both the University of Iowa and the University of Wisconsin, and he was named to the Teaching Academy at the University of Wisconsin in 1995. Professor Warfield has developed and published several case studies based on his research for use in accounting classes. These cases have been selected for the AICPA Professor-Practitioner Case Development Program and have been published in *Issues in Accounting Education*.

New to This Edition

The last few years have brought many changes to the teaching and learning environment. As a result, we scrutinized every line, every section, every chapter of *Intermediate Accounting*, to make sure our text best meets the needs of today's students and instructors. The most significant changes throughout the text include:

- MORE headings and bulleted/numbered lists to highlight key information.
- NEW “What, Why, and How” chapter opening feature.
- NEW Chapter Roadmap organized by learning objectives.
- NEW Analytics in Action feature in every chapter.
- NEW numbered examples throughout the discussion.
- NEW “Put It into Practice” feature at the end of each learning objective.
- ADDED T-accounts, where appropriate, to illustrate effects of accounting entries on account balances.

Changes by chapter are as follows.

Content Changes by Chapter

Chapter 1: The Environment and Conceptual Framework of Financial Reporting (previously Chapters 1 and 2)

- NEW discussion of the historical cost principle.
- REVISED illustration of the organizational structure for setting accounting standards.
- NEW Accounting Matters feature about (1) a situation in which the Codification did not cover a certain type of transaction and (2) neutrality.
- UPDATED Accounting Matters feature on materiality.

Chapter 2: The Accounting Information System (previously Chapter 3)

- NEW discussion on computerized and manual accounting systems.
- UPDATED discussion of the journal and ledger.
- NEW graphic highlighting the steps of the accounting cycle as they are discussed throughout the chapter.
- NEW illustrations on (1) the principles of an efficient and effective accounting information system, (2) the transaction identification process, (3) journalizing and posting, and (4) summary of the accounting cycle.
- NEW Accounting Matters features on (1) the use of bots in accounting and (2) blockchain.

Chapter 3: Income Statement, Related Information, and Revenue Recognition (previously Chapter 4)

- NEW discussion on (1) the fundamentals of revenue recognition, with practice and homework, and (2) the quality of earnings.
- REVISED illustration and discussion of the components of the multiple-step income statement.

- MOVED discussion of accounting changes and errors to an appendix.

Chapter 4: Balance Sheet and Statement of Cash Flows (previously Chapter 5)

- NEW illustration comparing the operating cycles of a merchandising company and a manufacturing company.
- NEW Accounting Matters feature on (1) how cruise lines navigated the Covid-19 pandemic, (2) cryptocurrency and how it is reported on the balance sheet, (3) how companies delay payments to suppliers to increase financial flexibility, and (4) comparing **Netflix's** net income to operating cash flow.
- MOVED discussion of footnotes and techniques of disclosure to an appendix.

Chapter 5: Accounting and the Time Value of Money (previously Chapter 6)

- NEW inclusion of an Excel solution in the margin for time value of money examples throughout the chapter.
- NEW appendix demonstrating the use of Excel and financial calculators to solve time value of money problems.

Chapter 6: Cash and Receivables (previously Chapter 7)

- NEW inclusion of an Excel solution in the margin for time value of money examples throughout the chapter.
- EXPANDED discussion of the effective-interest method of amortization of a discount on notes receivable.
- NEW Accounting Matters feature on (1) why cryptocurrency is not reported as cash and (2) how receivables are denominated in foreign currencies.
- REMOVED discussion of the fair value option for reporting receivables.

Chapter 7: Valuation of Inventories: A Cost-Basis**Approach** (previously Chapter 8)

- NEW discussion comparing the inventory valuation methods and the basis for selecting an inventory method.
- EXPANDED discussion of inventory cost flow, including an illustration of the computation of cost of goods sold.
- NEW illustrations for (1) FOB shipping point and FOB destination and consigned goods and (2) product versus period costs.
- REMOVED discussion of special sales agreements and high rates of return. These topics are covered in depth in Chapter 17.

Chapter 8: Inventories: Additional Valuation Issues

(previously Chapter 9)

- NEW Accounting Matters feature about (1) how companies handle excess inventory situations and (2) how some companies experienced significant increases in gross margin during the Covid-19 pandemic.
- REMOVED discussion of using an allowance for inventory market adjustments.
- NEW illustrations on (1) purchase commitment disclosures from actual companies, (2) the advantages of the retail inventory method, and (3) the pros and cons of inventory management.

Chapter 9: Acquisition and Disposition of Property, Plant, and Equipment (previously Chapter 10)

- NEW discussions on (1) the cost of land improvements and (2) accounting for asset retirement costs and obligations.
- EXPANDED discussion and NEW illustration on building acquisition costs, showing if the building is purchased, constructed by an independent contractor, or self-constructed.
- NEW illustrations on (1) the decision rule for amount of interest to capitalize, (2) how to calculate avoidable interest, and (3) expenditures over the life of a vehicle and how to account for them.
- REMOVED discussion on cash discounts when valuing fixed assets.

Chapter 10: Depreciation, Impairments, and Depletion (previously Chapter 11)

- REVISED discussions on (1) group and composite method of depreciation, (2) recognition and measurement of impairments, and (3) the continuing controversy related to full cost and successful efforts accounting.
- NEW illustrations on (1) physical and economic factors affecting depreciation and (2) impairments.
- NEW Accounting Matters feature on depreciation choices.

Chapter 11: Intangible assets (previously Chapter 12)

- REVISED discussion on (1) the valuation of purchased and internally created intangibles and (2) the recognition, measurement, and impairment of both limited-life and indefinite-life impairments.

- EXPANDED discussion of bargain purchase accounting.
- NEW Accounting Matters feature on (1) reporting cryptocurrencies, (2) **Disney's** revenue from intangible assets, and (3) research and development costs.
- NEW illustration on different types of intangibles.
- UPDATED Accounting Matters box on goodwill impairments.

Chapter 12: Current Liabilities and Contingencies (previously Chapter 13)

- NEW discussion on valuation and reporting of current liabilities.
- EXPANDED discussions of (1) unearned revenues related to gift cards, customer advances, and service type warranties, and (2) presentation and analysis, featuring **Best Buy, Microsoft, Walmart, and General Electric**.
- UPDATED discussion of classification for refinancing of short-term debt.
- NEW illustration on payroll deductions.
- NEW Accounting Matters feature on salary, benefits, and generation Z.

Chapter 13: Long-Term Liabilities (previously Chapter 14)

- STREAMLINED types of bonds discussion.
- EXPANDED discussion of mortgage bonds.
- MOVED off-balance sheet financing to Presentation and Decision Analysis section.
- NEW illustration on notes and bonds payable.
- NEW graphical presentation of time value material with Excel solutions presented.
- NEW Accounting Matters box on (1) hot market for bonds and (2) the use of environmental, social and governance (ESG) bonds to fund ESG projects.

Chapter 14: Stockholders' Equity (previously Chapter 15)

- NEW discussions on (1) characteristics and advantages of a corporation and (2) retiring treasury stock.
- EXPANDED discussions on (1) forming a corporation and components of stockholders' equity and (2) treasury stock.
- NEW Accounting Matters feature on (1) SPACS, (2) Class (B) stock, and (3) stock splits.
- NEW illustration on redeemable preferred stock.

Chapter 15: Dilutive Securities and Earnings per Share (previously Chapter 16)

- NEW discussions on (1) dilution of ownership (and NEW illustration), (2) stock compensation plans related to restricted-stock and restricted-stock-unit plans, (3) trends in stock compensation, and (4) usefulness of earnings per share information.
- REVISED discussion of convertibles and stock warrants.
- Updated Accounting Matters feature on convertible debt issuances.

Chapter 16: Investments (previously Chapter 17)

- NEW discussions on (1) overview of investments in securities and (2) the advantages of investments in various securities.
- REVISED (1) presentation of securities information in the financial statements and (2) discussion of the fair value option.
- NEW example of equity method of accounting.
- NEW illustration on comparing equity method to consolidation.

Chapter 17: Revenue Recognition (previously Chapter 18)

- NEW presentation criteria for revenue recognition over time.
- REVISED discussions of (1) identifying contract with customer and (2) sales returns and allowances.
- NEW illustrations on (1) steps in the revenue recognition process and (2) repurchase agreements and consignments.

Chapter 18: Accounting for Income Taxes (previously Chapter 19)

- REVISED presentation issues related to deferred tax assets and deferred tax liabilities.
- NEW illustrations on (1) the difference between income tax payable and income tax expense and (2) loss carryforwards.
- NEW Accounting Matters feature on deferring tax payments.

Chapter 19: Accounting for Pensions and Postretirement Benefits (previously Chapter 20)

- NEW discussion on issues related to retirement planning.
- REVISED discussion on defined contribution versus defined benefit plans.
- NEW illustrations on (1) retirement related to age categories and (2) the rationale for various disclosures in the notes to the financial statements.

Chapter 20: Accounting for Leases (previously Chapter 21)

- STREAMLINED discussion of advantages and disadvantages from both the lessee and lessor perspective.
- REVISED discussion related to conceptual nature of leasing.
- NEW illustrations on (1) advantages of leasing from the lessor's perspective, (2) operating leases, and (3) computing right-of-use lease assets.
- REVISED illustration on lease classification tests.

Chapter 21: Accounting Changes and Error Analysis (previously Chapter 22)

- UPDATED disclosure related to change in estimates.
- REVISED example to emphasize change in inventory rather than long-term construction contracts.

Chapter 22: Statement of Cash Flows (previously Chapter 23)

- UPDATED discussion on the usefulness of the cash flow statement.
- NEW illustration on working capital adjustments.
- UPDATED illustration on cash flow classifications.
- NEW Accounting Matters feature on cash flow pressures during Covid-19.

Chapter 23: Full Disclosure in Financial Reporting (previously Chapter 24)

- NEW discussion of climate-related disclosures.
- REVISED discussion of (1) related parties and subsequent events and (2) Internet financial reporting.
- NEW Accounting Matters feature on influence of social media on accounting disclosures.

Reimagined Pedagogy

This edition continues the tradition of providing numerous key learning aids to help students master the text material and prepare them for a successful career in accounting, reimagined as follows.

CHAPTER 8

Inventories: Additional Valuation Issues

WHAT are additional inventory valuation issues?

One issue is what to do when inventory has lost value as a result of competitive or economic factors. Another problem arises if cost information is difficult to determine. Consider also the situation in which you have to estimate the inventory because it has been destroyed or you don't have time to count it.

Best Buy
(\$ in millions)

Partial Balance Sheet		Partial Income Statement	
Current assets		Revenue	\$40,339
Cash and cash equivalents	\$ 2,432	Cost of goods sold	31,292
Short-term investments	1,456	Gross profit	\$ 9,047
Receivables	1,280		
Merchandise inventory	5,174	Net income (loss)	\$ 1,233
Other current assets	1,387		
Total current assets	\$11,729		

WHY is understanding additional inventory valuation issues important?

The reason is that the investment in inventories is frequently the largest current asset of merchandising (retail) and manufacturing businesses. For example, consider these recent financial statements of **Best Buy**. As you can see, inventory comprises over 44% of current assets, and gross profit is over 22% of sales revenue.

Inventory information is used to compute key ratios, such as inventory turnover and gross profit rate, as well as liquidity measures such as the acid-test ratio, to provide decision-useful information about the company to investors, creditors, and management. In addition to the use of LIFO or FIFO cost flow assumptions for inventory costs that you learned about in Chapter 7, you must also understand how the comparability and therefore the usefulness of the accounting information may also be affected by inventory writes-downs, valuation at net realizable value by some companies, and the use of estimation techniques.

HOW do we account for inventory at other than historical cost?

If inventory declines in value below its original cost, for whatever reason, a company should write down the inventory to reflect this loss. The general rule is to abandon the historical cost principle when the revenue-producing ability of the asset drops below its original cost. Companies value inventory at net realizable value (similar to net selling price) in certain industries where net realizable values are easily available and cost figures are difficult to obtain. Companies estimate the value of inventory by employing the gross profit method or the retail method. As you will learn, these methods rely on historical relationships between the cost and retail values to estimate the value of inventory without taking a physical count.

Chapter Roadmap

LEARNING OBJECTIVES	TOPICS	REVIEW AND PRACTICE
LO 8.1 Describe and apply the lower-of-cost-or-net realizable value rule.	8.1 Lower-of-Cost-or-Net Realizable Value <ul style="list-style-type: none">DefinitionIllustrationMethods of applyingAdjusting to NRV	Examples <ul style="list-style-type: none">8.1 Net Realizable Value8.2 Final Inventory Value Put It into Practice LO 8.1 <ul style="list-style-type: none">8.3 Cost-of-Goods-Sold and Loss MethodsDetermine LCM

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available in Wiley Course Resources.

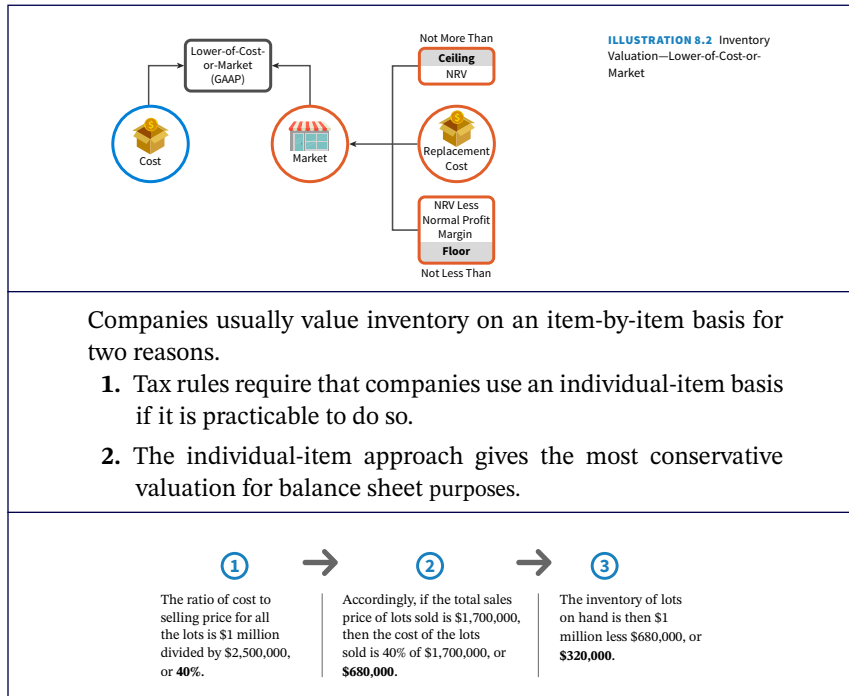

What/Why/How

Each chapter begins with an engaging overview of **what** the topic is, **why** it is important to decision-makers, and **how** the concepts are translated in accounting procedures.

Chapter Roadmap

The Chapter Roadmap allows students to easily see the chapter's topics as well as the worked-out examples and practice opportunities associated with each.

A Visual Approach

Illustrations

In each chapter, the authors carefully considered how the illustrations might best help students understand concepts.

Lists

Bulleted lists and numbered lists are used throughout, to help highlight key information.

Procedures

To help students understand how to apply accounting procedures, the authors have included a visual progression of steps.

Integrated Examples and Practice at the Point of Learning

Throughout the text, the authors have followed the approach of introducing a topic, showing an example(s), and then providing an opportunity for students to test their understanding.

Example 8.1

Net Realizable Value

FACTS Assume that **Starbucks Corporation** has unfinished inventory (unroasted coffee beans) with a cost of \$950, a sales value of \$1,000, estimated cost of completion of \$50, and estimated selling costs of \$200.

QUESTION What is the net realizable value of Starbucks's inventory?

SOLUTION

Inventory (estimated selling price)		\$1,000
Less: Estimated cost of completion	\$ 50	
Estimated selling costs	200	250
Net realizable value		\$ 750

Starbucks thus reports inventory on its balance sheet at \$750. In its income statement, Starbucks reports an inventory loss of \$200 (\$950 – \$750).

Put It into Practice LO 8.1

Determine LCNRV

FACTS Gard Corporation has the following four items in its ending inventory.

Item	Cost	Selling Price	Costs to Complete and Sell
M	\$2,000	\$3,000	\$ 900
N	5,000	8,000	3,050
O	4,400	6,000	1,375
P	3,200	5,000	1,170

Underlying Concepts

The Underlying Concepts highlight and explain major conceptual topics in the chapter.

Underlying Concepts

The objective of capitalizing interest is to obtain a measure of acquisition cost that reflects a company's total investment in the asset and to charge that cost to future periods benefited through depreciation expense.

It is common for a company to borrow money to construct an asset. Interest on the construction loan is considered part of the cost of the asset; without the loan, the asset could not be constructed. Plus, during construction, the asset is not generating revenues. Therefore, a company should record, or capitalize, these interest costs in the related asset account (see **Underlying Concepts**). [2] Once construction is complete, the asset is ready for its intended use such that it will begin generating revenues for the company. At this same time, the company should report any future interest as an expense.

To capitalize interest, companies consider three items:

1. Qualifying assets.
2. Capitalization period.
3. Amount to capitalize.

Accounting Matters

Are These Profit Margins for Real?

The process of writing down inventory is not an exact science and the estimated losses may not come to fruition. The example of **Trek Bicycle** writing down its season-ending inventory, only to go on to sell the inventory at a premium, shows the imperfect nature of these estimates.

How might users of financial statements understand when changes in profit margins are due to real changes in a company's operations or due to an accounting estimate? Well, not all disclosures are created equal, but **Nike** does a nice job of highlighting the details of changes in its profit margin in its annual report to investors as shown in the following chart.

As indicated in the following chart, Nike's margin declined by 1.3% (from 44.7% to 43.4%). While Nike saw a slight increase in selling price in excess of product cost (1.5% – 1.4%), its Other Costs were that main source of margin decline. Nike indicated these increased costs were due to the impacts of Covid-19, including increased factory cancellations costs, higher inventory obsolescence, and the adverse rate impact of supply chain costs on a lower volume of wholesale shipments.

Accounting Matters

The Accounting Matters boxes feature relatable real-world examples of how accounting is put into practice.

Developing Your Professional Skills

Critical-Thinking Cases

CT8.1 (LO 1) (LCNRV) You have been asked by the financial vice president to develop a short presentation on the LCNRV method for inventory purposes. The financial VP needs to explain this method to the president because it appears that a portion of the company's inventory has declined in value.

Instructions

The financial vice president asks you to answer the following questions.

- What is the purpose of the LCNRV method?
- What is meant by "net realizable value"?
- Do you apply the LCNRV method to each individual item, to a category, or to the total of the inventory? Explain.
- What are the potential disadvantages of the LCNRV method?

Emphasis on Critical Thinking

Critical-thinking skills are practiced through each chapter's Developing Your Professional Skills and Using Your Judgment end-of-chapter sections.

IFRS Insights

IFRS Insights offer students a quick overview of the similarities and differences between IFRS and GAAP for accounting topics. Additional IFRS Insights with assessment are available online. *Intermediate Accounting, IFRS Fourth Edition* exists as another resource.

IFRS Insights

LEARNING OBJECTIVE 8

Compare the accounting procedures related to valuation of inventories under GAAP and IFRS.

The major IFRS requirements related to accounting and reporting for inventories are found in *IAS 2* ("Inventories"), and *IAS 41* ("Agriculture"). In most cases, IFRS and GAAP are the same. The major differences are that IFRS prohibits the use of the LIFO cost flow assumption and does not have an exception to LCNRV. Following are the key similarities and differences between GAAP and IFRS related to inventories.

Data Analytics

Today's accounting profession demands that students possess strong Excel and data analytics skills. To that end, each chapter includes:

- **Analytics in Action** feature, which demonstrates the relevance of data analytics to intermediate accounting topics.
- **Analytics in Action Activities**, which include both data visualizations (Tableau/PowerBI) and Excel-based problem sets.
- Excel-based end-of-chapter problem material.
- Gradable Excel in Wiley Course Resources.

Assessment—Tableau, PowerBI, Excel...

Analytics in Action Activities encourage students to work through a data analytics problem using Excel. Additional questions referenced in the text ask students to interpret data in visualizations.

Analytics in Action Activities

Using Data Visualizations to Manage Inventory

DAR1 Effective inventory management is critical for many companies. With thousands of individual products and millions of dollars invested, inventory is often one of the largest balance sheet items. Data visualizations can provide quick insights into a company's inventory balance and identify potential issues before they become large-scale problems. For example, the following chart compares the value of inventory items included in the trial balance with those from a recent physical count. Management can easily identify any inventory variances and then further drill into the difference by inventory type or location.

Category	Value
Inventory value	\$678,798
Count value	\$686,162

Required
For this exercise, you will use data visualizations and other analytical tools to answer several questions about a hospital's inventory.
[Go to Wiley Course Resources for complete details and instructions.](#)

Using Data Analytics to Account for Inventory Adjustments

DAR2 Completing a physical inventory count is an important control over inventory. Some companies complete one annual physical count of all inventory, while others cycle through their inventory throughout the year, counting different items at different points in time. In either case, inventory balances in the general ledger are often adjusted to match the physical counts.

Required
For this exercise, you will use Excel to account for a variety of inventory adjustments related to the physical inventory count.
[Go to Wiley Course Resources for complete details and instructions.](#)

Industry	ROA (%)	Goodwill/Total Assets (%)
Electronic Technology	45	80
Health Technology	35	15
Technology Services	25	10

Energy/Minerals	3	1
Telecommunications E...	2	1

Chapter 8, Tableau and Power BI Exercise 1

General Questions

Question 1 of 2

What can be concluded from the dashboard?

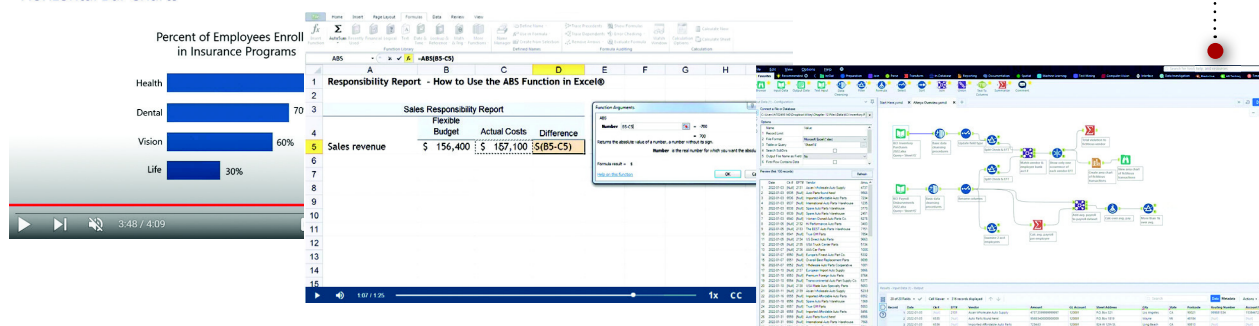

- ☐ The unit price for products in Aisle 4 is higher than the unit price of products in Aisle 5.
- ☐ The dashboard shows healthy inventory levels of products.
- ☐ The perpetual inventory system does not require periodic inventory counts.
- ☐ Aisle 9 should have space to add more inventory.

Interactive view ☒ ON

Video Resources for Tableau, Alteryx, and Excel

Students will have access to Wiley-prepared videos that will help them become familiar with and use data analytics software they will use in their careers.

Horizontal Bar Charts

Analytics in Action Insights

Application of intermediate accounting topics to data analytics are discussed throughout the text and in the Analytics in Action insight feature.

Analytics in Action: Current Ratio Analysis Can Lead to Innovation

As you know, the current ratio offers a glimpse into a company's ability to meet its current obligations. A current ratio greater than one is often desired as it means a company has sufficient current assets on hand to liquidate current liabilities. So, what does it mean when a company's current ratio is less than one? What is typically a red flag might actually be a sign of innovative business practices.

Take **Walmart** as an example. As the graph shows, Walmart's current ratio has consistently been lower than one. How does the

company make this work? With a lot of data! That is, companies like Walmart are able to pull granular data out of their accounting systems and, using sophisticated software tools, analyze that data to make business decisions. In Walmart's situation, it revised its supplier agreements to more closely align payment terms with the supplier's average total days of on-hand inventory. Tailoring the timing of payments to suppliers may therefore result in a current ratio of less than one, but it is a creative way to effectively manage working capital.

The chart, titled 'Walmart Liquidity', displays three data series from 2016 to 2020. The left y-axis represents values in billions of dollars (\$ in billions), ranging from 0 to 90. The right y-axis represents the Current Ratio, ranging from 0.10 to 1.00. Current Liabilities (blue bars) and Current Assets (green bars) are plotted against the left axis, while the Current Ratio (orange line) is plotted against the right axis. Current Liabilities are consistently higher than Current Assets, resulting in a current ratio consistently below 1.00.

Year	Current Liabilities (\$ in billions)	Current Assets (\$ in billions)	Current Ratio
2016	~65	~60	~0.92
2017	~68	~60	~0.88
2018	~75	~60	~0.80
2019	~75	~60	~0.80
2020	~75	~60	~0.80

Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

Gradable Excel

An understanding of how to use Excel functions and features helps students to ultimately use Excel for data analysis. Gradable Excel assesses student understanding of Excel functions.

BE9.4 - Using Excel to Determine Lower-of-Cost or Market Inventory Amounts

PROBLEM

Presented below is information related to Rembrandt Inc.'s inventory, assuming Rembrandt uses lower-of-LIFO cost-or-market.

Per Unit Amounts	Skis	Boots	Parkas
Historical cost	\$ 190.00	\$ 106.00	\$ 53.00
Selling price	212.00	145.00	73.75
Cost to distribute	19.00	8.00	2.50
Current replacement cost	203.00	105.00	51.00
Normal profit margin	32.00	29.00	21.25

Student Work Area

Required: Provide input into cells shaded in yellow in this template. Use cell references to the Problem area, along with mathematical formulas for any amounts not given.

Determine the following to be used in the lower-of-cost-or-market computation.

(a) The two limits to market value (ceiling and the floor) for skis

Ceiling	Floor
\$ 193.00	\$ 161.00

(b) The cost amount that should be used for boots

Cost
\$ 106.00

Data Set Library

The data set library provides intermediate accounting instructors with access to Excel data sets, PowerBI files, Tableau files, and accompanying assessment questions used in other accounting courses.

"Data Set Library" Instructor Version, with Assessment Questions

This is a collection of Excel data sets and other data analytics files you can download and use to create your own classroom activities.

INSTRUCTIONS FOR DOWNLOADING TABLEAU AND POWER BI FILES

How to Access Tableau: You can open a Tableau file with Tableau Desktop software. If you do not have Tableau Desktop, you can download the most recent version of Tableau Reader, a free program that allows you to open Tableau visualizations. To get the most recent version, search for "Tableau Reader" in your internet browser. Here also is a link to Tableau Reader: <https://www.tableau.com/products/reader>

How to Access Power BI: You can open the Power BI file in this problem statement with Power BI Desktop. If you do not have it already, search for "Power BI download" in your internet browser. You can also access PowerBI desktop software in this link: <https://powerbi.microsoft.com/en-us/downloads/>

Category	Set Description	Visualization File	Visualization Description	Assessment File	Assessment Outcome	Source

Engaging Online Student Resources and Tools

Adaptive Assignments

Adaptive Assignments ignite students' confidence to persist so that they can succeed in their courses and beyond. By continuously adapting to each student's needs and providing achievable goals with just-in-time instruction, Adaptive Assignments close knowledge gaps to accelerate learning.

The screenshot displays a user interface for an adaptive assignment. At the top, a green banner indicates "Your answer is correct." Below this, a progress bar shows "Current Progress: 30%" and "Highest Progress: 30%". The "Assignment Information" section includes a "Practice Assignment" description: "Answer questions to gauge understanding and fill knowledge gaps." The "Content Covered" section lists two items: "1.1 Business Organization and Accounting Information Uses" (1m 5s, 11 activities) and "1.2 The Three Types of Business Activity" (2m, 4 activities).

Practice Questions

Every chapter includes practice questions for each learning objective that students can review to assess their understanding of chapter topics.

The screenshot shows a "Practice Question 7" interface. It displays a "Correct Answer" message: "Correct! The designated market value is the middle number (\$90) of replacement cost (\$90), net realizable value (\$97.50) and net realizable value less a normal profit margin (\$88.50)." Below the message, the question text reads: "The replacement cost of an inventory item is \$90. Net realizable value is \$97.50. Net realizable value less a normal profit margin is \$88.50. The cost of the item is \$93. The designated market value used in applying Lower-of-Cost-or-Market is". The multiple-choice options are: \$88.50, \$90, \$93, and \$97.50. The "Attempts: 2 of 3 used" indicator is visible at the bottom right.

Problem Walkthrough Lightboard Videos

Professor Warfield teaches students how to work through intermediate accounting problems.

The screenshot shows a lightboard video with Professor Warfield. On the left, a handwritten formula is visible: $CR = \frac{\text{Current Assets}}{\text{Current Liab.}}$, with an arrow pointing to "Current Assets" labeled "Inventories". On the right, a table titled "Facts Englehart Company Pumps – March Inventory, Sales, Cost of Goods Sold..." compares FIFO and LIFO methods. The table shows Sales at \$498,000, Purchases at \$565,000, and Ending Inventory (EI) at \$245,000 for FIFO and \$222,500 for LIFO. The Cost of Goods Sold (C of GS) is \$400,000 for FIFO and \$422,500 for LIFO, resulting in a Gross Margin of \$98,000 for FIFO and \$75,500 for LIFO. Below the table, the "Analysis (Part a)" section asks: "Assume you need to compute a current ratio for Englehart. Which inventory method (FIFO or LIFO) do you think would give you a more meaningful current ratio?"

Solution Walkthrough Videos

Solution Walkthrough Videos explain how to solve questions similar to those assigned as homework. The videos can be enabled as question assistance in the Wiley online course. The library of solution walkthrough videos was expanded for the new edition of this intermediate accounting course.

Exercise 8-7
Presented below are transactions related to Kingbird, Inc.

May 10 Purchased goods billed at \$12,200 subject to cash discount terms of 2/10, n/60.
11 Purchased goods billed at \$14,700 subject to terms of 1/15, n/30.
19 Paid invoice of May 10.
24 Purchased goods billed at \$8,700 subject to cash discount terms of 2/10, n/30.

Prepare general journal entries for the transactions above under the assumption that purchases are to be recorded at net amounts after cash discounts and that discounts lost are to be treated as financial expenses. (If no entry is required, select "No entry" for the account titles and enter 0 for the amounts. Round answers to 0 decimal places, e.g., 6,578. Credit account titles are automatically indented when amount is entered. Do not indent manually.)

Date	Account Titles and Explanation	Debit	Credit
May 10	Purchases	11956	
	Accounts Payable		11956
May 11	Purchases	14553	
	Accounts Payable		14553
May 19	Accounts Payable	11956	
	Cash		11956
May 24	Purchases	8526	
	Accounts Payable		8526

SHOW LIST OF ACCOUNTS

Assuming no purchase or payment transactions other than those given above, prepare the adjusting entry required on May 31 if financial statements are to be prepared as of that date. (If no entry is required, select "No entry" for the account titles and enter 0 for the amounts. Round answers to 0 decimal places, e.g., 6,578. Credit account titles are automatically indented when amount is entered. Do not indent manually.)

Date	Account Titles and Explanation	Debit	Credit
May 31

Accounting News—Video and Article Updates

Up-to-date accounting videos and articles are posted to the Wiley accounting update site, www.wileyaccountingupdates.com. Many of these updates address topics related to intermediate accounting.

Instructor Resources

The **test bank** was updated with over 150 new multiple-choice assessment questions.

Accessible **PowerPoint** files were updated to address updates to the textbook.

A set of **companion gradable** exercises have been added to each chapter in the Wiley online course.

A selection of **Exercise B and Problem Set B** exercise and solutions are also available to instructors as PDF and Word files.

New questions were added across learning objectives in **adaptive practice**.

Other resources include a **computerized test bank**, **instructors manual**, **checklist of key figures**, **Excel templates**, and more.

Student Assessment

Each chapter of *Intermediate Accounting* has over 300 assessment questions that help students stay engaged and on track.

End-of-Chapter Assessment

Questions and Problems

Each *Intermediate Accounting* text chapter concludes with over 40 assessment questions and problems that help gauge students' understanding and ability to apply intermediate accounting concepts, as follows.

- **Short Answer Questions** are open-ended questions that require students to begin thinking critically about the chapter's topics.
- **Brief Exercises** focus on only one learning objective and quickly test students' overall understanding.
- **Exercises** present realistic brief situations that allow students to delve more deeply into each topic; often include several requirements.
- **Problems** span several learning objectives and more involved scenarios that require students to interpret and analyze realistic accounting scenarios.

To help students and instructors alike identify areas of need, questions are tagged with learning objectives, professional AICPA and AACSB outcome standards, Bloom's Taxonomy level, level of difficulty, and an estimated time of completion. Student performance can be linked to the gradebook found in the Wiley online homework system.

Test Bank

Over 150 NEW, more challenging application and analysis questions were added to this edition's test bank. Each chapter of the test bank has between 130 and 200 questions that can be assigned to students in an exam or as graded practice. Question types include true/false, multiple-choice (NEW multiple-select), fill-in-the-blank, and short answer questions. These questions are also categorized by learning objective and can be filtered by several different tags.

Preparing for the CPA Exam

For each chapter in the *Intermediate Accounting* course, students can access CPAexcel videos, CPA Exam Practice Questions in the Prometric™ Testing Interface, and Task-Based Simulations (TBSs), which are the primary form of assessment used by the American Institute of Certified Public Accountants (AICPA). These resources:

1. Reinforce understanding of course topics.
2. Demonstrate relevance to show students how the intermediate accounting content they are learning will be assessed on the CPA exam.
3. Build student confidence with early exposure to CPA exam questions.

A screenshot of the Prometric Testing Interface. At the top, it says "AUDITING AND ATTESTATION JULY 2018" and shows a timer at "0:00:35". Below the timer is a navigation bar with icons for "CALC", "EXCEL", "HELP", and "SUBMIT TESTLET". The main area displays a question: "For which of the following judgments may an independent auditor share responsibility with an entity's internal auditor who is assessed to be both competent and objective?". The question is divided into two columns: "Materiality of misstatements" and "Evaluation of accounting estimates". Each column has four radio button options: "Yes", "No", "No", and "Yes".

CPA Exam Practice Questions in the Prometric™ Testing Interface

Wiley partners with CPAexcel to provide CPA exam practice questions for each chapter that recreate the environment students will encounter on the CPA exam.

Task-Based Simulation in the Prometric™ Testing Interface

CPA simulations recreate the environment students will see on the CPA exam.

A screenshot of the Prometric Testing Interface showing a Task-Based Simulation. At the top, it says "AUDITING AND ATTESTATION JULY 2018" and shows a timer at "0:00:21". Below the timer is a navigation bar with icons for "CALC", "EXCEL", "HELP", and "SUBMIT TESTLET". The main area displays a simulation scenario. It starts with a question: "The above balance is ____ Correct". Below this, it says "The above balance is ____ Incorrect (show amount)\$325,000". Then, it asks: "If incorrect, please provide information that could help to reconcile your account". The response is: "We placed an order for \$58,000 on December 26, year 2." Below this, there are fields for "Signature", "Title", and "Date". Then, it says "Susan's note to file:" followed by a paragraph of text. Finally, it asks: "Select the procedure that should be followed to clear the exception, if one exists." Below this is a table with two columns: "Customer" and "Conclusion/procedure". The "Customer" column has the value "Performance Marine Sales, Inc." and the "Conclusion/procedure" column is empty.

Wiley CPAexcel™
Using the Work of an Internal Audit Function

CPA Exam Video Lessons

Each chapter includes CPA exam text discussions and videos that provide students with insight into intermediate accounting topics commonly addressed on the CPA exams.

CPA Exam Assignments

Each chapter includes one CPA exam assignment that allows instructors to assign CPA multiple-choice questions. Student performance is tied to the gradebook.

Ch 5: CPA Exam Assignment

A screenshot of the CPA Exam Assignment interface. At the top, it says "Ch 5: CPA Exam Assignment". Below this is a grid of 15 question cards, numbered 1 through 15. Each card has a "Question" label at the top, a number in the center, and a "--1" at the bottom. To the right of the grid are two buttons: "Send to Gradebook" and "Next >".

Acknowledgments

Meet Our Contributors

In this new edition of *Intermediate Accounting*, the authors are pleased to welcome the assistance of Laura Wiley and Kristen Fuhremann. Laura and Kristen assisted the authors with updating and streamlining chapter content. They also helped update the company references included throughout the text to be the most relevant and relatable to the student reader, focusing on well-known companies with tangible examples.

Another focus for these contributors was to bring more visibility to Excel and data analytics throughout the text. They created a new chapter appendix demonstrating how to complete various time value of money calculations using Excel functions. Illustrations of how to use these Excel functions were then carried throughout the text to reinforce the concepts and allow students to practice with Excel as they apply time value of money concepts to various accounting applications. Beyond Excel, they created Analytics in Action text boxes in each chapter, demonstrating the comprehensive impact of data analytics on all areas of intermediate accounting.

©Aaron Hogan, Eye Wander Photo

Laura D. Wiley

Laura Wiley, PhD, CPA, is the Assistant Department Chair and senior instructor in the Department of Accounting at the E. J. Ourso College of Business, Louisiana State University (LSU). She came to LSU in 1996 and teaches financial accounting and auditing courses. She also serves as the Director of International Experience for the college and leads business-focused study abroad excursions to Central and South America and Europe. Laura is active in the Society of Louisiana CPAs (LCPA) and has served as the chair of the Accounting Education Issues committee since 2014. She received the LSU Tiger Athletic Foundation Outstanding Instructor Award in 2019 and the LCPA's Distinguished Achievement in Education award in 2015. Laura has consulted with large and small companies on accounting-related matters and conducted onsite training sessions for company employees. Over her career, she has also been a presenter at numerous CPE events and published in the *Journal of Accounting Education*. Laura is co-author of *Auditing: A Practical Approach with Data Analytics*, also published by John Wiley & Sons. Prior to coming to LSU, she was an auditor with PricewaterhouseCoopers in Atlanta, Georgia. She earned her bachelor's degree in accounting from The University of Alabama, her master's degree in accounting from LSU, and her doctorate in human resource education and workforce development from LSU. She is an active licensed CPA in the state of Louisiana.

Kristen Fuhremann

Kristen Fuhremann, CPA, is the Director of Professional Programs in Accounting in the Wisconsin School of Business (WSB) at the University of Wisconsin—Madison. Kristen joined the WSB in 2010 and, in addition to supporting students in the Master of Accountancy program, has taught intermediate financial accounting I and II along with courses in managerial accounting. Kristen works closely with graduate teaching assistants as they navigate their first semester in a teaching role, providing training and ongoing support on best practices in student learning. Kristen has been recognized for her contributions to the WSB, earning the Outstanding Academic Staff Teaching Award, University Housing Honored Instructor Award, Business Emerging Leaders Impact Award and the Wisconsin Naming Gift Academic Staff Achievement Award. Prior to joining the WSB, Kristen was an auditor with Grant Thornton and financial controller with Palmer Johnson Power Systems. Kristen is actively engaged in her community, volunteering her time to several local nonprofit organizations and serving on the board of directors for Leading Change Africa, a nonprofit organization supporting education and leadership training for students in Africa. She earned her business undergraduate and master of accountancy degrees from the University of Wisconsin—Madison and holds an active CPA license through the state of Wisconsin.

Additional Acknowledgments

Intermediate Accounting has also benefited greatly from the input of focus group participants, manuscript reviewers, those who have sent comments by letter or e-mail, ancillary authors, and proofers. We greatly appreciate the constructive suggestions and innovative ideas of reviewers and the creativity and accuracy of the ancillary authors and checkers.

Prior Edition Reviewers

We greatly appreciate the over 400 reviewers who have assisted with the prior editions of Intermediate Accounting. These instructors have been invaluable in the development and continued improvement of our text.

Finally, we appreciate the exemplary support and professional commitment given us by the development, marketing, production, and editorial staffs of John Wiley & Sons, including the following: Michael McDonald, Zoe Craig, Veronica Schram, Emily Marcoux, Ed Brislin, Alethia Marrero, Lindsey Myers, and Rachel Conrad. Thanks, too, to Julie Perry, Jodie Bernard, and the staff at Lumina for their work on the text and illustrations, and the staff at Lumina Datamatics for their work on the solutions manual.

We also appreciate the cooperation of the American Institute of Certified Public Accountants and the Financial Accounting Standards Board in permitting us to quote from their

pronouncements. We also acknowledge permission from the American Institute of Certified Public Accountants, the Institute of Management Accountants, and the Institute of Internal Auditors to adapt and use material from the Uniform CPA Examinations, the CMA Examinations, and the CIA Examinations, respectively.

Suggestions and comments from users of this text will be appreciated. Please feel free to contact any one of us.

The Environment and Conceptual Framework of Financial Reporting

WHAT is the conceptual framework of financial reporting?

It's the process that a private and independent standard-setter—the Financial Accounting Standards Board (FASB)—uses to develop a set of generally accepted reporting standards. At the heart of this framework is the objective of financial reporting.

Source: Financial Accounting Foundation.

WHY is there a need for this conceptual framework?

It's because financial statement users—such as investors and creditors—rely on high-quality information to make better resource allocation decisions. Ultimately, as shown in the graphic, high-quality financial reporting results in increased investor confidence, which supports efficient capital markets.

For example, investors must be able to evaluate and compare financial reports across different industries and companies to determine where they will invest their capital. One recent study found that when accounting comparability is high, investors value \$1 of higher-reported EPS at \$6.76. In contrast, when accounting comparability is low, \$1 of higher-reported EPS is valued at just \$4.04.¹ That's quite a difference!

HOW are accounting standards established?

The FASB, with oversight by the Securities and Exchange Commission (SEC), develops accounting standards. In setting standards, the FASB is guided by the conceptual framework. The FASB follows a due process so that all stakeholders (investors, auditors, and companies) have an opportunity to provide input, thereby resulting in standards that are generally accepted.

1.1 Financial Reporting Environment

LEARNING OBJECTIVE 1

Describe the financial reporting environment, major standard-setting bodies, and the meaning of generally accepted accounting principles (GAAP).

Understanding and trusting data are critical for decision-making purposes. In other words, is the information relevant and reliable, or is it confusing and unhelpful? If the former, we have a sound basis for good decision making. If the latter, the saying “garbage in [bad information] leads to garbage out [bad decision making]” is descriptive.

Accountants face many of the same issues but in a different setting. They also recognize that the information they develop and report must be relevant and reliable. However, that task is often not easy. For example, consider some of the following issues accountants faced during the Covid-19 pandemic.

- **Assessing whether companies were viable.** Due to the pandemic, some companies were in real financial trouble. To understand whether the company is going to make it, you must make predictions of what is going to happen in the future. Some companies had not operated for some time and were unsure when they would reopen. That left accountants trying to make estimates about these companies with very uncertain information.
- **Estimating liabilities.** Contract modifications took place as companies were unable to fulfill their existing contracts and therefore faced penalties. If a company has a contract to provide a specific product, fails to do so, and then has a liability for failure to perform, that must be considered. Again, accountants had to estimate the likelihood of this outcome with very uncertain information.
- **Determining inventory.** Companies with disrupted supply chains faced possible large losses related to inventory, particularly if the inventory was seasonable, perishable, or had a short-shelf life. With uncertain information about the future due to Covid-19, accountants had to develop estimates with the best information possible.

In that time of uncertainty, companies were asked to provide as much information as possible about how the coronavirus was affecting their operations and outlook. Therefore, while it is important that information presented be relevant and reliable, we must also recognize that some degree of uncertainty will exist.

Importance of Accounting and Decision-Usefulness

When making resource allocation or investing decisions under uncertainty, accounting becomes even more important. We know that resources are limited. As a result, businesses of all types try to conserve resources and ensure that they are used efficiently. In fact, efficient use of resources often determines whether a business survives. This fact places a substantial burden on the accounting profession to provide useful information for decision-making, often referred to as **decision-usefulness**. Let's next look at three different user groups to see how accounting information helps them make good decisions.

Owner/Manager

Chances are that many of you will be involved with a small business as an owner, employee, creditor, advisor, or auditor. Data from the **Small Business Administration** indicate that there are 31.7 million small businesses in the United States, with 60.6 million employees. In fact, small businesses (defined as less than 500 employees) account for 99.9% of all businesses in the United States.

To understand the importance of accounting in this type of setting, we examine a small business called Silva Restaurant. Basic questions that Silva needs to answer are:

- How successful was Silva in generating revenues and controlling expenses during the year? An **income statement** answers this question.
- How much compensation was distributed to the owners of Silva during the year and has the equity of the owners increased or decreased during the year? A **statement of owners' (stockholders') equity** answers this question.
- What does Silva own (its assets) and what does it owe (liabilities)? A **balance sheet** answers this question.
- Where did Silva obtain its cash during the year and how was that cash used? A **statement of cash flows** answers this question.

In other words, Silva's **financial statements** (income statement, statement of owners' (stockholders') equity, balance sheet, and statement of cash flows) are the principal means that a company like Silva uses to assess its financial performance.

Creditors

We now assume that Silva needs additional cash and wishes to borrow \$250,000 from Morgan Bank. For Morgan to approve this loan, it needs to determine whether Silva will be able to pay back the \$250,000 plus the interest on that amount. Silva's financial statements will be important in determining the answer. In most cases, the financial statements will be the starting point because:

- Morgan has to predict what will happen to Silva in the future since Morgan will be receiving interest and principal payments in that time period.
- Morgan must assess the amount, timing, and uncertainty of Silva's future cash flows.

This information can be derived from the income statement and the statement of cash flows.

Stockholders

Most large companies in the United States are corporations. The primary means of funding for these companies is the sale of common stock to investors. Having access to relevant and reliable **financial reporting** helps investors to:

- Assess the amounts, timing, and uncertainty of future cash inflows from dividends, interest, and proceeds from the sale or maturity of investments.
- Compare income and assets of different companies such as **Nike**, **Microsoft**, and **Berkshire Hathaway**.

When users can assess the relative return and risks associated with investment opportunities, they channel resources more effectively. **Illustration 1.1** shows how this process of capital allocation works.

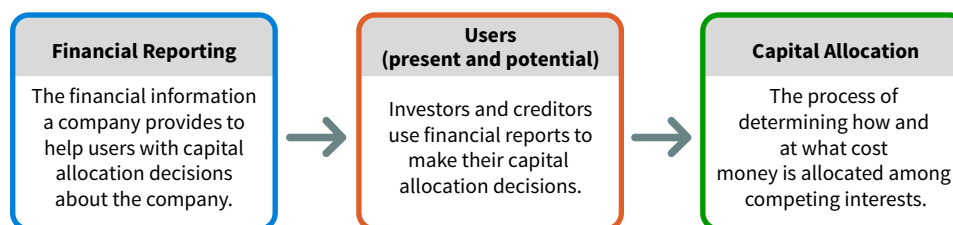

ILLUSTRATION 1.1 Capital Allocation Process

An effective process of capital allocation is critical to a healthy economy. It promotes productivity, encourages innovation, and provides an efficient and liquid market for buying and selling securities and obtaining and granting credit. Unreliable and irrelevant information leads to poor capital allocation, which adversely affects the securities markets.

The Need to Develop Standards

Underlying Concepts

Preparing financial statements according to accepted accounting standards contributes to the comparability of accounting information.

To enhance the decision-usefulness of accounting information, the accounting profession has developed a set of standards that are generally accepted and universally practiced. In the absence of financial statements prepared under these standards, readers of financial statements would have to familiarize themselves with every company's peculiar accounting and reporting practices. It would then be almost impossible to prepare statements that could be compared (see **Underlying Concepts**).

For example, as a prospective stockholder, you may want to evaluate how efficiently **Nike** uses its assets to generate sales relative to **Under Armour**. You may wonder how quickly **Restoration Hardware** turns over its high-end home furnishings inventory relative to **Williams-Sonoma**. These comparisons would not mean much without the common set of standards and procedures called **generally accepted accounting principles (GAAP)**. The term "generally accepted" can mean one of two things.

- A principle of reporting in a given area established by an authoritative accounting rule-making body.
- A given practice that has been accepted as appropriate because of its universal application over time.

Although there will always be debates regarding proposed and existing accounting standards, members of the financial community recognize GAAP as the standards that over time have proven to be most useful. You should recognize that the standard-setting process has worked well in the United States. As a former Secretary of the Treasury indicated, the single most important innovation shaping the capital markets was the idea of generally accepted accounting principles.

Two organizations are primarily responsible for the development of GAAP in the United States:

1. Securities and Exchange Commission (SEC).
2. Financial Accounting Standards Board (FASB).

Securities and Exchange Commission (SEC)

External financial reporting and auditing developed in tandem with the growth of the industrial economy and its capital markets. However, when the stock market crashed in 1929 and the nation's economy plunged into the Great Depression, there were calls for increased government regulation of business, especially financial institutions and the stock market.

As a result of these events, the federal government established the **Securities and Exchange Commission (SEC)**, a federal agency, to help develop and standardize financial information presented to stockholders. Specifically, the SEC:

- Administers the Securities Exchange Act of 1934 and several other acts.
- Requires most companies that issue securities to the public or are listed on a stock exchange to file audited financial statements with the SEC.
- Has broad powers to prescribe, in whatever detail it desires, the accounting practices and standards to be employed by companies that fall within its jurisdiction.

The SEC currently exercises oversight over 12,000 companies that are listed on the major exchanges (e.g., the New York Stock Exchange and the Nasdaq).

Accounting Matters

Global Markets

The SEC's Office of International Affairs is closely focused on cross-border investing, working with a global network of securities regulators all over the world. The International Organization

of Securities Commissions (IOSCO), established in 1987, consists of more than 100 securities regulatory agencies or securities exchanges from all over the world.

Public/Private Partnership

At the time the SEC was created, no group—public or private—issued accounting standards. The SEC encouraged the creation of a private standard-setting body because it believed that the private sector had the appropriate resources and talent to achieve this daunting task. Presently, accounting standards are developed in the private sector by the Financial Accounting Standards Board (FASB).

The SEC has affirmed its support for the FASB by indicating that financial statements conforming to standards set by the FASB are presumed to have substantial authoritative support. In short, the **SEC requires registrants to adhere to GAAP as developed by the FASB**. In its reports to Congress, the SEC indicated that “it continues to believe that the initiative for establishing and improving accounting standards should remain in the private sector, subject to Commission oversight.”

SEC Oversight

The SEC's partnership with the private sector works well. The SEC acts with remarkable restraint in the area of developing accounting standards. Generally, **the SEC relies on the FASB to develop accounting standards**.

The SEC's involvement in the development of accounting standards varies. For example, the SEC may:

- Reject a standard proposed by the private sector.
- Prod the private sector into taking quicker action on certain reporting problems, such as the reporting of derivative instruments.
- Communicate problems to the FASB, respond to FASB exposure drafts, and provide the FASB with counsel and advice upon request.

The SEC's mandate is to establish accounting principles, which it has delegated to the private sector (the FASB). Therefore, the private sector must listen carefully to the views of the SEC. In some sense, the FASB and others, such as companies and auditors in the private sector, are both the formulators and the implementors of the standards.²

However, when the private sector fails to address accounting problems as quickly as the SEC would like, the partnership between the SEC and the private sector can be strained. This occurred in the deliberations on the accounting for business combinations and intangible assets. Other examples include concerns over the accounting for off-balance-sheet special-purpose entities. Examples include the failure of **Enron** and the subprime crises that led to the failure of **IndyMac Bank**.

²One writer described the relationship of the FASB and SEC and the development of financial reporting standards using the analogy of a pearl. The pearl (a financial reporting standard) “is formed by the reaction of certain oysters (FASB) to an irritant (the SEC)—usually a grain of sand—that becomes embedded inside the shell. The oyster coats this grain with layers of nacre, and ultimately a pearl is formed. The pearl is a joint result of the irritant (SEC) and oyster (FASB); without both, it cannot be created.” John C. Burton, “Government Regulation of Accounting and Information,” *Journal of Accountancy* (June 1982).

Enforcement

As we indicated earlier, companies listed on a stock exchange must submit their financial statements to the SEC. If the SEC believes that an accounting or disclosure irregularity exists regarding the form or content of the financial statements, it sends a deficiency letter to the company. If the company does not resolve the issue, the SEC may issue a “stop order,” which prevents the registrant from issuing or trading securities on the exchanges.

The Department of Justice may also file criminal charges for violations of certain laws. The SEC process, private sector initiatives, and civil and criminal litigation help to ensure the integrity of financial reporting for public companies.

Accounting Matters

Private Company Perspectives

Consider companies like **Trek Bicycle**, **SC Johnson**, or **Publix Super Markets**, none of which are publicly traded on a stock exchange. Are these companies required to report their financial statements in accordance with GAAP? Most likely, yes! Even though these private companies are not accountable to the SEC, most private companies are accountable to their owners and creditors.

For a company like Trek, it is highly likely that the company borrows money from a bank to help fund its operations, investments, expansions, and so on. As its creditor, the bank will require Trek to provide audited financial statements in accordance with GAAP at least annually. So, while the SEC maintains the integrity of financial reporting for public companies, that does not mean that private companies are off the hook.

Financial Accounting Standards Board (FASB)

The major standard-setting organization in the private sector is the **Financial Accounting Standards Board (FASB)**. The mission of the FASB is as follows.

To establish and improve standards of financial accounting and reporting for the guidance and education of the public, which includes issuers, auditors, and users of financial information.

The FASB operates with oversight from the **Financial Accounting Foundation (FAF)**. In addition to research and support of its own staff, the FASB relies on the expertise of various task force groups formed for various projects and on the **Financial Accounting Standards Advisory Council (FASAC)**. The FASAC consults with the FASB on major policy and technical issues and also helps select task force members. **Illustration 1.2** shows the current organizational structure for the development of financial reporting standards.³

ILLUSTRATION 1.2
Organizational Structure for
Setting Accounting Standards

³Other advisory groups, such as the Investors Advisory Committee (IAC), the Not-for-Profit Advisor Committee (NAC), and the more recently established Private Company Council (PCC), share their views and experience with the FASB on matters related to projects on the Board’s agenda, from the perspective of various constituencies and/or in areas of specific expertise.

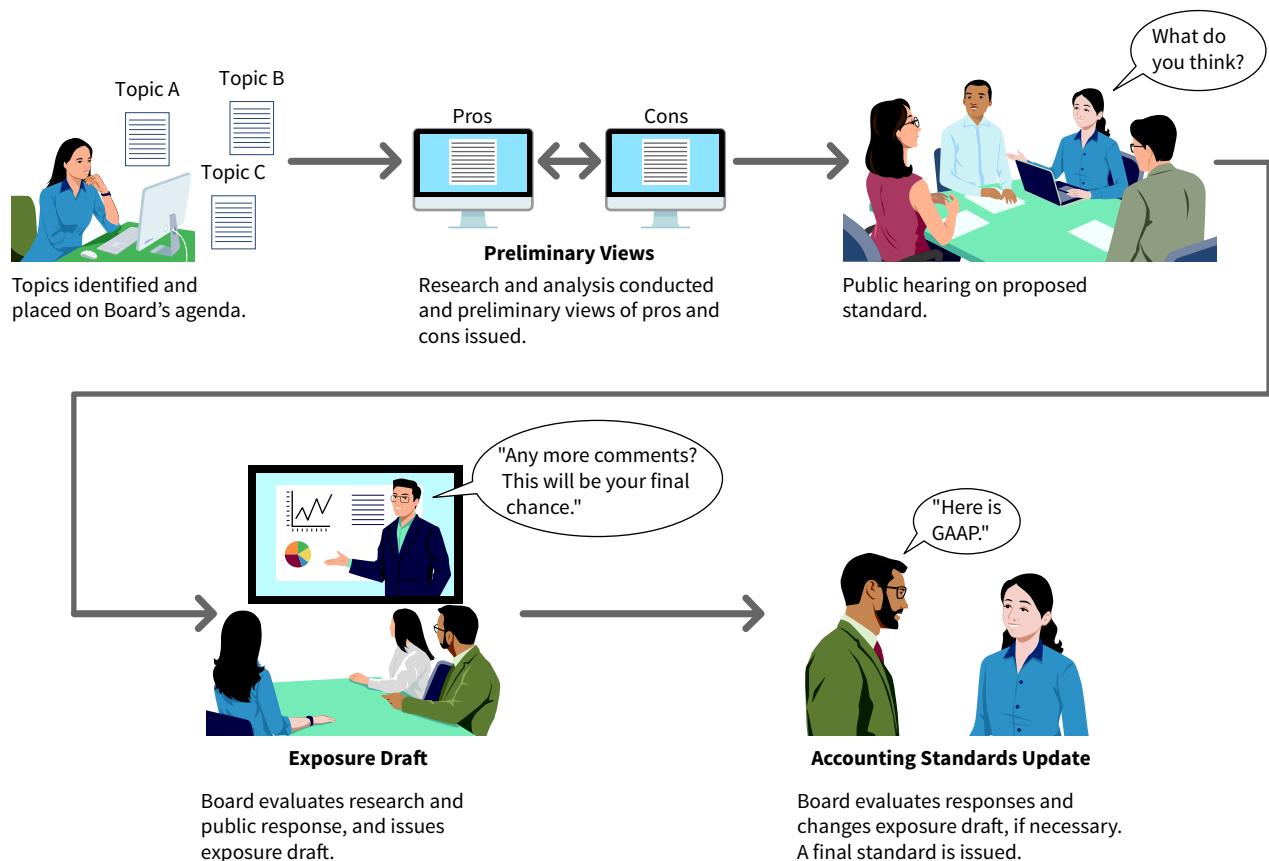

Due Process

In establishing financial accounting standards, the FASB relies on two basic premises. The FASB should:

1. Be responsive to the needs and viewpoints of the entire economic community, not just the public accounting profession.
2. Operate in full view of the public through a **due process** system that gives interested persons ample opportunity to make their views known.

To ensure the achievement of these goals, the FASB follows specific steps to develop a typical FASB pronouncement, as **Illustration 1.3** shows.

ILLUSTRATION 1.3 The Due Process System of the FASB

The passage of new FASB guidance in the form of an Accounting Standards Update requires the support of four of the seven Board members. FASB pronouncements are considered GAAP and are thereby binding in practice.

Types of Pronouncements

The FASB issues two major types of pronouncements:

1. Accounting Standards Updates (often referred to as **financial accounting standards**).
2. Financial Accounting Concepts.

Accounting Standards Updates The FASB issues accounting pronouncements through **Accounting Standards Updates** (Updates). These Updates amend the Accounting Standards Codification, which represents the source of authoritative accounting standards, other

than standards issued by the SEC (we discuss the Codification in more detail later in the chapter). Each Update consists of the following

- An explanation of how the Codification has been amended.
- Information to help the reader understand the changes.
- A date for when the changes will be effective.

Common forms of amendments are accounting standards issued that address a broad area of accounting practice (such as the accounting for leases) or interpretations that modify or extend existing standards.

Financial Accounting Concepts To provide a framework for the development of financial accounting standards, the FASB has issued a series of **Statements of Financial Accounting Concepts (SFAC)** as part of its conceptual framework project. (The SFAC can be accessed at the FASB website.)

The series sets forth fundamental objectives and concepts that the Board uses in developing standards of financial accounting and reporting. The Board has developed a cohesive set of interrelated concepts—a conceptual framework—that will serve as tools for solving existing and emerging problems in a consistent manner. Unlike an **Accounting Standards Update**, a **Statement of Financial Accounting Concepts does not establish GAAP**. Concepts statements, however, pass through the same due process system (preliminary views, public hearing, exposure draft, etc.) as do standards updates. (We discuss the conceptual framework in more detail later in the chapter.)

Other Organizations Involved

Two other organizations have also had a major role in standard-setting. The first is the **American Institute of Certified Public Accountants (AICPA)**, which is the national organization of practicing certified public accountants (CPAs). In the early years of standard-setting, the SEC urged the AICPA to develop accounting standards through various committees. Over time, however, due to the voluntary nature of these committees, it was recognized that broader representation coupled with a full-time, well-paid organization like the FASB was needed. As a result, the AICPA no longer has formal involvement in the accounting standard setting process.

The other organization is the **International Accounting Standards Board (IASB)**, which sets the **International Financial Reporting Standards (IFRS)** used in over 120 countries. Everyone seems to agree that the FASB and the IASB need to work together toward the goal of high-quality global accounting standards, which would result in comparability over time. They have, for example, worked together in developing similar standards for leasing and revenue recognition (see **Global View**).

Global View

Although global convergence for standard-setting appears unlikely at the present time, we provide a discussion of the similarities and differences between IFRS and GAAP at the end of the chapter in the *IFRS Insights* section.

FASB Codification

Historically, the documents that comprised GAAP varied in format, completeness, and structure. In some cases, these documents were inconsistent and difficult to interpret. As a result, financial statement preparers sometimes were not sure whether they had the right GAAP. Determining what was authoritative and what was not became difficult.

In response to these concerns, the FASB developed the **Financial Accounting Standards Board Accounting Standards Codification** (or more simply, “the Codification”). The FASB’s goals in developing the Codification are to:

- Provide, in one place, all the authoritative literature related to a particular topic.
- Simplify user access to all authoritative U.S. GAAP.
- Establish the way GAAP is documented, presented, and updated.
- Eliminate nonessential information such as redundant document summaries and historical content.

In short, the Codification integrates and synthesizes existing GAAP; it does not create new GAAP. It creates a single level of GAAP, which is considered authoritative. All other accounting literature is considered non-authoritative.⁴

To provide easy access to this Codification, the FASB also developed the **Financial Accounting Standards Board Codification Research System (CRS)**. CRS is an online, real-time database that provides easy access to the Codification. The Codification and the related CRS provide a topically organized structure, subdivided into topic, subtopics, sections, and paragraphs, using a numerical index system.

For purposes of referencing authoritative GAAP material in this text, we will use the Codification framework. For example, to determine GAAP for accounting for loans and trade receivables not held for sale subsequent to initial measurement, here is how the Codification framework is cited (see also **Illustration 1.4**).

Topic	Go to FASB ASC 310 to access the Receivables topic.
Subtopics	Go to FASB ASC 310-10 to access the Overall subtopic of Topic 310.
Sections	Go to FASB ASC 310-10-35 to access the Subsequent Measurement section of Subtopic 310-10.
Paragraph	Go to FASB ASC 310-10-35-47 to access the Loans and Trade Receivables not Held for Sale paragraph of Section 310-10-35.

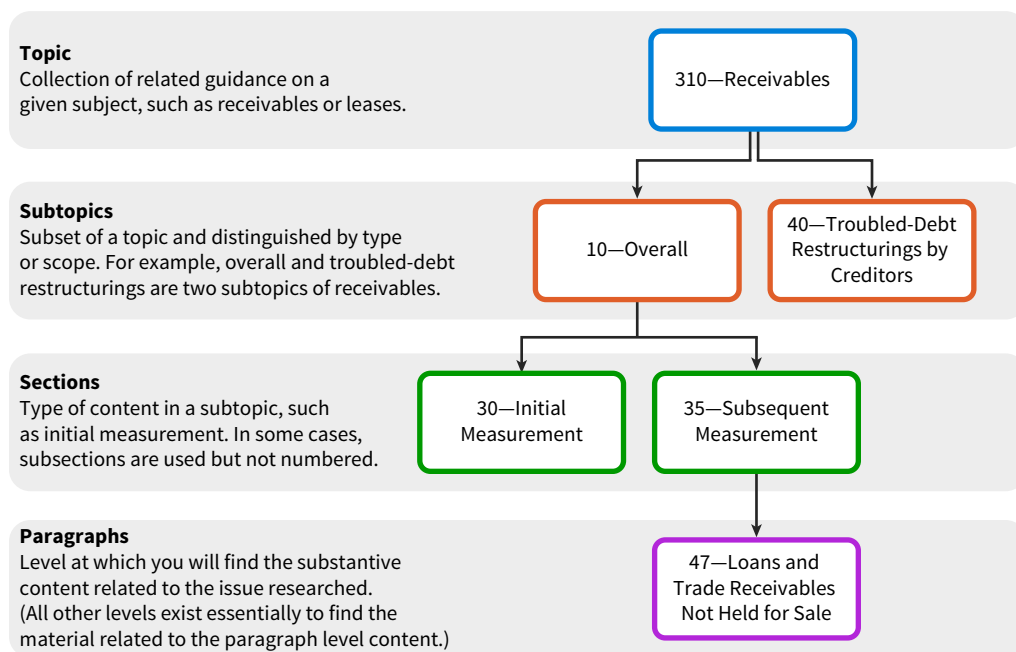

ILLUSTRATION 1.4 FASB Codification Framework

What happens if the Codification does not cover a certain type of transaction or event? In that case, other accounting literature should be considered, such as FASB Concept Statements, IFRS, and other professional literature. This will happen only rarely.⁵

⁴The FASB Codification can be accessed at the FASB website. Access to the full functionality of the Codification Research System requires a subscription; reduced-price academic access is available through the American Accounting Association. Prior to the Codification, the profession relied on *FASB 162*, "The Hierarchy of Generally Accepted Accounting Principles," which defined the meaning of generally accepted accounting principles. In that document, certain documents were deemed more authoritative than others, which led to various levels of GAAP. Fortunately, the Codification does not have different levels of GAAP.

⁵To increase the usefulness of the Codification for public companies, relevant authoritative content issued by the SEC is included in the Codification. In the case of SEC content, an "S" precedes the section number.

For individuals (like you) attempting to learn GAAP, the Codification will be invaluable. It streamlines and simplifies how to determine what GAAP is, which will lead to better financial accounting and reporting. We provide references to the Codification throughout this text, using a numbering system. For example, a bracket with a number, such as [1], indicates that the citation to the FASB Codification can be found in the **FASB Codification References** section near the end of the chapter.

Accounting Matters

Is There a Rule for That?

It is, in fact, rare that the Codification does not cover a certain type of transaction. However, that was the exact scenario the financial reporting community found themselves in during 2020 (surprised?) with loans provided by the **Small Business Administration** as part of the Paycheck Protection Program (PPP). To support businesses during the global pandemic brought on by Covid-19, the U.S. government issued potentially forgivable loans to eligible companies. While the nature of these loans varies, the

substance in many cases indicated that the loan was actually a government grant.

As it turns out, GAAP does not have specific guidance on accounting for government grants made to business entities (outside grants made in the form of a tax credit). This required the reporting community to look elsewhere for guidance, leading some companies to follow International Accounting Standard (IAS) 20, *Accounting for Government Grants and Disclosure of Government Assistance*.

Put It into Practice LO 1.1

Discuss Financial Reporting and Organizations

FACTS The first part of this chapter discusses general concepts related to financial reporting and various organizations involved in the standard-setting process. Here are some terms used in the first part of the chapter.

- a. Financial Accounting Standards Board
- b. American Institute of Certified Public Accountants
- c. Generally accepted accounting principles
- d. Securities and Exchange Commission
- e. International Accounting Standards Board
- f. Public/private partnership
- g. Codification
- h. Statements of Financial Accounting Concepts

INSTRUCTIONS

Describe the significance of each of the items as it relates to financial reporting.

SOLUTION

- a. Financial Accounting Standards Board: the U.S. organization established to improve standards of financial reporting for the guidance and education of the public, which includes issuers, auditors, and users of the financial statements.
- b. American Institute of Certified Public Accountants: the national professional organization of practicing certified public accountants.
- c. Generally accepted accounting principles: GAAP is the common set of standards and protocols either established by an authoritative accounting rule-making body or accepted as appropriate because of its universal application in practice.
- d. Securities and Exchange Commission: the SEC is a federal agency that administers the Securities Act of 1934 and other acts. Most companies that issue securities to the public or are listed on the stock exchanges are required to file audited GAAP financial statements with the SEC.
- e. International Accounting Standards Board: the IASB is the international organization established to improve standards of financial reporting for the guidance and education of the public, which includes issuers, auditors, and users of the financial statements. Their statements apply to most countries outside the United States.
- f. Public/private partnership: reflects the SEC's support for the FASB by indicating that financial statements conforming to standards by the FASB are presumed to have authoritative support.
- g. Codification: provides in one place all the authoritative accounting literature related to a topic.
- h. Statements of Financial Accounting Concepts: the series that sets forth fundamental objectives and concepts that the FASB uses in developing standards of financial accounting and reporting.

1.2 Conceptual Framework

LEARNING OBJECTIVE 2

Describe the components and usefulness of the conceptual framework.

As noted earlier, a **conceptual framework** establishes the concepts that underlie financial reporting. A conceptual framework is a coherent system of concepts that flow from an objective. The objective identifies the purpose of financial reporting. The other concepts provide guidance on:

1. Identifying the boundaries of financial reporting.
2. Selecting the transactions, other events, and circumstances to be represented.
3. Determining how transactions and events should be recognized and measured.
4. Determining how transactions and events should be summarized and reported.⁶

Accounting Matters

What's Your Principle?

There has been no shortage of accounting scandals to highlight the need for a strong conceptual framework, including some of the more notable failures such as **Enron** and **Lehman Brothers**. In both cases, the companies were able to remove, or keep debt off, their balance sheets by carefully structuring transactions to achieve a desired accounting treatment, even if that accounting treatment did not reflect the transactions' true nature.

To restore public confidence in the financial reporting process, many have argued that standard setters should move

toward principles-based rules. They believe that companies exploited the detailed provisions in rules-based pronouncements to manage accounting reports, rather than report the economic substance of transactions. Under principles-based rules, hopefully top management's financial reporting focus will shift from demonstrating compliance with rules to demonstrating that a company has achieved the objective of financial reporting.

Objective

The **objective of financial reporting** serves as the foundation of the conceptual framework. What is the objective, or purpose, of financial reporting? It is to provide financial information about the reporting entity that is **useful to present and potential equity investors, lenders, and other creditors in making decisions about providing resources to the entity**.⁷

Think about the types of decisions that investors and lenders are making about companies.

- Investors decide whether to buy, sell, or hold stock in a company.
- Lenders decide whether to lend money to a company and at what interest rate and for how long.

To make effective decisions, these groups need information to help them assess a company's future net cash flows which will support loan payments and/or provide a return to investors.

⁶As indicated earlier, the conceptual framework and any changes to it pass through the same due process (discussion paper, public hearing, exposure draft, etc.) as do the other FASB pronouncements, the framework is not authoritative. That is, the framework does not define standards for any particular measurement or disclosure issue, and nothing in the framework overrides any specific FASB pronouncement that is included in the Codification.

⁷"Chapter 1, The Objective of General Purpose Financial Reporting," *Statement of Financial Accounting Concepts* No. 8 (Norwalk, Conn.: FASB, September 2010).

To provide information to decision-makers, companies prepare general-purpose financial statements. **General-purpose financial statements** help users who lack the ability to demand all the financial information they need from a company and therefore must rely, at least partly, on the information provided in financial statements. However, it's important to note that users need reasonable knowledge of business and financial accounting matters to understand the information contained in financial statements.

Qualitative Characteristics of Accounting Information

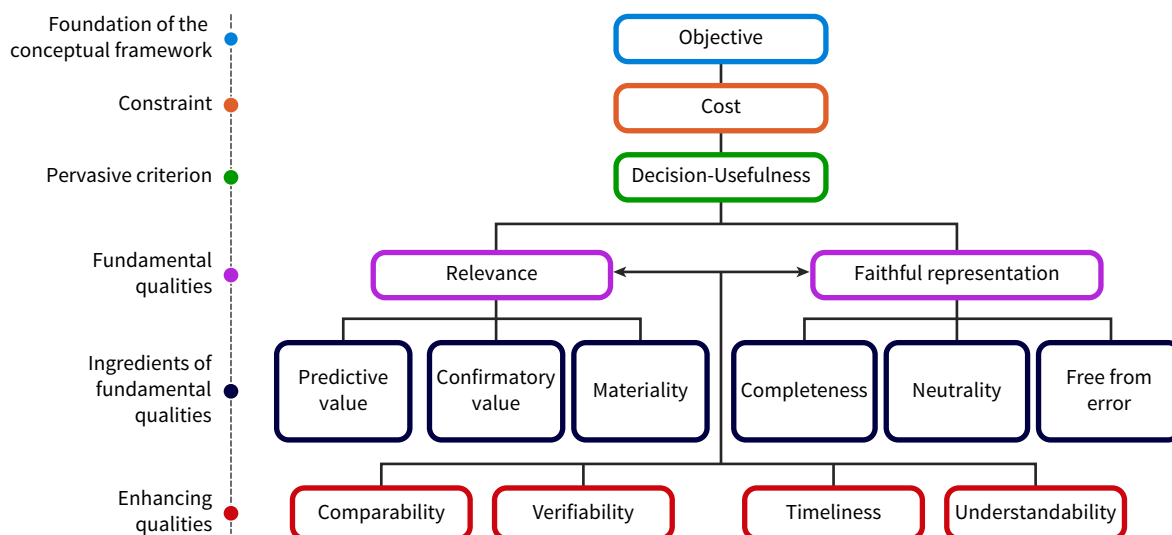

Consider these questions:

- Should companies like **Walt Disney** or **Kellogg's** provide information in their financial statements on how much it costs them to acquire their assets (historical cost basis) or how much the assets are currently worth (fair value basis)?
- Should **PepsiCo** combine and show as one company the seven main segments of its business, or should it report PepsiCo Beverages North America, Frito-Lay North America, Quaker Foods North America, Latin America, Europe, Africa, Middle East, South Asia, and Asia Pacific, Australia/New Zealand, China as seven separate segments?

How does a company choose an acceptable accounting method, the amount and types of information to disclose, and the format in which to present it? The answer: By determining **which alternative provides the most useful information for decision-making purposes (referred to as decision-usefulness)**. The FASB identified the **qualitative characteristics** of accounting information that distinguish better (more useful) information from inferior (less useful) information for meeting the objective of financial reporting.⁸ In addition, the FASB identified a cost constraint as part of the conceptual framework (discussed later in the chapter).

As **Illustration 1.5** shows, the characteristics may be viewed as a hierarchy.

ILLUSTRATION 1.5 Hierarchy of Accounting Qualities

As indicated, qualitative characteristics are either fundamental, or ingredients of fundamental qualities, and enhancing, depending on how they affect the decision-usefulness of information. Regardless of classification, each qualitative characteristic contributes to the decision-usefulness of financial reporting information. However, providing useful financial information is limited by a constraint on financial reporting—cost should not exceed the benefits of a reporting practice.

⁸“Chapter 3, Qualitative Characteristics of Useful Financial Information,” *Statement of Financial Accounting Concepts No. 8* (Norwalk, Conn.: FASB, September 2010).

Fundamental Quality—Relevance

Relevance is one of the two fundamental qualities that make accounting information useful for decision-making. Relevance and related ingredients of this fundamental quality are shown below.

As indicated, relevant accounting information must be capable of making a difference in a decision. Information with no bearing on a decision is irrelevant. Financial information is considered relevant when it is material and has predictive value, confirmatory value, or both.

Predictive Value Accounting information has **predictive value** if it helps users form their own expectations about the future. For example, if potential investors are interested in purchasing common shares in **UPS (United Parcel Service)**, they may analyze its current resources and claims to those resources, its dividend payments, and its past income performance to predict the amount, timing, and uncertainty of UPS's future cash flows.

Confirmatory Value Accounting information has **confirmatory value** if it helps users confirm or correct prior expectations. For example, when UPS issues its year-end financial statements, it confirms or changes past (or present) expectations based on previous evaluations. It follows that predictive value and confirmatory value are interrelated. In this regard, information about the current level and structure of UPS's assets and liabilities helps users predict its ability to take advantage of opportunities and to react to adverse situations. The same information helps to confirm or correct users' past predictions about that ability.

Materiality **Materiality** is a company-specific aspect of relevance. Information is material if omitting it or misstating it would influence decisions that users make on the basis of the reported financial information. An individual company determines whether information is material because both the nature and/or magnitude of the item(s) to which the information relates must be considered in the context of an individual company's financial report. Information is *immaterial*, and therefore irrelevant, if it would have no impact on a decision-maker. In short, **it must make a difference** or a company need not report it.⁹

Assessing materiality is one of the more challenging aspects of accounting because it requires evaluating both the **relative size and importance** of an item. For example, let's consider the two sets of numbers in **Illustration 1.6**, which indicate relative size.

	Company A	Company B
Sales	\$10,000,000	\$100,000
Costs and expenses	9,000,000	90,000
Income from operations	<u>\$ 1,000,000</u>	<u>\$ 10,000</u>
Unusual gain	<u>\$ 20,000</u>	<u>\$ 5,000</u>

ILLUSTRATION 1.6
Materiality Comparison

During the period in question, the revenues and expenses, and therefore the incomes from operations of Company A and Company B, are proportional. Meaning for both companies, income from operations is 10% of sales.

Each reported an unusual gain, but these amounts have different effects for each company.

- For Company A, the gain is only 2% of the operating income ($\$20,000 \div \$1,000,000$); if merged, it would not seriously distort the income figure.
- For Company B, a gain of \$5,000 amounts to 50% of its income from operations; obviously, the inclusion of such an item in operating income would affect the amount of that income materially.

Thus, we see the importance of the **relative size** of an item in determining its materiality.

⁹Amendments to *SFAC No. 8: Conceptual Framework for Financial Reporting*, Chapter 3, "Qualitative Characteristics of Useful Financial Information" (August 2018). In this amendment, the FASB defined materiality to be consistent with the legal concept of materiality, as established in the securities laws. Specifically, information is material "if there is a substantial likelihood that the omitted or misstated item would have been viewed by a reasonable resource provider as having significantly altered the total mix of information."

Companies and their auditors generally adopt the rule of thumb that anything under 5% of net income is considered immaterial. This may be acceptable for an initial assessment of materiality, but other qualitative factors should also be considered. For example, the relative size of an item might be small, but what if that item:

- Converts a loss to a profit, or vice versa.
- Increases management compensation.
- Hides an illegal transaction, like a bribe.
- Preserves a positive earnings trend.

Ultimately, materiality judgments should be made in the context of the nature and the amount of an item. **Companies must consider both quantitative and qualitative factors in determining whether an item is material.**

Accounting Matters

Living in a Material World

The word “material” can be found 114 times in **Starbucks’** recent annual report and 88 times in **Apple’s**. This is not unique to these companies but rather shows the impact that materiality has in the financial reporting process. When discussing the judgments and estimates involved in financial reporting, management concedes that actual results could differ **materially** from the estimates. Apple indicated that the adoption of the new revenue recognition

standard did not have a **material** impact on previously reported amounts. Starbucks adopted new guidance on accounting for hedging relationships and indicated that the adoption of the new guidance did not have a **material** impact on their consolidated financial statements. Materiality is indeed a key ingredient of relevant financial information and one that preparers and auditors alike spend a significant amount of time evaluating.

Source: Apple, Inc. and Starbucks Corporation 10-K annual reports.

Fundamental Quality—Faithful Representation

Faithful representation is the second fundamental quality that makes accounting information useful for decision-making. Faithful representation and related ingredients of this fundamental quality are shown below.

Faithful representation means that the numbers and descriptions match what really existed or happened. Faithful representation is a necessity because most users have neither the time nor the expertise to evaluate the factual content of the information. For example, if **General Motors’** income statement reports sales of \$162,300 million when sales were \$145,588 million, then the statement fails to faithfully represent the proper sales amount. To be a faithful representation, information must be complete, neutral, and free of material error.

Completeness **Completeness** means that all the information that is necessary for faithful representation is provided. An omission can cause information to be false or misleading and thus not be helpful to the users of financial reports. For example, when **Citigroup** fails to provide information needed to assess the value of its subprime loan receivables (toxic assets), the information is not complete and therefore not a faithful representation of their values.

Neutrality **Neutrality** means that a company cannot select information to favor one set of interested parties over another. Unbiased information must be the overriding consideration. For example, in the notes to financial statements, tobacco companies such as **R.J. Reynolds** should not suppress information about the numerous lawsuits that have

been filed because of tobacco-related health concerns—even though such disclosure is damaging to the company.¹⁰

Free from Error An information item that is **free from error** will be a more accurate (faithful) representation of a financial item. For example, if **JPMorgan Chase** misstates its loan losses, its financial statements are misleading and not a faithful representation of its financial results. However, faithful representation does not imply total freedom from error or total exactness. Think of the many estimates in the financial statements that incorporate the use of management judgment. For example, management must estimate the amount of uncollectible accounts to determine bad debt expense. Also, the determination of depreciation expense requires estimation of useful lives of plant and equipment, as well as the salvage values of the assets.

Accounting Matters

What's in It for Me?

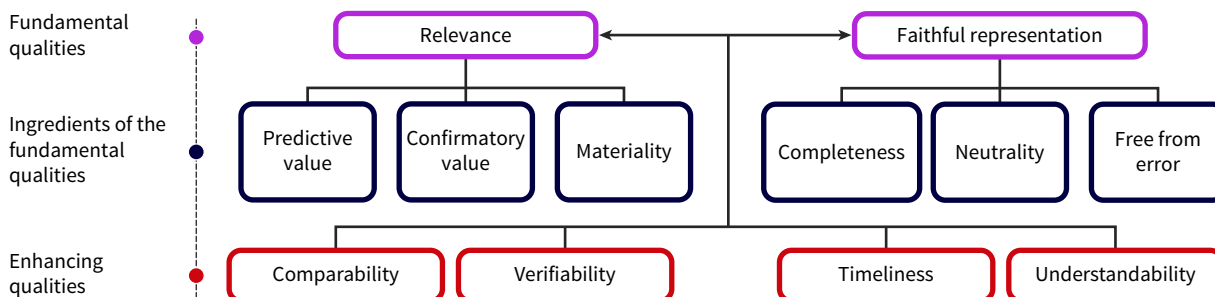

Neutrality in rule-making has always been a difficult concept to achieve. Some argue that the FASB should not issue pronouncements that cause undesirable economic effects on an industry or company. Most recently, banks and credit unions actively lobbied against the recent standard on loan losses because they argued the rules would put them in an unfavorable light, thereby reducing their ability to make loans. We are glad the FASB stayed with its plan to issue these rules. Accounting rules (and the standard-setting process) must be

free from bias, or we will no longer have credible financial statements. Without credible financial statements, individuals will no longer use this information.

An analogy demonstrates the point: Many individuals bet on boxing matches because such contests are assumed not to be fixed. But nobody bets on wrestling matches. Why? Because the public assumes that wrestling matches are rigged. If financial information is biased (rigged), the public will lose confidence and no longer use it.

Enhancing Qualities

Enhancing qualitative characteristics are complementary to the fundamental qualitative characteristics. These characteristics distinguish more-useful information from less-useful information. Enhancing characteristics, shown below, are comparability, verifiability, timeliness, and understandability.

Comparability Information that is measured and reported in a similar manner for different companies is considered comparable. **Comparability** enables users to identify the real similarities and differences in economic events between companies. For example, historically the accounting for pensions in Japan differed from that in the United States. In Japan, companies generally recorded little or no expense for these costs. U.S. companies recorded pension cost as incurred. As a result, it is difficult to compare and evaluate the financial results of **Toyota** or

¹⁰Sometimes, in practice, it has been acceptable to invoke prudence or conservatism as a justification for an accounting treatment under conditions of uncertainty. **Prudence** or **conservatism** means when in doubt, choose the solution that will be least likely to overstate assets or income and/or understate liabilities or expenses. The conceptual framework indicates that prudence or conservatism generally is in conflict with the quality of neutrality. This is because being prudent or conservative likely leads to a bias in the reported financial position and financial performance. In fact, introducing biased understatement of assets (or overstatement of liabilities) in one period frequently leads to overstating financial performance in later periods—a result that cannot be described as prudent. This is inconsistent with neutrality, which encompasses freedom from bias. Accordingly, the conceptual framework does not include prudence or conservatism as desirable qualities of financial reporting information. See “Chapter 3, Qualitative Characteristics of Useful Financial Information,” *Statement of Financial Accounting Concepts No. 8* (Norwalk, Conn.: FASB, September 2010), paras. BC3.27–BC3.29.

Honda to **General Motors** or **Ford**. Investors can only make valid evaluations if comparable information is available.

Another type of comparability, **consistency**, is present when a company applies the same accounting treatment to similar events, from period to period. Through such application, the company shows consistent use of accounting standards. The idea of consistency does not mean, however, that companies cannot switch from one accounting method to another.¹¹ If a company changes methods, it must:

- Demonstrate that the newly adopted method is preferable to the old.
- Disclose in a note to the financial statements the nature and effect of the accounting change, as well as the justification for it, in the period in which it made the change.¹²

Verifiability **Verifiability** occurs when independent measurers, using the same methods, obtain similar results. Verifiability occurs in the following two situations.

1. Two independent auditors count **PepsiCo**'s inventory and arrive at the same physical quantity amount for inventory. Verification of an amount for an asset therefore can occur by simply counting the inventory.
2. Two independent auditors compute PepsiCo's inventory value at the end of the year using the FIFO method of inventory valuation. Verification may occur by checking the inputs (quantity and costs) and recalculating the outputs (ending inventory value) using the same accounting convention or methodology.

Timeliness **Timeliness** means having information available to decision-makers before it loses its capacity to influence decisions. Having relevant information available sooner can enhance its capacity to influence decisions. A lack of timeliness, on the other hand, can rob information of its usefulness. For example, if **Apple** waited to report its financial results until nine months after the period ended, the information is less useful for decision-making purposes.

Understandability Decision-makers vary widely in the types of decisions they make, how they make decisions, the information they already possess or can obtain from other sources, and their ability to process the information. For information to be useful, there must be a connection (linkage) between these users and the decisions they make. This link, **understandability**, is the quality of information that lets reasonably informed users see its significance. Understandability is enhanced when information is classified, characterized, and presented clearly and concisely.

For example, assume that **Meta** (previously **Facebook**) issues a three-month report that shows interim earnings have declined significantly. This interim report provides relevant and faithfully represented information for decision-making purposes. Some users, upon reading the report, decide to sell their shares. Other users, however, do not understand the report's content and significance. They are surprised when Meta declares a smaller year-end dividend and the share price declines. Although Meta presented highly relevant information that was a faithful representation, it was useless to those who did not understand it.

Thus, users of financial reports are assumed to have a **reasonable knowledge of business and economic activities**. In making decisions, users also should review and analyze the information with reasonable diligence. Information that is relevant and faithfully represented should not be excluded from financial reports solely because it is too complex or difficult for some users to understand without assistance.¹³

¹¹Surveys indicate that users highly value consistency. They note that a change tends to destroy the comparability of data before and after the change. Some companies assist users to understand the pre-and post-change data. Generally, however, users say they lose the ability to analyze over time. GAAP guidelines (discussed in Chapter 21) on accounting changes are designed to improve the comparability of the data before and after an accounting change.

¹²These provisions are specified in "Reports on Audited Financial Statements," *Statement on Auditing Standards No. 58* (New York: AICPA, April 1988), par. 34.

¹³"Chapter 3, Qualitative Characteristics of Useful Financial Information," *Statement of Financial Accounting Concepts No. 8* (Norwalk, Conn.: FASB, September 2010), paras. QC30–QC31.

Elements

An important aspect of developing any theoretical structure is the body of basic **elements** or definitions to be included in it. Accounting uses many terms with distinctive and specific meanings. These terms constitute the language of business or the jargon of accounting. For example, one such term is **asset**. Is it merely something we own? Or is an asset something we have the right to use, as in the case of leased equipment? Or is it anything of value used by a company to generate revenues—in which case, should we also consider the managers of a company as an asset? The 10 elements identified by the FASB are as follows.

Elements of Financial Statements

Assets. Probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.

Liabilities. Probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.

Equity. Residual interest in the assets of an entity that remains after deducting its liabilities. In a business enterprise, the equity is the ownership interest.

Investments by owners. Increases in net assets (equity) of a particular enterprise resulting from transfers to it from other entities of something of value to obtain or increase ownership interests (or equity) in it. Assets are most commonly received as investments by owners, but that which is received may also include services or satisfaction or conversion of liabilities of the enterprise.

Distributions to owners. Decreases in net assets (equity) of a particular enterprise resulting from transferring assets, rendering services, or incurring liabilities by the enterprise to owners. Distributions to owners decrease ownership interests (or equity) in an enterprise.

Comprehensive income. Change in net assets (equity) of an entity during a period from transactions and other events and

circumstances from nonowner sources. It includes all changes in equity during a period except those resulting from investments by owners and distributions to owners.

Revenues. Inflows or other enhancements of assets of an entity or settlement of its liabilities (or a combination of both) during a period from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations.

Expenses. Outflows or other using up of assets or incurrences of liabilities (or a combination of both) during a period from delivering or producing goods, rendering services, or carrying out other activities that constitute the entity's ongoing major or central operations.

Gains. Increases in net assets (equity) from peripheral or incidental transactions of an entity and from all other transactions and other events and circumstances affecting the entity during a period except those that result from revenues or investments by owners.

Losses. Decreases in net assets (equity) from peripheral or incidental transactions of an entity and from all other transactions and other events and circumstances affecting the entity during a period except those that result from expenses or distributions to owners.¹⁴

The FASB classifies the elements into two distinct groups.

1. The first group of three elements—assets, liabilities, and equity—describes amounts of resources and claims to resources at a **moment in time**.
2. The other seven elements describe transactions, events, and circumstances that affect a company during a **period of time**.

The first group, affected by elements of the second group, provides at any time the cumulative result of all changes. This interaction is referred to as “articulation.” That is, key figures in one financial statement correspond to balances in another. We will explain and examine each of these elements in more detail in later chapters.

¹⁴“Elements of Financial Statements,” *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, December 1985), pp. ix and x. The FASB recently issued a new chapter of the Conceptual Framework [“Chapter 4, Elements of Financial Statements,” *Statement of Financial Accounting Concepts No. 8* (Norwalk, Conn.: FASB, December 2021)]. This chapter introduces rewording of definitions for some elements (e.g., assets and liabilities) to (1) make the language internally consistent and (2) eliminate repetition. These revised definitions also align with definitions recently introduced in IFRS. Although the substance of the updated definitions are the same as the previous definitions, we provide a brief reference for the updated definitions at Wiley Course Resources.

Put It into Practice LO 1.2

Apply Qualitative Characteristics

FACTS A local broker has called you with a tip about an investment in bonds of a company that she feels is about to take off. The company, AROD, sells sports memorabilia online. The bonds being issued by AROD mature in 15 years and promise a 10% yield. You tell the broker that before investing in this hot commodity that you would like to see AROD's financial statements.

The broker sends you the statements, which are from last year and unaudited. AROD's owner, Roderick Andrews, prepared the statements. You review the statements, and they are quite impressive. AROD reported a profit of \$3,500,000 and showed a low debt-equity ratio. The statement provides no comparative amounts for prior years, and there are no note disclosures provided about AROD's accounting methods related to inventory, depreciation, liabilities, and so on.

INSTRUCTIONS

With a focus on relevance and faithful representation, determine if this would be a wise investment decision based on the financial statements provided by the broker.

SOLUTION

The AROD statements are neither relevant nor a faithful representation.

- With respect to **relevance**, this information must be **timely**. Because AROD's financial statements are a year old, they have lost their ability to influence an investor's decision; a lot could have changed in that one year. Another element of relevance is **predictive value**. AROD's accounting information is not relevant because it provides no reference to other years' profitability. Because developing trends are not reported, the information cannot help an investor predict future profitability. Closely related to predictive value is **feedback value**. These financial statements do not provide feedback on any strategies that the company may have used to increase profits.
- With respect to **faithful representation**, information must be **verifiable** by several independent parties. Because no independent auditor has verified these amounts, there is no way of knowing whether they are represented faithfully. For instance, an investor might like to believe that AROD earned \$3,500,000 and that it had a very favorable debt-equity ratio. However, unaudited financial statements do not give reasonable assurance about these claims. The fact that the company owner himself prepared these statements indicates a lack of **neutrality**. Because the company owner is not a disinterested third party, an investor cannot be sure that the owner did not prepare the financial statements to portray the business in the most favorable light.

1.3 Assumptions and Principles

LEARNING OBJECTIVE 3

Discuss the basic assumptions and principles of accounting

The next part of the framework consists of concepts that implement the objective of financial reporting. The **assumptions** and **principles** help to explain how companies should recognize, measure, and report financial elements and events. In addition, you should also recognize the concept of a **cost constraint**, which we will discuss later in the chapter. These concepts serve as guidelines in responding to controversial accounting issues.

Assumptions

We generally rely on four assumptions in accounting: (1) economic entity, (2) going concern, (3) monetary unit, and (4) periodicity.

Economic Entity Assumption

The **economic entity assumption** means that **economic activity can be identified with a particular unit of accountability**. In other words, a company keeps its activity separate and distinct from its owners and any other business unit.¹⁵ Consider these examples:

- The economic entity assumption dictates that **Panera Bread Company** record the company's financial activities separate from those of its owners and managers.
- Financial statement users need to be able to distinguish the activities and elements of different companies, such as **General Motors, Ford, and Fiat Chrysler**.

If users could not distinguish the activities of different companies, how would they know which company financially outperformed the other?

The entity concept does not apply solely to the segregation of activities among competing companies, such as **Home Depot** and **Lowe's**. An individual, department, division, or an entire industry could be considered a separate entity if we choose to define it in this manner. Thus, **the entity concept does not necessarily refer to a legal entity**. A parent and its subsidiaries are separate **legal** entities, but merging their activities for accounting and reporting purposes does not violate the **economic entity** assumption.¹⁶

Going Concern Assumption

Most accounting methods rely on the **going concern assumption**—that the company will have a long life. This means for accounting purposes, we assume that a company will continue operating as normal, and we follow normal GAAP procedures. The going concern assumption has three significant implications:

1. The historical cost principle is of limited usefulness if we assume eventual liquidation. Under a liquidation approach, a company like **Peleton Interactive** would better state assets at net realizable value (sales price less costs of disposal).
2. Depreciation and amortization approaches for Peleton would not be needed given a liquidation approach.
3. Current and noncurrent classification of assets and liabilities for Peleton would lose their significance and would be difficult to justify. Also, reporting liabilities based on priority in liquidation would be more reasonable.

Most companies have a high continuance rate and fulfill their objectives and commitments. Recently, however, companies (both large and small) have had to declare bankruptcy due to the Covid-19 pandemic. In these cases, when it is known that a company is going out of business or liquidating, we apply a different type of accounting method, called **liquidation**

¹⁵The FASB has proposed to link the definition of an entity to its financial reporting objective. That is, a reporting entity is described as a circumscribed area of business activity of interest to present and potential equity investors, lenders, and other capital providers. See IASB/FASB, "The Reporting Entity," *Exposure Draft ED/2010/2: Conceptual Framework for Financial Reporting* (March 2010).

¹⁶The concept of the entity is changing. For example, defining the "outer edges" of companies is now harder. Public companies often consist of multiple public subsidiaries, each with joint ventures, licensing arrangements, and other affiliations. Increasingly, companies form and dissolve joint ventures or customer-supplier relationships in a matter of months or weeks. These "virtual companies" raise issues about how to account for the entity. As discussed in footnote 15, the FASB is addressing these issues in the entity phase of its conceptual framework project.

accounting. Because we do not cover liquidation accounting in this text, we will assume companies will remain a going concern in our examples.¹⁷

Monetary Unit Assumption

The **monetary unit assumption** means that money is the common denominator of economic activity and provides an appropriate basis for accounting measurement and analysis. That is, the monetary unit is the most effective means of expressing to interested parties changes in capital and exchanges of goods and services. **The monetary unit is relevant, simple, universally available, understandable, and useful.**

In the United States, accounting ignores price-level changes (inflation and deflation) and assumes that the unit of measure—the dollar—remains reasonably stable. We therefore use the monetary unit assumption to justify adding 1995 dollars to 2025 dollars without any adjustment. The FASB indicated that it expects the dollar, unadjusted for inflation or deflation, to continue to be used to measure items recognized in financial statements.

Periodicity Assumption

Users need to know a company's performance and economic status on a timely basis so that they can evaluate and compare firms, and take appropriate actions. Therefore, companies must report information periodically. The **periodicity** (or **time period**) **assumption** implies that a company can divide its economic activities into artificial time periods. These time periods vary, but the most common are monthly, quarterly, and yearly.

The shorter the time period, the more difficult it is to determine the proper net income for the period. A month's results usually prove less verifiable than a quarter's results, and a quarter's results are likely to be less verifiable than a year's results. Investors desire and demand that a company quickly process and disseminate information. Yet the quicker a company releases the information, the more likely the information will include errors (see **Underlying Concepts**).

Underlying Concepts

This phenomenon provides an interesting example of the trade-off between timeliness and accuracy (free from error) in preparing financial data.

Principles of Accounting

We generally use four basic principles of accounting to record and report transactions: (1) measurement, (2) revenue recognition, (3) expense recognition, and (4) full disclosure.

Measurement Principle

We presently have a “mixed-attribute” system that permits the use of various measurement bases. The most commonly used measurements are based on historical cost and fair value.

Historical Cost GAAP requires that companies account for and report many assets and liabilities on the basis of acquisition price. This is often referred to as the **historical cost principle**. Historical cost has an important advantage over other valuations: **It is generally thought to be verifiable.**

Suppose a company buys a piece of land in the year 2010 paying \$100,000 cash.

- The transaction is **verifiable** because there are documents, such as a title deed, confirming the purchase and the payment.

¹⁷In response to the minimal guidance addressing the going concern assumption, including when it is appropriate to apply or how to apply the liquidation basis of accounting, the FASB has issued two accounting standards. The first, (“Presentation of Financial Statements—Going Concern: Disclosure of Uncertainties about an Entity’s Ability to Continue as a Going Concern”) [1] requires additional disclosure when substantial doubt about a company’s ability to continue as a going concern occurs. (See the FASB Codification References near the end of the chapter.) The second standard (“Presentation of Financial Statements—The Liquidation Basis of Accounting”) [2] requires that companies use the liquidation basis of accounting when liquidation is imminent (when either a plan for liquidation has been approved or a plan for liquidation is being imposed by other forces, such as involuntary bankruptcy). If liquidation accounting is used, financial statements should reflect relevant information about a company’s resources and obligations in liquidation by measuring and presenting assets and liabilities at the amount of cash or other consideration that the company expects to collect or pay in liquidation, along with additional disclosures about the plan for liquidation, the methods and significant assumptions used to measure assets and liabilities, the type and amount of costs and income accrued, and the expected duration of liquidation.

- The land would be recorded in the company's accounting records at the historical cost of \$100,000.
- Now fast forward to the year 2025—is the land still worth \$100,000?

Most likely, the land has increased in value. That raises two important questions:

1. Should the company adjust the recorded amount for the land to its current sales value?
2. If so, how would the company determine the current sales value of the land?

One way to determine current sales value is to have the land appraised, but this is merely an estimate of the land's value and is subjective. The only way to truly know the value of the land is to sell it. You can see that if companies were required to adjust assets to current sales value, it could lead to highly subjective valuations that would have low verifiability. Plus, it would be a burden for companies to go through this process every time they want to prepare financial statements.

What about liabilities? Do companies account for them on a cost basis? Yes, they do. Companies issue liabilities, such as bonds, notes, and accounts payable, in exchange for assets (or services), for an agreed-upon price. **This price, established by the exchange transaction, is the “cost” of the liability.** A company uses this amount to record the liability and report it in financial statements. Thus, many users prefer historical cost because it provides them with a **verifiable benchmark** for measuring historical trends.

Fair Value Fair value is defined as “the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.” Fair value is therefore a market-based measure and commonly referred to as the **fair value principle**. [3]

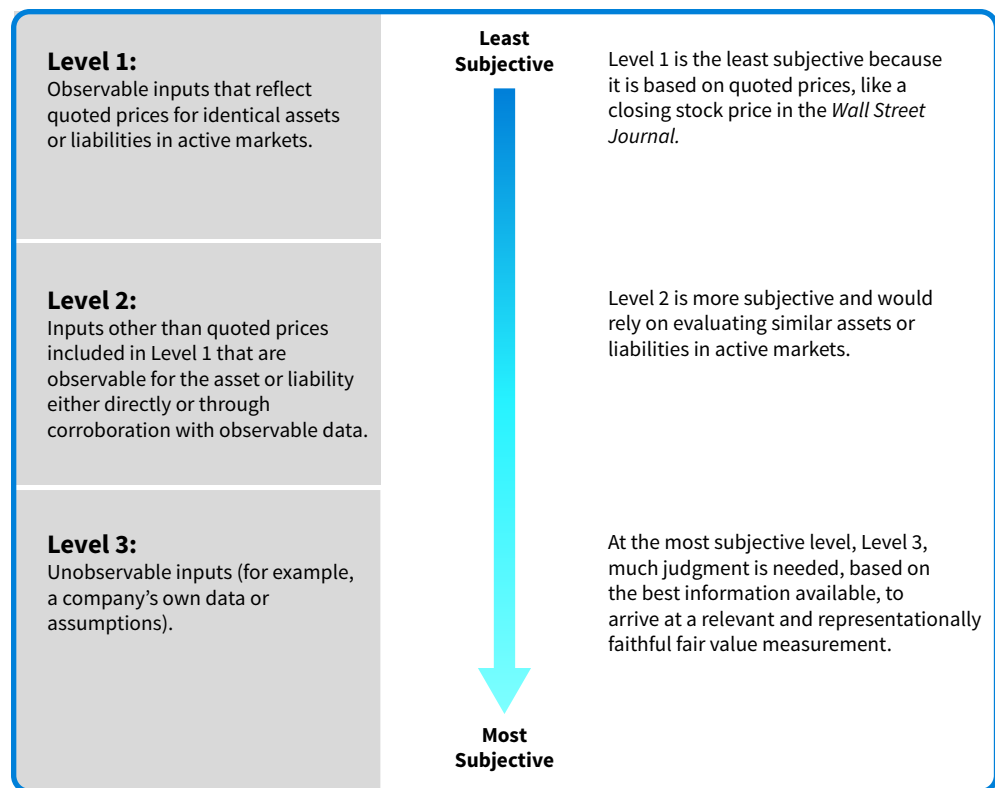

Fair value information may be more useful than historical cost for certain types of assets and liabilities and in certain industries. Therefore, GAAP does allow the use of fair value in certain situations.

- If long-lived assets such as buildings or equipment decline in value, a fair value measure determines any impairment loss.
- If inventories decline in value, a fair value measure is used to determine the amount of the loss.
- If equity investments and certain types of debt investments either increase or decrease in value, a fair value measure is used to determine the gain or loss.
- If a company chooses, it can use a fair value option to measure its financial assets and financial liabilities, including items such as receivables and debt securities.

In these situations, fair value measurements are considered more relevant than historical cost. And, it is argued that fair value measurement provides better insight into the value of a company's assets and liabilities (its financial position), and a better basis for assessing future cash flow prospects. As you progress through this text, you will learn more about these situations in which fair value is used instead of historical cost.

At initial acquisition, historical cost equals fair value. In subsequent periods, as market and economic conditions change, historical cost and fair value often diverge. Measurement based on fair value introduces subjectivity into accounting reports when fair value information is not readily available. To increase consistency and comparability in fair value measures, a fair value hierarchy is used to determine fair value. As shown in **Illustration 1.7**, the fair value hierarchy is divided into three levels.¹⁸

¹⁸For major groups of assets and liabilities, companies must disclose (1) the fair value measurement and (2) the fair value hierarchy level of the measurements as a whole, classified by Level 1, 2, or 3. Given the judgment involved, it follows that the more a company depends on Level 3 to determine fair values, the more information about the valuation process the company will need to disclose. Thus, additional disclosures are required for Level 3 measurements; we discuss these disclosures in more detail in subsequent chapters.

ILLUSTRATION 1.7 Fair Value Hierarchy

It is easy to arrive at fair values when markets are liquid with many traders, but fair value answers are not readily available in other situations. For example, **Walt Disney** recently purchased **21st Century Fox** for \$71.3 billion (that is, the mouse swallowed part of the fox).

- In this business combination, Walt Disney must allocate its purchase price to the fair value of the assets and liabilities acquired. For example, the plant and equipment of 21st Century Fox would be recorded on Disney's books based on selling price, if selling prices are available.
- Otherwise, where a limited market exists, such as acquisition of a network of cell towers, an income approach using a present value of future cash flows approach might be used.
- Another possibility would be to use the cost to replace these cell towers (a replacement cost approach).

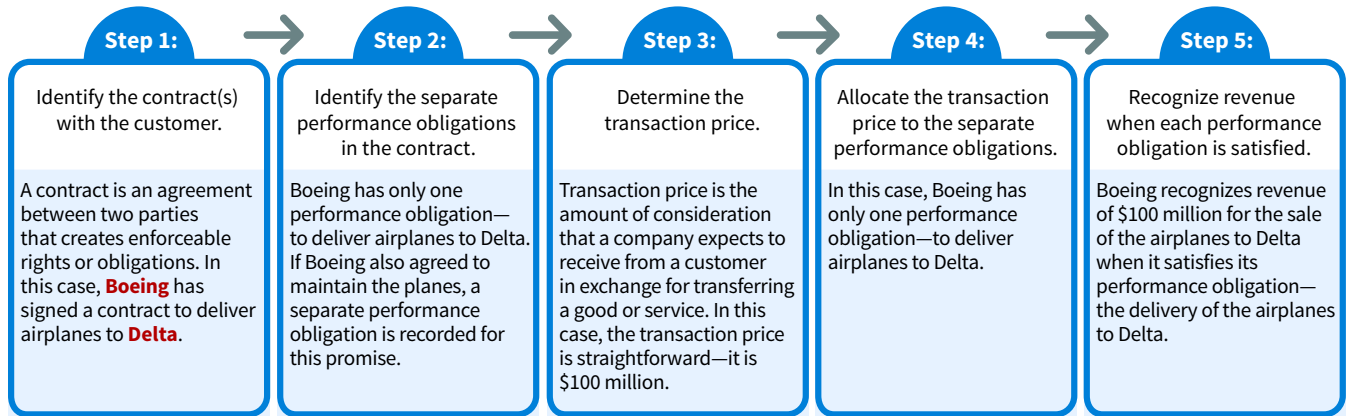

In summary, we presently have a “mixed-attribute” system that permits the use of historical cost and fair value. Although the historical cost principle continues to be an important basis for valuation, recording and reporting of fair value is increasing.

Revenue Recognition Principle

For an item to be recognized in the financial statements, it must meet the definition of an element, be measurable with sufficient certainty, and be relevant and reliable. Two key recognition concepts are the revenue recognition principle and the expense recognition principle. When a company agrees to perform a service or sell a product to a customer, it has a **performance obligation**. The **revenue recognition principle** requires that companies recognize revenue in the accounting period in which the performance obligation is satisfied. [4]

For example, assume that **Klinke Cleaners** cleans clothing on June 30, but customers do not claim and pay for their clothes until the first week of July. Klinke should record revenue in June when it performed the service (satisfied the performance obligation) rather than in July when it received the cash. At June 30, Klinke would report a receivable on its balance sheet and revenue in its income statement for the service performed.

To illustrate the revenue recognition principle in more detail, assume that **Boeing Corporation** signs a contract to sell airplanes to **Delta Air Lines** for \$100 million. To determine when to recognize revenue, Boeing uses the five steps shown in **Illustration 1.8**.

ILLUSTRATION 1.8 The Five Steps of Revenue Recognition

Many revenue transactions pose few problems because the transaction is initiated and completed at the same time. However, when to recognize revenue in other situations is often more difficult, as when a performance obligation is satisfied over time or multiple performance obligations are involved. We will revisit the five steps of revenue recognition in more detail in Chapters 3, 6, 7, 12, and 17.

Expense Recognition Principle

Expenses are defined as outflows or other “using up” of assets or incurring of liabilities during a period as a result of delivering or producing goods and/or performing services. It follows then that recognition of expenses is related to net changes in assets and earning revenues. In practice, the approach for recognizing expenses is, “Let the expense follow the revenues.” This approach is the **expense recognition principle**.

- Companies recognize expenses not when they pay wages or make a product, but when the work (service) or the product actually contributes to revenue. Thus, companies tie expense recognition to revenue recognition.
- That is, by matching **efforts (expenses) with accomplishment (revenues)**, the **expense recognition principle is implemented** in accordance with the definition of an expense.¹⁹

Some costs, however, are difficult to associate with revenue. As a result, some other approach must be developed. Often, companies use a **rational and systematic allocation policy** that will approximate the expense recognition principle. This type of expense recognition involves assumptions about the benefits that a company receives as well as the cost associated with those benefits.

For example, **Southwest Airlines** allocates the cost of an airplane over all of the accounting periods during which it uses the airplane because the asset contributes to the generation of revenue throughout its useful life. Companies also charge some costs to the current period as expenses simply because they cannot determine a connection with revenue. Examples of these types of costs are officers’ salaries and other administrative expenses.

For a manufacturer like **New Balance** or **Intel**, costs are generally classified into two groups for expense recognition purposes: **product costs** and **period costs**.

- **Product costs**, such as material, labor, and overhead, attach to the product. Companies carry these costs into future periods if they recognize the revenue from the product in subsequent periods.
- **Period costs**, such as officers’ salaries and other administrative expenses, attach to the period. Companies expense such costs in the immediate period even though benefits associated with these costs may occur in the future. Why? Because companies cannot determine a direct relationship between period costs and revenue.

¹⁹This approach is commonly referred to as the matching principle. However, there is much debate about the conceptual validity of the matching principle. A major concern is that matching permits companies to defer certain costs and treat them as assets on the balance sheet. In fact, these costs may not have future benefits. If abused, this principle permits the balance sheet to become a “dumping ground” for unmatched costs.

Illustration 1.9 summarizes these expense recognition procedures.

ILLUSTRATION 1.9 Expense Recognition

Type of Cost	Relationship	Recognition
Product costs:		
<ul style="list-style-type: none"> • Material • Labor • Overhead 	Direct relationship between cost and revenue.	Recognize in period of revenue.
Period costs:		
<ul style="list-style-type: none"> • Salaries • Administrative costs 	No direct relationship between cost and revenue.	Expense as incurred.

Full Disclosure Principle

Consider the following questions:

- Should a company have to disclose that its CEO has the coronavirus?
- Should a company be required to disclose its level of political spending?
- Should a company be required to disclose its level of diversity in its board of directors?

Answers to questions like these are difficult as they do not directly affect a specific asset, liability, revenue, or expense. But non-disclosure may have a significant effect on the financial reports from a longer-term point of view.

In deciding what information to report, companies follow the general practice of providing information that is of sufficient importance to influence the judgment and decisions of an informed user. The **full disclosure principle** recognizes that the nature and amount of information included in financial reports reflects a series of judgmental trade-offs. These trade-offs strive to balance two objectives:

1. Sufficient details to disclose matters that make a difference to users.
2. Sufficient condensation to make the information understandable, keeping in mind costs of preparing and using it.

Disclosure is not a substitute for proper accounting. As a former chief accountant of the SEC noted, “Good disclosure does not cure bad accounting any more than an adjective or adverb can be used without, or in place of, a noun or verb.”

Users find information about financial position, income, cash flows, and investments in one of three places:

1. Within the main body of financial statements.
2. In the notes to those statements.
3. As supplementary information.

Financial Statements As we discussed earlier, the financial statements are the balance sheet, income statement, statement of cash flows, and statement of stockholders’ equity. They are a structured means of communicating financial information. To be recognized in the main body of financial statements, **an item should meet the definition of an element, be measurable with sufficient certainty, and be relevant and reliable.**²⁰

Notes to the Financial Statements **Notes to financial statements** generally amplify or explain the items presented in the main body of the statements. If the main body of the financial statements gives an incomplete picture of the performance and position of the company, the notes should provide the additional information needed.

- Information in the notes does not have to be quantifiable, nor does it need to qualify as an element.
- Notes can be partially or totally narrative.

²⁰SFAC No. 5, par. 63.

Examples of notes include descriptions of the accounting policies and methods used in measuring the elements reported in the statements, explanations of uncertainties and contingencies, and statistics and details too voluminous for inclusion in the statements. The notes are essential to understanding the company's performance and position.

Supplementary Information **Supplementary information** may include details or amounts that present a different perspective from that adopted in the financial statements. It may be quantifiable information that is high in relevance but low in faithful representation. For example, oil and gas companies typically provide information on proven reserves as well as the related discounted cash flows.

Supplementary information may also include management's explanation of the financial information and its discussion of the significance of that information. For example, many business combinations have produced financing arrangements that demand new accounting and reporting practices and principles. In each of these situations, the same problem must be faced: making sure the company presents enough information to ensure that the **reasonably prudent investor** will not be misled.²¹

Cost Constraint

In providing information that is decision-useful, companies must weigh the costs of providing the information against the benefits that can be derived from using it. This is referred to as the **cost constraint**, or the **cost-benefit relationship**. Rule-making bodies use cost-benefit analysis before making final their informational requirements. To justify requiring a particular measurement or disclosure, the benefits perceived to be derived from it must exceed the costs perceived to be associated with it.

A corporate executive made the following remark to the FASB about a proposed rule: "In all my years in the financial arena, I have never seen such an absolutely ridiculous proposal . . . To dignify these 'actuarial' estimates by recording them as assets and liabilities would be virtually unthinkable except for the fact that the FASB has done equally stupid things in the past. . . . For God's sake, use common sense just this once."²² Although extreme, this remark indicates the frustration expressed by members of the business community about rule-making and whether the benefits of a given pronouncement exceed the costs.

The difficulty in cost-benefit analysis is that the costs and especially the benefits are not always evident or measurable. There are several types of costs associated with providing information:

- Collecting, processing, and disseminating information.
- Auditing information.
- Potential litigation caused by disclosure.
- Disclosure to competitors.
- Analyzing and interpreting information.

However, benefits to preparers of the information may include greater management control and access to capital at a lower cost. Users may receive better information for allocation of resources and tax assessment. Benefits are generally more difficult to quantify than are costs.

Despite the difficulty in assessing the costs and benefits of its rules, the FASB attempts to determine that each proposed pronouncement will fill a significant need and that the costs imposed to meet the rule are justified in relation to overall benefits of the resulting information. In addition, the Board seeks input on costs and benefits as part of its due process.²³

²¹As discussed (see footnote 9), the FASB has amended Chapter 8 of *SFAC No. 8* (issued in August 2018). The new chapter will be used by the Board as part of the process for establishing disclosure requirements in accounting standards as well as for evaluating existing disclosure requirements, if and when the Board considers those requirements. The FASB also has a standards-level project in which the staff is testing the concepts in Chapter 8, including an assessment of whether they will improve the effectiveness of disclosure requirements in the following topics: "Compensation—Retirement Benefits," "Income Taxes," and "Inventory." (For more information, go to the FASB website; click on Projects, then Technical Agenda, and then the Presentation and Disclosure Framework tab.)

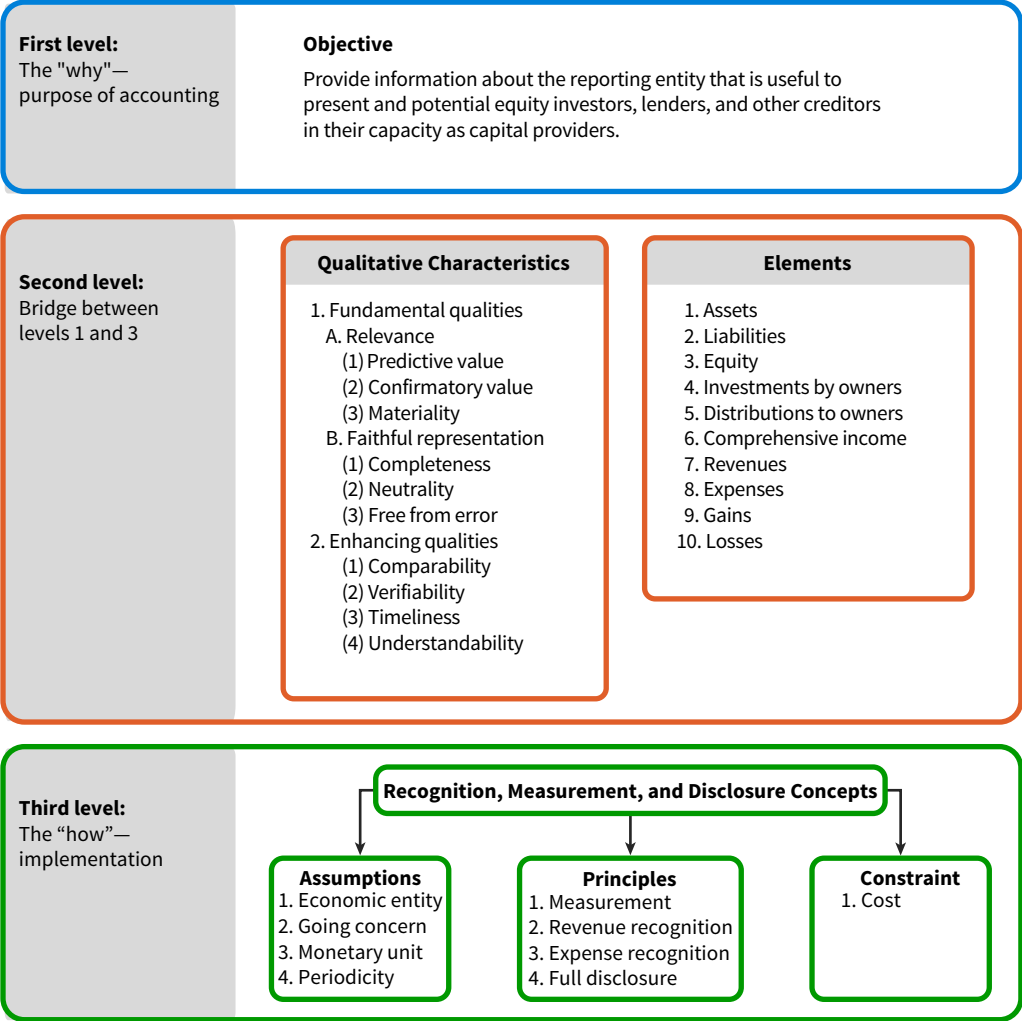

²²"Decision-Usefulness: The Overriding Objective," *FASB Viewpoints* (October 19, 1983), p. 4.

²³For example, as part of its project on "Share-Based Payment" [5], the Board conducted a field study and surveyed commercial software providers to collect information on the costs of measuring the fair values of share-based compensation arrangements.

Summary of the Structure

Illustration 1.10 presents the conceptual framework discussed in this chapter. It is similar to Illustration 1.5, except that it provides additional information for each level. We cannot over-emphasize the usefulness of this conceptual framework in helping to understand many of the problem areas that we examine in later chapters.

ILLUSTRATION 1.10
Conceptual Framework for
Financial Reporting

Accounting Matters

Be Responsible

Kellogg's issues an annual corporate responsibility report, and **Patagonia** devotes substantial space on its website to articulate its views on social responsibility, its initiatives, and its progress toward its goals. Evidence shows financial performance corresponds to how well companies contend with **environmental, social and governance (ESG) issues**, and investors have taken note.

Unlike financial information, however, sustainability disclosures do not need to conform to a set of shared standards. Kellogg's and Patagonia may focus their reporting on vastly

different metrics. With over a dozen major reporting frameworks and standards, businesses can apply the standards they see fit, making it challenging for investors to compare among companies.

Establishing some uniformity in ESG reporting took a big step forward in 2020 when the Big Four public accounting firms developed an international set of metrics for companies to use. They aim to provide a common set of existing disclosures that lead toward a more coherent, comprehensive global corporate reporting system. This emphasizes the need and desire for a uniform set of standards, both for financial and nonfinancial reporting.

FACTS Here are assumptions and principles used by the FASB in developing financial reporting standards

- a. Economic entity assumption
- b. Going concern assumption
- c. Monetary unit assumption
- d. Periodicity assumption
- e. Historical cost principle
- f. Revenue recognition principle
- g. Expense recognition principle
- h. Full disclosure principle

Put It into Practice LO 1.3

Identify Assumptions and Principles

INSTRUCTIONS

Match each item above with the description below.

1. The belief that the company will continue for the foreseeable future.
2. The reporting of all information that would make a difference to financial statement users.
3. The practice of preparing financial statements at regular intervals.
4. The belief that items should be reported on the balance sheet at the price that was paid to acquire the item.
5. Tracing accounting events to companies.
6. Reporting only those things that can be measured in dollars.
7. Recognize wages when the work contributes to revenue.
8. Recognize sale of goods when performance obligation is satisfied.

SOLUTION

1. **b.** Going concern assumption
2. **h.** Full disclosure principle
3. **d.** Periodicity assumption
4. **e.** Historical cost principle
5. **a.** Economic entity assumption
6. **c.** Monetary unit assumption
7. **g.** Expense recognition principle
8. **f.** Revenue recognition principle

1.4 Major Challenges in Financial Reporting

LEARNING OBJECTIVE 4

Identify the major challenges in the financial reporting environment.

Since the implementation of GAAP may affect many interests, much discussion occurs about who should develop GAAP and to whom it should apply. We discuss some of the major issues below.

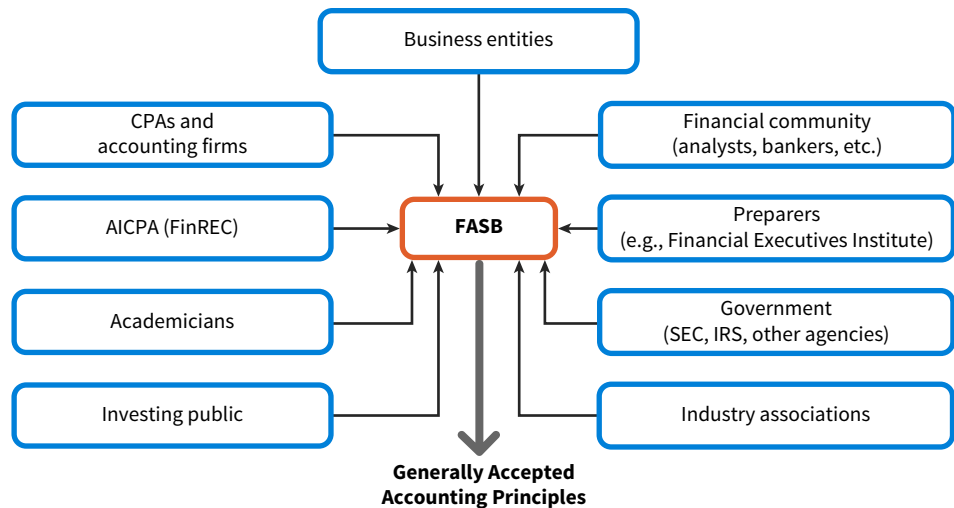

GAAP in a Political Environment

User groups are possibly the most powerful force influencing the development of GAAP. User groups consist of those most interested in or affected by accounting rules. Like lobbyists in our state and national capitals, user groups play a significant role. **GAAP is as much a product of political action as it is of careful logic or empirical findings.**

- User groups may want particular economic events accounted for or reported in a particular way, and they know that the most effective way to influence GAAP is to participate in the formulation of these rules or try to influence the formulator of them.
- These user groups often target the FASB, to pressure it to influence changes in the existing rules and the development of new ones.

Illustration 1.11 shows the various user groups that apply pressure.

ILLUSTRATION 1.11 User Groups that Influence the Formulation of Accounting Standards

Should there be politics in establishing GAAP for financial accounting and reporting? Why not? We have politics at home; at school; at the fraternity, sorority, and dormitory; at the office; and at church, temple, and mosque. Politics is everywhere. GAAP is part of the real world, and it cannot escape politics and political pressures.²⁴

That is not to say that politics in establishing GAAP is a negative force. Considering the **economic consequences**²⁵ of many accounting rules, special interest groups should vocalize their reactions to proposed rules. What the Board should *not* do is issue pronouncements that are primarily politically motivated. While paying attention to its constituencies, the Board should base GAAP on sound research and a conceptual framework that has its foundation in economic reality.

The Expectations Gap

The **Sarbanes-Oxley Act** was passed in response to a string of accounting scandals at companies like **Enron**, **Cendant**, **Sunbeam**, **Rite-Aid**, **Xerox**, and **WorldCom**. This law increased the resources for the SEC to combat fraud and curb poor reporting practices.²⁶ In addition, the Sarbanes-Oxley Act introduced sweeping changes to the institutional structure of the accounting profession. The following are some of the key provisions of the legislation.

²⁴FASB board members acknowledged that they undertook many of the Board's projects, such as "Accounting for Contingencies," "Accounting for Pensions," "Statement of Cash Flows," and "Recognition and Measurement of Financial Assets and Liabilities," due to political pressure.

²⁵**Economic consequences** means the impact of accounting reports on the wealth positions of issuers and users of financial information, and the decision-making behavior resulting from that impact. The resulting behavior of these individuals and groups could have detrimental financial effects on the providers of the financial information. See Stephen A. Zeff, "The Rise of 'Economic Consequences,'" *Journal of Accountancy* (December 1978), pp. 56–63. We extend appreciation to Professor Zeff for his insights on this chapter.

²⁶*Sarbanes-Oxley Act of 2002*, H. R. Rep. No. 107-610 (2002).

- Establishes an oversight board, the **Public Company Accounting Oversight Board (PCAOB)**, for accounting practices. The PCAOB has oversight and enforcement authority and establishes auditing, quality control, and independence standards and rules.
- Requires CEOs and CFOs to personally certify that financial statements and disclosures are accurate and complete, and requires CEOs and CFOs to forfeit bonuses and profits when there is an accounting restatement.
- Requires audit committees to be comprised of independent members and members with financial expertise and requires codes of ethics for senior financial officers.
- Requires large public companies to document and evaluate the effectiveness of their internal controls over financial reporting.

Are these changes enough to address deficiencies in financial reporting? The **expectations gap**, which is what the public thinks accountants **should** do versus what accountants think they **can** do, is difficult to close. Although the profession can argue rightfully that accounting cannot be responsible for every financial catastrophe, it must continue to strive to meet the needs of society. However, efforts to meet these needs will become more costly to society. The development of a highly transparent, clear, and reliable system will require considerable resources.

Financial Reporting Issues

While our reporting model has worked well in capturing and organizing financial information in a useful and reliable fashion, much still needs to be done, as shown in **Illustration 1.12**.

Challenge	Issue to Be Addressed
Nonfinancial measurements	Financial reports fail to provide some key performance measures widely used by management, such as customer satisfaction indexes, backlog information, reject rates on goods purchased, as well as the results of companies' sustainability efforts.
Forward-looking information	Financial reports fail to provide forward-looking information needed by present and potential investors and creditors. One individual noted that financial statements in 2020 should have started with the phrase, "Once upon a time," to signify their use of historical cost and accumulation of past events.
Soft assets	Financial reports are focused on hard assets (inventory, plant assets) but fail to provide much information about a company's soft assets (intangibles). The best assets are often intangible. Consider Microsoft's know-how and market dominance, Walmart's expertise in supply chain management, and Procter & Gamble's brand image.
Timeliness	Companies only prepare financial statements quarterly and provide audited financials annually. Little to no real-time financial statement information is available.
Understandability	Investors and market regulators are raising concerns about the complexity and lack of understandability of financial reports.

ILLUSTRATION 1.12 Financial Reporting Challenges

We believe each of these challenges must be met for the accounting profession to provide the type of information needed for an efficient capital allocation process. We are confident that changes will occur, based on these positive signs.

- **Companies are voluntarily disclosing information deemed relevant to investors.** Often, such information is nonfinancial. For example, banking companies now disclose data on loan growth, credit quality, fee income, operating efficiency, capital management,

and management strategy. Increasingly, companies are preparing reports on their sustainability efforts by reporting such information as water use and conservation, carbon impacts, and labor practices. In some cases, “integrated reports” are provided, which incorporate sustainability reports into the traditional annual report, leading some to call for standards for sustainability reporting.

- **The FASB is now working on projects that address disclosure effectiveness, a reporting framework for non-public companies, and a simplification initiative.** The projects could go a long way toward addressing complexity and understandability of the information in financial statements, allowing for more-effective, less-complex, and flexible reporting to meet the needs of investors.
- Most companies publish their annual reports in several formats on the Internet. The most innovative companies offer sections of their annual reports in a format that the user can readily manipulate, such as in an electronic spreadsheet format. Companies also format their financial reports using eXtensible Business Reporting Language (XBRL), which permits quicker and lower-cost access to their financial information.

Changes in these directions will enhance the relevance of financial reporting and provide useful information to financial statement readers.

Analytics in Action: Big Data for Big Decisions

Accounting software systems collect vast amounts of data about a company’s economic events as well as its suppliers and customers. With financial information delivered in a fully digital format, decision-makers are taking advantage of this wealth of information (big data) by using data analytics.

- **Data analytics** involves analyzing data, often employing both software and statistics, to draw inferences.

- As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies.

Data analytics often employs software and statistics to make inferences and make more informed business decisions.

An end-of-chapter Analytics in Action Activities section, which includes Excel-based problems with data sets, is available for most chapters in this text.

Ethics in the Environment of Financial Accounting

Robert Sack, a noted commentator on the subject of accounting ethics, observed, “Based on my experience, new graduates tend to be idealistic . . . thank goodness for that! Still, it is very dangerous to think that your armor is all in place and say to yourself, ‘I would have never given in to that.’ The pressures don’t explode on us; they build, and we often don’t recognize them until they have us.”

These observations are particularly appropriate for anyone entering the business world. In accounting, as in other areas of business, we frequently encounter ethical dilemmas. Some of these dilemmas are simple and easy to resolve. However, many are not, requiring difficult choices among allowable alternatives. Consider these examples:

- Companies that concentrate on “maximizing the bottom line,” “facing the challenges of competition,” and “stressing short-term results” place accountants in an environment of conflict and pressure.
- Basic questions such as, “Is this way of communicating financial information good or bad?” “Is it right or wrong?” and “What should I do in this circumstance?” cannot always be answered by simply adhering to GAAP or following the rules of the profession.
- Technical competence is not enough when encountering ethical decisions.

Doing the right thing is not always easy or obvious. The pressures “to bend the rules,” “to play the game,” or “to just ignore it” can be considerable. For example, “Will my decision affect my job performance negatively?” “Will my superiors be upset?” and “Will my colleagues be unhappy with me?” are often questions business people face in making a tough ethical decision. The decision is more difficult because there is no comprehensive ethical system to provide guidelines.

Time, job, client, personal, and peer pressures can complicate the process of ethical sensitivity and selection among alternatives. *Throughout this text, we present ethical considerations to help sensitize you to the type of situations you may encounter in the performance of your professional responsibility.* As Warren Buffet noted: “A word of caution as you go through life—It takes 20 years to build a reputation and five minutes to lose it. If you think about that, you will do things differently.”

Learning Objectives Review

1 Describe the financial reporting environment, major standard-setting bodies, and the meaning of generally accepted accounting principles (GAAP).

The **objective of general-purpose financial reporting** is to provide financial information about the reporting entity that is useful to present and potential equity investors, lenders, and other creditors in decisions about providing resources to the entity through equity investments and loans or other forms of credit. Information that

is decision-useful to investors may also be helpful to other users of financial reporting who are not investors.

To achieve this objective, the accounting profession has attempted to **develop a set of standards that is generally accepted** and universally practiced. Without this set of standards, each company would have to develop its own standards. Readers of financial statements would have to familiarize themselves with every company’s peculiar accounting and reporting practices. As a result, it would be almost impossible to prepare statements that could be compared.

The **Securities and Exchange Commission (SEC)** is a federal agency that has the broad powers to prescribe, in whatever detail it desires, the accounting standards to be employed by companies that fall within its jurisdiction. The **Financial Accounting Standards Board (FASB)** establishes and improves standards of financial accounting and reporting for the guidance and education of the public. **Generally accepted accounting principles (GAAP)** are those principles that have substantial authoritative support. All authoritative accounting documents are classified in one source referred to as the Codification. The purpose of the Codification is to simplify user access to all authoritative GAAP. The Codification is the means by which GAAP is documented, presented, and updated.

2 Describe the components and usefulness of the conceptual framework.

The accounting profession needs a conceptual framework to (1) build on and relate to an established body of concepts and objectives, (2) provide a framework for solving new and emerging practical problems, (3) increase financial statement users' understanding of and confidence in financial reporting, and (4) enhance comparability among companies' financial statements. Concepts that relate to financial reporting for business enterprises provide the basis for the conceptual framework. They include objectives, qualitative characteristics, and elements. In addition, measurement and recognition concepts are developed.

Objective of financial reporting. The objective of general-purpose financial reporting is to provide financial information about the reporting entity that is **useful to present and potential equity investors, lenders, and other creditors** in making decisions about providing resources to the entity. Those decisions involve buying, selling, or holding equity and debt instruments, and providing or settling loans and other forms of credit. Information that is decision-useful to capital providers may also be helpful to other users of financial reporting who are not capital providers.

The overriding criterion by which accounting choices can be judged is decision-usefulness—that is, providing information that is most useful for decision-making. Relevance and faithful representation are the two fundamental qualities that make information decision-useful. Relevant information makes a difference in a decision by having predictive or confirmatory value and is material. Faithful representation is characterized by completeness, neutrality, and being free from error.

Enhancing qualities of useful information are (1) comparability, (2) verifiability, (3) timeliness, and (4) understandability.

Elements of financial statements. The basic elements of financial statements are (1) assets, (2) liabilities, (3) equity, (4) investments by owners, (5) distributions to owners, (6) comprehensive income, (7) revenues, (8) expenses, (9) gains, and (10) losses.

3 Discuss the basic assumptions and principles of accounting.

Four basic assumptions underlying financial accounting are as follows. (1) **Economic entity:** The activity of a company can be kept separate and distinct from its owners and any other business units. (2) **Going concern:** The company will have a long life. (3) **Monetary unit:** Money is the common denominator by which economic activity is conducted, and the monetary unit provides an appropriate basis for measurement and analysis. (4) **Periodicity:** The economic activities of a company can be divided into artificial time periods.

The principles underlying accounting are as follows. (1) **Measurement principle:** GAAP permits the use of historical cost, fair value, and other valuation bases. Although the historical cost principle (measurement based on acquisition price) continues to be an important basis for valuation, recording and reporting of fair value information is increasing. (2) **Revenue recognition principle:** A company recognizes revenue when it satisfies a performance obligation. (3) **Expense recognition principle:** As a general rule, companies recognize expenses when the service or the product actually makes its contribution to revenue (commonly referred to as **matching**). (4) **Full disclosure principle:** Companies generally provide information that is of sufficient importance to influence the judgment and decisions of an informed user. (5) **Cost constraint:** The cost of providing the information must be weighed against the benefits that can be derived from using the information.

4 Identify the major challenges in the financial reporting environment.

One major challenge is that user groups may want particular economic events accounted for or reported in a particular way, and they fight hard to get what they want. They especially target the FASB to influence changes in existing GAAP and in the development of new rules. A second challenge is that financial reports fail to provide (1) some key performance measures widely used by management, (2) forward-looking information needed by investors and creditors, (3) sufficient information on a company's soft assets (intangibles), (4) real-time financial information, and (5) easy-to-comprehend information. Finally, financial accountants are called on for moral discernment and ethical decision-making. Decisions are sometimes difficult because a public consensus has not emerged to formulate a comprehensive ethical system that provides guidelines for making ethical judgments.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Questions

1. How does accounting help the capital allocation process?
2. What is the objective of financial reporting?
3. Briefly explain the meaning of decision-usefulness in the context of financial reporting.
4. Of what value is a common set of standards in financial accounting and reporting?
5. In what way is the Securities and Exchange Commission concerned about and supportive of accounting principles and standards?
6. If you had to explain or define “generally accepted accounting principles or standards,” what essential characteristics would you include in your explanation?
7. What is the difference between the Codification and the Codification Research System?
8. What are the primary advantages of having a Codification of generally accepted accounting principles?
9. What is a conceptual framework? Why is a conceptual framework necessary in financial accounting?
10. What is the primary objective of financial reporting?
11. What is meant by the term “qualitative characteristics of accounting information”?
12. Briefly describe the two fundamental qualities of useful accounting information.
13. How is materiality (or immateriality) related to the proper presentation of financial statements? What factors and measures should be considered in assessing the materiality of a misstatement in the presentation of a financial statement?
14. What are the enhancing qualities of the qualitative characteristics? What is the role of enhancing qualities in the conceptual framework?
15. According to the FASB conceptual framework, the objective of financial reporting for business enterprises is based on the needs of the users of financial statements. Explain the level of sophistication that the Board assumes about the users of financial statements.
16. What is the distinction between comparability and consistency?
17. Why is it necessary to develop a definitional framework for the elements of accounting?
18. Expenses, losses, and distributions to owners are all decreases in net assets. What are the distinctions among them?
19. Revenues, gains, and investments by owners are all increases in net assets. What are the distinctions among them?
20. What are the four basic assumptions that underlie the financial accounting structure?
21. The life of a business is divided into specific time periods, usually a year, to measure the results of operations for each such time period and to portray financial conditions at the end of each period.
 - a. This practice is based on the accounting assumption that the life of the business consists of a series of time periods and that it is possible to measure accurately the results of operations for each period. Comment on the validity and necessity of this assumption.
 - b. What has been the effect of this practice on accounting? What is its relation to the accrual system? What influence has it had on accounting entries and methodology?
22. What is the basic accounting problem created by the monetary unit assumption when there is significant inflation? What appears to be the FASB position on a stable monetary unit?
23. What is the definition of fair value?
24. Briefly describe the fair value hierarchy.
25. Explain the revenue recognition principle.
26. What is a performance obligation, and how is it used to determine when revenue should be recognized?
27. What are the five steps used to determine the proper time to recognize revenue?
28. Selane Eatery operates a catering service specializing in business luncheons for large corporations. Selane requires customers to place their orders 2 weeks in advance of the scheduled events. Selane bills its customers on the tenth day of the month following the date of service and requires that payment be made within 30 days of the billing date. Conceptually, when should Selane recognize revenue related to its catering service?
29. Three expense recognition methods (associating cause and effect, systematic and rational allocation, and immediate recognition) were discussed in the text under the expense recognition principle. Indicate the basic nature of each of these expense recognition methods and give two examples of each.
30. Briefly describe the types of information concerning financial position, income, and cash flows that might be provided (a) within the main body of the financial statements, (b) in the notes to the financial statements, or (c) as supplementary information.
31. In January 2026, Janeway Inc. doubled the amount of its outstanding stock by selling on the market an additional 10,000 shares to finance an expansion of the business. You propose that this information be shown by a footnote on the balance sheet as of December 31, 2025. The president objects, claiming that this sale took place after December 31, 2025, and therefore should not be shown. Explain your position.
32. Describe the major constraint inherent in the presentation of accounting information.

33. What are some of the costs of providing accounting information? What are some of the benefits of accounting information? Describe the cost-benefit factors that should be considered when new accounting standards are being proposed.

34. The treasurer of Landowska Co. has heard that conservatism is a doctrine that is followed in accounting and, therefore, proposes that several policies be followed that are conservative in nature. State your opinion with respect to each of the policies listed.

- a. The company gives a 2-year warranty to its customers on all products sold. The estimated warranty costs incurred from this year's sales should be entered as an expense this year instead of an expense in the period in the future when the warranty is made good.
- b. When sales are made on account, there is always uncertainty about whether the accounts are collectible. Therefore, the treasurer recommends recording the sale when the cash is received from the customers.
- c. A personal liability lawsuit is pending against the company. The treasurer believes there is an even chance that

the company will lose the suit and have to pay damages of \$200,000 to \$300,000. The treasurer recommends that a loss be recorded and a liability created in the amount of \$300,000.

35. What are the sources of pressure that change and influence the development of GAAP?

36. Some individuals have indicated that the FASB must be cognizant of the economic consequences of its pronouncements. What is meant by "economic consequences"? What dangers exist if politics play too much of a role in the development of GAAP?

37. One writer recently noted that 99.4% of all companies prepare statements that are in accordance with GAAP. Why then is there such concern about fraudulent financial reporting?

38. What is the "expectations gap"? What is the profession doing to try to close this gap?

39. What are some of the major challenges facing the accounting profession?

40. How are financial accountants challenged in their work to make ethical decisions? Is technical mastery of GAAP not sufficient to the practice of financial accounting?

Brief Exercises

BE1.1 (LO 1) Presented below are four statements, which you are to identify as true or false. If false, explain why the statement is false.

1. GAAP is the term used to indicate the whole body of FASB authoritative literature.
2. Any company claiming compliance with GAAP must comply with most standards and interpretations but does not have to follow the disclosure requirements.
3. The primary governmental body that has influence over the FASB is the SEC.
4. The FASB has a government mandate and therefore does not have to follow due process in issuing a standard.

BE1.2 (LO 1) Wayne Rogers, an administrator at a major university, recently said, "I've got some CDs in my IRA, which I set up to beat the IRS." As elsewhere, in the world of accounting and finance, it often helps to be fluent in abbreviations and acronyms. Presented below is a list of common accounting acronyms. Identify the term for which each acronym stands, and provide a brief definition of each term.

- | | |
|-----------|----------|
| a. AICPA. | e. CPA. |
| b. FAF. | f. FASB. |
| c. FASAC. | g. SEC. |
| d. GAAP. | h. IASB. |

BE1.3 (LO 2) Match the qualitative characteristics below with the following statements.

- | | |
|-----------------------------|-------------------|
| 1. Relevance. | 5. Comparability. |
| 2. Faithful representation. | 6. Completeness. |
| 3. Predictive value. | 7. Neutrality. |
| 4. Confirmatory value. | 8. Timeliness. |
- a. Quality of information that permits users to identify similarities in and differences between two sets of economic phenomena.
 - b. Having information available to users before it loses its capacity to influence decisions.
 - c. Information about an economic phenomenon that has value as an input to the processes used by capital providers to form their own expectations about the future.
 - d. Information that is capable of making a difference in the decisions of users in their capacity as capital providers.
 - e. Absence of bias intended to attain a predetermined result or to induce a particular behavior.

BE1.4 (LO 2) Match the qualitative characteristics below with the following statements.

- | | |
|-----------------------|-----------------------------|
| 1. Timeliness. | 5. Faithful representation. |
| 2. Completeness. | 6. Relevance. |
| 3. Free from error. | 7. Neutrality. |
| 4. Understandability. | 8. Confirmatory value. |
- Quality of information that assures users that information represents the economic phenomena that it purports to represent.
 - Information about an economic phenomenon that corrects past or present expectations based on previous evaluations.
 - The extent to which information is accurate in representing the economic substance of a transaction.
 - Includes all the information that is necessary for a faithful representation of the economic phenomena that it purports to represent.
 - Quality of information that allows users to comprehend its meaning.

BE1.5 (LO 2) Discuss whether the changes described in each of the cases below require recognition in the CPA's audit report as to consistency. (Assume that the amounts are material.)

- The company changed its inventory method to FIFO from weighted-average, which had been used in prior years.
- The company disposed of one of the two subsidiaries that had been included in its consolidated statements for prior years.
- The estimated remaining useful life of plant property was reduced because of obsolescence.

BE1.6 (LO 2) Identify which qualitative characteristic of accounting information is best described in each item below. (Do not use relevance and faithful representation.)

- The annual reports of **Best Buy Co.** are audited by certified public accountants.
- Black & Decker** and **Cannondale Corporation** both use the FIFO cost flow assumption.
- Starbucks Corporation** has used straight-line depreciation since it began operations.
- Motorola** issues its quarterly reports immediately after each quarter ends.

BE1.7 (LO 2) Presented below are three different transactions related to materiality. Explain whether you would classify these transactions as material.

- Blair Co. has reported a positive trend in earnings over the last 3 years. In the current year, it reduces its bad debt allowance to ensure another positive earnings year. The impact of this adjustment is equal to 3% of net income.
- Hindi Co. has an unusual gain of \$3.1 million on the sale of plant assets and a \$3.3 million loss on the sale of investments. It decides to net the gain and loss because the net effect is considered immaterial. Hindi Co.'s income for the current year was \$10 million.
- Damon Co. expenses all capital equipment under \$2,500 on the basis that it is immaterial. The company has followed this practice for a number of years.

BE1.8 (LO 2) For each item below, indicate to which category of elements of financial statements it belongs.

- | | |
|--------------------------------|--------------------------------|
| a. Retained earnings. | f. Loss on sale of equipment. |
| b. Sales revenue. | g. Interest payable. |
| c. Additional paid-in capital. | h. Dividends. |
| d. Inventory. | i. Gain on sale of investment. |
| e. Depreciation. | j. Issuance of common stock. |

BE1.9 (LO 2) Indicate the accounting for each of the following expenditures as an asset or an expense. Justify your choices. Assume all items are material.

- Legal fees paid in connection with the purchase of land are \$1,500.
- Eduardo, Inc. paves the driveway leading to the office building at a cost of \$21,000.
- A meat market purchases a meat-grinding machine at a cost of \$3,500.
- On June 30, Monroe and Meno, medical doctors, pay 6 months' office rent to cover the month of July and the next 5 months.
- Smith's Hardware Company pays \$9,000 in wages to laborers for construction on a building to be used in the business.
- Alvarez's Florists pays wages of \$2,100 for the month to an employee who serves as driver of their delivery truck.

BE1.10 (LO 3) Identify which basic assumption of accounting is best described in each item below.

- The economic activities of **FedEx Corporation** are divided into 12-month periods for the purpose of issuing annual reports.
- Soletron Corporation, Inc.** does not adjust amounts in its financial statements for the effects of inflation.
- Walgreen Co.** reports current and noncurrent classifications in its balance sheet.
- The economic activities of **General Electric** and its subsidiaries are merged for accounting and reporting purposes.

BE1.11 (LO 3) If the going concern assumption is not made in accounting, discuss the differences in the amounts shown in the financial statements for the following items.

- Land.
- Unamortized bond premium.
- Depreciation expense on equipment.
- Inventory.
- Prepaid insurance.

BE1.12 (LO 3) Identify which basic principle of accounting is best described in each item below.

- Norfolk Southern Corporation** reports revenue in its income statement when the performance obligation is satisfied instead of when the cash is collected.
- Yahoo!** recognizes depreciation expense for a machine over the 2-year period during which that machine helps the company earn revenue.
- Oracle Corporation** reports information about pending lawsuits in the notes to its financial statements.
- Gap, Inc.** reports land on its balance sheet at the amount paid to acquire it, even though the estimated fair value is greater.

BE1.13 (LO 3) Vande Velde Company made three investments during 2025. (1) It purchased 1,000 shares of Sastre Company, a start-up company. Vande Velde made the investment based on valuation estimates from an internally developed model. (2) It purchased 2,000 shares of **GE** stock, which trades on the NYSE. (3) It invested \$10,000 in local development authority bonds. Although these bonds do not trade on an active market, their value closely tracks movements in U.S. Treasury bonds. Where will Vande Velde report these investments in the fair value hierarchy?

BE1.14 (LO 3) What accounting assumption, principle, or constraint would **Target Corporation** use in each of the situations below?

- Target was involved in litigation over the last year. This litigation is disclosed in the financial statements.
- Target allocates the cost of its depreciable assets over the life it expects to receive revenue from these assets.
- Target records the purchase of a new **Dell** PC at its cash equivalent price.

Exercises

E1.1 (LO 1) Writing (Need for GAAP) Some argue that having various organizations establish accounting principles is wasteful and inefficient. Rather than mandating accounting rules, each company could voluntarily disclose the type of information it considered important. In addition, if an investor wants additional information, the investor could contact the company and pay to receive the additional information desired.

Instructions

Comment on the appropriateness of this viewpoint.

E1.2 (LO 1, 4) (Financial Reporting and Accounting Standards) Answer the following multiple-choice questions.

- GAAP stands for:
 - governmental auditing and accounting practices.
 - generally accepted attest principles.

- c. government audit and attest policies.
 - d. generally accepted accounting principles.
2. Accounting standard-setters use the following process in establishing accounting standards:
 - a. Research, exposure draft, discussion paper, standard.
 - b. Discussion paper, research, exposure draft, standard.
 - c. Research, preliminary views, discussion paper, standard.
 - d. Research, discussion paper, exposure draft, standard.
 3. GAAP is comprised of:
 - a. FASB standards, interpretations, and concepts statements.
 - b. FASB financial standards.
 - c. FASB standards, interpretations, EITF consensuses, and accounting rules issued by FASB predecessor organizations.
 - d. any accounting guidance included in the FASB Codification.
 4. The authoritative status of the conceptual framework is as follows.
 - a. It is used when there is no standard or interpretation related to the reporting issues under consideration.
 - b. It is not as authoritative as a standard but takes precedence over any interpretation related to the reporting issue.
 - c. It takes precedence over all other authoritative literature.
 - d. It has no authoritative status.
 5. The objective of financial reporting places most emphasis on:
 - a. reporting to capital providers.
 - b. reporting on stewardship.
 - c. providing specific guidance related to specific needs.
 - d. providing information to individuals who are experts in the field.
 6. General-purpose financial statements are prepared primarily for:
 - a. internal users.
 - b. external users.
 - c. auditors.
 - d. government regulators.
 7. Economic consequences of accounting standard-setting means:
 - a. standard-setters must give first priority to ensuring that companies do not suffer any adverse effect as a result of a new standard.
 - b. standard-setters must ensure that no new costs are incurred when a new standard is issued.
 - c. the objective of financial reporting should be politically motivated to ensure acceptance by the general public.
 - d. accounting standards can have detrimental impacts on the wealth levels of the providers of financial information.
 8. The expectations gap is:
 - a. what financial information management provides and what users want.
 - b. what the public thinks accountants should do and what accountants think they can do.
 - c. what the governmental agencies want from standard-setting and what the standard-setters provide.
 - d. what the users of financial statements want from the government and what is provided.

E1.3 (LO 2) (Usefulness, Objective of Financial Reporting) Indicate whether the following statements about the conceptual framework are true or false. If false, provide a brief explanation supporting your position.

- a. Accounting rule-making that relies on a body of concepts will result in useful and consistent pronouncements.
- b. General-purpose financial reports are most useful to company insiders in making strategic business decisions.
- c. Accounting standards based on personal conceptual frameworks generally will result in consistent and comparable accounting reports.

- d. Capital providers are the only users who benefit from general-purpose financial reporting.
- e. Accounting reports should be developed so that users without knowledge of economics and business can become informed about the financial results of a company.
- f. The objective of financial reporting is the foundation from which the other aspects of the framework logically result.

E1.4 (LO 2) (Usefulness, Objective of Financial Reporting, Qualitative Characteristics) Indicate whether the following statements about the conceptual framework are true or false. If false, provide a brief explanation supporting your position.

- a. The fundamental qualitative characteristics that make accounting information useful are relevance and verifiability.
- b. Relevant information only has predictive value, confirmatory value, or both.
- c. Information that is a faithful representation is characterized as having predictive or confirmatory value.
- d. Comparability pertains only to the reporting of information in a similar manner for different companies.
- e. Verifiability is solely an enhancing characteristic for faithful representation.
- f. In preparing financial reports, it is assumed that users of the reports have reasonable knowledge of business and economic activities.

E1.5 (LO 2) Groupwork (Qualitative Characteristics) SFAC No. 8, Chapter 3, identifies the qualitative characteristics that make accounting information useful. Presented below are a number of questions related to these qualitative characteristics and underlying constraint.

- a. What is the quality of information that enables users to confirm or correct prior expectations?
- b. Identify the pervasive constraint developed in the conceptual framework.
- c. The chairman of the SEC at one time noted, "If it becomes accepted or expected that accounting principles are determined or modified in order to secure purposes other than economic measurement, we assume a grave risk that confidence in the credibility of our financial information system will be undermined." Which qualitative characteristic of accounting information should ensure that such a situation will not occur? (Do not use faithful representation.)
- d. Muruyama Corp. switches from FIFO to average-cost to FIFO over a 2-year period. Which qualitative characteristic of accounting information is not followed?
- e. Assume that the profession permits the savings and loan industry to defer losses on investments it sells because immediate recognition of the loss may have adverse economic consequences on the industry. Which qualitative characteristic of accounting information is not followed? (Do not use relevance or faithful representation.)
- f. What are the two fundamental qualities that make accounting information useful for decision-making?
- g. Watteau Inc. does not issue its first-quarter report until after the second quarter's results are reported. Which qualitative characteristic of accounting is not followed? (Do not use relevance.)
- h. Predictive value is an ingredient of which of the two fundamental qualities that make accounting information useful for decision-making purposes?
- i. Duggan, Inc. is the only company in its industry to depreciate its plant assets on a straight-line basis. Which qualitative characteristic of accounting information may not be followed?
- j. Roddick Company has attempted to determine the replacement cost of its inventory. Three different appraisers arrive at substantially different amounts for this value. The president, nevertheless, decides to report the middle value for external reporting purposes. Which qualitative characteristic of information is lacking in these data? (Do not use relevance or faithful representation.)

E1.6 (LO 2) (Qualitative Characteristics) The qualitative characteristics that make accounting information useful for decision-making purposes are as follows.

Relevance	Neutrality	Verifiability
Faithful representation	Completeness	Understandability
Predictive value	Timeliness	Comparability
Confirmatory value	Materiality	Free from error

Instructions

Identify the appropriate qualitative characteristic(s) to be used given the following information.

- a. Qualitative characteristic being employed when companies in the same industry are using the same accounting principles.
- b. Quality of information that confirms users' earlier expectations.
- c. Imperative for providing comparisons of a company from period to period.
- d. Ignores the economic consequences of a standard or rule.
- e. Requires a high degree of consensus among individuals on a given measurement.
- f. Predictive value is an ingredient of this fundamental quality of information.
- g. Four qualitative characteristics that are related to both relevance and faithful representation.
- h. An item is not recorded because its effect on income would not change a decision.
- i. Neutrality is an ingredient of this fundamental quality of accounting information.
- j. Two fundamental qualities that make accounting information useful for decision-making purposes.
- k. Issuance of interim reports is an example of what enhancing quality of relevance?

E1.7 (LO 2) (Elements of Financial Statements) Ten interrelated elements that are most directly related to measuring the performance and financial status of an enterprise are provided below.

Assets	Distributions to owners	Expenses
Liabilities	Comprehensive income	Gains
Equity	Revenues	Losses
Investments by owners		

Instructions

Identify the element or elements associated with the 12 items below.

- a. Arises from peripheral or incidental transactions.
- b. Obligation to transfer resources arising from a past transaction.
- c. Increases ownership interest.
- d. Declares and pays cash dividends to owners.
- e. Increases in net assets in a period from nonowner sources.
- f. Items characterized by service potential or future economic benefit.
- g. Equals increase in assets less liabilities during the year, after adding distributions to owners and subtracting investments by owners.
- h. Arises from income statement activities that constitute the entity's ongoing major or central operations.
- i. Residual interest in the assets of the enterprise after deducting its liabilities.
- j. Increases assets during a period through sale of product.
- k. Decreases assets during the period by purchasing the company's own stock.
- l. Includes all changes in equity during the period, except those resulting from investments by owners and distributions to owners.

E1.8 (LO 3) (Assumptions, Principles, and Constraint) Presented below are the assumptions, principles, and constraint used in this chapter.

- 1. Economic entity assumption
- 2. Going concern assumption
- 3. Monetary unit assumption
- 4. Periodicity assumption
- 5. Measurement principle (historical cost)
- 6. Measurement principle (fair value)
- 7. Expense recognition principle
- 8. Full disclosure principle
- 9. Cost constraint
- 10. Revenue recognition principle

Instructions

Identify by number the accounting assumption, principle, or constraint that describes each situation in the following list. Do not use a number more than once.

- a. Allocates expenses to revenues in the proper period.

- b. Indicates that fair value changes subsequent to purchase are not recorded in the accounts. (Do not use revenue recognition principle.)
- c. Ensures that all relevant financial information is reported.
- d. Rationale why plant assets are not reported at liquidation value. (Do not use historical cost principle.)
- e. Indicates that personal and business record keeping should be separately maintained.
- f. Separates financial information into time periods for reporting purposes.
- g. Assumes that the dollar is the “measuring stick” used to report on financial performance.

E1.9 (LO 3) (Assumptions, Principles, and Constraint) Presented below are a number of operational guidelines and practices that have developed over time.

Instructions

Select the assumption, principle, or constraint that most appropriately justifies these procedures and practices. (Do not use qualitative characteristics.)

- a. Fair value changes are not recognized in the accounting records.
- b. Financial information is presented so that investors will not be misled.
- c. Intangible assets are amortized over periods benefited.
- d. Agricultural companies use fair value for purposes of valuing crops.
- e. Each company is kept as a unit distinct from its owner or owners.
- f. All significant post-balance-sheet events are disclosed.
- g. Revenue is recorded when the product is delivered.
- h. All important aspects of bond indentures are presented in financial statements.
- i. Rationale for accrual accounting.
- j. The use of consolidated statements is justified.
- k. Reporting must be done at defined time intervals.
- l. An allowance for doubtful accounts is established.
- m. Goodwill is recorded only at time of purchase.
- n. A company charges its sales commission costs to expense.

E1.10 (LO 3) (Full Disclosure Principle) Presented below are a number of facts related to Weller, Inc. Assume that no mention of these facts was made in the financial statements and the related notes.

Instructions

Assume that you are the auditor of Weller, Inc. and that you have been asked to explain the appropriate accounting and related disclosure necessary for each of these items.

- a. The company decided that, for the sake of conciseness, only net income should be reported on the income statement. Details as to revenues, cost of goods sold, and expenses were omitted.
- b. Equipment purchases of \$170,000 were partly financed during the year through the issuance of a \$110,000 notes payable. The company offset the equipment against the notes payable and reported plant assets at \$60,000.
- c. Weller has reported its ending inventory at \$2,100,000 in the financial statements. No other information related to inventories is presented in the financial statements and related notes.
- d. The company changed its method of valuing inventories from weighted-average to FIFO. No mention of this change was made in the financial statements.

E1.11 (LO 3) Groupwork (Accounting Principles and Assumptions—Comprehensive) Presented below are a number of business transactions that occurred during the current year for Gonzales, Inc.

Instructions

In each of the situations, discuss the appropriateness of the journal entries in terms of generally accepted accounting principles.

- a. The president of Gonzales, Inc. used his expense account to purchase a new Tahoe solely for personal use. The following journal entry was made.

Miscellaneous Expense	63,000	
Cash		63,000

- b. Merchandise inventory that cost \$620,000 is reported on the balance sheet at \$690,000, the expected selling price less estimated selling costs. The following entry was made to record this increase in value.

Inventory	70,000	
Sales Revenue		70,000

- c. The company is being sued for \$500,000 by a customer who claims damages for personal injury apparently caused by a defective product. Company attorneys feel extremely confident that the company will have no liability for damages resulting from the situation. Nevertheless, the company decides to make the following entry.

Loss from Lawsuit	500,000	
Liability for Lawsuit		500,000

- d. Because the general level of prices increased during the current year, Gonzales, Inc. determined that there was a \$16,000 understatement of depreciation expense on its equipment and decided to record it in its accounts. The following entry was made.

Depreciation Expense	16,000	
Accumulated Depreciation—Equipment		16,000

- e. Because of a “fire sale,” equipment obviously worth \$200,000 was acquired at a cost of \$155,000. The following entry was made.

Equipment	200,000	
Cash		155,000
Sales Revenue		45,000

E1.12 (LO 3) Groupwork (Accounting Principles—Comprehensive) Presented below is information related to Cramer, Inc.

Instructions

Comment on the appropriateness of the accounting procedures followed by Cramer, Inc.

- a. Depreciation expense on the building for the year was \$60,000. Because the building was increasing in value during the year, the controller decided to charge the depreciation expense to retained earnings instead of to net income. The following entry is recorded.

Retained Earnings	60,000	
Accumulated Depreciation—Buildings		60,000

- b. Materials were purchased on January 1, 2025, for \$120,000 and this amount was entered in the Materials account. On December 31, 2025, the materials would have cost \$141,000, so the following entry is made.

Inventory	21,000	
Gain on Inventories		21,000

- c. During the year, the company purchased equipment through the issuance of common stock. The stock had a par value of \$135,000 and a fair value of \$450,000. The fair value of the equipment was not easily determinable. The company recorded this transaction as follows.

Equipment	135,000	
Common Stock		135,000

- d. During the year, the company sold certain equipment for \$285,000, recognizing a gain of \$69,000. Because the controller believed that new equipment would be needed in the near future, she decided to defer the gain and amortize it over the life of any new equipment purchased.

- e. An order for \$61,500 has been received from a customer for products on hand. This order was shipped on January 9, 2026. The company made the following entry in 2025.

Accounts Receivable	61,500	
Sales Revenue		61,500

Using Your Judgment

Financial Reporting Problem: The Procter and Gamble Company (P&G)

UYJ1.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- Using the notes to the consolidated financial statements, determine P&G's revenue recognition policies. Discuss the impact of trade promotions on P&G's financial statements.
- Give two examples of where historical cost information is reported in P&G's financial statements and related notes. Give two examples of the use of fair value information reported in either the financial statements or related notes.
- When will P&G adopt the new accounting pronouncements on revenue recognition and leasing?
- What is P&G's accounting policy related to advertising? What accounting principle does P&G follow regarding accounting for advertising? Where are advertising expenses reported in the financial statements?

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ1.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- What are the primary lines of business of these two companies as shown in their notes to the financial statements?
- Which company has the dominant position in beverage sales?
- How are inventories for these two companies valued? What cost allocation method is used to report inventory? How does their accounting for inventories affect comparability between the two companies?
- What future accounting policy changes do the companies discuss related to revenue recognition?

Accounting, Analysis, and Principles

UYJ1.3 William Murray achieved one of his life-long dreams by opening his own business, The Caddie Shack Driving Range, on May 1, 2025. He invested \$20,000 of his own savings in the business. He paid \$6,000 cash to have a small building constructed to house the operations and spent \$800 on golf clubs, golf balls, and yardage signs. Murray leased 4 acres of land at a cost of \$1,000 per month. (He paid the first month's rent in cash.) During the first month, advertising costs totaled \$750, of which \$150 was unpaid at the end of the month. Murray paid his three nephews \$400 for retrieving golf balls. He deposited in the company's bank account all revenues from customers (\$4,700). On May 15, Murray withdrew \$800 in cash for personal use. On May 31, the company received a utility bill for \$100 but did not immediately pay it. On May 31, the balance in the company bank account was \$15,100.

Murray is feeling pretty good about results for the first month, but his estimate of profitability ranges from a loss of \$4,900 to a profit of \$1,650.

Accounting

Prepare a balance sheet at May 31, 2025. Murray appropriately records any depreciation expense on a quarterly basis. How could Murray have determined that the business operated at a profit of \$1,650? How could Murray conclude that the business operated at a loss of \$4,900?

Analysis

Assume Murray has asked you to become a partner in his business. Under the partnership agreement, after paying him \$10,000, you would share equally in all future profits. Which of the two income measures above would be more useful in deciding whether to become a partner? Explain.

Principles

What is income according to GAAP? What concepts do the differences in the income measures for The Caddie Shack Driving Range illustrate?

Developing Your Professional Skills

Critical-Thinking Cases

CT1.1 (LO 1) (Securities and Exchange Commission) The U.S. Securities and Exchange Commission (SEC) was created in 1934 and consists of five commissioners and a large professional staff. The SEC professional staff is organized into five divisions and several principal offices. The primary objective of the SEC is to support fair securities markets. The SEC also strives to foster enlightened stockholder participation in corporate decisions of publicly traded companies. The SEC has a significant presence in financial markets, the development of accounting practices, and corporation-shareholder relations, and has the power to exert influence on entities whose actions lie within the scope of its authority.

Instructions

- Explain from where the Securities and Exchange Commission receives its authority.
- Describe the official role of the Securities and Exchange Commission in the development of financial accounting theory and practices.
- Discuss the interrelationship between the Securities and Exchange Commission and the Financial Accounting Standards Board with respect to the development and establishment of financial accounting theory and practices.

(CMA adapted)

CT1.2 (LO 2) (Conceptual Framework—General) Wayne Cooper has some questions regarding the theoretical framework in which GAAP is set. He knows that the FASB and other predecessor organizations have attempted to develop a conceptual framework for accounting theory formulation. Yet, Wayne's supervisors have indicated that these theoretical frameworks have little value in the practical sense (i.e., in the real world). Wayne did notice that accounting rules seem to be established after the fact rather than before. He thought this indicated a lack of theory structure but never really questioned the process at school because he was too busy doing the homework.

Wayne feels that some of his anxiety about accounting theory and accounting semantics could be alleviated by identifying the basic concepts and definitions accepted by the profession and considering them in light of his current work. By doing this, he hopes to develop an appropriate connection between theory and practice.

Instructions

- Help Wayne recognize the purpose of and benefit of a conceptual framework.
- Identify any Statements of Financial Accounting Concepts issued by the FASB that may be helpful to Wayne in developing his theoretical background.

CT1.3 (LO 2, 4) Writing (Conceptual Framework—General) The Financial Accounting Standards Board (FASB) has developed a conceptual framework for financial accounting and reporting. The FASB has issued eight Statements of Financial Accounting Concepts. These statements are intended to set forth the objective and fundamentals that will be the basis for developing financial accounting and reporting standards. The objective identifies the goals and purposes of financial reporting. The fundamentals are the underlying concepts of financial accounting that guide the selection of transactions, events, and circumstances to be accounted for; their recognition and measurement; and the means of summarizing and communicating them to interested parties.

The purpose of the statement on qualitative characteristics is to examine the characteristics that make accounting information useful. These characteristics or qualities of information are the ingredients that make information useful and the qualities to be sought when accounting choices are made.

Instructions

- Identify and discuss the benefits that can be expected to be derived from the FASB's conceptual framework.
- What is the most important quality for accounting information as identified in the conceptual framework? Explain why it is the most important.

- c. *Statement of Financial Accounting Concepts No. 8* describes a number of key characteristics or qualities for accounting information. Briefly discuss the importance of any three of these qualities for financial reporting purposes.

(CMA adapted)

CT1.4 (LO 2) (Objective of Financial Reporting) Homer Winslow and Jane Alexander are discussing various aspects of the FASB's concepts statement on the objective of financial reporting. Homer indicates that this pronouncement provides little, if any, guidance to the practicing professional in resolving accounting controversies. He believes that the statement provides such broad guidelines that it would be impossible to apply the objective to present-day reporting problems. Jane concedes this point but indicates that the objective is still needed to provide a starting point for the FASB in helping to improve financial reporting.

Instructions

- Indicate the objective established in the conceptual framework.
- What do you think is the meaning of Jane's statement that the FASB needs a starting point to resolve accounting controversies?

CT1.5 (LO 2) (Qualitative Characteristics) Accounting information provides useful information about business transactions and events. Those who provide and use financial reports must often select and evaluate accounting alternatives. The FASB statement on qualitative characteristics of accounting information examines the characteristics of accounting information that make it useful for decision-making. It also points out that various limitations inherent in the measurement and reporting process may necessitate trade-offs or sacrifices among the characteristics of useful information.

Instructions

- Describe briefly the following characteristics of useful accounting information.
 - Relevance.
 - Faithful representation.
 - Understandability.
 - Comparability.
 - Consistency.
- For each of the following pairs of information characteristics, give an example of a situation in which one of the characteristics may be sacrificed in return for a gain in the other.
 - Relevance and faithful representation.
 - Relevance and consistency.
 - Comparability and consistency.
 - Relevance and understandability.
- What criterion should be used to evaluate trade-offs between information characteristics?

CT1.6 (LO 3) (Revenue Recognition Principle) After the presentation of your report on the examination of the financial statements to the board of directors of Piper Publishing Company, one of the new directors expresses surprise that the income statement assumes that an equal proportion of the revenue is recognized with the publication of every issue of the company's magazine. She feels that the "crucial event" in the process of earning revenue in the magazine business is the cash sale of the subscription. She says that she does not understand why most of the revenue cannot be "recognized" in the period of the cash sale.

Instructions

Discuss the propriety of timing the recognition of revenue in Piper Publishing Company's accounts with:

- The cash sale of the magazine subscription.
- The publication of the magazine every month.
- Over time, as the magazines are published and delivered to customers.

CT1.7 (LO 3) (Expense Recognition Principle) An accountant must be familiar with the concepts involved in determining earnings of a business entity. The amount of earnings reported for a business entity is dependent on the proper recognition, in general, of revenues and expenses for a given time period. In some situations, costs are recognized as expenses at the time of product sale. In other situations, guidelines have been developed for recognizing costs as expenses or losses by other criteria.

Instructions

- Explain the rationale for recognizing costs as expenses at the time of product sale.

- b. What is the rationale underlying the appropriateness of treating costs as expenses of a period instead of assigning the costs to an asset? Explain.
- c. In what general circumstances would it be appropriate to treat a cost as an asset instead of as an expense? Explain.
- d. Some expenses are assigned to specific accounting periods on the basis of systematic and rational allocation of asset cost. Explain the underlying rationale for recognizing expenses on the basis of systematic and rational allocation of asset cost.
- e. Identify the conditions under which it would be appropriate to treat a cost as a loss.

(AICPA adapted)

CT1.8 (LO 3) (Expense Recognition Principle) Accountants try to prepare income statements that are as accurate as possible. A basic requirement in preparing accurate income statements is to record costs and revenues properly. Proper recognition of costs and revenues requires that costs resulting from typical business operations be recognized in the period in which they expired.

Instructions

- a. List three criteria that can be used to determine whether such costs should appear as charges in the income statement for the current period.
- b. As generally presented in financial statements, the following items or procedures have been criticized as improperly recognizing costs. Briefly discuss each item from the viewpoint of matching costs with revenues and suggest corrective or alternative means of presenting the financial information.
 1. Receiving and handling costs.
 2. Cash discounts on purchases.

CT1.9 (LO 3) (Expense Recognition Principle) Daniel Barenboim sells and erects shell houses, that is, frame structures that are completely finished on the outside but are unfinished on the inside except for flooring, partition studding, and ceiling joists. Shell houses are sold chiefly to customers who are handy with tools and who have time to do the interior wiring, plumbing, wall completion and finishing, and other work necessary to make the shell houses livable dwellings.

Barenboim buys shell houses from a manufacturer in unassembled packages consisting of all lumber, roofing, doors, windows, and similar materials necessary to complete a shell house. Upon commencing operations in a new area, Barenboim buys or leases land as a site for its local warehouse, field office, and display houses. Sample display houses are erected at a total cost of \$30,000 to \$44,000 including the cost of the unassembled packages. The chief element of cost of the display houses is the unassembled packages, inasmuch as erection is a short, low-cost operation. Old sample models are torn down or altered into new models every 3 to 7 years. Sample display houses have little salvage value because dismantling and moving costs amount to nearly as much as the cost of an unassembled package.

Instructions

- a. A choice must be made between (1) expensing the costs of sample display houses in the periods in which the expenditure is made and (2) spreading the costs over more than one period. Discuss the advantages of each method.
- b. Would it be preferable to amortize the cost of display houses on the basis of (1) the passage of time or (2) the number of shell houses sold? Explain.

(AICPA adapted)

CT1.10 (LO 2) Writing (Qualitative Characteristics) Recently, your uncle, Carlos Beltran, who knows that you always have your eye out for a profitable investment, has discussed the possibility of your purchasing some corporate bonds. He suggests that you may wish to get in on the “ground floor” of this deal. The bonds being issued by Neville Corp. are 10-year debentures which promise a 40% rate of return. Neville manufactures novelty/party items.

You have told Uncle Carlos that, unless you can take a look at Neville’s financial statements, you would not feel comfortable about such an investment. Believing that this is the chance of a lifetime, Uncle Carlos has procured a copy of Neville’s most recent, unaudited financial statements which are a year old. These statements were prepared by Mrs. Andy Neville. You peruse these statements, and they are quite impressive. The balance sheet showed a debt-to-equity ratio of 0.10 and, for the year shown, the company reported net income of \$2,424,240.

The financial statements are not shown in comparison with amounts from other years. In addition, no significant note disclosures about inventory valuation, depreciation methods, loan agreements, etc. are available.

Instructions

Write a letter to Uncle Carlos explaining why it would be unwise to base an investment decision on the financial statements that he has provided to you. Be sure to explain why these financial statements are neither relevant nor representationally faithful.

CT1.11 (LO 3, 4) Ethics (Expense Recognition Principle) Anderson Nuclear Power Plant will be “mothballed” at the end of its useful life (approximately 20 years) at great expense. The expense recognition principle requires that expenses be recognized as assets are used up or liabilities are incurred. Accountants Ana Alicia and Ed Bradley argue whether it is better to allocate the expense of mothballing over the next 20 years or ignore it until mothballing occurs.

Instructions

Answer the following questions.

- What stakeholders should be considered?
- What ethical issue, if any, underlies the dispute?
- What alternatives should be considered?
- Assess the consequences of the alternatives.
- What decision would you recommend?

CT1.12 (LO 3) (Cost Constraint) The AICPA Special Committee on Financial Reporting proposed the following constraints related to financial reporting.

- Business reporting should exclude information outside of management’s expertise or for which management is not the best source, such as information about competitors.
- Management should not be required to report information that would significantly harm the company’s competitive position.
- Management should not be required to provide forecasted financial statements. Rather, management should provide information that helps users forecast for themselves the company’s financial future.
- Other than for financial statements, management need report only the information it knows. That is, management should be under no obligation to gather information it does not have, or does not need, to manage the business.
- Companies should present certain elements of business reporting only if users and management agree they should be reported—a concept of flexible reporting.
- Companies should not have to report forward-looking information unless there are effective deterrents to unwarranted litigation that discourages companies from doing so.

Instructions

For each item, briefly discuss how the proposed constraint addresses concerns about the costs and benefits of financial reporting.

CT1.13 (LO 4) Ethics (Rule-Making Issues) When the FASB issues new pronouncements, the implementation date is usually 12 months from date of issuance, with early implementation encouraged. Karen Weller, controller, discusses with her financial vice president the need for early implementation of a rule that would result in a fairer presentation of the company’s financial condition and earnings. When the financial vice president determines that early implementation of the rule will adversely affect the reported net income for the year, he discourages Weller from implementing the rule until it is required.

Instructions

Answer the following questions.

- What, if any, is the ethical issue involved in this case?
- Is the financial vice president acting improperly or immorally?
- What does Weller have to gain by advocacy of early implementation?
- Which stakeholders might be affected by the decision against early implementation?

(CMA adapted)

CT1.14 (LO 4) (Models for Setting GAAP) Presented below are three models for setting GAAP.

- The purely political approach, where national legislative action decrees GAAP.
- The private, professional approach, where GAAP is set and enforced by private professional actions only.

3. The public/private mixed approach, where GAAP is basically set by private-sector bodies that behave as though they were public agencies and whose standards to a great extent are enforced through governmental agencies.

Instructions

- a. Which of these three models best describes standard-setting in the United States? Provide justification for your answer.
- b. Why do companies, financial analysts, labor unions, industry trade associations, and others take such an active interest in standard-setting?
- c. Cite an example of a group other than the FASB that attempts to establish accounting standards. Speculate as to why another group might wish to set its own standards.

CT1.15 (LO 4) (Economic Consequences) Presented below are comments made in the financial press.

Instructions

Prepare responses to the requirements in each item.

- a. Rep. John Dingell, at one time the ranking Democrat on the House Commerce Committee, threw his support behind the FASB's controversial derivatives accounting standard and encouraged the FASB to adopt the rule promptly. Indicate why a member of Congress might feel obligated to comment on this proposed FASB standard.
- b. In a strongly worded letter to Senator Lauch Faircloth (R-NC) and House Banking Committee Chairman Jim Leach (R-IA), the American Institute of Certified Public Accountants (AICPA) cautioned against government intervention in the accounting standard-setting process, warning that it had the potential of jeopardizing U.S. capital markets. Explain how government intervention could possibly affect capital markets adversely.

CT1.16 (LO 4) Groupwork (GAAP and Economic Consequences) The following letter was sent to the SEC and the FASB by leaders of the business community.

Dear Sirs:

The FASB has been struggling with accounting for derivatives and hedging for many years. The FASB has now developed, over the last few weeks, a new approach that it proposes to adopt as a final standard. We understand that the Board intends to adopt this new approach as a final standard without exposing it for public comment and debate, despite the evident complexity of the new approach, the speed with which it has been developed and the significant changes to the exposure draft since it was released more than one year ago. Instead, the Board plans to allow only a brief review by selected parties, limited to issues of operationality and clarity, and would exclude questions as to the merits of the proposed approach.

As the FASB itself has said throughout this process, its mission does not permit it to consider matters that go beyond accounting and reporting considerations. Accordingly, the FASB may not have adequately considered the wide range of concerns that have been expressed about the derivatives and hedging proposal, including concerns related to the potential impact on the capital markets, the weakening of companies' ability to manage risk, and the adverse control implications of implementing costly and complex new rules imposed at the same time as other major initiatives, including the Year 2000 issues and a single European currency. We believe that these crucial issues must be considered, if not by the FASB, then by the Securities and Exchange Commission, other regulatory agencies, or Congress.

We believe it is essential that the FASB solicit all comments in order to identify and address all material issues that may exist before issuing a final standard. We understand the desire to bring this process to a prompt conclusion, but the underlying issues are so important to this nation's businesses, the customers they serve and the economy as a whole that expediency cannot be the dominant consideration. As a result, we urge the FASB to expose its new proposal for public comment, following the established due process procedures that are essential to acceptance of its standards, and providing sufficient time to affected parties to understand and assess the new approach.

We also urge the SEC to study the comments received in order to assess the impact that these proposed rules may have on the capital markets, on companies' risk management practices, and on management and financial controls. These vital public policy matters deserve consideration as part of the Commission's oversight responsibilities.

We believe that these steps are essential if the FASB is to produce the best possible accounting standard while minimizing adverse economic effects and maintaining the competitiveness of U.S. businesses in the international marketplace.

Very truly yours,

(This letter was signed by the chairs of 22 of the largest U.S. companies.)

Instructions

Answer the following questions.

- Explain the “due process” procedures followed by the FASB in developing a financial reporting standard.
- What is meant by the term “economic consequences” in accounting standard-setting?
- What economic consequences arguments are used in this letter?
- What do you believe is the main point of the letter?
- Why do you believe a copy of this letter was sent by the business community to influential members of the U.S. Congress?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE1.1 Describe the main elements of the link labeled “Help, FAQ, Learning Guide, and About the Codification.”

CE1.2 Describe the procedures for providing feedback.

CE1.3 Briefly describe the purpose and content of the “What’s New” link.

CE1.4 Access the glossary (“Master Glossary”) at the FASB Codification website to answer the following.

- What is the definition of fair value?
- What is the definition of revenue?
- What is the definition of comprehensive income?

CE1.5 Briefly describe how the organization of the FASB Codification corresponds to the elements of financial statements.

Codification Research Case

Your aunt recently received the annual report for a company in which she has invested. The report notes that the statements have been prepared in accordance with “generally accepted accounting principles.” She has also heard that certain terms have special meanings in accounting relative to everyday use. She would like you to explain the meaning of terms she has come across related to accounting.

Instructions

Go to the FASB website and access the FASB Concepts Statements and respond to the following items. (Provide paragraph citations.) When you have accessed the documents, you can use the search tool in your Internet browser.

- How is “materiality” defined in the conceptual framework?
- The concepts statements provide several examples in which specific quantitative materiality guidelines are provided to firms. Identify at least two of these examples. Do you think the materiality guidelines should be quantified? Why or why not?
- The concepts statements discuss the concept of “articulation” between financial statement elements. Briefly summarize the meaning of this term and how it relates to an entity’s financial statements.

IFRS Insights

LEARNING OBJECTIVE 5

Compare GAAP and IFRS and their standard-setting process.

Most agree that there is a need for one set of international accounting standards. Here is why:

- **Multinational corporations.** Today's companies view the entire world as their market. For example, **Coca-Cola**, **Intel**, and **McDonald's** generate more than 50 percent of their sales outside the United States, and many foreign companies, such as **Toyota**, **Nestlé**, and **Sony**, find their largest market to be the United States.
- **Mergers and acquisitions.** The mergers between **Fiat/Chrysler** and **Vodafone/Mannesmann** suggest that we will see even more such business combinations in the future.
- **Information technology.** As communication barriers continue to topple through advances in technology, companies and individuals in different countries and markets are becoming more comfortable buying and selling goods and services from one another.
- **Financial markets.** Financial markets are of international significance today. Whether it is currency, equity securities (stocks), bonds, or derivatives, there are active markets throughout the world trading these types of instruments.

The IASB and the FASB originally planned to develop a common conceptual framework. The Boards converged on two subjects: *Objectives of Financial Reporting* and *Qualitative Characteristics of Accounting Information*. However, the IASB decided it was important to move forward and complete other parts of the conceptual framework (which it did in 2018). The FASB did not join in on this effort although it is advancing its own work plan to modify its existing conceptual framework as well. Both Boards have the same objective, that is, to develop a conceptual framework consisting of standards that are principles-based and internally consistent, thereby leading to the most useful financial reporting. Hopefully, the two Boards will eventually agree on the key components of a common conceptual framework.

Following are the key similarities and differences between GAAP (the standards issued by the Financial Accounting Standards Board) and IFRS related to the financial reporting environment.

Similarities

- Generally accepted accounting principles (GAAP) for U.S. companies are developed by the Financial Accounting Standards Board (FASB). The FASB is a private organization. The Securities and Exchange Commission (SEC) exercises oversight over the actions of the FASB. The IASB is also a private organization. Oversight over the actions of the IASB is regulated by IOSCO.
- Both the IASB and the FASB have essentially the same governance structure, that is, a Foundation that provides oversight, a Board, an Advisory Council, and an Interpretations Committee. In addition, a general body that involves the public interest is part of the governance structure.
- Both the IASB and the FASB are working together to find common grounds for convergence. A good example is the recent issuance of a new standard on revenue recognition that both organizations support.
- As indicated above, the IASB has recently completed its conceptual framework, whereas the FASB has not. However, many of the concepts that are covered in the new IASB conceptual framework are consistent with the FASB current framework and related standards.
- The objective of financial reporting and the qualitative characteristics of useful financial information are essentially the same between the two frameworks.

- Both frameworks have similar measurement principles, based on historical cost and fair value concepts. The mixed model (historical cost and fair value) is essentially the same in the two frameworks. In 2011, the Boards issued a converged standard on fair value measurement so that the definition of fair value, measurement techniques, and disclosures are the same between GAAP and IFRS when fair value is used in financial statements.

Differences

- GAAP is more detailed or rules-based. IFRS tends to be simpler and more flexible in its accounting and disclosure requirements. The difference in approach has resulted in a debate about the merits of principles-based versus rules-based standards.
- Differences between GAAP and IFRS should not be surprising because standard-setters have developed standards in response to different user needs. In some countries, the primary users of financial statements are private investors. In others, the primary users are tax authorities or central government planners. In the United States, investors and creditors have driven accounting-standard formulation.
- The IASB gives more emphasis to stewardship in its conceptual framework. The framework indicates that users need information about the resources of the entity not only to assess an entity's prospects for future cash inflows but also to determine how effectively and efficiently management has discharged their responsibilities to use the entity's existing resources (i.e., stewardship). In other words, the IASB conceptual framework explicitly discusses the need to provide information related to stewardship of an entity's resources as well as the need for information to help users understand the prospects for future net cash inflows to the entity.
- The concept of prudence is introduced to support the principle of neutrality in relation to the purpose of faithful representation. Prudence is defined as the exercise of caution when making judgments under conditions of uncertainty. As an example, prudence means that revenues are not overstated, and expenses are not understated.
- The IASB also clarified two other concepts—measurement uncertainty and substance over form. The framework indicates that measurement uncertainty does not prevent information from being useful. However, in some cases the most relevant information may have such a high degree of uncertainty that the most useful information is that which is slightly less relevant but is subject to lower measurement uncertainty.
- Although both GAAP and IFRS are increasing the use of fair value to report assets, at this point IFRS has adopted it more broadly. As examples, under IFRS, companies can apply fair value to property, plant, and equipment; natural resources; and, in some cases, intangible assets.
- The monetary unit assumption is part of each framework. However, the unit of measure will vary depending on the currency used in the country in which the company is incorporated (e.g., Chinese yuan, Japanese yen, and British pound). IFRS makes an explicit assumption that financial statements are prepared on an accrual basis.
- The economic entity assumption is also part of each framework although some cultural differences result in differences in its application. For example, in Japan many companies have formed alliances that are so strong that they act similar to related corporate divisions although they are not actually part of the same company. IFRS defines a reporting entity as one that is required to (or chooses to) prepare financial statements. A reporting entity does not need to be a legal entity; it could be a portion of an entity or a combination of entities. GAAP uses a different definition (more aligned with legal entities).
- As indicated earlier, the IASB has developed a new conceptual framework. In the revised conceptual framework, the IASB has introduced two new qualitative characteristics: prudence and substance over form. Also, as noted in the next section, the IASB is making modifications to other parts of its conceptual framework by revising the definitions of a number of the elements. The IASB is also introducing updated chapters on such items as measurement, classification of income and expense, derecognition of assets and liabilities, and the reporting entity.

Additional IFRS Resources

Additional IFRS discussion with assessment is available online at Wiley Course Resources. For those who want even more IFRS coverage, *Intermediate Accounting, IFRS Fourth Edition* exists as another resource.

The Accounting Information System

WHAT is the accounting information system?

An **accounting information system** collects and processes transaction data and then disseminates the information in financial statements to interested parties. While the type of accounting system may vary due to the nature of the business, the transactions in which it engages, and the size of the company, all accounting information systems have the common objective to ensure relevant and reliable information is reported in financial statements.

WHY is an accounting information system important?

As you learned in Chapter 1, the value of information rests in its usefulness in decision-making. A good accounting information system produces financial statements, which help investors and creditors answer such questions as:

- How much and what kind of debt is outstanding?
- Were sales higher this period than last?
- What assets does the company have?
- What are the cash inflows and outflows?
- Is the rate of return on net assets increasing?

If the accounting system is not working well, the consequences can be negative and significant.

For example, **Tupperware** recently suffered a 43% decline in its stock price after it disclosed that an internal accounting probe into its sales and profit numbers would cause it to delay release of its annual report. As shown in the adjacent chart, the market viewed that news quite negatively, which reinforces the importance of a good accounting information system.

HOW do accounting information systems work?

Whether a company is large or small, or whether it uses a manual or computerized system, the process is pretty much the same. It begins by capturing and summarizing basic transactions, recording the effects of those transactions in a journal, and then posting to accounts. Following adjusting entries, the account balances are summarized in a trial balance, from which financial statements can be prepared and disseminated to decision-makers (investors, creditors, management).

2.1 Accounting Information System

LEARNING OBJECTIVE 1

Explain the basic concepts of an accounting information system.

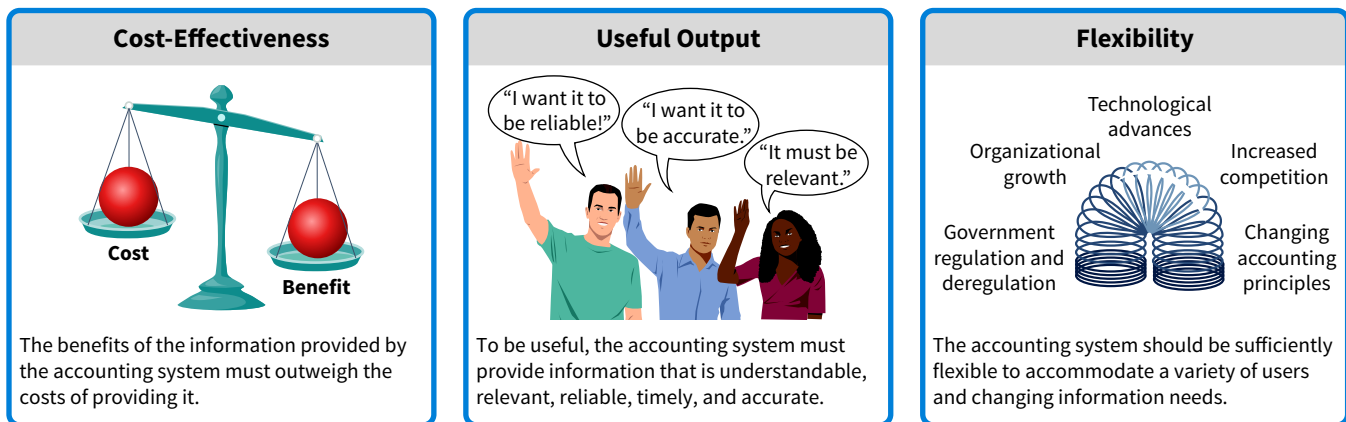

The **accounting information system** collects and processes transaction data and communicates financial information to decision-makers. Features include:

- Each of the steps in the accounting cycle that you studied in earlier courses.
- The documents that provide evidence of the transactions.
- The records, trial balances, worksheets (spreadsheets), and financial statements that result.

An accounting system may be either manual or computerized. Most businesses use some sort of computerized accounting system, whether it is an off-the-shelf system for small businesses, like QuickBooks®, Xero, or Sage 50, or a more complex, custom-made system.

Efficient and effective accounting information systems are based on certain basic principles. These principles, as described in **Illustration 2.1**, are (1) cost-effectiveness, (2) usefulness, and (3) flexibility. If the accounting system is cost-effective, provides useful output, and has the flexibility to meet future needs, it can contribute to both individual and organizational goals.

ILLUSTRATION 2.1 Principles of an Efficient and Effective Accounting Information System

Computerized Accounting Systems

All but the smallest businesses use a computerized general ledger accounting system. **General ledger accounting systems** are software programs that integrate the various accounting functions related to sales, purchases, receivables, payables, cash receipts and disbursements, and payroll. They also generate financial statements. Computerized systems have a number of advantages over manual systems as follows.

- Information needs to be entered only once in a computerized system.
- The computer performs most steps automatically, which eliminates many errors resulting from human intervention in a manual system, such as errors in posting or preparation of financial statements.
- Computerized systems provide up-to-the-minute information, which is more useful for decision-making.

Built-in internal controls is another important feature of all systems; things like tracking access to the system and requiring all entries to have equal debits and credits helps ensure the integrity of accounting data.

Software publishers tend to classify businesses into groups based on revenue and the number of employees.

- Companies with revenues of less than \$5 million and up to 20 employees generally use **entry-level programs**. These entry-level programs comes in many different industry-specific versions, such as for restaurants, retailing, construction, manufacturing, or nonprofit.
- **Enterprise resource planning (ERP) systems** are typically used by manufacturing companies with more than 500 employees and \$500 million in sales. An ERP system integrates all aspects of the organization, including accounting, sales, human resource management, and manufacturing. Because of the complexity of an ERP system, implementation can take several years and cost five times as much as the purchase price of the system, thereby representing a significant investment for the largest multinational corporations.

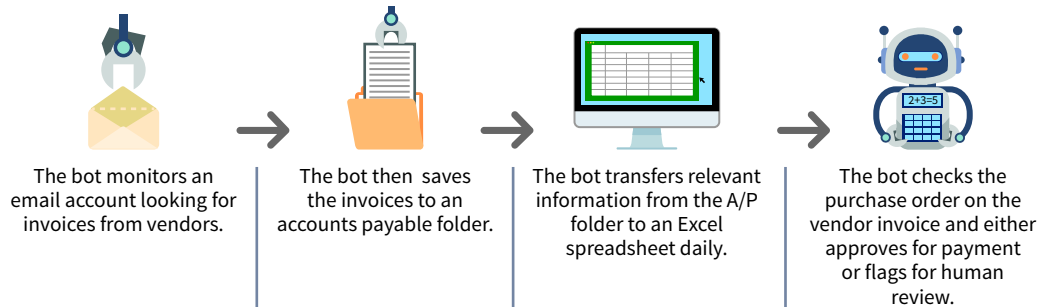

Accounting Matters

Accounting and Bots?

A bot (software robot) allows companies to automate repetitive tasks, such as billing customers or paying vendor invoices. And you might be surprised to learn that many accounting professionals with no programming background are creating bots to make their processes more efficient! **Robotic process automation (RPA) systems** are designed to be user-friendly and help companies create efficiencies in their business processes.

Consider the process of receiving an invoice from a vendor. What is normally a tedious process of manually entering invoices into the accounting system, matching details to a purchase order, and then ultimately paying the vendor can be automated such that the accountant is only looking at exceptions, as the following illustration shows.

Accounts Payable Bot Transaction

Does this mean accountants are no longer needed? Not at all. However, it does mean that the work you will do right out of school will probably be higher-level work and more fun. For now, you don't need to start studying programming on the weekends.

But you are expected to adapt to emerging technologies when you join the profession. Technology agility is of increasing importance for all business majors.

Source: Wendy Tietz, Jennifer Cainas, and Tracie Miller-Nobles, "The Bots Are Coming . . . to Intro Accounting," *Strategic Finance* (August 1, 2020).

Manual Accounting Systems

In **manual accounting systems**, someone performs each of the steps in the accounting cycle by hand. For example, someone manually enters each accounting transaction in the journal and manually posts each journal entry to the ledger. Other manual computations must be made to obtain ledger account balances and to prepare a trial balance and financial statements. In the remainder of this chapter, we illustrate the use of a manual system.

You might be wondering, "Why cover manual accounting systems if the real world uses computerized systems?" There are two main reasons for this.

- 1. **Small businesses still abound.** Most of them begin operations with manual accounting systems and convert to computerized systems as the business grows. You may work in a small business or start your own someday, so it is useful to know how a manual system works.
- 2. **To understand what computerized accounting systems do, you need to understand the mechanics of manual accounting systems.** For example, when you close an accounting period in a computerized system, you need to understand what that process entails as there is no going back. Your temporary accounts are now closed out and your adjusted trial balance only includes permanent balance sheet accounts.

The manual accounting system represented in this chapter is satisfactory for a company with a low volume of transactions. However, in most companies, it is necessary to add additional ledgers and journals to the accounting system to record transaction data efficiently.

Debits and Credits

The terms **debit** (Dr.) and **credit** (Cr.) mean left and right, respectively. These terms do not mean increase or decrease, but instead describe **where** a company makes entries in the recording process.

- An entry on the left side of an account is a **debit to** the account.
- An entry on the right side is a **credit to** the account.
- An account shows a **debit balance** if the total of the debit amounts exceeds the credits.
- An account shows a **credit balance** if the credit amounts exceed the debits.

The positioning of debits on the left and credits on the right is simply an accounting custom. We could function just as well if we reversed the sides. However, the United States adopted the custom, now the rule, of having debits on the left side of an account and credits on the right side, similar to the custom of driving on the right-hand side of the road. This rule applies to all accounts.

The equality of debits and credits provides the basis for the double-entry system of recording transactions (sometimes referred to as double-entry bookkeeping). Under the universally used **double-entry accounting** system, a company records the dual (two-sided) effect of each transaction in appropriate accounts.

- This system offers a means of proving the accuracy of the recorded amounts.
- If a company records every transaction with equal debits and credits, then the sum of all the debits to the accounts must equal the sum of all the credits.

Illustration 2.2 presents the basic guidelines for an accounting system. Increases to all asset and expense accounts occur on the left (or debit side) and decreases on the right (or credit side). Conversely, increases to all liability, revenue, and most stockholders' equity accounts occur on the right (or credit side) and decreases on the left (or debit side). A company increases stockholders' equity accounts, such as Common Stock and Retained Earnings, on the credit side but increases Dividends on the debit side.

ILLUSTRATION 2.2 Double-Entry (Debit and Credit) Accounting System

Normal Balance — Debit	
Asset Accounts	
Debit	Credit
+ (increase)	- (decrease)
Expense Accounts	
Debit	Credit
+ (increase)	- (decrease)

Normal Balance — Credit	
Liability Accounts	
Debit	Credit
- (decrease)	+ (increase)
Stockholders' Equity Accounts	
Debit	Credit
- (decrease)	+ (increase)
Revenue Accounts	
Debit	Credit
- (decrease)	+ (increase)

The Accounting Equation

In a double-entry system, for every debit there must be a credit, and vice versa. This leads us, then, to the basic equation in accounting.

Assets	=	Liabilities	+	Stockholders' Equity
--------	---	-------------	---	----------------------

Illustration 2.3 expands this equation to show the accounts that make up stockholders' equity. The figure also shows the debit/credit rules and effects on each type of account. Study this diagram carefully. It will help you understand the fundamentals of the double-entry system. Like the basic equation, the expanded equation must also balance (total debits equal total credits).

ILLUSTRATION 2.3 Expanded Equation and Debit/Credit Rules and Effects

Basic Equation	Assets		=	Liabilities		+	Stockholders' Equity													
Expanded Basic Equation	Assets		=	Liabilities		+	Common Stock		+	Retained Earnings		+	Revenues		-	Expenses		-	Dividends	
Debit/Credit Rules	Dr. +	Cr. -		Dr. -	Cr. +		Dr. -	Cr. +		Dr. -	Cr. +		Dr. -	Cr. +		Dr. +	Cr. -		Dr. +	Cr. -

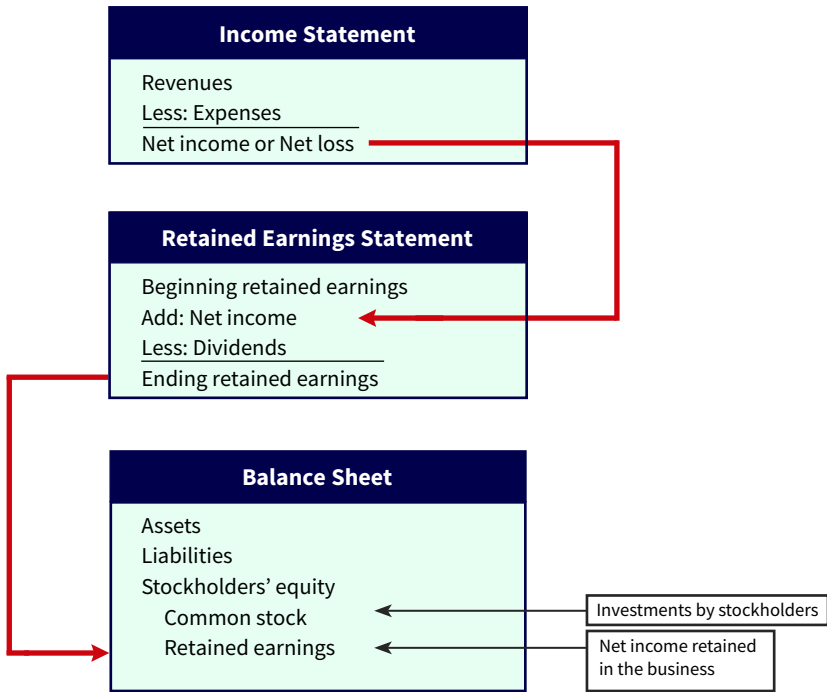

Every time a transaction occurs, the elements of the accounting equation change. However, the basic equality remains. To illustrate, consider the following eight different transactions for Perez Inc.

1	Owners invest \$40,000 in exchange for common stock.	Assets + 40,000	=	Liabilities	+	Stockholders' Equity + 40,000
2	Disburse \$600 cash for administrative wages.	Assets - 600	=	Liabilities	+	Stockholders' Equity - 600 (expense)
3	Purchase office equipment priced at \$5,200, giving a 10% promissory note in exchange.	Assets + 5,200	=	Liabilities + 5,200	+	Stockholders' Equity
4	Receive \$4,000 cash for services performed.	Assets + 4,000	=	Liabilities	+	Stockholders' Equity + 4,000 (revenue)
5	Pay off a short-term liability of \$7,000.	Assets - 7,000	=	Liabilities - 7,000	+	Stockholders' Equity
6	Declare a cash dividend of \$5,000.	Assets	=	Liabilities + 5,000	+	Stockholders' Equity - 5,000
7	Convert a long-term liability of \$80,000 into common stock.	Assets	=	Liabilities - 80,000	+	Stockholders' Equity + 80,000
8	Pay cash of \$16,000 for a delivery van.	Assets - 16,000 + 16,000	=	Liabilities	+	Stockholders' Equity

Financial Statements and Ownership Structure

The stockholders' equity section of the balance sheet reports common stock and retained earnings. The income statement reports revenues and expenses. The retained earnings statement reports net income/loss and dividends. Because a company transfers dividends, revenues, and expenses to retained earnings at the end of the period, a change in any one of these three items affects stockholders' equity. **Illustration 2.4** shows the stockholders' equity relationships.

ILLUSTRATION 2.4 Financial Statements and Ownership Structure

The company's ownership structure dictates the types of accounts that are part of or affect the stockholders' equity section.

- A corporation commonly uses Common Stock, Paid-in Capital in Excess of Par, Dividends, and Retained Earnings accounts.
- A proprietorship or a partnership uses an Owner's Capital account and an Owner's Drawings account. An Owner's Capital account indicates the owner's or owners' investment in the company. An Owner's Drawings account tracks withdrawals by the owner(s).

Illustration 2.5 summarizes and relates the transactions affecting equity to the nominal (temporary) and real (permanent) classifications and to the types of business ownership.

ILLUSTRATION 2.5 Effects of Transactions on Equity Accounts

Transactions Affecting Owners' or Stockholders' Equity	Impact on Owners' or Stockholders' Equity	Proprietorships and Partnerships		Corporations	
		Nominal (Temporary) Accounts	Real (Permanent) Accounts	Nominal (Temporary) Accounts	Real (Permanent) Accounts
Investment by owner(s)	Increase		Capital		Common Stock and related accounts
Revenues recognized	Increase	Revenue	Capital	Revenue	Retained Earnings
Expenses incurred	Decrease	Expense		Expense	
Withdrawal by owner(s)	Decrease	Drawings		Dividends	

2.2 Analyze and Record Business Transactions

LEARNING OBJECTIVE 2

Record and summarize accounting transactions.

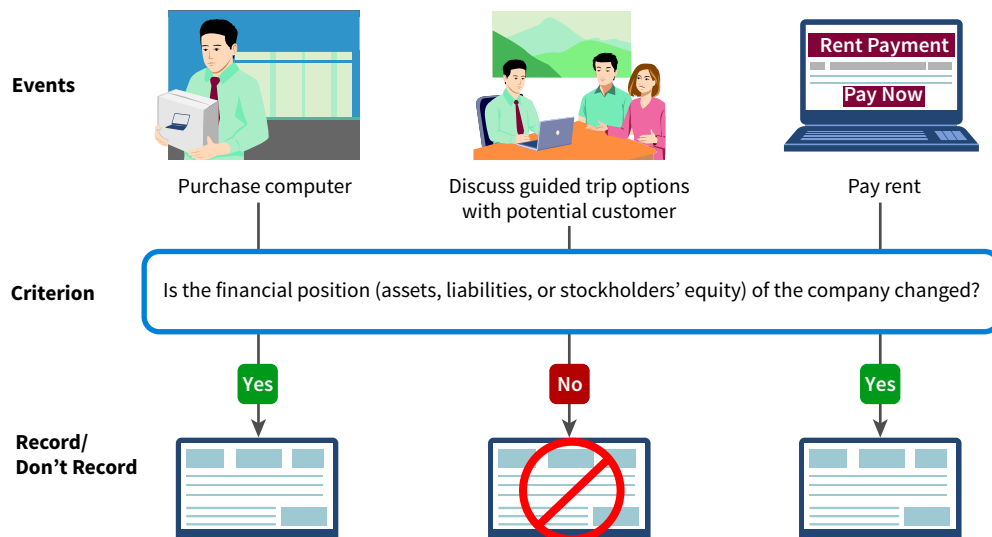

Transactions (business transactions) are a business's economic events recorded by accountants. Transactions may be external or internal.

- **External transactions** involve economic events between the company and some outside enterprise. For example, Campus Pizza's purchase of cooking equipment from a supplier, payment of monthly rent to the landlord, and sale of pizzas to customers are external transactions.
- **Internal transactions** are economic events that occur entirely within one company. The use of cooking and cleaning supplies are internal transactions for Campus Pizza.

Companies also carry on many activities that do not represent business transactions. Examples are hiring employees, responding to e-mails, talking with customers, and placing merchandise orders. Some of these activities may lead to business transactions. For example, employees will earn wages, and suppliers will deliver ordered merchandise. The company must analyze each event to find out if it affects the components of the accounting equation. If it does, the company will record the transaction. **Illustration 2.6** demonstrates the transaction identification process.

ILLUSTRATION 2.6 Transaction Identification Process

Each transaction must have a dual effect on the accounting equation. If an asset is increased, one of the following must occur:

1. Decrease in another asset.
2. Increase in a specific liability.
3. Increase in stockholders' equity.

A transaction could affect two or more items in the accounting equation. For example, a company could purchase a \$10,000 piece of equipment (increase in assets) and pay \$6,000 in cash now (decrease in assets) and agree to pay the \$4,000 balance in 30 days (increase in liabilities). Any change in a liability or ownership claim is subject to similar analysis.

The Recording Process

Although it is possible to enter transaction information directly into the accounts, few businesses do so. Practically every business uses the basic steps shown in **Illustration 2.7** in the recording process (an integral part of the accounting cycle).

ILLUSTRATION 2.7 The Recording Process

INVOICE <i>Superior Equipment Sales</i>					
Bill to: Sierra Corporation		General Journal			
Description Purchase equipment for \$5,000		Date Oct. 2	Account Titles and Explanation Equipment Cash	General Ledger	
				Cash	Equipment
				Oct. 1 10,000 Oct. 2 5,000	Oct. 2 5,000

① Analyze transaction.

② Enter transaction.

③ Transfer from journal to ledger.

The first steps in the recording process occur repeatedly. In the prior section, we illustrated the first step, the analysis of transactions, and will give further examples later in this chapter. The other two steps in the recording process are explained next.

The Journal

Companies initially record transactions in chronological order (the order in which they occur). Thus, the **journal** is referred to as the book of original entry. For each transaction, the journal shows the debit and credit effects on specific accounts.

Companies may use various kinds of journals, but every company has the most basic form of a journal, a **general journal**. Typically, a general journal has spaces for dates, account titles and explanations, references, and two amount columns. *Whenever we use the term “journal” in this text, we mean the general journal unless we specify otherwise.*

The journal makes several significant contributions to the recording process:

1. It discloses in one place the **complete effects of a transaction**.
2. It provides a **chronological record** of transactions.
3. It helps to **prevent or locate errors** because the debit and credit amounts for each entry can be easily compared.

Journalizing

Entering transaction data in the journal is known as **journalizing**. Companies make separate journal entries for each transaction. A complete entry consists of:

1. The date of the transaction.
2. The accounts and amounts to be debited and credited.
3. A brief explanation of the transaction.

Illustration 2.8 shows the technique of journalizing using two transactions for a typical company: (1) on September 1, stockholders invested \$15,000 cash in the corporation in exchange for common stock, and (2) the company purchased computer equipment for \$7,000 cash. The number J1 indicates that these two entries are recorded on the first page of the journal. The circled numbers in Illustration 2.8 correspond to explanations in the list after the illustration.

ILLUSTRATION 2.8 Technique of Journalizing

General Journal					J1
Date	Account Titles and Explanation		Ref.	Debit	Credit
2025	<div>②</div> <div>③</div> <div>④</div>	Cash	<div>⑤</div>	15,000	15,000
Sept. 1		Common Stock			
		(Issued common stock for cash)			
		Equipment		7,000	7,000
1		Cash			
	(Purchase of equipment for cash)				

- ① The date of the transaction is entered in the Date column.
- ② The debit account title (that is, the account to be debited) is entered first at the extreme left margin of the column headed “Account Titles and Explanation,” and the amount of the debit is recorded in the Debit column.
- ③ The credit account title (that is, the account to be credited) is indented and entered on the next line in the column headed “Account Titles and Explanation,” and the amount of the credit is recorded in the Credit column.
- ④ A brief explanation of the transaction appears on the line below the credit account title. A space is left between journal entries. The blank space separates individual journal entries and makes the entire journal easier to read.
- ⑤ The column titled Ref. (which stands for Reference) is left blank when the journal entry is made. This column is used later when the journal entries are transferred (posted) to the ledger accounts.

The Ledger

The entire group of accounts maintained by a company is the **ledger**.

- The ledger provides the balance in each of the accounts as well as keeps track of changes in these balances. For example, the Cash account shows the amount of cash available to meet current obligations, and the Accounts Payable account shows amounts owed to creditors.
- Companies may use various kinds of ledgers, but every company has a general ledger.
- A **general ledger** contains all the asset, liability, and stockholders' equity accounts, as shown in **Illustration 2.9**.

Whenever we use the term “ledger” in this text, we are referring to the general ledger unless we specify otherwise.

Asset Accounts	Liability Accounts	Stockholders' Equity Accounts
<ul style="list-style-type: none"> • Cash • Accounts Receivable • Supplies • Land • Equipment 	<ul style="list-style-type: none"> • Notes Payable • Accounts Payable • Salaries and Wages Payable • Interest Payable 	<ul style="list-style-type: none"> • Service Revenue • Salaries and Wages Expense • Dividends • Retained Earnings • Common Stock

ILLUSTRATION 2.9 The General Ledger

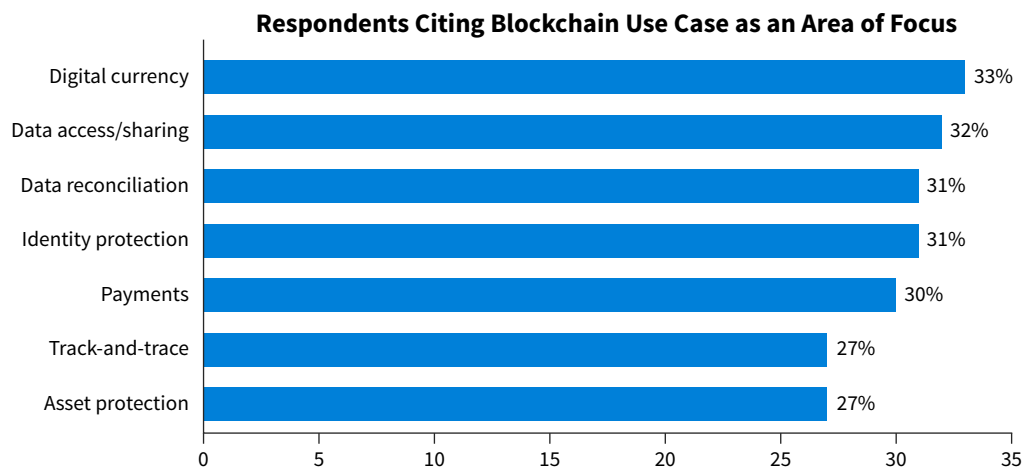

Companies arrange the ledger in the sequence in which they present the accounts in the financial statements, beginning with the balance sheet accounts. First in order are the asset accounts, followed by liability accounts, stockholders' equity accounts, revenues, and expenses. Each account is numbered for easier identification.

Accounting Matters

Working on the Chain Gang

You may have heard of blockchain, especially as it relates to digital currencies such as bitcoin, but what exactly is it? Blockchain is a decentralized, digital ledger of economic transactions that take place across a peer-to-peer network. A blockchain database contains two types of records: transactions and blocks. Blocks hold batches of transactions. The blocks are time-stamped and linked to a previous block. However, transactions cannot be altered retroactively.

As shown in the following chart, there are many use cases for blockchain within an organization, including digital currency, data reconciliation, and asset transfers. As companies adopt blockchain technology throughout their organization, financial reporting mechanisms must adapt to that change as well.

Source: Deloitte's 2020 Global Blockchain Survey.

What does this mean for the accounting profession and, more notably, the accounting system? The answer to that question remains to be seen, but the opportunities are endless. Enhanced security of transactions (reduced fraud), near real-time settlement of transactions between two parties (reduced risk), and an opportunity for accounting professionals to streamline financial

reporting while paving the way for continuous audit processes are a few ways that blockchain could change the accounting profession. And while there is potential for disruption to the financial reporting process as we know it, many agree that blockchain represents an opportunity to evolve the accounting profession from record-keeper to advisor. What an exciting time to enter the profession!

Sources: Antoinette Alexander, "Blockchain: Unlocking New Potential," *Accounting Today* (December 3, 2019); and Deloitte's 2020 Global Blockchain Survey.

Chart of Accounts

The number and type of accounts differ for each company. The number of accounts depends on the amount of detail management desires. For example, the management of one company may want a single account for all types of utilities expense. Another may keep separate expense accounts for each type of utility, such as gas, electricity, and water. Similarly, a small company will have fewer accounts than a business giant like **Anheuser-Busch InBev**. Smaller companies may be able to manage and report its activities in 20 to 30 accounts, while Anheuser-Busch may require thousands of accounts to keep track of its worldwide activities.

- Most companies have a **chart of accounts**, which lists the accounts and the account numbers that identify their location in the ledger.
- The numbering system that identifies the accounts usually starts with the balance sheet accounts and follows with the income statement accounts.

We will be explaining the accounting for Pioneer Advertising, a service company. The ranges for Pioneer's account numbers are as follows.

- 101–199 indicate asset accounts.
- 200–299 indicate liability accounts.
- 300–399 indicate stockholders' equity accounts.
- 400–499 indicate revenues.
- 500–799 indicate expenses.
- 800–899 indicate other revenues.
- 900–999 indicate other expenses.

Illustration 2.10 shows the chart of accounts for Pioneer Advertising.

ILLUSTRATION 2.10 Chart of Accounts for Pioneer Advertising

Pioneer Advertising Chart of Accounts			
Assets		Stockholders' Equity	
101	Cash	311	Common Stock
112	Accounts Receivable	320	Retained Earnings
113	Allowance for Doubtful Accounts	332	Dividends
126	Supplies	350	Income Summary
130	Prepaid Insurance		
157	Equipment		
158	Accumulated Depreciation—Equipment		
Liabilities		Revenues	
200	Notes Payable	400	Service Revenue
201	Accounts Payable		
209	Unearned Service Revenue		
212	Salaries and Wages Payable		
230	Interest Payable		
		Expenses	
		631	Supplies Expense
		711	Depreciation Expense
		722	Insurance Expense
		726	Salaries and Wages Expense
		729	Rent Expense
		732	Utilities Expenses
		750	Bad Debt Expense
		905	Interest Expense

You will notice that there are gaps in the numbering system of the chart of accounts. Gaps are left to permit the insertion of new accounts as needed during the life of the business.

The Recording Process Illustrated

Illustrations 2.11 through **2.20** show the basic steps in the recording process using the October transactions of Pioneer Advertising. Pioneer's accounting period is one month. A basic analysis and a debit-credit analysis precede the journalizing and posting of each transaction. For simplicity, we use the T-account form of the ledger in the illustrations.

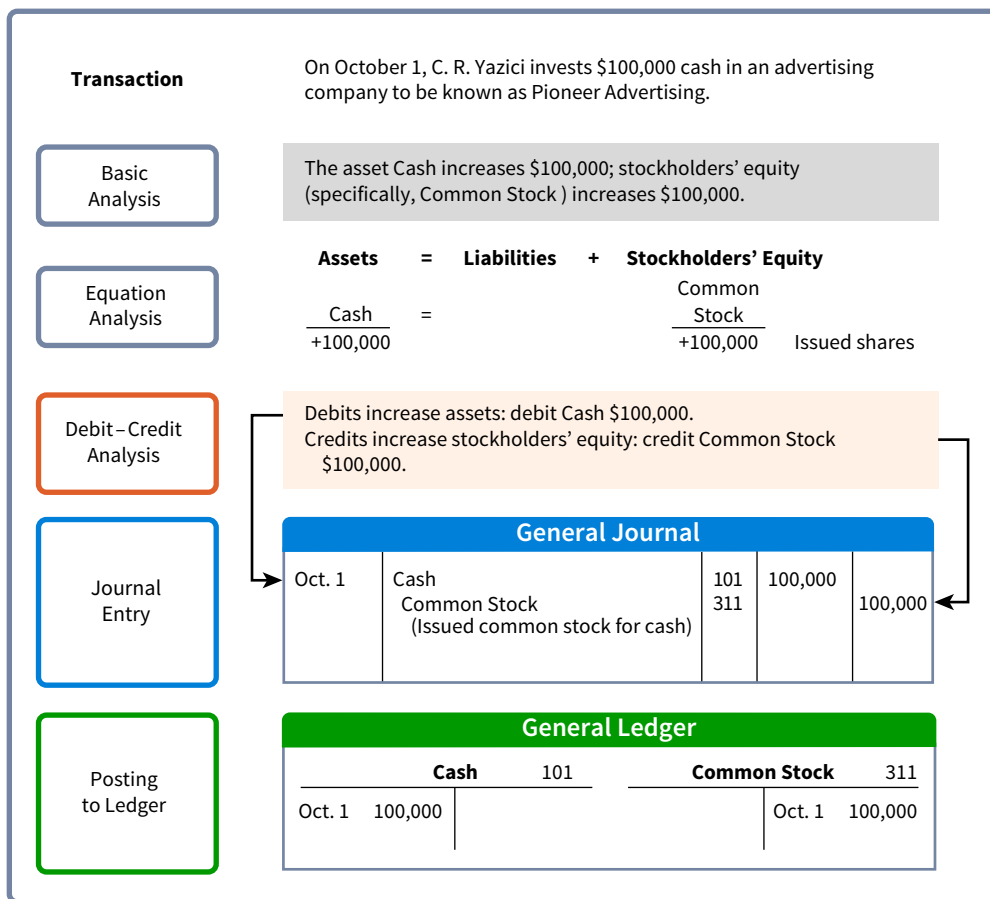

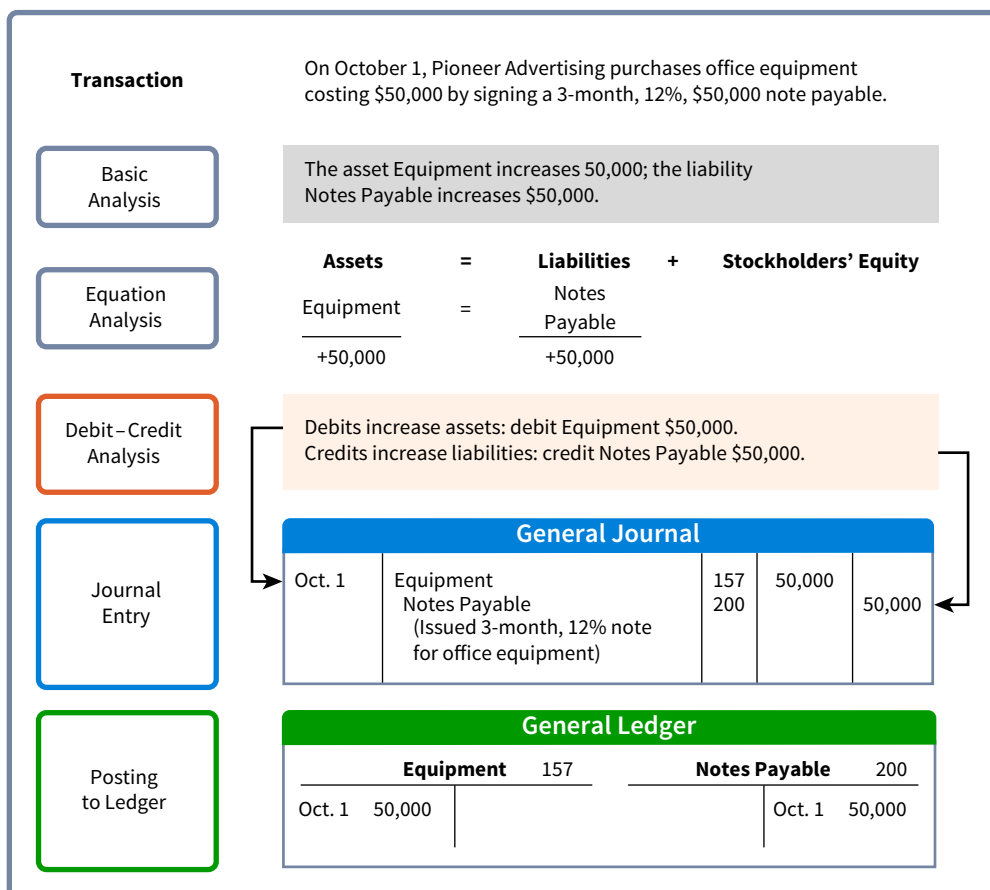

ILLUSTRATION 2.11 Investment of Cash by Stockholders**ILLUSTRATION 2.12** Purchase of Office Equipment

ILLUSTRATION 2.13

Receipt of Cash for Future Service

Transaction

On October 2, Pioneer Advertising receives a \$12,000 cash advance from R. Knox, a client, for advertising services that are expected to be completed by December 31.

Basic
Analysis

The asset Cash increases \$12,000; the liability Unearned Service Revenue increases \$12,000 because the service has not been performed yet. That is, when Pioneer receives an advance payment, it should record an unearned revenue (a liability) in order to recognize the obligation that exists.

Equation
Analysis

Assets	=	Liabilities	+	Stockholders' Equity
Cash	=	Unearned Service Revenue		
+12,000		+12,000		

Debit–Credit
Analysis

Debits increase assets: debit Cash \$12,000.
Credits increase liabilities: credit Unearned Service Revenue \$12,000.

Journal
Entry

General Journal				
Oct. 2	Cash	101	12,000	
	Unearned Service Revenue (Received cash from R. Knox for future service)	209		12,000

Posting
to Ledger

General Ledger				
	Cash	101	Unearned Service Revenue	209
Oct. 1	100,000			
2	12,000			
			Oct. 2	12,000

ILLUSTRATION 2.14

Payment of Monthly Rent

Transaction

On October 3, Pioneer Advertising pays office rent for October in cash, \$9,000.

Basic
Analysis

Rent Expense increases \$9,000 because the payment pertains only to the current month; the asset Cash decreases \$9,000.

Equation
Analysis

Assets	=	Liabilities	+	Stockholders' Equity
Cash	=			Expenses
–9,000				–9,000 Rent Expense

Debit–Credit
Analysis

Debits increase expenses: debit Rent Expense \$9,000.
Credits decrease assets: credit Cash \$9,000.

Journal
Entry

General Journal				
Oct. 3	Rent Expense	729	9,000	
	Cash (Paid cash for October rent)	101		9,000

Posting
to Ledger

General Ledger				
	Cash	101	Rent Expense	729
Oct. 1	100,000			
2	12,000			
		Oct. 3	9,000	
		Oct. 3	9,000	

ILLUSTRATION 2.15 Payment for Insurance

Transaction On October 4, Pioneer Advertising pays \$6,000 for a one-year insurance policy that will expire next year on September 30.

Basic Analysis The asset Prepaid Insurance increases \$6,000 because the payment extends to more than the current month; the asset Cash decreases \$6,000. Payments of expenses that will benefit more than one accounting period are prepaid expenses or prepayments. When a company makes a payment, it debits an asset account in order to show the service or benefit that will be received in the future.

Equation Analysis

Assets		=	Liabilities	+	Stockholders' Equity
Cash	+ Prepaid Insurance				
-6,000	+6,000				

Debit–Credit Analysis Debits increase assets: debit Prepaid Insurance \$6,000. Credits decrease assets: credit Cash \$6,000.

Journal Entry

General Journal					
Oct. 4	Prepaid Insurance	130	6,000		
	Cash	101		6,000	
	(Paid one-year policy; effective date October 1)				

Posting to Ledger

General Ledger					
Cash			101	Prepaid Insurance	
				130	
Oct. 1	100,000	Oct. 3	9,000	Oct. 3	6,000
2	12,000	4	6,000		

ILLUSTRATION 2.16 Purchase of Supplies on Credit

Transaction On October 5, Pioneer Advertising purchases an estimated three-month supply of advertising materials on account from Aero Supply for \$25,000.

Basic Analysis The asset Supplies increases \$25,000; the liability Accounts Payable increases \$25,000.

Equation Analysis

Assets		=	Liabilities	+	Stockholders' Equity
Supplies	=	Accounts Payable			
+25,000		+25,000			

Debit–Credit Analysis Debits increase assets: debit Supplies \$25,000. Credits increase liabilities: credit Accounts Payable \$25,000.

Journal Entry

General Journal					
Oct. 5	Supplies	126	25,000		
	Accounts Payable	201		25,000	
	(Purchased supplies on account from Aero Supply)				

Posting to Ledger

General Ledger					
Supplies			126	Accounts Payable	
				201	
Oct. 5	25,000			Oct. 5	25,000

ILLUSTRATION 2.17 Signing a Contract

Event

On October 9, Pioneer Advertising signs a contract with a local newspaper for advertising inserts (flyers) to be distributed starting the last Sunday in November. Pioneer will start work on the content of the flyers in November. Payment of \$7,000 is due following delivery of the Sunday papers containing the flyers.

Basic Analysis

A business transaction has not occurred. There is only an agreement between Pioneer Advertising and the newspaper for the services to be provided in November. Therefore, no journal entry is necessary in October.

ILLUSTRATION 2.18 Payment of Salaries

Transaction

On October 26, Pioneer Advertising pays employee salaries and wages in cash. Employees are paid once a month, every four weeks. The total payroll is \$ 10,000 per week, or \$2,000 per day. In October, the pay period began on Monday, October 1. As a result, the pay period ended on Friday, October 26, with salaries and wages of \$40,000 being paid.

Basic Analysis

Salaries and Wages Expense increases \$40,000; the asset Cash decreases \$40,000.

Equation Analysis

Assets	=	Liabilities	+	Stockholders' Equity

The general ledger allows Pioneer Advertising to quickly see all of the entries made to each account during the month. This overview is helpful when analyzing accounts for trends or trying to spot potential errors.

- If management would like to further explore one of the transactions impacting an account, they can use the “Ref.” number to navigate into the appropriate journal where the entry was originally recorded.
- The journal entry will provide even more details, such as the source document that prompted the entry, or who initiated and recorded the entry.

This is all useful information when analyzing a company’s transactions.

Analytics in Action: This System Is Full of Data

Accounting systems house vast amounts of data that can be used to make business decisions. The real trick, however, is accessing and “cleaning” the data to most effectively use it for decision-making. Imagine conducting a revenue analysis for a pharmaceutical

company like **Pfizer Inc.** We could easily pull total revenues from its trial balance, but what does that tell us? Not much.

To fully analyze revenue trends, we might look at revenue by product type or geographic location, or perform a yearly trend

analysis of each product. As a result, we would need to pull very detailed, transactional, revenue data from Pfizer's accounting system and then use tools like Excel, Tableau, or Power BI to organize the data for decision-making.

The ability to drill into such detailed revenue data allows Pfizer to explain revenue changes to its investors and

highlight changes due to unique events like the Covid-19 pandemic, versus changes due to regulatory or economic events that may be more ongoing in nature. The data contained in a company's accounting system, combined with analytical software, is an increasingly powerful tool for business decision-makers.

Go to the **Analytics in Action Activities** section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

Trial Balance

A **trial balance** is a list of accounts and their balances at a given time.

- A company usually prepares a trial balance at the end of an accounting period such as the end of the month.
- The trial balance lists the accounts in the order in which they appear in the ledger, with debit balances listed in the left column and credit balances in the right column. The totals of the two columns must agree.

The trial balance proves the mathematical equality of debits and credits after posting to the ledger. Under the double-entry system, this equality occurs when the sum of the debit account balances equals the sum of the credit account balances. A trial balance also uncovers errors in journalizing and posting. In addition, it is useful in the preparation of financial statements. The procedures for preparing a trial balance consist of:

1. Listing the account titles and their balances.
2. Totaling the debit and credit columns.
3. Proving the equality of the two columns.

Illustration 2.23 presents the trial balance prepared from the ledger of Pioneer Advertising. Note that the total debits (\$287,000) equal the total credits (\$287,000). A trial balance also may show account numbers to the left of the account titles.

ILLUSTRATION 2.23 Trial Balance (Unadjusted)

Pioneer Advertising Trial Balance October 31, 2025		
	Debit	Credit
Cash	\$ 80,000	
Accounts Receivable	72,000	
Supplies	25,000	
Prepaid Insurance	6,000	
Equipment	50,000	
Notes Payable		\$ 50,000
Accounts Payable		25,000
Unearned Service Revenue		12,000
Common Stock		100,000
Dividends	5,000	
Service Revenue		100,000
Salaries and Wages Expense	40,000	
Rent Expense	9,000	
	<u>\$287,000</u>	<u>\$287,000</u>

A trial balance does not prove that a company recorded all transactions or that the ledger is correct. Numerous errors may exist even though the trial balance columns agree. For example, the trial balance may balance even when a company:

1. Fails to journalize a transaction,
2. Omits posting a correct journal entry,
3. Posts a journal entry twice,
4. Uses incorrect accounts in journalizing or posting, or
5. Makes offsetting errors in recording the amount of a transaction.

In other words, as long as a company posts equal debits and credits, even to the wrong account or in the wrong amount, the total debits will equal the total credits.

FACTS Mike Greenberg opened Kleene Window Washing Inc. on July 1, 2025. During July, the following transactions occurred.

- July 1 Issued 12,000 shares of common stock for \$12,000 cash.
- 1 Purchased used truck for \$8,000, paying \$2,000 cash and the balance on account.
 - 3 Purchased cleaning supplies for \$900 on account.
 - 5 Paid \$1,800 cash on a 1-year insurance policy effective July 1.
 - 12 Billed customers \$3,700 for cleaning services performed.
 - 18 Paid \$1,000 cash on amount owed on truck and \$500 on amount owed on cleaning supplies.
 - 20 Paid \$2,000 cash for employee salaries.
 - 21 Collected \$1,600 cash from customers billed on July 12.
 - 25 Billed customers \$2,500 for cleaning services performed.
 - 31 Paid \$290 for maintenance of the truck during month.
 - 31 Declared and paid \$600 cash dividend.

The chart of accounts for Kleene Window Washing contains the following accounts: Cash, Accounts Receivable, Supplies, Prepaid Insurance, Equipment, Accounts Payable, Salaries and Wages Payable, Common Stock, Retained Earnings, Dividends, Income Summary, Service Revenue, Maintenance and Repairs Expense, Supplies Expense, Depreciation Expense, Insurance Expense, and Salaries and Wages Expense.

INSTRUCTIONS

- a. Journalize the July transactions.
- b. Post to the ledger accounts. (Use T-accounts.)
- c. Prepare a trial balance at July 31.

2.3 Adjusting Entries

LEARNING OBJECTIVE 3

Identify and prepare adjusting entries.

In order for revenues to be recorded in the period in which services are performed (performance obligations are satisfied) and for expenses to be recognized in the period in which they are incurred, companies make **adjusting entries**. In short, adjusting entries ensure that a company follows the revenue recognition and expense recognition principles.

The use of adjusting entries makes it possible to report on the balance sheet the appropriate assets, liabilities, and stockholders' equity at the statement date. Adjusting entries also make it possible to report on the income statement the proper revenues and expenses for the period. Why are adjusting entries needed? Because the initial trial balance may not contain up-to-date and complete data. This occurs for the following reasons.

1. Some events are not recorded daily because it is not efficient to do so. Examples are the use of supplies and the earning of salaries and wages by employees.

- 2. Some costs are not recorded during the accounting period because these costs expire with the passage of time rather than as a result of recurring daily transactions. Examples of such costs are building and equipment depreciation, rent, and insurance.
- 3. Some items may be unrecorded. An example is a utility service bill that will not be received until the next accounting period.

Adjusting entries are required every time a company, such as **Coca-Cola**, prepares financial statements. At that time, Coca-Cola must analyze each account in the trial balance to determine whether it is complete and up-to-date for financial statement purposes. The analysis requires a thorough understanding of Coca-Cola's operations and the interrelationship of accounts.

Because of this involved process, usually a skilled accountant prepares the adjusting entries. In gathering the adjustment data, Coca-Cola employees may need to make inventory counts of supplies and repair parts. Further, Coca-Cola accountants may prepare supporting schedules of insurance policies, rental agreements, and other contractual commitments.

Companies often prepare adjustments after the balance sheet date. However, they date the entries as of the balance sheet date.

Types of Adjusting Entries

Adjusting entries are classified as either deferrals or accruals. Each of these classes has two subcategories, as **Illustration 2.24** shows.

ILLUSTRATION 2.24 Categories of Adjusting Entries

Deferrals:

- 1. **Prepaid expenses:** Expenses paid in cash before they are used or consumed.
- 2. **Unearned revenues:** Cash received before services are performed.

Accruals:

- 1. **Accrued revenues:** Revenues for services performed but not yet received in cash or recorded.
- 2. **Accrued expenses:** Expenses incurred but not yet paid in cash or recorded.

We review specific examples and explanations of each type of adjustment in the following sections. Each example is based on the October 31 trial balance of Pioneer Advertising (**Illustration 2.23**). We assume that Pioneer uses an accounting period of one month. Thus, Pioneer will make monthly adjusting entries, dated October 31.

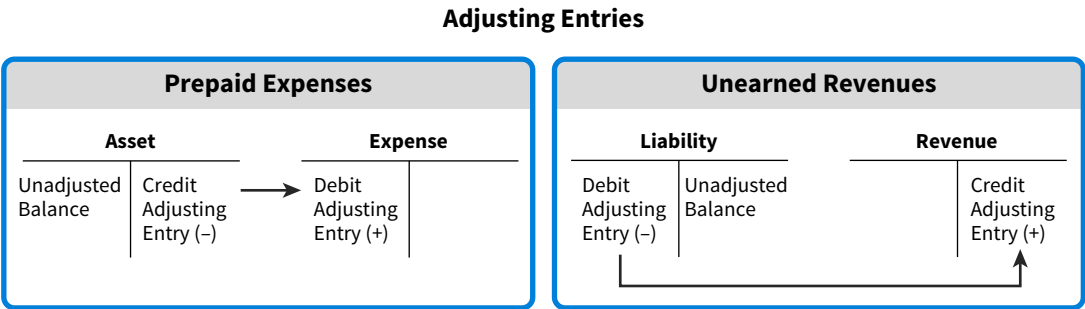

Adjusting Entries for Deferrals

To defer means to postpone or delay. **Deferrals** are expenses or revenues that are recognized at a date later than the point when cash was originally exchanged. The two types of deferrals are prepaid expenses and unearned revenues.

If a company does not make an adjustment for these deferrals, the asset and liability are overstated, and the related expense and revenue are understated. For example, in Pioneer Advertising's trial balance (**Illustration 2.23**), the balance in the asset Supplies shows only supplies purchased. If Pioneer used some of these supplies during the period, the Supplies account balance is overstated; the related expense account, Supplies Expense, is understated because the cost of supplies used has not been recognized. Thus, the adjusting entry for deferrals will decrease a balance sheet account and increase an income statement account.

Illustration 2.25 shows the effects of adjusting entries for deferrals.

ILLUSTRATION 2.25
Adjusting Entries for Deferrals

Prepaid Expenses

Assets paid for and recorded before a company uses them are called **prepaid expenses**. When expenses are prepaid, a company debits an asset account to show the service or benefit it will receive in the future. Examples of common prepayments are insurance, supplies, advertising, and rent. In addition, companies make prepayments when they purchase buildings and equipment.

- Prepaid expenses are costs that expire either with the passage of time (e.g., rent and insurance) or through use and consumption (e.g., supplies).
- The expiration of these costs does not require daily entries, an unnecessary and impractical task.

Accordingly, a company like **Home Depot** usually postpones the recognition of such cost expirations until it prepares financial statements. At each statement date, Home Depot makes adjusting entries to record the expenses that apply to the current accounting period and to show the remaining amounts in the asset accounts.

As shown above, prior to adjustment, assets are overstated and expenses are understated.

Thus, an adjusting entry for prepaid expenses results in a debit to an expense account and a credit to an asset account.

Supplies A business may use several different types of supplies. For example, a CPA firm will use office supplies such as stationery, envelopes, and accounting paper. An advertising firm will stock advertising supplies such as whiteboard markers and printer cartridges.

- Supplies are generally debited to an asset account when they are acquired.
- Recognition of supplies used is generally deferred until the adjustment process.
- At that time, a physical inventory (count) of supplies is taken. The difference between the balance in the Supplies (asset) account and the cost of supplies on hand represents the supplies used (an expense) for the period.

For example, Pioneer Advertising purchased advertising supplies costing \$25,000 on October 5. Pioneer therefore debited the asset Supplies. This account shows a balance of \$25,000 in the October 31 trial balance (see Illustration 2.23). Do you think there are still \$25,000 of supplies on October 31? An inventory count at the close of business on October 31 reveals that only \$10,000 of supplies are still on hand. As a result, the cost of supplies used is \$15,000 (\$25,000 – \$10,000). The amount used is recorded as an expense. The analysis and adjustment for advertising supplies is summarized in **Illustration 2.26**.

ILLUSTRATION 2.26 Adjustment for Supplies

Basic Analysis

Equation Analysis

Debit-Credit Analysis

Journal Entry

Posting to Ledger

The expense Supplies Expense is increased \$15,000, and the asset Supplies is decreased \$15,000.

(1)	Assets	=	Liabilities	+	Stockholders' Equity
	Supplies	=			Supplies Expense
	-15,000				-15,000

Debits increase expenses: debit Supplies Expense \$15,000.
 Credits decrease assets: credit Supplies \$15,000.

General Journal					
Oct. 31	Supplies Expense	631	15,000		
	Supplies	126			
	(To record supplies used)				

General Ledger					
Supplies		126	Supplies Expense		631
Oct. 5	25,000		Oct. 31	Adj. 15,000	
Oct. 31	Bal. 10,000		Oct. 31	Bal. 15,000	

A	=	L	+	SE	
					-15,000
					-15,000
					Cash Flows
					no effect

After adjustment, the asset account Supplies shows a balance of \$10,000, which equals the cost of supplies on hand at the statement date. In addition, Supplies Expense shows a balance of \$15,000, which equals the cost of supplies used in October. If an adjusting entry is not made, then:

- October expenses are understated and net income is overstated by \$15,000.
- Both assets and stockholders' equity are overstated by \$15,000 on the October 31 balance sheet.

Insurance Most companies maintain fire and theft insurance on merchandise and equipment, personal liability insurance for accidents suffered by customers, and automobile insurance on company cars and trucks. The extent of protection against loss determines the cost of the insurance (the amount of the premium to be paid). The insurance policy specifies the term and coverage. The minimum term usually covers one year, but three- to five-year terms are available and may offer lower annual premiums.

- A company usually debits insurance premiums to the asset account Prepaid Insurance when paid.
- At the financial statement date, the company then debits Insurance Expense and credits Prepaid Insurance for the amount of the insurance cost that expired during the period.

For example, on October 4, Pioneer Advertising paid \$6,000 for a one-year fire insurance policy. Coverage began on October 1. Pioneer debited the cost of the premium to Prepaid Insurance at that time. This account still shows a balance of \$6,000 in the October 31 trial balance. Does Pioneer still have one year of insurance coverage? No, because the month of October has ended. One month, or \$500, of the insurance policy has expired or been used. The analysis and adjustment for insurance is summarized in **Illustration 2.27**.

ILLUSTRATION 2.27

Basic Analysis

The expense Insurance Expense is increased \$500, and the asset Prepaid Insurance is decreased \$500.

Equation Analysis

(1)	Assets	=	Liabilities	+	Stockholders' Equity
	Prepaid Insurance	=			Insurance Expense
	-500	=			-500

Debit-Credit Analysis

Debits increase expenses: debit Insurance Expense \$500.
Credits decrease assets: credit Prepaid Insurance \$500.

Journal Entry

General Journal				
Oct. 31	Insurance Expense	722	500	
	Prepaid Insurance	130		500
	(To record insurance expired)			

Posting to Ledger

Prepaid Insurance			Insurance Expense		
		130			722
Oct. 4	6,000		Oct. 31	Adj.	500
Oct. 31	Bal.	5,500	Oct. 31	Bal.	500

The asset Prepaid Insurance shows a balance of \$5,500, which represents the unexpired cost for the remaining 11 months of coverage. At the same time, the balance in Insurance Expense equals the insurance cost that expired in October. Without an adjusting entry:

- October expenses are understated by \$500 and net income is overstated by \$500.
- Both assets and stockholders' equity also are overstated by \$500 on the October 31 balance sheet.

Depreciation A company like **Caterpillar** typically owns various productive assets, such as buildings, equipment, and motor vehicles. These assets provide a service for a number of years. The term of service is commonly referred to as the **useful life** of the asset. Because Caterpillar expects an asset such as a building to provide service for many years, Caterpillar records the building as an asset at its cost, as required by the historical cost principle.

Under GAAP, the acquisition of long-lived assets is essentially a prepayment for services that are provided by those assets over their useful life. **Depreciation** is the process of expensing (allocating) the cost of an asset over its useful life in a rational and systematic manner. In other words, to follow the expense recognition principle, Caterpillar reports a portion of the cost of a long-lived asset as an expense during each period of the asset's useful life.

Depreciation Adjustment Generally accepted accounting principles (GAAP) view the acquisition of productive facilities as a long-term prepayment for services. The need for making periodic adjusting entries for depreciation is the same as we described for other prepaid expenses.

- A company recognizes the expired cost (expense) during the period and reports the unexpired cost (asset) at the end of the period.
- The primary causes of depreciation of a productive facility are actual use, deterioration due to the elements, and obsolescence.

For example, at the time Caterpillar acquires an asset, the effects of these factors cannot be known with certainty. Therefore, Caterpillar must estimate them. **Thus, depreciation is an estimate rather than a factual measurement of the expired cost.**

To estimate depreciation expense, Caterpillar often divides the cost of the asset by its useful life. For example, if Caterpillar purchases equipment for \$10,000 and expects its useful life to be 10 years, Caterpillar records annual depreciation of \$1,000.

In the case of Pioneer Advertising, it estimates depreciation on its office equipment to be \$4,800 a year (cost \$50,000 less salvage value \$2,000 divided by useful life of 10 years), or \$400 per month. The analysis and adjustment for depreciation is summarized in **Illustration 2.28**.

The balance in the Accumulated Depreciation—Equipment account will increase \$400 each month. Therefore, after recording and posting the next adjusting entry at November 30, the balance will be \$800.

Statement Presentation Accumulated Depreciation—Equipment is a contra asset account. A **contra asset account** offsets an asset account on the balance sheet. This means that the Accumulated Depreciation—Equipment account offsets, or is subtracted from, the Equipment account on the balance sheet. The normal balance for this contra asset account is a credit.

Pioneer Advertising uses this account instead of crediting Equipment in order to disclose both the original cost of the equipment and the total expired cost to date. In the balance sheet, Pioneer deducts Accumulated Depreciation—Equipment from the related asset account, as shown in **Illustration 2.29**.

ILLUSTRATION 2.29 Balance Sheet Presentation of Accumulated Depreciation

Equipment	\$50,000	
Less: Accumulated depreciation—equipment	<u>400</u>	\$49,600

The **book value** of any depreciable asset is the difference between its cost and its related accumulated depreciation. In Illustration 2.29, the book value of the equipment at the balance sheet date is \$49,600. Note that the asset’s book value is **not** an indication of the asset’s current fair value. Why? Because depreciation is an allocation concept, not a valuation concept. That is, depreciation allocates an asset’s cost to the periods in which it is used. Depreciation does not attempt to report the actual change in the value of the asset.

- Depreciation expense reflects that portion of the asset’s cost that expired during the period (in this case, October).
- Without this adjusting entry, total assets, total stockholders’ equity, and net income are overstated, and depreciation expense is understated.

Unearned Revenues

Oct. 2

Customer

\$12,000

Thank you in advance for your work

I will finish by Dec. 31

Pioneer

\$12,000

Cash is received in advance; liability is recorded.

Oct. 31

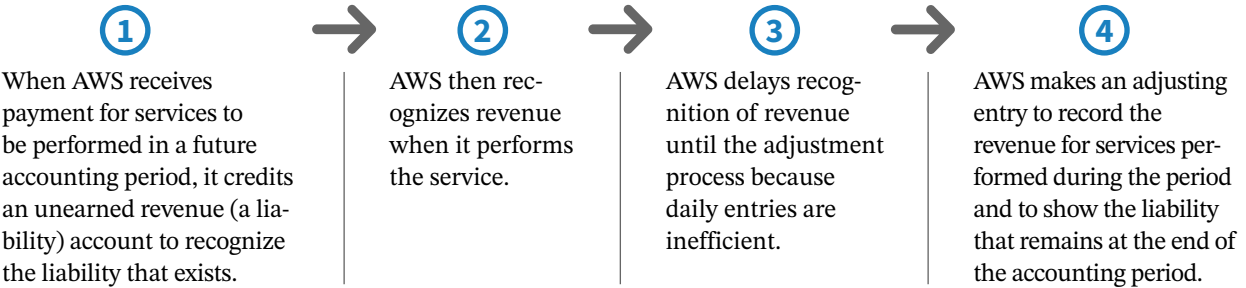

Some service has been performed; some revenue is recorded.

A company records depreciation expense in a single account for each piece of equipment, such as trucks or machinery, and for all buildings. A company also establishes related accumulated depreciation accounts for the different assets, such as Accumulated Depreciation—Trucks, Accumulated Depreciation—Machinery, and Accumulated Depreciation—Buildings.

Unearned Revenues

When companies receive cash before services are performed, they record a liability by increasing (crediting) a liability account called **unearned revenues**. In other words, a company now has a performance obligation (liability) to provide service to one of its customers. Items like rent, magazine subscriptions, and customer deposits for future service may result in unearned revenues. For example, airlines, such as **Delta**, **American**, and **Southwest**, treat receipts from the sale of tickets as unearned revenue until they satisfy the performance obligation by providing the flight service. Once flights are completed, the airline makes an adjusting entry with a debit (decrease) to the unearned revenue account and a credit (increase) to a revenue account.

Unearned revenues are the opposite of prepaid expenses. Indeed, unearned revenue on the books of one company is likely to be a prepayment on the books of the company that made the advance payment. For example, if we assume identical accounting periods, a landlord will have unearned rent revenue when a tenant has prepaid rent. Or, consider the case of **Amazon Web Services (AWS)**:

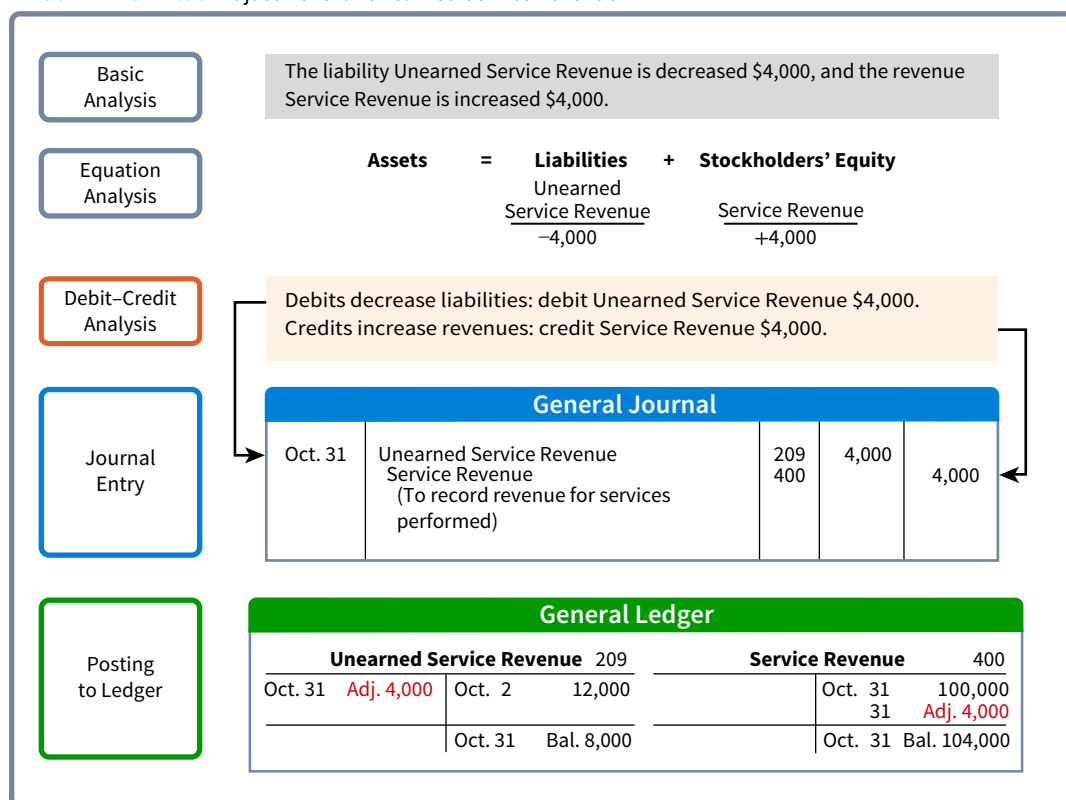

In the typical case:

- Liabilities are overstated and revenues are understated prior to adjustment.
- The adjusting entry for unearned revenues results in a debit (decrease) to a liability account and a credit (increase) to a revenue account.

For example, Pioneer Advertising received \$12,000 on October 2 from R. Knox for advertising services expected to be completed by December 31. Pioneer credited the payment to Unearned Service Revenue. This liability account shows a balance of \$12,000 in the October 31 trial balance. Based on an evaluation of the service Pioneer performed for Knox during October, the company determines that it should recognize \$4,000 of revenue in October. The liability (Unearned Service Revenue) is therefore decreased and stockholders' equity (Service Revenue) is increased, as shown in **Illustration 2.30**.

ILLUSTRATION 2.30 Adjustment for Unearned Service Revenue

A	=	L	+	SE
		-4,000		+4,000
Cash Flows				
no effect				

The liability Unearned Service Revenue now shows a balance of \$8,000. This amount represents the remaining advertising services expected to be performed in the future. At the same time, Service Revenue shows total revenue recognized in October of \$104,000. Without this adjustment:

- Revenues and net income are understated by \$4,000 in the income statement.
- Liabilities will be overstated and stockholders' equity will be understated by \$4,000 on the October 31 balance sheet.

Adjusting Entries for Accruals

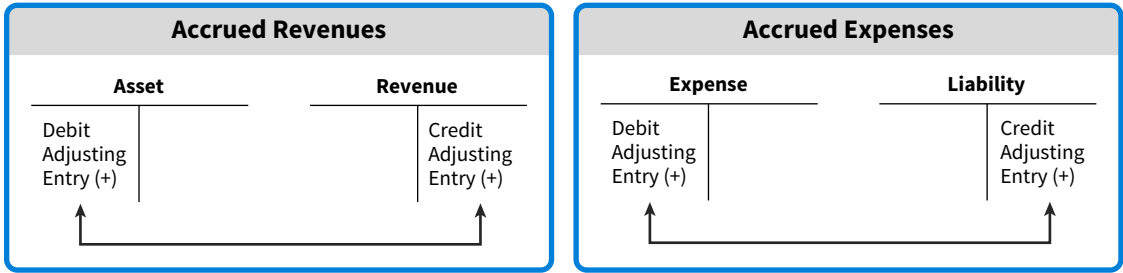

The second category of adjusting entries is accruals.

- Companies make adjusting entries for accruals to record revenues for services performed and expenses incurred in the current accounting period.
- Without an accrual adjustment, the revenue account (and the related asset account) or the expense account (and the related liability account) are understated. Thus, the adjusting entry for accruals **will increase both a balance sheet and an income statement account**.

Illustration 2.31 shows adjusting entries for accruals.

ILLUSTRATION 2.31
Adjusting Entries for
Accruals

Adjusting Entries

Accrued Revenues

Revenues for services performed but not yet recorded at the statement date are **accrued revenues**. Accrued revenues arise due to:

- **The passing of time.** Accrued revenues may accumulate (accrue) if a company has a savings account at a bank. In this situation, interest revenue accrues, or accumulates. These are unrecorded because the earning of interest does not involve daily transactions. Companies do not record interest revenue on a daily basis because it is impractical to do so. Companies will wait and record the interest revenue earned at the end of a period.
- **Services performed but not yet billed nor collected.** As in the case of commissions and fees, these accrued revenues may be unrecorded because only a portion of the total service has been performed and the clients will not be billed until the service has been completed.

An adjusting entry records the receivable that exists at the balance sheet date and the revenue for the services performed during the period. Prior to adjustment, both assets and revenues are understated. Accordingly, **an adjusting entry** for accrued revenues results in a debit (increase) to an asset account and a credit (increase) to a revenue account.

In October, Pioneer Advertising performed services worth \$2,000 that were not billed to clients on or before October 31. Because these services are not billed, they are not recorded. The accrual of unrecorded service revenue increases an asset account, Accounts Receivable. It also increases stockholders' equity by increasing a revenue account, Service Revenue, as shown in **Illustration 2.32**.

Journal Entry

General Journal

Oct. 31	Accounts Receivable Service Revenue (To record revenue for services performed)	112 400	2,000	2,000
---------	--	------------	-------	-------

Posting to Ledger

General Ledger

Accounts Receivable		112	Service Revenue		400
Oct. 31	72,000		Oct. 31	100,000	
31	Adj. 2,000		31	4,000	
Oct. 31	Bal. 74,000		31	Adj. 2,000	
			Oct. 31	Bal. 106,000	

The asset Accounts Receivable shows that clients owe \$74,000 at the balance sheet date. The balance of \$106,000 in Service Revenue represents the total revenue for services performed by Pioneer during the month (\$100,000 + \$4,000 + \$2,000). **Without an adjusting entry, assets and stockholders' equity on the balance sheet, and revenues and net income on the income statement, are understated.**

Accrued Expenses

Expenses incurred but not yet paid or recorded at the statement date are called **accrued expenses**. Interest, rent, taxes, and salaries are common examples. Accrued expenses result from the same causes as accrued revenues, the passage of time and the occurrence of an expense that has not been paid. In fact, an accrued expense on the books of one company is an accrued revenue to another company. For example, the \$2,000 accrual of service revenue by Pioneer Advertising is an accrued expense to the client that received the service.

- An adjusting entry for accrued expense includes a debit (increase) to the appropriate expense account and a credit (increase) to a liability account.
- The liability reflects an obligation that exists at the balance sheet date to pay for the expense in the future.
- **Prior to adjustment, both liabilities and expenses are understated.**

Accrued Interest Pioneer Advertising signed a three-month note payable in the amount of \$50,000 on October 1. The note requires interest at an annual rate of 12%. Three factors determine the amount of the interest accumulation:

1. The face value of the note.
2. The interest rate, which is always expressed as an annual rate.
3. The length of time the note is outstanding.

For Pioneer, the total interest due on the \$50,000 note at its maturity date three months' in the future is \$1,500 ($\$50,000 \times .12 \times 3/12$), or \$500 for one month. **The following shows** the formula for computing interest and its application to Pioneer. Note that the formula expresses the time period as a fraction of a year.

Face Value of Note	×	Annual Interest Rate	×	Time in Terms of One Year	=	Interest
\$50,000	×	.12	×	1/12	=	\$500

As **Illustration 2.33** shows, the accrual of interest at October 31 increases a liability account, Interest Payable. It also decreases stockholders' equity by increasing an expense account, Interest Expense.

ILLUSTRATION 2.33 Adjustment for Interest

Basic Analysis

Cash Flows

no effect

Interest Expense shows the interest that accrued for the month of October. Interest Payable shows the amount of interest owed at the end of October. Pioneer will not pay this amount until the note comes due at the end of three months. Why does Pioneer use the Interest Payable account instead of crediting Notes Payable? By recording interest payable separately, Pioneer discloses the two different types of obligations—interest and principal—in the accounts and financial statements. **Without this adjusting entry, liabilities and interest expense are understated, and both net income and stockholders' equity are overstated.**

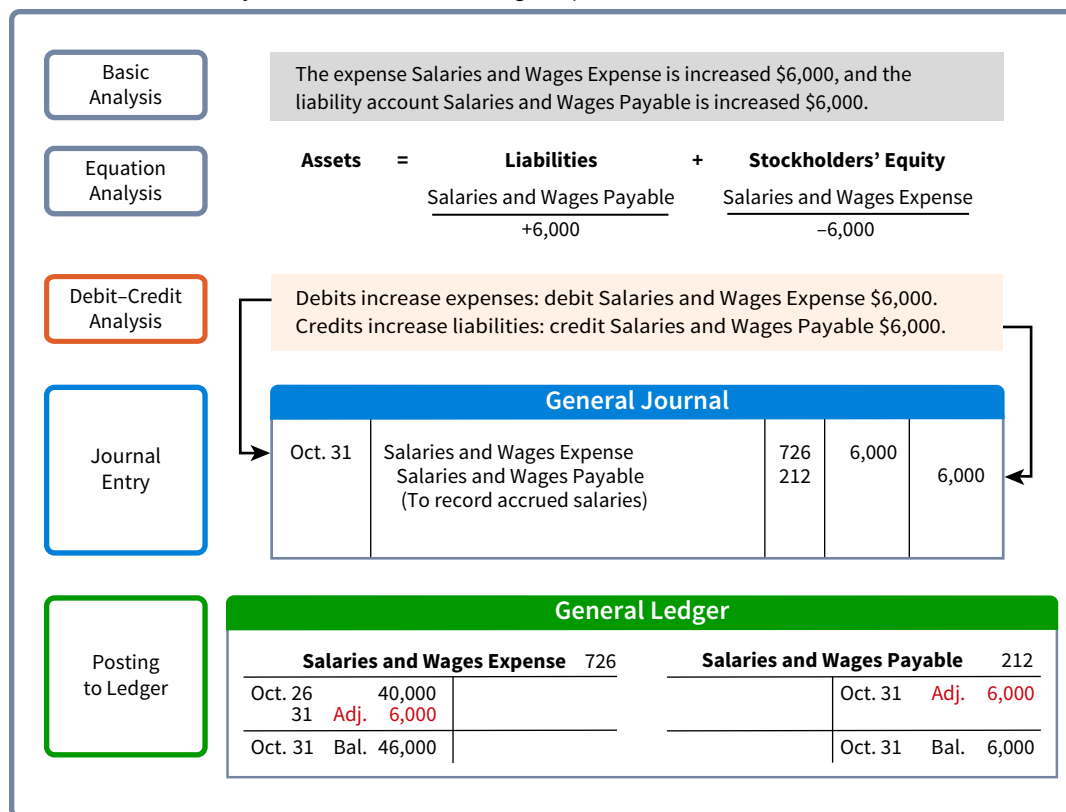

Accrued Salaries and Wages Companies pay for some types of expenses, such as employee salaries and wages, after the services have been performed. For example, Pioneer Advertising last paid salaries and wages on October 26. It will not pay salaries and wages again until November 23. However, as shown in [Illustration 2.34](#), three working days remain in October (October 29–31).

ILLUSTRATION 2.34 Accrued Salaries and Wages

At October 31, the salaries and wages for these three days represent an accrued expense and a related liability to Pioneer. The employees receive total salaries and wages of \$10,000 for a five-day work week, or \$2,000 per day. Thus, accrued salaries and wages at October 31 are \$6,000 (\$2,000 × 3). The analysis and adjustment process is summarized in **Illustration 2.35**.

ILLUSTRATION 2.35 Adjustment for Salaries and Wages Expense

A	=	L	+	SE
		+6,000		-6,000
Cash Flows no effect				

After this adjustment, the balance in Salaries and Wages Expense of \$46,000 (23 days × \$2,000) is the actual salaries and wages expense for October. The balance in Salaries and Wages Payable of \$6,000 is the amount of the liability for salaries and wages owed as of October 31. **Without the \$6,000 adjustment for salaries, both Pioneer's expenses and liabilities are understated by \$6,000.**

Pioneer pays salaries and wages every four weeks. Consequently, the next payday is November 23, when it will again pay total salaries and wages of \$40,000. The payment consists of \$6,000 of salaries and wages payable at October 31 plus \$34,000 of salaries and wages expense for November (17 working days as shown in the November calendar × \$2,000). Therefore, Pioneer makes the following entry on November 23.

November 23		
Salaries and Wages Payable	6,000	
Salaries and Wages Expense	34,000	
Cash		40,000

A	=	L	+	SE
		-6,000		-34,000
-40,000 Cash Flows -40,000				

This entry eliminates the liability for Salaries and Wages Payable that Pioneer recorded in the October 31 adjusting entry. This entry also records the proper amount of Salaries and Wages Expense for the period between November 1 and November 23.

Bad Debts Accounts receivable represents amounts owed to the company from customers. Do you think that all customers are going to pay what they owe? Most likely not. Therefore, GAAP requires that companies estimate uncollectible accounts receivable at the end of each period and record bad debt expense. This ensures receivables are reported on the balance sheet at an amount that is expected to be received, sometimes referred to as net realizable value.

Bad Debts

Oct. 31

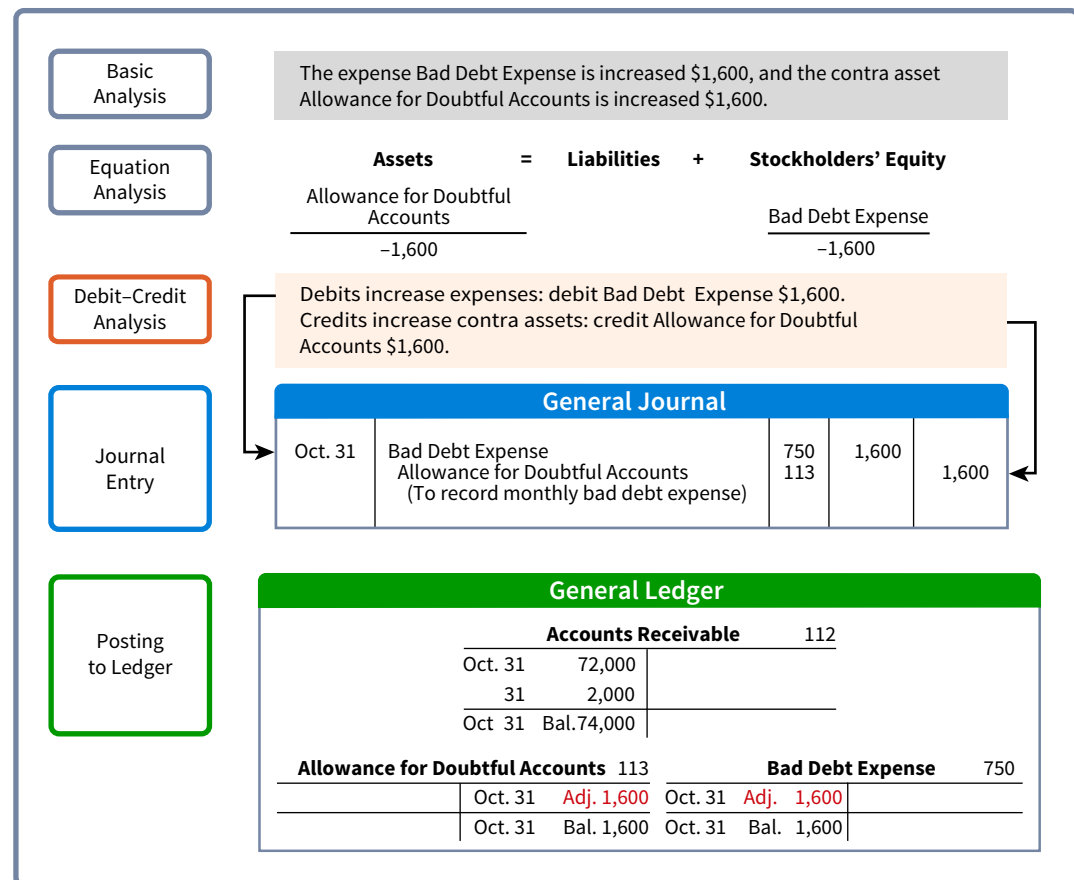

Uncollectible accounts;
record bad debt expense

- At the end of each period, a company estimates the amount of receivables that will later prove to be uncollectible.
- A company bases the estimate on various factors such as the amount of bad debts it experienced in past years, general economic conditions, how long the receivables are past due, and other factors that indicate the extent of uncollectibility.

To illustrate, assume that, based on past experience, Pioneer Advertising reasonably estimates a bad debt expense for the month of \$1,600. The analysis and adjustment process for bad debts is summarized in **Illustration 2.36**.

ILLUSTRATION 2.36 Adjustment for Bad Debt Expense

A	=	L	+	SE
-1,600				-1,600
Cash Flows				
no effect				

The Allowance for Doubtful Accounts is a contra asset account, just like Accumulated Depreciation. On the balance sheet, the Allowance for Doubtful Accounts offsets, or is subtracted from, Accounts Receivable to reflect net realizable value of Accounts Receivable. A company generally computes bad debts by adjusting Allowance for Doubtful Accounts to a certain percentage of the trade accounts receivable and trade notes receivable at the end of the period.

Adjusted Trial Balance

After journalizing and posting all adjusting entries, Pioneer Advertising prepares another trial balance from its ledger accounts (see **Illustration 2.37**). This trial balance is called an **adjusted trial balance**, which proves the equality of the total debit balances and the total

credit balances in the ledger after all adjustments. Because the accounts contain all data needed for financial statements, the adjusted trial balance is the **primary basis for the preparation of financial statements**.

2.4 Preparing Financial Statements

LEARNING OBJECTIVE 4

Prepare financial statements from the adjusted trial balance and prepare closing entries.

As indicated above, **Pioneer Advertising can prepare financial statements directly from the adjusted trial balance.** Illustrations 2.38 and 2.39 show the interrelationships of data in the adjusted trial balance and the financial statements.

As **Illustration 2.38** shows, Pioneer prepares the income statement from the revenue and expense accounts. Next, it derives the retained earnings statement from the retained earnings and dividends accounts and the net income (or net loss) shown in the income statement.

ILLUSTRATION 2.38 Preparation of the Income Statement and Retained Earnings Statement from the Adjusted Trial Balance

Pioneer Advertising Adjusted Trial Balance October 31, 2025			Pioneer Advertising Income Statement For the Month Ended October 31, 2025

trial balance

The **closing process** reduces the balance of nominal (temporary) accounts to zero in order to prepare the accounts for the next period's transactions. In the closing process, Pioneer Advertising transfers all of the revenue and expense account balances (income statement items) to a clearing or suspense account called Income Summary.

1. Pioneer uses this clearing account only at the end of each accounting period.
2. The balance in the account represents the net income or net loss for the period.
3. Pioneer then transfers this amount (the net income or net loss) to a stockholders' equity account.

(For a corporation, the stockholders' equity account is retained earnings; for proprietorships and partnerships, it is a capital account.) Companies post all such **closing entries** to the appropriate general ledger accounts.

Closing Entries

In practice, companies generally prepare closing entries only at the end of a company's annual accounting period. However, to illustrate the journalizing and posting of closing entries, we will assume that Pioneer Advertising closes its books monthly. **Illustration 2.40** shows the closing entries at October 31.

General Journal			J3
Date	Account Titles and Explanation	Debit	Credit

31	Retained Earnings	5,000	
	Dividends		5,000
	(To close dividends to retained earnings)		

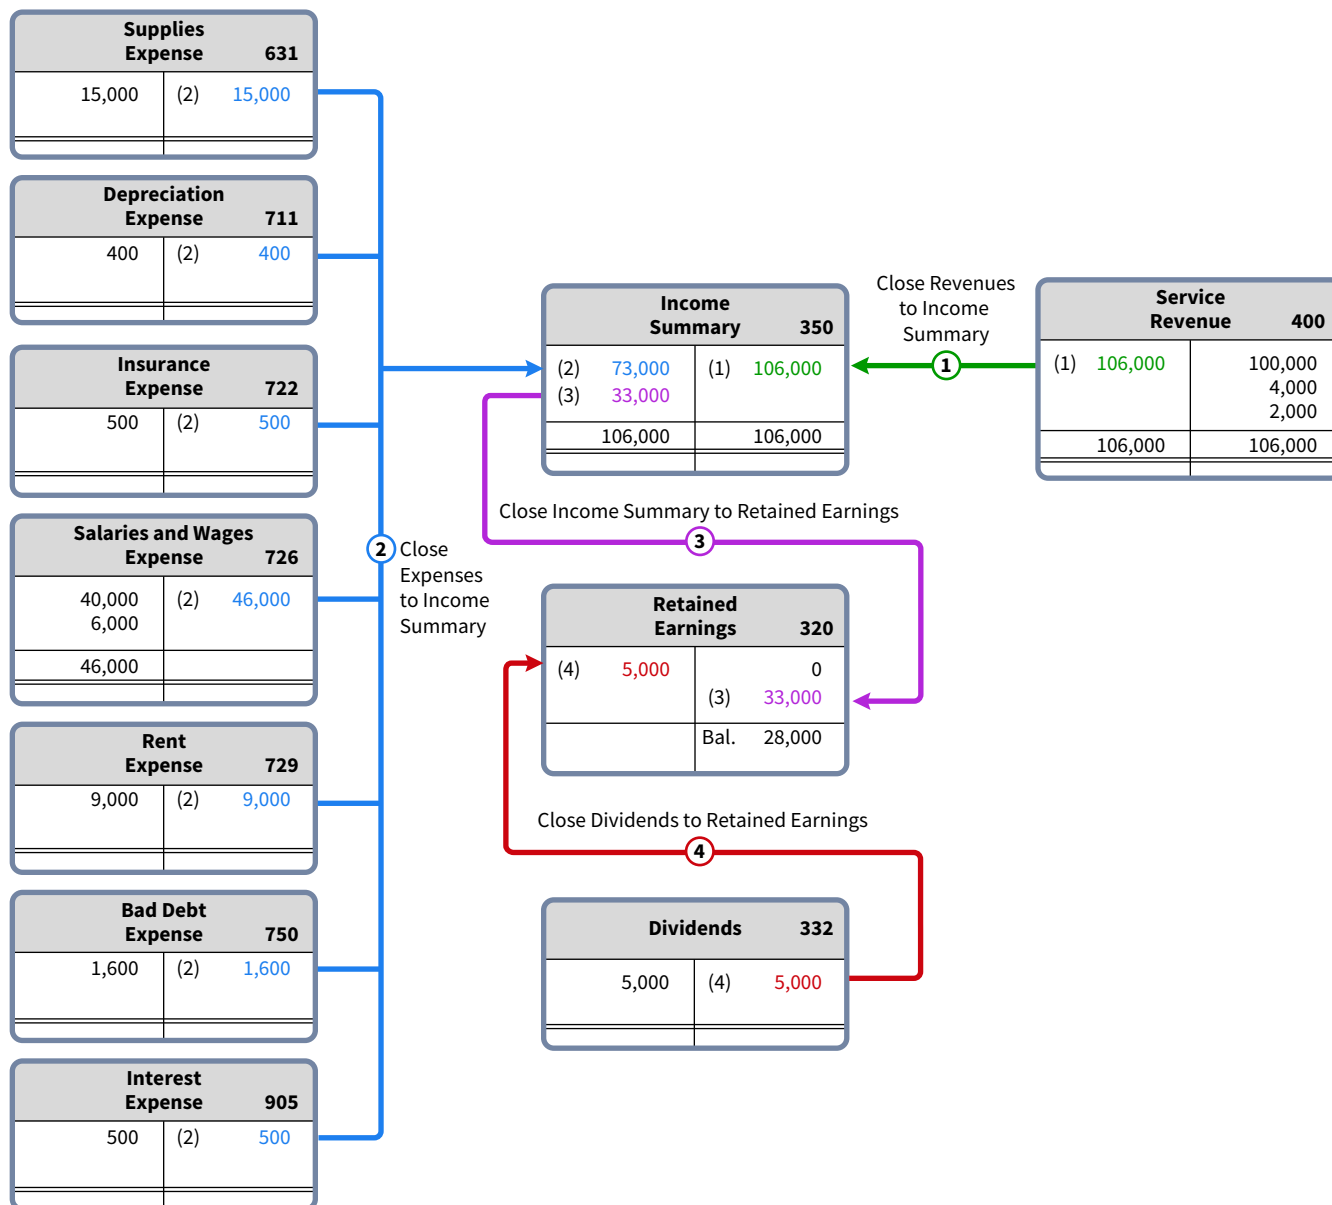

ILLUSTRATION 2.40 Closing Entries Journalized

A couple of cautions about preparing closing entries.

1. Avoid unintentionally doubling the revenue and expense balances rather than zeroing them. For example, revenue and gain accounts have a normal credit side balance, so to zero out the temporary revenue accounts, you must debit revenue and credit the temporary income summary account.
2. Do not close Dividends through the Income Summary account. **Dividends are not expenses, and they are not a factor in determining net income.** Dividends should be closed out through Retained Earnings to reflect that they are a distribution of earnings back to the owners.

Posting Closing Entries

Illustration 2.41 shows the posting of closing entries. All temporary accounts have zero balances after posting the closing entries. In addition, note that the balance in Retained Earnings represents the accumulated undistributed earnings of Pioneer Advertising at the end of the accounting period. Pioneer reports the ending balance in retained earnings in the balance sheet. As noted above, **Pioneer uses the Income Summary account only in closing.** It does not journalize and post entries to this account during the year.

ILLUSTRATION 2.41 Posting of Closing Entries

- As part of the closing process, Pioneer totals, balances, and double-underlines the **temporary accounts**—revenues, expenses, and dividends—as shown in T-account form in Illustration 2.41.
- It does not close the **permanent accounts**—assets, liabilities, and stockholders' equity (Common Stock and Retained Earnings). Instead, Pioneer draws a single underline beneath the current period entries for the permanent accounts. The account balance is then entered below the single underline and is carried forward to the next period (see, for example, Retained Earnings).

After the closing process, each income statement account and the dividends account are balanced out to zero and are ready for use in the next accounting period.

Post-Closing Trial Balance

Recall that a trial balance is prepared after entering the regular transactions of the period, and that a second trial balance (the adjusted trial balance) occurs after posting the adjusting

entries. A company may prepare a third trial balance after posting the closing entries. The trial balance after closing is called the **post-closing trial balance**.

- The purpose of the post-closing trial balance is to prove the equality of the permanent account balances that the company carries forward into the next accounting period.
- Since all temporary accounts will have zero balances, the post-closing trial balance will contain only permanent (real)—balance sheet—accounts.

Illustration 2.42 shows the post-closing trial balance of Pioneer Advertising.

Pioneer Advertising Post-Closing Trial Balance October 31, 2025		
	<u>Debit</u>	<u>Credit</u>
Cash	\$ 80,000	
Accounts Receivable	74,000	
Allowance for Doubtful Accounts		\$ 1,600
Supplies	10,000	
Prepaid Insurance	5,500	
Equipment	50,000	
Accumulated Depreciation—Equipment		400
Notes Payable		50,000
Accounts Payable		25,000
Unearned Service Revenue		8,000
Salaries and Wages Payable		6,000
Interest Payable		500
Common Stock		100,000
Retained Earnings		28,000
	<u>\$219,500</u>	<u>\$219,500</u>

ILLUSTRATION 2.42 Post-Closing Trial Balance

A post-closing trial balance provides evidence that the company has properly journalized and posted the closing entries. It also shows that the accounting equation is in balance at the end of the accounting period. However, like the other trial balances, it does not prove that the company has recorded all transactions or that the ledger is correct. For example, if Pioneer did not record depreciation expense on their equipment in October, the trial balance would balance, but their financial statements would not be correct.

Reversing Entries—An Optional Step

Some accountants prefer to reverse the effects of certain adjusting entries by making a reversing entry at the beginning of the next accounting period. A **reversing entry** is the exact opposite of the adjusting entry made in the previous period. Use of reversing entries is an optional bookkeeping procedure; it is not a required step in the accounting cycle. Accordingly, we have chosen to cover this topic in Appendix 2B.

The Accounting Cycle Summarized

Illustration 2.43 summarizes the steps in the accounting cycle and shows a logical sequence of the accounting procedures used during a fiscal period.

ILLUSTRATION 2.43 Required Steps in the Accounting Cycle

The Accounting Cycle

① Analyze Business Transactions

Transaction	Assets			=		Liabilities		+	Stockholders' Equity			
	Cash	Accounts Receivable	Equipment			Notes Payable	Accounts Payable		Common Stock	Retained Earnings	Rev.	Exp.
(1)	+ \$10,000								+ \$10,000			
(2)	- 800										- \$ 800	
(3)			+ \$3,000				+ \$3,000					
(4)	+ 1,500									+ \$1,500		
(5)	+ 700						+ \$700					
(6)		+ \$2,000								+ 2,000		
(7)	- 500										- 500	
	- 300										- 300	
	- 100										- 100	
	<u>\$10,500</u>	<u>\$2,000</u>	<u>\$3,000</u>			<u>\$700</u>	<u>\$3,000</u>		<u>\$10,000</u>	<u>\$3,500</u>	<u>- \$1,700</u>	
	\$15,500					\$15,500						

⑨ Prepare a Post-Closing Trial Balance

Pioneer Advertising Post-Closing Trial Balance October 31, 2025		
	Debit	Credit
Cash	\$ 80,000	
Accounts Receivable	74,000	
Allowance for Doubtful Accounts		\$ 1,600
Supplies	10,000	
Prepaid Insurance	5,500	
Equipment	50,000	
Accumulated Depreciation—Equipment		400
Notes Payable		50,000
Accounts Payable		25,000
Unearned Service Revenue		8,000
Salaries and Wages Payable		6,000
Interest Payable		900
Common Stock		100,000
Retained Earnings		28,000
	<u>\$219,500</u>	<u>\$219,500</u>

② Journalize the Transactions

General Journal				Page J1		
Date	Account Titles and Explanation	Ref.	Debit	Credit		
2025						
Oct. 1	Cash	101	100,000			
	Common Stock	311		100,000		
	(Issued common stock for cash)

2.5 Financial Statements for a Merchandising Company

LEARNING OBJECTIVE 5

Prepare financial statements for a merchandising company.

Pioneer Advertising is a service company. In this section, we show a detailed set of financial statements for a merchandising company, Uptown Cabinet Corp. The financial statements (see Illustrations 2.44 to 2.46) are prepared from the adjusted trial balance (not shown).

Income Statement

The income statement for Uptown, shown in **Illustration 2.44**, is self-explanatory. The **income statement** classifies amounts into such categories as gross profit on sales, income from operations, income before taxes, and net income. Although earnings per share information is required to be shown on the face of the income statement for a corporation, we omit this item here as it will be discussed more fully later in the text. *For homework problems, do not present earnings per share information unless required to do so.*

ILLUSTRATION 2.44 Income Statement for a Merchandising Company

Uptown Cabinet Corp. Income Statement For the Year Ended December 31, 2025			
Net sales			\$400,000
Cost of goods sold			<u>316,000</u>
Gross profit on sales			84,000
Selling expenses			
Salaries and wages expense (sales)	\$20,000		
Advertising expense	<u>10,200</u>		
Total selling expenses		\$30,200	
Administrative expenses			
Salaries and wages expense (general)	19,000		
Depreciation expense—equipment	6,700		
Property tax expense	5,300		
Rent expense	4,300		
Bad debt expense	1,000		
Telephone and Internet expense	600		
Insurance expense	<u>360</u>		
Total administrative expenses		<u>37,260</u>	
Total selling and administrative expenses			<u>67,460</u>
Income from operations			16,540
Other revenues and gains			
Interest revenue			<u>800</u>
			17,340
Other expenses and losses			
Interest expense			<u>1,700</u>
Income before income taxes			15,640
Income tax			<u>3,440</u>
Net income			<u><u>\$ 12,200</u></u>

Retained Earnings Statement

A corporation may retain the net income earned in the business, or it may distribute it to stockholders by payment of dividends. The **retained earnings statement** reconciles the balance of the retained earnings account from the beginning to the end of the period. For example, as shown in **Illustration 2.45**, Uptown added the net income earned during the year to the balance of retained earnings on January 1, thereby increasing the balance of retained earnings. Deducting dividends of \$2,000 results in the ending retained earnings balance of \$26,400 on December 31.

ILLUSTRATION 2.45 Retained Earnings Statement for a Merchandising Company

Uptown Cabinet Corp. Retained Earnings Statement For the Year Ended December 31, 2025	
Retained earnings, January 1	\$16,200
Add: Net income	<u>12,200</u>
	28,400
Less: Dividends	<u>2,000</u>
Retained earnings, December 31	<u><u>\$26,400</u></u>

Balance Sheet

The **balance sheet** for Uptown, shown in **Illustration 2.46**, is a classified balance sheet that shows the financial condition of a company at the end of a period. Interest receivable, inventory, prepaid insurance, and prepaid rent are included as current assets. Uptown considers these assets current because they will be converted into cash or used by the business within a relatively short period of time. Uptown deducts the amount of Allowance for Doubtful Accounts from the total of accounts, notes, and interest receivable because it estimates that only \$54,800 of \$57,800 will be collected in cash.

ILLUSTRATION 2.46 Balance Sheet for a Merchandising Company

Uptown Cabinet Corp. Balance Sheet As of December 31, 2025			
<u>Assets</u>			
Current assets			
Cash			\$ 1,200
Notes receivable	\$16,000		
Accounts receivable	41,000		
Interest receivable	800	\$57,800	
Less: Allowance for doubtful accounts		<u>3,000</u>	54,800
Inventory			40,000
Prepaid insurance			540
Prepaid rent			<u>500</u>
Total current assets			97,040
Property, plant, and equipment			
Equipment		67,000	
Less: Accumulated depreciation—equipment		<u>18,700</u>	
Total property, plant, and equipment			<u>48,300</u>
Total assets			<u>\$145,340</u>
<u>Liabilities and Stockholders' Equity</u>			
Current liabilities			
Notes payable		\$20,000	
Accounts payable		13,500	
Property taxes payable		2,000	
Income taxes payable		<u>3,440</u>	
Total current liabilities			\$ 38,940
Long term liabilities			
Bonds payable, due June 30, 2033			<u>30,000</u>
Total liabilities			68,940
Stockholders' equity			
Common stock, \$5.00 par value, issued and outstanding, 10,000 shares		50,000	
Retained earnings		<u>26,400</u>	
Total stockholders' equity			76,400
Total liabilities and stockholders' equity			<u>\$145,340</u>

- In the property, plant, and equipment section, Uptown deducts the Accumulated Depreciation—Equipment from the cost of the equipment. The difference represents the book or carrying value of the equipment.

- The balance sheet shows property taxes payable as a current liability because it is an obligation that is payable within a year. The balance sheet also shows other short-term liabilities such as accounts payable.
- The bonds payable, due in 2033, are long-term liabilities. As a result, the balance sheet shows the account in a separate section. (The company paid interest on the bonds on December 31.)

Because Uptown is a corporation, the capital section of the balance sheet, called the stockholders' equity section in the illustration, differs somewhat from the capital section for a proprietorship. Total stockholders' equity consists of the common stock, which is the original investment by stockholders, and the earnings retained in the business. *For homework purposes, unless instructed otherwise, prepare an unclassified balance sheet.*

Closing Entries

Uptown makes closing entries in its general journal as follows.

December 31, 2025			
Sales Revenue	400,000		
Interest Revenue	800		
Income Summary		400,800	
(To close revenues to Income Summary)			
Income Summary	388,600		
Cost of Goods Sold		316,000	
Salaries and Wages Expense (sales)		20,000	
Advertising Expense		10,200	
Salaries and Wages Expense (general)		19,000	
Depreciation Expense		6,700	
Rent Expense		4,300	
Property Tax Expense		5,300	
Bad Debt Expense		1,000	
Telephone and Internet Expense		600	
Insurance Expense		360	
Interest Expense		1,700	
Income Tax Expense		3,440	
(To close expenses to Income Summary)			
Income Summary (\$400,800 – \$388,600)	12,200		
Retained Earnings		12,200	
(To close Income Summary to Retained Earnings)			
Retained Earnings	2,000		
Dividends		2,000	
(To close Dividends to Retained Earnings)			

APPENDIX 2A

Cash-Basis Accounting versus Accrual-Basis Accounting

LEARNING OBJECTIVE * 6

Differentiate the cash basis of accounting from the accrual basis of accounting.

Most companies use **accrual-basis accounting**. They recognize revenue when the performance obligation is satisfied and expenses in the period incurred, without regard to the time of receipt or payment of cash.

Some small companies and the average individual taxpayer, however, use a strict or modified cash-basis approach. Under the **strict cash basis**, companies record revenue only when they receive cash. They record expenses only when they disperse cash.

- Determining income on the cash basis rests upon collecting revenue and paying expenses.
- The cash basis ignores two principles: the revenue recognition principle and the expense recognition principle. Consequently, cash-basis financial statements are not in conformity with GAAP.

An illustration will help clarify the differences between accrual-basis and cash-basis accounting.

Assume that Quality Contractor signs an agreement to construct a garage for \$22,000. In January, Quality begins construction, and purchases \$18,000 of supplies on account, and by the end of January delivers a finished garage to the buyer. In February, Quality collects \$22,000 cash from the customer. In March, Quality pays the \$18,000 due to their vendor. **Illustrations 2A.1** and **2A.2** show the net incomes for each month under cash-basis accounting and accrual-basis accounting, respectively.

ILLUSTRATION 2A.1 Income Statements—Cash Basis

Quality Contractor Income Statement—Cash Basis For the Month of				
	January	February	March	Total
Cash receipts	\$-0-	\$22,000	\$ -0-	\$22,000
Cash payments	-0-	-0-	18,000	18,000
Net income (loss)	\$-0-	\$22,000	\$(18,000)	\$ 4,000

ILLUSTRATION 2A.2 Income Statements—Accrual Basis

Quality Contractor Income Statement—Accrual Basis For the Month of				
	January	February	March	Total
Revenues	\$22,000	\$-0-	\$-0-	\$22,000
Expenses	18,000	-0-	-0-	18,000
Net income (loss)	\$ 4,000	\$-0-	\$-0-	\$ 4,000

For the three months combined, total net income is the same under both cash-basis accounting and accrual-basis accounting. The difference is in the **timing** of revenues and expenses. The basis of accounting also affects the balance sheet. **Illustrations 2A.3** and **2A.4** show Quality's balance sheets at each month-end under the cash basis and the accrual basis, respectively.

ILLUSTRATION 2A.3 Balance Sheets—Cash Basis

Quality Contractor Balance Sheet—Cash Basis As of			
	January 31	February 28	March 31
Assets			
Cash	\$-0-	\$22,000	\$4,000
Total assets	\$-0-	\$22,000	\$4,000
Liabilities and owners' equity			
Owners' equity	\$-0-	\$22,000	\$4,000
Total liabilities and owners' equity	\$-0-	\$22,000	\$4,000

ILLUSTRATION 2A.4 Balance Sheets—Accrual Basis

Quality Contractor Balance Sheet—Accrual Basis As of			
	January 31	February 28	March 31
Assets			
Cash	\$ 0–	\$22,000	\$4,000
Accounts receivable	22,000	–0–	–0–
Total assets	<u>\$22,000</u>	<u>\$22,000</u>	<u>\$4,000</u>
Liabilities and owners' equity			
Accounts payable	\$18,000	\$18,000	\$ 0–
Owners' equity	4,000	4,000	4,000
Total liabilities and owners' equity	<u>\$22,000</u>	<u>\$22,000</u>	<u>\$4,000</u>

Analysis of Quality's income statements and balance sheets shows the ways in which cash-basis accounting is inconsistent with basic accounting theory:

1. The cash basis understates revenues and assets from the construction and delivery of the garage in January. It ignores the \$22,000 of accounts receivable, representing a near-term future cash inflow.
2. The cash basis understates expenses incurred with the construction of the garage and the liability outstanding at the end of January. It ignores the \$18,000 of accounts payable, representing a near-term future cash outflow.
3. The cash basis understates owners' equity in January by not recognizing the revenues and the asset until February. It also overstates owners' equity in February by not recognizing the expenses and the liability until March.

In short, cash-basis accounting violates the accrual concept underlying financial reporting.

The **modified cash basis** is a mixture of the cash basis and the accrual basis. It is based on the strict cash basis but with modifications that have substantial support, such as capitalizing and depreciating plant assets or recording inventory. This method is often followed by professional services firms (doctors, lawyers, accountants, and consultants) and by retail, real estate, and agricultural operations.¹

Conversion from Cash Basis to Accrual Basis

Not infrequently, companies want to convert a cash basis or a modified cash basis set of financial statements to the accrual basis for presentation to investors and creditors. To illustrate this conversion, assume that Dr. Diane Windsor, like many small business owners, keeps her accounting records on a cash basis. In 2025, Dr. Windsor received \$300,000 from her patients and paid \$170,000 for operating expenses, resulting in an excess of cash receipts over disbursements of \$130,000 (\$300,000 – \$170,000). At January 1 and December 31, 2025, she has accounts receivable, unearned service revenue, accrued liabilities, and prepaid expenses as shown in **Illustration 2A.5**.

¹Companies in the following situations might use a cash or modified cash basis.

1. A company that is primarily interested in cash flows (e.g., a group of physicians who distributes cash-basis earnings for salaries and bonuses).
2. A company that has a limited number of financial statement users (small, closely held company with little or no debt).
3. A company that has operations that are relatively straightforward (small amounts of inventory, long-term assets, or long-term debt).

ILLUSTRATION 2A.5 Financial Information Related to Dr. Diane Windsor

	<u>January 1, 2025</u>	<u>December 31, 2025</u>
Accounts receivable	\$12,000	\$9,000
Unearned service revenue	–0–	4,000
Accrued liabilities	2,000	5,500
Prepaid expenses	1,800	2,700

Service Revenue Computation

To convert the amount of cash received from patients to service revenue on an accrual basis, we must consider changes in accounts receivable and unearned service revenue during the year. Accounts receivable at the beginning of the year represents revenues recognized last year that are collected this year. Ending accounts receivable indicates revenues recognized this year that are not yet collected. Therefore, to compute revenue on an accrual basis, we subtract beginning accounts receivable and add ending accounts receivable, as the following formula shows.

$$\text{Cash Receipts from Customers} \left\{ \begin{array}{l} - \text{Beginning Accounts Receivable} \\ + \text{Ending Accounts Receivable} \end{array} \right\} = \text{Revenue on an Accrual Basis}$$

Similarly, beginning unearned service revenue represents cash received last year for revenues recognized this year. Ending unearned service revenue results from collections this year that will be recognized as revenue next year. Therefore, to compute revenue on an accrual basis, we add beginning unearned service revenue and subtract ending unearned service revenue, as the following formula shows.

$$\text{Cash Receipts from Customers} \left\{ \begin{array}{l} + \text{Beginning Unearned Service Revenue} \\ - \text{Ending Unearned Service Revenue} \end{array} \right\} = \text{Revenue on an Accrual Basis}$$

Therefore, for Dr. Windsor's dental practice, to convert cash collected from customers to service revenue on an accrual basis, we would make the computations shown in **Illustration 2A.6**.

Cash receipts from customers		\$300,000
– Beginning accounts receivable	\$(12,000)	
+ Ending accounts receivable	9,000	
+ Beginning unearned service revenue	–0–	
– Ending unearned service revenue	(4,000)	(7,000)
Service revenue (accrual)		<u>\$293,000</u>

ILLUSTRATION 2A.6 Conversion of Cash Receipts to Service Revenue

Operating Expense Computation

To convert cash paid for operating expenses during the year to operating expenses on an accrual basis, we must consider changes in prepaid expenses and accrued liabilities. First, we need to recognize as this year's expenses the amount of beginning prepaid expenses. (The cash payment for these occurred last year.) Therefore, to arrive at operating expense on an accrual basis, we add the beginning prepaid expenses balance to cash paid for operating expenses.

Conversely, ending prepaid expenses result from cash payments made this year for expenses to be reported next year. (Under the accrual basis, Dr. Windsor would have deferred recognizing these payments as expenses until a future period.) To convert these cash payments to operating expenses on an accrual basis, we deduct ending prepaid expenses from cash paid for expenses, as the following formula shows.

$$\text{Cash Paid for Operating Expenses} \left\{ \begin{array}{l} + \text{Beginning Prepaid Expenses} \\ - \text{Ending Prepaid Expenses} \end{array} \right\} = \text{Expenses on an Accrual Basis}$$

Similarly, beginning accrued liabilities result from expenses recognized last year that require cash payments this year. Ending accrued liabilities relate to expenses recognized this year that have not been paid. To arrive at expenses on an accrual basis, we deduct beginning accrued liabilities and add ending accrued liabilities to cash paid for expenses, as the following formula shows.

$$\text{Cash Paid for Operating Expenses} \left\{ \begin{array}{l} - \text{Beginning Accrued Liabilities} \\ + \text{Ending Accrued Liabilities} \end{array} \right\} = \text{Expenses on an Accrual Basis}$$

Therefore, for Dr. Windsor's dental practice, to convert cash paid for operating expenses to operating expenses on an accrual basis, we would make the computations shown in **Illustration 2A.7**.

ILLUSTRATION 2A.7 Conversion of Cash Paid to Operating Expenses

Cash paid for operating expenses		\$170,000
+ Beginning prepaid expenses	\$ 1,800	
– Ending prepaid expenses	(2,700)	
– Beginning accrued liabilities	(2,000)	
+ Ending accrued liabilities	5,500	2,600
Operating expenses (accrual)		<u>\$172,600</u>

This entire conversion can be completed in worksheet form, as shown in **Illustration 2A.8**.

Diane Windsor, D.D.S. Conversion of Income Statement Data from Cash Basis to Accrual Basis For the Year 2025				
	Cash Basis	Adjustments		Accrual Basis
Account Titles		Add	Deduct	
Collections from customers	\$300,000			
– Accounts receivable, Jan. 1			12,000	
+ Accounts receivable, Dec. 31		9,000		
+ Unearned service revenue, Jan. 1		—	—	
– Unearned service revenue, Dec. 31			4,000	
Service revenue				\$293,000
Disbursement for expenses	170,000			
+ Prepaid expenses, Jan. 1		1,800		
– Prepaid expenses, Dec. 31			2,700	
– Accrued liabilities, Jan. 1			2,000	
+ Accrued liabilities, Dec. 31		5,500		
Operating expenses				172,600
Excess of cash collections over disbursements—cash basis	\$130,000			
Net income—accrual basis				\$120,400

ILLUSTRATION 2A.8 Conversion of Statement of Cash Receipts and Disbursements to Income Statement

Using this approach, we adjust collections and disbursements on a cash basis to revenue and expense on an accrual basis, to arrive at accrual net income. In any conversion from the cash basis to the accrual basis, depreciation or amortization is an additional expense in arriving at net income on an accrual basis.

Theoretical Weaknesses of the Cash Basis

The cash basis reports exactly when cash is received and when cash is disbursed. To many people, that information represents something concrete. Cash is king, right? Does it make sense to invent something, design it, produce it, market and sell it, if you aren't going to get cash for it in the end? Many frequently say, "Cash is the real bottom line" and "Cash is the oil that lubricates the economy." If so, then what is the merit of accrual accounting?

- **Today's economy is considerably more driven by credit transactions than by cash.** The accrual basis, not the cash basis, recognizes all aspects of the credit phenomenon.
- **Investors, creditors, and other decision-makers seek timely information about a company's future cash flows.** Accrual-basis accounting provides this information by reporting the cash inflows and outflows associated with earnings activities as soon as these companies can estimate these cash flows with an acceptable degree of certainty.

Receivables and payables are forecasters of future cash inflows and outflows. In other words, accrual-basis accounting aids in predicting future cash flows by reporting transactions and other events with cash consequences at the time the transactions and events occur, rather than when the cash is received and paid.

APPENDIX 2B

Using Reversing Entries

LEARNING OBJECTIVE *7

Identify adjusting entries that may be reversed.

Use of reversing entries simplifies the recording of transactions in the next accounting period. The use of reversing entries, however, does not change the amounts reported in the financial statements for the previous period.

Illustration of Reversing Entries—Accruals

A company most often uses reversing entries to reverse two types of adjusting entries: accrued revenues and accrued expenses. To illustrate the optional use of reversing entries for accrued expenses, we use the following transaction and adjustment data.

- 1. October 24 (initial salaries and wages entry): Paid \$4,000 of salaries and wages incurred between October 10 and October 24.
- 2. October 31 (adjusting entry): Incurred salaries and wages between October 25 and October 31 of \$1,200, to be paid in the November 8 payroll.
- 3. November 8 (subsequent salaries and wages entry): Paid salaries and wages of \$2,500. Of this amount, \$1,200 applied to accrued salaries and wages payable at October 31 and \$1,300 to salaries and wages payable for November 1 through November 8.

Illustration 2B.1 shows the comparative entries.

ILLUSTRATION 2B.1 Comparison of Entries for Accruals, with and without Reversing Entries

Reversing Entries Not Used				Reversing Entries Used			
<u>Initial Salary Entry</u>							
Oct. 24	Salaries and Wages Expense	4,000		Oct. 24	Salaries and Wages Expense	4,000	
	Cash		4,000		Cash		4,000
<u>Adjusting Entry</u>							
Oct. 31	Salaries and Wages Expense	1,200		Oct. 31	Salaries and Wages Expense	1,200	
	Salaries and Wages Payable		1,200		Salaries and Wages Payable		1,200
<u>Closing Entry</u>							
Oct. 31	Income Summary	5,200		Oct. 31	Income Summary	5,200	
	Salaries and Wages Expense		5,200		Salaries and Wages Expense		5,200
<u>Reversing Entry</u>							
Nov. 1	No entry is made.			Nov. 1	Salaries and Wages Payable	1,200	
					Salaries and Wages Expense		1,200
<u>Subsequent Salary Entry</u>							
Nov. 8	Salaries and Wages Payable	1,200		Nov. 8	Salaries and Wages Expense	2,500	
	Salaries and Wages Expense	1,300			Cash		2,500
	Cash		2,500				

The comparative entries show that the first three entries are the same whether or not the company uses reversing entries. The last two entries differ.

- The November 1 reversing entry eliminates the \$1,200 balance in Salaries and Wages Payable, created by the October 31 adjusting entry.
- The reversing entry also creates a \$1,200 credit balance in the Salaries and Wages Expense account.

As you know, it is unusual for an expense account to have a credit balance. However, the balance is correct in this instance. Why? Because the company will debit the entire amount of the first salaries and wages payment in the new accounting period to Salaries and Wages Expense. This debit eliminates the credit balance. The resulting debit balance in the expense account will equal the salaries and wages expense incurred in the new accounting period (\$1,300 in this example).

When a company makes reversing entries, it debits all cash payments of expenses to the related expense account. This means that on November 8 (and every payday), the company debits Salaries and Wages Expense for the amount paid without regard to the existence of any accrued salaries and wages payable. Repeating the same entry simplifies the recording process in an accounting system.

Salaries and Wages Expense

		11/1	1,200
11/8	2,500		
	1,300		

Salaries and Wages Payable

		10/31	1,200
11/1	1,200		

Illustration of Reversing Entries—Deferrals

Up to this point, we assumed the recording of all deferrals as prepaid expense or unearned revenue. In some cases, though, a company records deferrals directly in expense or revenue accounts. When this occurs, a company may also reverse deferrals.

To illustrate the use of reversing entries for prepaid expenses, we use the following transaction and adjustment data.

1. December 10 (initial entry): Purchased \$20,000 of office supplies with cash.
2. December 31 (adjusting entry): Determined that \$5,000 of office supplies are on hand.

Illustration 2B.2 shows the comparative entries.

Reversing Entries Not Used				Reversing Entries Used			
Initial Purchase of Supplies Entry							
Dec. 10	Supplies	20,000		Dec. 10	Supplies Expense	20,000	
	Cash		20,000		Cash		20,000
Adjusting Entry							
Dec. 31	Supplies Expense	15,000		Dec. 31	Supplies	5,000	
	Supplies		15,000		Supplies Expense		5,000
Closing Entry							
Dec. 31	Income Summary	15,000		Dec. 31	Income Summary	15,000	
	Supplies Expense		15,000		Supplies Expense		15,000
Reversing Entry							
Jan. 1	No entry			Jan. 1	Supplies Expense	5,000	
					Supplies		5,000

ILLUSTRATION 2B.2 Comparison of Entries for Deferrals, with and without Reversing Entries

After the adjusting entry on December 31 (regardless of whether using reversing entries), the asset account Supplies shows a balance of \$5,000, and Supplies Expense shows a balance of \$15,000. If the company initially debits Supplies Expense when it purchases the supplies, it then makes a reversing entry to return to the expense account the cost of unconsumed supplies. The company then continues to debit Supplies Expense for additional purchases of supplies during the next period.

Deferrals are generally entered in real accounts (assets and liabilities), thus making reversing entries unnecessary.

- This approach is used because it is advantageous for items that a company needs to apportion over several periods (e.g., supplies and parts inventories).
- However, for other items that do not follow this regular pattern and that may or may not involve two or more periods, a company ordinarily enters them initially in revenue or expense accounts. The revenue and expense accounts may not require adjusting, and the company thus systematically closes them to Income Summary.

Using the nominal accounts adds consistency to the accounting system. It also makes the recording more efficient, particularly when a large number of such transactions occur during the year. For example, the bookkeeper knows to expense invoice items (except for capital asset acquisitions). He or she need not worry whether an item will result in a prepaid expense at the end of the period because the company will make adjustments at the end of the period.

Summary of Reversing Entries

We summarize guidelines for reversing entries as follows.

1. All accruals should be reversed.
2. All deferrals for which a company debited or credited the original cash transaction to an expense or revenue account should be reversed.
3. Adjusting entries for depreciation and bad debts are not reversed.

Recognize that reversing entries do not have to be used. Therefore, some accountants avoid them entirely.

APPENDIX 2C

Using a Worksheet: The Accounting Cycle Revisited

LEARNING OBJECTIVE *8

Prepare a 10-column worksheet.

In this appendix, we provide an additional illustration of the end-of-period steps in the accounting cycle and illustrate the use of a worksheet (usually in an electronic spreadsheet) in this process. Using a **worksheet** (spreadsheet) often facilitates the end-of-period (monthly, quarterly, or annually) accounting and reporting process. Use of a worksheet helps a company prepare the financial statements on a more timely basis. How? With a worksheet; a company need not wait until it journalizes and posts the adjusting and closing entries.

A company prepares a worksheet either on columnar paper or within a computer spreadsheet. In either form, a company uses the worksheet to adjust account balances and to prepare financial statements.

The worksheet does not replace the financial statements.

- Instead, it is an informal device for accumulating and sorting information needed for the financial statements.
- Completing the worksheet provides considerable assurance that a company properly handled all of the details related to the end-of-period accounting and statement preparation.

The 10-column worksheet in Illustration 2C.1 provides columns for the first trial balance, adjustments, adjusted trial balance, income statement, and balance sheet.

Worksheet Columns

Trial Balance Columns

Uptown Cabinet Corp., shown in **Illustration 2C.1**, obtains data for the trial balance from its ledger balances at December 31. The amount for Inventory, \$40,000, is the year-end inventory amount, which results from the application of a perpetual inventory system.

ILLUSTRATION 2C.1 Use of a Worksheet

AutoSave Off											
Uptown Cabinet Corp. Ten-Column Worksheet For the Year Ended December 31, 2025											
1											
2		Trial Balance		Adjustments		Adjusted Trial Balance		Income Statement		Balance Sheet	
3	Account Titles	Dr.	Cr.	Dr.	Cr.	Dr.	Cr.	Dr.	Cr.	Dr.	Cr.

34	Property taxes payable				(f) 2,000		2,000				2,000
35	Income tax expense			(g) 3,440		3,440		3,440			
36	Income taxes payable				(g) 3,440		3,440				3,440
37	Totals			14,800	14,800	557,640	557,640	388,600	400,800	169,040	156,840
38	Net income							12,200			12,200
39	Totals							400,800	400,800	169,040	169,040

Adjustments Columns

After Uptown enters all adjustment data on the worksheet, it establishes the equality of the adjustment columns. It then extends the balances in all accounts to the adjusted trial balance columns.

Adjustments Entered on the Worksheet

Items (a) through (g) below serve as the basis for the adjusting entries made in the worksheet for Uptown shown in Illustration 2C.1.

- a. Depreciation of equipment at the rate of 10% per year based on original cost of \$67,000.
- b. Estimated bad debts of \$1,000, based on an aging of Accounts Receivable.
- c. Insurance expired during the year \$360.
- d. Interest accrued on notes receivable as of December 31, \$800.
- e. The Rent Expense account contains \$500 rent paid in advance, which is applicable to next year.
- f. Property taxes accrued December 31, \$2,000.
- g. Income taxes payable estimated \$3,440.

The adjusting entries shown on the December 31, 2025, worksheet are as follows.

a.	Depreciation Expense	6,700	
	Accumulated Depreciation—Equipment		6,700
b.	Bad Debt Expense	1,000	
	Allowance for Doubtful Accounts		1,000
c.	Insurance Expense	360	
	Prepaid Insurance		360
d.	Interest Receivable	800	
	Interest Revenue		800
e.	Prepaid Rent	500	
	Rent Expense		500
f.	Property Tax Expense	2,000	
	Property Taxes Payable		2,000
g.	Income Tax Expense	3,440	
	Income Taxes Payable		3,440

Uptown Cabinet transfers the adjusting entries to the Adjustments columns of the worksheet, often designating each by letter. The trial balance lists any new accounts resulting from the adjusting entries, as illustrated on the worksheet. (For example, see the accounts listed in rows 28 through 36 in Illustration 2C.1.) Uptown then totals and balances the Adjustments columns.

Adjusted Trial Balance

The adjusted trial balance shows the balance of all accounts after adjustment at the end of the accounting period. For example, Uptown adds the \$2,000 shown opposite the Allowance for Doubtful Accounts in the Trial Balance Cr. column to the \$1,000 in the Adjustments Cr. column. The company then extends the \$3,000 total to the Adjusted Trial Balance Cr. column. Similarly, Uptown reduces the \$900 debit opposite Prepaid Insurance by the \$360 credit in the Adjustments column. The result, \$540, is shown in the Adjusted Trial Balance Dr. column.

Income Statement and Balance Sheet Columns

Uptown extends all the debit items in the Adjusted Trial Balance columns into the Income Statement or Balance Sheet columns to the right. It similarly extends all the credit items.

The next step is to total the Income Statement columns. Uptown needs the amount of net income or loss for the period to balance the debit and credit columns. The net income of \$12,200 is shown in the Income Statement Dr. column because revenues exceeded expenses by that amount.

Uptown then balances the Income Statement columns. The company also enters the net income of \$12,200 in the Balance Sheet Cr. column as an increase in retained earnings.

Preparing Financial Statements from a Worksheet

The worksheet provides the information needed for preparation of the financial statements without reference to the ledger or other records. In addition, the worksheet sorts that data into appropriate columns, which facilitates the preparation of the statements. The financial statements of Uptown Cabinet are shown in Illustrations 2.44 to 2.46.

Review of Basic Terminology

Financial accounting rests on a set of concepts (discussed in Chapter 1) for identifying, recording, classifying, and interpreting transactions and other events relating to enterprises. You therefore need to understand the following **basic terminology employed in collecting accounting data**.

- **Account.** A systematic arrangement that shows the effect of transactions and other events on a specific element (asset,

liability, and so on). Companies keep a separate account for each asset, liability, revenue, and expense, and for capital (stockholders' equity). Because the format of an account often resembles the letter T, it is sometimes referred to as a **T-account** (see Illustration 2.3).

- **Adjusting Entries.** Entries made at the end of an accounting period to bring all accounts up to date on an accrual basis, so that the company can prepare correct financial statements.

- **Closing Entries.** The formal process by which the enterprise reduces all nominal accounts to zero and determines and transfers the net income or net loss to a stockholders' equity account. Also known as "closing the ledger," "closing the books," or merely "closing."
- **Event.** A happening of consequence. An event generally is the source or cause of changes in assets, liabilities, and equity. Events may be external or internal.
- **Financial Statements.** Statements that reflect the collection, tabulation, and final summarization of the accounting data. Four statements are involved. (1) The **balance sheet** shows the financial condition of the enterprise at the end of a period. (2) The **income statement** measures the results of operations during the period. (3) The **statement of cash flows** reports the cash provided and used by operating, investing, and financing activities during the period. (4) The **retained earnings statement** reconciles the balance of the retained earnings account from the beginning to the end of the period.
- **Journal.** The "book of original entry" where the company initially records transactions and selected other events. Various amounts are transferred from the book of original entry, the journal, to the ledger. Entering transaction data in the journal is known as **journalizing**.
- **Ledger.** The book (or computer printouts) containing the accounts. A **general ledger** is a collection of all the asset, liability, stockholders' equity, revenue, and expense accounts. A **subsidiary ledger** contains the details related to a given general ledger account.
- **Posting.** The process of transferring the essential facts and figures from the book of original entry to the ledger accounts.
- **Real and Nominal Accounts.** **Real** (permanent) **accounts** are asset, liability, and equity accounts; they appear on the balance sheet. **Nominal** (temporary) **accounts** are revenue, expense, and dividend accounts; except for dividends, they appear on the income statement. Companies periodically close nominal accounts; they do not close real accounts.
- **Transaction.** An **external event** involving a transfer or exchange between two or more entities.
- **Trial Balance.** The list of all open accounts in the ledger and their balances. The trial balance prepared immediately after all adjustments have been posted is called an **adjusted trial balance**. A trial balance prepared immediately after closing entries have been posted is called a **post-closing** (or **after-closing**) **trial balance**. Companies may prepare a trial balance at any time.

Learning Objectives Review

1 Explain the basic concepts of an accounting information system.

Using **double-entry rules**, the left side of any account is the debit side; the right side is the credit side. All asset and expense accounts are increased on the left or debit side and decreased on the right or credit side. Conversely, all liability and revenue accounts are increased on the right or credit side and decreased on the left or debit side. Stockholders' equity accounts, Common Stock and Retained Earnings, are increased on the credit side. Dividends is increased on the debit side.

The **basic steps in the accounting cycle** are (1) identifying and measuring transactions and other events, (2) journalizing, (3) posting, (4) preparing an unadjusted trial balance, (5) making adjusting entries, (6) preparing an adjusted trial balance, (7) preparing financial statements, (8) closing, and (9) preparing a post-closing trial balance (optional).

2 Record and summarize accounting transactions.

The simplest journal form chronologically lists transactions and events expressed in terms of debits and credits to particular accounts. The items entered in a general journal must be transferred (posted) to the general ledger. Companies should prepare an unadjusted trial balance at the end of a given period after they have recorded the entries in the journal and posted them to the ledger.

3 Identify and prepare adjusting entries.

Adjustments achieve a proper recognition of revenues and expenses, so as to determine net income for the current period and to achieve an accurate statement of end-of-the-period balances in assets, liabilities, and equity accounts. The major types of adjusting entries are deferrals (prepaid expenses and unearned revenues) and accruals (accrued revenues and accrued expenses).

4 Prepare financial statements from the adjusted trial balance and prepare closing entries.

Companies can **prepare financial statements** directly from the adjusted trial balance. The income statement is prepared from the revenue and expense accounts. The retained earnings statement is prepared from the retained earnings account, dividends, and net income (or net loss). The balance sheet is prepared from the asset, liability, and equity accounts.

In the **closing process**, the company transfers all of the revenue and expense account balances (income statement items) to a clearing account called Income Summary, which is used only at the end of the fiscal year. Revenues and expenses are matched in the Income Summary account. The net result of this matching represents the net income or net loss for the period. That amount is then transferred to an equity account (Retained Earnings for a corporation and capital accounts for proprietorships and partnerships).

5 Prepare financial statements for a merchandising company.

The financial statements for a merchandiser differ from those for a service company, as a merchandiser must account for gross profit on sales. The accounting cycle, however, is performed the same.

*6 Differentiate the cash basis of accounting from the accrual basis of accounting.

The cash basis of accounting records revenues when cash is received and expenses when cash is paid. Cash-basis accounting is not in conformity with GAAP. The accrual basis recognizes revenue when the performance obligation is satisfied and expenses in the period incurred, without regard to the time of the receipt or payment of cash. Accrual-basis accounting is theoretically preferable because it provides information about future cash inflows and outflows associated with earnings activities as soon as companies can estimate these cash flows with an acceptable degree of certainty.

*7 Identify adjusting entries that may be reversed.

Reversing entries are most often used to reverse two types of adjusting entries: accrued revenues and accrued expenses. Deferrals may also be reversed if the initial entry to record the transaction is made to an expense or revenue account.

*8 Prepare a 10-column worksheet.

The 10-column worksheet provides columns for the unadjusted trial balance, adjustments, adjusted trial balance, income statement, and balance sheet. The worksheet does not replace the financial statements. Instead, it is an informal device for accumulating and sorting information needed for the financial statements.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

- Give an example of a transaction that results in:
 - A decrease in an asset and a decrease in a liability.
 - A decrease in one asset and an increase in another asset.
 - A decrease in one liability and an increase in another liability.
- Do the following events represent business transactions? Explain your answer in each case.
 - A computer is purchased on account.
 - A customer returns merchandise and is given credit on account.
 - A prospective employee is interviewed.
 - The owner of the business withdraws cash from the business for personal use.
 - Merchandise is ordered for delivery next month.
- Name the accounts debited and credited for each of the following transactions.
 - Billing a customer for work done.
 - Receipt of cash from customer on account.
 - Purchase of office supplies on account.
 - Purchase of 15 gallons of gasoline for the delivery truck for cash.
- Andrea Pafko, a fellow student, contends that the double-entry system means that each transaction must be recorded twice. Is Andrea correct? Explain.
- Is it necessary that a trial balance be prepared periodically? What purpose does it serve?
- Indicate whether each of the following items is a real or nominal account and whether it appears in the balance sheet or the income statement.
 - Prepaid Rent.
 - Salaries and Wages Payable.
 - Inventory.
 - Accumulated Depreciation—Equipment.
 - Equipment.
 - Service Revenue.
 - Salaries and Wages Expense.
 - Supplies.
- Employees are paid every Saturday for the preceding work week. If a balance sheet is prepared on Wednesday, December 31, what does the amount of wages earned during the first three days of the week (12/29, 12/30, 12/31) represent? Explain.

9. (a) How are the components of revenues and expenses different for a merchandising company? (b) Explain the income measurement process of a merchandising company.

10. What differences are there between the trial balance before closing and the trial balance after closing with respect to the following accounts?

- | | |
|----------------------|-------------------------------|
| a. Accounts Payable. | d. Retained Earnings account. |
| b. Expense accounts. | e. Cash. |
| c. Revenue accounts. | |

11. What are adjusting entries and why are they necessary?

12. What are closing entries and why are they necessary?

13. Jay Hawk, maintenance supervisor for Boston Insurance Co., has purchased a riding lawnmower and accessories to be used in maintaining the grounds around corporate headquarters. He has sent the following information to the accounting department.

Cost of mower and accessories	\$4,000	Date purchased	7/1/25
Estimated useful life	5 yrs	Monthly salary of groundskeeper	\$1,100
Salvage value	\$0	Estimated annual fuel cost	\$150

Compute the amount of depreciation expense (related to the mower and accessories) that should be reported on Boston's December 31, 2025, income statement. Assume straight-line depreciation.

14. Midwest Enterprises made the following entry on December 31, 2025.

Interest Expense	10,000
Interest Payable	10,000
(To record interest expense due on loan from Anaheim National Bank)	

What entry would Anaheim National Bank make regarding its outstanding loan to Midwest Enterprises? Explain why this must be the case.

*15. Distinguish between cash-basis accounting and accrual-basis accounting. Why is accrual-basis accounting acceptable for most businesses and the cash-basis unacceptable in the preparation of an income statement and a balance sheet?

*16. When salaries and wages expense for the year is computed, why are beginning accrued salaries and wages subtracted from, and ending accrued salaries and wages added to, salaries and wages paid during the year?

*17. List two types of transactions that would receive different accounting treatment using (a) strict cash-basis accounting, and (b) a modified cash basis.

*18. What are reversing entries, and why are they used?

*19. "A worksheet is a permanent accounting record, and its use is required in the accounting cycle." Do you agree? Explain.

Brief Exercises

BE2.1 (LO 2) Transactions for Mehta Company for the month of May are presented below. Prepare journal entries for each of these transactions. (You may omit explanations.)

- | | |
|-------|--|
| May 1 | B.D. Mehta invests \$4,000 cash in exchange for common stock in a small welding corporation. |
| 3 | Buys equipment on account for \$1,100. |
| 13 | Pays \$400 to landlord for May rent. |
| 21 | Bills Noble Corp. \$500 for welding work done. |

BE2.2 (LO 2) Agazzi Repair Shop had the following transactions during the first month of business as a proprietorship. Journalize the transactions. (Omit explanations.)

- | | |
|--------|--|
| Aug. 2 | Invested \$12,000 cash and \$2,500 of equipment in the business. |
| 7 | Purchased supplies on account for \$500. (Debit asset account.) |
| 12 | Performed services for clients, for which \$1,300 was collected in cash and \$670 was billed to the clients. |
| 15 | Paid August rent \$600. |
| 19 | Counted supplies and determined that only \$270 of the supplies purchased on August 7 are still on hand. |

BE2.3 (LO 2, 3) On July 1, 2025, Crowe Co. pays \$15,000 to Zubin Insurance Co. for a 3-year insurance policy. Both companies have fiscal years ending December 31. For Crowe Co., journalize the entry on July 1 and the adjusting entry on December 31.

BE2.4 (LO 2, 3) Using the data in BE2.3, journalize the entry on July 1 and the adjusting entry on December 31 for Zubin Insurance Co. Zubin uses the accounts Unearned Service Revenue and Service Revenue.

BE2.5 (LO 2, 3) Assume that on February 1, **Procter & Gamble (P&G)** paid \$720,000 in advance for 2 years' insurance coverage. Prepare P&G's February 1 journal entry and the annual adjusting entry on June 30.

BE2.6 (LO 2, 3) LaBouche Corporation owns a warehouse. On November 1, it rented storage space to a lessee (tenant) for 3 months for a total cash payment of \$2,400 received in advance. Prepare LaBouche's November 1 journal entry and the December 31 annual adjusting entry.

BE2.7 (LO 3) Dresser Company's weekly payroll, paid on Fridays, totals \$8,000. Employees work a 5-day week. Prepare Dresser's adjusting entry on Wednesday, December 31, and the journal entry to record the \$8,000 cash payment on Friday, January 2.

BE2.8 (LO 3) Included in Gonzalez Company's December 31 trial balance is a note receivable of \$12,000. The note is a 4-month, 10% note dated October 1. Prepare Gonzalez's December 31 adjusting entry to record \$300 of accrued interest, and the February 1 journal entry to record receipt of \$12,400 from the borrower.

BE2.9 (LO 3) Prepare the following adjusting entries at August 31 for **Walgreens**.

- a. Interest on notes payable of \$300 is accrued.
- b. Services performed but unbilled total \$1,400.
- c. Salaries and wages earned by employees of \$700 have not been recorded.
- d. Bad debt expense for year is \$900.

Use the following account titles: Service Revenue, Accounts Receivable, Interest Expense, Interest Payable, Salaries and Wages Expense, Salaries and Wages Payable, Allowance for Doubtful Accounts, and Bad Debt Expense.

BE2.10 (LO 3) At the end of its first year of operations, the trial balance of Alonzo Company shows Equipment \$30,000 and zero balances in Accumulated Depreciation—Equipment and Depreciation Expense. Depreciation for the year is estimated to be \$2,000. Prepare the adjusting entry for depreciation at December 31, and indicate the balance sheet presentation for the equipment at December 31.

BE2.11 (LO 4) Side Kicks has year-end account balances of Sales Revenue \$808,900, Interest Revenue \$13,500, Cost of Goods Sold \$556,200, Administrative Expenses \$189,000, Income Tax Expense \$35,100, and Dividends \$18,900. Prepare the year-end closing entries.

***BE2.12 (LO 6)** Kelly Company had cash receipts from customers in 2025 of \$142,000. Cash payments for operating expenses were \$97,000. Kelly has determined that at January 1, accounts receivable was \$13,000, and prepaid expenses were \$17,500. At December 31, accounts receivable was \$18,600, and prepaid expenses were \$23,200. Compute (a) service revenue and (b) operating expenses.

***BE2.13 (LO 7)** Assume that **Best Buy** made a December 31 adjusting entry to debit Salaries and Wages Expense and credit Salaries and Wages Payable for \$4,200 for one of its departments. On January 2, Best Buy paid the weekly payroll of \$7,000. Prepare Best Buy's (a) January 1 reversing entry; (b) January 2 entry (assuming the reversing entry was prepared); and (c) January 2 entry (assuming the reversing entry was not prepared).

Exercises

E2.1 (LO 2) (Transaction Analysis—Service Company) Beverly Crusher is a licensed CPA. During the first month of operations of her business (a sole proprietorship), the following events and transactions occurred.

- April 2 Invested \$32,000 cash and equipment valued at \$14,000 in the business.
- 2 Hired an administrative assistant at a salary of \$290 per week payable monthly.
- 3 Purchased supplies on account \$700. (Debit an asset account.)
- 7 Paid office rent of \$600 for the month.
- 11 Completed a tax assignment and billed client \$1,100 for services rendered. (Use Service Revenue account.)
- 12 Received \$3,200 advance on a management consulting engagement.
- 17 Received cash of \$2,300 for services completed for Ferengi Co.
- 21 Paid insurance expense \$110.
- 30 Paid administrative assistant \$1,160 for the month.
- 30 A count of supplies indicated that \$120 of supplies had been used.
- 30 Purchased a new computer for \$6,100 with personal funds. (The computer will be used exclusively for business purposes.)

Instructions

Journalize the transactions in the general journal. (Omit explanations.)

E2.2 (LO 2) (Corrected Trial Balance) The following trial balance of Wanda Landowska Company does not balance. Your review of the ledger reveals the following. (a) Each account had a normal balance. (b) The debit footings in Prepaid Insurance, Accounts Payable, and Property Tax Expense were each understated \$100. (c) A transposition error was made in Accounts Receivable and Service Revenue; the correct balances for Accounts Receivable and Service Revenue are \$2,750 and \$6,690, respectively. (d) A debit posting to Advertising Expense of \$300 was omitted. (e) A \$1,500 cash drawing by the owner was debited to Owner's Capital and credited to Cash.

Wanda Landowska Company		
Trial Balance		
April 30, 2025		
	Debit	Credit
Cash	\$ 4,800	
Accounts Receivable	2,570	
Prepaid Insurance	700	
Equipment		\$ 8,000
Accounts Payable		4,500
Property Taxes Payable	560	
Owner's Capital		11,200
Service Revenue	6,960	
Salaries and Wages Expense	4,200	
Advertising Expense	1,100	
Property Tax Expense		800
	<u>\$20,890</u>	<u>\$24,500</u>

Instruction

Prepare a correct trial balance.

E2.3 (LO 2) (Corrected Trial Balance) The following trial balance of Blues Traveler Corporation does not balance.

Blues Traveler Corporation		
Trial Balance		
April 30, 2025		
	Debit	Credit
Cash	\$ 5,912	
Accounts Receivable	5,240	
Supplies	2,967	
Equipment	6,100	
Accounts Payable		\$ 7,044
Common Stock		8,000
Retained Earnings		2,000
Service Revenue		5,200
Office Expense	4,320	
	<u>\$24,539</u>	<u>\$22,244</u>

An examination of the ledger shows these errors.

1. Cash received from a customer on account was recorded (both debit and credit) as \$1,380 instead of \$1,830.
2. The purchase on account of a computer costing \$3,200 was recorded as a debit to Office Expense and a credit to Accounts Payable.
3. Services were performed on account for a client, \$2,250, for which Accounts Receivable was debited \$2,250 and Service Revenue was credited \$225.
4. A payment of \$95 for telephone charges was entered as a debit to Office Expense and a debit to Cash.
5. The Service Revenue account was totaled at \$5,200 instead of \$5,280.

Instructions

From this information prepare a corrected trial balance.

E2.4 (LO 2) (Corrected Trial Balance) The following trial balance of Watteau Co. does not balance.

Watteau Co. Trial Balance June 30, 2025		
	<u>Debit</u>	<u>Credit</u>
Cash		\$ 2,870
Accounts Receivable	\$ 3,231	
Supplies	800	
Equipment	3,800	
Accounts Payable		2,666
Unearned Service Revenue	1,200	
Common Stock		6,000
Retained Earnings		3,000
Service Revenue		2,380
Salaries and Wages Expense	3,400	
Office Expense	940	
	<u>\$13,371</u>	<u>\$16,916</u>

Each of the listed accounts should have a normal balance per the general ledger. An examination of the ledger and journal reveals the following errors.

1. Cash received from a customer on account was debited for \$570, and Accounts Receivable was credited for the same amount. The actual collection was for \$750.
2. The purchase of a computer printer on account for \$500 was recorded as a debit to Supplies for \$500 and a credit to Accounts Payable for \$500.
3. Services were performed on account for a client for \$890. Accounts Receivable was debited for \$890 and Service Revenue was credited for \$89.
4. A payment of \$65 for telephone charges was recorded as a debit to Office Expense for \$65 and a debit to Cash for \$65.
5. When the Unearned Service Revenue account was reviewed, it was found that service revenue amounting to \$325 was performed prior to June 30 (related to Unearned Service Revenue).
6. A debit posting to Salaries and Wages Expense of \$670 was omitted.
7. A payment on account for \$206 was credited to Cash for \$206 and credited to Accounts Payable for \$260.
8. A dividend of \$575 was debited to Salaries and Wages Expense for \$575 and credited to Cash for \$575.

Instruction

Prepare a correct trial balance. (Note: It may be necessary to add one or more accounts to the trial balance.)

E2.5 (LO 3) Excel (Adjusting Entries) The ledger of Duggan Rental Agency on March 31 of the current year includes the following selected accounts before adjusting entries have been prepared.

	<u>Debit</u>	<u>Credit</u>
Prepaid Insurance	\$ 3,600	
Supplies	2,800	
Equipment	25,000	
Accumulated Depreciation—Equipment		\$ 8,400
Notes Payable		20,000
Unearned Rent Revenue		9,300
Rent Revenue		60,000
Interest Expense	—0—	
Salaries and Wages Expense	14,000	

An analysis of the accounts shows the following.

1. The equipment depreciates \$250 per month.
2. One-third of the unearned rent was recognized as revenue during the quarter.
3. Interest of \$500 is accrued on the notes payable.
4. Supplies on hand total \$850.
5. Insurance expires at the rate of \$300 per month.

Instructions

Prepare the adjusting entries at March 31, assuming that adjusting entries are made quarterly. Additional accounts are Depreciation Expense, Insurance Expense, Interest Payable, and Supplies Expense. (Omit explanations.)

E2.6 (LO 3) (Adjusting Entries) Karen Weller, D.D.S., opened a dental practice on January 1, 2025. During the first month of operations, the following transactions occurred.

1. Performed services for patients who had dental plan insurance. At January 31, \$750 of such services was performed but not yet billed to the insurance companies.
2. Utility expenses incurred but not paid prior to January 31 totaled \$520.
3. Purchased dental equipment on January 1 for \$80,000, paying \$20,000 in cash and signing a \$60,000, 3-year note payable. The equipment depreciates \$400 per month. Interest is \$500 per month.
4. Purchased a one-year malpractice insurance policy on January 1 for \$12,000.
5. Purchased \$1,600 of dental supplies. On January 31, determined that \$500 of supplies were on hand.

Instructions

Prepare the adjusting entries on January 31. (Omit explanations.) Account titles are Accumulated Depreciation—Equipment, Depreciation Expense, Service Revenue, Accounts Receivable, Insurance Expense, Interest Expense, Interest Payable, Prepaid Insurance, Supplies, Supplies Expense, Utilities Expenses, and Accounts Payable.

E2.7 (LO 3) (Analyze Adjusted Data) A partial adjusted trial balance of Piper Company at January 31, 2025, shows the following.

Piper Company Adjusted Trial Balance January 31, 2025		
	Debit	Credit
Supplies	\$ 700	
Prepaid Insurance	2,400	
Salaries and Wages Payable		\$ 800
Unearned Service Revenue		750
Supplies Expense	950	
Insurance Expense	400	
Salaries and Wages Expense	1,800	
Service Revenue		2,000

Instructions

Answer the following questions, assuming the year begins January 1.

- a. If the amount in Supplies Expense is the January 31 adjusting entry, and \$850 of supplies was purchased in January, what was the balance in Supplies on January 1?
- b. If the amount in Insurance Expense is the January 31 adjusting entry, and the original insurance premium was for one year, what was the total premium and when was the policy purchased?
- c. If \$2,500 of salaries was paid in January, what was the balance in Salaries and Wages Payable at December 31, 2024?
- d. If \$1,600 was received in January for services performed in January, what was the balance in Unearned Service Revenue at December 31, 2024?

E2.8 (LO 3) Excel (Adjusting Entries) Andy Roddick is the new owner of Ace Computer Services. At the end of August 2025, his first month of ownership, Roddick is trying to prepare monthly financial statements. Below is some information related to unrecorded expenses that the business incurred during August.

1. At August 31, Roddick owed his employees \$1,900 in wages that will be paid on September 1.
2. At the end of the month, he had not yet received the month's utility bill. Based on past experience, he estimated the bill would be approximately \$600.
3. On August 1, Roddick borrowed \$30,000 from a local bank on a 15-year mortgage. The annual interest rate is 8%.
4. A telephone bill in the amount of \$117 covering August charges is unpaid at August 31.

Instructions

Prepare the adjusting journal entries as of August 31, 2025, suggested by the information above.

E2.9 (LO 2, 3) (Adjusting Entries) Selected accounts of Urdu Company are as follows.

Supplies				Accounts Receivable			
Beg. bal.	800	10/31	470	10/17	2,400		
				10/31	1,650		
Salaries and Wages Expense				Salaries and Wages Payable			
10/15	800					10/31	600
10/31	600						
Unearned Service Revenue				Supplies Expense			
10/31	400	10/20	650	10/31	470		
Service Revenue							
		10/17	2,400				
		10/31	1,650				
		10/31	400				

Instructions

From an analysis of the T-accounts, reconstruct (a) the October transaction entries, and (b) the adjusting journal entries that were made on October 31, 2025. Prepare explanations for each journal entry.

E2.10 (LO 3) (Adjusting Entries) Greco Resort opened for business on June 1 with eight air-conditioned units. Its trial balance on August 31 is as follows.

Greco Resort Trial Balance August 31, 2025		
	Debit	Credit
Cash	\$ 10,600	
Prepaid Insurance	4,500	
Supplies	2,600	
Land	20,000	
Buildings	120,000	
Equipment	16,000	
Accounts Payable		\$ 4,500
Unearned Rent Revenue		4,600
Mortgage Payable		60,000
Common Stock		91,000
Retained Earnings		-0-
Dividends	5,000	
Rent Revenue		76,200
Salaries and Wages Expense	44,800	
Utilities Expenses	9,200	
Maintenance and Repairs Expense	3,600	
	<u>\$236,300</u>	<u>\$236,300</u>

Other data:

- The balance in prepaid insurance is a one-year premium paid on June 1, 2025.
- An inventory count on August 31 shows \$450 of supplies on hand.
- Annual depreciation rates are buildings (4%) and equipment (10%). Salvage value is estimated to be 10% of cost.
- Unearned Rent Revenue of \$3,800 was earned prior to August 31.
- Salaries of \$375 were unpaid at August 31.
- Rentals of \$800 were due from tenants at August 31.
- The mortgage interest rate is 8% per year.

Instructions

- Journalize the adjusting entries on August 31 for the 3-month period June 1–August 31. (Omit explanations.)
- Prepare an adjusted trial balance on August 31.

E2.11 (LO 4) (Prepare Financial Statements) The adjusted trial balance of Oliver Co. as of December 31, 2025, contains the following.

Oliver Co. Adjusted Trial Balance December 31, 2025		
	Dr.	Cr.
Cash	\$19,472	
Accounts Receivable	6,920	
Prepaid Rent	2,280	
Equipment	18,050	
Accumulated Depreciation—Equipment		\$ 4,895
Notes Payable		5,700
Accounts Payable		5,472
Common Stock		20,000
Retained Earnings		11,310
Dividends	3,000	
Service Revenue		11,590
Salaries and Wages Expense	6,840	
Rent Expense	2,260	
Depreciation Expense	145	
Interest Expense	83	
Interest Payable		83
	<u>\$59,050</u>	<u>\$59,050</u>

Instructions

- Prepare an income statement.
- Prepare a retained earnings statement.
- Prepare a classified balance sheet.

E2.12 (LO 4) (Prepare Financial Statements) Santo Design was founded by Thomas Grant in January 2016. Presented below is the adjusted trial balance as of December 31, 2025.

Santo Design Adjusted Trial Balance December 31, 2025		
	Dr.	Cr.
Cash	\$ 11,350	
Accounts Receivable	21,500	
Supplies	5,000	
Prepaid Insurance	2,500	
Equipment	60,000	
Accumulated Depreciation—Equipment		\$ 35,000
Accounts Payable		5,000
Interest Payable		150
Notes Payable		5,000
Unearned Service Revenue		5,600
Salaries and Wages Payable		1,300
Common Stock		10,000
Retained Earnings		3,500
Service Revenue		61,500
Salaries and Wages Expense	11,300	
Insurance Expense	850	
Interest Expense	150	
Depreciation Expense	7,000	
Supplies Expense	3,400	
Rent Expense	4,000	
	<u>\$127,050</u>	<u>\$127,050</u>

Instructions

- Prepare an income statement and a retained earnings statement for the year ending December 31, 2025, and an unclassified balance sheet at December 31.

b. Answer the following questions.

1. If the note has been outstanding 6 months, what is the annual interest rate on that note?
2. If the company paid \$17,500 in salaries in 2025, what was the balance in Salaries and Wages Payable on December 31, 2024?

E2.13 (LO 4, 5) (Closing Entries) The adjusted trial balance of Lopez Company shows the following data pertaining to sales at the end of its fiscal year, October 31, 2025: Sales Revenue \$800,000, Delivery Expense \$12,000, Sales Returns and Allowances \$24,000, and Sales Discounts \$15,000.

Instructions

- a. Prepare the revenues section of the income statement.
- b. Prepare separate closing entries for (1) sales and (2) the contra accounts to sales.

E2.14 (LO 4) (Closing Entries) Presented below is information related to Gonzales Corporation for the month of January 2025.

Cost of goods sold	\$208,000	Salaries and wages expense	\$ 61,000
Delivery expense	7,000	Sales discounts	8,000
Insurance expense	12,000	Sales returns and allowances	13,000
Rent expense	20,000	Sales revenue	350,000

Instructions

Prepare the necessary closing entries.

E2.15 (LO 5) (Missing Amounts) Presented below is financial information for two different companies.

	<u>Alatorre Company</u>	<u>Eduardo Company</u>
Sales revenue	\$90,000	(d)
Sales returns and allowances	(a)	\$ 5,000
Net sales	81,000	95,000
Cost of goods sold	56,000	(e)
Gross profit	(b)	38,000
Operating expenses	15,000	23,000
Net income	(c)	15,000

Instructions

Compute the missing amounts.

E2.16 (LO 4) (Closing Entries for a Corporation) Presented below are selected account balances for Homer Winslow Co. as of December 31, 2025.

Inventory 12/31/25	\$ 60,000	Cost of Goods Sold	\$225,700
Common Stock	75,000	Selling Expenses	16,000
Retained Earnings	45,000	Administrative Expenses	38,000
Dividends	18,000	Income Tax Expense	30,000
Sales Returns and Allowances	12,000		
Sales Discounts	15,000		
Sales Revenue	410,000		

Instructions

Prepare closing entries for Homer Winslow Co. on December 31, 2025. (Omit explanations.)

E2.17 (LO 2) (Transactions of a Corporation, Including Investment and Dividend) Scratch Miniature Golf and Driving Range Inc. was opened on March 1 by Rick Fowler. The following selected events and transactions occurred during March.

- Mar. 1 Invested \$50,000 cash in the business in exchange for common stock.
- 3 Purchased Michelle Wie's Golf Land for \$38,000 cash. The price consists of land \$10,000, building \$22,000, and equipment \$6,000. (Make one compound entry.)
- 5 Advertised the opening of the driving range and miniature golf course, paying advertising expenses of \$1,600.
- 6 Paid cash \$1,480 for a one-year insurance policy.
- 10 Purchased golf equipment for \$2,500 from Singh Company, payable in 30 days.
- 18 Received golf fees of \$1,200 in cash.
- 25 Declared and paid a \$500 cash dividend.
- 30 Paid wages of \$900.
- 30 Paid Singh Company in full.
- 31 Received \$750 of fees in cash.

Scratch uses the following accounts: Cash, Prepaid Insurance, Land, Buildings, Equipment, Accounts Payable, Common Stock, Dividends, Service Revenue, Advertising Expense, and Salaries and Wages Expense.

Instructions

Journalize the March transactions. (Provide explanations for the journal entries.)

***E2.18 (LO 6) (Cash to Accrual Basis)** Jill Accardo, M.D., maintains the accounting records of Accardo Clinic on a cash basis. During 2025, Dr. Accardo collected \$142,600 from her patients and paid \$55,470 in expenses. At January 1, 2025, and December 31, 2025, she had accounts receivable, unearned service revenue, accrued expenses, and prepaid expenses as follows. (All long-lived assets are rented.)

	<u>January 1, 2025</u>	<u>December 31, 2025</u>
Accounts receivable	\$9,250	\$15,927
Unearned service revenue	2,840	4,111
Accrued expenses	3,435	2,108
Prepaid expenses	1,917	3,232

Instructions

Prepare a schedule that converts Dr. Accardo's "excess of cash collected over cash disbursed" for the year 2025 to net income on an accrual basis for the year 2025.

***E2.19 (LO 6) (Cash and Accrual Basis)** Wayne Rogers Corp. maintains its financial records on the cash basis of accounting. Interested in securing a long-term loan from its regular bank, Wayne Rogers Corp. requests you as its independent CPA to convert its cash-basis income statement data to the accrual basis. You are provided with the following summarized data covering 2024, 2025, and 2026.

	<u>2024</u>	<u>2025</u>	<u>2026</u>
Cash receipts from sales:			
On 2024 sales	\$295,000	\$160,000	\$ 30,000
On 2025 sales	–0–	355,000	90,000
On 2026 sales			408,000
Cash payments for expenses:			
On 2024 expenses	185,000	67,000	25,000
On 2025 expenses	40,000 ^a	160,000	55,000
On 2026 expenses		45,000 ^b	218,000

^aPrepayments of 2025 expenses.

^bPrepayments of 2026 expenses.

Instructions

- Using the data above, prepare abbreviated income statements for the years 2024 and 2025 on the cash basis.
- Using the data above, prepare abbreviated income statements for the years 2024 and 2025 on the accrual basis.

***E2.20 (LO 3, 7) (Adjusting and Reversing Entries)** When the accounts of Daniel Barenboim Inc. are examined, the adjusting data listed below are uncovered on December 31, the end of an annual fiscal period.

- The prepaid insurance account shows a debit of \$5,280, representing the cost of a 2-year fire insurance policy dated August 1 of the current year.
- On November 1, Rent Revenue was credited for \$1,800, representing revenue from a subrental for a 3-month period beginning on that date.
- Purchase of advertising materials for \$800 during the year was recorded in the Advertising Expense account. On December 31, advertising materials of \$290 are on hand.
- Interest of \$770 has accrued on notes payable. The interest will be paid in January of the next year.

Instructions

Prepare the following in general journal form.

- The adjusting entry for each item.
- The reversing entry for each item where appropriate.

***E2.21 (LO 8) (Worksheet)** Presented below are selected accounts for Alvarez Company as reported in the worksheet at the end of May 2025.

	A	B	C	D	E	F	G
1	Alvarez Co. Worksheet For the Month Ended May 31, 2025						
2		Adjusted Trial Balance		Income Statement		Balance Sheet	
3	Account Titles	Dr.	Cr.	Dr.	Cr.	Dr.	Cr.
4	Cash	9,000					
5	Inventory	80,000					
6	Sales Revenue		450,000				
7	Sales Returns and Allowances	10,000					
8	Sales Discounts	5,000					
9	Cost of Goods Sold	250,000					

Instructions

Complete the worksheet by extending amounts reported in the adjusted trial balance to the appropriate columns in the worksheet. Do not total individual columns.

***E2.22 (LO 8) (Worksheet and Balance Sheet Presentation)** The adjusted trial balance for Ed Bradley Co. is presented in the following worksheet for the month ended April 30, 2025.

	A	B	C	D	E	F	G
1	Ed Bradley Co. Worksheet (partial) For the Month Ended April 30, 2025						
2		Adjusted Trial Balance		Income Statement		Balance Sheet	
3	Account Titles	Dr.	Cr.	Dr.	Cr.	Dr.	Cr.
4	Cash	24,522					
5	Accounts Receivable	6,920					
6	Prepaid Rent	2,280					
7	Equipment	18,050					
8	Accumulated Depreciation—Equipment		4,895				
9	Notes Payable		5,700				
10	Accounts Payable		4,472				
11	Common stock		34,960				
12	Retained Earnings—April 1, 2025		1,000				
13	Dividends	1,100					
14	Service Revenue		12,590				
15	Salaries and Wages Expense	6,840					
16	Rent Expense	3,760					
17	Depreciation Expense	145					
18	Interest Expense	83					
19	Interest Payable		83				

Instructions

Complete the worksheet and prepare a classified balance sheet.

***E2.23 (LO 8) (Partial Worksheet Preparation)** Jurassic Park Co. prepares monthly financial statements from a worksheet. Selected portions of the January worksheet showed the following data.

Jurassic Park Co. Worksheet (partial) For the Month Ended Jan. 31, 2025							
		Trial Balance		Adjustments		Adjusted Trial Balance	
Account Titles	Dr.	Cr.	Dr.	Cr.	Dr.	Cr.	
Supplies	3,256			(a) 1,500	1,756		
Accumulated Depreciation—Equipment		6,682		(b) 257		6,939	
Interest Payable		100		(c) 50		150	
Supplies Expense			(a) 1,500			1,500	
Depreciation Expense			(b) 257			257	
Interest Expense			(c) 50			50	

During February, no events occurred that affected these accounts. But at the end of February, the following information was available.

(a) Supplies on hand	\$715
(b) Monthly depreciation	\$257
(c) Accrued interest	\$ 50

Instructions

Reproduce the data that would appear in the February worksheet, and indicate the amounts that would be shown in the February income statement.

Problems

P2.1 (LO 2, 4) (Transactions, Financial Statements—Service Company) Listed below are the transactions of Yasunari Kawabata, D.D.S., for the month of September.

- Sept. 1 Kawabata begins practice as a dentist, invests \$20,000 cash, and issues 2,000 shares of \$10 par stock.
- 2 Purchases dental equipment on account from Green Jacket Co. for \$17,280.
- 4 Pays rent for office space, \$680 for the month.
- 4 Employs a receptionist, Michael Bradley.
- 5 Purchases dental supplies for cash, \$942.
- 8 Receives cash of \$1,690 from patients for services performed.
- 10 Pays miscellaneous office expenses, \$430.
- 14 Bills patients \$5,820 for services performed.
- 18 Pays Green Jacket Co. on account, \$3,600.
- 19 Pays a dividend of \$3,000 cash.
- 20 Receives \$980 from patients on account.
- 25 Bills patients \$2,110 for services performed.
- 30 Pays the following expenses in cash: salaries and wages \$1,800; miscellaneous office expenses \$85.
- 30 Dental supplies used during September, \$330.

Instructions

- a. Enter the transactions shown above in appropriate general ledger accounts (use T-accounts). Use the following ledger accounts: Cash, Accounts Receivable, Supplies, Equipment, Accumulated Depreciation—Equipment, Accounts Payable, Common Stock, Retained Earnings, Dividends, Service Revenue, Rent Expense, Office Expense, Salaries and Wages Expense, Supplies Expense,

Depreciation Expense, and Income Summary. Allow 10 lines for the Cash and Income Summary accounts, and 5 lines for each of the other accounts needed. Record depreciation using a 5-year life on the equipment, the straight-line method, and no salvage value.

- b. Prepare a trial balance.
- c. Prepare an income statement, a retained earnings statement, and an unclassified balance sheet.
- d. Close the ledger.
- e. Prepare a post-closing trial balance.

P2.2 (LO 3, 4) Excel (Adjusting Entries and Financial Statements) Mason Advertising was founded in January 2018. Presented below are adjusted and unadjusted trial balances as of December 31, 2025.

Mason Advertising Trial Balance December 31, 2025				
	Unadjusted		Adjusted	
	Dr.	Cr.	Dr.	Cr.
Cash	\$ 11,000		\$ 11,000	
Accounts Receivable	20,000		23,500	
Supplies	8,400		3,000	
Prepaid Insurance	3,350		2,500	
Equipment	60,000		60,000	
Accumulated Depreciation—Equipment		\$28,000		\$ 33,000
Accounts Payable		5,000		5,000
Interest Payable		—0—		150
Notes Payable		5,000		5,000
Unearned Service Revenue		7,000		5,600
Salaries and Wages Payable		—0—		1,300
Common Stock		10,000		10,000
Retained Earnings		3,500		3,500
Service Revenue		58,600		63,500
Salaries and Wages Expense	10,000		11,300	
Insurance Expense			850	
Interest Expense	350		500	
Depreciation Expense			5,000	
Supplies Expense			5,400	
Rent Expense	4,000		4,000	
	<u>\$117,100</u>	<u>\$117,100</u>	<u>\$127,050</u>	<u>\$127,050</u>

Instructions

- a. Journalize the annual adjusting entries that were made. (Omit explanations.)
- b. Prepare an income statement and a retained earnings statement for the year ending December 31, 2025, and an unclassified balance sheet at December 31.
- c. Answer the following questions.
 1. If the note has been outstanding 3 months, what is the annual interest rate on that note?
 2. If the company paid \$12,500 in salaries and wages in 2025, what was the balance in Salaries and Wages Payable on December 31, 2024?

P2.3 (LO 3) (Adjusting Entries) A review of the ledger of Baylor Company at December 31, 2025, produces the following data pertaining to the preparation of annual adjusting entries.

1. Salaries and Wages Payable \$0. There are eight employees. Salaries and wages are paid every Friday for the current week. Five employees receive \$700 each per week, and three employees earn \$600 each per week. December 31 is a Tuesday. Employees do not work weekends. All employees worked the last 2 days of December.
2. Unearned Rent Revenue \$384,000. The company began subleasing office space in its new building on November 1. Each tenant is required to make a \$5,000 security deposit that is not refundable

until occupancy is terminated. At December 31, the company had the following rental contracts that are paid in full for the entire term of the lease.

<u>Date</u>	<u>Term (in months)</u>	<u>Monthly Rent</u>	<u>Number of Leases</u>
Nov. 1	6	\$6,000	5
Dec. 1	6	\$8,500	4

3. Prepaid Advertising \$13,200. This balance consists of payments on two advertising contracts. The contracts provide for monthly advertising in two trade magazines. The terms of the contracts are as shown below.

The first advertisement runs in the month in which the contract is signed.

<u>Contract</u>	<u>Date</u>	<u>Amount</u>	<u>Number of Magazine Issues</u>
A650	May 1	\$6,000	12
B974	Oct. 1	7,200	24

4. Notes Payable \$60,000. This balance consists of a note for one year at an annual interest rate of 12%, dated June 1.

Instructions

Prepare the adjusting entries at December 31, 2025. (Show all computations).

P2.4 (LO 3, 4, 5) (Financial Statements, Adjusting and Closing Entries) The trial balance of Bellemy Fashion Center contained the following accounts at November 30, the end of the company's fiscal year.

Bellemy Fashion Center Trial Balance November 30, 2025		
	<u>Debit</u>	<u>Credit</u>
Cash	\$ 28,700	
Accounts Receivable	33,700	
Inventory	45,000	
Supplies	5,500	
Equipment	133,000	
Accumulated Depreciation—Equipment		\$ 24,000
Notes Payable		51,000
Accounts Payable		48,500
Common Stock		90,000
Retained Earnings		8,000
Sales Revenue		757,200
Sales Returns and Allowances	4,200	
Cost of Goods Sold	495,400	
Salaries and Wages Expense	140,000	
Advertising Expense	26,400	
Utilities Expenses	14,000	
Maintenance and Repairs Expense	12,100	
Delivery Expense	16,700	
Rent Expense	24,000	
	<u>\$978,700</u>	<u>\$978,700</u>

Adjustment data:

- Supplies on hand totaled \$1,500.
- Depreciation is \$15,000 on the equipment.
- Interest of \$11,000 is accrued on notes payable at November 30.

Other data:

- Salaries expense is 70% selling and 30% administrative.
- Rent expense and utilities expenses are 80% selling and 20% administrative.
- \$30,000 of notes payable are due for payment next year.
- Maintenance and repairs expense is 100% administrative.

Instructions

- Journalize the adjusting entries.
- Prepare an adjusted trial balance.
- Prepare a multiple-step income statement (ignore taxes) and retained earnings statement for the year and a classified balance sheet as of November 30, 2025.
- Journalize the closing entries.
- Prepare a post-closing trial balance.

P2.5 (LO 3) (Adjusting Entries) The accounts listed below appeared in the December 31 trial balance of the Savard Theater.

	<u>Debit</u>	<u>Credit</u>
Equipment	\$192,000	
Accumulated Depreciation—Equipment		\$ 60,000
Notes Payable		90,000
Admissions Revenue		380,000
Advertising Expense	13,680	
Salaries and Wages Expense	57,600	
Interest Expense	1,400	

Instructions

- From the account balances listed above and the information given below, prepare the annual adjusting entries necessary on December 31. (Omit explanations.)
 - The equipment has an estimated life of 16 years and a salvage value of \$24,000 at the end of that time. (Use straight-line method.)
 - The note payable is a 90-day note given to the bank October 20 and bearing interest at 8%. (Use 360 days for denominator.)
 - In December, 2,000 coupon admission books were sold at \$30 each and recorded as Admissions Revenue. They could be used for admission any time after January 1.
 - Advertising expense paid in advance and included in Advertising Expense \$1,100.
 - Salaries and wages accrued but unpaid \$4,700.
- What amounts should be shown for each of the following on the income statement for the year?
 - Interest expense.
 - Admissions revenue.
 - Advertising expense.
 - Salaries and wages expense.

P2.6 (LO 3, 4) (Adjusting Entries and Financial Statements) The following are the trial balance and the other information related to Perez Consulting Engineers.

Perez Consulting Engineers		
Trial Balance		
December 31, 2025		
	<u>Debit</u>	<u>Credit</u>
Cash	\$ 29,500	
Accounts Receivable	49,600	
Allowance for Doubtful Accounts		\$ 750
Supplies	1,960	
Prepaid Insurance	1,100	
Equipment	25,000	
Accumulated Depreciation—Equipment		6,250
Notes Payable		7,200
Common Stock		10,000
Retained Earnings		25,010
Service Revenue		100,000
Rent Expense	9,750	
Salaries and Wages Expense	30,500	
Utilities Expenses	1,080	
Office Expense	720	
	<u>\$149,210</u>	<u>\$149,210</u>

1. Fees received in advance from clients \$6,000, which were recorded as revenue.
2. Services performed for clients that were not recorded by December 31, \$4,900.
3. Bad debt expense for the year is \$1,430.
4. Insurance expired during the year \$480.
5. Equipment is being depreciated at 10% per year.
6. Perez gave the bank a 90-day, 10% note for \$7,200 on December 1, 2025.
7. Rent of the building is \$750 per month. The rent for 2025 has been paid, as has that for January 2026, and recorded as Rent Expense.
8. Office salaries and wages earned but unpaid December 31, 2025, \$2,510.

Instructions

- a. From the trial balance and other information given, prepare annual adjusting entries as of December 31, 2025. (Omit explanations.)
- b. Prepare an income statement for 2025, a retained earnings statement, and a classified balance sheet. Perez paid a \$17,000 cash dividend during the year (recorded in Retained Earnings).

P2.7 (LO 3, 4) (Adjusting Entries and Financial Statements) Rolling Hills Golf Inc. was organized on July 1, 2025. Quarterly financial statements are prepared. The unadjusted trial balance and adjusted trial balance on September 30 are as follows.

Rolling Hills Golf Inc. Trial Balance September 30, 2025				
	Unadjusted		Adjusted	
	Dr.	Cr.	Dr.	Cr.
Cash	\$ 6,700		\$ 6,700

	<u>\$123,100</u>	<u>\$123,100</u>	<u>\$132,980</u>	<u>\$132,980</u>

Instructions

- Journalize the annual adjusting entries that were made.
- Prepare an income statement and a retained earnings statement for the year ended December 31, and a classified balance sheet at December 31.
- Identify which accounts should be closed on December 31.
- If the note has been outstanding 10 months, what is the annual interest rate on that note?
- If the company paid \$10,500 in salaries and wages in 2025, what was the balance in Salaries and Wages Payable on December 31, 2024?

P2.9 (LO 2, 3, 4) (Adjusting and Closing) Presented below is the trial balance of the Crestwood Golf Club, Inc. as of December 31. The books are closed annually on December 31.

Crestwood Golf Club, Inc. Trial Balance December 31		
	Debit	Credit
Cash	\$ 15,000	
Accounts Receivable	13,000	
Allowance for Doubtful Accounts		\$ 1,100
Prepaid Insurance	9,000	
Land	350,000	
Buildings	120,000	
Accumulated Depreciation—Buildings		38,400
Equipment	150,000	
Accumulated Depreciation—Equipment		70,000
Common Stock		400,000
Retained Earnings		82,000
Dues Revenue		200,000
Green Fees Revenue		5,900
Rent Revenue		17,600
Utilities Expenses	54,000	
Salaries and Wages Expense	80,000	
Maintenance and Repairs Expense	24,000	
	<u>\$815,000</u>	<u>\$815,000</u>

Instructions

- a. Enter the balances in ledger accounts. Allow five lines for each account.
- b. From the trial balance and the information given below, prepare annual adjusting entries and post to the ledger accounts. (Omit explanations.)
 1. The buildings have an estimated life of 30 years with no salvage value (straight-line method).
 2. The equipment is depreciated at 10% per year.
 3. Insurance expired during the year \$3,500.
 4. The rent revenue represents the amount received for 11 months for dining facilities. The December rent has not yet been received.
 5. It is estimated that 12% of the accounts receivable will be uncollectible.
 6. Salaries and wages earned but not paid by December 31, \$3,600.
 7. Dues received in advance from members \$8,900 were recorded as Dues Revenue.
- c. Prepare an adjusted trial balance.
- d. Prepare closing entries and post.

P2.10 (LO 2, 3, 4) (Adjusting and Closing) Presented below is the December 31 trial balance of New York Boutique.

New York Boutique Trial Balance December 31		
	Debit	Credit
Cash	\$ 18,500	
Accounts Receivable	32,000	
Allowance for Doubtful Accounts		\$ 700
Inventory, December 31	80,000	
Prepaid Insurance	5,100	
Equipment	84,000	
Accumulated Depreciation—Equipment		35,000
Notes Payable		28,000
Common Stock		80,600
Retained Earnings		10,000
Sales Revenue		600,000
Cost of Goods Sold	408,000	
Salaries and Wages Expense (sales)	50,000	
Advertising Expense	6,700	
Salaries and Wages Expense (administrative)	65,000	
Supplies Expense	5,000	
	<u>\$754,300</u>	<u>\$754,300</u>

Instructions

- a. Construct T-accounts and enter the balances shown.
- b. Prepare adjusting journal entries for the following and post to the T-accounts. (Omit explanations.) Open additional T-accounts as necessary. (The books are closed yearly on December 31.)
 1. Bad debt expense to be recorded is \$1,400.
 2. Equipment is depreciated based on a 7-year life (no salvage value).
 3. Insurance expired during the year \$2,550.
 4. Interest accrued on notes payable \$3,360.
 5. Sales salaries and wages earned but not paid \$2,400.
 6. Advertising paid in advance \$700. It was charged to Advertising Expense when paid.
 7. Office supplies on hand \$1,500, charged to Supplies Expense when purchased.
- c. Prepare closing entries and post to the accounts.

***P2.11 (LO 6) (Cash and Accrual Basis)** On January 1, 2025, Norma Smith and Grant Wood formed a computer sales and service company in Soapville, Arkansas, by investing \$90,000 cash. The new company, Arkansas Sales and Service, has the following transactions during January.

1. Pays \$6,000 in advance for 3 months' rent of office, showroom, and repair space.
2. Purchases 40 personal computers at a cost of \$1,500 each, 6 graphics computers at a cost of \$2,500 each, and 25 printers at a cost of \$300 each, paying cash upon delivery.

3. Sales, repair, and office employees earn \$12,600 in salaries and wages during January, of which \$3,000 was still payable at the end of January.
4. Sells 30 personal computers at \$2,550 each, 4 graphics computers for \$3,600 each, and 15 printers for \$500 each; \$75,000 is received in cash in January, and \$23,400 is sold on a deferred payment basis.
5. Other operating expenses of \$8,400 are incurred and paid for during January; \$2,000 of incurred expenses are payable at January 31.

Instructions

- a. Using the transaction data above, prepare (1) a cash-basis income statement and (2) an accrual-basis income statement for the month of January.
- b. Using the transaction data above, prepare (1) a cash-basis balance sheet and (2) an accrual-basis balance sheet as of January 31, 2025.
- c. Identify the items in the cash-basis financial statements that make cash-basis accounting inconsistent with the theory underlying the elements of financial statements.

***P2.12 (LO 3, 4, 8) (Worksheet, Balance Sheet, Adjusting and Closing Entries)** Cooke Company has a fiscal year ending on September 30. Selected data from the September 30 worksheet are presented below.

Cooke Company Worksheet For the Month Ended September 30, 2025				
	Trial Balance		Adjusted Trial Balance

Mortgage Payable		50,000		50,000
Common Stock		107,700		107,700
Retained Earnings, Sept. 1, 2025		2,000		2,000
Dividends	14,000		14,000	
Service Revenue		278,500		280,500
Salaries and Wages Expense	109,000		109,000	
Maintenance and Repairs Expense	30,500		30,500	
Advertising Expense	9,400		9,400	
Utilities Expenses	16,900		16,900	
Property Tax Expense	18,000		21,000	
Interest Expense	6,000		12,000	
Totals	491,700	491,700		
Insurance Expense			28,000	
Supplies Expense			14,400	
Interest Payable				6,000
Depreciation Expense			5,800	
Property Taxes Payable				3,000
Totals			506,500	506,500

Instructions

- a. Prepare a complete worksheet.
- b. Prepare a classified balance sheet. (Note: \$10,000 of the mortgage payable is due for payment in the next fiscal year.)
- c. Journalize the adjusting entries using the worksheet as a basis.
- d. Journalize the closing entries using the worksheet as a basis.
- e. Prepare a post-closing trial balance.

Using Your Judgment

Financial Reporting Problem: The Proctor & Gamble Company (P&G)

UYJ2.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to these financial statements and the accompanying notes to answer the following questions.

- What were P&G's total assets at June 30, 2020? At June 30, 2019?
- How much cash (and cash equivalents) did P&G have on June 30, 2020?
- What were P&G's research and development costs in 2019? In 2020?
- What were P&G's revenues in 2019? In 2020?
- Using P&G's financial statements and related notes, identify items that may result in adjusting entries for deferrals and accruals.
- What were the amounts of P&G's depreciation and amortization expense in 2019 and 2020?

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ2.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- Which company had the greater percentage increase in total assets from 2019 to 2020?
- Using the information in the income statements of these two companies, determine their 3-year average growth rates related to net sales and net income.
- Which company had more depreciation and amortization expense for 2020? Provide a rationale as to why there is a difference in these amounts between the two companies.

Financial Statement Analysis Case: Kellogg Company

UYJ2.3 **Kellogg Company** has its headquarters in Battle Creek, Michigan. The company manufactures and sells ready-to-eat breakfast cereals and convenience foods including cookies, toaster pastries, and cereal bars. Selected data from Kellogg Company's recent annual report follows (dollar amounts in millions).

	<u>Current Year</u>	<u>Prior Year</u>	<u>2 Years Ago</u>
Sales	\$14,580	\$14,792	\$14,197
Gross profit %	34.73	41.26	38.28
Operating profit	1,024	2,837	1,562
Net cash flow less capital expenditures	1,211	1,170	1,225
Net earnings	633	1,808	961

In its annual reports, Kellogg Company has indicated that it plans to achieve sustainability of its operating results with operating principles that emphasize profit-rich, sustainable sales growth, as well as cash flow and return on invested capital. Kellogg believes its steady earnings growth, strong cash flow, and continued investment during a multi-year period demonstrates the strength and flexibility of its business model.

Instructions

- Compute the percentage change in sales, operating profit, net cash flow less capital expenditures, and net earnings from year to year for the years presented.
- Evaluate Kellogg's performance. Which trend seems most favorable? Which trend seems least favorable? What are the implications of these trends for Kellogg's sustainable performance objectives? Explain.

Accounting, Analysis, and Principles

UYJ2.4 The Amato Theater is nearing the end of the year and is preparing for a meeting with its bankers to discuss the renewal of a loan. The accounts listed below appeared in the December 31, 2025, trial balance. Additional information is available as follows.

	<u>Debit</u>	<u>Credit</u>
Prepaid Advertising	\$ 6,000	
Equipment	192,000	
Accumulated Depreciation—Equipment		\$ 60,000
Notes Payable		90,000
Unearned Service Revenue		17,500
Ticket Revenue		360,000
Advertising Expense	18,680	
Salaries and Wages Expense	67,600	
Interest Expense	1,400	

1. The equipment has an estimated useful life of 16 years and a salvage value of \$40,000 at the end of that time. Amato uses the straight-line method for depreciation.
2. The note payable is a one-year note given to the bank January 31 and bearing interest at 10%. Interest is calculated on a monthly basis.
3. Late in December 2025, the theater sold 350 coupon ticket books at \$50 each. Two hundred of these ticket books have been used by year-end. The cash received was recorded as Unearned Service Revenue.
4. Advertising paid in advance was \$6,000 and was debited to Prepaid Advertising. The company has used \$2,500 of the advertising as of December 31, 2025.
5. Salaries and wages accrued but unpaid at December 31, 2025, were \$3,500.

Accounting

Prepare any adjusting journal entries necessary for the year ended December 31, 2025.

Analysis

Determine Amato's income before and after recording the adjusting entries. Use your analysis to explain why Amato's bankers should be willing to wait for Amato to complete its year-end adjustment process before making a decision on the loan renewal.

Principles

Although Amato's bankers are willing to wait for the adjustment process to be completed before they receive financial information, they would like to receive financial reports more frequently than annually or even quarterly. What trade-offs, in terms of relevance and faithful representation, are inherent in preparing financial statements for shorter accounting time periods?

Developing Your Professional Skills

Codification Research Case

Recording transactions in the accounting system requires knowledge of the important characteristics of the elements of financial statements, such as assets and liabilities. In addition, accountants must understand the inherent uncertainty in accounting measures and distinctions between related accounting concepts that are important in evaluating the effects of transactions on the financial statements.

Instructions

Access the Conceptual Framework at the FASB website and provide explanations for the following items. (Provide paragraph citations.) When you have accessed the documents, you can use the search tool in your Internet browser.

- a. The three essential characteristics of assets.
- b. The three essential characteristics of liabilities.
- c. Uncertainty and its effect on financial statements.
- d. The difference between realization and recognition.

Go to Wiley Course Resources for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

Analytics in Action Activities

Using Data Visualization to Evaluate Revenue Metrics

DA2.1 Benchmarking financial data against other companies in the same industry is critical for business leaders to understand how they stack up against the competition. Financial ratios are often meaningless without a relevant comparison.

Data visualizations help present financial data in a format that is quick and easy to evaluate. Visualizations can be based on a company's internal financial information, or they can be used to present industry data that companies can benchmark against. The following chart shows a comparison of unearned revenue to total revenue, by year, for six major airlines.

Required

For this exercise, you will use a dashboard of data visualizations to answer questions about revenue metrics and trends for companies in the airline industry.

[Go to Wiley Course Resources for complete details and instructions.](#)

DA2.2 Data visualizations can also be used to develop important insights into a company's performance or industry trends. These insights can help management make strategic decisions.

Required

For this exercise, you will use the same dashboard of visualizations from DA2.1 to answer questions about what insights you gained from your revenue analysis and how you would advise management that is considering a new airline.

[Go to Wiley Course Resources for complete details and instructions.](#)

Data Analytics and "Clean" Data

DA2.3 Clean data? Investors and creditors have unprecedented access to the financial data of public companies, but using that data for decision-making often requires that we spend some time cleaning the data to allow for the most effective analysis. For example, **Pfizer** lists "Revenues" on its consolidated statements of income, while **Johnson & Johnson** lists "Sales to Customers" on its consolidated statements of earnings. These may seem like minor naming differences, but when using analytics to pull data, precision and consistency counts.

Required

For this exercise, you will download data in from three public companies and then clean some of the data presented. You will then pull that data into Excel using the VLOOKUP function to analyze and present the data in a user-friendly format that will allow for industry trend analysis.

[Go to Wiley Course Resources for complete details and instructions.](#)

IFRS Insights

LEARNING OBJECTIVE 9

Compare the accounting information systems under GAAP and IFRS.

As indicated in this chapter, companies must have an effective accounting system. In the wake of accounting scandals at U.S. companies like **Sunbeam**, **Rite-Aid**, **Xerox**, and **WorldCom**, U.S. lawmakers demanded higher assurance on the quality of accounting reports. Since the passage of the Sarbanes-Oxley Act (SOX), companies that trade on U.S. exchanges are required to place renewed focus on their accounting systems to ensure accurate reporting.

Following are the key similarities and differences between GAAP and IFRS related to accounting information systems.

Similarities

- International companies use the same set of procedures and records to keep track of transaction data. Thus, the material in Chapter 2 dealing with the account, general rules of debit and credit, and steps in the recording process—the journal, ledger, and chart of accounts—is the same under both GAAP and IFRS.
- Transaction analysis is the same under GAAP and IFRS but, as you will see in later chapters, different standards sometimes impact how transactions are recorded.
- Both the FASB and IASB go beyond the basic definitions provided in this text for the key elements of financial statements, that is, assets, liabilities, equity, revenues, and expenses.
- A trial balance under IFRS follows the same format as shown in the text. As shown in the text, dollar signs are typically used only in the trial balance and the financial statements. The same practice is followed under IFRS, using the currency of the country in which the reporting company is headquartered.

Differences

- Rules for accounting for specific events sometimes differ across countries. For example, European companies rely less on historical cost and more on fair value than U.S. companies. Despite the differences, the double-entry accounting system is the basis of accounting systems worldwide.
- Internal controls are a system of checks and balances designed to prevent and detect fraud and errors. While most public U.S. companies have these systems in place, many non-U.S. companies have neither completely documented them nor had an independent auditor attest to their effectiveness. Both of these actions are required under SOX. These enhanced internal control standards apply only to large public companies listed on U.S. exchanges.

Additional IFRS Resources

Additional IFRS Insights with assessment are available online at Wiley Course Resources. For those who want more IFRS coverage, *Intermediate Accounting, IFRS Fourth Edition* exists as another resource.

Income Statement, Related Information, and Revenue Recognition

WHAT is the income statement?

The income statement is one of the primary financial statements. It measures a company's financial results—usually referred to as its profitability—over a period of time. The bottom line in any income statement, net income, is measured based on all revenues and gains in a period less expenses and losses incurred to generate those revenues. The higher the net income, the more positive is the assessment of company performance in that period.

WHY is information reported in the income statement important?

As you learned in Chapter 1, the objective of financial reporting calls for reporting information that helps in predicting future cash flows. Information in the income statement is directly related to that

goal because revenues and expenses capture the effects of transactions in the past, which many times can be used to predict future operating results. In other words, the income statement is useful because it provides investors and creditors with information that helps them predict the amounts, timing, and uncertainty of future cash flows.

For example, consider the adjacent chart, which shows the paths of net income (earnings) and stock returns (S&P 500 Index) over the past 30 years for companies in the S&P 500. As you can see, income moves in tandem with stock returns. We can therefore say the income number is capturing the same information about future cash flows as that captured in prices. That is, reported income helps us meet the objective of financial reporting.

Source: Eddy Eifenbein, "2018 Estimate = \$147.98," *Crossing Wall Street* (February 6, 2017).

HOW does the income statement provide useful information?

To provide useful information, companies report revenues, expenses, gains, and losses consistently over time and in a way that can be compared to other companies. Generally, companies prepare a multiple-step income statement, which highlights important relationships between revenues and expenses (e.g., sales and cost of goods sold). Within the income statement, companies also separate reporting of non-recurring gains and losses, as these items are less predictive relative to recurring revenues and expenses.

3.1 Income Statement

LEARNING OBJECTIVE 1

Identify the uses, limitations, and basic content of an income statement.

The **income statement** is the report that measures the success of company operations for a given period of time. It is also often called the statement of income or statement of earnings.¹

- The business and investment community uses the income statement to determine profitability, investment value, and creditworthiness.
- The income statement provides investors and creditors with information that helps them predict the **amounts, timing, and uncertainty of future cash flows**.

Usefulness of the Income Statement

The income statement helps users of financial statements predict future cash flows in a number of ways. For example, investors and creditors use the income statement information to:

- 1. Evaluate the past performance of the company.** Examining revenues and expenses indicates how the company performed and allows comparison of its performance to its competitors. For example, analysts use the income data provided by **Ford** to compare its performance to that of **Toyota**.
- 2. Provide a basis for predicting future performance.** Information about past performance helps to determine important trends that, if continued, provide information about future performance. For example, **General Electric (GE)** at one time reported consistent increases in revenues. Obviously, past success does not necessarily translate into future success. However, analysts can better predict future revenues, and hence earnings and cash flows, if a reasonable correlation exists between past and future performance.
- 3. Help assess the risk or uncertainty of achieving future cash flows.** Information on the various components of income—revenues, expenses, gains, and losses—highlights the relationships among them. It also helps to assess the risk of not achieving a particular level of cash flows in the future. For example, investors and creditors often separate **IBM**’s operating performance from other non-recurring sources of income because IBM primarily generates revenues and cash through its operations. Thus, results from continuing operations (operating income) usually have greater significance for predicting future performance than do results from non-recurring activities and events.

In summary, information in the income statement—revenues, expenses, gains, and losses—helps users evaluate past performance. It also provides insights into the likelihood of achieving a particular level of cash flows in the future.

Where am I headed?	
IBM	
Income for Year Ended 12/31/25

– Operating expenses	
Operating income	
± Unusual items	
\$ Net income	
	Recurring?
	Yes
	No
	?

Recurring items are more certain in the future.

¹We will use the term **income statement** except in situations where a company reports other comprehensive income (discussed later in the chapter). In that case, we will use the terms **statement of comprehensive income** or **comprehensive income statement**.

Limitations of the Income Statement

Because net income is based on estimates, a number of assumptions, as well as actual performance, income statement users need to be aware of certain limitations associated with its information. Some of these limitations include:

1. **Companies omit items from the income statement that they cannot measure reliably.** Current practice prohibits recognition of certain items from the determination of income even though the effects of these items can arguably affect the company's performance. For example, a company may not record unrealized gains and losses on certain investment securities in income when there is uncertainty that it will ever realize the changes in value. In addition, more and more companies experience increases in value due to brand recognition, reputation for excellent customer service, and outstanding product quality. A common framework for identifying and reporting these types of values is still lacking.
2. **Income numbers are affected by the accounting methods employed.** One company may depreciate its plant assets on an accelerated basis; another chooses straight-line depreciation. Assuming all other factors are equal, the first company will report lower income. In effect, we are comparing apples to oranges.
3. **Income measurement involves judgment.** For example, one company in good faith may estimate the useful life of an asset to be 20 years, while another company uses a 15-year estimate for the same type of asset. Similarly, some companies may make optimistic estimates of future warranty costs and bad debts, which result in lower expenses and higher income.

In summary, several limitations of the income statement reduce the usefulness of its information for predicting the amounts, timing, and uncertainty of future cash flows.

You left something out!

Is the income using these methods the same?

You might be too optimistic!

Content of the Income Statement

Net income results from revenue, expense, gain, and loss transactions. The following is a more in-depth discussion of these major elements of the income statement.

Elements of Financial Statements

Revenues. Inflows or other enhancements of assets of an entity or settlements of its liabilities during a period from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations.

Expenses. Outflows or other using-up of assets or incurrences of liabilities during a period from delivering or producing goods, rendering services, or carrying out other activities that constitute the entity's ongoing major or central operations.

Gains. Increases in equity (net assets) from peripheral or incidental transactions of an entity except those that result from revenues or investments by owners.

Losses. Decreases in equity (net assets) from peripheral or incidental transactions of an entity except those that result from expenses or distributions to owners.

The income statement summarizes these transactions. This method of income measurement, the **transaction approach**, focuses on the income-related activities that have occurred during the period.² The statement can further classify income by customer, product line, or

²The element definitions are found in "Elements of Financial Statements," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1985), paras. 78–89. The most common alternative to the transaction approach is the **capital maintenance approach** to income measurement. Under this approach, a company determines income for the period based on the change in equity, after adjusting for capital contributions (e.g., investments by owners) or distributions (e.g., dividends). The main drawback associated with the **capital maintenance approach** is that the components of income are not evident in its measurement. The Internal Revenue Service uses the capital maintenance approach to identify unreported income and refers to this approach as the "net worth check."

function, or by operating and nonoperating, continuing and discontinued, and regular and non-recurring categories.³

Multiple-Step Income Statement

Companies use either a multiple-step or single-step income statement. **Illustration 3.1** presents an income statement for Cabrera Company, which sells outdoor apparel, using the multiple step format. (A single-step income statement is shown later in Illustration 3.3.) The **multiple-step income statement** is so named because it shows the several steps in determining net income. For example, the multiple-step statement reports net sales, gross profit, income from operations, income before income tax, and net income. A major advantage of this statement is that it distinguishes operating from non-operating activities.

ILLUSTRATION 3.1
Multiple-Step Income Statement

Cabrera Company Income Statement For the Year Ended December 31, 2025		
Sales		
Sales revenue		\$3,053,081
Less: Sales discounts	\$24,241	
Sales returns and allowances	56,427	80,668
Net sales		2,972,413
Cost of goods sold		1,982,541
Gross profit		989,872
Operating expenses		
Selling expenses	453,028	
General and administrative expenses	350,771	803,799
Income from operations		186,073
Other revenues and gains		
Dividend revenue	98,500	
Gain on sale of equipment	72,910	171,410
		357,483
Other expenses and losses		
Interest on bonds and notes	96,060	
Loss on flood	30,000	126,060
Income before income tax		231,423
Income tax		66,934
Net income		\$ 164,489
Earnings per common share (\$164,489 ÷ 100,000)		\$ 1.64

Here is a more detailed analysis of each of the components of the multiple-step income statement.

Net Sales Cabrera's net sales of \$2,972,413 highlights the regular and hopefully recurring revenue of the company. Without revenue that is stable or increasing, it is unlikely that companies will be profitable in the long run. Revenue (often referred to as the top line) is considered by many to be as important as the bottom line (net income) because the bottom line may be affected by cutting expenses, or non-recurring revenue or expense items that may not be sustainable. As one expert noted "you won't generally grow net income much faster than revenues so keep an eye on the top line."

Gross Profit Cabrera deducts cost of goods sold from net sales to determine gross profit of \$989,872. It is important to understand what gross profit is—and what it is not. Gross profit represents the merchandising profit of Cabrera. It is not a measure of Cabrera's overall

³The term "non-recurring" encompasses transactions and other events that are derived from developments outside the normal operations of the business.

profitability because operating expenses are not yet deducted. Nevertheless, managers and other interested parties closely watch the amount and trend of gross profit. Managers compare current gross profit with past years and with gross profit rates in the industry to determine the effectiveness of Cabrera's purchasing and pricing policies.

Operating Expenses Cabrera divides operating expenses into two categories: (1) selling expense of \$453,028 and (2) general and administrative expense of \$350,771. (Some companies choose to report operating expenses in one line and identify them as selling, general, and administrative expenses.) The individual operating expenses are shown in **Illustration 3.2**.

Selling expenses		General and administrative expenses	
Sales salaries and commissions	\$202,644	Officers' salaries	\$186,000
Sales office salaries	59,200	Office salaries	61,200
Travel and entertainment	48,940	Legal and professional services	23,721
Advertising expense	38,315	Utilities expense	23,275
Delivery expense	41,209	Insurance expense	17,029
Shipping supplies and expense	24,712	Depreciation of building	18,059
Postage and stationery	16,788	Depreciation of office equipment	16,000
Telephone and Internet expense	12,215	Stationery, supplies, and postage	2,875
Depreciation of sales equipment	9,005	Miscellaneous office supplies	2,612
	<u>\$453,028</u>		<u>\$350,771</u>
		Total operating expenses	
		<u>\$803,799</u>	

ILLUSTRATION 3.2 Expense Detail

If Cabrera were a manufacturing rather than a merchandising company, certain costs may be charged to cost of goods sold rather than to operating expense. For example, the depreciation of manufacturing factory equipment may be capitalized and reported as part of inventory cost rather than as an operating expense. Often, companies will identify a specific expense, such as research and development expense or restructuring expenses, as a separate line item due to its significance.

Income from Operations Disclosing income from a company's core operations of \$186,073 highlights the difference between regular and non-recurring or incidental activities. This disclosure is important to financial statement users because it helps distinguish between the types of transactions that are likely to happen in the future and those that are not. Users want to know what Cabrera's results are related to its ongoing major or central operations—its core earnings. This disclosure helps users recognize that incidental or non-recurring activities are unlikely to continue at the same level. Furthermore, disclosure of operating earnings may assist in comparing different companies and assessing operating efficiencies.

Income Before Income Tax Non-operating activities consist of various revenues and expenses and gains and losses that are unrelated to the company's main line of operations. Let's discuss what Cabrera lists as non-operating items:

- **Dividend revenue.** As a general practice, companies list dividend and interest revenue from investments as a non-operating activity.
- **Gain on sale of equipment.** Cabrera is in the business of selling outdoor apparel, so when it records a gain from selling some equipment it no longer uses, this gain is not part of the company's recurring operations.
- **Interest on bonds and notes.** As a general practice, companies list interest expense on liabilities as non-operating items.
- **Loss on flood.** Cabrera suffered a loss from a flood, which (hopefully) is an infrequent and unusual item. Cabrera would provide more detail about this unusual event in the notes to the financial statements.

For Cabrera, Other revenues and gains and Other expenses and losses are considered non-operating because these items are unrelated to Cabrera's main line of business. The non-operating revenues and gains are added to Income from operations, and the non-operating

expenses and losses are subtracted from Income from operations, to arrive at Income before income tax of \$231,423.

Gains and losses are sometimes considered **unusual or infrequent, or both**. These are defined as follows.

- **Unusual.** High degree of abnormality and of a type clearly unrelated to, or only incidentally related to, the ordinary activities of the company, taking into account the environment in which it operates.
- **Infrequency of occurrence.** Type of transaction that is not reasonably expected to recur in the foreseeable future, taking into account the environment in which the company operates.

Common types of unusual or infrequent gains and losses or both are as follows.

- Losses on write-down (impairment) of receivables; inventories; property, plant, and equipment; goodwill or other intangible assets.
- Restructuring charges (costs incurred in rearranging operations, such as laying off workers, closing plants, and shifting production to new locations).
- Other gains and losses from sale or abandonment of property, plant, and equipment.
- Effects of a strike, including those against competitors and major suppliers.
- Gains and losses on extinguishment (redemption) of debt obligations.
- Gains or losses on sale of investment securities. [1] (See the FASB Codification References near the end of the chapter.)

When gains or losses are unusual or infrequent or both, additional disclosure is often needed in the notes to the financial statements. Users of the income statement can then understand the effect of these gains or losses on net income and future cash flows.

The distinctions between revenues and gains, and between expenses and losses, depend largely on the typical activities of the company. For example, when **McDonald's** sells a hamburger, it records the selling price as revenue. However, when McDonald's sells land, it records any excess of the selling price over the book value as a gain. This difference in treatment results because the sale of the hamburger is part of McDonald's regular operations. The sale of land is not.

Here is another example that illustrates the importance of segregating operating from non-operating items. In one situation, **IBM** began providing more detail regarding its Other gains and losses. It had previously included these items in its selling, general, and administrative expenses, with little disclosure. For example, if IBM previously sold off one of its buildings at a gain, it included this gain in the selling, general, and administrative expense line item, thus reducing that expense. This made it appear that the company had done a better job of controlling operating expenses than it actually had.

Income Tax Cabrera reports income tax expense, also referred to as income tax provision, of \$66,934. Income taxes are a significant expense for many companies. For example, when the United States dropped its income tax rate significantly in 2018, half of the combined net income growth reported by the largest 300 U.S. companies for the first quarter of that year stemmed from a decline in the tax rate. Analysts watch very closely the relationship of income tax to reported net income. In some cases, due to losses carried over from previous periods, the tax rate may be significantly lower in that year, resulting in much higher income that year. If the loss carryover is a one-time event, users need to understand that the tax rate in the future will be higher.

Net Income Income tax expense is then deducted to arrive at net income. The net income or loss is the number that many analysts focus on to assess whether the company has been successful. Many argue that nothing good happens to a company unless there are profits and lots of them. The argument is that market value is the present value of expected future profits. The higher the profits, the higher the market value, with likely dividend increases as well. But be careful about focusing solely on net income.

We cannot overemphasize the importance of reporting components of net income. Indeed, most decision-makers find the **parts of a financial statement** to be more useful

than the whole. As we indicated earlier, investors and creditors are interested in predicting the amounts, timing, and uncertainty of future income and cash flows. Having income statement elements shown in some detail and in comparison with prior years' data allows decision-makers to better assess future income and cash flows.

Earnings per Share The computation of earnings per share is usually straightforward, as follows.

$$\text{Earnings per Share (EPS)} = \frac{\text{Net Income} - \text{Preferred Dividends}}{\text{Weighted-Average Number of Common Shares Outstanding}}$$

Note that **earnings per share (EPS)** measures the number of dollars earned by each share of common stock. It does not represent the dollar amount paid to stockholders in the form of dividends.

Cabrera has 100,000 shares of common stock outstanding. This is the only stock outstanding, and Cabrera has no other equity instruments outstanding. Cabrera is required to present a basic per share amount of \$1.64 (\$164,489 ÷ 100,000 shares) on the face of the income statement. If Cabrera has 100,000 shares outstanding on January 1 and issues another 100,000 shares on July 1, the weighted-average number of shares outstanding for the calendar year would be 150,000, as follows.

	<u>Shares Outstanding</u>		<u>Fraction of Period</u>		<u>Weighted Shares</u>
January–June	100,000	×	6/12	=	50,000
July–December	200,000	×	6/12	=	100,000
					<u>150,000</u>

The basic per share amount disclosed on the income statement would then be \$1.10 (\$164,489 ÷ 150,000 shares).

FACTS Lancer Inc. reports net income of \$350,000. It declares and pays preferred dividends of \$50,000 for the year. The weighted-average number of common shares outstanding during the year is 100,000 shares.

QUESTION What is Lancer's earnings per share?

SOLUTION

Lancer computes earnings per share of \$3, as follows.

$$\frac{\text{Net Income} - \text{Preferred Dividends}}{\text{Weighted-Average Number of Common Shares Outstanding}} = \text{Earnings per Share}$$

$$\frac{\$350,000 - \$50,000}{100,000} = \$3$$

Example 3.1 Earnings per Share

Company prospectuses, proxy material, and annual reports to stockholders commonly use the “net income per share” or “earnings per share” ratio. The financial press, statistical services like **S&P Global Ratings**, and Wall Street securities analysts also highlight EPS. Because of its importance, **companies must disclose earnings per share on the face of the income statement.** [2]⁴ A word of caution related to earnings per share. Due to very low interest rates these days as a result of the Covid-19 pandemic, companies have been borrowing

⁴In this chapter, we discuss only earnings per share or net loss per share where a company has only common stock. Another measure shown on the face of the income statement (when applicable) is diluted earnings per share, which gives effect to all dilutive potential common shares that were outstanding during the reporting period. This concept is discussed in Chapter 15.

funds to buy back stock, which reduces shares outstanding and increases earnings per share. This creates the perception that earnings are increasing when in fact they are not.

Analytics in Action: Income Statement Dashboards

The income statement provides a wealth of information to users of the financial statements, whether you are an investor or creditor making capital allocation decisions, or a manager making internal business decisions. To organize and track the

vast amounts of data that goes into the income statement, users can create data visualizations, or dashboards, to give an easy visual of key metrics. A sample dashboard might look like the following.

As indicated, the elements in the dashboard highlight key income subtotals, compare actual to plan, and present a trend over several years for income.

Managers can pull data for their dashboards directly from their accounting system and update the metrics on a daily basis. External users may rely on regular public reporting of financial

information, which public companies must report in eXtensible Business Reporting Language (XBRL), which tags elements of the financial statements and allows users to digitize data points in a company's financial statements. With this data, users can easily track trends in the income statement and quickly investigate any irregularities.

Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

Single-Step Income Statement

As indicated earlier, companies use one of two forms of the income statement. The second type of income statement is referred to as the **single-step income statement**. The statement is so named because only one step, subtracting total expenses from total revenues, is required in determining net income (or net loss). In a single-step statement, all data are classified into two categories:

1. **Revenues**, which include both operating revenues and nonoperating revenues and gains (for example, interest revenue and gain on sale of equipment).

2. **Expenses**, which include cost of goods sold, operating expenses, and nonoperating expenses and losses (for example, interest expense, loss on sale of equipment, or income tax expense).

Illustration 3.3 shows a single-step statement for Cabrera Company.

Cabrera Company Income Statement For the Year Ended December 31, 2025	
Revenues	
Net sales	\$2,972,413
Dividend revenue	98,500
Gain on sale of equipment	72,910
Total revenues	3,143,823
Expenses	
Cost of goods sold	1,982,541
Selling expenses	453,028
Administrative expenses	350,771
Interest expense on bonds and notes	96,060
Loss on flood	30,000
Income tax	66,934
Total expenses	2,979,334
Net income	\$ 164,489
Earnings per common share (\$164,489 ÷ 100,000)	\$ 1.64

ILLUSTRATION 3.3 Single-Step Income Statement

Note that Cabrera's net income amount is the same whether using the single-step or multiple-step income statement. There are two primary reasons for using the single-step form.

1. A company does not realize any type of profit or income until total revenues exceed total expenses, so it makes sense to divide the statement into these two categories.
2. The form is simple and easy to read.

However, while the FASB allows companies to report their income statement using the single-step or multiple-step format, the Securities and Exchange Commission (SEC) dictates otherwise for public companies. Tasked with protecting investors and capital markets, the SEC requires their registrants to report net income using the multiple-step format, separating operating and non-operating income.

Accounting Matters

Top Line or Bottom Line?

The importance of the components of income, as well as the bottom line, is illustrated in the recent case of **Chipotle**. Its stock price had quadrupled in five years and for good reason. The company had been reporting surprisingly high income and investors were clamoring to buy. However, that pattern was broken—that is, Chipotle posted solid earnings, but investors sold. The reason? Analysts attribute the sell-off to Chipotle missing its target for **revenues**. The stock fell 21%, from \$404 to \$317, in a day.

The focus on the top line, revenue, arises because market expectations for revenues do not seem to jive with the companies' optimistic profit picture. And while companies might report

a surprise in earnings, analysts will be focusing on revenues. Companies have been able to cut costs to compensate—laying off workers, squeezing remaining staff, and using technology to run more efficiently—but there's a limit to how much you can squeeze your workers and use technology to produce more. U.S. companies are just about as lean as any time in history.

As one analyst noted (in this economic environment), "you won't be able to grow earnings much faster than revenue. . . . Analysts will have to revise down their earnings." So watch the top line, as well as the bottom line.

Put It into Practice LO 3.1

Prepare Multiple-Step and Single-Step Income Statements

FACTS The following information is related to Shark Inc.

Loss related to fire damage	\$500,000	Income taxes payable	\$ 32,000
General and administrative expense	200,000	Selling expense	25,000
Sales revenue	4,000,000	Sales discounts	6,000
Cash	40,000	Warranty liability	9,000
Interest expense	10,000	Interest revenue	11,000
Accounts payable	30,000	Accounts receivable	14,000
Sales returns and allowances	5,000	Retained earnings	45,000
Gain on sale of equipment	8,000	Cost of goods sold	2,220,000

INSTRUCTIONS

Assuming that the tax rate is 30% and the weighted-average number of common shares outstanding is 100,000, prepare the following for the year ended December 31, 2025.

- Multiple-step income statement for Shark Inc.
- Single step income statement for Shark Inc.

SOLUTION

a.

Shark Inc. Income Statement For the Year Ended December 31, 2025			
Sales			
Sales revenue			\$4,000,000
Less: Sales discounts	\$ 6,000		
Sales returns and allowances	5,000	11,000	
Net sales			3,989,000
Cost of goods sold			2,220,000
Gross profit			1,769,000
Operating expenses			
Selling expenses	25,000		
General and administrative expenses	200,000	225,000	
Income from operations			1,544,000
Other revenues and gains			
Interest revenue	11,000		
Gain on sale of equipment	8,000	19,000	
			1,563,000
Other expenses and losses			
Interest expense	10,000		
Loss on fire	500,000	510,000	
Income before income tax			1,053,000
Income tax (\$1,053,000 × .30)			315,900
Net income			\$ 737,100
Earnings per common share (\$737,100 ÷ 100,000)			\$7.37

b.

Shark Inc.
Income Statement
For the Year Ended December 31, 2025

Revenues		
Net sales	\$3,989,000	
Interest revenue	11,000	
Gain on sale of equipment	8,000	
Total revenues		\$4,008,000
Expenses		
Cost of goods sold	2,220,000	
Selling expenses	25,000	
General and administrative expenses	200,000	
Interest expense	10,000	
Loss on fire	500,000	
Income tax (\$1,053,000 × .30)	315,900	
Total expenses		3,270,900
Net income		<u>\$ 737,100</u>
Earnings per common share (\$737,100 ÷ 100,000)		<u>\$ 7.37</u>

As shown in Illustrations 3.1 and 3.3 with Cabrera Company, the bottom-line net income and earnings per share are the same using a single-step or multiple-step income statement presentation, but the multiple-step format provides users with better information to predict future profitability.

Note that the other accounts listed in the facts that were not included in the income statements (e.g., Accounts Receivable, Income Taxes Payable, and Retained Earnings) are reported as assets, liabilities, and equity on the balance sheet.

3.2 Reporting Special Income Items

LEARNING OBJECTIVE 2

Discuss the accounting for unusual income items.

What should be reported in net income and where it should be reported is controversial. For example:

- Should companies report a gain or loss on sale of an investment as part of net income or report it directly in stockholders' equity?
- Should a company report a loss on discontinued operations differently than interest expense?

What we need is consistent and comparable income reporting practices. Developing a framework for reporting income components is important to ensure useful information.

So, what to do? The accounting profession requires that companies record most items, including unusual or infrequent ones, as part of net income. In addition, companies are sometimes required to highlight items in the income statement so that users can better determine the long-run earning power of the company. Two special items are discontinued operations and other comprehensive income.

Discontinued Operations

A **discontinued operation** occurs when two things happen.

1. A company eliminates the results of operations of a component of the business. A component comprises operations and cash flows that can be clearly distinguished, both operationally and for financial reporting purposes.
2. The elimination of a component that represents a **strategic shift**, having a major effect on the company's operations and financial results. A strategic shift generally includes the disposal of (1) a major line of business, (2) a major geographical area, or (3) a major equity method investment. [3]

For example, **Starbucks** operates its namesake cafés as one component of its operations. It also packages and sells coffee, tea, and other beverages through many different retail and grocery outlets. If Starbucks were to stop selling products through grocery stores, this would be considered a strategic shift in its business. The company would then report a discontinued operation.

Example 3.2 Eliminated Product Line

FACTS Softso has the following product lines that it manufactures and sells: beauty care, health care, and baby care. Each product line represents a major line of business. Within these product lines, the company has a total of 18 brands. Each brand is considered a separate component as it comprises operations and cash flows that can be clearly distinguished, both operationally and for financial reporting purposes. Softso decides to eliminate the baby-care product line because it is suffering substantial losses.

QUESTION How should Softso report the elimination of the baby-care product line?

SOLUTION

Softso should report the elimination of the baby-care product line as a discontinued operation because the baby-care line represents a major line of business. Its disposal represents a major part of Softso's operations (a strategic shift).

An alternative scenario is examined in Example 3.3

Example 3.3 Discontinued Brand

FACTS Refer to the facts in Example 3.2 but now assume that Softso decides to remain in the baby-care business. However, it will discontinue the BoPeep brand in this product line because it is very unprofitable.

QUESTION How should Softso report the discontinuation of the BoPeep brand?

SOLUTION

Softso should not report the elimination of this brand as a discontinued operation because it does not represent a major part of Softso's operations (disposing of it is not considered a strategic shift).

As indicated, the reporting of a discontinued operation involves strategic shifts that are substantial in nature. Here are some additional examples.

1. The sale of a product line that represents 15% of a company's total revenues.
2. The sale of operations in a geographical area that represents 20% of a company's total assets.
3. The sale of a component that is an equity investment that represents 20% of a company's total assets.

In a separate category on the income statements, companies report the gain or loss from **disposal of a component of a business**. In addition, companies report the **results of operations of a component that has been or will be disposed of** separately from continuing operations. Companies show the effects of discontinued operations net of tax after continuing operations. [4]

FACTS Multiplex Products, Inc., a highly diversified company, decides to discontinue its electronics division. During the current year, the electronics division lost \$300,000 (net of tax). Multiplex sold the division at the end of the year at a loss of \$500,000 (net of tax). Multiplex determines that the electronics division discontinuation meets the strategic shift criteria because the division is a major line of business (its assets exceed 20% of Multiplex's total assets). For the current year, Multiplex reports Income from continuing operations of \$20,000,000.

QUESTION How would you advise Multiplex to report this discontinued operation in the income statement?

SOLUTION

The reporting of discontinued operations for Multiplex is as follows.

Income from continuing operations		\$20,000,000
Discontinued operations		
Loss from operation of discontinued electronics division (net of tax)	\$300,000	
Loss from disposal of electronics division (net of tax)	<u>500,000</u>	<u>(800,000)</u>
Net income		<u>\$19,200,000</u>

Example 3.4 Operating Loss and Loss on Sale of Division

Notice the use of the phrase **Income from continuing operations** in Example 3.4. That phrase is used only when gains or losses on discontinued operations occur. It highlights that all items up to that point represent the results of continuing operations. After the results of discontinued operations are included, then the company reaches the final net income amount.

A company that reports a discontinued operation must report on the face of the income statement the per share effect of income from continuing operations and net income. In addition, it must report per share amounts for discontinued items either on the face of the income statement or in the notes to the financial statements.⁵

To illustrate, consider the income statement for Poquito Industries Inc., shown in **Illustration 3.4**. Poquito had 100,000 shares outstanding for the entire year. Notice the order in which Poquito shows the data, with per share information at the bottom. The Poquito income statement is highly condensed. Poquito would need to describe items such as "Other expenses and losses" and "Discontinued operations" fully and appropriately in the statement or related notes.

⁵In practice, a company will generally report only one line on the income statement, such as "Loss on discontinued operations, net of tax," and then in the notes explain the two components of the loss that total \$800,000. *For homework purposes, report both amounts on the face of the income statement, net of tax, if both amounts are provided.*

ILLUSTRATION 3.4 Income Statement

Poquito Industries Inc. Income Statement For the Year Ended December 31, 2025			
Sales revenue			\$1,420,000
Cost of goods sold			600,000
Gross profit			<u>820,000</u>
Selling and administrative expenses			320,000
Income from operations			<u>500,000</u>
Other revenues and gains			
Interest revenue			10,000
Other expenses and losses			
Loss on disposal of part of Textile Division	\$ 5,000		
Loss on sale of investments	30,000		
Interest expense	<u>15,000</u>		50,000
Income before income tax			<u>460,000</u>
Income tax			184,000
Income from continuing operations			<u>276,000</u>
Discontinued operations			
Income from operations of Pizza Division, less	54,000		
applicable income tax of \$24,800			
Loss on disposal of Pizza Division,			
less applicable income tax of \$41,000	90,000	(36,000)	
Net income			<u><u>\$ 240,000</u></u>
Per share			
Income from continuing operations			\$2.76
Income from operations of discontinued division,			
net of tax			0.54
Loss on disposal of discontinued division, net of tax			0.90
Net income			<u><u>\$2.40</u></u>

Intraperiod Tax Allocation

As indicated in Illustration 3.4, companies report discontinued operations on the income statement net of tax. The allocation of tax to this item is called **intraperiod tax allocation**, that is, allocation within the income statement of a period. It relates the income tax expense of the fiscal period to the specific items that give rise to the amount of the income tax expense.

Intraperiod tax allocation helps financial statement users better understand the impact of income taxes on the various components of net income. For example, readers of financial statements will understand how much income tax expense relates to “Income from continuing operations” and how much to discontinued operations.

- Intraperiod tax allocation helps users to better predict the amount, timing, and uncertainty of future cash flows.
- In addition, intraperiod tax allocation discourages statement readers from using pretax measures of performance when evaluating financial results, and thereby recognizes that income tax expense is a real cost.

Companies use intraperiod tax allocation on the income statement for (1) income from continuing operations and (2) discontinued operations. The general concept is **“let the tax follow the income.”**

To compute the income tax expense attributable to “Income from continuing operations,” a company computes the income tax expense related to both the revenue and expense transactions as well as other income and expense used in determining this income subtotal. (In this computation, the company does not consider the tax consequences of items excluded from the

determination of “Income from continuing operations.”) Companies then associate a separate tax effect for discontinued operations. Here, we look in more detail at the calculation of intra-period tax allocation for a discontinued gain or discontinued loss.

Discontinued Operations (Gain)

In applying the concept of intraperiod tax allocation, assume that Beesly Enterprises has income before income tax of \$250,000. It has a gain of \$100,000 from a discontinued operation. Assuming a 30% income tax rate, Beesly presents the information on the income statement as shown in **Illustration 3.5**.

Income before income tax		\$250,000
Income tax		<u>75,000</u>
Income from continuing operations		175,000
Gain on discontinued operations	\$100,000	
Less: Applicable income tax	<u>30,000</u>	<u>70,000</u>
Net income		<u>\$245,000</u>

ILLUSTRATION 3.5 Intraperiod Tax Allocation, Discontinued Operations Gain

Beesly determines the income tax of \$75,000 ($\$250,000 \times .30$) to arrive at “Income from continuing operations.” The company shows a separate tax effect of \$30,000 related to the “Gain on discontinued operations.” When a company experiences a gain on discontinued operations, the company owes tax on the gain. Therefore, Beesly’s total income tax expense for the period is \$105,000 (\$75,000 + \$30,000). With intraperiod tax allocation, users can see that \$75,000 of total income tax is attributable to continuing operations. The other \$30,000 of income tax expense is attributable to a discontinued operation and therefore will not occur again in the next period.

Discontinued Operations (Loss)

To illustrate the reporting of a loss from discontinued operations, assume that Beesly Enterprises has income before income tax of \$250,000. It also has a loss from discontinued operations of \$100,000. Assuming a 30% tax rate, Beesly presents the income tax on the income statement as shown in **Illustration 3.6**.

Income before income tax		\$250,000
Income tax		<u>75,000</u>
Income from continuing operations		175,000
Loss from discontinued operations	\$100,000	
Less: Applicable income tax reduction	<u>30,000</u>	<u>70,000</u>
Net income		<u>\$105,000</u>

ILLUSTRATION 3.6 Intraperiod Tax Allocation, Discontinued Operations Loss

When a company experiences a loss on discontinued operations, it receives a tax benefit, or a reduction in overall income tax expense. This “tax savings” is netted with the loss from discontinued operations and has the effect of reducing the overall loss. Therefore, Beesly’s total income tax expense for the period is \$45,000 (\$75,000 – \$30,000). With intraperiod tax allocation, users can see that \$75,000 is attributable to continuing operations. The \$30,000 of tax savings is attributable to a discontinued operation and therefore will not occur again in the next period.

Beesly may also report the tax effect of a discontinued item by means of a note disclosure, as shown in **Illustration 3.7**.

ILLUSTRATION 3.7 Note
Disclosure of Intraperson Tax
Allocation

Income before income tax	\$250,000
Income tax	<u>75,000</u>
Income from continuing operations	175,000
Loss on discontinued operations, less applicable income tax reduction (Note 1)	<u>70,000</u>
Net income	<u>\$105,000</u>

Note 1: During the year, the Company suffered a loss on discontinuing operations of \$70,000, net of applicable income tax reduction of \$30,000.

Global View

GAAP and IFRS report comprehensive income similarly. *See the IFRS Insights at the end of the chapter for a discussion of the similarities and differences between IFRS and GAAP.*

Other Comprehensive Income

In recent years, the use of fair values for measuring assets and liabilities has increased. As a result, reporting of gains and losses related to changes in fair value has become controversial. Because fair values are continually changing, some argue that recognizing these gains and losses in net income is misleading. The FASB agrees and has identified a limited number of transactions that should not be recorded in the income statement. One example is unrealized gains and losses on available-for-sale debt investments.⁶ These gains and losses are excluded from net income, thereby reducing volatility in net income due to fluctuations in fair value. (We discuss these unrealized gains and losses in Chapter 16.)

So how do companies report these changes in fair value? They are reported in a measure called comprehensive income (see **Global View**).

- **Comprehensive income** includes all changes in equity during a period **except** those resulting from investments by owners and distributions to owners.
- Comprehensive income, therefore, includes everything that is included on the income statement **plus** all gains and losses that bypass net income but affect stockholders' equity.
- The gains and losses that bypass the income statement are referred to as **other comprehensive income**.

Companies must display the components of other comprehensive income in one of two ways:

1. **One statement approach.** A single continuous statement. This approach is often referred to as the statement of comprehensive income.
2. **Two statement approach.** Two separate, but consecutive, statements of net income and other comprehensive income. This approach uses the traditional term "income statement" for the first statement and "comprehensive income statement" for the second statement.

Under either approach, companies display each component of net income and each component of other comprehensive income. In addition, net income and comprehensive income are reported. Companies are not required to report earnings per share information related to comprehensive income. [5]

We illustrate these two alternatives in the next two sections. In each case, assume that Trader Bob's Organic Groceries reports the following information for 2025: sales revenue \$800,000, cost of goods sold \$600,000, operating expenses \$90,000, and an unrealized holding gain on available-for-sale debt investments of \$30,000, net of tax.

⁶We further discuss available-for-sale debt investments in Chapter 16. Additional examples of other comprehensive items are translation gains and losses on foreign currency, unrealized gains and losses on certain hedging transactions, and adjustments related to pensions. Corrections of errors and changes in accounting principles are not considered other comprehensive income items.

One Statement Approach

In this approach, the traditional net income is a subtotal, with total comprehensive income shown as a final total. The combined statement has the advantage of not requiring the creation of a new financial statement. However, burying net income as a sub-total on the statement is a disadvantage. **Illustration 3.8** shows the one statement format for Trader Bob's.

Trader Bob's Organic Groceries Statement of Comprehensive Income For the Year Ended December 31, 2025			
Sales revenue	\$800,000		
Cost of goods sold	<u>600,000</u>		
Gross profit	200,000		
Operating expenses	<u>90,000</u>		
Net income	110,000	Accumulates in →	Retained Earnings
Other comprehensive income			
Unrealized holding gain, net of tax	<u>30,000</u>	Accumulates in →	Accumulated Other Comprehensive Income
Comprehensive income*	<u>\$140,000</u>		

} Permanent accounts reported on balance sheet

*Excludes investments by owners (sale of common stock) and distribution to owners (payment of dividends)

ILLUSTRATION 3.8 One Statement Format: Comprehensive Income

Two Statement Approach

Illustration 3.9 shows the two statement format for Trader Bob's. Reporting comprehensive income in a separate statement indicates that the gains and losses identified as other comprehensive income have the same status as traditional gains and losses.

Trader Bob's Organic Groceries Income Statement For the Year Ended December 31, 2025			
Sales revenue	\$800,000		
Cost of goods sold	<u>600,000</u>		
Gross profit	200,000		
Operating expenses	<u>90,000</u>		
Net income	<u>\$110,000</u>	Accumulates in →	Retained Earnings

Comprehensive Income Statement For the Year Ended December 31, 2025			
Net income	\$110,000		
Other comprehensive income			
Unrealized holding gain, net of tax	<u>30,000</u>	Accumulates in →	Accumulated Other Comprehensive Income
Comprehensive income	<u>\$140,000</u>		

} Permanent accounts reported on balance sheet

ILLUSTRATION 3.9 Two Statement Format: Comprehensive Income

As you will see in the next section, the total amount of “Other comprehensive income” is also reported on the statement of stockholders’ equity and on the balance sheet in the stockholders’ equity section. On the balance sheet, the total amount is listed as Accumulated Other Comprehensive Income.

Put It into Practice LO 3.2

Report Comprehensive Income Using the Two Statement Approach

FACTS The following information is related to Diego Company for the year 2025.

Cost of goods sold	\$260,000	Loss on plastics division operations related to discontinued operations	\$ 60,000
Other revenues and gains	5,600	Net sales	440,000
Unrealized gain on available-for-sale securities	15,000	Other expenses and losses	9,600
Gain on disposal of plastics division related to discontinued operations	50,000	Operating expenses	130,000

INSTRUCTIONS

Prepare a multiple-step income statement and a comprehensive income statement for Diego Company (the two statement approach). The income tax rate is 30%, and the weighted-average number of common shares outstanding is 10,000.

SOLUTION

Diego Company Income Statement For the Year Ended December 31, 2025			
Sales revenue			\$440,000
Cost of goods sold			<u>260,000</u>
Gross profit			180,000
Operating expenses			<u>130,000</u>
Income from operations			50,000
Other revenues and gains	\$5,600		
Other expenses and losses	<u>9,600</u>		<u>(4,000)</u>
Income before income tax			46,000
Income tax (30%)			<u>13,800</u>
Income from continuing operations			32,200
Discontinued operations			
Loss on operations of discontinued operation, net of tax (\$18,000)	42,000		
Gain from disposal of discontinued operation, net of tax (\$15,000)	<u>35,000</u>		<u>(7,000)</u>
Net income			<u>\$25,200</u>
Per share of common stock			
Income from continuing operations			\$ 3.22
Discontinued operations			<u>0.70</u>
Net income			<u>\$ 2.52</u>
Diego Company Comprehensive Income Statement For the Year Ended December 31, 2025			
Net income			\$ 25,200
Unrealized holding gain on available-for-sale debt investment, net of tax of \$4,500			<u>10,500</u>
Comprehensive income			<u>\$ 35,700</u>

3.3 Stockholders' Equity Statements

LEARNING OBJECTIVE 3

Explain the reporting of stockholders' equity.

Retained Earnings

Let's review some of the items that impact retained earnings:

1. Net income increases retained earnings, but a net loss decreases retained earnings.
2. Both cash dividends and stock dividends decrease retained earnings.
3. Changes in accounting principles (discussed in the chapter appendix) and prior period adjustments due to errors may increase or decrease retained earnings, generally as an adjustment to the beginning balance of retained earnings. Adjustments for accounting changes and errors are made net of tax.

Companies may show retained earnings information in different ways. For example, some companies prepare a separate retained earnings statement, as **Illustration 3.10** shows.

Stricker Inc. Retained Earnings Statement For the Year Ended December 31, 2025		
Retained earnings, January 1, as reported		\$1,050,000
Correction for understatement of net income in prior period (net of tax) (inventory error)		<u>50,000</u>
Retained earnings, January 1, as adjusted		1,100,000
Add: Net income		<u>360,000</u>
		1,460,000
Less: Cash dividends	\$100,000	
Stock dividends	<u>200,000</u>	<u>300,000</u>
Retained earnings, December 31		<u>\$1,160,000</u>

ILLUSTRATION 3.10 Retained Earnings Statement

The reconciliation of the beginning to the ending balance in retained earnings provides information about why retained earnings increased or decreased during the year. The association of dividend distributions with net income for the period indicates what management is doing with earnings: It may be “plowing back” into the business part or all of the earnings, distributing all current income, or distributing current income plus the accumulated earnings of prior years.

Companies often restrict retained earnings to comply with contractual requirements, board of directors' policy, or current necessity. Generally, companies disclose in the notes to the financial statements the amounts of restricted retained earnings.

- In some cases, companies transfer the amount of retained earnings restricted to an account titled **Appropriated Retained Earnings**.
- The retained earnings section may therefore report two separate amounts—(1) retained earnings free (unrestricted) and (2) retained earnings appropriated (restricted).
- The total of these two amounts equals the total retained earnings.

Statement of Stockholders' Equity

In addition to a balance sheet, statement of cash flows, and a comprehensive income statement, companies also report a **statement of stockholders' equity** (often referred to as statement of changes in shareholders' equity). This statement reports the changes in each stockholders' equity account and in total stockholders' equity during the year.

Companies often prepare this statement **in columnar form**. In this format, they use columns for each account and for total stockholders' equity. Stockholders' equity is generally comprised of contributed capital (common and preferred stock and additional paid-in capital), retained earnings, and the accumulated balances in other comprehensive income.

Example 3.5
Statement of
Stockholders'
Equity

FACTS Offbrand Inc. has the following stockholders' equity account balances at the beginning of 2025: Common Stock \$300,000, Retained Earnings \$50,000, and Accumulated Other Comprehensive Income \$60,000. No changes in the Common Stock account occurred during the year. Net income for the year is \$110,000; other comprehensive income (due to an unrealized holding gain) during the year is \$40,000 net of tax.

QUESTION How would you report this information in a statement of stockholders' equity?

SOLUTION

Offbrand's statement of stockholders' equity is as follows.

Offbrand Inc. Statement of Stockholders' Equity For the Year Ended December 31, 2025				
	Total	Retained Earnings	Accumulated Other Comprehensive Income	Common Stock
Beginning balance	\$410,000	\$ 50,000	\$ 60,000	\$300,000
Net income	110,000	110,000		
Other comprehensive income				
Unrealized holding gain, net of tax	40,000		40,000	
Ending balance	<u>\$560,000</u>	<u>\$160,000</u>	<u>\$100,000</u>	<u>\$300,000</u>

Balance Sheet Presentation

The ending balance totals from the statement of stockholders' equity are reported on the balance sheet. The stockholders' equity section of Offbrand's balance sheet is shown in [Illustration 3.11](#). Notice how the ending balances from Offbrand's statement of stockholders' equity in Example 3.5 appear on the balance sheet in Illustration 3.11.

ILLUSTRATION 3.11
Presentation of Stockholders'
Equity in the Balance Sheet

Offbrand Inc. Balance Sheet (partial) As of December 31, 2025	
Stockholders' equity	
Common stock	\$300,000
Retained earnings	160,000
Accumulated other comprehensive income	100,000
Total stockholders' equity	<u>\$560,000</u>

By providing information on accumulated other comprehensive income, the company communicates information about all changes in net assets. With this information, users will better understand the company's performance.

FACTS Quintin Inc. has retained earnings of \$375,000 at January 1, 2025. During 2025:

- Quintin reported net income of \$1,700,000.
- Cash dividends declared and paid totaled \$85,000.
- An error was discovered: land costing \$80,000 (net of tax) was charged to maintenance and repairs expense in 2024.

INSTRUCTIONS

Prepare a retained earnings statement for the year ended December 31, 2025.

SOLUTION

Quintin Corporation Retained Earnings Statement For the Year Ended December 31, 2025	
Retained earnings, January 1, as reported	\$ 375,000
Correction for overstatement of expenses in prior period (net of tax)	<u>80,000</u>
Retained earnings, January 1, as adjusted	455,000
Add: Net income	<u>1,700,000</u>
	2,155,000
Less: Cash dividends	<u>85,000</u>
Retained earnings, December 31	<u><u>\$2,070,000</u></u>

Equity

3.4 Revenue Recognition— The Fundamentals

LEARNING OBJECTIVE 4

Explain the revenue recognition principle.

As noted earlier, as the top line in the income statement, revenue is especially important in evaluating the profitability of a company. Furthermore, revenue numbers are attracting more attention from investors. In a recent survey, financial executives noted that the revenue recognition process is increasingly more complex to manage, more prone to error, and more material to financial statements compared to any other area in financial reporting. The report went on to note that revenue recognition is a top fraud risk and that regardless of the accounting rules followed, the risk of errors and inaccuracies in revenue recognition reporting is significant.⁷

The FASB has developed comprehensive guidance on revenue recognition. [6] This guidance applies to all companies and it provides a five-step process for determining when revenue should be recognized and how it should be measured. By following these provisions, companies should report revenue and income with enhanced comparability and consistency.

⁷Joseph Radigan, "Financial Fraud Risks to Watch for Amid the Pandemic," *Journal of Accountancy* (December 23, 2020).

Revenue Recognition Principle

The objective of the **revenue recognition** standard is to recognize revenue to depict the transfer of goods or services to customers in an amount that reflects the consideration that the company receives, or expects to receive, in exchange for those goods or services. For example, if **Amazon** sells you a new fitness tracker, Amazon receives cash (the consideration) and transfers the fitness tracker (the product) to you. In other words, Amazon recognizes revenue when its performance obligation (the transfer of the fitness tracker to you) is satisfied.

When is Amazon's performance obligation satisfied? It is satisfied when you (the customer) have control of the fitness tracker. Change in control is the deciding factor in determining when a performance obligation is satisfied. Customers control the product or service when they can directly use or obtain substantially all the remaining benefits from the asset or service. Control also includes the customers' ability to prevent others from directing the use of, or receiving the benefits from, the asset or service.

In the fitness tracker transaction, deciding when the change in control occurs is not complicated. However, in other situations, control is difficult to determine. Therefore, the FASB provides following indicators of when control has passed.

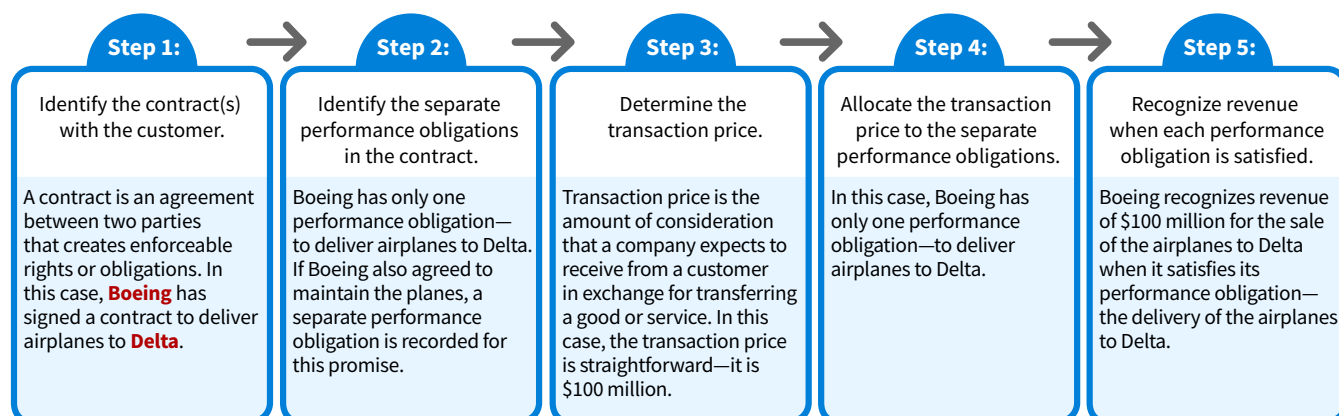

- The company has a right to payment for the asset.
- The company has transferred legal title to the asset.
- The company has transferred physical possession of the asset.
- The customer has significant risk and rewards of ownership.
- The customer accepted the asset.

This is a list of indicators, not requirements. Companies must use judgment to determine whether the factors collectively indicate that the customer has obtained control. The FASB has developed a five-step model for recording and measuring the amount of revenue to be recognized.

Overview of the Five-Step Model

Recall our discussion of revenue recognition in Chapter 1, in which **Boeing Corporation** signs a contract to sell airplanes to **Delta Air Lines** for \$100 million. **Illustration 3.12** shows here again the five steps that Boeing follows to recognize revenue.

ILLUSTRATION 3.12 Five Steps of Revenue Recognition

Revenue recognition related to the sale of the airplanes occurs at Step 5, when Boeing delivers the airplanes to Delta and satisfies its performance obligation. In essence, a change in control from Boeing to Delta occurs. Let's take a closer look at each step of the revenue recognition model.

Step 1: Identify the Contract

A contract is an agreement between two or more parties that creates enforceable rights or obligations. Contracts can be written, oral, or implied from customary business practices. For example:

- If **Best Buy** sells you a laser printer off the shelf in one of its stores, you likely have an **implied contract** with Best Buy.
- If **Snowflake, Inc.** sells you a cloud-based data platform, you will have a **written contract** for capacity utilization, which typically has a term of one to four years.

Illustration 3.13 explains the type of contract(s) that **FedEx** and **Ford Motors** have with their customers.

ILLUSTRATION 3.13 Examples of Company Contracts

Company	Description of Contracts, as Reported in the Annual Report
FedEx	For most of our contracts with customers, the customer contracts with us to provide distinct services within a single contract, primarily transportation services.
Ford Motor	Revenue is recognized when obligations under the terms of a contract with our customer are satisfied. Generally, this occurs with the transfer of control of our vehicles, parts, accessories, or services.

Revenue is recognized only when a valid contract exists. In both the Best Buy and Snowflake situations, the sellers have rights to receive consideration from you, and you have the right to receive goods or services from them. The important point is that a formal written document is not needed for a valid contract to exist. Even if you have a written contract, it is not considered valid if either party can cancel the contract at any time or if neither party has performed on the contract. Specifically, for a contract to be valid, it must meet the following criteria.

1. Approval and commitment of parties.
2. Identification of rights and payment terms and commercial substance (the contract represents a valid transaction).
3. Collection is probable.

In summary, revenue recognition begins with existence of a valid contract, whether written or implied.

FACTS FlexCo sells equipment to a customer for total consideration of \$1 million to be paid in annual payments at the end of the next three years. While FlexCo hopes to generate a lot of business with this customer in the future, there is some uncertainty about whether the customer will be able to pay as amounts become due. FlexCo delivers the equipment at the inception of the contract. At the end of the first year of the contract, the customer indicates it will not be able to make the first payment. FlexCo then determines that collection of the remaining amounts is not probable.

QUESTION Can FlexCo recognize revenue on this contract?

SOLUTION

FlexCo cannot recognize revenue for sale of this equipment. Even though other valid contract criteria are met, collection is not probable. Therefore, FlexCo cannot recognize revenue until payment is probable. Only then (or when payment is received) can FlexCo recognize revenue on this contract.

Example 3.6 Validity of Contract

Step 2: Identify Performance Obligations

To recognize revenue, companies must identify the nature of their performance obligation(s). For example, a company like **Walmart** identifies four different performance obligations common in its business.

- Selling of merchandise and services to customers.
- Membership fee revenue.
- Gift card revenue.
- Financial and other services.

For Walmart, the performance obligations are readily identified. But for other companies' revenue arrangements, that is not always the case. For example, **Verizon** notes that its contracts with customers often include promises to transfer multiple products (cell phones) and services (cellular connections) to a customer. **Illustration 3.14** shows how **Microsoft** and **Activision Blizzard** (developer of interactive entertainment content and services) describe their performance obligations.

ILLUSTRATION 3.14 Company Performance Obligation

Company	Nature of Performance Obligations, as Reported in the Annual Report (in part)
Microsoft	...our contracts often include promises to transfer multiple products and services to a customer. Determining whether products and services are considered distinct performance obligations that should be accounted for separately versus together may require significant judgment. When a cloud-based service includes both on premises software licenses and cloud services, judgment is required to determine the software licenses considered distinct and accounted for separately, or not distinct and accounted for together.
Activision Blizzard	...has multiple performance obligations. One performance obligation relates to the sale of its games including digital full length game downloads. It also recognizes revenue for software products that include a significant online functionality such its "Call of Duty" franchise.

Determining whether products or services are considered **distinct performance obligations** that should be accounted for separately versus together may require significant judgment. The FASB's guidance is that goods or services are distinct and accounted for as separate performance obligations if **both** of the following criteria exist.

1. The customer can benefit from the good or the service on its own.
2. The good or service is separately identifiable from other promises in the contract.

Let's return to the Amazon fitness tracker situation.

Example 3.7 Performance Obligation(s)

FACTS Assume that **Amazon** sells a fitness tracker for \$36 and included in this price is a warranty, which covers any repair costs to the fitness tracker for one year after purchase.

QUESTION Does Amazon have one or two performance obligations related to the sale of the fitness tracker?

SOLUTION

Amazon has only one performance obligation. This is because the warranty promise (referred to as an assurance warranty) cannot be separately identified from the sale of the fitness tracker. While both the fitness tracker and the warranty are capable of being distinct (the customer could benefit from each item on its own), the warranty promise cannot be separately identified from fitness tracker within the contract.

Let's look at a different type of warranty for the fitness tracker.

FACTS Refer to the facts in Example 3.7. Assume now that your contract with **Amazon** also includes purchase of an extended warranty on the fitness tracker, which covers repairs on the tracker for 2 more years at a price of \$6 per year.

QUESTION Should Amazon account for the extended warranty as a separate performance obligation?

SOLUTION

In this situation, for accounting purposes, Amazon has two performance obligations. One relates to the sale of the fitness tracker with the assurance warranty (as analyzed in Example 3.7) and a second performance obligation that relates to the extended warranty (known as a service-type warranty). The extended warranty is a separate performance obligation because it is separately identifiable from the other promises in the contract. For example, the extended warranty is separately identifiable and priced independently from the sale of the tracker with the one-year warranty.

Example 3.8
Separate
Performance
Obligation

Step 3: Determine Transaction Price

The transaction price is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods or services. In many cases, the transaction price is fixed; therefore, determining the transaction price is straightforward. For example, when Amazon sold the fitness tracker in Example 3.7, the price was fixed at \$36.

In other situations, several factors may have to be considered in determining the transaction price. These factors include possible variable consideration, noncash consideration, significant financing costs, or amounts payable to customers (e.g., discounts or returns and allowances). **Illustration 3.15** shows how **Nike** and **Amazon** describe measurement of transaction price.

ILLUSTRATION 3.15 Measurement of Transaction Price

Company	Transaction Price Discussion, as Reported in the Annual Report (in part)
Nike	Consideration promised in the Company's contracts with customers is variable due to anticipated reductions such as sales returns, discounts and miscellaneous claims from customers. The Company estimates the most likely amount it will be entitled to receive and records an anticipated reduction against revenues, with an offsetting increase to Accrued liabilities at the time revenues are recognized.
Amazon	Revenue is measured based on the amount of consideration that we expect to receive, reduced by estimates for return allowances, promotional discounts, and rebates. Revenue also excludes any amounts collected on behalf of third parties, including sales and indirect taxes. In arrangements where we have multiple performance obligations, the transaction price is allocated to each performance obligation using the relative stand-alone selling price. We generally determine stand-alone selling prices based on the prices charged to customers or using expected cost plus a margin.

Variable consideration describes a situation in which the price of a good or service is dependent on future events. These future events might include price increases, volume discounts, rebates, credits, performance bonuses, or royalties. In these cases, the company

estimates the amount of variable consideration it will receive from the contract to determine the amount of revenue to recognize. Companies commonly use the **expected value**, which is a **probability-weighted amount**. Alternatively, they may use the **most likely amount** in a range of possible amounts to estimate variable consideration.

Example 3.9 Variable Consideration

FACTS Peabody Inc. enters into a contract with Doolittle Co. to build a warehouse for \$100,000 with a performance bonus of \$50,000 that will be paid based on the timing of completion. The amount of the performance bonus decreases by 10% per week for every week beyond the agreed-on completion date. These requirements are similar to contracts Peabody has performed previously, and management believes that such experience is predictive for this contract. Peabody concludes that the expected value method is most predictive in this case. Peabody estimates that there is:

- 60% probability that the contract will be completed by the agreed upon completion date.
- 30% probability that it will be completed one week late.
- 10% probability that it will be completed two weeks late.

QUESTION How should Peabody determine the transaction price?

SOLUTION

The transaction price should include management's estimate of the amount of consideration to which the reporting entity will be entitled for the work performed. The probably-weighted consideration is calculated as follows.

\$150,000 (fixed fee plus full performance bonus) × .60	\$ 90,000
\$145,000 (fixed fee plus 90% of performance bonus) × .30	43,500
\$140,000 (fixed fee plus 80% of performance bonus) × .10	14,000
Total probability-weighted consideration	<u>\$147,500</u>

The total transaction price is \$147,500 based on the probability-weighted estimate. Peabody will update its estimate at each reporting date.

A word of caution—a company **only includes variable consideration if it is reasonably assured that it will be entitled to that amount**. Companies may only recognize variable consideration if (1) they have experience with similar contracts and are able to estimate the cumulative amount of revenue, and (2) based on experience, it is highly probable that there will not be a significant reversal of revenue previously recognized. If these criteria are not met, the amount of revenue recognized may be limited. Issues related to accounting for other variable consideration such as sales returns, sales discounts, and present value computations related to long-term contracts are discussed in later chapters.

Step 4: Allocate Transaction Price

A company generally allocates the transaction price to its separate performance obligations in proportion to stand-alone selling prices. The stand-alone selling price is the price at which a company would sell a promised product or service separately to a customer. If this information is not available, companies should use their best estimate of what those goods or services might sell for as a stand-alone item. **Illustration 3.16** shows how **Alphabet (Google)** and **Amazon** allocate transaction prices to multiple performance obligations.

ILLUSTRATION 3.16 Allocation Approach

Company	Allocation Approach, as Reported in the Annual Report (in part)
Alphabet (Google)	...we allocate revenues to each performance obligation based on its relative standalone selling price. We generally determine standalone selling price, based on the prices charged to customers or using expected cost plus margin.
Amazon	...the transaction price is allocated to each performance obligation using the relative standalone selling price. We generally determine standalone selling price based on the prices charged to customers, using expected cost plus a margin.

FACTS Skipper Marine sells boats and provides docking slips for its customers. Skipper sells the boats for \$30,000 each and provides mooring facilities for \$5,000 per year. To promote sales, Skipper enters into a contract to sell a boat combined with one year of mooring services to a customer for \$32,500. Skipper concludes that the goods and services should be accounted for as separate performance obligations.

QUESTION How should Skipper allocate the transaction price of \$32,500 to the performance obligations?

SOLUTION

The transaction price of \$32,500 is allocated to the boat sale and the mooring services based on their relative standalone selling prices as follows.

Boat [$\$32,500 \times (\$30,000 \div \$35,000)$]	\$27,857
Mooring services [$\$32,500 \times (\$5,000 \div \$35,000)$]	4,643

If sold on a standalone basis, the customer would have paid \$35,000 (\$30,000 + \$5,000). The bundling of the boat and mooring services provide the customer a \$2,500 discount. The allocation results in the \$2,500 discount being allocated proportionately to the two performance obligations.

Example 3.10

Allocate Transaction Price

**Step 5: Recognize Revenue**

As indicated earlier, revenue is recognized when performance obligations are satisfied by transferring control of a good or service to a customer. Control either transfers over time or at a point in time which affects when revenue is recognized. **Illustration 3.17** shows how **Nike** and **General Mills** explain revenue recognition.

ILLUSTRATION 3.17 Recognition of Revenue

Company	Recognition of Revenue, as Reported in the Annual Report (in part)
Nike	The Company satisfies the performance obligation and records revenues when transfer of control has passed to the customer, based on the terms of sale. A customer is considered to have control once they are able to direct the use and receive substantially all of the benefits of the product.
General Mills	We recognize revenue for the sale of packaged foods at the point in time when our performance obligation has been satisfied and control of the product has transferred to our customer, which generally occurs when the shipment is accepted by our customer.

Example 3.11

Recognize Revenue

FACTS Assume that on January 1, 2025, **Amazon** sold 100 fitness trackers at \$36, for total proceeds of \$3,600. In addition, it sold an extended 2-year warranty on 40 of these fitness trackers for \$12 or \$6 per year. Recall that the extended warranty takes effect after the regular one-year assurance warranty expires.

QUESTION How should Amazon report this information in 2025, 2026, and 2027?

SOLUTION

Amazon satisfies the performance obligation related to the sale of the fitness tracker at a point in time (along with any cost of goods sold). Therefore, Amazon recognizes \$3,600 as revenue in 2025. In addition, Amazon recognizes revenue over time for the revenue related to the extended warranty services. Therefore, warranty revenue of \$240 ($40 \times \6) is recognized in 2026, and the remaining warranty revenue of \$240 is recognized in 2027.

A company recognizes revenue from a performance obligation over time by measuring the progress toward completion. The method selected for measuring progress should depict the transfer of control from the company to the customer. For many service arrangements, such as with the extended warranty for the fitness tracker example, revenue is recognized on a straight-line basis because the performance obligation is being satisfied ratably over the term of the contract. In other settings, such as long-term construction contracts, companies use various methods to determine the state of progress toward completion (e.g., costs incurred, labor hours worked, tons produced, and floors completed). Use of these progress-to-completion methods requires the exercise of judgment and careful tailoring to the circumstances.

Summary

The discussion in this section provides the foundation for understanding revenue recognition. Chapters 6, 7, and 13 explore in more detail the application of revenue recognition as it relates to certain assets and liabilities. Chapter 17 provides a comprehensive discussion of the revenue recognition model and its application.

Put It into Practice LO 3.4

Recognize Revenue

FACTS Backup Company manufactures emergency power equipment. Its most popular generator is a model called the Back-Gen, which has a retail price of \$1,500 and costs Backup \$740 to manufacture. It sells the Back-Gen under a written contract, which indicates the customer's and Backup's rights and responsibilities on the sale of each Back-Gen (collection on the contract is probable). Backup sells its generators on a standalone basis directly to customers, as well as provides installation services. Installation services are not specialized and customers could hire other vendors to provide these services.

Backup sells 30 generators (with installation) to a chain of convenience stores to provide uninterrupted power to its self-service beverage coolers for a total contract price of \$50,000. Backup provides installation services at a standalone selling price of \$200 per Back-Gen; the cost to Backup to install is \$150 per Back-Gen. The generators are delivered on February 1, 2025, installation is completed on March 15, 2025, and full payment is made to Backup Company.

INSTRUCTIONS

- Evaluate each of the five steps in the revenue recognition model for this revenue arrangement. The sale of the generator and the installation are accounted for as separate performance obligations.
- What amount of income related to this arrangement will be included in Backup's 2025 income?
- Assume now that the customer promises to pay Backup 3 months after installation. Briefly discuss how collectibility of this payment affects revenue recognition and income measurement for Backup.

SOLUTION

a. With respect to the five-step model:

1. **Identify the contract.** Backup and the customer enter into a written contract, which entails (1) approval and commitment of parties and (2) identification of rights and payment terms. Collection is probable.
2. **Identify performance obligations.** There are two performance obligations: (1) delivery of the Back-Gens and (2) installation of the Back-Gens. These promises are distinct and, given installation could be done by another vendor and installation has a stand-alone selling price, you should conclude that installation is separately identifiable from sale of the generator and should be accounted for as a separate performance obligation.
3. **Determine the transaction price.** The total transaction price is \$50,000, as specified in the contract. It is the amount that Backup expects to receive in exchange for the goods and services.
4. **Allocate the transaction price.** The total price should be allocated between the equipment and installation, based on relative standalone selling prices:

Equipment $[(\$45,000 \div \$51,000) \times \$50,000]$	\$44,118
Installation $[(\$6,000 \div \$51,000) \times \$50,000]$	5,882
*30 Back-Gens $\times \$1,500$	\$45,000
30 installations $\times \$200$	<u>6,000</u>
Total standalone price	<u>\$51,000</u>

5. **Recognize revenue.** Control of the generator transfers upon delivery on February 1, 2025; Sales Revenue (and Cost of Goods Sold) is recognized on this date. The installation revenue is recognized on March 15, 2025, when installation is completed (Backup satisfies its installation performance obligation).

b. Income to be included on this arrangement is as follows.

Sales revenue	\$44,118
Cost of goods sold $(30 \times \$740)$	<u>22,200</u>
Gross profit	\$21,918
Installation revenue	\$5,882
Installation expense $(30 \times \$150)$	<u>4,500</u>
Net profit	<u>1,382</u>
Total income on this arrangement	<u>\$23,300</u>

Assuming both delivery and installation occur in the same accounting period, the income effect on the entire arrangement would appear in a single period's income.

- c. If it is not probable that a company will get paid for satisfying a performance obligation, the existence of a valid contract is questionable. If collection is not probable, Backup cannot recognize revenue until payment is probable. Only then (or when all amounts are paid) can Backup recognize revenue on this contract.

3.5 Quality of Earnings

LEARNING OBJECTIVE 5

Describe the concept of earnings quality.

So far, our discussion has highlighted the importance of information in the income statement for investment and credit decisions, including evaluation of the company and its managers.

- Companies try to meet or beat Wall Street expectations so that the market price of their stock, as well as the value of management's stock compensation packages, increase.
- Companies have incentives to “manage” income to meet earnings targets or to make earnings look less risky.
- In some cases, management has gone too far, which has led to the reporting of fraudulent financial information.

The SEC has therefore expressed concern that the motivations to meet earnings targets may override good business practice. This erodes the quality of earnings and the quality of financial reporting. As indicated by one SEC chairperson, “Managing may be giving way to manipulation, integrity may be losing to illusion.”

Earnings Management

What is earnings management?

- **Earnings management** is often defined as the planned timing of revenues, expenses, gains, and losses to smooth out the bumps in earnings.
- In most cases, companies use earnings management to increase income in the current year at the expense of income in future years. As one commentator noted, “it is like popping a cork in [opening] a bottle of wine before it is ready.”

As an example, the SEC recently charged rental-car company **Hertz** with inaccurate financial reporting for, among other things, artificially lowering its estimated bad debt expense to meet earnings targets. Hertz reworked its methodology for estimating the allowance for doubtful accounts to arrive at a 4% reserve rate. This implied a 96% recovery rate, which did not align with historical recovery rates. In addition to individual charges against the former CEO and corporate controller for their roles in perpetuating the fraud, Hertz paid \$16 million to settle the SEC charges.

Companies also use earnings management to decrease current earnings to increase income in the future. The classic case is the use of “cookie jar” reserves. Companies establish these reserves by using unrealistic assumptions to estimate liabilities for items such as loan losses, restructuring charges, and warranty returns. The companies then reduce these reserves in the future to increase reported income in the future. Such earnings management negatively affects the quality of earnings. It distorts information in a way that is less useful for predicting future earnings and cash flows.

In other situations, companies misrepresent operating performance based on classification of various income items. For example, **Conagra Foods** reported a non-recurring gain of \$186 million from the sale of **Pilgrim's Pride** stock as an operating item to help meet an earnings target. In a second case, when **eBay** sold the remainder of its investment in **Skype** to **Microsoft**, it reported a gain in Other revenues and gains of \$1.7 billion. Since eBay's total income from operations was \$2.4 billion, it was very important that the gain from the Skype sale not be buried in operating income.

Non-GAAP Reporting

Some companies go to great lengths to present their results in the most favorable light, by implementing “non-GAAP” reporting. As an example, the management discussion and analysis section of its 2019 annual report by **Groupon** presents the additional information shown in **Illustration 3.18**.

ILLUSTRATION 3.18 Non-GAAP Reporting

 Groupon		
	Year Ended December 31	
	2019	2018
Income (loss) from continuing operations	\$ (14,292)	\$ 1,988
Adjustments:		
Stock-based compensation	81,615	64,821
Depreciation and amortization	105,765	115,828
Acquisition-related expense (benefit), net	39	655
Restructuring charges	31	(136)
IBM patent litigation	—	34,600
Gain on sale of intangible assets	—	—
Other (income) expense, net	53,329	53,008
Provision (benefit) for income taxes	761	(957)
Total adjustments	<u>241,540</u>	<u>267,819</u>
Adjusted EBITDA	<u>\$227,248</u>	<u>\$269,807</u>

In Illustration 3.18, Groupon management indicates that adjusted EBITDA (earnings before interest, taxes, depreciation, and amortization) is a non-GAAP financial measure that comprises net loss excluding income taxes, interest and other nonoperating items, depreciation and amortization, stock-based compensation, and acquisition-related expense (benefit), net. Management also indicates that the definition of adjusted EBITDA may differ from similar measures used by other companies, even when similar terms are used to identify such measures:

“Adjusted EBITDA is a key measure used by our management and Board of Directors to evaluate operating performance, generate future operating plans and make strategic decisions for the allocation of capital. Accordingly, we believe that adjusted EBITDA provides useful information to investors and others in understanding and evaluating our operating results in the same manner as our management and Board of Directors.”

Why do companies report these adjusted income numbers, sometimes referred to as non-GAAP measures? One major reason is that companies believe some items on the income statement are not representative of operating results.

- Non-GAAP advocates defend non-GAAP reporting, saying it gives better insight into the fundamental operations of the business.
- However, skeptics of non-GAAP reporting often note that these adjustments generally lead to higher adjusted net income and, as a result, often report **earnings before bad stuff (EBS)**.

In Groupon’s case, the add-backs took a GAAP net loss of \$14,292 thousand and adjusted it to a non-GAAP profit of \$227,248 thousand in 2019. Groupon is not alone, as many companies (over 80% of those in the S&P 500) employ non-GAAP reporting. Importantly, a large percentage of these companies reported **higher** non-GAAP numbers compared to GAAP.

Another concern with non-GAAP reporting is that it is difficult to compare these adjusted numbers because companies have different views as to what is fundamental to their business. Such variation in reporting reduces the quality of the reporting because users are unsure of which numbers to rely on. In many ways, the non-GAAP reporting practices by companies like Groupon represent implied criticisms of certain financial reporting standards, including how the information is presented on the income statement.

These non-GAAP disclosures are not exempt from scrutiny by the SEC. **BGC Partners** recently paid a \$1.4 million civil penalty to the SEC related to its non-GAAP financial measure called “post-tax distributable earnings.” The SEC found this measure to be improperly calculated and misleading to users.

Fraudulent Financial Reporting

A fine line exists between earnings management and the preparation of fraudulent financial statements. In many cases, the rationales used for earnings management are the same that are used to commit fraud. Major rationales for earnings management and fraudulent financial statements are to influence stock price, hit earnings benchmarks, influence executive compensation, or protect individual careers.

Fraudulent financial reporting is defined as the “intentional or reckless conduct whether an act or omission, that results in materially misleading financial statements.” Fraudulent financial reporting involves gross and deliberate distortion of corporate records (such as fictitious sales invoices) or misapplication of accounting principles (failure to disclose material transactions). Here are some recent examples of fraudulent financial reporting frauds that have occurred.

- The headline in the financial press was “Fake accounting sees U.S. marijuana company go to pot.” A fine of over \$12 million was assessed against **Medbox**, which sold vending machines to dispense marijuana, for falsely touting recent revenue numbers to investors while some of its earnings came from sham transactions with a secret affiliate.
- Executives at **Lukin Coffee** (a company often referred to as the next **Starbucks**) admitted recently that it had fabricated as much as \$310 million of sales, or approximately one-third of its revenue.
- **Abeko Brake** inflated its sales and profit by channel stuffing its distributors with too much inventory, thereby recognizing revenue early.
- **Steinhoff International Holdings** (often referred to as Africa’s **IKEA**) found that executives inflated profits and asset values over an extended period.
- **Wirecard** revealed that it was unable to trace about \$2 billion in cash balances—in essence, it had \$2 billion in fake cash.
- Shares in **Globalscape Inc.** plunged by as much as 23% after the company said an internal forensic audit found improper arrangements with customers in the fourth quarter that overstated its earnings and revenue.

Fraudulent financial reporting usually occurs because of conditions in a company’s environment. Here are some examples.

- Influences in the environment related to poor internal control systems.
- Management’s poor attitude toward ethics.
- Significant liquidity or profitability problems.
- Overall business environment (e.g., the Covid pandemic).

Opportunities for fraudulent reporting also increases dramatically when the accounting principles followed in reporting transactions are nonexistent, evolving, or subject to varying interpretations. Indeed, as discussed in the prior section, increasing fraud risk related to revenue was a key motivation for the FASB in developing the conceptually sound five-step revenue recognition model.

Response by the Profession

Circus founder P.T. Barnum is alleged to have said, “Trust everyone, but cut the deck.” Congress, the SEC, and others are now attempting to cut the deck in many ways.

- Congress passed the Sarbanes-Oxley Act (SOX) to reduce unethical corporate behavior and decrease the likelihood of future corporate reporting failures. As a result of SOX, top management must now certify the accuracy of financial information. In addition, penalties for fraudulent financial reporting are much more severe.
- The SEC issued Regulation G, which requires companies to reconcile non-GAAP financial measures to GAAP. This regulation provides investors with a roadmap to analyze adjustments that companies make to their GAAP number to arrive at a non-GAAP result. Regulation G helps investors compare one company’s non-GAAP measures with results reported by another company.

The continuing evolution of Big Data and data analytics will also play a part in curbing fraudulent financial reporting. The SEC is using a risk-based analytic approach to identify potential violations. For example, the SEC uses data analytics to uncover earnings management practices by evaluating their impact on earnings per share data.

As indicated in Chapter 1, the standards of conduct by which actions are judged as right or wrong, honest or dishonest, or fair or unfair, are ethics. Effective financial reporting depends on sound ethical behavior. The bond and trust between shareholders and the company must remain strong. Investors or others losing faith in the numbers reported in the financial statements will damage U.S. capital markets.

Accounting Matters

Good Accounting Does Matter

“**General Motors** surged over 5% before the market opened after reporting third-quarter profit that leapfrogged Wall Street’s expectations.” “**Zynga** dropped over 6% off hours. The game maker’s third-quarter revenue and forecast was boosted by two acquisitions, but it still reported a loss.” It is no surprise that the market reacts when a company meets, or misses, forecasted earnings. Studies have shown that companies are far more likely to **just meet or beat** earnings per share forecasts, and are rewarded for doing so with positive stock returns.

The precision with which companies can meet or exceed earnings targets certainly calls into question the tactics used to achieve that goal. With share price on the line, managers may engage in earnings management to avoid reporting earnings lower than analyst forecasts. Is it unethical to change methodologies for calculating allowance for doubtful accounts? Not if the change is based on sound evidence. If, however, the change is made simply to achieve a pre-established earnings target, the quality of financial reporting suffers.

APPENDIX 3A

Accounting Changes and Errors

LEARNING OBJECTIVE * 6

Explain the reporting of accounting changes, estimates, and errors.

Changes in accounting principle, change in estimates, and corrections of errors require unique reporting provisions. In Chapter 21, we examine these topics in greater detail, so consider this appendix an introduction.

Changes in Accounting Principles

Changes in accounting occur frequently in practice because important events or conditions may be in dispute or uncertain at the statement date. One type of accounting change results when a company adopts a different accounting principle (see **Underlying Concepts**).

Changes in accounting principle include a change in the method of inventory pricing from FIFO to average-cost, or a change in accounting for construction contracts from the percentage-of-completion to the completed-contract method. [7]

- A company recognizes a change in accounting principle by making a **retrospective adjustment** to the financial statements.
- Such an adjustment recasts the prior years’ statements on a basis consistent with the newly adopted principle.
- The company records the cumulative effect of the change for prior periods as an adjustment to beginning retained earnings of the earliest year presented.

Underlying Concepts

Companies can change principles, but they must demonstrate that the newly adopted principle is preferable to the old one. Such changes result in lost consistency from period to period. Changes in accounting principles also occur when the FASB introduces new accounting standards, such as the changes in revenue recognition and accounting for leases.

Example 3.12

Change in Inventory Method

FACTS Gaubert Inc. decided in March 2025 to change from FIFO to weighted-average inventory pricing. Gaubert’s income before income tax, using the new weighted-average method in 2025, is \$30,000. Pretax income data for 2023 and 2024 is as follows.

Year	FIFO	Weighted-Average Method	Excess of FIFO over Weighted-Average Method
2023	\$40,000	\$35,000	\$5,000
2024	30,000	27,000	3,000
Total			<u>\$8,000</u>

QUESTION Assuming a tax rate of 30%, what net income should be reported by Gaubert in 2023, 2024, and 2025?

SOLUTION

Gaubert presents its comparative income statements for 2023, 2024, and 2025 as follows.			
	<u>2025</u>	<u>2024</u>	<u>2023</u>
Income before income tax	\$30,000	\$27,000	\$35,000
Income tax (30%)	<u>9,000</u>	<u>8,100</u>	<u>10,500</u>
Net income	<u>\$21,000</u>	<u>\$18,900</u>	<u>\$24,500</u>

Thus, under the retrospective approach as shown in Example 3.12, the company recasts the prior years’ income numbers under the newly adopted method. This approach therefore preserves comparability across years.

Changes in Accounting Estimates

Changes in accounting estimates are inherent in the accounting process. For example, companies estimate useful lives and salvage values of depreciable assets, uncollectible receivables, inventory obsolescence, and the number of periods expected to benefit from a particular expenditure.

- Frequently, due to time, circumstances, or new information, even estimates originally made in good faith must be changed.
- A company accounts for such changes in estimates in the current period of change if they affect only that period, or in the current period of change and future periods if the change affects both.

Example 3.13

Change in Estimate for Bad Debts

FACTS DuPage Materials Corp. consistently estimated its bad debt expense at 1% of accounts receivable. In 2025, however, DuPage determines that it must revise upward the estimate of bad debts for accounts receivable outstanding to 2%, or double the prior years’ percentage. The 2% rate is necessary to reduce accounts receivable to net realizable value. Using 2% results in a bad debt expense of \$240,000, or double the amount using the 1% estimate for prior years.

QUESTION What entry would you advise DuPage to make to record bad debt expense in 2025?

SOLUTION

DuPage records the bad debt expense and related allowance at December 31, 2025 (assuming a zero balance in the allowance), as follows.		
Bad Debt Expense	240,000	
Allowance for Doubtful Accounts		240,000
DuPage includes the entire change in estimate in 2025 income because the change does not affect future periods.		

Companies do not handle changes in estimate retrospectively. That is, such changes are not carried back to adjust prior years. **Changes in estimate are not considered errors.**

Corrections of Errors

Errors occur as a result of mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time financial statements were prepared. In recent years, many companies have corrected for errors in their financial statements. The errors involved such items as improper reporting of revenue, accounting for stock compensation, allowances for receivables, inventories, and other provisions. Here are two examples of errors in financial statements.

- **Mattel Inc.** understated its net losses by \$109 million in a recent quarter because of an error calculating its tax valuation allowance, then understated the next quarter results by a smaller amount.
- **Metlife** disclosed that several retired workers were without their retirement benefits because of a recording mistake, which resulted in a significant restatement of reported income.

Companies correct errors by making proper entries in the accounts and reporting the corrections in the financial statements. Corrections of errors are treated as **prior period adjustments**.

- Companies record a correction of an error in the year in which it is discovered.
- They report the error in the financial statements as an adjustment to the beginning balance of retained earnings.
- If a company prepares comparative financial statements, it should restate the prior statements for the effects of the error.

FACTS In 2026, Hillsboro Co. determined that it incorrectly overstated its accounts receivable and sales revenue by \$100,000 in 2025.

QUESTION What entry should Hillsboro make to correct this error (ignore taxes)?

SOLUTION

In 2026, Hillsboro makes the following entry to correct for this error.

Retained Earnings	100,000	
Accounts Receivable		100,000

Example 3.14 Error Correction

In Example 3.14, beginning retained earnings is debited in 2026 because sales revenue, and therefore net income, was overstated in 2025 (hence, Retained Earnings was overstated). Hillsboro would not want to debit the revenue account in 2026 as that would impact 2026 revenues when in fact the error occurred in 2025. Accounts Receivable is credited to reduce this overstated balance to the correct amount. It is reasonable to credit Accounts Receivable in 2026 for the 2025 error as Accounts Receivable is a permanent account whose balance carries over from period to period.

The impact of changes in accounting principle and error corrections are debited or credited directly to retained earnings for the amounts related to prior periods. **Illustration 3A.1** summarizes the basic concepts related to these items.

ILLUSTRATION 3A.1 Summary of Accounting Changes and Errors

Type of Situation	Criteria	Examples	Placement on Income Statement
Changes in accounting principle	Change from one generally accepted accounting principle to another.	Change in the basis of inventory pricing from FIFO to average-cost.	Recast prior years' income statement on the same basis as the newly adopted principle. (Shown net of tax.)
Changes in estimates	Normal, recurring corrections and adjustments.	Changes in the realizability of receivables and inventories; changes in estimated lives of equipment, intangible assets; changes in estimated liability for warranty costs, income taxes, and salary payments.	Show change only in the affected accounts in current and future periods. (Not shown net of tax.)
Corrections of errors	Mistake, misuse of facts.	Error in reporting income and expenses.	Treat as prior period adjustment; restate prior years' income statements to correct for error. (Shown net of tax.)

Put It into Practice LO 6

Report Accounting Changes and Errors

FACTS You are working in the external reporting department for Palmer Company. You have been assigned the task of evaluating the classification of various items to be reported in this year's financial statements. You are working through the following list.

1. The company changed its computation for bad debt expense from 2% to 3% of receivables due to the economic effects of Covid-19 on its customers.
2. Palmer's West Coast division forgot to record the adjusting journal entry for depreciation expense on its manufacturing facility 2 years ago. The division discovered this error in the current year.
3. During the current year, Palmer extended the estimated useful life of certain equipment from 7 to 10 years. As a result, depreciation for the current year was materially lowered.
4. The company changed from the average-cost method to the FIFO method for inventory costing purposes.

INSTRUCTIONS

Indicate the nature of each transaction and the recommended reporting in the financial statements. Provide a brief rationale for your position.

SOLUTION

Nature of Item	Reporting / Rationale
1. Change in estimate	Considered part of normal business activity. Treat effects in the current period using new estimate in current income. No separate disclosure unless material.
2. Error	Debit Retained Earnings and credit Accumulated Depreciation to correct for that year's omitted depreciation. The prior-year income statements should be restated if the amount of the error is material.
3. Change in estimate	Treat effects in the current period. Change depreciation expense in body of income statement, based on new useful life. Use new estimate to calculate current- and future-period net income. Material item, but change in estimated useful life is considered part of normal business activity.
4. Change in accounting principle	A change in inventory methods is a change in accounting principle. Prior periods are recast as if new method was used (retrospective treatment).

Review and Practice

Key Terms Review

Appropriated Retained Earnings 3-19	earnings per share (EPS) 3-7	single-step income statement 3-8
capital maintenance approach 3-3(n)	income statement 3-2	statement of comprehensive income
*changes in accounting estimates 3-34	intraperiod tax allocation 3-14	(comprehensive income statement) 3-2(n)
*changes in accounting principle 3-33	multiple-step income statement 3-4	statement of stockholders' equity 3-20
comprehensive income 3-16	other comprehensive income 3-16	transaction approach 3-3
discontinued operation 3-12	*prior period adjustments 3-35	
earnings management 3-30	revenue recognition 3-22	

Learning Objectives Review

1 Identify the uses, limitations, and basic content of an income statement.

The **income statement is useful** because it provides investors and creditors with information that helps them predict the amounts, timing, and uncertainty of future cash flows. Also, the income statement helps users determine the risk (level of uncertainty) of not achieving particular cash flows. The **limitations of an income statement** are as follows. (1) The statement does not include many items that contribute to general growth and well-being of a company. (2) Income numbers are often affected by the accounting methods used. (3) Income measures are subject to estimates.

The **major elements of the income statement** are as follows.

1. **Revenues.** Inflows or other enhancements of assets of an entity or settlements of its liabilities during a period from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations.
2. **Expenses.** Outflows or other using-up of assets or incurrences of liabilities during a period from delivering or producing goods, rendering services, or carrying out other activities that constitute the entity's ongoing major or central operations.
3. **Gains.** Increases in equity (net assets) from peripheral or incidental transactions of an entity except those that result from revenues or investments by owners.
4. **Losses.** Decreases in equity (net assets) from peripheral or incidental transactions of an entity except those that result from expenses or distributions to owners.

A **multiple-step income statement** shows two further classifications: (1) a separation of operating results from those obtained through the nonoperating activities of the company, and (2) a classification of expenses by functions, such as merchandising or manufacturing, selling, and administration.

In a **single-step income statement**, just two groupings exist: revenues and expenses. Expenses are deducted from revenues to arrive at net income or loss—a single subtraction. Frequently, companies report income tax separately as the last item before net income.

2 Discuss the accounting for unusual income items.

Companies generally include unusual or infrequent gains or losses or both or non-recurring items in the income statement as follows. (1) Other items of a material amount that are of an unusual or infrequent nature or both are separately disclosed as a component of continuing operations. (2) Discontinued operations are classified as a separate item, after income from continuing operations. (3) Companies report the components of **other comprehensive income** in one of two ways: (a) a single statement of comprehensive income (one statement format) or (b) in a second statement (two statement format).

Companies must disclose **earnings per share** on the face of the income statement. If the company has a discontinued item, it must also report income from continuing operations, discontinued operations, and net income on a per share basis.

3 Explain the reporting of stockholders' equity.

The **retained earnings statement** should disclose net income (loss), dividends, adjustments due to changes in accounting principles, error corrections, and restrictions of retained earnings.

Companies also present a **statement of stockholders' equity**. This statement reports the change in each stockholders' equity account (including Accumulated Other Comprehensive Income) and in total stockholders' equity for the period.

4 Explain the revenue recognition principle.

As the top line in the income statement, revenue is especially important in evaluating the profitability of a company. Most revenue transactions pose few problems for revenue recognition. Increasing complexity of business and revenue arrangements have resulted in revenue recognition practices being identified as the most prevalent reasons for accounting restatements. The FASB has developed comprehensive guidance on revenue recognition, which specifies the following five-step process for

determining when revenue should be recognized and how it should be measured: (1) identify the contract with customers, (2) identify the separate performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the separate performance obligations, and (5) recognize revenue when each performance obligation is satisfied. By following these provisions, companies should report revenue and income with enhanced comparability and consistency.

5 Describe the concept of earnings quality.

Earnings management is usually defined as the planned timing of revenues, expenses, gains, and losses to smooth out the bumps in earnings. Companies commonly use earnings management to increase income in the current year at the expense of income in future years. Such earnings management, as well as misclassification of revenue, expenses, gains and losses, including non-GAAP reporting, can reduce the usefulness of reported income to users of financial statements. Accounting regulators and the accounting profession have increased attention on these issues through regulation

of non-GAAP reporting and increased penalties on fraudulent financial reporting.

*6 Explain the reporting of accounting changes, estimates, and errors.

Changes in accounting principles and corrections of errors are adjusted through retained earnings. Changes in estimates are a normal part of the accounting process. The effects of these changes are handled prospectively, with the effects recorded in income in the period of change and in future periods without adjustment to retained earnings.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

- What kinds of questions about future cash flows do investors and creditors attempt to answer with information in the income statement?
- How can information based on past transactions be used to predict future cash flows?
- Identify at least two situations in which important changes in value are not reported in the income statement.
- Identify at least two situations in which application of different accounting methods or accounting estimates results in difficulties in comparing companies.
- Explain the transaction approach to measuring income. Why is the transaction approach to income measurement preferable to other ways of measuring income?
- Why should caution be exercised in the use of the net income figure derived in an income statement? What are the objectives of generally accepted accounting principles in their application to the income statement?
- What is the major distinction (a) between revenues and gains and (b) between expenses and losses?
- What are the advantages and disadvantages of the single-step income statement?
- What is the basis for distinguishing between operating and non-operating items?
- Discuss the appropriate treatment in the financial statements of each of the following.
 - Gain on sale of investment securities.
 - A profit-sharing bonus to employees computed as a percentage of net income.
 - Additional depreciation on factory machinery because of an error in computing depreciation for the previous year.
 - Rent received from subletting a portion of the office space.
 - A patent infringement suit, brought 2 years ago against the company by another company, was settled this year by a cash payment of \$725,000.
 - A reduction in the Allowance for Doubtful Accounts balance because the account appears to be considerably in excess of the probable loss from uncollectible receivables.
- Indicate where the following items would ordinarily appear on the financial statements of Boleyn, Inc. for the year 2025.
 - The service life of certain equipment was changed from 8 to 5 years. If a 5-year life had been used previously, additional depreciation of \$425,000 would have been charged.
 - In 2025, a flood destroyed a warehouse that had a book value of \$1,600,000. Floods are rare in this locality.
 - In 2025, the company wrote off \$1,000,000 of inventory that was considered obsolete.
 - In 2022, a supply warehouse with an expected useful life of 7 years was erroneously expensed.
 - Boleyn, Inc. changed from weighted-average to FIFO inventory pricing.

12. Indicate the section of a multiple-step income statement in which each of the following is shown.

- Loss on inventory write-down.
- Loss from strike.
- Bad debt expense.
- Loss on disposal of a discontinued operation.
- Gain on sale of machinery.
- Interest revenue.
- Depreciation expense.
- Material write-offs of notes receivable.

13. Perlman Land Development, Inc. purchased land for \$70,000 and spent \$30,000 developing it. It then sold the land for \$160,000. Sheehan Manufacturing purchased land for a future plant site for \$100,000. Due to a change in plans, Sheehan later sold the land for \$160,000. Should these two companies report the land sales, both at gains of \$60,000, in a similar manner?

14. You run into Greg Norman at a party and begin discussing financial statements. Greg says, “I prefer the single-step income statement because the multiple-step format generally overstates income.” How should you respond to Greg?

15. Santo Corporation has eight expense accounts in its general ledger which could be classified as selling expenses. Should Santo report these eight expenses separately in its income statement or simply report one total amount for selling expenses?

16. Cooper Investments reported an unusual gain from the sale of certain assets in its 2025 income statement. How does intraperiod tax allocation affect the reporting of this unusual gain?

17. Discuss the appropriate treatment in the income statement for the following items:

- Loss on discontinued operations.
- Earnings per share.
- Gain on sale of equipment.

18. What effect does intraperiod tax allocation have on reported net income?

19. Neumann Company computed earnings per share as follows.

Net Income
Common Shares Outstanding at Year-End

Neumann has a simple capital structure. What possible errors might the company have made in the computation? Explain.

20. Qualls Corporation reported 2025 earnings per share of \$7.21. In 2026, Qualls reported earnings per share as follows.

On income from continuing operations	\$6.40
On discontinued operations	1.88
On net income	<u>\$8.28</u>

Is the increase in earnings per share from \$7.21 to \$8.28 a favorable trend?

21. What is meant by “tax allocation within a period”? What is the justification for such practice?

22. When does tax allocation within a period become necessary? How should this allocation be handled?

23. During 2025, Liselotte Company reported income of \$1,500,000 before income taxes and realized a gain of \$450,000 on the disposal of assets related to a discontinued operation. The criteria for classification as a discontinued operation is appropriate for this sale. The income is subject to income taxation at the rate of 34%. The gain on the sale of the plant is taxed at 30%. Indicate an appropriate presentation of these items in the income statement.

24. On January 30, 2024, a suit was filed against Frazier Corporation under the Environmental Protection Act. On August 6, 2025, Frazier Corporation agreed to settle the action and pay \$920,000 in damages to certain current and former employees. How should this settlement be reported in the 2025 financial statements? Discuss.

25. Linus Paper Company decided to close two small pulp mills in Conway, New Hampshire, and Corvallis, Oregon. These two closings do not represent a major shift in strategy for the company. Would these closings be reported in a separate section entitled “Discontinued operations after income from continuing operations”? Discuss.

26. What major types of items are reported in the retained earnings statement?

27. Generally accepted accounting principles usually require the use of accrual accounting to “fairly present” income. If the cash receipts and disbursements method of accounting will “clearly reflect” taxable income, why does this method not usually also “fairly present” income?

28. State some of the more serious problems encountered in seeking to achieve the ideal measurement of periodic net income. Explain what accountants do as a practical alternative.

29. What is meant by the terms **elements** and **items** as they relate to the income statement? Why might **items** have to be disclosed in the income statement?

30. What are the two ways that other comprehensive income may be displayed (reported)?

31. How should the disposal of a component of a business be disclosed in the income statement?

32. Identify the five steps in the revenue recognition process.

33. Explain the importance of a contract in the revenue recognition process.

34. Describe the critical factor in evaluating whether a performance obligation is satisfied.

35. When must multiple performance obligations in a revenue arrangement be accounted for separately?

36. What is the transaction price? What additional factors related to the transaction price must be considered in determining the transaction price?

37. Describe the revenue recognition principle.

38. What is earnings management?

39. How can earnings management affect the quality of earnings?

40. A *Wall Street Journal* article noted that **Apple** reported higher income than its competitors by using a more aggressive policy for recognizing revenue on future upgrades to its products. Some contend that Apple’s quality of earnings is low. What does the term “quality of earnings” mean?

*41. How should correction of errors be reported in the financial statements?

Brief Exercises

BE3.1 (LO 1) Starr Co. had sales revenue of \$540,000 in 2025. Other items recorded during the year were as follows.

Cost of goods sold	\$330,000
Salaries and wages expense	120,000
Income tax expense	25,000
Increase in value of company reputation	15,000
Other operating expenses	10,000
Unrealized gain on value of patents	20,000

Prepare a single-step income statement for Starr for 2025. Starr has 100,000 shares of stock outstanding.

BE3.2 (LO 1) Brisky Corporation had net sales of \$2,400,000 and interest revenue of \$31,000 during 2025. Expenses for 2025 were cost of goods sold \$1,450,000, administrative expenses \$212,000, selling expenses \$280,000, and interest expense \$45,000. Brisky's tax rate is 30%. The corporation had 100,000 shares of common stock authorized and 70,000 shares issued and outstanding during 2025. Prepare a single-step income statement for the year ended December 31, 2025.

BE3.3 (LO 1) Using the information provided in BE3.2, prepare a condensed multiple-step income statement for Brisky Corporation.

BE3.4 (LO 1, 2) Finley Corporation had income from continuing operations of \$10,600,000 in 2025. During 2025, it disposed of its restaurant division at an after-tax loss of \$189,000. Prior to disposal, the division operated at a loss of \$315,000 (net of tax) in 2025 (assume that the disposal of the restaurant division meets the criteria for recognition as a discontinued operation). Finley had 10,000,000 shares of common stock outstanding during 2025. Prepare a partial income statement for Finley beginning with income from continuing operations.

BE3.5 (LO 1) Stacy Corporation had income from operations of \$7,200,000. In addition, it suffered an unusual and infrequent pretax loss of \$770,000 from a volcano eruption, interest revenue of \$17,000, and a write-down (impairment) on buildings of \$53,000. The corporation's tax rate is 30%. Prepare a partial income statement for Stacy beginning with Income from operations. The corporation had 5,000,000 shares of common stock outstanding during 2025.

BE3.6 (LO 1) In 2025, Hollis Corporation reported net income of \$1,000,000. It declared and paid preferred stock dividends of \$250,000. During 2025, Hollis had a weighted average of 190,000 common shares outstanding. Compute Hollis's 2025 earnings per share.

BE3.7 (LO 3) Portman Corporation has retained earnings of \$675,000 at January 1, 2025. Net income during 2025 was \$1,400,000, and cash dividends declared and paid during 2025 totaled \$75,000. Prepare a retained earnings statement for the year ended December 31, 2025.

BE3.8 (LO 2) On January 1, 2025, Richards Inc. had cash and common stock of \$60,000. At that date, the company had no other asset, liability, or stockholders' equity balances. On January 2, 2025, it purchased for cash \$20,000 of debt securities that it classified as available-for-sale. It received interest of \$3,000 during the year on these securities. In addition, it has an unrealized holding gain on these securities of \$4,000 net of tax. Determine the following amounts for 2025: (a) net income, (b) comprehensive income, (c) other comprehensive income, and (d) accumulated other comprehensive income (end of 2025).

BE3.9 (LO 4) Leno Computers manufactures tablet computers for sale to retailers such as Fallon Electronics. Recently, Leno sold and delivered 200 tablet computers to Fallon for \$20,000 on January 5, 2025. Fallon has agreed to pay for the 200 tablet computers within 30 days. Fallon has a good credit rating and should have no difficulty in making payment to Leno. (a) Explain whether a valid contract exists between Leno Computers and Fallon Electronics. (b) Assuming that Leno Computers has not yet delivered the tablet computers to Fallon Electronics, what might cause a valid contract not to exist between Leno and Fallon?

BE3.10 (LO 4) Hillside Company enters into a contract with Sanchez Inc. to provide a software license and 3 years of customer support. The customer-support services require specialized knowledge that only Hillside Company's employees can perform. How many performance obligations are in the contract?

BE3.11 (LO 4) Destin Company signs a contract to manufacture a new 3D printer for \$80,000. The contract includes installation which costs \$4,000 and a maintenance agreement over the life of the printer at a cost of \$10,000. The printer cannot be operated without the installation. Destin Company as well as other companies could provide the installation and maintenance agreement. What are Destin Company's performance obligations in this contract?

BE3.12 (LO 4) Ismail Construction enters into a contract to design and build a hospital. Ismail is responsible for the overall management of the project and identifies various goods and services to be provided,

including engineering, site clearance, foundation, procurement, construction of the structure, piping and wiring, installation of equipment, and finishing. Does Ismail have a single performance obligation to the customer in this revenue arrangement? Explain.

BE3.13 (LO 4) Nair Corp. enters into a contract with a customer to build an apartment building for \$1,000,000. The customer hopes to rent apartments at the beginning of the school year and provides a performance bonus of \$150,000 to be paid if the building is ready for rental beginning August 1, 2026. The bonus is reduced by \$50,000 each week that completion is delayed. Nair commonly includes these completion bonuses in its contracts and, based on prior experience, estimates the following completion outcomes.

August 1, 2026	70%
August 8, 2026	20
August 15, 2026	5
After August 15, 2026	5

Determine the transaction price for this contract.

BE3.14 (LO 4) On May 1, 2025, Mount Company enters into a contract to transfer a product to Eric Company on September 30, 2025. It is agreed that Eric will pay the full price of \$25,000 in advance on June 15, 2025. Eric pays on June 15, 2025, and Mount delivers the product on September 30, 2025. How much revenue does Mount recognize (a) June 15, 2025 and (b) September 30, 2025.

***BE3.15 (LO 6)** During 2025, Williamson Company changed from FIFO to weighted-average inventory pricing. Pretax income in 2024 and 2023 (Williamson's first year of operations) under FIFO was \$160,000 and \$180,000, respectively. Pretax income using weighted-average pricing in the prior years would have been \$145,000 in 2024 and \$170,000 in 2023. In 2025, Williamson reported pretax income (using weighted-average pricing) of \$180,000. Show comparative income statements for Williamson, beginning with "Income before income tax," as presented on the 2025 income statement. (The tax rate in all years is 30%.)

***BE3.16 (LO 6)** Vandross Company has recorded bad debt expense in the past at a rate of 1½% of accounts receivable, based on an aging analysis. In 2025, Vandross decides to increase its estimate to 2%. If the new rate had been used in prior years, cumulative bad debt expense would have been \$380,000 instead of \$285,000. In 2025, bad debt expense will be \$120,000 instead of \$90,000. If Vandross's tax rate is 30%, what amount should it report as the cumulative effect of changing the estimated bad debt rate?

***BE3.17 (LO 6)** Using the information from BE3.7, prepare a retained earnings statement for the year ended December 31, 2025. Assume an error was discovered: land costing \$80,000 (net of tax) was charged to maintenance and repairs expense in 2025.

Exercises

E3.1 (LO 1) (Computation of Net Income) Presented below are changes in all the account balances of Fritz Mayhew Furniture Co. during the current year, except for retained earnings.

	<u>Increase (Decrease)</u>		<u>Increase (Decrease)</u>
Cash	\$ 79,000	Accounts Payable	\$ (51,000)
Accounts Receivable (net)	45,000	Bonds Payable	82,000
Inventory	127,000	Common Stock	125,000
Investments	(47,000)	Paid-In Capital in Excess of Par—Common Stock	13,000

Instructions

Compute the net income for the current year, assuming that there were no entries in the Retained Earnings account except for net income and a dividend declaration of \$19,000 which was paid in the current year.

E3.2 (LO 1, 2) (Compute Income Measures) Presented below is information related to Viel Company at December 31, 2025, the end of its first year of operations.

Sales revenue	\$310,000
Cost of goods sold	140,000
Selling and administrative expenses	50,000
Gain on sale of plant assets	30,000
Unrealized gain on available-for-sale debt investments	10,000
Interest expense	6,000
Loss on discontinued operations	12,000
Dividends declared and paid	5,000

Instructions

Compute the following: (a) income from operations, (b) net income, (c) comprehensive income, and (d) retained earnings balance at December 31, 2025. (Ignore income tax effects.)

E3.3 (LO 1) (Income Statement Items) Presented below are certain account balances of Paczki Products Co.

Rent revenue	\$ 6,500	Sales discounts	\$ 7,800
Interest expense	12,700	Selling expenses	99,400
Beginning retained earnings	114,400	Sales revenue	390,000
Ending retained earnings	125,000	Income tax expense	31,000
Dividend revenue	71,000	Cost of goods sold	184,400
Sales returns and allowances	12,400	Administrative expenses	82,500

Instructions

From the foregoing, compute the following: (a) total net revenue and (b) net income.

E3.4 (LO 1) (Single-Step Income Statement) The financial records of LeRoi Jones Inc. were destroyed by fire at the end of 2025. Fortunately, the controller had kept certain statistical data related to the income statement as follows.

1. The beginning merchandise inventory was \$92,000 and decreased 20% during the current year.
2. Sales discounts amount to \$17,000.
3. 20,000 shares of common stock were outstanding for the entire year.
4. Interest expense was \$20,000.
5. The income tax rate is 30%.
6. Cost of goods sold amounts to \$500,000.
7. Administrative expenses are 20% of cost of goods sold but only 8% of gross sales.
8. Four-fifths of the operating expenses relate to sales activities.

Instructions

From the foregoing information prepare an income statement for the year 2025 in single-step form.

E3.5 (LO 1) Excel (Multiple-Step and Single-Step Statements) Two accountants for the firm of Elwes and Wright are arguing about the merits of presenting an income statement in a multiple-step versus a single-step format. The discussion involves the following 2025 information related to P. Bride Company (\$000 omitted).

Administrative expense	
Officers' salaries	\$ 4,900
Depreciation of office furniture and equipment	3,960
Cost of goods sold	60,570
Rent revenue	17,230
Selling expense	
Delivery expense	2,690
Sales commissions	7,980
Depreciation of sales equipment	6,480
Sales revenue	96,500
Income tax	9,070
Interest expense	1,860

Instructions

- a. Prepare an income statement for the year 2025 using the multiple-step form. Common shares outstanding for 2025 total 40,550 (000 omitted).
- b. Prepare an income statement for the year 2025 using the single-step form.
- c. Which one do you prefer? Discuss.

E3.6 (LO 1) (Multiple-Step Statement) The following balances were taken from the books of Alonzo Corp. on December 31, 2025.

Interest revenue	\$ 86,000	Accumulated depreciation—equipment	\$ 40,000
Cash	51,000	Accumulated depreciation—buildings	28,000
Sales revenue	1,380,000	Notes receivable	155,000
Accounts receivable	150,000	Selling expenses	194,000
Prepaid insurance	20,000	Accounts payable	170,000
Sales returns and allowances	150,000	Bonds payable	100,000
Allowance for doubtful accounts	7,000	Administrative and general expenses	97,000

Sales discounts	45,000	Accrued liabilities	32,000
Land	100,000	Interest expense	60,000
Equipment	200,000	Notes payable	100,000
Buildings	140,000	Loss from earthquake damage	150,000
Cost of goods sold	621,000	Common stock	500,000
		Retained earnings	21,000

Assume the total effective tax rate on all items is 20%.

Instructions

Prepare a multiple-step income statement; 100,000 shares of common stock were outstanding during the year.

E3.7 (LO 1) (Multiple-Step and Single-Step Statements) The accountant of Latifa Shoe Co. has compiled the following information from the company's records as a basis for an income statement for the year ended December 31, 2025.

Rent revenue	\$ 29,000
Interest expense	18,000
Market appreciation on land above cost	31,000
Salaries and wages expense (selling)	114,800
Supplies (selling)	17,600
Income tax	23,100
Salaries and wages expense (administrative)	135,900
Other administrative expenses	51,700
Cost of goods sold	496,000
Net sales	980,000
Depreciation on plant assets (70% selling, 30% administrative)	65,000
Cash dividends declared	16,000

There were 20,000 shares of common stock outstanding during the year.

Instructions

- Prepare a multiple-step income statement.
- Prepare a single-step income statement.
- Which format do you prefer? Discuss.

E3.8 (LO 1, 2) (Income Statement, EPS) Presented below are selected ledger accounts of Tucker Corporation as of December 31, 2025.

Cash	\$ 50,000
Administrative expenses	100,000
Selling expenses	80,000
Net sales	540,000
Cost of goods sold	210,000
Cash dividends declared (2025)	20,000
Cash dividends paid (2025)	15,000
Discontinued operations (loss before income taxes)	40,000
Depreciation expense, not recorded in 2024	30,000
Retained earnings, December 31, 2024	90,000
Effective tax rate 20%	

Instructions

- Compute net income for 2025.
- Prepare a partial income statement beginning with income from continuing operations before income tax, and include appropriate earnings per share information. Assume 10,000 shares of common stock were outstanding during 2025.

E3.9 (LO 1, 3) (Multiple-Step Statement with Retained Earnings Statement) Presented below is information related to Ivan Calderon Corp. for the year 2025.

Net sales	\$1,300,000	Write-off of inventory due to	
Cost of goods sold	780,000	obsolescence	\$ 80,000
Selling expenses	65,000	Depreciation expense omitted by	
Administrative expenses	48,000	accident in 2024	55,000
Dividend revenue	20,000	Casualty loss	50,000
Interest revenue	7,000	Cash dividends declared	45,000
		Retained earnings at December 31, 2024	980,000
		Effective tax rate of 20% on all items	

Instructions

- Prepare a multiple-step income statement for 2025. Assume that 60,000 shares of common stock are outstanding for the entire year.
- Prepare a separate retained earnings statement for 2025.

E3.10 (LO 1) (Earnings per Share) The stockholders' equity section of Hendly Corporation appears below as of December 31, 2025.

8% preferred stock, \$50 par value, authorized	
100,000 shares, outstanding 90,000 shares	\$ 4,500,000
Common stock, \$1.00 par, authorized and issued	
10 million shares	10,000,000
Additional paid-in capital	20,500,000
Retained earnings (includes 2025 net income of \$33,000,000)	167,000,000
Total stockholders' equity	202,000,000

Net income for 2025 reflects a total effective tax rate of 20%. Included in the net income figure is a loss of \$18,000,000 (before tax) as a result of a non-recurring major casualty. Preferred stock dividends of \$360,000 were declared and paid in 2025. Dividends of \$1,000,000 were declared and paid to common stockholders in 2025.

Instructions

Compute earnings per share data as it should appear on the income statement of Hendly Corporation.

E3.11 (LO 1) (Condensed Income Statement—Periodic Inventory Method) The following are selected ledger accounts of Spock Corporation at December 31, 2025.

Cash	\$ 185,000	Salaries and wages expense (sales)	\$ 284,000
Inventory	535,000	Salaries and wages expense (office)	346,000
Sales revenue	4,275,000	Purchase returns	15,000
Unearned sales revenue	117,000	Sales returns and allowances	79,000
Purchases	2,786,000	Freight-in	72,000
Sales discounts	34,000	Accounts receivable	142,500
Purchase discounts	27,000	Sales commissions	83,000
Selling expenses	69,000	Telephone and Internet expense (sales)	17,000
Accounting and legal services	33,000	Utilities expense (office)	32,000
Insurance expense (office)	24,000	Miscellaneous office expenses	8,000
Advertising expense	54,000	Rent revenue	240,000
Delivery expense	93,000	Casualty loss (before tax)	70,000
Depreciation expense (office equipment)	48,000	Interest expense	176,000
Depreciation expense (sales equipment)	36,000	Common stock (\$10 par)	900,000

Spock's effective tax rate on all items is 20%. A physical inventory indicates that the ending inventory is \$686,000.

Instructions

Prepare a condensed 2025 multi-step income statement for Spock Corporation.

E3.12 (LO 3) Excel (Retained Earnings Statement) Eddie Zambrano Corporation began operations on January 1, 2022. During its first 3 years of operations, Zambrano reported net income and declared dividends as follows.

	<u>Net Income</u>	<u>Dividends Declared</u>
2022	\$ 40,000	\$ —0—
2023	125,000	50,000
2024	160,000	50,000

The following information relates to 2025.

Income before income tax	\$240,000
Prior period adjustment: understatement of 2023 depreciation expense (before taxes)	25,000
Dividends declared (of this amount, \$25,000 will be paid on Jan. 15, 2026)	100,000
Effective tax rate	20%

Instructions

- Prepare a 2025 retained earnings statement for Eddie Zambrano Corporation.
- Assume Eddie Zambrano Corporation restricted retained earnings in the amount of \$70,000 on December 31, 2025. After this action, what would Zambrano report as total retained earnings in its December 31, 2025, balance sheet?

E3.13 (LO 1, 2) (Earnings per Share) At December 31, 2024, Shiga Naoya Corporation had the following stock outstanding.

10% cumulative preferred stock, \$100 par, 107,500 shares	\$10,750,000
Common stock, \$5 par, 4,000,000 shares	20,000,000

During 2025, Shiga Naoya did not issue any additional common stock. The following also occurred during 2025.

Income from continuing operations before taxes	\$23,650,000
Discontinued operations (loss before taxes)	3,225,000
Preferred dividends declared	1,075,000
Common dividends declared	2,200,000
Effective tax rate	17%

Instructions

Compute earnings per share data as it should appear in the 2025 income statement of Shiga Naoya Corporation. (Round to two decimal places.)

E3.14 (LO 2) (Comprehensive Income) Roxanne Carter Corporation reported the following for 2025: net sales \$1,200,000, cost of goods sold \$750,000, selling and administrative expenses \$320,000, and an unrealized holding gain on available-for-sale debt securities \$18,000.

Instructions

Prepare a statement of comprehensive income, using (a) the one statement format, and (b) the two statement format. (Ignore income taxes and earnings per share.)

E3.15 (LO 3) (Comprehensive Income) C. Reither Co. reports the following information for 2025: sales revenue \$700,000, cost of goods sold \$500,000, operating expenses \$80,000, and an unrealized holding loss on available-for-sale debt securities for 2025 of \$60,000. It declared and paid a cash dividend of \$10,000 in 2025.

C. Reither Co. has January 1, 2025, balances in common stock \$350,000; accumulated other comprehensive income \$80,000; and retained earnings \$90,000. It issued no stock during 2025.

Instructions

Prepare a statement of stockholders' equity. (Ignore income taxes.)

E3.16 (LO 1, 2, 3) (Various Reporting Formats) The following information was taken from the records of Roland Carlson Inc. for the year 2025: income tax applicable to income from continuing operations \$187,000, income tax applicable to loss on discontinued operations \$25,500, and unrealized holding gain on available-for-sale debt securities (net of tax) \$15,000.

Gain on sale of equipment	\$ 95,000	Cash dividends declared	\$ 150,000
Loss on discontinued operations	75,000	Retained earnings January 1, 2025	600,000
Administrative expenses	240,000	Cost of goods sold	850,000
Rent revenue	40,000	Selling expenses	300,000
Loss on write-down of inventory	60,000	Sales revenue	1,900,000

Shares outstanding during 2025 were 100,000.

Instructions

- Prepare a single-step income statement (with respect to items in Income from operations).
- Prepare a comprehensive income statement for 2025, using the two statement format.
- Prepare a retained earnings statement for 2025.

E3.17 (LO 4) (Fundamentals of Revenue Recognition) Consider the following.

- One of the main indicators of whether control has passed to the customer is whether revenue has been earned. Is this statement correct?

2. One of the criteria that contracts must meet to apply the revenue standard is that collectibility of the sales price must be reasonably possible. Is this correct?
3. A wholly unperformed contract is one in which the company has neither transferred the promised goods or services to the customer nor received, or become entitled to receive, any consideration. Why are these contracts not recorded in the accounts?
4. Performance obligations are the unit of account for purposes of applying the revenue recognition standard and therefore determine when and how revenue is recognized. Is this statement correct?
5. Elaina Company contracts with a customer and provides the customer with an option to purchase additional goods for free or at a discount. Should Elaina Company account for this option?
6. The transaction price is generally not adjusted to reflect the customer's credit risk, meaning the risk that the customer will not pay the amount to which the entity is entitled to under the contract. Comment on this statement.

Instructions

Provide an answer to each of these questions.

E3.18 (LO 4) (Determine Transaction Price) Jeff Heun, president of Concrete Always, agrees to construct a concrete cart path at Dakota Golf Club. Concrete Always enters into a contract with Dakota to construct the path for \$200,000. In addition, as part of the contract, a performance bonus of \$40,000 will be paid based on the timing of completion. The performance bonus will be paid fully if completed by the agreed-upon date. The performance bonus decreases by \$10,000 per week for every week beyond the agreed-upon completion date. Jeff has been involved in a number of contracts that had performance bonuses as part of the agreement in the past. As a result, he is fairly confident that he will receive a good portion of the performance bonus. Jeff estimates, given the constraints of his schedule related to other jobs, that there is 55% probability that he will complete the project on time, a 30% probability that he will be 1 week late, and a 15% probability that he will be 2 weeks late.

Instructions

- a. Determine the transaction price that Concrete Always should compute for this agreement.
- b. Assume that Jeff Heun has reviewed his work schedule and decided that it makes sense to complete this project on time. Assuming that he now believes that the probability for completing the project on time is 90% and otherwise it will be finished 1 week late, determine the transaction price.

E3.19 (LO 4) (Allocate Transaction Price) Shaw Company sells goods that cost \$300,000 to Ricard Company for \$410,000 on January 2, 2025. The sales price includes an installation fee, which has a stand-alone selling price of \$40,000. The standalone selling price of the goods is \$370,000. The installation is considered a separate performance obligation and is expected to take 6 months to complete (installation was completed on June 18, 2025).

Instructions

- a. How much revenue does Shaw record on January 2, 2025?
- b. How much income should Shaw report related to its sale to Ricard in its income statement prepared for the quarter ended March 31, 2025?

***E3.20 (LO 6) (Change in Accounting Principle)** Tim Mattke Company began operations in 2023 and for simplicity reasons, adopted weighted-average pricing for inventory. In 2025, in accordance with other companies in its industry, Mattke changed its inventory pricing to FIFO. The pretax income data is reported below.

<u>Year</u>	<u>Weighted-Average</u>	<u>FIFO</u>
2023	\$370,000	\$395,000
2024	390,000	430,000
2025	410,000	450,000

Instructions

- a. What is Mattke's net income in 2025? Assume a 20% tax rate in all years.
- b. Compute the cumulative effect of the change in accounting principle from weighted-average to FIFO inventory pricing.
- c. Show comparative income statements for Tim Mattke Company, beginning with income before income tax, as presented on the 2025 income statement.

Problems

P3.1 (LO 1, 2, 3) (Multiple-Step Statement, Retained Earnings Statement) The following information is related to Dickinson Company for 2025.

Retained earnings balance, January 1, 2025	\$ 980,000
Sales revenue	25,000,000
Cost of goods sold	16,000,000
Interest revenue	70,000
Selling and administrative expenses	4,700,000
Write-off of goodwill	820,000
Income taxes for 2025	1,244,000
Gain on the sale of investments	110,000
Loss due to flood damage	390,000
Loss on the disposition of the wholesale division (net of tax)	440,000
Loss on operations of the wholesale division (net of tax)	90,000
Dividends declared on common stock	250,000
Dividends declared on preferred stock	80,000

Dickinson Company decided to discontinue its entire wholesale operations (considered a discontinued operation) and to retain its manufacturing operations. On September 15, Dickinson sold the wholesale operations to Rogers Company. During 2025, there were 500,000 shares of common stock outstanding all year.

Instructions

Prepare a multiple-step income statement and a retained earnings statement.

P3.2 (LO 1, 3) Excel (Single-Step Statement, Retained Earnings Statement, Periodic Inventory)

The following is the trial balance of Thompson Corporation at December 31, 2025.

Thompson Corporation Trial Balance December 31, 2025		
	Debit	Credit
Purchase Discounts		\$ 10,000
Cash	\$ 189,700	
Accounts Receivable	105,000	
Rent Revenue		18,000
Retained Earnings		160,000
Salaries and Wages Payable		18,000
Sales Revenue		1,100,000
Notes Receivable	110,000	
Accounts Payable		49,000
Accumulated Depreciation—Equipment		28,000
Sales Discounts	14,500	
Sales Returns and Allowances	17,500	
Notes Payable		70,000
Selling Expenses	232,000	
Administrative Expenses	99,000	
Common Stock		300,000
Income Tax Expense	53,900	
Cash Dividends	45,000	
Allowance for Doubtful Accounts		5,000
Supplies	14,000	
Freight-In	20,000	
Land	70,000	
Equipment	140,000	
Bonds Payable		100,000
Gain on Sale of Land		30,000
Accumulated Depreciation—Buildings		19,600
Inventory (January 1, 2025)	89,000	
Buildings	98,000	
Purchases	610,000	
Totals	<u>\$1,907,600</u>	<u>\$1,907,600</u>

A physical count of inventory on December 31 resulted in an inventory amount of \$64,000; thus, cost of goods sold for 2025 is \$645,000.

Instructions

Prepare a single-step income statement and a retained earnings statement. Assume that the only changes in retained earnings during the current year were from net income and dividends. Thirty thousand shares of common stock were outstanding the entire year.

***P3.3 (LO 1, 2, 6) Excel Groupwork (Various Income-Related Items)** Maher Inc. reported income from continuing operations before taxes during 2025 of \$790,000. Additional transactions occurring in 2025 but not considered in the \$790,000 are as follows.

1. The corporation experienced an uninsured flood loss in the amount of \$90,000 during the year.
2. At the beginning of 2023, the corporation purchased a machine for \$54,000 (salvage value of \$9,000) that had a useful life of 6 years. The bookkeeper used straight-line depreciation for 2023, 2024, and 2025, but failed to deduct the salvage value in computing the depreciation base.
3. Sale of securities held as a part of its portfolio resulted in a loss of \$57,000 (pretax).
4. When its president died, the corporation realized \$150,000 from an insurance policy. The cash surrender value of this policy had been carried on the books as an investment in the amount of \$46,000 (the gain is nontaxable).
5. The corporation disposed of its recreational division at a loss of \$115,000 before taxes. Assume that this transaction meets the criteria for discontinued operations.
6. The corporation decided to change its method of inventory pricing from average-cost to the FIFO method. The effect of this change on prior years is to increase 2023 income by \$60,000 and decrease 2024 income by \$20,000 before taxes. The FIFO method has been used for 2025. The tax rate on these items is 30%.

Instructions

Prepare an income statement for the year 2025 starting with income from continuing operations before taxes. Compute earnings per share as it should be shown on the face of the income statement. Common shares outstanding for the year are 120,000 shares. (Assume a tax rate of 30% on all items, unless indicated otherwise.)

P3.4 (LO 1, 3) (Multiple- and Single-Step Statements, Retained Earnings Statement) The following account balances were included in the trial balance of Twain Corporation at June 30, 2025.

Sales revenue	\$1,578,500	Depreciation expense (office furniture and equipment)	\$ 7,250
Sales discounts	31,150	Property tax expense	7,320
Cost of goods sold	896,770	Bad debt expense (selling)	4,850
Salaries and wages expense (sales)	56,260	Maintenance and repairs expense (administration)	9,130
Sales commissions	97,600	Office expense	6,000
Travel expense (salespersons)	28,930	Sales returns and allowances	62,300
Delivery expense	21,400	Dividends revenue	38,000
Entertainment expense	14,820	Interest expense	18,000
Telephone and Internet expense (sales)	9,030	Income tax expense	102,000
Depreciation expense (sales equipment)	4,980	Depreciation understatement due to error—2022 (net of tax)	17,700
Maintenance and repairs expense (sales)	6,200	Dividends declared on preferred stock	9,000
Miscellaneous selling expenses	4,715	Dividends declared on common stock	37,000
Office supplies used	3,450		
Telephone and Internet expense (administration)	2,820		

The Retained Earnings account had a balance of \$337,000 at July 1, 2024. There are 80,000 shares of common stock outstanding.

Instructions

- a. Using the multiple-step form, prepare an income statement and a retained earnings statement for the year ended June 30, 2025.
- b. Using the single-step form, prepare an income statement and a retained earnings statement for the year ended June 30, 2025.

P3.5 (LO 1, 3) (Unusual or Infrequent Items) Presented below is a combined single-step income and retained earnings statement for Nerwin Company for 2025.

		(000 omitted)
Net sales revenue		\$640,000
Costs and expenses		
Cost of goods sold	\$500,000	
Selling, general, and administrative expenses	66,000	
Other, net	<u>17,000</u>	<u>583,000</u>
Income before income tax		57,000
Income tax		<u>19,400</u>
Net income		37,600
Retained earnings at beginning of period, as previously reported	141,000	
Adjustment required for correction of error	<u>(7,000)</u>	
Retained earnings at beginning of period, as restated		134,000
Dividends on common stock		<u>(12,200)</u>
Retained earnings at end of period		<u>\$159,400</u>

Additional facts are as follows.

1. "Selling, general, and administrative expenses" for 2025 included a charge of \$8,500,000 that was usual but infrequently occurring.
2. "Other, net" for 2025 included a loss on sale of equipment of \$6,000,000.
3. "Adjustment required for correction of an error" was a result of a change in estimate (useful life of certain assets reduced to 8 years and a catch-up adjustment made).
4. Nerwin Company disclosed earnings per common share for net income in the notes to the financial statements.

Instructions

Determine from these additional facts whether the presentation of the facts in the Nerwin Company income and retained earnings statement is appropriate. If the presentation is not appropriate, describe the appropriate presentation and discuss its theoretical rationale. (Do not prepare a revised statement.)

P3.6 (LO 1, 2, 3) (Retained Earnings Statement, Prior Period Adjustment) Below is the Retained Earnings account for the year 2025 for Acadian Corp.

Retained earnings, January 1, 2025		\$257,600
Add:		
Gain on sale of investments (net of tax)	\$41,200	
Net income	84,500	
Refund on litigation with government, related to the year 2022 (net of tax)	21,600	
Recognition of income earned in 2024, but omitted from income statement in that year (net of tax)	<u>25,400</u>	<u>172,700</u>
		430,300
Deduct:		
Loss on discontinued operations (net of tax)	35,000	
Write-off of goodwill (net of tax)	60,000	
Cumulative effect on income of prior years in changing from LIFO to FIFO inventory valuation in 2025 (net of tax)	23,200	
Cash dividends declared	<u>32,000</u>	<u>150,200</u>
Retained earnings, December 31, 2025		<u>\$280,100</u>

Instructions

- a. Prepare a corrected retained earnings statement. Acadian Corp. normally sells investments of the type mentioned above. FIFO inventory was used in 2025 to compute net income.
- b. State where the items that do not appear in the corrected retained earnings statement should be shown.

P3.7 (LO 1, 2, 3) Groupwork (Income Statement, Irregular Items) Wade Corp. has 150,000 shares of common stock outstanding. In 2025, the company reports income from continuing operations before income tax of \$1,210,000. Additional transactions not considered in the \$1,210,000 are as follows.

1. In 2025, Wade Corp. sold equipment for \$40,000. The machine had originally cost \$80,000 and had accumulated depreciation of \$30,000. The gain or loss is considered non-recurring.
2. The company discontinued operations of one of its subsidiaries during the current year at a loss of \$190,000 before taxes. Assume that this transaction meets the criteria for discontinued operations. The loss from operations of the discontinued subsidiary was \$90,000 before taxes; the loss from disposal of the subsidiary was \$100,000 before taxes.
3. An internal audit discovered that amortization of intangible assets was understated by \$35,000 (net of tax) in a prior period. The amount was charged against retained earnings.
4. The company recorded a non-recurring gain of \$125,000 on the condemnation of some of its property (this item was included in the \$1,210,000).

Instructions

Analyze the above information and prepare an income statement for the year 2025, starting with income from continuing operations before income tax. Compute earnings per share as it should be shown on the face of the income statement. (Assume a total effective tax rate of 19% on all items, unless otherwise indicated.)

Using Your Judgment

Financial Reporting Problem: The Proctor & Gamble Company (P&G)

UYJ3.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- a. What type of income statement format does P&G use? Indicate why this format might be used to present income statement information.
- b. What are P&G's primary revenue sources?
- c. Compute P&G's gross profit for each of the years 2018–2020. Explain why gross profit decreased in 2020.
- d. Why does P&G make a distinction between operating and nonoperating revenue?
- e. What financial ratios did P&G choose to report in its "Financial Summary" section covering the years 2015–2020?

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ3.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What type of income format(s) is used by these two companies? Identify any differences in income statement format between these two companies.
- b. What are the gross profits, operating profits, and net incomes for these two companies over the 3-year period 2018–2020? Which company has had better financial results over this period of time?
- c. What income statement format do these two companies use to report comprehensive income?

Financial Statement Analysis Case: Bankruptcy Prediction

UYJ3.3 The Z-score bankruptcy prediction model uses balance sheet and income information to arrive at a Z-score, which can be used to predict financial distress:

$$Z = \frac{\text{Working capital}}{\text{Total assets}} \times 1.2 + \frac{\text{Retained earnings}}{\text{Total assets}} \times 1.4 + \frac{\text{EBIT}}{\text{Total assets}} \times 3.3 + \frac{\text{Sales}}{\text{Total assets}} \times 0.99 + \frac{\text{MV equity}}{\text{Total liabilities}} \times 0.6$$

EBIT is earnings before interest and taxes. MV equity is the market value of common equity, which can be determined by multiplying stock price by shares outstanding.

Following extensive testing, it has been shown that companies with Z-scores above 3.0 are unlikely to fail; those with Z-scores below 1.81 are very likely to fail. While the original model was developed for publicly held manufacturing companies, the model has been modified to apply to companies in various industries, emerging companies, and companies not traded in public markets.

Instructions

- Use information in the financial statements of **Walgreens** to compute the Z-score for the years 2019 and 2020. (Walgreens' financial information may be found online.)
- Interpret your result. Where does the company fall in the financial distress range?
- The Z-score uses EBIT as one of its elements. Why do you think this income measure is used?

Financial Statement Analysis Case: P/E Ratios

UYJ3.4 One of the more closely watched ratios by investors is the price-earnings (P/E) ratio. By dividing price per share by earnings per share, analysts get insight into the value the market attaches to a company's earnings. More specifically, a high P/E ratio (in comparison to companies in the same industry) may suggest the stock is overpriced. Also, there is some evidence that companies with low P/E ratios are underpriced and tend to outperform the market. However, the ratio can be misleading.

P/E ratios are sometimes misleading because the E (earnings) is subject to a number of assumptions and estimates that could result in overstated earnings and a lower P/E. Some analysts conduct "revenue analysis" to evaluate the quality of an earnings number. Revenues are less subject to management estimates and all earnings must begin with revenues. These analysts also compute the price-to-sales ratio (PSR = Price per share ÷ Sales per share) to assess whether a company is performing well compared to similar companies. If a company has a price-to-sales ratio significantly higher than its competitors, investors may be betting on a stock that has yet to prove itself. [See Janice Revell, "Beyond P/E," *Fortune* (May 28, 2001), p. 174.]

Instructions

- Identify some of the estimates or assumptions that could result in overstated earnings.
- Compute the P/E ratio and the PSR for **Tootsie Roll** and **Hershey** for 2020 (these data can be found online).
- Use these data to compare the quality of each company's earnings.

Accounting, Analysis, and Principles

UYJ3.5 Counting Crows Inc. provided the following information for the year 2025.

Retained earnings, January 1, 2025	\$ 600,000
Administrative expenses	240,000
Selling expenses	300,000
Sales revenue	1,900,000
Cash dividends declared	80,000
Cost of goods sold	850,000
Loss on discontinued operations	110,000
Rent revenue	102,700
Unrealized holding gain on available-for-sale debt securities	17,000
Income tax applicable to continuing operations	187,000
Income tax benefit applicable to loss on discontinued operations	60,500
Income tax applicable to unrealized holding gain on available-for-sale debt securities	2,000

Accounting

Prepare (a) a single-step income statement for 2025, (b) a retained earnings statement for 2025 and (c) a statement of comprehensive income using the two statement format. Shares outstanding during 2025 were 100,000.

Analysis

Explain how a multiple-step income statement format can provide useful information to a financial statement user.

Principles

In a recent meeting with its auditor, Counting Crows' management argued that the company should be able to prepare a non-GAAP income statement with some one-time administrative expenses reported similar to discontinued operations. Is such reporting consistent with the qualitative characteristics of accounting information as discussed in the conceptual framework? Explain.

Developing Your Professional Skills

Critical-Thinking Cases

CT3.1 (LO 1, 2) (Identification of Income Statement Deficiencies) O'Malley Corporation was incorporated and began business on January 1, 2022. It has been successful and now requires a bank loan for additional working capital to finance expansion. The bank has requested an audited income statement for the year 2025. The accountant for O'Malley Corporation provides you with the following income statement which O'Malley plans to submit to the bank.

O'Malley Corporation Income Statement	
Sales revenue	\$850,000
Dividends	32,300
Gain on recovery of insurance proceeds from earthquake loss	<u>38,500</u>
	920,800
Less:	
Selling expenses	\$101,100
Cost of goods sold	510,000
Advertising expense	13,700
Loss on obsolescence of inventories	34,000
Loss on discontinued operations	48,600
Administrative expense	<u>73,400</u>
	<u>780,800</u>
Income before income tax	140,000
Income tax	<u>56,000</u>
Net income	<u>\$ 84,000</u>

Instructions

Indicate the deficiencies in the income statement presented above. Assume that the corporation desires a single-step income statement.

CT3.2 (LO 5) Groupwork (Earnings Management) Bobek Inc. has recently reported steadily increasing income. The company reported income of \$20,000 in 2022, \$25,000 in 2023, and \$30,000 in 2024. A number of market analysts have recommended that investors buy the stock because they expect the steady growth in income to continue. Bobek is approaching the end of its fiscal year in 2025, and it again appears to be a good year. However, it has not yet recorded warranty expense.

Based on prior experience, this year's warranty expense should be around \$5,000, but some managers have approached the controller to suggest a larger, more conservative warranty expense should be recorded this year. Income before warranty expense is \$43,000. Specifically, by recording a \$7,000 warranty accrual this year, Bobek could report an increase in income for this year and still be in a position to cover its warranty costs in future years.

Instructions

- What is earnings management?
- Assume income before warranty expense is \$43,000 for both 2025 and 2026 and that total warranty expense over the 2-year period is \$10,000. What is the effect of the proposed accounting in 2025? In 2026?
- What is the appropriate accounting in this situation?

CT3.3 (LO 5) Ethics (Earnings Management) Charlie Brown, controller for Kelly Corporation, is preparing the company's income statement at year-end. He notes that the company lost a considerable sum on the sale of some equipment it had decided to replace. Since the company has sold equipment routinely in the past, Brown knows the losses cannot be reported as an unusual item. He also does not want to highlight it as a material loss since he feels that will reflect poorly on him and the company. He reasons that if the company had recorded more depreciation during the assets' lives, the losses would not be so great. Since depreciation is included among the company's operating expenses, he wants to report the losses along with the company's expenses, where he hopes it will not be noticed.

Instructions

- What are the ethical issues involved?
- What should Brown do?

CT3.4 (LO 1, 2) (Income Reporting Items) Simpson Corp. is an entertainment firm that derives approximately 30% of its income from the Casino Knights Division, which manages gambling facilities. As auditor for Simpson Corp., you have recently overheard the following discussion between the controller and financial vice president.

- Vice President: If we sell the Casino Knights Division, it seems ridiculous to segregate the results of the sale in the income statement. Separate categories tend to be absurd and confusing to the stockholders. I believe that we should simply report the gain on the sale as other income or expense without detail.
- Controller: Professional pronouncements would require that we report this information separately in the income statement. If a sale of this type is considered unusual and infrequent, it must be reported separate from income from continuing operations.
- Vice President: What about the walkout we had last month when employees were upset about their commission income? Would this situation not also be subject to reporting outside operating income?
- Controller: I am not sure whether this item should get special reporting or not.
- Vice President: Oh well, it doesn't make any difference because the net effect of all these items is immaterial, so no disclosure is necessary.

Instructions

- On the basis of the foregoing discussion, answer the following questions. Who is correct about handling the sale? What would be the correct income statement presentation for the sale of the Casino Knights Division?
- How should the walkout by the employees be reported?
- What do you think about the vice president's observation on materiality?
- What are the earnings per share implications of these topics?

CT3.5 (LO 1, 2) (Identification of Income Statement Weaknesses) The following financial statement was prepared by employees of Walters Corporation.

Walters Corporation Income Statement Year Ended December 31, 2025	
Revenues	
Gross sales, including sales taxes	\$1,044,300
Less: Returns, allowances, and cash discounts	56,200
Net sales	988,100
Dividends, interest, and purchase discounts	30,250
Recoveries of accounts written off in prior years	13,850
Total revenues	1,032,200
Costs and expenses	
Cost of goods sold, including sales taxes	465,900
Salaries and related payroll expenses	60,500
Rent	19,100
Delivery expense and freight-in	3,400
Bad debt expense	27,800
Total costs and expenses	576,700
Income before other items	455,500
Other items	
Loss on discontinued styles (Note 1)	71,500
Loss on sale of marketable securities (Note 2)	39,050
Loss on sale of warehouse (Note 3)	86,350
Total other items	196,900
Net income	\$ 258,600
Net income per share of common stock	\$2.30

Note 1: New styles and rapidly changing consumer preferences resulted in a \$71,500 loss on the disposal of discontinued styles and related accessories.

Note 2: The corporation sold an investment in marketable securities at a loss of \$39,050. The corporation normally sells securities of this nature.

Note 3: The corporation sold one of its warehouses at an \$86,350 loss.

Instructions

Identify and discuss the weaknesses in classification and disclosure in the single-step income statement above. You should explain why these treatments are weaknesses and what the proper presentation of the items would be in accordance with GAAP.

CT3.6 (LO 1, 2, 3, 6) Ethics (Classification of Income Statement Items) As audit partner for Grupo and Rijo, you are in charge of reviewing the classification of unusual items that have occurred during the current year. The following material items have come to your attention.

1. A merchandising company incorrectly overstated its ending inventory 2 years ago. Inventory for all other periods is correctly computed.
2. An automobile dealer sells for \$137,000 an extremely rare 1930 S type Invicta which it purchased for \$21,000 10 years ago. The Invicta is the only such display item the dealer owns.
3. A drilling company during the current year extended the estimated useful life of certain drilling equipment from 9 to 15 years. As a result, depreciation for the current year was materially lowered.
- *4. A retail outlet changed its computation for bad debt expense from 1% to ½ of 1% of receivables because of changes in its customer clientele.
5. A mining concern sells a foreign subsidiary engaged in uranium mining, although it (the seller) continues to engage in uranium mining in other countries.
6. A steel company changes from the average-cost method to the FIFO method for inventory costing purposes.
7. A construction company, at great expense, prepared a major proposal for a government loan. The loan is not approved.
8. A water pump manufacturer has had large losses resulting from a strike by its employees early in the year.
9. Depreciation for a prior period was incorrectly understated by \$950,000. The error was discovered in the current year.
10. A large sheep rancher suffered a major loss because the state required that all sheep in the state be killed to halt the spread of a rare disease. Such a situation has not occurred in the state for 20 years.
11. A food distributor that sells wholesale to supermarket chains and to fast-food restaurants (two distinguishable classes of customers) decides to discontinue the division that sells to one of the two classes of customers. This represents a strategic shift in the company business.

Instructions

From the foregoing information, indicate in what section of the income statement or retained earnings statement these items should be classified. Provide a brief rationale for your position.

CT3.7 (LO 2) (Comprehensive Income) Willie Nelson, Jr., controller for Jenkins Corporation, is preparing the company's financial statements at year-end. Currently, he is focusing on the income statement and determining the format for reporting comprehensive income. During the year, the company earned net income of \$400,000 and had unrealized gains on available-for-sale debt securities of \$15,000. In the previous year, net income was \$410,000, and the company had no unrealized gains or losses.

Instructions

- a. Show how income and comprehensive income will be reported on a comparative basis for the current and prior years, using the two statement format.
- b. Show how income and comprehensive income will be reported on a comparative basis for the current and prior years, using the one statement format.
- c. Which format should Nelson recommend?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE3.1 Access the glossary (“Master Glossary”) to answer the following.

- a. What is a change in accounting estimate?
- b. How is a change in accounting principle distinguished from a “change in accounting estimate effected by a change in accounting principle”?
- c. What is the formal definition of comprehensive income?

CE3.2 Enyart Company has a noncontrolling interest in a subsidiary. Enyart’s controller is unsure how to report losses in the subsidiary that exceed the value of Enyart’s interest in the subsidiary. Advise the controller.

CE3.3 What guidance does the SEC provide for public companies with respect to the reporting of the “effect of preferred stock dividends and accretion of carrying amount of preferred stock on earnings per share”?

Codification Research Case

Your client took accounting a number of years ago and was unaware of comprehensive income reporting. He is not convinced that any accounting standards exist for comprehensive income.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- a. What authoritative literature addresses comprehensive income? When was it issued?
- b. Provide the definition of comprehensive income.
- c. Define classifications within net income and give examples.
- d. Define classifications within other comprehensive income and give examples.
- e. What are reclassification adjustments?

Analytics in Action Activities

Using Data Visualizations to Analyze Trends

DA3.1 Data visualizations can often help us see data in a different way as well as explain trends that may not be so apparent when looking at a set of financial statements. For example, consider the following graphs. These graphs compare earnings trends for **Chipotle** and **McDonald's**, and provide a visual of the relationship between earnings per share and the quarterly growth in earnings.

**Required**

For this exercise, you will use visualizations of earnings and stock price data from Chipotle and McDonald's to track trends in these metrics.

[Go to Wiley Course Resources for complete details and instructions.](#)

DA3.2 Data visualizations can also be used to help management understand how the market may respond to reported financial data.

Required

Using the same visualization dashboard from DA3.1, you will provide a summary to management as to why you think **Chipotle's** stock price fell despite an increase in earnings per share.

[Go to Wiley Course Resources for complete details and instructions.](#)

Using Data Analytics for Investment Decisions

DA3.3 Deciding whether a public company is worthy of your investment takes a good amount of analysis. With the amount of financial data available to the investing public, we can make good use of tools like Excel to organize and evaluate the data.

Required

For this exercise, you will pull data from a public company's 10-K filing and prepare a thorough ratio analysis in Excel for both the current and prior period. You will evaluate each ratio individually and then evaluate the potential investment as a whole. You will then write a memo detailing whether you would pursue an investment in this company.

[Go to Wiley Course Resources for complete details and instructions.](#)

IFRS Insights

LEARNING OBJECTIVE 7

Compare the accounting procedures for income reporting under GAAP and IFRS.

As in GAAP, the income statement is a required statement for IFRS. In addition, the content and presentation of an IFRS income statement is similar to the one used for GAAP. *IAS 1*, “Presentation of Financial Statements,” provides general guidelines for the reporting of income statement information. Subsequently, a number of international standards have been issued that provide additional guidance to issues related to income statement presentation. Following are the key similarities and differences between GAAP and IFRS related to the income statement.

Similarities

- Both GAAP and IFRS require companies to indicate the amount of net income attributable to non-controlling interest.
- Under both IFRS and GAAP, unusual and infrequent income items are reported in Income before income taxes.
- Both GAAP and IFRS follow the same presentation guidelines for discontinued operations, but IFRS defines a discontinued operation more narrowly. Both standard-setters have indicated a willingness to develop a similar definition to be used in the joint project on financial statement presentation.
- Both GAAP and IFRS have items that are recognized in equity as part of comprehensive income but do not affect net income. Both GAAP and IFRS allow a one statement or two statement approach to preparing the statement of comprehensive income.

Differences

- Presentation of the income statement under GAAP follows either a single-step or multiple-step format. IFRS does not mention a single-step or multiple-step approach.
- Under IFRS, companies must classify expenses by either nature or function. GAAP does not have that requirement, but the SEC requires a functional presentation.
- IFRS identifies certain minimum items that should be presented on the income statement. GAAP has no minimum information requirements. However, the SEC rules have more rigorous presentation requirements.
- IFRS does not define key measures like income from operations. SEC regulations define many key measures and provide requirements and limitations on companies reporting non-GAAP/IFRS information.
- Under IFRS, revaluation of property, plant, and equipment, and intangible assets is permitted, with gains reported as other comprehensive income. The effect of this difference is that application of IFRS results in more transactions affecting equity but not net income.

Additional IFRS Resources

Additional IFRS Insights with assessment are available online at Wiley Course Resources. For those who want more IFRS coverage, *Intermediate Accounting, IFRS Fourth Edition* exists as another resource.

Balance Sheet and Statement of Cash Flows

WHAT are the balance sheet and statement of cash flows?

As you learned in Chapter 1, the balance sheet and the statement of cash flows are two of the primary financial statements. The balance sheet (also referred to as the statement of financial position) reports the assets, liabilities, and stockholders' equity of a company at a specific date. The statement of cash flows reports cash flow from (1) operations, (2) investing transactions, and (3) financing transactions, thereby explaining the net increase or decrease in cash during the period.

WHY is information reported in the balance sheet and statement of cash flows important to investors and creditors?

The objective of financial reporting calls for reporting information that helps in predicting the amounts, timing, and uncertainty of future cash flows. Information in the balance sheet is directly related to that goal, as assets represent future cash inflows and liabilities reflect future cash outflows. Information in the balance sheet also provides signals on the quality of income.

For example, consider **Krispy Kreme Doughnuts**, which not long ago had a 60% earnings per share growth rate and a price-earnings ratio around 70. Seven months later, its stock price had dropped 72%. What happened? Stockholders alleged that Krispy Kreme may

have been inflating its revenues and not taking enough bad debt expense (which inflated both assets and income). In addition, Krispy Kreme's operating cash flow was negative. Most financially sound companies generate positive cash flow. Information in the balance sheet could have provided investors an early warning signal of Krispy Kreme's financial challenges.

A classic case of the importance of information in the cash flow statement was the bankruptcy of **W.T. Grant**. As shown in the graph, W. T. Grant's cash flow began to "go south" starting in about year 3; the company filed for bankruptcy shortly after year 7. Financial statement readers who studied the company's cash flows, as reported in the statement of cash flows, would have found early warnings of its problems.

HOW are these statements prepared?

The balance sheet is prepared at a point in time and reports all asset, liability, and stockholders' equity balances. Companies generally prepare a classified balance sheet, grouping assets and liabilities as either current or long-term according to whether the assets or the liabilities will be received or paid within the next year. The cash flow statement is prepared with information from the income statement and changes in balance sheet accounts to present the sources and uses of cash as operating, investing, and financing activities.

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available in Wiley Course Resources.

4.1 Balance Sheet

LEARNING OBJECTIVE 1

Explain the uses, limitations, and content of the balance sheet.

The **balance sheet**, sometimes referred to as the **statement of financial position**, reports the assets, liabilities, and stockholders' equity of a business enterprise at a specific date. The balance sheet is useful because it:

- Provides information about the nature and amounts of investments in enterprise resources, obligations to creditors, and the owners' equity in net resources.
- Helps in predicting the amounts, timing, and uncertainty of future cash flows.

Usefulness of the Balance Sheet

By reporting information on assets, liabilities, and stockholders' equity, the balance sheet provides a basis for computing rates of return and evaluating the capital structure of the company. Analysts also use information in the balance sheet to assess a company's risk¹ and future cash flows. In this regard, analysts use the balance sheet to assess a company's liquidity, solvency, and financial flexibility, as shown in **Illustration 4.1**.

¹Risk conveys the unpredictability of future events, transactions, circumstances, and results of the company.

ILLUSTRATION 4.1 Assessing
a Company's Liquidity, Solvency,
and Financial Flexibility

Liquidity

Liquidity describes “the amount of time that is expected to elapse until an asset is realized or otherwise converted into cash or until a liability has to be paid.”² Creditors are interested in short-term liquidity ratios, such as the ratio of cash (or near cash) to short-term liabilities, and which ratios indicate whether a company will have the resources to pay its current and maturing obligations. Stockholders assess liquidity to evaluate the possibility of future cash dividends or the buyback of shares. In general, the greater a company's liquidity, the lower its risk of failure.

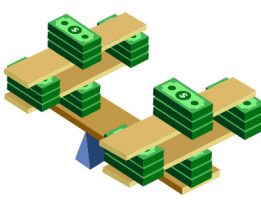

How quickly will my assets convert to cash?

Solvency

Solvency refers to the ability of a company to pay its debts as they mature. For example, when a company carries a high level of long-term debt relative to assets, it has lower solvency than a similar company with a low level of long-term debt. Companies with higher debt are relatively more risky because they will need more of their assets to meet their fixed obligations (interest and principal payments).

Financial Flexibility

Liquidity and solvency affect a company's **financial flexibility**, which measures the “ability of an enterprise to take effective actions to alter the amounts and timing of cash flows so it can respond to unexpected needs and opportunities.” For example, a company may become so loaded with debt—so financially inflexible—that it has little or no sources of cash to finance expansion or to pay off maturing debt. A company with a high degree of financial flexibility is better able to survive bad times, to recover from unexpected setbacks, and to take advantage of profitable and unexpected investment opportunities. Generally, the greater a company's financial flexibility, the lower its risk of failure.

Hmm... I wonder if they will pay me back?

Limitations of the Balance Sheet

Some of the major limitations of the balance sheet are as follows.

1. **Most assets and liabilities are reported at historical cost.** As a result, the information provided in the balance sheet is often criticized for not reporting a more relevant fair value. For example, **Amazon** reports \$31.7 billion of land and buildings on its balance sheet that may have appreciated in value after purchase. Yet, Amazon reports any increase in value only if and when it sells these assets.
2. **Companies use judgments and estimates to determine many of the items reported in the balance sheet.** For example, in its balance sheet, **Dell** estimates that \$94 million of its accounts receivable balance will be uncollectible, that computer equipment should be depreciated over 3–5 years, and that its warranty obligation is a liability of \$341 million. These judgments and estimates have a material impact on Dell's financial reports.
3. **The balance sheet necessarily omits many items that are of financial value but that a company cannot record objectively.** For example, the knowledge and skill of **Intel** employees in developing new computer chips are arguably the company's most significant assets. However, because Intel cannot reliably measure the value of its employees and other intangible assets (such as customer base, research superiority, and reputation), it does not recognize these items in the balance sheet. Similarly, many liabilities are reported in an “off-balance-sheet” manner, if at all. For example, **Apple** disclosed \$8.2 million of off-balance-sheet, noncancelable purchase obligations in the notes to its financial statements.

²“Reporting Income, Cash Flows, and Financial Position of Business Enterprises,” *Proposed Statement of Financial Accounting Concepts* (Stamford, Conn.: FASB, 1981), par. 29.

Accounting Matters

Stuck in Port

The strength of a company's balance sheet can have a significant impact on its ability to navigate a crisis. During the Covid-19 global pandemic, the cruise industry effectively shut down. With no revenue coming in, companies were burning through staggering amounts of cash, upward of \$650 million per month for **Carnival Corporation**.

However, the company's strong financial position helped it to navigate the shutdown, with company executives noting to Wall Street analysts that it had \$7.6 billion in liquidity early in the pandemic. Carnival president and CEO, Arnold Donald, told

analysts: "Additional cash conservation efforts, combined with future liquidity measures, will enable us to sustain ourselves beyond 12 months into late [2021], even in a zero-revenue scenario."

Another cruise operator, **Royal Caribbean**, noted that the strength of its balance sheet, assets, and brands allowed it to raise upward of \$6.5 billion in new liquidity since the start of the pandemic. While the operations of cruise lines look very different (and more efficient) once the ships finally set sail post-pandemic, it is clear that a strong balance sheet and financial flexibility were critical to survival.

Source: Gene Sloan, "Why Your Favorite Cruise Line Probably Isn't Going Out of Business, Despite the COVID Shutdown," *the pointsguy.com* (September 3, 2020).

Classification in the Balance Sheet

Balance sheet accounts are **classified**. That is, balance sheets group together similar items to arrive at significant subtotals. Furthermore, the material is arranged so that important relationships are shown.

The FASB has often noted that the parts and subsections of financial statements can be more informative than the whole. Therefore, the FASB discourages the reporting of summary accounts alone (such as total assets, net assets, and total liabilities). Instead, companies should report and classify individual items in sufficient detail to permit users to assess the amounts, timing, and uncertainty of future cash flows. For example, classifying accounts payable as a current liability indicates that the company must liquidate that payable in the next year or accounting cycle. Such classifications make it easier for users to evaluate the company's liquidity, solvency, financial flexibility, profitability, and risk.

To classify items in financial statements, companies group those items with similar characteristics and separate items with different characteristics. For example, companies should report separately:

1. **Assets that differ in their type or expected function in the company's central operations or other activities.** For example, merchandise inventories should be reported separately from property, plant, and equipment.
2. **Assets and liabilities with different implications for the company's financial flexibility.** For example, a company that uses assets in its operations like manufacturing equipment should report those assets separately from assets held for investment and assets subject to restrictions, such as leased equipment.
3. **Assets and liabilities with different general liquidity characteristics.** For example, cash should be reported separately from inventories.

The three general classes of items included in the balance sheet are assets, liabilities, and equity. We defined them in Chapter 1 as follows.

Elements of the Balance Sheet

1. **Assets.** Probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.
2. **Liabilities.** Probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer

assets or provide services to other entities in the future as a result of past transactions or events.

3. **Equity.** Residual interest in the assets of an entity that remains after deducting its liabilities. In a business enterprise, the equity is the ownership interest.

Companies then further divide these items into several subclassifications. **Illustration 4.2** indicates the general format of balance sheet presentation.

ILLUSTRATION 4.2 Balance Sheet Classifications

Assets	Liabilities and Owners' Equity
Current assets	Current liabilities
Long-term investments	Long-term debt
Property, plant, and equipment	Owners' (stockholders') equity
Right-of-use assets	
Intangible assets	
Other assets	

A company may classify the balance sheet in some other manner, but in practice you usually see little departure from these major subdivisions. A proprietorship or partnership presents the classifications within the owners' equity section a little differently, as we will show later in the chapter.

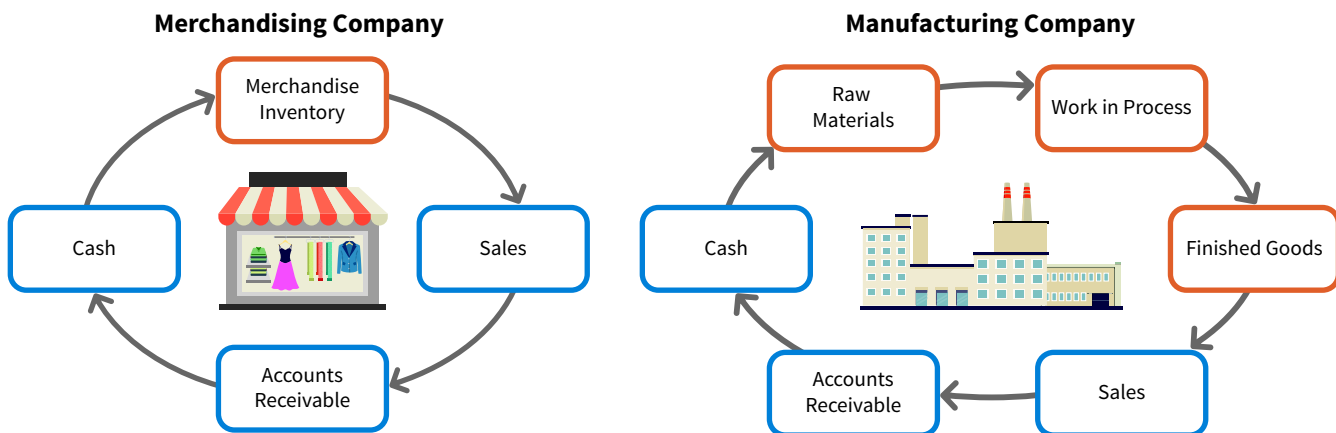

Current Assets

Current assets are cash and other assets a company expects to convert into cash, sell, or consume either in one year or in the operating cycle, whichever is longer.

- The operating cycle is the average time between when a company acquires materials and supplies and when it receives cash for sales of the product (for which it acquired the materials and supplies).
- The cycle operates from cash through inventory, production, receivables, and back to cash.

Illustration 4.3 shows the operating cycles for merchandising and manufacturing companies.

ILLUSTRATION 4.3 Operating Cycles

When several operating cycles occur within one year (which is generally the case for service and merchandising companies), a company uses the one-year period. If the operating cycle is more than one year, a company uses the longer period. Although an operating cycle longer than a year is not common, the tobacco, distillery, lumber, and shipbuilding industries have operating cycles longer than one year.

Current assets are presented in the balance sheet in order of liquidity. The five major items found in the current assets section, and their bases of valuation, are shown in **Illustration 4.4**.

ILLUSTRATION 4.4 Current Assets and Basis of Valuation

Item	Basis of Valuation
Cash and cash equivalents	Fair value
Short-term investments	Generally, fair value
Receivables	Estimated amount collectible
Inventories	Lower-of-cost-or-net realizable value/market
Prepaid expenses	Cost

A company does not report these five items as current assets if it does not expect to realize them in one year or in the operating cycle, whichever is longer. For example, a company excludes from the current assets section cash restricted for purposes other than payment of current obligations or for use in current operations. **Generally, if a company expects to convert an asset into cash or to use it to pay a current liability within a year or the operating cycle, whichever is longer, it classifies the asset as current.**

Cash Most companies use the caption “Cash and cash equivalents” on their balance sheet. What types of items are included in “cash and cash equivalents”?

- **Cash:** currency and demand deposits at a financial institution. Examples of demand deposits are checking, savings, and money market accounts.
- **Cash equivalents:** short-term, highly liquid investments that will mature within three months or less. One such example is a certificate of deposit (CD). If a company invests funds into a three-month CD, those funds would be included in the cash and cash equivalents line item on the balance sheet.

These items are reported at approximate fair value on the balance sheet.

A company must disclose any restrictions or commitments related to the availability of cash. Additionally, if a company restricts cash for purposes other than current obligations, it excludes the cash from current assets. **Illustration 4.5** shows an example of this, from the annual report of **The Walt Disney Company**.

ILLUSTRATION 4.5 Balance Sheet Presentation of Current and Noncurrent Restricted Cash

 The Walt Disney Company (in millions)	
Current assets	
Cash and cash equivalents	\$5,418
Other current assets	979
Other assets	4,715
Note 2 (in part): Cash and cash equivalents consist of cash on hand and marketable securities with original maturities of three months or less. Cash and cash equivalents subject to contractual restrictions and not readily available are classified as restricted cash. The Company’s restricted cash balances are primarily made up of cash held as collateral for certain derivative instruments.	
Cash and cash equivalents	\$5,418
Restricted cash included in:	
Other current assets	26
Other assets	11
Total cash, cash equivalents and restricted cash in the statement of cash flows	<u>\$5,455</u>

Short-Term Investments If a company has excess cash on hand, it may choose to invest that cash in stocks or bonds of other companies. The investments may be held for a short period of time or for many years. We will cover accounting for investments later in the text,

but here is an overview and introduction to investments terminology. [1] (See the FASB Codification References near the end of the chapter.)

- 1. **Equity securities:** investments in preferred and common stock of other companies. A company can buy the stock and sell it quickly if the stock price increases, or it can hold the stock for many years. If the entity intends to sell the stock in a short period of time, say less than a year, it is classified as a short-term investment. Equity securities are generally recorded at fair value.
- 2. **Debt securities:** investments in bonds or notes of other companies or governmental entities. Debt investments are further separated into three portfolios for valuation and reporting purposes as follows.
 - a. **Held-to-maturity:** debt securities that a company intends to hold until maturity. These are reported as current or noncurrent assets depending on the time left until maturity. Held-to-maturity debt investments are reported on the balance sheet at “amortized cost,” which is covered in Chapter 16.
 - b. **Trading:** debt securities bought and held primarily for sale in the near future to generate a return. These are reported as current assets at their fair value.
 - c. **Available-for-sale:** debt securities not classified as held-to-maturity or trading securities. These are reported at fair value as current or noncurrent assets depending on the length of time management intends to hold the investment.³

Illustration 4.6 shows an excerpt from the annual report of **CVS Health Corporation** with respect to its investments.

ILLUSTRATION 4.6 Balance Sheet Presentation of Investments in Securities

CVS Health Corporation (in millions)	
 Assets	
Cash and cash equivalents	\$5,683
Short-term investments	2,373
Note 1 Accounting Policies (in part):	
Debt securities consist primarily of U.S. Treasury and agency securities, mortgage-backed securities, corporate and foreign bonds and other debt securities. Debt securities are classified as either current or long-term investments based on their contractual maturities unless the company intends to sell an investment within the next twelve months, in which case it is classified as current on the consolidated balance sheets. Debt securities are classified as available for sale and are carried at fair value.	
Note 3 Investments (in part):	
<i>In millions</i>	<u>Current</u>
Debt securities available for sale	\$2,251
Mortgage loans	<u>122</u>
Total current investments	<u><u>\$2,373</u></u>

Receivables Current receivables may be grouped as one item on the balance sheet and be shown “net” of any expected loss due to uncollectible amounts. A breakdown of major categories of receivables is typically provided in the related notes. For receivables arising from unusual transactions, such as sale of property or a loan to employees, companies should separately classify these as long-term unless collection is expected within one year.

³Under the fair value option, companies may elect to use fair value as the measurement basis for selected financial assets and liabilities. For these companies, some of their financial assets (and liabilities) may be recorded at historical cost, while others are recorded at fair value. [2]

Stanley Black & Decker reported its receivables as shown in [Illustration 4.7](#).

 Stanley Black & Decker (in millions)	
Current assets	
Cash and cash equivalents	\$ 297.7
Accounts and notes receivable, net	1,454.6
Inventories, net	2,255.0
Prepaid expenses	395.4
Other current assets	53.9
Total current assets	\$4,456.6
Note B (in part): Accounts and Notes Receivable	
Trade accounts receivable	\$1,284.0
Trade notes receivable	156.7
Other accounts receivables	126.3
Gross accounts and notes receivable	1,567.0
Allowance for doubtful accounts	(112.4)
Accounts and notes receivable, net	\$1,454.6

ILLUSTRATION 4.7 Balance Sheet Presentation of Current Assets

Inventories To present inventories properly, a company discloses the basis of valuation (e.g., lower-of-cost-or-net realizable value or lower-of-cost-or-market) and the cost flow assumption used (e.g., FIFO or LIFO). A manufacturing company, like **Stanley Black & Decker** shown in [Illustration 4.8](#), also indicates the stage of completion of the inventories in the notes to its financial statements.

 Stanley Black & Decker	
Note C (in part): Inventories	
Finished products	\$1,526.0
Work in process	162.0
Raw materials	567.0
Total	2,255.0
Note A (in part): Inventories	
U.S. inventories are primarily valued at the lower of Last-In-First-Out ("LIFO") cost or market because the Company believes it results in better matching of costs and revenues.	

ILLUSTRATION 4.8 Note Disclosure of Inventories

Prepaid Expenses A company includes prepaid expenses in current assets if it will receive benefits (usually services) within one year or the operating cycle, whichever is longer. As we discussed earlier, these items are current assets because if they had not already been paid, they would require the use of cash during the next year or the operating cycle. A company reports prepaid expenses at the amount of the unexpired or unconsumed cost.

A common example is the prepayment for an insurance policy. A company classifies it as a prepaid expense because the payment precedes the receipt of the benefit of coverage. Other common prepaid expenses include prepaid rent, advertising, taxes, and office or operating supplies. See [Illustration 4.7](#) to see how Stanley Black & Decker displays its prepaid expenses within the current assets section of its balance sheet.

Analytics in Action Working Capital and Analytics?

Companies have access to more data now than ever before, and there are increasingly more tools available to help managers evaluate those data to help make business decisions. Granular data on inventory, including how many days each type of inventory will last, is necessary to effectively manage inventory levels. Without data on how much is spent with each supplier, managers cannot negotiate volume discounts.

Collecting data on the timeliness of issuing sales invoices after services are provided will highlight any consistent delays; you cannot expect to receive payment from your customers until

you invoice them. Managing working capital with data can provide a lifeline to companies who are struggling, and a significant competitive advantage to healthy companies by allowing them to use the newfound resources to invest in more value creation. One natural-resources company reduced its working capital by more than 40% in the space of a year, worth almost \$1.5 billion!

Source: Michael Birshan, Matt Stone, and Michael Park, “Transforming the Culture of Managing Working Capital,” McKinsey & Company (January 4, 2018).

Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

Noncurrent Assets

Noncurrent assets are those not meeting the definition of current assets. They include a variety of items, as we discuss in the following sections.

Long-Term Investments Long-term investments, often referred to simply as investments, normally consist of one of four types.

- 1. Investments in debt and equity securities.
- 2. Investments in tangible fixed assets not currently used in operations, such as land held for speculation.
- 3. Investments set aside in special funds, such as a sinking fund, pension fund, or plant expansion fund. This includes the cash surrender value of life insurance.
- 4. Investments in nonconsolidated subsidiaries or affiliated companies.

Companies usually present long-term investments on the balance sheet just below “Current assets,” in a separate section called “Investments.” Realize that many securities classified as long-term investments are, in fact, readily marketable. But a company does not include them as current assets unless it **intends to convert them to cash in the short-term**—that is, within a year or in the operating cycle, whichever is longer.

Illustration 4.6 showed how CVS reported its short-term investments; that same disclosure also detailed its long-term investments. On the balance sheet, CVS reported investments after the current asset subtotal and before the “Property, plant and equipment” section. as shown in **Illustration 4.9**.

ILLUSTRATION 4.9 Balance Sheet Presentation of Long-Term Investments

CVS Health Corporation	
(in millions)	
	Assets
	Total current assets \$50,302
	Long-term investments 17,314
Note 3 Investments (in part):	
	Long-term
Debt securities available for sale	\$14,671
Mortgage loans	1,091
Other investments	1,552
Total investments	<u>\$17,314</u>

Property, Plant, and Equipment **Property, plant, and equipment** are tangible long-lived assets used in the regular operations of the business. These assets consist of physical property such as land, buildings, machinery, furniture, tools, right-of-use assets (leased assets), and wasting resources (timberland, minerals). The right-of-use asset results from leasing arrangements and can be significant for many companies, as most lease arrangements are recorded on the balance sheet. With the exception of land, a company either depreciates (e.g., buildings) or depletes (e.g., timberlands or oil reserves) these assets.

Mattel, Inc. presented its property, plant, and equipment in its balance sheet as shown in **Illustration 4.10**. A company discloses the basis it uses to value property, plant, and equipment; any liens, or claims, against the properties; and accumulated depreciation—usually in the notes to the financial statements.

 Mattel Inc.	
Property, plant, and equipment, net	\$ 550,139
Right-of-use assets, net	303,187
Goodwill	1,390,714
Other noncurrent assets	833,212
	<u>\$3,077,252</u>

Note 2: Property, plant, and equipment, net includes the following:

Land	\$ 25,112
Buildings	302,956
Machinery and equipment	812,509
Software	364,391
Tools, dies, and molds	747,706
Leasehold improvements	183,250
	<u>2,435,924</u>
Less: Accumulated depreciation	<u>1,885,785</u>
Total property, plant, and equipment, net	<u>\$ 550,139</u>

ILLUSTRATION 4.10 Balance Sheet Presentation of Property, Plant, and Equipment

Intangible Assets **Intangible assets** lack physical substance and are not financial instruments (see the “Fair Values” section in Appendix 4A for the definition of a financial instrument). Intangible assets include patents, copyrights, franchises, goodwill, trademarks, trade names, and customer lists. A company writes off (amortizes) limited-life intangible assets over their useful lives. It periodically assesses indefinite-life intangibles (such as goodwill) for impairment. Intangible assets can represent significant economic resources, yet financial analysts often ignore them, because valuation is difficult.

PepsiCo, Inc. reported intangible assets in its balance sheet as shown in **Illustration 4.11**.

 PepsiCo, Inc. (in millions)	
Intangible assets	
Amortizable Intangible Assets, net	\$ 1,433
Goodwill	15,501
Other indefinite-lived intangible assets	14,610
Total intangible assets	<u>31,544</u>

ILLUSTRATION 4.11 Balance Sheet Presentation of Intangible Assets

You should recognize that a company like PepsiCo spends considerable sums (more than 1% of sales) on research and development costs, which may lead to the development of patents or copyrights. However, due to the difficulty of associating these expenditures with possible intangible assets in the future, these costs are expensed as incurred.

Accounting Matters

Cryptocurrency: Is It Cash?

You may have heard of cryptocurrency, like Bitcoin. Some of you may have even invested in cryptocurrency. But what exactly is it, and how should companies report it on their balance sheet?

Cryptocurrency is a type of digital asset that uses an encryption to secure and verify transactions. It is designed to work independent of a financial institution. Cryptocurrencies can be used to pay for goods and services, though they are not backed by any government, nor is the supply managed by a central bank.

So, how do we report cryptocurrencies? Is it cash, inventory, or financial instrument? While GAAP does not explicitly cover accounting for cryptocurrencies (yet), these assets are most often accounted for as indefinite-life intangible assets, given that they lack physical substance but do not meet the definition of a financial instrument. As the use of cryptocurrencies continues to evolve, additional accounting challenges will emerge. To support continued innovation in this area, GAAP will need to evolve as well.

Other Assets The items included in the section “Other assets” vary widely in practice. Some include items such as long-term prepaid expenses, prepaid pension cost, and noncurrent receivables. Other items that might be included are assets in special funds, deferred income taxes, property held for sale, and restricted cash or securities. A company should limit this section to include only unusual items sufficiently different from assets included in specific categories.

Liabilities

Similar to assets, companies classify liabilities as current or long-term.

Current Liabilities **Current liabilities** are the obligations that a company reasonably expects to settle, or pay off, either through the use of current assets or the creation of other current liabilities. This concept includes:

1. Payables resulting from the acquisition of goods and services, such as accounts payable, wages payable, taxes payable, and so on.
2. Collections received in advance for the delivery of goods or performance of services, such as unearned rent revenue or unearned subscriptions revenue.
3. Other liabilities whose settlement will take place within the operating cycle, such as the portion of long-term bonds to be paid in the current period, referred to as the current maturity of long-term debt, or short-term obligations arising from the purchase of equipment.

At times, a liability that is payable within the next year is not included in the current liabilities section. This occurs either when the company has executed a contractual agreement to refinance the debt through another long-term issue [3] or to retire the debt out of noncurrent assets. This approach is used because settlement does not result from the use of current assets or the creation of other current liabilities.

Companies do not report current liabilities in any consistent order. In general, though, companies most commonly list notes payable, accounts payable, or short-term debt as the first item. Income taxes payable, current maturities of long-term debt, or other current liabilities are commonly listed last. For example, see **Starbucks Corporation**’s current liabilities section in **Illustration 4.12**.

ILLUSTRATION 4.12 Balance Sheet Presentation of Current Liabilities

Starbucks Corporation (in millions)	
<div>  </div>	
Current liabilities	
Accounts payable	\$1,179.3
Accrued liabilities	1,752.5
Accrued payroll and benefits	656.8
Income taxes payable	102.8
Stored value card liability and current portion of deferred revenue	1,642.9
Current portion of long-term debt	349.9
Total current liabilities	5,684.2

Previously, we discussed the importance of analyzing a company's liquidity. One way to assess liquidity is to calculate a company's working capital.

- **Working capital** is simply total current assets minus total current liabilities.
- As such, working capital represents the net amount of a company's relatively liquid resources.

Of course, the hope is that working capital is a positive number, meaning current assets are more than current liabilities. Companies seldom disclose on the balance sheet an amount for working capital, but bankers and other creditors compute it as an indicator of the short-run liquidity of a company.

Accounting Matters

When Do I Get Paid?

A key indicator of financial flexibility is a company's working capital, or the relationship between its current assets and current liabilities. Even before the Covid-19 global pandemic, U.S. public companies were delaying payments to their suppliers, holding back payments for an average of 56.7 days, far longer than the industry standard of 30 days.

Why the delay? The longer companies wait to pay their suppliers, the more cash they have on hand to direct to other areas. For example, **Stanley Black & Decker** made its suppliers wait an average of 83 days in 2018, thereby unlocking nearly \$500

million from its working capital since 2005. But what about the suppliers? One company's working capital gain is another company's loss.

In 2020, when many retailers were struggling, some companies unilaterally extended payment terms to their vendors. **Macy's** told its vendors to expect payment in 120 days, and **Kohl's** extended its payment out to 180 days. Some larger suppliers were able to weather these longer payment terms. But some smaller suppliers, or those with limited financial flexibility, were irreparably harmed.

Sources: Tatyana Shumsky and Nina Trentmann, "Delaying Payments to Suppliers Helps Companies Unlock Cash," *Wall Street Journal* (June 28, 2018); and Warren Shoulberg, "Kohl's, Macy's, Gap, Belk Are Among the Retailers Delaying Payments to Their Suppliers," *Forbes* (April 27, 2020).

Long-Term Liabilities Long-term liabilities are obligations that a company does not reasonably expect to settle within the normal operating cycle. Instead, it expects to pay them at some date beyond that time. The most common examples are bonds payable, notes payable, deferred income tax liabilities, lease obligations, and pension obligations. **Companies classify long-term liabilities that mature within the current operating cycle as current liabilities if payment of the obligation requires the use of current assets.**

Generally, long-term liabilities are of three types.

1. Obligations arising from specific financing situations, such as the issuance of bonds, long-term lease obligations, and long-term notes payable.
2. Obligations arising from the ordinary operations of the company, such as pension obligations and deferred income tax liabilities.
3. Obligations that depend on the occurrence or nonoccurrence of one or more future events to confirm the amount payable, the payee, or the date payable, such as service or product warranties.

Companies generally provide a great deal of supplementary disclosure for long-term liabilities because most long-term debt is subject to various covenants and restrictions for the protection of lenders.⁴

Companies frequently describe the terms of all long-term liability agreements in notes to the financial statements. The description includes the maturity date or dates, rates of interest, nature of the obligation, and any collateral pledged to support the debt. **Illustration 4.13** provides an example of this, taken from an excerpt from **Verizon Wireless's** financials.

⁴Companies usually explain the pertinent rights and privileges of the various securities (both debt and equity) outstanding in the notes to the financial statements. Examples of information that companies should disclose are dividend and liquidation preferences, participation rights, call prices and dates, conversion or exercise prices or rates and pertinent dates, sinking fund requirements, unusual voting rights, and significant terms of contracts to issue additional shares. [4]

ILLUSTRATION 4.13 Balance Sheet Presentation of Long-Term Debt

		
Verizon Wireless		
(dollars in millions)		
Total current liabilities		\$ 44,868
Long-term debt		100,712

Total long-term debt		<u>\$ 100,712</u>

Owners' Equity

The **owners' equity (stockholders' equity)** section is one of the most difficult sections to prepare and understand. This is due to the complexity of capital stock agreements and the various restrictions on stockholders' equity imposed by state corporation laws, liability agreements, and boards of directors. Companies usually divide the section into five parts, as the following indicates.

Elements of Owners' Equity

- 1. Capital stock.** The total par or stated value of the shares issued. Companies must disclose the par value per share and the authorized, issued, and outstanding share amounts for common and preferred stock.
- 2. Additional paid-in capital.** The excess of amounts paid in over the par or stated value.
- 3. Retained earnings.** The corporation's accumulated, undistributed earnings. It may be divided into two parts:
 - a. Unappropriated:** the amount usually available for dividend distribution.
 - b. Restricted:** the amount restricted by bond indentures or other loan agreements.
- 4. Accumulated other comprehensive income.** The aggregate amount of the other comprehensive income items, such as unrealized gains and losses on certain investments.
- 5. Treasury stock.** Generally, the cost of shares repurchased by the company. This amount is a reduction of stockholders' equity.

Illustration 4.14 presents an example of the stockholders' equity section from **General Mills, Inc.**

General Mills, Inc.

(in millions)

Stockholders' equity:

Common stock, 754.6 shares issued, \$.10 par value	\$ 75.5
Additional paid-in capital	1,348.6
Retained earnings	15,982.1
Common stock in treasury, at cost, shares of 144.8	(6,433.3)
Accumulated other comprehensive loss	(2,914.4)
Total stockholders' equity	8,058.5

ILLUSTRATION 4.14 Balance Sheet Presentation of Stockholders' Equity

The ownership or stockholders' equity accounts in a corporation differ considerably from those in a partnership or proprietorship. Partners show separately their permanent capital accounts and the balance in their temporary accounts (drawing accounts). Proprietorships ordinarily use a single capital account that handles all of the owner's equity transactions.

Accounting Matters?

Warning Signals

Analysts use balance sheet information in models designed to predict financial distress. Researcher E. I. Altman pioneered a

bankruptcy-prediction model that derives a "Z-score" by combining balance sheet and income measures in the following equation.

$$Z = \frac{\text{Working capital}}{\text{Total assets}} \times 1.2 + \frac{\text{Retained earnings}}{\text{Total assets}} \times 1.4 + \frac{\text{EBIT}}{\text{Total assets}} \times 3.3 + \frac{\text{Sales}}{\text{Total assets}} \times 0.99 + \frac{\text{MV equity}}{\text{Total liabilities}} \times 0.6$$

Following extensive testing, Altman found that companies with Z-scores above 3.0 are unlikely to fail. Those with Z-scores below 1.81 are very likely to fail.

consultants, and courts of law use this measure to help evaluate the overall financial position and trends of a firm. Altman himself used the Z-score in his 2008 testimony evaluating a government bailout of **General Motors** and **Chrysler**. More recently, the Z-score was used to indicate the resilience of companies in times of crisis.

At one time, the use of Z-scores was virtually unheard of among practicing accountants. Today, auditors, management

Hotchkiss, *Corporate Financial Distress and Bankruptcy*, Third Edition (New York: John Wiley and Sons, 2006); and Jeffrey Caso, Peeyash Karnani, and Mihir Mysore, "Resilience in a Crisis: An Interview with Professor Edward I. Altman," McKinsey & Company (November 19, 2020).

Format of the Balance Sheet

The most common form of the balance sheet is the **report form**, which lists the balance sheet sections one above the other, on the same page. See, for example, **Illustration 4.15**, which lists assets, followed by liabilities and stockholders' equity (see **Underlying Concepts**).

Scientific Products, Inc.

4.2 Statement of Cash Flows

LEARNING OBJECTIVE 2

Explain the purpose, content, preparation, and usefulness of the statement of cash flows.

Chapter 1 indicated that an important element of the objective of financial reporting is “assessing the amounts, timing, and uncertainty of cash flows.” The three financial statements we have looked at so far—the income statement, the statement of stockholders’ equity, and the balance sheet—each present some information about the cash flows of an enterprise during a period. But they do so to a limited extent.

- The income statement provides information about resources provided by operations but not exactly cash.
- The statement of stockholders’ equity shows the amount of cash provided by issuing more capital stock and used to pay dividends or purchase treasury stock.
- Comparative balance sheets might show what assets the company has acquired or disposed of, and what liabilities it has incurred or liquidated.

Useful as they are, none of these statements presents a detailed summary of all the cash inflows and outflows, or the sources and uses of cash during the period. To fill this need, the FASB requires the **statement of cash flows** (also called the **cash flow statement**). [5]

Underlying Concepts

The statement of cash flows meets the objective of financial reporting—to help assess the amounts, timing, and uncertainty of future cash flows.

Purpose of the Statement of Cash Flows

The primary purpose of a statement of cash flows is to provide relevant information about the cash receipts and cash payments of an enterprise during a period (see **Underlying Concepts**). To achieve this purpose, the statement of cash flows reports the following: (1) the cash effects of operations during a period, (2) investing transactions, (3) financing transactions, and (4) the net increase or decrease in cash during the period.⁵

Reporting the sources, uses, and net increase or decrease in cash helps investors, creditors, and others know what is happening to a company’s most liquid resource. Because most individuals maintain a checkbook and prepare a tax return on a cash basis, they can comprehend the information reported in the statement of cash flows.

The statement of cash flows provides answers to the following simple but important questions:

1. Where did the cash come from during the period?
2. What was the cash used for during the period?
3. What was the change in the cash balance during the period?

Accounting Matters

Accrual-based net income and the resulting earnings per share are important metrics when reviewing a company’s financial performance. But what about cash? Cash is critical to a company’s long-term survival, making the statement of cash flows a critical piece to the financial reporting puzzle.

Consider **Enron**. As shown in the following charts, Enron reported impressive, and consistent, growth in its net income through the 1990s. Its cash flows, however, painted a very different picture, only reporting positive cash flows three times from 1991 through 1999.

Watch That Cash Flow

Even more telling was Enron’s **free cash flow**, which is defined as operating cash flow less dividends and capital expenditures. Free cash flow is used to evaluate a company’s ability to repay creditors or pay dividends or interest to investors. In the years leading up to Enron’s collapse, the company reported substantial negative free cash flows, a warning signal indeed. Enron engaged in many questionable accounting practices, and its cash flow reporting was no exception. In the end, cash does not lie.

⁵The FASB recommends the basis as “cash and cash equivalents.” **Cash equivalents** are liquid investments that mature within three months or less.

Sources: Enron Corp. 10-K annual reports; and Bala G. Dharan and William R. Bufkins, "Red Flags in Enron's Reporting of Revenues and Key Financial Measures," *Semantic Scholar* (2008).

Content of the Statement of Cash Flows

Companies classify cash receipts and cash payments during a period into three different activities in the statement of cash flows as follows.

1. **Operating activities** involve the cash effects of transactions that enter into the determination of net income.
2. **Investing activities** include making and collecting loans and acquiring and disposing of investments (both debt and equity) and property, plant, and equipment.
3. **Financing activities** involve liability and owners' or stockholders' equity items. They include (a) obtaining resources from owners and providing them with a return on their investment, and (b) borrowing money from creditors and repaying the amounts borrowed.

Illustration 4.16 shows the basic format of the statement of cash flows (see **Global View**).

Statement of Cash Flows

Cash at end of year	<u>XXX</u>

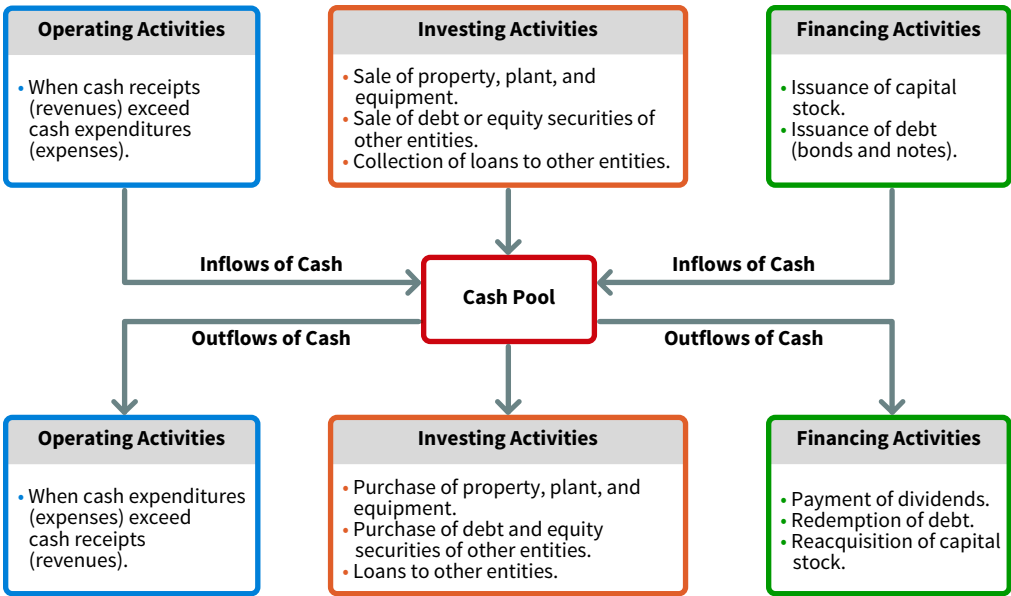

ILLUSTRATION 4.16 Basic Format of Cash Flow Statement

Global View

IFRS requires a statement of cash flows. Both IFRS and GAAP specify that the cash flows must be classified as operating, investing, or financing. See the *IFRS Insights* at the end of the chapter for a discussion of the similarities and differences between IFRS and GAAP.

Illustration 4.17 shows the inflows and outflows of cash classified by activity.

ILLUSTRATION 4.17 Cash Inflows and Outflows

The statement’s value is that it helps users evaluate liquidity, solvency, and financial flexibility. As stated earlier, **liquidity** refers to the “nearness to cash” of assets and liabilities. **Solvency** is the firm’s ability to pay its debts as they mature. **Financial flexibility** is a company’s ability to respond and adapt to financial adversity and unexpected needs and opportunities.

We have devoted Chapter 22 entirely to the detailed preparation and content of the statement of cash flows. The intervening chapters will cover several elements and complex topics that affect the content of a typical statement of cash flows. The presentation in this chapter is introductory—a reminder of the existence of the statement of cash flows and its usefulness.

Preparation of the Statement of Cash Flows

Sources of Information

Companies obtain the information to prepare the statement of cash flows from several sources: (1) comparative balance sheets, (2) the current income statement, and (3) selected transaction data.

The following example demonstrates how companies use these sources in preparing a statement of cash flows. On January 1, 2025, in its first year of operations, Telemarketing Inc. issued 50,000 shares of \$1 par value common stock for \$50,000 cash. The company rented its office space, furniture, and telecommunications equipment and performed marketing services throughout the first year. In June 2025, the company purchased land for \$15,000. **Illustration 4.18** shows the company’s comparative balance sheets at the beginning and end of 2025.

ILLUSTRATION 4.18 Comparative Balance Sheets

Telemarketing Inc. Balance Sheets			
	Dec. 31, 2025	Jan. 1, 2025	Increase/Decrease
<u>Assets</u>			
Cash	\$31,000	\$–0–	\$31,000 Increase
Accounts receivable	41,000	–0–	41,000 Increase
Land	15,000	–0–	15,000 Increase
Total	<u>\$87,000</u>	<u>\$–0–</u>	
<u>Liabilities and Stockholders' Equity</u>			
Accounts payable	\$12,000	\$–0–	\$12,000 Increase
Common stock	50,000	–0–	50,000 Increase
Retained earnings	25,000	–0–	25,000 Increase
Total	<u>\$87,000</u>	<u>\$–0–</u>	

Illustration 4.19 presents the income statement and additional information.

Telemarketing Inc. Income Statement For the Year Ended December 31, 2025	
Revenues	\$172,000
Operating expenses	<u>120,000</u>
Income before income tax	52,000
Income tax	<u>13,000</u>
Net income	<u>\$ 39,000</u>
Additional information:	
Dividends of \$14,000 were paid during the year.	

ILLUSTRATION 4.19 Income Statement Data

Preparing the Statement of Cash Flows

Preparing the statement of cash flows from these sources involves four steps.

Step 1. Determine Net Cash Provided by Operating Activities This step calculates the excess of cash receipts over cash payments from operating activities. Companies determine this amount by converting net income on an accrual basis to a cash basis. To do so, they adjust net income for items that do not affect cash. This procedure requires that a company analyze not only the current year's income statement but also the comparative balance sheets and selected transaction data.

Analysis of Telemarketing's comparative balance sheets reveals two items that will affect the computation of net cash provided by operating activities, as follows.

1. The increase in accounts receivable reflects a noncash increase of \$41,000 in revenues. What caused accounts receivable to increase? It increased because goods were sold on credit or services were performed on credit. Revenue increased, and so did net income, but no cash was received. Therefore, \$41,000 should be subtracted from net income.
2. The increase in accounts payable reflects a noncash increase of \$12,000 in expenses. What caused accounts payable to increase? It increased because various expenses were incurred, but no cash was paid. Expenses increased, and therefore net income decreased, but cash was not affected. Therefore, \$12,000 should be added back to net income.

Accounts Receivable	41,000
Sales (Service) Revenue	41,000
Utilities Expense	12,000
Accounts Payable	12,000

Illustration 4.20 shows the computation of net cash provided by operating activities of \$10,000 for Telemarketing.

Net income		\$ 39,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in accounts receivable	\$(41,000)	
Increase in accounts payable	<u>12,000</u>	<u>(29,000)</u>
Net cash provided by operating activities		<u>\$ 10,000</u>

ILLUSTRATION 4.20 Computation of Net Cash Provided by Operating Activities

Step 2. Determine the Net Cash Provided by (or Used in) Investing and Financing Activities Next, the company determines its investing and financing activities. Telemarketing's only **investing activity** was the land purchase. It had two **financing activities**: (1) common stock increased \$50,000 from the issuance of 50,000 shares for cash, and (2) the company paid \$14,000 cash in dividends, as shown in **Illustration 4.21**.

ILLUSTRATION 4.21
Determining Investing and
Financing Activities

Land	15,000				
Cash			15,000		
The credit to Cash in this journal entry indicates a cash outflow from an investing activity.					
Cash	50,000				
Common Stock		50,000			
The debit to Cash in this journal entry indicates a cash inflow from a financing activity.					
Retained Earnings	14,000				
Cash			14,000		
The credit to Cash in this journal entry indicates a cash outflow from a financing activity.					

Step 3. Determine the Change (Increase or Decrease) in Cash During the Period Knowing the amounts provided/used by operating, investing, and financing activities, the company determines the **net change in cash**. **Illustration 4.22** presents Telemarketing's statement of cash flows for 2025, which shows a net increase in cash of \$31,000.

ILLUSTRATION 4.22 Statement
of Cash Flows

Telemarketing Inc. Statement of Cash Flows For the Year Ended December 31, 2025			
Cash flows from operating activities			
Net income			\$39,000
Adjustments to reconcile net income to net cash provided by operating activities:			
Increase in accounts receivable		\$(41,000)	
Increase in accounts payable		12,000	(29,000)
Net cash provided by operating activities			10,000
Cash flows from investing activities			
Purchase of land		(15,000)	
Net cash used by investing activities			(15,000)
Cash flows from financing activities			
Issuance of common stock		50,000	
Payment of cash dividends		(14,000)	
Net cash provided by financing activities			36,000
Net increase in cash			31,000
Cash at beginning of year			–0–
Cash at end of year			<u>\$31,000</u>

Step 4. Reconcile the Change in Cash with the Beginning and the Ending Cash Balances The increase in cash of \$31,000 reported in the statement of cash flows **agrees with** the increase of \$31,000 in cash calculated from the comparative balance sheets.

Significant Noncash Activities

Not all of a company's significant activities involve cash. Examples of significant noncash activities are as follows.

1. Issuance of common stock to purchase assets.
2. Conversion of bonds into common stock.

3. Issuance of debt to purchase assets.
4. Exchanges of long-lived assets.

Significant financing and investing activities that do not affect cash are not reported in the body of the statement of cash flows. Rather, these activities are reported in either a separate schedule at the bottom of the statement of cash flows or in separate notes to the financial statements. Reporting of these noncash activities satisfies the full disclosure principle.

Illustration 4.23 shows an example of a more comprehensive statement of cash flows. Note that the company purchased equipment through the issuance of \$50,000 of bonds, which is a significant noncash transaction. *In solving homework assignments, you should present significant noncash activities in a separate schedule at the bottom of the statement of cash flows.*

ILLUSTRATION 4.23

Comprehensive Statement of Cash Flows

Nestor Company Statement of Cash Flows For the Year Ended December 31, 2025		
Cash flows from operating activities		
Net income		\$320,750
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 88,400	
Amortization of intangibles	16,300	
Gain on sale of plant assets	(8,700)	
Increase in accounts receivable (net)	(11,000)	
Decrease in inventory	15,500	
Decrease in accounts payable	(9,500)	91,000
Net cash provided by operating activities		411,750
Cash flows from investing activities		
Sale of plant assets	90,500	
Purchase of equipment	(182,500)	
Purchase of land	(70,000)	
Net cash used by investing activities		(162,000)
Cash flows from financing activities		
Payment of cash dividend	(19,800)	
Issuance of common stock	100,000	
Redemption of bonds	(50,000)	
Net cash provided by financing activities		30,200
Net increase in cash		279,950
Cash at beginning of year		135,000
Cash at end of year		<u>\$414,950</u>
Noncash investing and financing activities:		
Purchase of equipment through issuance of \$50,000 of bonds		

Usefulness of the Statement of Cash Flows

“Happiness is a positive cash flow” is certainly true. Although net income provides a long-term measure of a company’s success or failure, cash is its lifeblood. Without cash, a company will not survive. For small and newly developing companies, cash flow is the single-most important element for survival. Even medium and large companies must control cash flow.

Creditors examine the cash flow statement carefully because they are concerned about being paid. They begin their examination by finding net cash provided by operating activities. A high amount indicates that a company is able to generate sufficient cash from operations to pay its bills without further borrowing. Conversely, a low or negative amount of net cash provided by operating activities indicates that a company may have to borrow or issue stock to acquire sufficient cash to pay its bills. Consequently, creditors look for answers to the following questions in the company’s cash flow statements.

1. How successful is the company in generating net cash provided by operating activities?
2. What are the trends in net cash flow provided by operating activities over time?
3. What are the major reasons for the positive or negative net cash provided by operating activities?

You should recognize that companies can fail even though they report net income. The difference between net income and net cash provided by operating activities can be substantial. Companies such as **W. T. Grant Company** and **Prime Motor Inn**, for example, reported high net income numbers but negative net cash provided by operating activities. Eventually, both companies filed for bankruptcy.

In addition, substantial increases in receivables and/or inventory can explain the difference between positive net income and negative net cash provided by operating activities. For example, in its first year of operations, Hu Inc. reported a net income of \$80,000. Its net cash provided by operating activities, however, was a negative \$95,000, as shown in **Illustration 4.24**.

ILLUSTRATION 4.24 Negative Net Cash Provided by Operating Activities

Hu Inc. Statement of Cash Flows (partial)			
Cash flows from operating activities			
Net income			\$ 80,000
Adjustments to reconcile net income to net cash provided by operating activities:			
Increase in receivables	\$ (75,000)		
Increase in inventories	(100,000)	(175,000)	
Net cash provided by operating activities			<u>\$ (95,000)</u>

Hu could easily experience a “cash crunch” because it has its cash tied up in receivables and inventory. If Hu encounters problems in collecting receivables, or if inventory moves slowly or becomes obsolete, it may have difficulty paying its debts on time.

Accounting Matters

Cash Flow Conundrum

Negative cash flow isn't always **negative**. Consider **Netflix, Inc.** With the influx of competition in online streaming, Netflix embarked on a cash-intensive content development pipeline with the goal of producing more original content, leading to more subscriptions and ultimately profit and positive cash flow. As shown

in the graph, while Netflix was reporting net income for the years 2017–2019, it was also reporting substantial negative operating cash flows. However, its investments started to pay off in 2020 when the company continued to show growth in its net income while also posting positive operating cash flows.

Sources: Netflix Inc. 10-K; and Tatyana Shumsky, “New Netflix CFO to Tackle Cash Flow Conundrum,” *Wall Street Journal* (January 2, 2019).

Liquidity

Readers of financial statements often assess liquidity by using the **current cash debt coverage**. It indicates whether the company can pay off its current liabilities from its operations in a given year. The formula for this ratio is as follows.

$$\frac{\text{Net Cash Provided by Operating Activities}}{\text{Average Current Liabilities}} = \text{Current Cash Debt Coverage}$$

The higher the current cash debt coverage, the less likely a company will have liquidity problems. For example, a ratio near 1:1 is good. It indicates that the company can meet all of its current obligations from internally generated cash flow.

Financial Flexibility

The **cash debt coverage** provides information on financial flexibility. It indicates a company's ability to repay its liabilities from net cash provided by operating activities, without having to liquidate the assets employed in its operations. The formula for this ratio is as follows.

$$\frac{\text{Net Cash Provided by Operating Activities}}{\text{Average Total Liabilities}} = \text{Cash Debt Coverage}$$

Notice its similarity to the current cash debt coverage. However, because it uses average total liabilities in place of average current liabilities, it takes a somewhat longer-range view.

The higher this ratio, the less likely the company will experience difficulty in meeting its obligations as they come due. It signals whether the company can pay its debts and survive if external sources of funds become limited or too expensive.

Free Cash Flow

A more sophisticated way to examine a company's financial flexibility is to develop a free cash flow analysis. **Free cash flow** is the amount of discretionary cash flow a company has. It can use this cash flow to purchase additional investments, retire its debt, purchase treasury stock, or simply add to its liquidity. Financial statement users calculate free cash flow as follows.

$$\begin{array}{rcccl} \text{Net Cash Provided} & & & & \\ \text{by Operating} & - & \text{Capital} & - & \text{Cash Dividends} = \text{Free} \\ \text{Activities} & & \text{Expenditures} & & \text{Cash Flow} \end{array}$$

In a free cash flow analysis, we first deduct capital spending, to indicate it is the least discretionary expenditure a company generally makes. (Without continued efforts to maintain and expand facilities, it is unlikely that a company can continue to maintain its competitive position.) We then deduct dividends. Although a company **can** cut its dividend, it usually will do so only in a **financial emergency**. The amount resulting after these deductions is the company's free cash flow. Obviously, the greater the amount of free cash flow, the greater the company's financial flexibility.

Questions that a free cash flow analysis answer include:

1. Is the company able to pay its dividends without resorting to external financing?
2. If business operations decline, will the company be able to maintain its needed capital investment?
3. What is the amount of discretionary cash flow that can be used for additional investment, retirement of debt, purchase of treasury stock, or addition to liquidity?

Illustration 4.25 is a free cash flow analysis using the cash flow statement for Nestor Company (shown in Illustration 4.23).

ILLUSTRATION 4.25 Free Cash Flow Computation

Nestor Company Free Cash Flow Analysis			
Net cash provided by operating activities			\$411,750
Less: Capital expenditures	\$252,500		
Dividends	<u>19,800</u>	<u>272,300</u>	
Free cash flow			<u>\$139,450</u>

This computation shows that Nestor has a positive, and substantial, net cash provided by operating activities of \$411,750. Nestor's statement of cash flows reports that the company purchased equipment of \$182,500 and land of \$70,000 for total capital spending of \$252,500. Nestor has more than sufficient cash flow to meet its dividend payment and therefore has satisfactory financial flexibility.

As you can see from looking back at Illustration 4.23, Nestor used its free cash flow to redeem bonds and add to its liquidity. If it finds additional investments that are profitable, it can increase its spending without putting its dividend or basic capital spending in jeopardy.

- Companies that have strong financial flexibility can take advantage of profitable investments even in tough times.
- In addition, strong financial flexibility frees companies from worry about survival in poor economic times.

In fact, those with strong financial flexibility often fare better in a poor economy because they can take advantage of opportunities that other companies cannot.

Put It into Practice LO 4.2

Prepare a Statement of Cash Flows

FACTS Cassy Corporation's balance sheet at the end of 2024 included the following items.

Current assets	\$282,000	Current liabilities	\$180,000
Land	36,000	Bonds payable	120,000
Buildings	144,000	Common stock	216,000
Equipment	108,000	Retained earnings	<u>52,800</u>
Accumulated depreciation—buildings	(36,000)	Total	<u>\$568,800</u>
Accumulated depreciation—equipment	(13,200)		
Patents	<u>48,000</u>		
Total	<u>\$568,800</u>		

The following information is available for 2025.

1. Treasury stock was purchased at a cost of \$13,200.
2. Cash dividends of \$36,000 were declared and paid.
3. A long-term investment in stock was purchased for \$19,200.

4. Current assets other than cash increased by \$34,800. Current liabilities increased by \$15,600.
5. Depreciation expense was \$4,800 on the building and \$10,800 on equipment.
6. Net income was \$66,000.
7. Bonds payable of \$60,000 were issued.
8. An addition to the building was completed at a cost of \$32,400.
9. Patent amortization was \$3,000.
10. Equipment (cost \$24,000 and accumulated depreciation \$9,600) was sold for \$12,000.

INSTRUCTIONS

- a. Prepare a balance sheet at December 31, 2025.
- b. Prepare a statement of cash flows for 2025. The cash balance at January 1, 2025, was \$5,000.

SOLUTION

a.

Cassy Corporation Balance Sheet December 31, 2025			
<u>Assets</u>			
Current assets (see Notes below)			\$355,800
Long-term investments			19,200
Property, plant, and equipment			
Land		\$ 36,000	
Buildings (\$144,000 + \$32,400)	\$176,400		
Less: Accumulated depreciation—buildings			
(\$36,000 + \$4,800)	40,800	135,600	
Equipment (\$108,000 – \$24,000)	84,000		
Less: Accumulated depreciation—equipment			
(\$13,200 – \$9,600 + \$10,800)	14,400	69,600	
Total property, plant, and equipment			241,200
Intangible assets—patents			
(\$48,000 – \$3,000)			45,000
Total assets			<u>\$661,200</u>
<u>Liabilities and Stockholders' Equity</u>			
Current liabilities (\$180,000 + \$15,600)			\$195,600
Long-term liabilities			
Bonds payable (\$120,000 + \$60,000)			180,000
Total liabilities			375,600
Stockholders' equity			
Common stock		\$216,000	
Retained earnings (\$52,800 + \$66,000 – \$36,000)		82,800	
		298,800	
Less: Cost of treasury stock		13,200	
Total stockholders' equity			285,600
Total liabilities and stockholders' equity			<u>\$661,200</u>

Notes: The amount determined for current assets is computed last and is a “plug” figure. That is, total liabilities and stockholders' equity is computed because information is available to determine this amount. Because the total assets amount is the same as the total liabilities and stockholders' equity amount, the amount of total assets is determined. Information is available to compute all the asset amounts except current assets. Therefore, current assets can be determined by deducting the total of all the other asset balances from the total asset balance (i.e., \$661,200 – \$45,000 – \$241,200 – \$19,200).

b.

Cassy Corporation		
Statement of Cash Flows		
For the Year Ended December 31, 2025		
Cash flows from operating activities		
Net income		\$66,000
Adjustments to reconcile net income		
to net cash provided by operating activities:		
Loss on sale of equipment $[(\$24,000 - \$9,600) - \$12,000]$	\$ 2,400	
Depreciation expense	15,600	
Patent amortization	3,000	
Increase in current liabilities	15,600	
Increase in current assets (other than cash)	(34,800)	1,800
Net cash provided by operating activities		67,800
Cash flows from investing activities		
Sale of equipment	12,000	
Addition to building	(32,400)	
Investment in stock	(19,200)	
Net cash used by investing activities		(39,600)
Cash flows from financing activities		
Issuance of bonds	60,000	
Payment of dividends	(36,000)	
Purchase of treasury stock	(13,200)	
Net cash provided by financing activities		10,800
Net increase in cash		39,000
Cash at the beginning of the year		5,000
Cash at the end of the year		<u>\$44,000</u>

APPENDIX 4A

Additional Information

LEARNING OBJECTIVE *3

Describe additional types of information provided.

Underlying Concepts

The basis for including additional information should meet the *full disclosure principle*. That is, the information should be of sufficient importance to influence the judgment of an informed user.

In this chapter, we have discussed the balance sheet and statement of cash flows that all companies prepare in accordance with GAAP. However, these financial statements cannot provide the complete picture related to the financial position and financial performance of a company. Additional descriptive information in note disclosures and certain techniques of disclosure expand on and amplify the items presented in the main body of the statements (see **Underlying Concepts**). For example, the balance sheet is not complete if a company simply lists the asset, liability, and owners' equity accounts.

Notes to the Financial Statements

Recall that notes are an integral part of reporting financial statement information. Notes can:

- Explain in qualitative terms information related to specific financial statement items.
- Provide supplemental data of a quantitative nature to expand the information in financial statements.
- Explain restrictions imposed by financial arrangements or basic contractual agreements.

Although notes may be technical and difficult to understand, they provide meaningful information for users of financial statements.⁶

Accounting Policies

Accounting policies are the specific principles, bases, conventions, rules, and practices applied by a company in preparing and presenting financial information. GAAP recommends disclosure for all significant accounting principles and methods that involve selection from among alternatives or those that are peculiar to a given industry. [6] For instance, companies can:

- Compute inventories under several cost flow assumptions (e.g., LIFO and FIFO).
- Depreciate property, plant, and equipment under several accepted methods (e.g., double-declining-balance and straight-line).
- Carry investments at different valuations (e.g., amortized cost, equity, and fair value).

Sophisticated users of financial statements know of these possibilities and examine the statements closely to determine the methods used.

Companies therefore present a “Summary of Significant Accounting Policies” generally as the first note to the financial statements. This disclosure is important because, under GAAP, alternative treatments of a transaction are sometimes permitted. If these policies are not understood, users of financial statements are not able to compare the financial statements among companies. **Illustration 4A.1** presents the accounting policy related to revenue recognition as reported by **Microsoft**.

Microsoft Corporation

Note 1—Accounting Policies (in part):

Revenue Recognition

Revenue is recognized upon transfer of control of promised products or services to customers in an amount that reflects the consideration we expect to receive in exchange for those products or services. We enter into contracts that can include various combinations of products and services, which are generally capable of being distinct and accounted for as separate performance obligations. Revenue is recognized net of allowances for returns and any taxes collected from customers, which are subsequently remitted to governmental authorities.

ILLUSTRATION 4A.1
Accounting Policy Note

Related to accounting policies, companies must also disclose information about the nature of their operations, the use of estimates in preparing financial statements, and certain significant estimates. [7] **Illustration 4A.2** shows an example of such a disclosure.

⁶*Conceptual Framework for Financial Reporting—Chapter 8, Notes to Financial Statements* (August 2018) addresses the Board’s decision process in identifying disclosures to be considered when setting standards-level disclosure requirements, as well as evaluating existing disclosure requirements. The concepts are consistent with the discussion in this section.

ILLUSTRATION 4A.2 Balance Sheet Disclosure of Estimates and Assumptions**Microsoft Corporation**

Preparing financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenue, and expenses. Examples of estimates and assumptions include: for revenue recognition, determining the nature and timing of satisfaction of performance obligations, and determining the standalone selling price (“SSP”) of performance obligations, variable consideration, and other obligations such as product returns and refunds; loss contingencies; product warranties; the fair value of and/or potential impairment of goodwill and intangible assets for our reporting units; product life cycles; useful lives of our tangible and intangible assets; allowances for doubtful accounts; the market value of, and demand for, our inventory; stock-based compensation forfeiture rates; when technological feasibility is achieved for our products; the potential outcome of uncertain tax positions that have been recognized in our consolidated financial statements or tax returns; and determining the timing and amount of impairments for investments. Actual results and outcomes may differ from management’s estimates and assumptions due to risks and uncertainties, including uncertainty in the current economic environment due to the recent outbreak of a novel strain of the coronavirus (“COVID-19”).

Additional Notes to the Financial Statements

In addition to a note related to the explanation of their accounting policies, companies use specific notes to discuss items in the financial statements. Judgment must be exercised to identify the important aspects of financial information that need amplification in the notes. In many cases, the profession requires specific disclosures. For the balance sheet, note disclosures include (1) contractual situations, (2) contingencies, and (3) information on fair values.

Contractual Situations Companies should disclose contractual situations, if significant, in the notes to the financial statements. For example, they must clearly state the essential provisions of lease contracts, pension obligations, and stock compensation plans in the notes. Analysts want to know not only the amount of the liabilities but also how the different contractual provisions affect the company at present and in the future. Companies must disclose the following commitments if the amounts are material.

- To maintain working capital.
- To limit the payment of dividends.
- To restrict the use of assets.
- To require the maintenance of certain financial ratios.

Indeed, many of the recent accounting scandals related to the nondisclosure of significant contractual obligations. In response, the SEC has mandated that companies disclose contractual obligations in a tabular summary in the management discussion and analysis section of the company’s annual report. Presented in **Illustration 4A.3** is a disclosure from **The Procter & Gamble Company**.

ILLUSTRATION 4A.3
Contractual Commitments**The Procter & Gamble Company****Contractual commitments (in part)**

The following table provides information on the amount and payable date of our contractual commitments as of June 30, 2020.

(\$ millions)	Total	Less Than 1 Year	1-3 Years	3-5 Years	After 5 Years
Recorded Liabilities					
Total debt	\$ 34,589	\$ 11,189	\$ 5,154	\$ 5,148	\$ 13,098
Leases	1,023	239	352	220	212
U.S Tax Act transitional change ⁽¹⁾	2,346	224	450	984	688
Uncertain tax positions ⁽²⁾	59	59	—	—	—

Other

Interest payments relating to long-term debt	6,676	673	1,173	955	3,875
Minimum pension funding ⁽³⁾	603	196	407	—	—
Purchase obligations ⁽⁴⁾	1,577	782	412	145	238
Total Contractual Commitments	\$ 46,873	\$ 13,362	\$ 7,948	\$ 7,452	\$ 18,111

(1) Represents the U.S. federal tax liability associated with the repatriation provisions of the U.S. Tax Act. Does not include any provisions made for foreign withholding taxes on expected repatriations as the timing of those payments is uncertain.

(2) As of June 30, 2020, the Company's Consolidated Balance Sheet reflects a liability for uncertain tax positions of \$643 million, including \$158 million of interest and penalties.

(3) Represents future pension payments to comply with local funding requirements. These future pension payments assume the Company continues to meet its future statutory funding requirements.

(4) Primarily reflects future contractual payments under various take-or-pay arrangements entered into as part of the normal course of business. Commitments made under take-or-pay obligations represent minimum commitments under take-or-pay agreements with suppliers and are in line with expected usage.

ILLUSTRATION 4A.3 (continued)

Management must exercise considerable judgment to determine whether omission of such information is misleading. The rule in this situation is, "When in doubt, disclose." It is better to disclose a little too much information than not enough.

Contingencies A **contingency** is an existing situation involving uncertainty as to possible gain (gain contingency) or loss (loss contingency) that will ultimately be resolved when one or more future events occur or fail to occur.

- In short, contingencies are material events with an uncertain future.
- Examples of gain contingencies are tax operating-loss carryforwards or company litigation against another party.
- Typical loss contingencies relate to litigation, environmental issues, possible tax assessments, or government investigations.

The note disclosure in **Illustration 4A.4** shows the presentation of such information based on the financial statements of **Costco Wholesale Corporation**.

**Costco Wholesale Corporation****Note 10—Commitments and Contingencies:***Legal Proceedings (in part)*

The Company is involved in a number of claims, proceedings and litigation arising from its business and property ownership. In accordance with applicable accounting guidance, the Company establishes an accrual for legal proceedings if and when those matters reach a stage where they present loss contingencies that are both probable and reasonably estimable. There may be exposure to loss in excess of any amounts accrued. The Company monitors those matters for developments that would affect the likelihood of a loss (taking into account where applicable indemnification arrangements concerning suppliers and insurers) and the accrued amount, if any, thereof, and adjusts the amount as appropriate. As of the date of this Report, the Company has recorded immaterial accruals with respect to certain matters described below, in addition to other immaterial accruals for matters not described below. If the loss contingency at issue is not both probable and reasonably estimable, the Company does not establish an accrual, but will continue to monitor the matter for developments that will make the loss contingency both probable and reasonably estimable.

ILLUSTRATION 4A.4

Contingency Disclosure

We examine the accounting and reporting requirements involving contingencies more fully in Chapter 12.

Fair Values As we discussed in Chapter 1, fair value information may be more useful than historical cost for certain types of assets and liabilities. This is particularly so in the case of **financial instruments**, which are defined as cash, an ownership interest, or a contractual right to receive or obligation to deliver cash or another financial instrument.

- Such contractual rights to receive cash or other financial instruments are assets.
- Contractual obligations to pay are liabilities.

Cash, investments, accounts receivable, and payables are examples of financial instruments. Given the expanded use of fair value measurements, as also discussed in Chapter 1, GAAP also has expanded disclosures about fair value measurements. [8] To increase consistency and comparability in the use of fair value measures, companies follow a fair value hierarchy that provides insight into how to determine fair value, as follows.

1. **Level 1** measures (the least subjective) are based on observable inputs, such as market prices for identical assets or liabilities.
2. **Level 2** measures (more subjective) are based on market-based inputs other than those included in Level 1, such as those based on market prices for similar assets or liabilities.
3. **Level 3** measures (most subjective) are based on unobservable inputs, such as a company’s own data or assumptions.⁷

For major groups of assets and liabilities, companies must make the following fair value disclosures: (1) the fair value measurement and (2) the fair value hierarchy level of the measurements as a whole, classified by Level 1, 2, or 3. **Illustration 4A.5** provides a disclosure for **Devon Energy** for its assets and liabilities measured at fair value.

ILLUSTRATION 4A.5
 Disclosure of Fair Values

Devon Energy Corporation

Note 7: Fair Value Measurements (in part): Certain of Devon’s assets and liabilities are reported at fair value in the accompanying balance sheets. The following table provides fair value measurement information for such assets and liabilities.

	Total Fair Value	Fair Value Measurements Using:			
		Quoted Prices in Active Markets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	
(In millions)					
Assets:					
Short-term investments	\$ 341	\$ 341	\$ —	\$ —	
Investment in Chevron common stock	1,327	1,327	—	—	
Financial instruments	8	—	8	—	
Liabilities:					
Financial instruments	497	—	497	—	
Asset retirement obligation (ARO)	1,300	—	—	1,300	

GAAP establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. As presented in the table above, this hierarchy consists of three broad levels. Level 1 inputs on the hierarchy consist of unadjusted quoted prices in active markets for identical assets and liabilities and have the highest priority. Level 3 inputs have the lowest priority. Devon uses appropriate valuation techniques based on the available inputs to measure the fair values of its assets and liabilities. When available, Devon measures fair value using Level 1 inputs because they generally provide the most reliable evidence of fair value.

⁷Level 3 fair value measurements may be developed using expected cash flow and present value techniques, as described in “Using Cash Flow Information and Present Value in Accounting,” *Statement of Financial Accounting Concepts No. 7*, as discussed in Chapter 6.

In addition, companies must provide significant additional disclosure related to Level 3 measurements. The disclosures related to Level 3 are substantial and must identify what assumptions the company used to generate the fair value numbers and any related income effects. Companies will want to use Level 1 and 2 measurements as much as possible. In most cases, these valuations should be very reliable, as the fair value measurements are based on market information. In contrast, a company that uses Level 3 measurements extensively must be carefully evaluated to understand the impact these valuations have on the financial statements.

Techniques of Disclosure

Companies should disclose as completely as possible the effect of various contingencies on financial condition, the methods of valuing assets and liabilities, and the company’s contracts and agreements. To disclose this pertinent information, companies may use parenthetical explanations, notes, cross-reference and contra items, and supporting schedules.

Parenthetical Explanations

Companies often provide additional information by parenthetical explanations following the item. For example, **Illustration 4A.6** shows a parenthetical explanation of the number of shares issued by **Ford Motor Company** on the balance sheet under “Stockholders’ Equity.”

		
Ford Motor Company		
<u>Stockholders' Equity (in millions)</u>		
Common stock, par value \$0.01 per share (1,837 million shares issued)		\$18

ILLUSTRATION 4A.6
Parenthetical Disclosure of Shares Issued—Ford Motor Company

- This additional pertinent balance sheet information adds clarity and completeness.
- It has an advantage over a note because it brings the additional information into the **body of the statement** where readers will less likely overlook it.

Companies, however, should avoid lengthy parenthetical explanations, which might be distracting (see **Underlying Concepts**).

Cross-Reference and Contra Items

Companies “cross-reference” a direct relationship between an asset and a liability on the balance sheet. For example, as shown in **Illustration 4A.7**, on December 31, 2025, a company might show the following entries—one listed among the current assets, and the other listed among the current liabilities.

<u>Current Assets (in part)</u>	
Cash on deposit with sinking fund trustee for redemption of bonds payable—see Current liabilities	\$800,000
<u>Current Liabilities (in part)</u>	
Bonds payable to be redeemed in 2026—see Current assets	\$2,300,000

Underlying Concepts

The user-specific quality of *understandability* requires accountants to be careful in describing transactions and events.

ILLUSTRATION 4A.7 Cross-Referencing and Contra Items

This cross-reference points out that the company will redeem \$2,300,000 of bonds payable currently, for which it has only set aside \$800,000. Therefore, it needs additional cash from unrestricted cash, from sales of investments, from profits, or from some other source. Alternatively, the company can show the same information parenthetically.

Another common procedure is to establish contra or adjunct accounts.

- A **contra account** on a balance sheet reduces either an asset, liability, or owners' equity account. Contra accounts provide some flexibility in presenting the financial information. With the use of the Accumulated Depreciation—Equipment account, for example, a reader of the statement can see the original cost of the asset as well as the depreciation to date.
- An **adjunct account**, on the other hand, increases either an asset, liability, or owners' equity account. An example is Premium on Bonds Payable, which, when added to the Bonds Payable account, describes the total bond liability of the company.

Supporting Schedules

Often a company needs a separate schedule to present more detailed information about certain assets or liabilities, as shown in **Illustration 4A.8**.

ILLUSTRATION 4A.8
Disclosure Through Use of
Supporting Schedules

Property, plant, and equipment					
Land, buildings, equipment, and other fixed assets—net (see Schedule 3)					\$643,300
Schedule 3					
Land, Buildings, Equipment, and Other Fixed Assets					
	Total	Land	Buildings	Equip.	Other Fixed Assets
Balance January 1, 2025	\$740,000	\$46,000	\$358,000	\$260,000	\$76,000
Additions in 2025	161,200		120,000	38,000	3,200
	901,200	46,000	478,000	298,000	79,200
Assets retired or sold in 2025	31,700			27,000	4,700
Balance December 31, 2025	869,500	46,000	478,000	271,000	74,500
Depreciation taken to January 1, 2025	196,000		102,000	78,000	16,000
Depreciation taken in 2025	56,000		28,000	24,000	4,000
	252,000		130,000	102,000	20,000
Depreciation on assets retired in 2025	25,800			22,000	3,800
Depreciation accumulated December 31, 2025	226,200		130,000	80,000	16,200
Book value of assets	\$643,300	\$46,000	\$348,000	\$191,000	\$58,300

Terminology

The account titles in the general ledger do not necessarily represent the best terminology for balance sheet purposes. Companies often use brief account titles and include technical terms that only accountants understand. But many persons unacquainted with accounting terminology examine balance sheets. Thus, balance sheets should contain descriptions that readers will generally understand and clearly interpret.

For example, companies have used the term “reserve” in differing ways:

- To describe amounts deducted from assets (contra accounts such as accumulated depreciation and allowance for doubtful accounts).
- As a part of the title of contingent or estimated liabilities.
- To describe an appropriation of retained earnings.

Because of the different meanings attached to this term, misinterpretation often resulted from its use. Therefore, the profession has recommended that companies use the word **reserve** only to describe an appropriation of retained earnings. The use of the term in this narrower sense—to describe appropriated retained earnings—has resulted in a better understanding of its significance when it appears in a balance sheet. However, the term “appropriated” appears more logical, and we encourage its use.

For years, the profession has recommended that the use of the word **surplus** be discontinued in balance sheet presentations of stockholders’ equity. The use of the terms **capital surplus**, **paid-in surplus**, and **earned surplus** is confusing. Although condemned by the profession, these terms appear all too frequently in current financial statements.

APPENDIX 4B

Ratio Analysis—A Reference

LEARNING OBJECTIVE * 4

Identify the major types of financial ratios and what they measure.

Analysts and other interested parties can gather qualitative information from financial statements by examining relationships between items on the statements and identifying trends in these relationships. A useful starting point in developing this information is ratio analysis.

- A **ratio** expresses the mathematical relationship between one quantity and another.
- **Ratio analysis** expresses the relationship among pieces of selected financial statement data, in a **percentage**, a **rate**, or a simple **proportion**.

To illustrate, **IBM Corporation** recently had current assets of \$46,970 million and current liabilities of \$39,798 million. We find the ratio between these two amounts by dividing current assets by current liabilities. The alternative means of expression are:

Percentage: Current assets are 118% of current liabilities.

Rate: Current assets are 1.18 times as great as current liabilities.

Proportion: The relationship of current assets to current liabilities is 1.18:1.

To analyze financial statements, we classify ratios into four types, as follows.

1. **Liquidity ratios.** Measures of the company’s short-term ability to pay its maturing obligations.
2. **Activity ratios.** Measures of how effectively the company uses its assets.
3. **Profitability ratios.** Measures of the degree of success or failure of a given company or division for a given period of time.
4. **Coverage ratios.** Measures of the degree of protection for long-term creditors and investors.

Throughout the remainder of the text, we provide ratios to help you understand and interpret the information presented in financial statements. **Illustration 4B.1** presents the ratios that we will use throughout the text. You should find this chart helpful as you examine these ratios in more detail in the following chapters. An appendix to Chapter 23 further discusses financial statement analysis.

ILLUSTRATION 4B.1 A Summary of Financial Ratios

Ratio	Formula	Purpose or Use
Liquidity		
1. Current ratio	$\frac{\text{Current assets}}{\text{Current liabilities}}$	Measures short-term debt-paying ability
2. Quick (acid-test) ratio	$\frac{\text{Cash} + \text{Short-term investments} + \text{Accounts receivable (net)}}{\text{Current liabilities}}$	Measures immediate short-term liquidity
3. Current cash debt coverage	$\frac{\text{Net cash provided by operating activities}}{\text{Average current liabilities}}$	Measures a company's ability to pay off its current liabilities in a given year from its operations
Activity		
4. Accounts receivable turnover	$\frac{\text{Net sales}}{\text{Average net accounts receivable}}$	Measures liquidity of receivables
5. Inventory turnover	$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$	Measures liquidity of inventory
6. Asset turnover	$\frac{\text{Net sales}}{\text{Average total assets}}$	Measures how efficiently assets are used to generate sales
Profitability		
7. Profit margin on sales	$\frac{\text{Net income}}{\text{Net sales}}$	Measures net income generated by each dollar of sales
8. Return on assets	$\frac{\text{Net income}}{\text{Average total assets}}$	Measures overall profitability of assets
9. Return on common stockholders' equity	$\frac{\text{Net income} - \text{Preferred dividends}}{\text{Average common stockholders' equity}}$	Measures profitability of owners' investment
10. Earnings per share	$\frac{\text{Net income} - \text{Preferred dividends}}{\text{Weighted-average common shares outstanding}}$	Measures net income earned on each share of common stock
11. Price-earnings ratio	$\frac{\text{Market price per share}}{\text{Earnings per share}}$	Measures the ratio of the market price per share to earnings
12. Payout ratio	$\frac{\text{Cash dividends}}{\text{Net income}}$	Measures percentage of earnings distributed in the form of per share cash dividends
Coverage		
13. Debt to assets ratio	$\frac{\text{Total liabilities}}{\text{Total assets}}$	Measures the percentage of total assets provided by creditors
14. Times interest earned	$\frac{\text{Net income} + \text{Interest expense} + \text{Income tax expense}}{\text{Interest expense}}$	Measures ability to meet interest payments as they come due
15. Cash debt coverage	$\frac{\text{Net cash provided by operating activities}}{\text{Average total liabilities}}$	Measures a company's ability to repay its total liabilities in a given year from its operations
16. Book value per share	$\frac{\text{Common stockholders' equity}}{\text{Outstanding shares}}$	Measures the amount each share would receive if the company were liquidated at the amounts reported on the balance sheet
17. Free cash flow	$\text{Net cash provided by operating activities} - \text{Capital expenditures} - \text{Cash dividends}$	Measures the amount of discretionary cash flow

Learning Objectives Review

1 Explain the uses, limitations, and content of the balance sheet.

The **balance sheet is useful** because it provides information about the nature and amounts of investments in a company's resources, obligations to creditors, and owners' equity. The balance sheet contributes to financial reporting by providing a basis for (1) computing rates of return, (2) evaluating the capital structure of the enterprise, and (3) assessing the liquidity, solvency, and financial flexibility of the enterprise.

Three **limitations of a balance sheet** are as follows. (1) The balance sheet does not reflect fair value because accountants use a historical cost basis in valuing and reporting most assets and liabilities. (2) Companies must use judgments and estimates to determine certain amounts, such as the collectibility of receivables and the useful life of long-term tangible and intangible assets. (3) The balance sheet omits many items that are of financial value to the business but cannot be recorded objectively, such as human resources, customer base, and reputation.

The **general elements of the balance sheet** are assets, liabilities, and equity. The major classifications of assets are current assets; long-term investments; property, plant, and equipment; intangible assets; and other assets. The major classifications of liabilities are current and long-term liabilities. The balance sheet of a corporation generally classifies owners' equity as capital stock, additional paid-in capital, and retained earnings.

The **format of the balance sheet** is generally in report form. The report form lists liabilities and stockholders' equity directly below assets on the same page.

2 Explain the purpose, content, preparation, and usefulness of the statement of cash flows.

The **primary purpose of a statement of cash flows** is to provide relevant information about a company's cash receipts and cash payments during a period. Reporting the sources, uses, and net change in cash enables financial statement readers to know what is happening to a company's most liquid resource.

In the statement of cash flows, **companies classify the period's cash receipts and cash payments into three different activities**. (1) *Operating activities*: Involve the cash effects of transactions that enter into the determination of net income. (2) *Investing activities*: Include making and collecting loans, and acquiring and disposing of investments (both debt and equity) and of property, plant, and equipment. (3) *Financing activities*: Involve liability and owners' equity items. Financing activities include (a) obtaining capital from owners and providing them with a return on their investment, and (b) borrowing money from creditors and repaying the amounts borrowed.

The **information to prepare the statement of cash flows** usually comes from comparative balance sheets, the current income statement, and selected transaction data. Companies follow four steps to prepare the statement of cash flows from these sources. (1) Determine the net cash provided by (or used in) operating activities. (2) Determine the net cash provided by (or used in) investing and financing activities. (3) Determine the change (increase or decrease) in cash during the period. (4) Reconcile the change in cash with the beginning and ending cash balances.

Creditors examine the statement of cash flows carefully because they are concerned about being paid. The net cash flow provided by operating activities in relation to the company's liabilities is helpful in making this assessment. Two ratios used in this regard are the current cash debt ratio and the cash debt ratio. In addition, the amount of free cash flow provides creditors and stockholders with a picture of the company's financial flexibility.

*3 Describe additional types of information provided.

Four types of information normally are supplemental to account titles and amounts presented in the balance sheet. (1) *Accounting policies*: Explanations of the valuation methods used or the basic assumptions made concerning inventory valuation, depreciation methods, investments in subsidiaries, etc. (2) *Contractual situations*: Explanations of certain restrictions or covenants attached to specific assets or, more likely, to liabilities. (3) *Contingencies*: Material events that have an uncertain outcome. (4) *Fair values*: Disclosures related to fair values, particularly related to financial instruments.

Companies use **three methods to disclose pertinent information in the balance sheet**. (1) *Parenthetical explanations*: Parenthetical information provides additional information or description following the item. A company uses notes if it cannot conveniently show additional explanations or descriptions as parenthetical explanations. (2) *Cross-reference and contra items*: Companies

“cross-reference” a direct relationship between an asset and a liability on the balance sheet. (3) *Supporting schedules*: Often a company uses a separate schedule to present more detailed information than just the single summary item shown in the balance sheet. Companies establish contra accounts on a balance sheet to reduce either an asset, liability, or stockholders' equity account.

*4 Identify the major types of financial ratios and what they measure.

Ratios express the mathematical relationship between one quantity and another, expressed as a percentage, a rate, or a proportion. *Liquidity ratios* measure the short-term ability to pay maturing obligations. *Activity ratios* measure the effectiveness of asset usage. *Profitability ratios* measure the success or failure of an enterprise. *Coverage ratios* measure the degree of protection for long-term creditors and investors.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

- How does information from the balance sheet help users of the financial statements?
- What is meant by solvency? What information in the balance sheet can be used to assess a company's solvency?
- A recent financial magazine indicated that the airline industry has poor financial flexibility. What is meant by financial flexibility, and why is it important?
- Discuss at least two situations in which estimates could affect the usefulness of information in the balance sheet.
- Perez Company reported higher inventories compared to its competitors in a recent year. Discuss this effect on the current ratio (current assets ÷ current liabilities). What does this tell a statement user about Perez Company's liquidity?
- What is meant by liquidity? Rank the following assets from one to five in order of liquidity.
 - Goodwill
 - Inventory
 - Buildings
 - Short-term investments
 - Accounts receivable
- What are the major limitations of the balance sheet as a source of information?
- Discuss at least two items that are important to the value of companies like **Intel** or **IBM** but that are not recorded in their balance sheets. What are some reasons why these items are not recorded in the balance sheet?
- How does separating current assets from property, plant, and equipment in the balance sheet help analysts?
- In its December 31, 2025, balance sheet Oakley Corporation reported as an asset, “Net notes and accounts receivable, \$7,100,000.” What other disclosures are necessary?
- Should available-for-sale securities always be reported as a current asset? Explain.
- What is the relationship between current assets and current liabilities?
- The New York Knicks, Inc. sold 10,000 season tickets at \$2,000 each. By December 31, 2025, 16 of the 40 home games had been played. What amount should be reported as a current liability at December 31, 2025?
- What is working capital? How does working capital relate to the operating cycle?

15. In what section of the balance sheet should the following items appear, and what balance sheet terminology would you use?

- Treasury stock (recorded at cost).
- Checking account at bank.
- Land (held as an investment).
- Sinking fund.
- Unamortized premium on bonds payable.
- Copyrights.
- Pension fund assets.
- Premium on common stock.
- Long-term investments (pledged against bank loans payable).

16. Where should the following items be shown on the balance sheet, if shown at all?

- Allowance for doubtful accounts.
- Merchandise held on consignment.
- Advances received on sales contract.
- Cash surrender value of life insurance.
- Land.
- Merchandise out on consignment.
- Franchises.
- Accumulated depreciation of equipment.
- Materials in transit—purchased f.o.b. destination.

17. According to generally accepted accounting principles, what is the balance sheet valuation of each of the following assets?

- Trade accounts receivable.
- Land.
- Inventories.
- Trading securities.
- Prepaid expenses.

18. Recall the definition of assets: probable economic benefits obtained or controlled by a particular entity as a result of past transactions or events. Discuss how a leased building might qualify as an asset of the lessee (tenant) under this definition.

19. Kathleen Battle says, “Retained earnings should be reported as an asset, since it is earnings which are reinvested in the business.” How would you respond to Battle?

20. The creditors of Chester Company agree to accept promissory notes for the amount of its indebtedness with a proviso that two-thirds

of the annual profits must be applied to their liquidation. How should these notes be reported on the balance sheet of the issuing company? Give a reason for your answer.

21. What is the purpose of a statement of cash flows? How does it differ from a balance sheet and an income statement?

22. The net income for the year for Genesis, Inc. is \$750,000, but the statement of cash flows reports that the net cash provided by operating activities is \$640,000. What might account for the difference?

23. Net income for the year for Carrie, Inc. was \$750,000, but the statement of cash flows reports that net cash provided by operating activities was \$860,000. What might account for the difference?

24. Differentiate between operating activities, investing activities, and financing activities.

25. Each of the following items must be considered in preparing a statement of cash flows. Indicate where each item is to be reported in the statement, if at all. Assume that net income is reported as \$90,000.

- Accounts receivable increased from \$34,000 to \$39,000 from the beginning to the end of the year.
- During the year, 10,000 shares of preferred stock with a par value of \$100 per share were issued at \$115 per share.
- Depreciation expense amounted to \$14,000, and bond premium amortization amounted to \$5,000.
- Land increased from \$10,000 to \$30,000.

26. Sergey Co. has net cash provided by operating activities of \$1,200,000. Its average current liabilities for the period are \$1,000,000, and its average total liabilities are \$1,500,000. Comment on the company's liquidity and financial flexibility, given this information.

27. Net income for the year for Tanizaki, Inc. was \$750,000, but the statement of cash flows reports that net cash provided by operating activities was \$860,000. Tanizaki also reported capital expenditures of \$75,000 and paid dividends in the amount of \$30,000. Compute Tanizaki's free cash flow.

28. What is the purpose of a free cash flow analysis?

*29. What are some of the techniques of disclosure for the balance sheet?

30. What is a “Summary of Significant Accounting Policies”?

*31. What types of contractual obligations must be disclosed in great detail in the notes to the balance sheet? Why do you think these detailed provisions should be disclosed?

*32. What is the profession's recommendation in regard to the use of the term “surplus”? Explain.

Brief Exercises

BE4.1 (LO 1) Harding Corporation has the following accounts included in its December 31, 2025, trial balance: Accounts Receivable \$110,000, Inventory \$290,000, Allowance for Doubtful Accounts \$8,000, Patents \$72,000, Prepaid Insurance \$9,500, Accounts Payable \$77,000, and Cash \$30,000. Prepare the current assets section of the balance sheet, listing the accounts in proper sequence.

BE4.2 (LO 1) Koch Corporation's adjusted trial balance contained the following asset accounts at December 31, 2025: Cash \$7,000, Land \$40,000, Patents \$12,500, Accounts Receivable \$90,000, Prepaid Insurance \$5,200, Inventory \$30,000, Allowance for Doubtful Accounts \$4,000, and Equity Investments (to be sold in the next quarter) \$11,000. Prepare the current assets section of the balance sheet, listing the accounts in proper sequence.

BE4.3 (LO 1) Included in Outkast Company's December 31, 2025, trial balance are the following accounts: Prepaid Rent \$5,200, Debt Investments (to be held to maturity until 2028) \$56,000, Unearned Fees \$17,000, Land (held for investment) \$39,000, and Notes Receivable (long-term) \$42,000. Prepare the long-term investments section of the balance sheet.

BE4.4 (LO 1) Lowell Company's December 31, 2025, trial balance includes the following accounts: Inventory \$120,000, Buildings \$207,000, Accumulated Depreciation—Equipment \$19,000, Equipment \$190,000, Land (held for investment) \$46,000, Accumulated Depreciation—Buildings \$45,000, Land \$71,000, and Timberland \$70,000. Prepare the property, plant, and equipment section of the balance sheet.

BE4.5 (LO 1) Crane Corporation has the following accounts included in its December 31, 2025, trial balance: Equity Investments (to be sold in the next 6 months) \$21,000, Goodwill \$150,000, Prepaid Insurance \$12,000, Patents \$220,000, and Franchises \$130,000. Prepare the intangible assets section of the balance sheet.

BE4.6 (LO 1) Patrick Corporation's adjusted trial balance contained the following asset accounts at December 31, 2025: Prepaid Rent \$12,000, Goodwill \$50,000, Franchise Fees Receivable \$2,000, Franchises \$47,000, Patents \$33,000, and Trademarks \$10,000. Prepare the intangible assets section of the balance sheet.

BE4.7 (LO 1) Thomas Corporation's adjusted trial balance contained the following liability accounts at December 31, 2025: Bonds Payable (due in 3 years) \$100,000, Accounts Payable \$72,000, Notes Payable (due in 90 days) \$22,500, Salaries and Wages Payable \$4,000, and Income Taxes Payable \$7,000. Prepare the current liabilities section of the balance sheet.

BE4.8 (LO 1) Included in Adams Company's December 31, 2025, trial balance are the following accounts: Accounts Payable \$220,000, Pension Liability \$375,000, Discount on Bonds Payable \$29,000, Unearned Rent Revenue \$41,000, Bonds Payable \$400,000, Salaries and Wages Payable \$27,000, Interest Payable \$12,000, and Income Taxes Payable \$29,000. Prepare the current liabilities section of the balance sheet.

BE4.9 (LO 1) Use the information presented in BE4.8 for Adams Company to prepare the long-term liabilities section of the balance sheet.

BE4.10 (LO 1) Hawthorn Corporation's adjusted trial balance contained the following accounts at December 31, 2025: Retained Earnings \$120,000, Common Stock \$750,000, Bonds Payable \$100,000, Paid-in Capital in Excess of Par—Common Stock \$200,000, Goodwill \$55,000, and Accumulated Other Comprehensive Loss \$150,000. Prepare the stockholders' equity section of the balance sheet.

BE4.11 (LO 1) Stowe Company's December 31, 2025, trial balance includes the following accounts: Investment in Common Stock \$70,000, Retained Earnings \$114,000, Trademarks \$31,000, Preferred Stock \$152,000, Common Stock \$55,000, Deferred Income Taxes \$88,000, and Paid-in Capital in Excess of Par—Common Stock \$174,000. Prepare the stockholders' equity section of the balance sheet.

BE4.12 (LO 2) Keyser Beverage Company reported the following items in the most recent year.

Net income	\$40,000
Dividends paid	5,000
Increase in accounts receivable	10,000
Increase in accounts payable	7,000
Purchase of equipment (capital expenditure)	8,000
Depreciation expense	4,000
Issue of notes payable	20,000

Compute net cash provided by operating activities, the net change in cash during the year, and free cash flow.

BE4.13 (LO 2) Ames Company reported 2025 net income of \$151,000. During 2025, accounts receivable increased by \$13,000 and accounts payable increased by \$9,500. Depreciation expense was \$44,000. Prepare the cash flows from operating activities section of the statement of cash flows.

BE4.14 (LO 2) Martinez Corporation engaged in the following cash transactions during 2025.

Sale of land and building	\$191,000
Purchase of treasury stock	40,000
Purchase of land	37,000
Payment of cash dividend	95,000
Purchase of equipment	53,000
Issuance of common stock	147,000
Retirement of bonds	100,000

Compute the net cash provided (used) by investing activities.

BE4.15 (LO 2) Use the information presented in BE4.14 for Martinez Corporation to compute the net cash used (provided) by financing activities.

BE4.16 (LO 2) Using the information in BE4.14, determine Martinez's free cash flow, assuming that it reported net cash provided by operating activities of \$400,000.

Exercises

E4.1 (LO 1) (Balance Sheet Classifications) Presented below are a number of balance sheet accounts of Deep Blue Something, Inc.

- | | |
|--|------------------------------------|
| a. Debt Investments. | h. Interest Payable. |
| b. Treasury Stock. | i. Deficit. |
| c. Common Stock. | j. Equity Investments |
| d. Dividends Payable. | k. Income Taxes Payable. |
| e. Accumulated Depreciation—Equipment. | l. Unearned Subscriptions Revenue. |
| f. Construction in Process. | m. Work in Process. |
| g. Petty Cash. | n. Salaries and Wages Payable. |

Instructions

For each of the accounts above, indicate the proper balance sheet classification. In the case of borderline items, indicate the additional information that would be required to determine the proper classification.

E4.2 (LO 1) (Classification of Balance Sheet Accounts) Presented below are the captions of Faulk Company's balance sheet.

- | | |
|------------------------------------|--------------------------------|
| a. Current assets. | f. Current liabilities. |
| b. Long-term investments. | g. Noncurrent liabilities. |
| c. Property, plant, and equipment. | h. Capital stock. |
| d. Intangible assets. | i. Additional paid-in capital. |
| e. Other assets. | j. Retained earnings. |

Instructions

Indicate by letter where each of the following items would be classified.

- | | |
|---|------------------------------------|
| 1. Preferred stock. | 10. Accounts receivable. |
| 2. Goodwill. | 11. Notes payable (due next year). |
| 3. Salaries and wages payable. | 12. Supplies. |
| 4. Accounts payable. | 13. Common stock. |
| 5. Buildings. | 14. Land. |
| 6. Equity investments (to be sold within one year). | 15. Inventory. |
| 7. Current maturity of long-term debt. | 16. Prepaid insurance. |
| 8. Premium on bonds payable. | 17. Bonds payable. |
| 9. Allowance for doubtful accounts. | 18. Income taxes payable. |

E4.3 (LO 1) (Classification of Balance Sheet Accounts) Assume that Fielder Enterprises uses the following headings on its balance sheet.

- | | |
|------------------------------------|--------------------------------------|
| a. Current assets. | f. Current liabilities. |
| b. Long-term Investments. | g. Long-term liabilities. |
| c. Property, plant, and equipment. | h. Capital stock. |
| d. Intangible assets. | i. Paid-in capital in excess of par. |
| e. Other assets. | j. Retained earnings. |

Instructions

Indicate by letter how each of the following usually should be classified. If an item should appear in a note to the financial statements, use the letter "N" to indicate this fact. If an item need not be reported at all on the balance sheet, use the letter "X."

- | | |
|------------------------------------|---|
| 1. Prepaid insurance. | 5. Unearned rent revenue. |
| 2. Stock owned in another company. | 6. Preferred stock. |
| 3. Unearned service revenue. | 7. Additional paid-in capital on preferred stock. |
| 4. Advances to suppliers. | 8. Copyrights. |

9. Petty cash fund.
10. Sales taxes payable.
11. Accrued interest on notes receivable.
12. Twenty-year issue of bonds payable that will mature within the next year.
13. Machinery retired from use and held for sale.
14. Fully depreciated machine still in use.
15. Accrued interest on bonds payable.
16. Salaries that company budget shows will be paid to employees within the next year.
17. Discount on bonds payable. (Assume related to bonds payable in item 12.)
18. Accumulated depreciation—buildings.

E4.4 (LO 1) (Preparation of a Classified Balance Sheet) Assume that Denis Savard Inc. has the following accounts at the end of the current year.

1. Common Stock.
2. Discount on Bonds Payable.
3. Treasury Stock (at cost).
4. Notes Payable (short-term).
5. Raw Materials.
6. Equity Investments (long-term).
7. Unearned Rent Revenue.
8. Work in Process.
9. Copyrights.
10. Buildings.
11. Notes Receivable (short-term).
12. Cash.
13. Salaries and Wages Payable.
14. Accumulated Depreciation—Buildings.
15. Restricted Cash for Plant Expansion.
16. Land Held for Future Plant Site.
17. Allowance for Doubtful Accounts.
18. Retained Earnings.
19. Paid-in Capital in Excess of Par—Common Stock.
20. Unearned Subscriptions Revenue.
21. Receivables—Officers (due in one year).
22. Inventory (finished goods).
23. Accounts Receivable.
24. Bonds Payable (due in 4 years).

Instructions

Prepare a classified balance sheet in good form. (No monetary amounts are necessary.)

E4.5 (LO 1) (Preparation of a Corrected Balance Sheet) Uhura Company has decided to expand its operations. The bookkeeper recently completed the following balance sheet in order to obtain additional funds for expansion.

Uhura Company Balance Sheet For the Year Ended 2025	
Current assets	
Cash	\$230,000
Accounts receivable (net)	340,000
Inventory (lower-of-cost-or-net realizable value)	401,000
Equity investments (to be sold in the next year)—at cost (fair value \$120,000)	140,000
Property, plant, and equipment	
Buildings (net)	570,000
Equipment (net)	160,000
Land held for future use	175,000
Intangible assets	
Goodwill	80,000
Held-to maturity debt investment	90,000
Prepaid expenses	12,000
Current liabilities	
Accounts payable	135,000
Notes payable (due next year)	125,000
Pension obligation	82,000
Rent payable	49,000
Premium on bonds payable	53,000
Long-term liabilities	
Bonds payable	500,000
Stockholders' equity	
Common stock, \$1.00 par, authorized 400,000 shares, issued 290,000	290,000
Paid-in capital in excess of par	160,000
Retained earnings	?

Instructions

Prepare a revised balance sheet given the available information. Assume that the accumulated depreciation balance for the buildings is \$160,000 and for the equipment, \$105,000. The allowance for doubtful accounts has a balance of \$17,000. The pension obligation is considered a long-term liability.

E4.6 (LO 1) (Corrections of a Balance Sheet) The bookkeeper for Geronimo Company has prepared the following balance sheet as of July 31, 2025.

Geronimo Company Balance Sheet As of July 31, 2025			
Cash	\$ 69,000	Notes and accounts payable	\$ 44,000
Accounts receivable (net)	40,500	Long-term liabilities	75,000
Inventory	60,000	Stockholders' equity	155,500
Equipment (net)	84,000		<u>\$274,500</u>
Patents	21,000		
	<u>\$274,500</u>		

The following additional information is provided.

1. Cash includes \$1,200 in a petty cash fund and \$15,000 invested in a 24-month certificate of deposit.
2. The net accounts receivable balance is comprised of the following two items: (a) accounts receivable \$44,000 and (b) allowance for doubtful accounts \$3,500.
3. Inventory costing \$5,300 was shipped out on consignment on July 31, 2025. The ending inventory balance does not include the consigned goods. Receivables in the amount of \$5,300 were recognized on these consigned goods.
4. Equipment had a cost of \$112,000 and an accumulated depreciation balance of \$28,000.
5. Income taxes payable of \$6,000 were accrued on July 31. Geronimo Company, however, had set up a cash fund to meet this obligation. This cash fund was not included in the cash balance but was offset against the income taxes payable amount.

Instructions

Prepare a corrected classified balance sheet as of July 31, 2025, from the available information, adjusting the account balances using the additional information.

E4.7 (LO 1) Excel (Current Assets Section of the Balance Sheet) Presented below are selected accounts of Yasunari Kawabata Company at December 31, 2025.

Inventory (finished goods)	\$ 52,000	Cost of Goods Sold	\$2,100,000
Unearned Service Revenue	90,000	Notes Receivable	40,000
Equipment	253,000	Accounts Receivable	161,000
Inventory (work in process)	34,000	Inventory (raw materials)	207,000
Cash	37,000	Supplies Expense	60,000
Debt Investments (trading)	31,000	Allowance for Doubtful Accounts	12,000
Customer Advances	36,000	Licenses	18,000
Restricted Cash for Plant Expansion	50,000	Additional Paid-in Capital	88,000
		Treasury Stock	22,000

The following additional information is available.

1. Inventories are valued at lower-of-cost-or-market using LIFO.
2. Equipment is recorded at cost. Accumulated depreciation, computed on a straight-line basis, is \$50,600.
3. The short-term investments have a fair value of \$29,000.
4. The notes receivable are due April 30, 2027, with interest receivable every April 30. The notes bear interest at 6%. (*Hint:* Accrue interest due on December 31, 2025.)
5. The allowance for doubtful accounts applies to the accounts receivable. Accounts receivable of \$50,000 are pledged as collateral on a bank loan.
6. Licenses are recorded net of accumulated amortization of \$14,000.
7. Treasury stock is recorded at cost.

Instructions

Prepare the current assets section of Yasunari Kawabata Company's December 31, 2025, balance sheet, with appropriate disclosures.

E4.8 (LO 1) (Current vs. Long-term Liabilities) Frederic Chopin Corporation is preparing its December 31, 2025, balance sheet. The following items may be reported as either a current or long-term liability.

1. On December 15, 2025, Chopin declared a cash dividend of \$2.50 per share to stockholders of record on December 31. The dividend is payable on January 15, 2026. Chopin has issued 1,000,000 shares of common stock, of which 50,000 shares are held in treasury.
2. At December 31, bonds payable of \$100,000,000 are outstanding. The bonds pay 12% interest every September 30 and mature in installments of \$25,000,000 every September 30, beginning September 30, 2026.
3. At December 31, 2024, customer advances were \$12,000,000. During 2025, Chopin collected \$30,000,000 of customer advances; advances of \$25,000,000 should be recognized in income.

Instructions

For each item above, indicate the dollar amounts to be reported as a current liability and as a long-term liability, if any.

E4.9 (LO 1) (Current Assets and Current Liabilities) The current assets and current liabilities sections of the balance sheet of Alessandro Scarlatti Company appear as follows.

Alessandro Scarlatti Company				
Balance Sheet (partial)				
December 31, 2025				
Cash		\$ 40,000	Accounts payable	\$ 61,000
Accounts receivable	\$89,000		Notes payable	67,000
Less: Allowance for				<u>\$128,000</u>
doubtful accounts	<u>7,000</u>	82,000		
Inventory		171,000		
Prepaid expenses		<u>9,000</u>		
		<u>\$302,000</u>		

The following errors in the corporation's accounting have been discovered:

1. January 2026 cash disbursements entered as of December 2025 included payments of accounts payable in the amount of \$39,000, on which a cash discount of 2% was taken.
2. The inventory included \$27,000 of merchandise that had been received at December 31 but for which no purchase invoices had been received or entered. Of this amount, \$12,000 had been received on consignment; the remainder was purchased f.o.b. destination, terms 2/10, n/30.
3. Sales for the first four days in January 2026 in the amount of \$30,000 were entered in the sales journal as of December 31, 2025. Of these, \$21,500 were sales on account and the remainder were cash sales.
4. Cash, not including cash sales, collected in January 2026 and entered as of December 31, 2025, totaled \$35,324. Of this amount, \$23,324 was received on account after cash discounts of 2% had been deducted; the remainder represented the proceeds of a bank loan.

Instructions

- a. Restate the current assets and current liabilities sections of the balance sheet in accordance with good accounting practice. (Assume that both accounts receivable and accounts payable are recorded gross.)
- b. State the net effect of your adjustments on Alessandro Scarlatti Company's retained earnings balance.

E4.10 (LO 1) (Current Liabilities) Norma Smith is the controller of Baylor Corporation and is responsible for the preparation of the year-end financial statements. The following transactions occurred during the year.

- a. Bonuses to key employees based on net income for 2025 are estimated to be \$150,000.

- b. On December 1, 2025, the company borrowed \$600,000 at 8% per year. Interest is paid quarterly.
- c. Accounts receivable at December 31, 2025, is \$10,000,000. An aging analysis indicates that Baylor's expense provision for doubtful accounts is estimated to be 3% of the receivables balance.
- d. On December 15, 2025, the company declared a \$2.00 per share dividend on the 40,000 shares of common stock outstanding, to be paid on January 5, 2026.
- e. During the year, customer advances of \$160,000 were received; \$50,000 of this amount was earned by December 31, 2025.

Instructions

For each item above, indicate the dollar amount to be reported as a current liability as of December 31, 2025. If a liability is not reported, explain why.

E4.11 (LO 1) Excel (Balance Sheet Preparation) Presented below is the adjusted trial balance of Kelly Corporation at December 31, 2025.

	<u>Debit</u>	<u>Credit</u>
Cash	\$?	
Supplies	1,200	
Prepaid Insurance	1,000	
Equipment	48,000	
Accumulated Depreciation—Equipment		\$ 4,000
Trademarks	950	
Accounts Payable		10,000
Salaries and Wages Payable		500
Unearned Service Revenue		2,000
Bonds Payable (due 2032)		9,000
Common Stock		10,000
Retained Earnings		25,000
Service Revenue		10,000
Salaries and Wages Expense	9,000	
Insurance Expense	1,400	
Rent Expense	1,200	
Interest Expense	900	
Total	<u>\$?</u>	<u>\$?</u>

Additional information:

- Net loss for the year was \$2,500.
- No dividends were declared during 2025.

Instructions

Prepare a classified balance sheet as of December 31, 2025.

E4.12 (LO 1) (Preparation of a Balance Sheet) Presented below is the trial balance of Scott Butler Corporation at December 31, 2025.

	<u>Debit</u>	<u>Credit</u>
Cash	\$ 197,000	
Sales Revenue		\$ 8,100,000
Debt Investments (trading) (at cost, \$145,000)	153,000	
Cost of Goods Sold	4,800,000	
Debt Investments (long-term)	299,000	
Equity Investments (long-term)	277,000	
Notes Payable (short-term)		90,000
Accounts Payable		455,000
Selling Expenses	2,000,000	
Investment Revenue		63,000
Land	260,000	
Buildings	1,040,000	
Dividends Payable		136,000

Common Stock (\$5 par)		1,000,000
Treasury Stock	191,000	
Patents	195,000	
Retained Earnings		78,000
Paid-in Capital in Excess of Par		80,000
Totals	<u>\$12,315,000</u>	<u>\$12,315,000</u>

Instructions

Prepare a balance sheet at December 31, 2025, for Scott Butler Corporation. (Ignore income taxes.)

E4.13 (LO 2) (Statement of Cash Flows—Classifications) The major classifications of activities reported in the statement of cash flows are operating, investing, and financing. Classify each of the transactions listed below as:

1. Operating activity—add to net income.
2. Operating activity—deduct from net income.
3. Investing activity.
4. Financing activity.
5. Reported as significant noncash activity.

The transactions are as follows.

- | | |
|--|---|
| a. Issuance of common stock. | h. Payment of cash dividends. |
| b. Purchase of land and building. | i. Exchange of furniture for office equipment. |
| c. Redemption of bonds. | j. Purchase of treasury stock. |
| d. Sale of equipment. | k. Loss on sale of equipment. |
| e. Depreciation of machinery. | l. Increase in accounts receivable during the year. |
| f. Amortization of patent. | m. Decrease in accounts payable during the year. |
| g. Issuance of bonds for plant assets. | |

E4.14 (LO 2) (Preparation of a Statement of Cash Flows) The comparative balance sheets of Constantine Cavamanlis Inc. at the beginning and the end of the year 2025 are as follows.

Constantine Cavamanlis Inc. Balance Sheets			
<u>Assets</u>	<u>Dec. 31, 2025</u>	<u>Jan. 1, 2025</u>	<u>Inc./Dec.</u>
Cash	\$ 45,000	\$ 13,000	\$32,000 Inc.
Accounts receivable	91,000	88,000	3,000 Inc.
Equipment	39,000	22,000	17,000 Inc.
Less: Accumulated depreciation—equipment	17,000	11,000	6,000 Inc.
Total	<u>\$158,000</u>	<u>\$112,000</u>	
<u>Liabilities and Stockholders' Equity</u>			
Accounts payable	\$ 20,000	\$ 15,000	\$ 5,000 Inc.
Common stock	100,000	80,000	20,000 Inc.
Retained earnings	38,000	17,000	21,000 Inc.
Total	<u>\$158,000</u>	<u>\$112,000</u>	

Net income of \$44,000 was reported, and dividends of \$23,000 were paid in 2025. New equipment was purchased and none was sold.

Instructions

Prepare a statement of cash flows for the year 2025.

E4.15 (LO 2) (Preparation of a Statement of Cash Flows) The following is a condensed version of the comparative balance sheets for Zubin Mehta Corporation for the last two years at December 31.

	2025	2024
Cash	\$177,000	\$ 78,000
Accounts receivable	180,000	185,000
Investments	52,000	74,000
Equipment	298,000	240,000
Accumulated depreciation—equipment	(106,000)	(89,000)
Current liabilities	134,000	151,000
Common stock	160,000	160,000
Retained earnings	307,000	177,000

Additional information:

Investments were sold at a loss of \$10,000; no equipment was sold; cash dividends paid were \$30,000; and net income was \$160,000.

Instructions

- Prepare a statement of cash flows for 2025 for Zubin Mehta Corporation.
- Determine Zubin Mehta Corporation's free cash flow.

E4.16 (LO 2) (Preparation of a Statement of Cash Flows) A comparative balance sheet for Shabbona Corporation is presented as follows.

	December 31	
	2025	2024
Assets		
Cash	\$ 73,000	\$ 22,000
Accounts receivable	82,000	66,000
Inventory	180,000	189,000
Land	71,000	110,000
Equipment	260,000	200,000
Accumulated depreciation—equipment	(69,000)	(42,000)
Total	<u>\$597,000</u>	<u>\$545,000</u>
Liabilities and Stockholders' Equity		
Accounts payable	\$ 34,000	\$ 47,000
Bonds payable	150,000	200,000
Common stock (\$1 par)	214,000	164,000
Retained earnings	199,000	134,000
Total	<u>\$ 597,000</u>	<u>\$ 545,000</u>

Additional information:

- Net income for 2025 was \$125,000. No gains or losses were recorded in 2020.
- Cash dividends of \$60,000 were declared and paid.
- Bonds payable amounting to \$50,000 were retired through issuance of common stock.

Instructions

- Prepare a statement of cash flows for 2025 for Shabbona Corporation.
- Determine Shabbona Corporation's current cash debt coverage, cash debt coverage, and free cash flow. Comment on its liquidity and financial flexibility.

E4.17 (LO 1, 2) (Preparation of a Statement of Cash Flows and a Balance Sheet) Grant Wood Corporation's balance sheet at the end of 2024 included the following items.

Current assets (Cash \$82,000)	\$235,000	Current liabilities	\$150,000
Land	30,000	Bonds payable	100,000
Buildings	120,000	Common stock	180,000
Equipment	90,000	Retained earnings	44,000
Accum. depr.—buildings	(30,000)	Total	<u>\$474,000</u>
Accum. depr.—equipment	(11,000)		
Patents	40,000		
Total	<u>\$474,000</u>		

The following information is available for 2025.

1. Net income was \$55,000.
2. Equipment (cost \$20,000 and accumulated depreciation \$8,000) was sold for \$10,000.
3. Depreciation expense was \$4,000 on the building and \$9,000 on equipment.
4. Patent amortization was \$2,500.
5. Current assets other than cash increased by \$29,000. Current liabilities increased by \$13,000.
6. An addition to the building was completed at a cost of \$27,000.
7. A long-term investment in stock was purchased for \$16,000.
8. Bonds payable of \$50,000 were issued.
9. Cash dividends of \$30,000 were declared and paid.
10. Treasury stock was purchased at a cost of \$11,000.

Instructions

(Show only totals for current assets and current liabilities.)

- a. Prepare a statement of cash flows for 2025.
- b. Prepare a balance sheet at December 31, 2025.

E4.18 (LO 2) (Preparation of a Statement of Cash Flows, Analysis) The comparative balance sheets of Madrasah Corporation at the beginning and end of the year 2025 are as follows.

Madrasah Corporation Balance Sheets			
	Dec. 31, 2025	Jan. 1, 2025	Inc./Dec.
Assets			
Cash	\$ 20,000	\$ 13,000	\$ 7,000 Inc.
Accounts receivable	106,000	88,000	18,000 Inc.
Equipment	39,000	22,000	17,000 Inc.
Less: Accumulated depreciation—equipment	17,000	11,000	6,000 Inc.
Total	<u>\$148,000</u>	<u>\$112,000</u>	
Liabilities and Stockholders' Equity			
Accounts payable	\$ 20,000	\$ 15,000	\$ 5,000 Inc.
Common stock	100,000	80,000	20,000 Inc.
Retained earnings	28,000	17,000	11,000 Inc.
Total	<u>\$148,000</u>	<u>\$112,000</u>	

Net income of \$44,000 was reported, and dividends of \$33,000 were paid in 2025. New equipment was purchased and none was sold.

Instructions

- a. Prepare a statement of cash flows for the year 2025.
- b. Compute the current ratio (current assets ÷ current liabilities) as of January 1, 2025, and December 31, 2025, and compute free cash flow for the year 2025.
- c. In light of the analysis in (b), comment on Madrasah's liquidity and financial flexibility.

Problems

P4.1 (LO 1) (Preparation of a Classified Balance Sheet, Periodic Inventory) Presented below is a list of accounts in alphabetical order.

Accounts Receivable	Buildings
Accumulated Depreciation—Buildings	Cash (in bank)
Accumulated Depreciation—Equipment	Cash (on hand)
Accumulated Other Comprehensive Income	Cash Surrender Value of Life Insurance
Advances to Employees	Commission Expense
Advertising Expense	Common Stock
Allowance for Doubtful Accounts	Interest Receivable
Bond Sinking Fund	Inventory—Beginning

(continues)

Bonds Payable	Inventory—Ending
Land	Prepaid Rent
Land for Future Plant Site	Purchase Returns and Allowances
Loss from Flood	Purchases
Notes Payable (due next year)	Retained Earnings
Paid-in Capital in Excess of Par—Preferred Stock	Salaries and Wages Expense (sales)
Patents	Salaries and Wages Payable
Payroll Taxes Payable	Sales Discounts
Pension Liability	Sales Revenue
Petty Cash	Treasury Stock (at cost)
Preferred Stock	Unearned Subscriptions Revenue
Premium on Bonds Payable	

Instructions

Prepare a classified balance sheet in good form. (No monetary amounts are to be shown.)

P4.2 (LO 1) Excel (Balance Sheet Preparation) Presented below are a number of balance sheet items for Montoya, Inc. for the current year, 2025.

Goodwill	\$ 125,000	Accumulated depreciation—equipment	\$ 292,000
Payroll taxes payable	177,591	Inventory	239,800
Bonds payable	300,000	Rent payable (short-term)	45,000
Discount on bonds payable	15,000	Income taxes payable	98,362
Cash	360,000	Rent payable (long-term)	480,000
Land	480,000	Common stock, \$1 par value	200,000
Notes receivable	445,700	Preferred stock, \$10 par value	150,000
Notes payable (to banks)	265,000	Prepaid expenses	87,920
Accounts payable	490,000	Equipment	1,470,000
Retained earnings	?	Debt investments (trading)	121,000
Income taxes receivable	97,630	Accumulated depreciation—buildings	270,200
Notes payable (long-term)	1,600,000	Buildings	1,640,000

Instructions

Prepare a classified balance sheet in good form. Common stock authorized was 400,000 shares, and preferred stock authorized was 20,000 shares. Assume that notes receivable and notes payable are short-term, unless stated otherwise. Cost and fair value of debt investments (trading) are the same.

P4.3 (LO 1) (Balance Sheet Adjustment and Preparation) The post-closing trial balance of Eastwood Company and other related information for the year 2025 are presented as follows.

Eastwood Company Post-Closing Trial Balance December 31, 2025		
	Debit	Credit
Cash	\$ 41,000	
Accounts Receivable	163,500	
Allowance for Doubtful Accounts		\$ 8,700
Prepaid Insurance	5,900	
Inventory	208,500	
Equity Investments (long-term)	339,000	
Land	85,000	
Construction in Process (building)	124,000	
Patents	36,000	
Equipment	400,000	
Accumulated Depreciation—Equipment		240,000
Discount on Bonds Payable	20,000	
Accounts Payable		148,000
Accrued Liabilities		49,200
Notes Payable		94,000
Bonds Payable		200,000
Common Stock		500,000
Paid-in Capital in Excess of Par—Common		45,000
Stock		
Retained Earnings		138,000
	<u>\$1,422,900</u>	<u>\$1,422,900</u>

Additional information:

1. The LIFO method of inventory value is used.
2. The cost and fair value of the long-term investments that consist of stocks (with ownership less than 20% of total shares) are the same.
3. The amount of the Construction in Progress account represents the costs expended to date on a building in the process of construction. (The company rents factory space at the present time.) The land on which the building is being constructed cost \$85,000, as shown in the trial balance.
4. The patents were purchased by the company at a cost of \$40,000 and are being amortized on a straight-line basis.
5. Of the discount on bonds payable, \$2,000 will be amortized in 2026.
6. The notes payable represent bank loans that are secured by long-term investments carried at \$120,000. These bank loans are due in 2026.
7. The bonds payable bear interest at 8% payable every December 31, and are due January 1, 2036.
8. 600,000 shares of common stock of a par value of \$1 were authorized, of which 500,000 shares were issued and outstanding.

Instructions

Prepare a balance sheet as of December 31, 2025, so that all important information is fully disclosed.

P4.4 (LO 1) Groupwork (Preparation of a Corrected Balance Sheet) The balance sheet of Kishwaukee Corporation as of December 31, 2025, is as follows.

Kishwaukee Corporation Balance Sheet December 31, 2025	
Assets	
Goodwill (Note 2)	\$ 120,000
Buildings (Note 1)	1,640,000
Inventory	312,100
Land	950,000
Accounts receivable	170,000
Treasury stock (50,000 shares)	87,000
Cash on hand	175,900
Assets allocated to trustee for plant expansion	
Cash in bank	70,000
Debt investments (held-to-maturity)	138,000
	<u>\$3,663,000</u>
Equities	
Notes payable (Note 3)	\$ 600,000
Common stock, authorized and issued, 1,000,000 shares, no par	1,150,000
Retained earnings	858,000
Appreciation capital (Note 1)	570,000
Income taxes payable	75,000
Reserve for depreciation recorded to date on the building	410,000
	<u>\$3,663,000</u>

Note 1: Buildings are stated at cost, except for one building that was recorded at appraised value. The excess of appraisal value over cost was \$570,000. Depreciation has been recorded based on cost.

Note 2: Goodwill in the amount of \$120,000 was recognized because the company believed that book value was not an accurate representation of the fair value of the company. The gain of \$120,000 was credited to Retained Earnings.

Note 3: Notes payable are long-term except for the current installment due of \$100,000.

Instructions

Prepare a corrected classified balance sheet in good form. The notes above are for information only.

P4.5 (LO 1) Groupwork (Balance Sheet Adjustment and Preparation) Presented below is the balance sheet of Sargent Corporation for the current year, 2025.

Sargent Corporation Balance Sheet December 31, 2025			
Current assets	\$ 485,000	Current liabilities	\$ 380,000
Investments	640,000	Long-term liabilities	1,000,000
Property, plant, and equipment	1,720,000	Stockholders' equity	1,770,000
Intangible assets	305,000		<u>\$3,150,000</u>
	<u>\$3,150,000</u>		

The following information is presented.

1. The current assets section includes cash \$150,000, accounts receivable \$170,000 less \$10,000 for allowance for doubtful accounts, inventories \$180,000, and unearned rent revenue \$5,000. Inventory is stated on the lower-of-FIFO-cost-or-net realizable value.
2. The investments section includes the cash surrender value of a life insurance contract \$40,000; investments in common stock, short-term \$80,000 and long-term \$270,000; and bond sinking fund \$250,000. The cost and fair value of investments in common stock are the same.
3. Property, plant, and equipment includes buildings \$1,040,000 less accumulated depreciation \$360,000, equipment \$450,000 less accumulated depreciation \$180,000, land \$500,000, and land held for future use \$270,000.
4. Intangible assets include a franchise \$165,000, goodwill \$100,000, and discount on bonds payable \$40,000.
5. Current liabilities include accounts payable \$140,000, notes payable—short-term \$80,000 and long-term \$120,000, and income taxes payable \$40,000.
6. Long-term liabilities are composed solely of 7% bonds payable due 2033.
7. Stockholders' equity has preferred stock, no par value, authorized 200,000 shares, issued 70,000 shares for \$450,000; and common stock, \$1 par value, authorized 400,000 shares, issued 100,000 shares at an average price of \$10. In addition, the corporation has retained earnings of \$320,000.

Instructions

Prepare a balance sheet in good form, adjusting the amounts in each balance sheet classification as affected by the information given above.

P4.6 (LO 1, 2) Excel (Preparation of a Statement of Cash Flows and a Balance Sheet) Lansbury Inc. had the following balance sheet at December 31, 2024.

Lansbury Inc. Balance Sheet December 31, 2024			
Cash	\$ 20,000	Accounts payable	\$ 30,000
Accounts receivable	21,200	Notes payable (long-term)	41,000
Investments	32,000	Common stock	100,000
Plant assets (net)	81,000	Retained earnings	<u>23,200</u>
Land	40,000		<u>\$194,200</u>
	<u>\$194,200</u>		

During 2025, the following occurred.

1. Lansbury Inc. sold part of its debt investment portfolio for \$15,000. This transaction resulted in a gain of \$3,400 for the firm. The company classifies these investments as available-for-sale.
2. A tract of land was purchased for \$13,000 cash.
3. Long-term notes payable in the amount of \$16,000 were retired before maturity by paying \$16,000 cash.
4. An additional \$20,000 in common stock was issued at par.
5. Dividends of \$8,200 were declared and paid to stockholders.
6. Net income for 2025 was \$32,000 after allowing for depreciation of \$11,000.
7. Land was purchased through the issuance of \$35,000 in bonds.
8. At December 31, 2025, Cash was \$37,000, Accounts Receivable was \$41,600, and Accounts Payable remained at \$30,000.

Instructions

- Prepare a statement of cash flows for 2025.
- Prepare an unclassified balance sheet as it would appear at December 31, 2025.
- How might the statement of cash flows help the user of the financial statements? Compute two cash flow ratios.

P4.7 (LO 1, 2) Groupwork (Preparation of a Statement of Cash Flows and Balance Sheet)
Aero Inc. had the following balance sheet at December 31, 2024.

Aero Inc. Balance Sheet December 31, 2024			
Cash	\$ 20,000	Accounts payable	\$ 30,000
Accounts receivable	21,200	Bonds payable	41,000
Investments	32,000	Common stock	100,000
Plant assets (net)	81,000	Retained earnings	23,200
Land	40,000		<u>\$194,200</u>
	<u>\$194,200</u>		

During 2025, the following occurred.

- Aero liquidated its available-for-sale debt investment portfolio at a loss of \$5,000.
- A tract of land was purchased for \$38,000.
- An additional \$30,000 in common stock was issued at par.
- Dividends totaling \$10,000 were declared and paid to stockholders.
- Net income for 2025 was \$35,000, including \$12,000 in depreciation expense.
- Land was purchased through the issuance of \$30,000 in additional bonds.
- At December 31, 2025, Cash was \$70,200, Accounts Receivable was \$42,000, and Accounts Payable was \$40,000.

Instructions

- Prepare a statement of cash flows for the year 2025 for Aero.
- Prepare the unclassified balance sheet as it would appear at December 31, 2025.
- Compute Aero's free cash flow and current cash debt coverage for 2025.
- Use the analysis of Aero to illustrate how information in the balance sheet and statement of cash flows helps the user of the financial statements.

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ4.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the related information in the annual report to answer the following questions.

- What balance sheet format did P&G adopt?
- Identify the various techniques of disclosure P&G might have used to disclose additional pertinent financial information. Which technique does it use in its financials?
- In what classifications are P&G's investments reported? What valuation basis does P&G use to report its investments? How much working capital did P&G have on June 30, 2020? On June 30, 2019?
- What were P&G's cash flows from its operating, investing, and financing activities for 2020? What were its trends in net cash provided by operating activities over the period 2018–2020? Explain why the change in accounts payable and in accrued and other liabilities is added to net income to arrive at net cash provided by operating activities.
- Compute P&G's (1) current cash debt coverage, (2) cash debt coverage, and (3) free cash flow for 2020. What do these ratios indicate about P&G's financial condition?

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ4.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- What format(s) did these companies use to present their balance sheets?
- How much working capital did each of these companies have at the end of 2020? Speculate as to their rationale for the amount of working capital they maintain.
- What are the companies' annual and 3-year (2018–2020) growth rates in total assets and long-term debt?
- What were these two companies' trends in net cash provided by operating activities over the period 2018–2020?
- Compute both companies' (1) current cash debt coverage, (2) cash debt coverage, and (3) free cash flow. What do these ratios indicate about the financial condition of the two companies?

Financial Statement Analysis Case: Uniroyal Technology Corporation (UTC)

UYJ4.3 Uniroyal Technology Corporation (UTC), with corporate offices in Sarasota, Florida, is organized into three operating segments. The high-performance plastics segment is responsible for research, development, and manufacture of a wide variety of products, including orthopedic braces, graffiti-resistant seats for buses and airplanes, and a static-resistant plastic used in the central processing units of microcomputers. The coated fabrics segment manufactures products such as automobile seating, door and instrument panels, and specialty items such as waterproof seats for personal watercraft and stain-resistant, easy-cleaning upholstery fabrics. The foams and adhesives segment develops and manufactures products used in commercial roofing applications.

The following items relate to operations in a recent year.

- Serious pressure was placed on profitability by sharply increasing raw material prices. Some raw materials increased in price 50% during the past year. Cost containment programs were instituted and product prices were increased whenever possible, which resulted in profit margins actually improving over the course of the year.
- The company entered into a revolving credit agreement, under which UTC may borrow the lesser of \$15,000,000 or 80% of eligible accounts receivable. At the end of the year, approximately \$4,000,000 was outstanding under this agreement. The company plans to use this line of credit in the upcoming year to finance operations and expansion.

Instructions

- Should investors be informed of raw materials price increases, such as described in item 1? Does the fact that the company successfully met the challenge of higher prices affect the answer? Explain.
- How should the information in item 2 be presented in the financial statements of UTC?

Financial Statement Analysis Case: Sherwin-Williams

UYJ4.4 Sherwin-Williams, based in Cleveland, Ohio, manufactures a wide variety of paint and other coatings, which are marketed through its specialty stores and in other retail outlets. The company also manufactures paint for automobiles. The Automotive Division has had financial difficulty. During a recent year, five branch locations of the Automotive Division were closed, and new management was put in place for the branches remaining.

The following titles were shown on Sherwin-Williams's balance sheet for that year.

Accounts payable	Buildings
Accounts receivable, less allowance	Cash and cash equivalents
Accrued taxes	Common stock
Employee compensation payable	Other current assets
Finished goods inventories	Other long-term liabilities
Intangibles and other assets	Postretirement obligations other than pensions
Land	Retained earnings
Long-term debt	Short-term investments
Machinery and equipment	Taxes payable
Other accruals	Work in process and raw materials inventories
Other capital	

Instructions

- Organize the accounts in the general order in which they would have been presented in a classified balance sheet.
- When several of the branch locations of the Automotive Division were closed, what balance sheet accounts were most likely affected? Did the balance in those accounts decrease or increase?

Financial Statement Analysis Case: Deere & Company

UYJ4.5 Presented below is the SEC-mandated disclosure of contractual obligations provided by **Deere & Company** in a recent annual report. Deere & Company reported current assets of \$50,060 and total current liabilities of \$21,394 at year-end. (All dollars are in millions.)

Aggregate Contractual Obligations

The payment schedule for the company's contractual obligations at year-end in millions of dollars is as follows:

	Total	Less than 1 year	1–3 years	4 and 5 years	More than 5 years
Debt					
Equipment operations	\$ 5,091	\$ 434	\$ 270	\$ 775	\$3,612
Financial services	31,692	9,962	11,477	6,578	3,675
Total	36,783	10,396	11,747	7,353	7,287
Interest on debt	4,777	609	1,069	745	2,354
Accounts payable	2,743	2,611	90	39	3
Capital leases	87	39	42	4	2
Purchasing obligations	3,007	2,970	37	—	—
Operating leases	371	121	134	70	46
Total	<u>\$47,768</u>	<u>\$16,746</u>	<u>\$13,119</u>	<u>\$8,211</u>	<u>\$9,692</u>

Instructions

- Compute Deere & Company's working capital and current ratio (current assets ÷ current liabilities) with and without the off-balance-sheet contractual obligations reported in the schedule.
- Briefly discuss how the information provided in the contractual obligation disclosure would be useful in evaluating Deere & Company for loans (1) due in one year and (2) due in five years.

Financial Statement Analysis Case: Amazon.com

UYJ4.6 The incredible growth of **Amazon.com** has put fear into the hearts of traditional retailers. Amazon's stock price has soared to amazing levels. However, it is often pointed out in the financial press that it took the company several years to report its first profit. The following financial information is taken from a recent annual report.

(\$ in millions)	Current Year	Prior Year
Current assets	\$31,327	\$24,625
Total assets	54,505	40,159
Current liabilities	28,089	22,980
Total liabilities	43,764	30,413
Cash provided by operations	6,842	5,475
Capital expenditures	4,893	3,444
Dividends paid	—	—
Net income (loss)	(241)	274
Sales	88,988	74,452

Instructions

- Calculate free cash flow for Amazon for the current and prior years, and discuss its ability to finance expansion from internally generated cash. At one time, Amazon had avoided purchasing large warehouses. Instead, it used those of others. It is possible, however, that in order to increase customer satisfaction the company could build its own warehouses. How might your impression of its ability to finance expansion change?
- Discuss any potential implications of the change in Amazon's cash provided by operations from the prior year to the current year.

Accounting, Analysis, and Principles

UYJ4.7 Early in January 2026, Hopkins Company is preparing for a meeting with its bankers to discuss a loan request. Its bookkeeper provided the following accounts and balances at December 31, 2025.

	<u>Debit</u>	<u>Credit</u>
Cash	\$ 75,000	
Accounts Receivable (net)	38,500	
Inventory	65,300	
Equipment (net)	84,000	
Patents	15,000	
Notes and Accounts Payable		\$ 52,000
Notes Payable (due 2027)		75,000
Common Stock		100,000
Retained Earnings		50,800
	<u>\$277,800</u>	<u>\$277,800</u>

Except for the following items, Hopkins has recorded all adjustments in its accounts.

1. Cash includes \$500 petty cash and \$15,000 in a bond sinking fund.
2. Net accounts receivable is comprised of \$52,000 in accounts receivable and \$13,500 in allowance for doubtful accounts.
3. Equipment had a cost of \$112,000 and accumulated depreciation of \$28,000.
4. On January 8, 2026, one of Hopkins' customers declared bankruptcy. At December 31, 2025, this customer owed Hopkins \$9,000.

Accounting

Prepare a December 31, 2025, balance sheet for Hopkins Company.

Analysis

Hopkins' bank is considering granting an additional loan in the amount of \$45,000, which will be due December 31, 2026. How can the information in the balance sheet provide useful information to the bank about Hopkins' ability to repay the loan?

Principles

In the upcoming meeting with the bank, Hopkins plans to provide additional information about the fair value of its equipment and some internally generated intangible assets related to its customer lists. This information indicates that Hopkins has significant unrealized gains on these assets, which are not reflected on the balance sheet. What objections is the bank likely to raise about the usefulness of this information in evaluating Hopkins for the loan renewal?

Developing Your Professional Skills

Critical-Thinking Cases

CT4.1 (LO 1) (Reporting the Financial Effects of Varied Transactions) In an examination of Arenes Corporation as of December 31, 2025, you have learned that the following situations exist. No entries have been made in the accounting records for these items.

1. The corporation erected its present factory building in 2009. Depreciation was calculated by the straight-line method, using an estimated life of 35 years. Early in 2025, the board of directors conducted a careful survey and estimated that the factory building had a remaining useful life of 25 years as of January 1, 2025.
2. An additional assessment of 2024 income taxes was levied and paid in 2025.
3. When calculating the accrual for officers' salaries at December 31, 2025, it was discovered that the accrual for officers' salaries for December 31, 2024, had been overstated.
4. On December 15, 2025, Arenes Corporation declared a cash dividend on its common stock outstanding, payable February 1, 2026, to the common stockholders of record December 31, 2025.

Instructions

Describe fully how each of the items above should be reported in the financial statements of Arenes Corporation for the year 2025.

CT4.2 (LO 1) (Identifying Balance Sheet Deficiencies) The assets of Fonzarelli Corporation are presented below (000s omitted).

Fonzarelli Corporation Balance Sheet (partial) December 31, 2025		
Assets		
Current assets		
Cash		\$ 100,000
Unclaimed payroll checks		27,500
Debt investments (trading) (fair value \$30,000) at cost		37,000
Accounts receivable (less bad debt reserve)		75,000
Inventory—at lower-of-cost (determined by the next-in, first-out method)-or-net realizable value		240,000
Total current assets		479,500
Tangible assets		
Land (less accumulated depreciation)		80,000
Buildings and equipment	\$800,000	
Less: Accumulated depreciation	250,000	550,000
Net tangible assets		630,000
Long-term investments		
Stocks and bonds		100,000
Treasury stock		70,000
Total long-term investments		170,000
Other assets		
Discount on bonds payable		19,400
Sinking fund		975,000
Total other assets		994,400
Total assets		\$2,273,900

Instructions

Indicate the deficiencies, if any, in the foregoing presentation of Fonzarelli Corporation's assets.

CT4.3 (LO 1) Writing (Critique of Balance Sheet Format and Content) The following is the balance sheet of Sameed Brothers Corporation (000s omitted).

Sameed Brothers Corporation Balance Sheet December 31, 2025		
Assets		
Current assets		
Cash	\$26,000	
Marketable securities	18,000	
Accounts receivable	25,000	
Inventory	20,000	
Supplies	4,000	
Stock investment in subsidiary company	20,000	\$113,000
Assets		
Investments		
Treasury stock		25,000
Property, plant, and equipment		
Buildings and land	91,000	
Less: Reserve for depreciation	31,000	60,000
Other assets		
Cash surrender value of life insurance		19,000
Total assets		\$217,000
Liabilities and Stockholders' Equity		
Current liabilities		
Accounts payable	\$22,000	
Reserve for income taxes	15,000	
Customers' accounts with credit balances	1	\$ 37,001
Deferred credits		
Unamortized premium on bonds payable		2,000

(continues)

Long-term liabilities		
Bonds payable		<u>60,000</u>
Total liabilities		99,001
Common stock		
Common stock, par \$5	85,000	
Earned surplus	24,999	
Cash dividends declared	<u>8,000</u>	<u>117,999</u>
Total liabilities and stockholders' equity		<u><u>\$217,000</u></u>

Instructions

Evaluate the balance sheet presented. State briefly the proper treatment of any item criticized.

CT4.4 (LO 1) Ethics (Presentation of Property, Plant, and Equipment) Carol Keene, corporate comptroller for Dumaine Industries, is trying to decide how to present "Property, plant, and equipment" in the balance sheet. She realizes that the statement of cash flows will show that the company made a significant investment in purchasing new equipment this year, but overall she knows the company's plant assets are rather old. She feels that she can disclose one figure titled "Property, plant, and equipment, net of depreciation," and the result will be a low figure. However, it will not disclose the age of the assets. If she chooses to show the cost less accumulated depreciation, the age of the assets will be apparent. She proposes the following.

Property, plant, and equipment, net of depreciation <i>rather than</i>	\$10,000,000
Property, plant, and equipment	\$50,000,000
Less: Accumulated depreciation	<u>40,000,000</u>
Net book value	<u><u>\$10,000,000</u></u>

Instructions

Answer the following questions.

- What are the ethical issues involved?
- What should Keene do?

CT4.5 (LO 2) Writing (Cash Flow Analysis) The partner in charge of the Kappeler Corporation audit comes by your desk and leaves a letter he has started to the CEO and a copy of the cash flow statement for the year ended December 31, 2025. Because he must leave on an emergency, he asks you to finish the letter by explaining: (1) the disparity between net income and cash flow, (2) the importance of operating cash flow, (3) the renewable source(s) of cash flow, and (4) possible suggestions to improve the cash position.

Kappeler Corporation Statement of Cash Flows For the Year Ended December 31, 2025		
Cash flows from operating activities		
Net income		\$ 100,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 10,000	
Amortization expense	1,000	
Loss on sale of fixed assets	5,000	
Increase in accounts receivable (net)	(40,000)	
Increase in inventory	(35,000)	
Decrease in accounts payable	<u>(41,000)</u>	<u>(100,000)</u>
Net cash provided by operating activities		-0-
Cash flows from investing activities		
Sale of plant assets	25,000	
Purchase of equipment	(100,000)	
Purchase of land	<u>(200,000)</u>	
Net cash used by investing activities		(275,000)
Cash flows from financing activities		
Payment of dividends	(10,000)	
Redemption of bonds	<u>(100,000)</u>	
Net cash used by financing activities		<u>(110,000)</u>
Net decrease in cash		(385,000)
Cash balance, January 1, 2025		<u>400,000</u>
Cash balance, December 31, 2025		<u><u>\$ 15,000</u></u>

(continues)

Date
 President Kappeler, CEO
 Kappeler Corporation
 125 Wall Street
 Middleton, Kansas 67458
 Dear Mr. Kappeler:

I have good news and bad news about the financial statements for the year ended December 31, 2025. The good news is that net income of \$100,000 is close to what we predicted in the strategic plan last year, indicating strong performance this year. The bad news is that the cash balance is seriously low. Enclosed is the Statement of Cash Flows, which best illustrates how both of these situations occurred simultaneously ...

Instructions

Complete the letter to the CEO, including the four components requested by your boss.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE4.1 Access the Codification glossary (“Master Glossary”) to answer the following.

- a. What is the definition provided for current assets?
- b. What is the definition of an intangible asset? In what section of the Codification are intangible assets addressed?
- c. What are cash equivalents?
- d. What are financing activities?

CE4.2 What guidance does the Codification provide on the classification of current liabilities?

CE4.3 What guidance does the Codification provide concerning the format of accounting disclosures?

CE4.4 What are the objectives related to the statement of cash flows?

Codification Research Case

In light of the full disclosure principle, investors and creditors need to know the balances for assets, liabilities, and equity as well as the accounting policies adopted by management to measure the items reported in the balance sheet.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- a. Identify the literature that addresses the disclosure of accounting policies.
- b. How are accounting policies defined in the literature?
- c. What are the three scenarios that would result in detailed disclosure of the accounting methods used?
- d. What are some examples of common disclosures that are required under this statement?

Analytics in Action Activities

Using Data Visualizations to Understand Relationships Among Data

DA4.1 Is there a correlation between a company's current ratio and its debt coverage ratio? What is a good benchmark for profit margin on sales for a company in the technology industry? Can I use profit margin to project a company's payout ratio?

We can use publicly available financial data to answer these questions and many more. Data visualizations like the following chart can help us organize data in a way that helps us see relationships among the data that we might not understand from looking at numbers on a spreadsheet.

Required

For this exercise, you will use data visualizations showing various financial ratios for a selection of companies in the Dow Jones Industrial Average. You will then use that data to answer questions about the financial results of those companies.

[Go to Wiley Course Resources for complete details and instructions.](#)

DA4.2 Understanding the relationships among key financial ratios is critical when making investment or credit decisions.

Required

Using the same visualizations from DA4.1, you will take a deeper look at the relationships among the financial ratios and consider what conclusions can be drawn from that data.

[Go to Wiley Course Resources for complete details and instructions.](#)

Using Data Analytics for Financial Ratio Analysis

DA4.3 Before we can use visualizations to understand relationships among various financial ratios, we must first calculate the ratios. We learned about “data cleansing” in Chapter 2. Now, we can take our cleaned-up data and use it to calculate financial ratios.

Required

For this analytics exercise, you will use Excel to calculate several financial ratios for companies in the Dow 30. After calculating the ratios, you will create graphs in Excel to identify and understand relationships among the data.

[Go to Wiley Course Resources for complete details and instructions.](#)

IFRS Insights

LEARNING OBJECTIVE 5

Compare the accounting procedures related to the balance sheet under GAAP and IFRS.

As in GAAP, the balance sheet and the statement of cash flows are required statements for IFRS. However, the content and presentation of an IFRS statement of financial position (balance sheet) are different, while those for the cash flow statement are similar to those used for GAAP. In general, the disclosure requirements related to the balance sheet and the statement of cash flows are much more extensive and detailed in the United States. *IAS 1*, “Presentation of Financial Statements,” provides the overall IFRS requirements for balance sheet information. *IAS 7*, “Cash Flow Statements,” provides the overall IFRS requirements for cash flow information. IFRS insights on the statement of cash flows are presented in Chapter 22.

Following are the key similarities and differences between GAAP and IFRS related to the balance sheet.

Similarities

- Both IFRS and GAAP allow the use of title “balance sheet” or “statement of financial position.” IFRS recommends but does not require the use of the title “statement of financial position” rather than balance sheet.
- Both IFRS and GAAP require disclosures about (1) accounting policies followed, (2) judgments that management has made in the process of applying the entity’s accounting policies, and (3) the key assumptions and estimation uncertainty that could result in a material adjustment to the carrying amounts of assets and liabilities within the next financial year. Comparative prior period information must be presented and financial statements must be prepared annually.
- IFRS and GAAP require presentation of non-controlling interests in the equity section of the balance sheet.

Differences

- IFRS requires a classified statement of financial position except in very limited situations. IFRS follows the same guidelines as this text for distinguishing between current and non-current assets and liabilities. However, under GAAP, public companies must follow SEC regulations, which require specific line items. In addition, specific GAAP mandates certain forms of reporting for this information.
- Under IFRS, current assets are usually listed in the reverse order of liquidity. For example, under GAAP cash is listed first, but under IFRS it is listed last.
- IFRS has many differences in terminology that you will notice in this text. For example, in the equity section, common stock is called share capital—ordinary.
- Use of the term “reserve” is discouraged in GAAP, but there is no such prohibition in IFRS.

Additional IFRS Resources

Additional IFRS Insights with assessment are available online at Wiley Course Resources. For those who want more IFRS coverage, *Intermediate Accounting, IFRS Fourth Edition* exists as another resource.

Accounting and the Time Value of Money

WHAT is the time value of money?

Consider this question: If I offer you either \$100 today or the promise of \$100 tomorrow, which would you choose? While I never go back on a promise and it is very likely that I will pay you, receiving \$100 today is probably more valuable. If you have \$100 now, you can invest that money, receive interest, and then have more than \$100 tomorrow. So, as the **length of time** you wait to receive the money increases, the **amount of money** (interest that accumulates) increases as well.

WHY are time value of money concepts important to accounting?

A significant part of accounting is measurement. In fact, the measurement of a variety of assets and liabilities involves cash flows that will be received or paid in the future, including pension obligations, fair value estimates, and valuations of receivables. GAAP requires that we record these assets and liabilities on the balance sheet in today's dollars. This allows investors and creditors to be able to compare today's dollar and tomorrow's dollar on the same footing—to compare “apples to apples.”

This also has implications for you. For example, suppose you wish to begin saving for retirement by setting aside \$1,000 each year, beginning when you are 25 and assuming a rate of return of 6% on your retirement account. How much will you have on hand when you retire at age 65? Using future value computations that you will learn in this chapter, we can determine that those \$1,000 contributions each year will grow to balance of \$154,762, as shown in the adjacent chart (the blue bar). However, if you delay starting those contributions until age 30, your retirement fund will grow only to a value of \$111,435 (the orange bar in the chart). That is quite a haircut—about 28%. The lesson? Start early with your retirement savings plan because by delaying or missing contributions, you miss out on the power of compounding earned interest.

HOW are time value of money concepts applied in accounting?

Generally, managers, accountants, and investors are attempting to determine a future value (as in the retirement savings example) or the present value (or discounting). Important time value of money factors that must be considered include (1) calculating future and present dollar values, (2) identifying the number of time periods between the future and present values, and (3) specifying the appropriate interest rate. The purpose of this chapter is to present the tools and techniques that will help you measure the time value of money effects of present and future cash inflows and outflows.

5.1 Basic Time Value Concepts

LEARNING OBJECTIVE 1

Describe the fundamental concepts related to the time value of money.

In accounting (and finance), the phrase **time value of money** indicates that a dollar received today is worth more than a dollar promised at some time in the future. Why? Because of the opportunity to invest today's dollar and receive interest on the investment. Yet, when deciding among investment or borrowing alternatives, it is essential to compare today's dollar and tomorrow's dollar on the same footing—to compare “apples to apples.” Investors do that by using the concept of **present value**, which has many applications in accounting.

The Importance of Time Value Concepts

Financial reporting uses different measurements in different situations—historical cost for equipment, net realizable value for inventories, fair value for investments. As we discussed in Chapters 1 and 3, the FASB increasingly is requiring the use of fair values in the measurement of assets and liabilities.

However, for many assets and liabilities, market-based fair value information is not available. In these cases, fair value can be estimated based on the expected future cash flows related to the asset or liability. Such fair value estimates are generally considered Level 3 (most subjective) in the fair value hierarchy. They are based on unobservable inputs, such as a company's own data or assumptions related to the expected future cash flows associated with the asset or liability.

As discussed in the fair value guidance, present value techniques are used to convert expected cash flows into present values, which represent an estimate of fair value. [1] (See the FASB Codification References near the end of the chapter.) Some of the applications of present value-based measurements in accounting topics, which we discuss in this text, include the following.¹

Present Value-Based Accounting Measurements

- | | |
|--|--|
| <p>1. Notes. Valuing noncurrent receivables and payables that carry no stated rate or a stated rate that is different than the market interest rate.</p> <p>2. Leases. Valuing assets and obligations to be capitalized under long-term leases and measuring the amount of the lease payments and annual leasehold amortization.</p> <p>3. Measuring the value of future cash flows from oil and gas reserves for disclosure in supplementary information.</p> <p>8. Environmental liabilities. Determining the fair value of future obligations for asset retirements.</p> |
|--|--|

In addition to accounting and business applications, present value concepts also apply to your own finance and investment decisions. In purchasing a home or car, planning for retirement, and evaluating alternative investments, you will need to understand time value of money concepts.

¹GAAP addresses present value as a measurements basis for a broad array of transactions, such as accounts and loans receivable [2], leases [3], postretirement benefits [4], asset impairments [5], and stock-based compensation [6].

Understanding Interest

To understand interest, let's consider an example. Chase Bank lends Hillfarm Company \$10,000 with the understanding that Hillfarm will repay \$10,600. Here is the breakdown of this agreement.

- \$10,000 is the **principal**, or the amount borrowed or lent.
- \$600 is the **interest**, or the payment for the use of money.
- Chase will have \$600 of interest revenue.
- Hillfarm will have \$600 of interest expense.

Lenders generally state the amount of interest as a rate over a specific period of time, rather than as a dollar amount. The interest rate in the Chase/Hillfarm example is 6%, which is calculated by dividing the total interest by the principal ($\$600 \div \$10,000$).

In practice, interest is expressed as a percentage rather than a dollar amount. Business managers make investing and borrowing decisions based on interest rates rather than actual dollar amounts of interest to be received or paid.² Interest can be calculated on a simple or compound basis, as you'll discover next.

Simple Interest

Companies compute **simple interest** on the amount of the principal only. It is the return on (or growth of) the principal for one time period. The following equation expresses simple interest.³

$$\text{Interest} = p \times i \times n$$

where:

p = principal (the amount borrowed or invested)

i = rate of interest for a single period (a percentage of the outstanding principal)

n = number of periods (years, or portions of a year, that the principal is outstanding)

FACTS Hillfarm Company borrows \$10,000 for one year with a simple interest rate of 6% per year.

QUESTION What is the total interest to be paid by Hillfarm?

SOLUTION

Hillfarm computes the total interest it will pay as follows.

$$\begin{aligned}\text{Interest} &= p \times i \times n \\ &= \$10,000 \times .06 \times 1 \\ &= \$600\end{aligned}$$

If Hillfarm borrows \$10,000 for 3 months at 6%, the interest is \$150, computed as follows.

$$\begin{aligned}\text{Interest} &= \$10,000 \times .06 \times 3/12 \\ &= \$150\end{aligned}$$

Because the 6% is an annual interest rate but Hillfarm is only borrowing money for 3 months, we must adjust the 6% into a 3-month interest rate by multiplying by 3/12.

Example 5.1 Calculating Simple Interest

Compound Interest

John Maynard Keynes, the legendary English economist, supposedly called it magic. Mayer Rothschild, the founder of the famous European banking firm, proclaimed it the eighth wonder of the world. Today, people continue to praise its power. The object of their affection? Compound interest.

²Federal law requires the disclosure of interest rates on an annual basis in all contracts. That is, instead of stating the rate as "1% per month," contracts must state the rate as "12% per year" if it is simple interest, or "12.68% per year" if it is compounded monthly.

³Business mathematics and business finance texts traditionally state simple interest as $I (\text{interest}) = P (\text{principal}) \times R (\text{rate}) \times T (\text{time})$.

We compute **compound interest** on principal **and** on any interest earned that has not been paid or withdrawn. It is the return on, or growth of, the principal for two or more time periods.

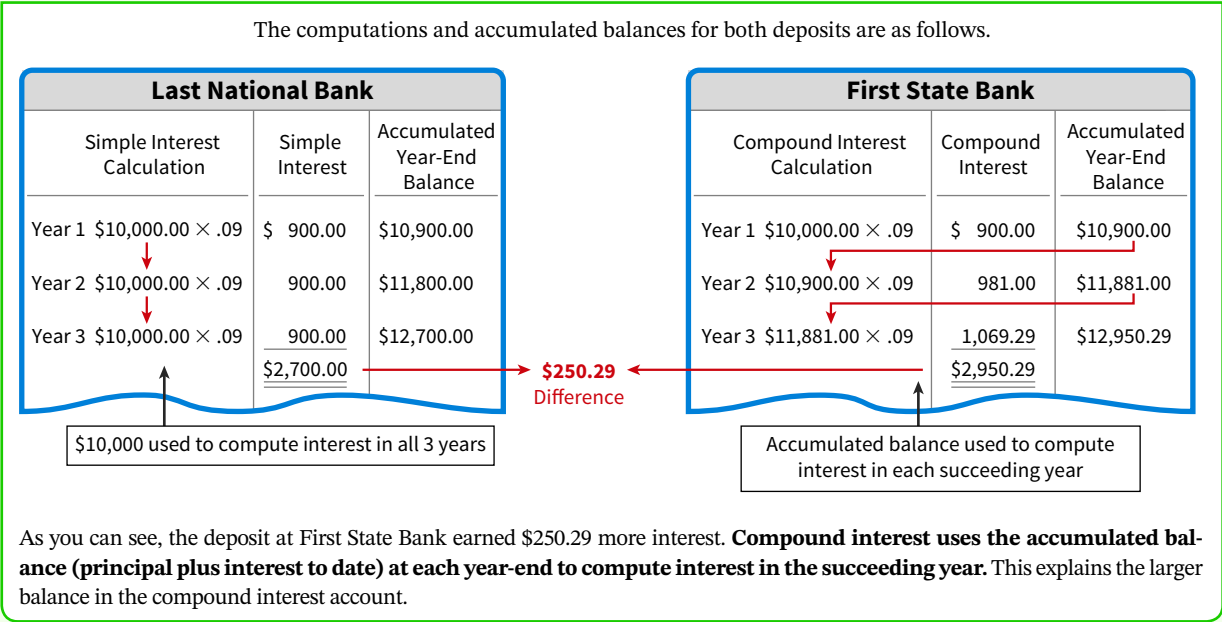

Example 5.2
 Simple versus
 Compound Interest

FACTS Vasquez Company deposits \$10,000 in the Last National Bank, where it will earn simple interest of 9% per year. It deposits another \$10,000 in the First State Bank, where it will earn compound interest of 9% per year compounded annually. In both cases, Vasquez will not withdraw any interest until 3 years from the date of deposit.

QUESTION What is the difference in interest received and accumulated balances for Vasquez on the two deposits?

SOLUTION

In Example 5.2, Vasquez would clearly choose compound interest, if available, over simple interest as it provides \$250.29 of additional interest revenue. Not surprisingly, compound interest is the typical interest computation applied in business situations. Simple interest usually applies only to short-term investments and debts that involve a time span of one year or less.

The continuing debate on Social Security reform provides an additional context to illustrate the power of compounding. One proposed idea is for the government to give \$1,000 to every citizen at birth.

- Assuming the account earns a modest 5% annual return until retirement at age 65, the \$1,000 would grow to **\$23,839**.
- If the government waited until age 18 to deposit the money, it would grow to only **\$9,906** with annual compounding.

That is, reducing the time invested by about one-third results in more than a 50% reduction in retirement money. This example illustrates the importance of starting early when the power of compounding is involved.

Keep this example in mind as you begin your career and are offered the opportunity to contribute to a retirement plan. The earlier you begin saving, the more savings you will have to enjoy your retirement! We show you next how to solve typical compound interest problems used in business as well as those you may encounter in your own life.

How to Solve Compound Interest Problems

Solving compound interest problems requires understanding the variables and the formulas. The following four variables are fundamental to all compound interest problems.

Fundamental Variables

1. **Rate of interest.** Unless otherwise stated, an annual rate that must be adjusted to reflect the length of the compounding period if less than a year.

2. **Number of time periods.** The number of compounding periods. (A period may be equal to or less than a year.)

3. **Future value.** The value at a future date of a given sum or sums invested assuming compound interest.

4. **Present value.** The value now (present time) of a future sum or sums discounted assuming compound interest.

Illustration 5.1 depicts the relationship of these four fundamental variables in a time diagram.

ILLUSTRATION 5.1 Basic Time Diagram

In some cases, all four of these variables are known. However, at least one variable is unknown in many business situations. To better understand and solve the problems in this chapter, we encourage you to sketch compound interest problems in the form of a time diagram, as shown in Illustration 5.1.

Compound Interest Tables

Determining compound interest requires some calculations. To help solve these problems more quickly, we present the following five different types of compound interest tables at the end of this chapter.

Interest Tables and Their Contents

1. **Future Value of 1 Table.** Contains the amounts to which 1 will accumulate if deposited now at a specified rate and left for a specified number of periods (Table 5.1).

2. **Present Value of 1 Table.** Contains the amounts that must be deposited now at a specified rate of interest to equal 1 at the end of a specified number of periods (Table 5.2).

3. **Future Value of an Ordinary Annuity of 1 Table.** Contains the amounts to which periodic rents of 1 will accumulate if the payments (rents) are invested at the end of each period at a specified rate of interest for a specified number of periods (Table 5.3).

4. **Present Value of an Ordinary Annuity of 1 Table.** Contains the amounts that must be deposited now at a specified rate of interest to permit withdrawals of 1 at the end of regular periodic intervals for the specified number of periods (Table 5.4).

5. **Present Value of an Annuity Due of 1 Table.** Contains the amounts that must be deposited now at a specified rate of interest to permit withdrawals of 1 at the beginning of regular periodic intervals for the specified number of periods (Table 5.5).

These tables should help you study this chapter as well as solve other problems involving interest. Note that you can also use financial calculators and Excel spreadsheets to solve compound interest problems. We discuss how in Appendix 5A.

Illustration 5.2 lists the general format and content of these tables. This table shows how much principal plus interest a dollar accumulates to at the end of each of five periods, at three different rates of compound interest.

Future Value of 1 at Compound Interest (Excerpt from Table 5.1)			
Period	4%	5%	6%
1	1.04000	1.05000	1.06000
2	1.08160	1.10250	1.12360
3	1.12486	1.15763	1.19102
4	1.16986	1.21551	1.26248
5	1.21665	1.27628	1.33823

ILLUSTRATION 5.2 Excerpt from Table 5.1

Without the tables, you would have to calculate these amounts yourself. For example, the formula to determine the future value factor (*FVF*) for 1 is as follows.

$$FVF_{n,i} = (1 + i)^n$$

where:

$FVF_{n,i}$ = future value factor for n periods at i interest

n = number of periods

i = rate of interest for a single period

Example 5.3 Future Value Factors

FACTS Assume an interest rate of 5%.

QUESTION What is the future value to which \$1 accumulates in one, two, and three periods?

SOLUTION

After three periods of compounding at 5% interest, \$1 accumulates to approximately \$1.16. The following shows the calculations using the formula for the future value factor (*FVF*) for 1.

Period	Beginning-of-Period Amount	Multiplier $(1 + i)$	End-of-Period Amount*	Formula $(1 + i)^n$
1	1.00000	1.05	1.05000	$(1.05)^1$
2	1.05000	1.05	1.10250	$(1.05)^2$
3	1.10250	1.05	1.15763	$(1.05)^3$

*These amounts appear in Table 5.1 in the 5% column.

Notice the end-of-period amount matches the first three periods of the 5% column from Illustration 5.2. The compound interest table is derived from the formula.

Determining Compounding Periods

Throughout our discussion of compound interest tables, note the intentional use of the term **periods** instead of **years**. Interest is generally expressed in terms of an annual rate, but not all investing and lending activities are for periods of one or more years. For example, a company may borrow money for 6 months, which is half of a year. Or, a company may invest cash for 3 months, which is one-fourth of a year. In these situations, the annual interest rate and the number of compounding periods must be adjusted.

Illustration 5.3 provides examples of these adjustments with the following calculations.⁴

$$\text{Interest Rate per Compounding Period} = \frac{\text{Annual Interest Rate}}{\text{Number of Compounding Periods}}$$

$$\text{Number of Compounding Periods} = \text{Number of Years} \times \text{Number of Compounding Periods}$$

⁴Because interest is theoretically earned (accruing) every second of every day, it is possible to calculate interest that is **compounded continuously**. Using the natural, or Napierian, system of logarithms facilitates computations involving continuous compounding. As a practical matter, however, most business transactions assume interest to be compounded no more frequently than daily.

**12% Annual Interest Rate
over 5 Years Compounded****Interest Rate per
Compounding Period****Number of
Compounding Periods****Annually (1)** $.12 \div 1 = 12\%$ 5 years \times 1 compounding
per year = 5 periods**Semiannually (2)** $.12 \div 2 = 6\%$ 5 years \times 2 compoundings
per year = 10 periods**Quarterly (4)** $.12 \div 4 = 3\%$ 5 years \times 4 compoundings
per year = 20 periods**Monthly (12)** $.12 \div 12 = 1\%$ 5 years \times 12 compoundings
per year = 60 periods**ILLUSTRATION 5.3** Frequency of
Compounding

In Illustration 5.3, 12% is referred to as the **stated**, **nominal**, or **face rate**. It is the interest rate written into the loan or investment contract. But when interest is compounded more than once a year, the rate of return will be greater than 12%. Why is that? It's because with compounding, you are earning interest on the principal **and** previously earned interest, more than once a year. For example, a 12% annual interest rate compounded quarterly provides a 12.55% return. The 12.55% is called the **effective yield** (or **effective rate of interest**).⁵ With compounding, the effective-interest rate will **always** exceed the stated rate.

Illustration 5.4 shows how compounding for five different time periods affects the effective yield and the amount earned by an investment of \$10,000 for one year.

Interest Rate	Compounding Periods				
	Annually	Semiannually	Quarterly	Monthly	Daily
8%	8.00%	8.16%	8.24%	8.30%	8.33%
	\$ 800	\$ 816	\$ 824	\$ 830	\$ 833
9%	9.00%	9.20%	9.31%	9.38%	9.42%
	\$ 900	\$ 920	\$ 931	\$ 938	\$ 942
10%	10.00%	10.25%	10.38%	10.47%	10.52%
	\$1,000	\$1,025	\$1,038	\$1,047	\$1,052

ILLUSTRATION 5.4 Comparison
of Different Compounding Periods**Accounting Matters****Don't Put Off Your Taxes!**

The Internal Revenue Service (IRS) charges interest on any unpaid taxes from the due date of the tax return until the date the taxes are paid in full. The interest charged is based on the federal

short-term rate plus 3%, and interest compounds **daily**. The total amount owed could add up very quickly!

⁵The formula for calculating the **effective rate**, in situations where the compounding frequency (n) is greater than once a year, is as follows.

$$\text{Effective rate} = (1 + i)^n - 1$$

To illustrate, if the stated annual rate is 8% compounded quarterly (or 2% per quarter), the effective annual rate is:

$$\begin{aligned} \text{Effective rate} &= (1 + .02)^4 - 1 \\ &= (1.02)^4 - 1 \\ &= 1.0824 - 1 \\ &= .0824 \\ &= 8.24\% \end{aligned}$$

Put It into Practice LO 5.1

Compute Simple and Compound Interest

FACTS Katie Boylen invests \$20,000 at 6% annual interest, leaving the money invested without withdrawing any of the interest for 6 years. At the end of the 6 years, Katie withdraws the accumulated amount of money.

INSTRUCTIONS

- Compute the amount Katie would withdraw assuming the investment earns simple interest.
- Compute the amount Katie would withdraw assuming the investment earns interest compounded annually.
- Compute the amount Katie would withdraw assuming the investment earns interest compounded semiannually.

SOLUTION

a. Simple interest:

\$1,200 ($\$20,000 \times .06$) per year \times 6 periods (years)	\$ 7,200
Principal	+ 20,000
Total withdrawn	<u>\$ 27,200</u>

b. Interest compounded annually:

Future value of 1 @ 6% for 6 periods (years) (Table 5.1)	1.41852
Principal	<u>$\times \\$20,000$</u>
Total withdrawn	<u>\$ 28,370</u>

c. Interest compounded semiannually:

Future value of 1 @ 3% ($.06 \div 2$) for 12 periods (6 years \times 2) (Table 5.1)	1.42576
Principal	<u>$\times \\$20,000$</u>
Total withdrawn	<u>\$ 28,515</u>

Even over the relatively short 6-year time span, the impact of compound interest can be seen. Katie will accumulate the most money when interest compounds semiannually.

5.2 Single-Sum Problems

LEARNING OBJECTIVE 2

Solve future and present value of 1 problems.

Many business and investment decisions involve a single amount of money that either exists now or will in the future. Single-sum problems are generally classified into one of the following two categories.

- Computing the **unknown future value** of a known single sum of money that is invested now for a certain number of periods at a certain interest rate.

To solve: **Accumulate** all cash flows to a future point. In this instance, interest increases the amounts or values over time so that the future value exceeds the present value.

- Computing the **unknown present value** of a known single sum of money in the future that is discounted for a certain number of periods at a certain interest rate.

To solve: **Discount** all cash flows from the future to the present. In this case, **discounting** reduces the amounts or values, so that the present value is less than the future amount.

Future Value of a Single Sum

To determine the **future value** of a single sum, multiply the future value factor by its present value (principal), as follows.

$$FV = PV (FVF_{n,i})$$

where:

FV = future value

PV = present value (principal or single sum)

$FVF_{n,i}$ = future value factor for n periods at i interest

FACTS Bruegger Co. invests \$50,000 for 5 years earning compounded annual interest at a rate of 6%.

QUESTION What is the value of the investment at the end of 5 years?

SOLUTION

We can show this investment situation in time-diagram form as follows.

Using the future value formula, we solve Bruegger's investment problem as follows.

$$\begin{aligned} \text{Future value} &= PV(FVF_{n,i}) \\ &= \$50,000 (FVF_{5,6\%}) \\ &= \$50,000 (1 + .06)^5 \\ &= \$50,000 (1.33823) \\ &= \$66,912 \end{aligned}$$

To more quickly determine the future value factor of 1.33823 in the formula above, we can refer to Table 5.1 (6% column and the 5-period row).

In addition, as indicated, we can use Excel to calculate the present value of the note, as shown here, or a financial calculator may also be used. See Appendix 5A for specific guidance on using Excel and financial calculators to solve time value of money problems.

Example 5.4 Future Value of a Single Sum

Excel Solution

i	6%
n	5
PV	-\$50,000

FV \$66,911.28

$FV(\text{rate}, \text{nper}, \text{pmt}, [\text{pv}], [\text{type}])$

Example 5.5 presents another real world example for determining future values.

Example 5.5

Future Value of a Single Sum

FACTS Assume that **Amazon** deposited \$250 million with **JPMorgan Chase Bank** at the beginning of 2025 as a commitment toward the construction of a second headquarter location (HQ2), to be completed December 31, 2028.

QUESTION How much will Amazon have on deposit at the end of 4 years if interest is 10%, compounded semiannually?

SOLUTION

With a known present value of \$250 million, a total of 8 compounding periods (4×2), and an interest rate of 5% per compounding period ($.10 \div 2$), you can time-diagram this problem and determine the future value as follows.

$$\begin{aligned} \text{Future value} &= \$250,000,000 (FVF_{8,5\%}) \\ &= \$250,000,000 (1 + .05)^8 \\ &= \$250,000,000 (1.47746) \\ &= \$369,365,000 \end{aligned}$$

Using a future value factor found in Table 5.1 (5% column, 8-period row), you find that the deposit of \$250 million will accumulate to \$369,365,000 by December 31, 2028.

Present Value of a Single Sum

Example 5.4 showed that \$50,000 invested at an annually compounded interest rate of 6% will equal \$66,912 at the end of 5 years. It follows, then, that \$66,912, 5 years in the future, is worth \$50,000 now. So, \$50,000 is the present value of \$66,912. The present value is the amount needed to invest now, to produce a known future value.

- The present value is always a smaller amount than the known future value, due to earned and accumulated interest.
- In determining the future value, a company moves forward in time using a process of **accumulation**. In determining present value, it moves backward in time using a process of **discounting**.

The following formula is used to determine the present value of 1 (present value factor).

$$PVF_{n,i} = \frac{1}{(1 + i)^n}$$

where:

$PVF_{n,i}$ = present value factor for n periods at i interest

However, as discussed earlier and to simplify calculations, it would be easier for you to use Table 5.2 (Present Value of 1), so that the present value of any single sum (future value) is as follows.

$$PV = FV (PVF_{n,i})$$

where:

PV = present value

FV = future value

$PVF_{n,i}$ = present value factor for n periods at i interest

FACTS You will receive \$73,466 in 5 years.

QUESTION What is the value today if the appropriate rate is 8% with annual compounding?

SOLUTION

The following shows this problem as a time diagram.

Using the formula, we solve this problem as follows.

$$\begin{aligned} \text{Present value} &= FV (PVF_{n,i}) \\ &= \$73,466 (PVF_{5,8\%}) \\ &= \$73,466 \left(\frac{1}{(1+.08)^5} \right) \\ &= \$73,466 (.68058) \\ &= \$50,000 \text{ (rounded by $.51)} \end{aligned}$$

To determine the present value factor of 0.68058, we refer to the present value of a single sum in Table 5.2 (8% column, 5-period row).

Example 5.6 Present Value of a Single Sum

Excel Solution

i	8%
n	5
FV	-\$73,466

PV \$50,000

$PV(\text{rate}, \text{nper}, \text{pmt}, [\text{fv}], [\text{type}])$

Example 5.7 presents another personal present value example.

FACTS Your uncle is giving you \$2,000 for a trip to Europe when you graduate from college 3 years from now. He proposes to finance the trip by investing a sum of money now that will provide you with \$2,000 upon your graduation. The only conditions are that you graduate and that you tell him how much to invest now.

QUESTION How much should your uncle invest today, earning 8% compound annual interest that will provide you with \$2,000 upon your graduation?

Example 5.7 Present Value of a Single Sum

SOLUTION

To impress your uncle, you set up the following time diagram and solve this problem as follows.

Present value = \$2,000 ($PVF_{3,8\%}$)
 $= \$2,000 \left(\frac{1}{(1+.08)^3} \right)$
 $= \$2,000 (.79383)$
 $= \$1,587.66$

Advise your uncle to invest \$1,587.66 now to provide you with \$2,000 upon graduation. To satisfy your uncle's other condition, you must pass this course (and many more).

Solving for Other Unknowns in Single-Sum Problems

In many business situations, both the future value and the present value are known, but the number of periods or the interest rate is unknown. However, if you know any three of the four values (future value, FV ; present value, PV ; number of periods, n ; and interest rate, i), you can figure out the remaining unknown variable.

Example 5.8
 Solving for the
 Number of Periods

FACTS The Village of Somonauk wants to accumulate \$70,000 for the construction of a veterans' monument in the town square. At the beginning of the current year, the Village deposited \$47,811 in a memorial fund that earns 10% interest compounded annually.

QUESTION How many years will it take to accumulate \$70,000 in the memorial fund?

SOLUTION

Here, we know both the present value (\$47,811) and the future value (\$70,000), along with the interest rate of 10%, as shown in the following time diagram.

If we know the present value and the future value, we can solve for the unknown number of periods. We may use either the future value or the present value formulas, as follows.

Future Value Approach	Present Value Approach
$FV = PV (FVF_{n,10\%})$ $\$70,000 = \$47,811 (FVF_{n,10\%})$ $FVF_{n,10\%} = \frac{\$70,000}{\$47,811} = 1.46410$	$PV = FV (PVF_{n,10\%})$ $\$47,811 = \$70,000 (PVF_{n,10\%})$ $PVF_{n,10\%} = \frac{\$47,811}{\$70,000} = .68301$
Using Table 5.1 (10% column), $n = 4$ years	Using Table 5.2 (10% column), $n = 4$ years

Excel Solution

i	10%
PV	-\$47,811
FV	\$70,000
n	4

\uparrow
NPER(rate, pmt, pv, [fv], [type])

Example 5.9 presents a situation in which we solve for the interest rate.

FACTS Assume that **Amazon** needs \$1,070,584 5 years from now to purchase electric scooters for employees in their new HQ2 location. The company currently has \$800,000 to invest for that purpose.

QUESTION At what rate of interest must Amazon invest the \$800,000 to fund the contract to purchase the electric scooters for \$1,070,584 5 years from now?

SOLUTION

The following time diagram shows this investment situation.

Amazon may determine the unknown interest rate from either the future value approach or the present value approach, as follows.

Future Value Approach

$$FV = PV(FVF_{5,i})$$

$$\$1,070,584 = \$800,000(FVF_{5,i})$$

$$FVF_{5,i} = \frac{\$1,070,584}{\$800,000} = 1.33823$$

Using Table 5.1 (5-period row), $i = 6\%$

Present Value Approach

$$PV = FV(PVF_{5,i})$$

$$\$800,000 = \$1,070,584(PVF_{5,i})$$

$$PVF_{5,i} = \frac{\$800,000}{\$1,070,584} = .74726$$

Using Table 5.2 (5-period row), $i = 6\%$

Example 5.9 Solving for the Interest Rate

Excel Solution

n	5
PV	-\$800,000
FV	\$1,070,584
$Rate$	6%

RATE(nper, pmt, pv, [fv], [type], [guess])

FACTS Vince Stores is considering the following time value of money scenarios.

INSTRUCTIONS

Using the appropriate interest table, answer the question in each scenario. (Each case is independent of the others.)

- What is the future value of \$7,000 at the end of 5 years at 8% interest compounded annually?
- What is the present value of \$7,000 due 8 periods from now, discounted at 6%?
- Vince needs to accumulate \$1,000,000 for future expansion plans. The company's money market fund has a balance of \$92,296 and has a guaranteed interest rate of 10%. How many years (with annual compounding) must Vince leave that balance in the fund to get his desired \$1,000,000?
- Assume that Vince desires to accumulate \$1 million in 15 years using the money market fund balance of \$182,696. At what interest rate must Vince's investment compound annually?

SOLUTION

- $\$7,000(FVF_{5,8\%}) = \$7,000 \times 1.46933 = \$10,285$
- $\$7,000(PVF_{8,6\%}) = \$7,000 \times .62741 = \$4,392$
- This can be solved with either the future value approach or the present value approach as follows. The number of interest periods is calculated by first dividing the future value of \$1,000,000 by \$92,296, which is 10.83471—the value \$1.00 would accumulate to—at 10% for the unknown number of interest periods. The factor 10.83471 or its approximate is then located in the Future Value of 1 Table by reading down the 10% column to the 25-period line; thus, 25 is the unknown number of years the company must wait to accumulate \$1 million.

Put It into Practice LO 5.2 Compute Future and Present Values of 1

LEARNING OBJECTIVE 3
Solve future value of ordinary and annuity due problems.

1. Periodic payments or receipts (called **rents**) of the same amount.
2. The same-length interval between such rents.
3. Compounding of **interest** once each interval.

Note that the rents of an annuity may occur at either the beginning or the end of the periods. If the rents occur at the end of each period, an annuity is classified as an **ordinary annuity**. If the rents occur at the beginning of each period, an annuity is classified as an **annuity due**. The difference between the types of annuities can be significant, as you will see later in Illustration 5.7.

For example, assume that you deposit \$1 at the **end** of each of 5 years (an ordinary annuity) in a savings account that earns 5% interest compounded annually. **Illustration 5.5** shows the computation of the future value, using Table 5.1 for each of the five \$1 rents.

End of Period in Which \$1.00 Is to Be Invested						Value at End of Year 5
Present	1	2	3	4	5	
.....	\$1.00					\$1.21551
.....		\$1.00				1.15762
.....			\$1.00			1.10250
.....				\$1.00		1.05000
.....					\$1.00	1.00000
Total (future value of an ordinary annuity of \$1.00 for 5 periods at 5%)						<u><u>\$5.52563</u></u>

Because an ordinary annuity consists of rents deposited at the end of the period, those rents earn no interest during the period in which they are deposited. For example, consider the third rent:

- It earns interest for only two periods (periods four and five).
- It earns no interest for the third period since it is not deposited until the end of the third period.

When computing the future value of an ordinary annuity, the number of compounding periods will always be **one less than the number of rents**.

This procedure for computing the future value of an ordinary annuity always produces the correct answer, but it's easier to use the following formula to sum the individual rents plus the compound interest.

$$FVF-OA_{n,i} = \frac{(1+i)^n - 1}{i}$$

where:

$FVF-OA_{n,i}$ = future value factor of an ordinary annuity
 i = rate of interest per period
 n = number of compounding periods

For example, $FVF-OA_{5,5\%}$ refers to the value to which an ordinary annuity of 1 will accumulate in 5 periods at 5% interest. You can use Table 5.3 to find this value, as shown in **Illustration 5.6**.

Future Value of an Ordinary Annuity of 1 (Excerpt from Table 5.3)			
Period	4%	5%	6%
1	1.00000	1.00000	1.00000
2	2.04000	2.05000	2.06000
3	3.12160	3.15250	3.18360
4	4.24646	4.31013	4.37462
5	5.41632	5.52563*	5.63709

*Note that this annuity table factor is the same as the sum of the future values of 1 factors shown in Illustration 5.5.

ILLUSTRATION 5.6 Excerpt from Table 5.3

The following formula computes the future value of an ordinary annuity.

$$\text{Future value of an ordinary annuity} = R(FVF-OA_{n,i})$$

where:

R = periodic rent
 $FVF-OA_{n,i}$ = future value of an ordinary annuity factor for n periods at i interest

Example 5.10

Future Value of an Ordinary Annuity

Excel Solution

<i>i</i>	6%
<i>n</i>	5
PMT	-\$5,000
PV	\$0
FV	\$28,185.46

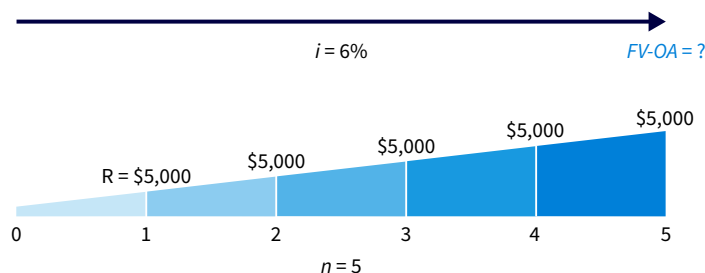

FV(rate, nper, pmt, [pv], [type])

FACTS You plan to make five \$5,000 deposits made at the end of each of the next 5 years, earning interest of 6%.

QUESTION What is the future value of these five deposits?

SOLUTION

We can time-diagram this problem as follows.

Use of the formula solves this investment problem as follows.

$$\begin{aligned}
 \text{Future value of an ordinary annuity} &= R (FVF-OA_{n,i}) \\
 &= 5,000 (FVF-OA_{5,6\%}) \\
 &= 5,000 \left(\frac{(1 + .06)^5 - 1}{0.06} \right) \\
 &= 5,000 (5.63709) \\
 &= \$28,185.45
 \end{aligned}$$

To determine the future value of an ordinary annuity factor of 5.63709 in the above formula, we refer to Table 5.3 (6% column and the 5-period row).

Here is another ordinary annuity problem, set in a business situation.

Example 5.11

Future Value of an Ordinary Annuity

FACTS Hightown Electronics deposits \$75,000 at the end of each 6-month period for the next 3 years, to accumulate enough money to meet debts that mature in 3 years.

QUESTION What is the future value that Hightown will have on deposit at the end of 3 years if the annual interest rate is 10%?

SOLUTION

You can time-diagram this problem as follows. Note that the deposits are made every 6 months; therefore, the interest is being compounded semiannually and the number of periods will be doubled.

The formula solution for the Hightown Electronics situation is as follows.

$$\begin{aligned}
 \text{Future value of an ordinary annuity} &= R (FVF-OA_{n,i}) \\
 &= \$75,000 (FVF-OA_{6,5\%}) \\
 &= \$75,000 \left(\frac{(1 + .05)^6 - 1}{.05} \right) \\
 &= \$75,000 (6.80191) \\
 &= \$510,143.25
 \end{aligned}$$

Thus, six 6-month deposits of \$75,000 earning 5% per period will grow to \$510,143.25.

To determine the future value of an ordinary annuity factor of 6.80191 in the above formula, we refer to Table 5.3 (5% column and the 6-period row).

Future Value of an Annuity Due

Now let's consider an **annuity due**, in which the rents occur at the **beginning** of each period. An annuity due will accumulate interest during the first period, which is in contrast to the ordinary annuity that did not accumulate interest during the first period. **Illustration 5.7** shows this distinction.

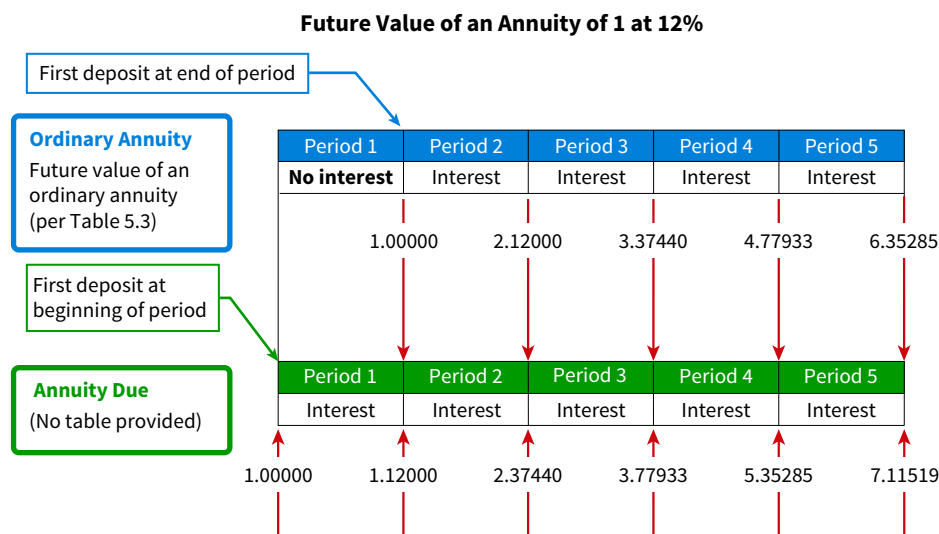

ILLUSTRATION 5.7 Comparison of the Future Value of an Ordinary Annuity with an Annuity Due

In this example, the cash flows from the annuity due come exactly one period earlier than for an ordinary annuity. We can draw the following conclusions from the example.

- If rents occur at the beginning of the period (annuity due), there will be one additional interest period than if rents occur at the end of the period (ordinary annuity).
- The future value of the annuity due factor is exactly 12% higher than the ordinary annuity factor. For example, the value of an annuity due factor at the end of period one at 12% is 1.12000, whereas for an ordinary annuity it is 1.00000.

Therefore, to find the future value of an annuity due factor, multiply the future value of an ordinary annuity factor by 1 plus the interest rate. For example, to determine the future value of an annuity due interest factor for five periods at 12% compound interest, simply multiply the future value of an ordinary annuity interest factor for five periods (6.35285), by one plus the interest rate ($1 + .12$), to arrive at 7.11519 (6.35285×1.12).

Example 5.12

Future Value of an Annuity Due

FACTS Sue Lotadough plans to deposit \$800 a year on each birthday of her son Howard. She makes the first deposit on his tenth birthday, at 6% interest compounded annually.

QUESTION What amount will Sue have accumulated for college expenses by her son's eighteenth birthday?

SOLUTION

If the first deposit occurs on Howard's tenth birthday, Sue will make a total of eight deposits over the life of the annuity (assume no deposit on the eighteenth birthday), as shown in the following time diagram. Because all the deposits are made at the beginning of the periods, they represent an annuity due.

FV-AD = Future value of an annuity due

Referring to Table 5.3 for 8 periods at 6%, Sue finds a factor of 9.89747. She then multiplies this factor by (1 + .06) to arrive at the future value of an annuity due factor. As a result, the accumulated value on Howard's eighteenth birthday is \$8,393.06, calculated as follows.

1. Future value of an ordinary annuity of 1 for 8 periods at 6% (Table 5.3)	9.89747
2. Factor (1 + .06)	× 1.06
3. Future value of an annuity due of 1 for 8 periods at 6%	10.49132
4. Periodic deposit (rent)	× \$800
5. Accumulated value on son's 18th birthday	<u>\$8,393.06</u>

Depending on the college he chooses, Howard may have enough to finance only part of his first year of school.

Let's look at one more example of an annuity due problem.

Example 5.13

Future Value of an Annuity Due

FACTS To create his retirement fund, Walter Goodwrench, a mechanic, now works weekends. Mr. Goodwrench deposits \$2,500 today in a savings account that earns 9% interest. He plans to deposit \$2,500 every year for a total of 30 years.

QUESTION How much cash will Mr. Goodwrench accumulate in his retirement savings account, when he retires in 30 years?

SOLUTION

You can time-diagram this problem as follows.

Using Table 5.3, you compute the solution as follows.

1. Future value of an ordinary annuity of 1 for 30 periods at 9%	136.30754
2. Factor $(1 + .09)$	$\times 1.09$
3. Future value of an annuity due of 1 for 30 periods at 9%	148.57522
4. Periodic rent	$\times \$2,500$
5. Accumulated value at end of 30 years	<u><u>\$ 371,438</u></u>

Mr. Goodwrench should consider putting more than \$2,500 per year into his retirement account, depending on how he plans to spend his time during retirement. Do you think a retirement account of \$371,438 is enough?

Solving for Unknowns in Future Value of Annuity Problems

Similar to future value and present value problems, if we know three values for a future value of an annuity problem, we can determine the fourth. Here we present two examples: the computations of (1) the amount of rents and (Example 5.14) and (2) number of rents (Example 5.15).

FACTS You plan to accumulate \$14,000 for a down payment on a condominium 5 years from now. For the next 5 years, you earn an annual return of 8% compounded semiannually.

QUESTION How much should you deposit at the end of each 6-month period?

SOLUTION

Start by determining if it is an ordinary annuity or annuity due. Since the rents will be deposited at the end of each period, it is an ordinary annuity. The \$14,000 is the future value of 10 (5×2) semiannual end-of-period payments of an unknown amount, at an interest rate of 4% ($.08 \div 2$). The following shows this problem as a time diagram.

$FV-OA$ = Future value of an ordinary annuity

Using the formula for the future value of an ordinary annuity and Table 5.3, you determine the amount of each rent as follows.

$$\begin{aligned}
 \text{Future value of an ordinary annuity} &= R(FVF-OA_{n,i}) \\
 \$14,000 &= R(FVF-OA_{10,4\%}) \\
 \$14,000 &= R(12.00611) \\
 R &= \$1,166.07
 \end{aligned}$$

You must make 10 semiannual deposits of \$1,166.07 each to accumulate \$14,000 for your down payment.

Example 5.14 Solving for the Amount of Rents

Example 5.15

Solving for the Number of Rents

FACTS A company has a goal to accumulate \$117,332 by making periodic deposits of \$20,000 at the end of each year, which will earn 8% compounded annually while accumulating.

QUESTION How many deposits must the company make to achieve this goal?

SOLUTION

This situation is an ordinary annuity since the rents are deposited at the end of the period. The \$117,332 represents the future value of $n(?)$ \$20,000 deposits, at an 8% annual rate of interest. The following shows this problem as a time diagram.

Using the future value of an ordinary annuity formula, the company obtains the following factor.

$$\text{Future value of an ordinary annuity} = R(FVF-OA_{n,i})$$

$$\$117,332 = \$20,000 (FVF-OA_{n,8\%})$$

$$FVF-OA_{n,8\%} = \frac{\$117,332}{\$20,000} = 5.86660$$

Use Table 5.3 and read down the 8% column to find 5.86660 in the 5-period row. The company must make five deposits of \$20,000 each.

Put It into Practice LO 5.3

Compute the Future Value of an Ordinary Annuity and Annuity Due

FACTS Consider the following independent situations involving annuities.

- What is the future value of 20 periodic payments of \$5,000, each made at the end of each period and compounded at 8%?
- What is the future value of 15 deposits of \$2,000, each made at the beginning of each period and compounded at 10%? (Future value as of the end of the fifteenth period.)
- Steve Malpezzi needs \$250,000 in 10 years. How much must he invest at the end of each year, at 5% interest, to meet his needs?
- Joe Morgan is investing \$9,069 at the end of each year in a fund that earns 5% interest. In how many years will the fund be at \$100,000?

INSTRUCTIONS

Using the appropriate interest table, answer the questions for each situation.

SOLUTION

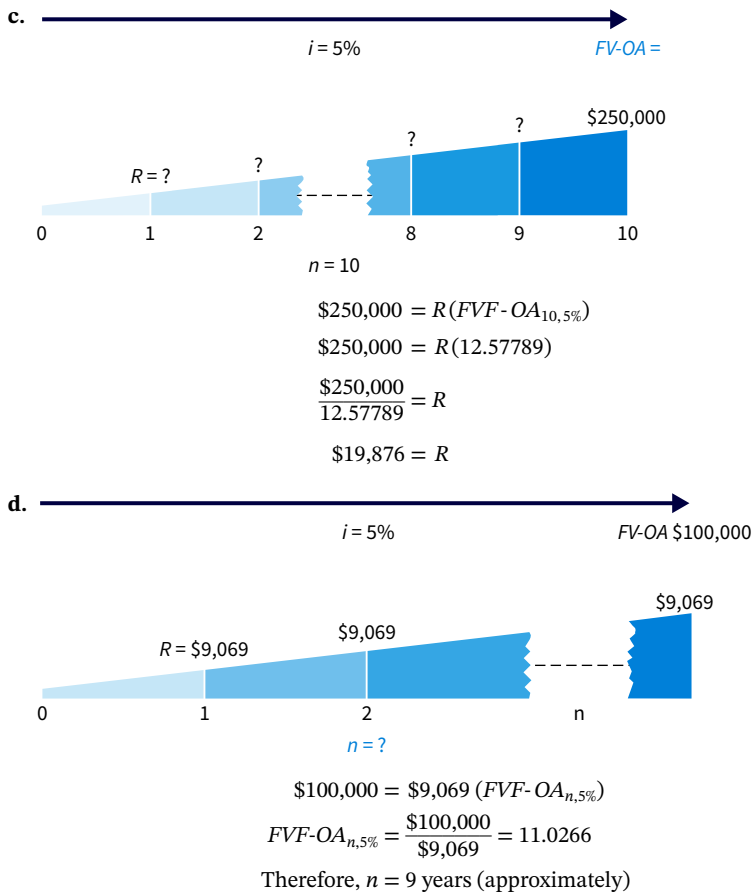

- Future value of an ordinary annuity of \$5,000 a period for 20 periods at 8%: $\$5,000 \times 45.76196 = \$228,810$

- This situation is an annuity due, so remember there is one additional interest accumulation period.

$$\$63,544.96 (\$2,000 \times 31.77248)$$

$$\times 1.10 \text{ (interest earned in the last period)}$$

$$\$69,899.00$$

5.4 Annuities (Present Value)

LEARNING OBJECTIVE 4

Solve present value of ordinary and annuity due problems.

The present value of an annuity is **the single sum** that, if invested at compound interest now, would provide for an annuity (a series of withdrawals) for a certain number of future periods.

Present Value of an Ordinary Annuity

The present value of an ordinary annuity is the present value of a series of equal rents, to be withdrawn at equal intervals at the end of the period. One approach to finding the present value of an annuity determines the present value of each of the rents in the series and then totals their individual present values. **Illustration 5.8** shows this approach. We may view an annuity of \$1, to be received at the **end** of each of 5 periods, as separate amounts. We then compute each present value using Table 5.2, assuming an interest rate of 5%.

ILLUSTRATION 5.8 Solving for the Present Value of an Ordinary Annuity

End of Period in Which \$1.00 Is to Be Received					
Present Value at Beg. of Year 1	1	2	3	4	5
\$0.95238	← \$1.00				
.90703	←	\$1.00			
.86384	←		\$1.00		
.82270	←			\$1.00	
.78353	←				\$1.00
<u>\$4.32948</u>	Total (present value of an ordinary annuity of \$1.00 for five periods at 5%)				

This computation tells us that if we invest the single sum of \$4.33 today at 5% interest for five periods, we will be able to withdraw \$1 at the end of each period for five periods. We can summarize this cumbersome procedure by the following formula.

$$PVF-OA_{n,i} = \frac{1 - \frac{1}{(1+i)^n}}{i}$$

The expression $PVF-OA_{n,i}$ refers to the present value of an ordinary annuity of 1 factor for n periods at i interest. **Illustration 5.9** shows an excerpt from Table 5.4, which bases present values on this formula.

ILLUSTRATION 5.9 Excerpt from Table 5.4

Present Value of an Ordinary Annuity of 1 (Excerpt from Table 5.4)			
Period	4%	5%	6%
1	.96154	.95238	.94340
2	1.88609	1.85941	1.83339
3	2.77509	2.72325	2.67301
4	3.62990	3.54595	3.46511
5	4.45182	4.32948*	4.21236

*Note that this annuity table factor is equal to the sum of the present value of 1 factors shown in Illustration 5.8.

The general formula for the present value of any ordinary annuity is as follows.

$$\text{Present value of an ordinary annuity} = R (PVF-OA_{n,i})$$

where:

R = periodic rent (ordinary annuity)

$PVF-OA_{n,i}$ = present value of an ordinary annuity of 1 for n periods at i interest

FACTS You wish to determine the value today of receiving rental receipts of \$6,000 each at the end of each of the next 5 years when discounted at 6%?

QUESTION What is the present value of these future receipts?

SOLUTION

This problem may be time-diagrammed and solved as follows.

The formula for this calculation is as follows.

$$\begin{aligned}\text{Present value of an ordinary annuity} &= R(PVF-OA_{n,i}) \\ &= \$6,000(PVF-OA_{5,6\%}) \\ &= \$6,000(4.21236) \\ &= \$25,274.16\end{aligned}$$

The present value of the five ordinary annuity rental receipts of \$6,000 each is \$25,274.16. To determine the present value of the ordinary annuity factor 4.21236, we refer to Table 5.4 (6% column and 5-period row).

Example 5.16

Present Value of an Ordinary Annuity

Excel Solution

<i>i</i>	6%
<i>n</i>	5
PMT	-\$6,000
FV	\$0

PV \$25,274.18

PV(rate, nper, pmt, [fv], [type])

Here is another real-life annuity situation.

FACTS Lucky Louie has just won a state lottery prize totaling \$4,000,000. He learns that he will receive a check in the amount of \$200,000 at the end of each of the next 20 years.

QUESTION What amount has Louie really won? That is, what is the present value of the \$200,000 checks he will receive over the next 20 years? Assume an interest rate of 10%.

SOLUTION

You can time-diagram this enviable situation.

You calculate the present value as follows.

$$\begin{aligned}\text{Present value of an ordinary annuity} &= R(PVF-OA_{n,i}) \\ &= \$200,000(PVF-OA_{20,10\%}) \\ &= \$200,000(8.51356) \\ &= \$1,702,712\end{aligned}$$

As a result, if the state deposits \$1,702,712 now and that amount earns 10% interest, the state can withdraw \$200,000 a year for 20 years to pay Louie the \$4,000,000.

Example 5.17

Present Value of an Ordinary Annuity—Lottery

Accounting Matters

Up in Smoke

Time value of money concepts also can be relevant to public policy debates. For example, several states had to determine how to receive the payments from tobacco companies as settlement for a national lawsuit against the companies for the healthcare costs of smoking.

The **State of Wisconsin** was due to collect 25 years of payments totaling \$5.6 billion. The state could wait to collect the payments, or it could sell the payments to an investment bank (a process called **securitization**). If it were to sell the payments, it would receive a lump-sum payment today of \$1.26 billion. Is this a good deal for the state? Assuming a discount rate of 8% and that the payments will be received in equal amounts (e.g., an annuity), the present value of the tobacco payment is:

$$\$5.6 \text{ billion} \div 25 = \$224 \text{ million payment}$$

$$\$224 \text{ million} \times 10.67478^* = \$2.39 \text{ billion}$$

$$*PV\text{-}OA (i = 8\%, n = 25)$$

Why would some in the state be willing to take just \$1.26 billion today for an annuity whose present value is almost twice that amount? One reason is that Wisconsin was facing a hole in its budget that could be plugged in part by the lump-sum payment. Also, some believed that the risk of not getting paid by the tobacco companies in the future makes it prudent to get the money earlier.

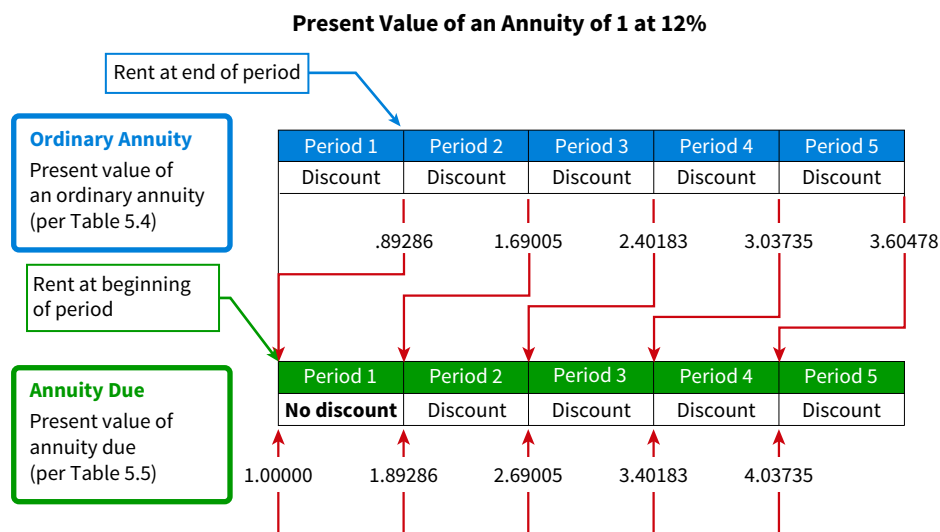

If this latter reason has merit, then the present value computation above should have been based on a higher interest rate. Assuming a discount rate of 15%, the present value of the annuity is \$1.448 billion (\$5.6 billion \div 25 = \$224 million; \$224 million \times 6.46415), which is much closer to the lump-sum payment offered to the State of Wisconsin.

Present Value of an Annuity Due

In our discussion of the present value of an ordinary annuity, we discounted the final rent based on the number of rent periods. In determining the present value of an **annuity due**, there is always one discount period less. **Illustration 5.10** shows this distinction.

ILLUSTRATION 5.10

Comparison of Present Value of an Ordinary Annuity with an Annuity Due

In this example, each cash flow from the annuity due comes exactly one period sooner than for an ordinary annuity. We can draw the following conclusions from the example.

- The present value of the cash flows from the annuity due is exactly 12% higher than the present value of an ordinary annuity.
- To find the present value of an annuity due factor, multiply the present value of an ordinary annuity factor by 1 plus the interest rate (that is, $1 + i$).

To determine the present value of an annuity due interest factor for 5 periods at 12% interest, take the present value of an ordinary annuity for five periods at 12% interest (3.60478 from Table 5.4) and multiply it by 1.12 to arrive at the present value of an annuity due, 4.03735 (3.60478×1.12).

- A faster way to determine the present value of an annuity due is to use Table 5.5, which contains the present value of annuity due factors.
- When using Table 5.5, no adjustment needs to be made by multiplying by $1 +$ the interest rate.

FACTS Space Odyssey, Inc., leases a communications satellite for 4 years with annual rental payments of \$4.8 million to be made at the beginning of each year.

QUESTION If the relevant annual interest rate is 5%, what is the present value of the rental obligations?

SOLUTION

We can time-diagram this problem as follows.

$PV-AD$ = the present value of an annuity due

We then make the following computations to solve this problem.

1. Present value of an ordinary annuity of 1 for 4 periods at 5% (Table 5.4)	3.54595
2. Factor $(1 + .05)$	$\times \quad 1.05$
3. Present value of an annuity due of 1 for 4 periods at 5%	3.72325
4. Periodic deposit (rent)	$\times \$4,800,000$
5. Present value of payments	<u><u>\$ 17,871,600</u></u>

Alternatively, if Space Odyssey has a table with the present value of an annuity due, like Table 5.5, we can then simply locate the desired factor 3.72325 (4 periods, 5%) and compute the present value of the lease payments of \$17,871,600 ($\$4,800,000 \times 3.72325$).

Example 5.18

Present Value of an Annuity Due—Rent Payments

Solving for Unknowns in Present Value of Annuity Problems

In the following examples, we demonstrate how knowing three variables can help us determine how to compute a fourth value, in this case the computation of (1) the interest rate (Example 5.19) and (2) the amount of each rent (Example 5.20).

FACTS Shoppers commonly use credit cards to make purchases. When you receive the statement for payment, you may pay the total amount due or you may pay the balance in a certain number of payments. For example, assume you receive a statement from **Visa** with a balance due of \$528.77. You may pay it off in 12 equal monthly payments of \$50 each, with the first payment due one month from now.

QUESTION What rate of interest would you be paying?

Example 5.19

Solving for the Effective-Interest Rate on a Loan

SOLUTION

The \$528.77 represents the present value of the 12 payments of \$50 each at an unknown rate of interest. The following time diagram shows this situation.

You calculate the rate as follows.

$$\text{Present value of an ordinary annuity} = R(PVF-OA_{n,i})$$

$$\$528.77 = \$50(PVF-OA_{12,i})$$

$$(PVF-OA_{12,i}) = \frac{\$528.77}{\$50} = 10.57540$$

Referring to Table 5.4 and reading across the 12-period row, you find 10.57534 in the 2% column. Since 2% is a monthly rate, the nominal annual rate of interest is 24% ($12 \times .02$). The effective annual rate is 26.82413 $[(1 + .02)^{12} - 1]$. Obviously, you are better off paying the entire bill now if possible.

Example 5.20

Calculating the Ordinary Annuity for a College Fund

FACTS Norm and Jackie Remmers have saved \$36,000 to finance their daughter Dawna's college education. They deposited the money in their local bank, where it earns 4% interest compounded semiannually.

QUESTION What equal amounts can their daughter withdraw at the end of every 6 months during her 4 college years, without exhausting the fund?

SOLUTION

The following shows a time diagram of this situation.

Determining the answer by simply dividing \$36,000 by 8 withdrawals is wrong. Why? Because that ignores the interest earned on the money remaining on deposit. Dawna must consider that interest is compounded semiannually at 2% ($.04 \div 2$) for 8 periods ($4 \text{ years} \times 2$). Thus, using the same present value of an ordinary annuity formula and Table 5.4, she determines the amount of each withdrawal that she can make as follows.

$$\text{Present value of an ordinary annuity} = R(PVF-OA_{n,i})$$

$$\$36,000 = R(PVF-OA_{8,2\%})$$

$$\$36,000 = R(7.32548)$$

$$R = \$4,914.35$$

FACTS The Healthy Hearth Co., a maker of gluten-free breads and bagels, hopes to increase its market share in the upper Midwest. To do so, Healthy Hearth has decided to locate a new factory in Fargo, North Dakota. The company will either buy or lease a site depending upon which is more advantageous. The site location committee has narrowed down the available sites to the following three very similar alternatives that will meet their needs.

1. Building A: Purchase for \$1,300,000 cash. This building is larger than needed; however, the excess space can be sublet for 25 years at a net annual rental of \$14,000. Rental payments will be received at the end of each year. Healthy Hearth is happy to be a landlord.
2. Building B: Lease for 25 years with annual lease payments of \$140,000 being made at the beginning of the year.
3. Building C: Purchase for a cash price of \$1,200,000, useful life 25 years.

INSTRUCTIONS

Explain which alternative would you recommend for Healthy Hearth, assuming a 12% cost of funds.

SOLUTION

To select the best alternative, you would calculate the present value for each alternative as follows.

1. Building A:

Rent(PV of ordinary annuity of 25 periods at 12%) = PV

\$14,000 \times 7.84314 = PV

\$109,804 = PV

Cash purchase price	\$1,300,000
PV of rental income	– 109,804
Net present value cost	<u>\$1,190,196</u>

2. Building B:

Rent(PV of annuity due of 25 periods at 12%) = PV

\$140,000 \times 8.78432 = PV

\$1,229,805 = PV of cost

3. Building C:

PV = \$1,200,000 (cash cost today)

You recommend choosing the Building A alternative as the present value of its net cost is the smallest.

Put It into Practice LO 5.4
Compute the Present Value of an Ordinary Annuity and Annuity Due

5.5 Other Time Value of Money Issues

LEARNING OBJECTIVE 5

Solve present value problems related to deferred annuities, bonds, and expected cash flows.

Solving time value problems often requires using more than one table. For example, a business problem may need computations of both the present value of a single sum and the present value of an annuity. In addition, GAAP may require the use of expected cash flows in determining present value. In this section, we examine:

1. Deferred annuities.
2. Bond problems.
3. Present value measurement.

Deferred Annuities

A **deferred annuity** is an annuity in which the rents begin after a specified number of periods. A deferred annuity does not begin to produce rents until two or more periods have expired. Consider these examples.

- “An **ordinary annuity** of six annual rents deferred 4 years” means that no rents will occur during the first 4 years and that the first of the six rents will occur at the end of the fifth year.
- “An **annuity due** of six annual rents deferred 4 years” means that no rents will occur during the first 4 years and that the first of six rents will occur at the beginning of the fifth year.

Future Value of a Deferred Annuity

Computing the future value of a deferred annuity is relatively straightforward. Because there is no accumulation or investment on which interest may accrue, the future value of a deferred annuity is the same as the future value of an annuity that is not deferred. Computing the future value simply ignores the deferred period.

Example 5.21 Future Value of a Deferred Annuity

FACTS Sutton Corporation plans to purchase a land site in 6 years for the construction of its new corporate headquarters. Because of cash flow problems, Sutton budgets deposits of \$80,000 on which it expects to earn 5% annually, only at the end of the fourth, fifth, and sixth periods.

QUESTION What future value will Sutton have accumulated at the end of the sixth year?

SOLUTION

The following shows a time diagram of this situation.

Sutton determines the value accumulated by using the standard formula for the future value of an ordinary annuity and Table 5.3 as follows.

$$\begin{aligned}
 \text{Future value of an ordinary annuity} &= R (FVF-OA_{n,i}) \\
 &= \$80,000 (FVF-OA_{3,5\%}) \\
 &= \$80,000 (3.15250) \\
 &= \$252,200
 \end{aligned}$$

Present Value of a Deferred Annuity

Computing the present value of a deferred annuity must recognize the interest that accrues on the original investment during the deferral period. To compute the present value of a deferred annuity:

①

Compute the present value of an ordinary annuity of 1 as if the rents had occurred for the entire period.

②

Subtract the present value of rents that were not received during the deferral period.

③

The difference is the present value of the rents actually received subsequent to the deferral period.

Example 5.22 illustrates this computation, which involves the use of one interest table. The example also shows another way to perform the calculation using two interest tables.

FACTS Bob Boyd has developed and copyrighted tutorial software for students in advanced accounting. He agrees to sell the copyright to Campus Learning Systems for six annual payments of \$5,000 each. The payments will begin 5 years from today.

QUESTION Given an annual interest rate of 8%, what is the present value of the six payments?

SOLUTION

This situation is an ordinary annuity of six payments deferred 4 periods. The following time diagram shows this sales agreement.

Two options are available to solve this problem.

Option 1: Using One Table

The first option is to use Table 5.4, using the method discussed above.

Each periodic rent	\$5,000
1. Present value of an ordinary annuity of 1 for total periods (10) [number of rents (6) plus number of deferred periods (4)] at 8%	6.71008
2. Less: Present value of an ordinary annuity of 1 for the number of deferred periods (4) at 8%	3.31213
3. Difference	<u>3.39795</u>
Present value of 6 rents of \$5,000 deferred 4 periods	<u>\$16,989.75</u>

The subtraction of the present value of an annuity of 1 for the deferred periods eliminates the nonexistent rents during the deferral period. It converts the present value of an ordinary annuity of \$1.00 for 10 periods to the present value of 6 rents of \$1.00, deferred 4 periods.

Option 2: Using Two Tables

Boyd can use both Tables 5.2 and 5.4 to compute the present value of the 6 rents.

1. He can first discount the annuity 6 periods.
2. Then, because the annuity is deferred 4 periods, he must treat the present value of the annuity as a future amount to be discounted another 4 periods.

The following time diagram shows this two-step process.

Calculation using formulas would be done in two steps, as follows.

Example 5.22
Present Value of a
Deferred Annuity

Step 1:

$$\text{Present value of an ordinary annuity} = R(PVF\text{-}OA_{n,i})$$

$$= \$5,000(PVF\text{-}OA_{6,8\%})$$

$$= \$5,000(4.62288)$$

(Table 5.4, Present value of an ordinary annuity)

$$= \$23,114.40$$

Step 2:

$$\text{Present value of a single sum} = FV(PVF_{n,i})$$

$$= \$23,114.40(PVF_{4,8\%})$$

$$= \$23,114.40(.73503)$$

(Table 5.2, Present value of a single sum)

$$= \$16,989.78$$

The present value of \$16,989.78 is the same as calculated in Option 1 although computed differently. (The \$0.03 difference is due to rounding.)

Valuation of Long-Term Bonds

A long-term bond produces two cash flows:

1. Periodic interest payments during the life of the bond (an annuity).
2. The principal (face value) paid at maturity.

The current market value of the bonds is the combined present values of the interest annuity and the principal amount.

Example 5.23 Long-Term Bond Valuation

FACTS Alltech Corporation on January 1, 2025, issues \$100,000 of 5% bonds due in 5 years with interest payable annually at year-end (\$100,000 × .05 = \$5,000). The current market rate of interest for bonds of similar risk is 6%.

QUESTION What will investors pay for this bond issue?

SOLUTION

The following time diagram shows both cash flows.

Alltech computes the present value of the two cash flows by discounting at 6%, as follows.

1. Present value of the principal: $FV(PVF_{5,6\%}) = \$100,000(.74726)$ \$74,726.00
2. Present value of the interest payments: $R(PVF\text{-}OA_{5,6\%}) = \$5,000(4.21236)$ 21,061.80
3. **Combined present value (market price)—carrying value of bonds** **\$95,787.80**

By paying \$95,787.80 at date of issue, investors will realize an effective yield of 6% over the 5-year term of the bonds. This is true because Alltech discounted the cash flows at 6%.

Excel Solution

<i>i</i>	6%
<i>n</i>	5
PMT	-\$5,000
FV	-\$100,000
PV	\$95,787.64

PV(rate, nper, pmt, [fv], [type])

Analytics in Action: Using Present Value for Investment Analysis

Many companies carry investments on their balance sheet, representing investments in debt and equity securities. **Alphabet, Inc.** (parent company of **Google**) reports \$20.7 billion of non-marketable investments, including investments in privately held companies. Alphabet will regularly invest in early-stage companies that are developing promising technology or products. How does Alphabet determine the value of these private companies and, ultimately, how much to invest? While the company likely employs a very complex quantitative and qualitative review, you can be certain that present value is part of its overall analysis.

There is a significant amount of judgment involved in valuing a private company; investors must estimate future revenues,

costs, and cash flows along with a reasonable discount rate, which could be impacted by market and economic conditions. Given the subjectivity of such estimates, companies will often prepare a sensitivity analysis to understand how changes in the values of their assumptions will impact the estimated value of a potential investment. Analytical tools can be very useful in helping companies gain comfort over their investment decisions.

For example, consider the scenario of trying to value a potential investment based on discounted future free cash flows when there is subjectivity around both the amount of annual cash flows and the appropriate discount rate in the following chart.

Free Cash Flow	Present Value of Free Cash Flow				
	Discount Rate				
	3.0%	3.5%	4.0%	4.5%	5.0%
\$1,500,000	\$ 6,869,561	\$ 6,772,579	\$ 6,677,733	\$ 6,584,965	\$ 6,494,215
2,000,000	9,159,414	9,030,105	8,903,645	8,779,953	8,658,953
2,500,000	11,449,268	11,287,631	11,129,556	10,974,942	10,823,692
3,000,000	13,739,122	13,545,157	13,355,467	13,169,930	12,988,430
3,500,000	16,028,975	15,802,683	15,581,378	15,364,919	15,153,168

($n = 5$ in all scenarios)

While the **best** estimate of present value is based on annual free cash flows of \$2,500,000 discounted at a rate of 4%, this chart

shows how present value changes with fluctuations in both future free cash flows and discount rate.

Go to the **Analytics in Action Activities** section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

Present Value Measurement

Calculations of present value rely on an **expected cash flow approach**.⁶ This approach uses a range of cash flows and incorporates the probabilities of those cash flows to provide a more relevant measurement of present value, as shown in **Illustration 5.11**.

Information:	30% probability that future cash flows will be \$100	50% probability that future cash flows will be \$200	20% probability that future cash flows will be \$300		
Expected Cash Flow:	$(\$100 \times 0.3)$	+	$(\$200 \times 0.5)$	+	$(\$300 \times 0.2)$
	\$190				

ILLUSTRATION 5.11 Example of Expected Cash Flow Approach

Choosing an Appropriate Interest Rate

After determining expected cash flows, a company must then use the proper interest rate to discount the cash flows. The interest rate used for this purpose has the following three components.

1. **Pure rate of interest (2%–4%).** The amount a lender would charge if there were no possibilities of default and no expectation of inflation.

⁶“Using Cash Flow Information and Present Value in Accounting Measurements,” *Statement of Financial Accounting Concepts* No. 7 (Norwalk, Conn.: FASB, 2000).

2. **Expected inflation rate of interest (0%–?).** Lenders recognize that in an inflationary economy, they are being paid back with less valuable dollars. As a result, they increase their interest rate to compensate for this loss in purchasing power. When inflationary expectations are higher, interest rates are higher.
3. **Credit risk rate of interest (0%–5%).** The government has little or no credit risk (i.e., risk of nonpayment) when it issues bonds. A business enterprise, however, depending upon its financial stability, profitability, etc., can have a low or a high credit risk.

The FASB takes the position that after computing the expected cash flows, a company should discount those cash flows by the **risk-free rate of return**.

- That rate is defined as **the pure rate of return plus the expected inflation rate**.
- The Board notes that the expected cash flow framework adjusts for credit risk because it incorporates the probability of receipt or payment into the computation of expected cash flows.
- Therefore, the rate used to discount the expected cash flows should consider only the pure rate of interest and the inflation rate.

Example 5.24 Expected Cash Flows

FACTS Al's Appliance Outlet offers a 2-year warranty on all products sold. In 2025, Al's Appliance sold \$250,000 of a particular type of clothes dryer. Al's Appliance entered into an agreement with Ralph's Repair to provide all warranty service on these dryers sold in 2025.

QUESTION What is the warranty expense to record in 2025 and the amount of warranty liability to record on the December 31, 2025, balance sheet? Al's Appliance must measure the fair value of the agreement. Since there is not a ready market for these warranty contracts, Al's Appliance uses expected cash flow techniques to value the warranty obligation.

SOLUTION

Based on prior warranty experience, Al's Appliance estimates the following expected cash outflows associated with the dryers sold in 2025.

	<u>Cash Flow Estimate</u>	×	<u>Probability Assessment</u>	=	<u>Expected Cash Flow</u>
2025	\$3,800		.20		\$ 760
	6,300		.50		3,150
	7,500		.30		2,250
Total					<u>\$6,160</u>
2026	\$5,400		.30		\$1,620
	7,200		.50		3,600
	8,400		.20		1,680
Total					<u>\$6,900</u>

Applying expected cash flow concepts to these data, Al's Appliance estimates warranty cash outflows of \$6,160 in 2025 and \$6,900 in 2026. The present value of these cash flows, assuming a risk-free rate of 5% and cash flows occurring at the end of the year, is therefore calculated as follows.

<u>Year</u>	<u>Expected Cash Flow</u>	×	<u>PV Factor, $i = 5\%$</u>	=	<u>Present Value</u>
2025	\$6,160		0.95238		\$ 5,866.66
2026	6,900		0.90703		6,258.51
Total					<u>\$12,125.17</u>

FACTS Messier Company is a manufacturer of cycling equipment. It is facing several decisions involving time value of money considerations.

INSTRUCTIONS

Provide the requested information for (a)–(d) below. (Round all answers to the nearest dollar.)

- Messier recently signed a lease for a new office building for a lease period of 10 years. Under the lease agreement, a security deposit of \$12,000 is made, with the deposit to be returned at the expiration of the lease, with interest compounded at 10% per year. What amount will the company receive at the time the lease expires?
- Recently, the vice president of operations of the company has requested construction of a new plant to meet the increasing demand for the company's bikes. After a careful evaluation of the request, the board of directors has decided to raise funds for the new plant by issuing \$3,000,000 of 11% bonds on March 1, 2025, with principal due on March 1, 2040, and interest payable each March 1 and September 1. At the time of issuance, the market interest rate for similar financial instruments is 10%. Determine the selling price of the bonds.
- The company, having issued the bonds in part (b), is committed to making annual sinking fund deposits of \$90,000. The deposits are made on the last day of each year and yield a return of 10%. Will the fund at the end of 15 years be sufficient to retire the bonds? If not, what will the deficiency be?
- Messier has 50 employees. Recently, after a long negotiation with the local labor union, the company decided to initiate a pension plan as a part of its employee compensation plan. The plan will start on January 1, 2025. Each employee covered by the plan is entitled to a pension payment each year after retirement. As required by accounting standards, the controller of the company needs to report the pension obligation (liability). The following estimates have been collected.

Average length of time to retirement	15 years
Expected life duration after retirement	10 years
Total pension payment expected each year after retirement for all employees	\$800,000 per year

On the basis of the information above, determine the present value of the pension liability. Assume payment made at the end of the year and the interest rate to be used is 8%.

SOLUTION

- a. Future value of \$12,000 at 10% for 10 years:

$$(\$12,000 \times 2.59374) = \$31,125$$

- b. Formula for the interest payments*:

$$\begin{aligned} PV-OA &= R (PVF-OA_{n,i}) \\ PV-OA &= \$165,000 (PVF-OA_{30,5\%}) \\ PV-OA &= \$165,000 (15.37245) \\ PV-OA &= \$2,536,454 \end{aligned}$$

$$\begin{aligned} \text{*Payments} &= \$3,000,000 \times .11 \times 1/2 \\ n &= 30 \text{ (15 years} \times 2 \text{ semiannual periods)} \\ i &= .05 \text{ (.10} \div 2 \text{ periods per year)} \end{aligned}$$

Formula for the principal:

$$\begin{aligned} PV &= FV (PVF_{n,i}) \\ PV &= \$3,000,000 (PVF_{30,5\%}) \\ PV &= \$3,000,000 (0.23138) \\ PV &= \$694,140 \end{aligned}$$

$$\text{The selling price of the bonds} = \$2,536,454 + \$694,140 = \$3,230,594.$$

- c. Future value of an ordinary annuity of \$90,000 at 10% for 15 years ($\$90,000 \times 31.77248$) \$2,859,523
 Deficiency ($\$3,000,000 - \$2,859,523$) \$140,477

Put It into Practice LO 5.5

Analyze Time Value Decisions

d. Compute the value of the deferred annuity and then discount that amount to the present.

1. Present value of the expected annual pension payments at the end of the tenth year:

$$PV-OA = R (PVF-OA_{n,i})$$

$$PV-OA = \$800,000 (PVF-OA_{10,8\%})$$

$$PV-OA = \$800,000 (6.71008)$$

$$PV-OA = \$5,368,064$$

2. Present value of the expected annual pension payments at the beginning of the current year:

$$PV = FV (PVF_{n,i})$$

$$PV = \$5,368,064 (PVF_{15,8\%})$$

$$PV = \$5,368,064 (0.31524)$$

$$PV = \$1,692,228$$

The company's pension obligation (liability) is \$1,692,228.

APPENDIX 5A

Technology Tools for Time Value of Money Problems

LEARNING OBJECTIVE * 6

Solve time value of money problems using Excel and financial calculators.

While it is important to understand the foundational elements of present and future value calculations shown in the chapter, business professionals will often use different technology tools to solve time value of money problems. In this appendix, we will demonstrate how to use Excel and a financial calculator for these calculations.

Using Excel to Solve Time Value of Money Problems

The use of Excel **functions**, such as present and future value, allows users to quickly solve a variety of accounting problems and offers the ability to quickly modify inputs to understand how, for example, changes in discount rate might impact the time value of money calculations. While Excel has many valuable functions, we will focus on the following.

- **Present Value (PV).** Returns the present value of a single sum and series of constant annuity payments
- **Future Value (FV).** Returns the future value of a single sum and series of constant annuity payments
- **Rate (R).** Returns the interest rate per period for a loan or investment
- **Number of Periods (NPER).** Returns the number of periods for an investment based on periodic, constant annuity payments and a constant interest rate

To access these functions, you select *formulas > Insert Function* from Excel's main menu.

When using Excel, each function will require some combination of the following inputs.

- **Rate.** Interest rate per period; annual rate must be adjusted if compounding is less than one year.

- **Nper.** Number of periods, which may be equal to or less than one year.
- **Pmt.** Amount of the payment made each period. If you are solving for a problem with a single sum and no annuity payment, this field can be left blank.
- **PV or FV.** Present or future value; if left blank, this amount will default to zero.
- **Type.** This represents the timing of the payment in a problem with an annuity payment.
 - **Entering 0 represents an ordinary annuity**, indicating that payments come at the end of a period. If the Type field is left blank, it will default to this value.
 - **Entering 1 represents an annuity due**, indicating that payments come at the beginning of a period.

When entering values for the payment or present or future values, it is important to be aware if the value is a cash **inflow** or **outflow** in the context of the time value of money scenario. Excel views cash inflows as positive values, while cash outflows must be entered as negative values. We have noted this in each of the examples below to help you practice identifying the inflows and outflows.

Now let's take a look at some of the examples covered in Chapter 5 and practice solving those same problems using Excel. You will see some minor differences in the solutions when solved with Excel versus with the present or future value factors. This is simply due to rounding. The factors used in the chapter are generally rounded to five decimals, whereas Excel does not round this intermediate part of the calculation.

Future and Present Value Single-Sum Problems

Let's start with the future value of a single sum.

FACTS Bruegger Co. invests \$50,000 for 5 years earning compounded annual interest at a rate of 6%.

QUESTION What is the value of the investment at the end of 5 years?

SOLUTION

Using Excel, navigate to the Formulas tab, select Insert Function, and then choose the future value (FV) function. Excel will walk you through the inputs using the following Function Arguments box and then show you the results of your formula. As indicated, Bruegger's investment will grow to nearly \$67,000.

Future Value of a Single Sum

<i>i</i>	6%	→	Rate	6%	= 0.06
<i>n</i>	5	→	Nper	5	= 5
PV	-\$50,000	→	Pmt	0 No annuity, enter '0' or leave blank	= 0
		→	Pv	-50000	= -50000
		→	Type	No annuity, enter '0' or leave blank	= number
FV	\$66,911.28				= 66911.27888

Returns the future value of an investment based on periodic, constant payments and a constant interest rate.

Formula result = \$66,911.28 See the result of your formula!

Note that the initial investment of \$50,000 is considered a cash outflow and must be entered as a negative value. The function returns a positive future value as this is deemed a cash inflow. Because this is a single-sum scenario with no annuity payment, we can leave the Pmt and Type fields blank or enter 0.

Example 5A.1 Future Value of a Single Sum

In Example 5A.1, we manually entered the input values into the Function Arguments box (e.g., for Rate, we entered 6%). As you get more comfortable using Excel, you can enter cell references into the Function Arguments, such as cell C3 as shown in **Illustration 5A.1**.

ILLUSTRATION 5A.1 Entering Cell References into Function Arguments

Future Value of a Single Sum	
<i>i</i>	6%
<i>n</i>	5
<i>PV</i>	-\$50,000
<i>FV</i>	\$66,911.28

Function Arguments

FV

Rate

C3

= 0.06

Nper

C4

= 5

Pmt

No annuity, enter '0' or leave blank

= number

Pv

-C5 Negative; cash outflow

= -50000

Type

No annuity, enter '0' or leave blank

= number

= 66911.27888

Returns the future value of an investment based on periodic, constant payments and a constant interest rate.

Formula result = \$66,911.28 See the result of your formula!

Using cell references allows us to easily change our inputs and see what impact that has on the formula result. Once the formula is set up, Bruegger (in Example 5A.1) could understand how the future value would change if it invested \$60,000 instead of \$50,000. Or, what if the annual interest rate is 4% and Bruegger invests for 6 years? As your scenarios become more complex, it is helpful to distinguish your input cells from your formula cells by highlighting, or otherwise formatting the input cells you can change. In Example 5A.1, we could highlight the cells where we input interest rate, number of periods, and present value. This allows us to see the future value under a variety of scenarios.

Once you get comfortable using functions in Excel, you can enter your function and related inputs directly into the worksheet. We will show this format throughout the text when we use time value of money in different accounting applications.

Example 5A.2
 Present Value of a Single Sum

FACTS You will receive \$73,466 in 5 years.

QUESTION What is the value today if the appropriate rate is 8% with annual compounding?

SOLUTION

Using Excel, navigate to the Formulas tab, select Insert Function, and then choose the present value (PV) function. Excel will walk you through the inputs using the following Function Arguments box and then show you the result of your formula.

Function Arguments

PV

Rate

8%

= 0.08

Nper

5

= 5

Pmt

0 No annuity, enter '0' or leave blank

= 0

Fv

-73466 Negative; cash outflow

= -73466

Type

No annuity, enter '0' or leave blank

= number

= 49999.72515

Returns the present value of an investment: the total amount that a series of future payments is worth now.

Formula result = \$50,000 See the result of your formula!

As indicated, the present value is \$50,000. Note the future value is considered a cash outflow and must be entered as a negative value. The function returns a positive present value as this is the original cash value. Because this is a single-sum scenario, we can leave the Pmt and Type fields blank or enter 0.

Again, as you become comfortable with Excel, you will be able to set up your present value function such that it links directly to each of the inputs (rate, periods, future value), allowing you to modify the inputs and evaluate the impact on your present value.

Solving for Other Unknowns in Single-Sum Problems

We can use Excel to solve for other components of a time value of money scenario, like the number of periods or interest rate.

FACTS The Village of Somonauk wants to accumulate \$70,000 for the construction of a veterans' monument in the town square. At the beginning of the current year, the Village deposited \$47,811 in a memorial fund that earns 10% interest compounded annually.

QUESTION How many years will it take to accumulate \$70,000 in the memorial fund?

SOLUTION

Using Excel, navigate to the Formulas tab, select Insert Function, and then choose the number of periods (NPER) function. Excel will walk you through the inputs in the following Function Arguments box and then show you the result of your formula.

Finding Number of Periods

i	10%	→	Rate	10%	= 0.1
PV	-\$47,811	→	Pmt	0 No annuity, enter '0' or leave blank	= 0
FV	\$70,000	→	Pv	-47811	= -47811
			Fv	70000	= 70000
n	4	→	Type	0 No annuity, enter '0' or leave blank	= 0

Formula result = 3.999987245

Returns the number of periods for an investment based on periodic, constant payments and a constant interest rate.

Formula result = 4 See the result of your formula!

As indicated, the number of periods is 4. As we saw with the single-sum future and present value calculations, both the Pmt and Type inputs can be left blank or entered as zero. In this example, the initial deposit is a cash outflow that will be entered as a negative value. The future value of \$70,000 is a cash inflow and should be entered as a positive value.

Example 5A.3 Computing the Number of Periods

FACTS Assume that **Amazon** needs \$1,070,584 5 years from now to purchase electric scooters for employees in its new HQ2 location. The company currently has \$800,000 to invest for that purpose.

QUESTION At what rate of interest must Amazon invest the \$800,000 to pay for the electric scooters in the amount of \$1,070,584, 5 years from now?

Example 5A.4 Solve for the Interest Rate

SOLUTION

Using Excel, navigate to the Formulas tab, select Insert Function, and then choose the rate (RATE) function. Excel will walk you through the inputs shown in the following Function Arguments box and then show you the result of the formula.

Solving for Interest Rate

n 5

PV -\$800,000

FV \$1,070,584

Rate 6.00%

Function Arguments

NPER

Nper 5 = 5

Pmt 0 No annuity, enter '0' or leave blank = 0

Pv -800000 = -800000

Fv 1070584 = 1070584

Type 0 No annuity, enter '0' or leave blank = 0

= 0.060000701

Returns the interest rate per period of a loan or an investment. For example, use 6%/4 for quarterly payments at 6% APR.

Formula result = 6.00% See the result of your formula!

In this case, solving for the rate yields 6%. As with previous examples, we have no annuity payment, so the Pmt and Type inputs are left blank. In this scenario, the initial investment of \$800,000 represents a cash outflow and must be entered as a negative value. The future value represents the value of Amazon's investment after earning interest for 5 years and should be entered as a positive cash inflow.

Within the Function Arguments box for the Rate function, we can scroll down for one additional (optional) input. As shown in **Illustration 5A.2**, Excel allows you to enter a *Guess* of what the rate will be. Although this field is optional and often left blank, providing a value here gives Excel a starting point from which the rate function can begin so that it may converge on an answer that is accurate within a very small margin. If Excel cannot converge on an answer within this margin after 20 iterations, it will not return a result on the function. The user must then enter a different *Guess*.

ILLUSTRATION 5A.2 Optional Guess Field

Function Arguments

RATE

Pmt 0 = 0

Pv -800000 = -800000

Fv 1070584 = 1070584

Type 0 = 0

Guess | = number

= 0.000000701

Returns the interest rate per period of a loan or an investment. For example, use 6%/4 for quarterly payments at 6% APR.

Guess is your guess for what the rate will be; if omitted, Guess = 0.1 (10 percent).

Formula result = 6.00%

Annuities

In each of the previous examples, we had a present value, future value, or both, but no annuity payment. The next two examples will show how you can use Excel to solve for the future or present value of an annuity.

FACTS You plan to make five \$5,000 deposits made at the end of each of the next 5 years, earning interest of 6%.

QUESTIONS (a) What is the future value of these five deposits? (b) Repeat the requirements for (a), assuming payments occur at the beginning of the period.

SOLUTION

- a. Using Excel, navigate to the Formulas tab, select Insert Function, and then choose the future value (FV) function. Excel will walk you through the inputs using the following Function Arguments box and then show you the results of the formula.

Future Value of an Ordinary Annuity

i	6%
n	5
PMT	-\$5,000
PV	\$0
FV	\$28,185.46

Function Arguments

FV

Rate 6% = 0.06

Nper 5 = 5

Pmt -5000 = -5000

Pv 0 = 0

Type 0 = 0

Payments at END of period, enter 0 for ordinary annuity

= 28185.4648

Returns the future value of an investment based on periodic, constant payments and a constant interest rate.

Formula result = \$28,185.46 See the result of your formula!

As indicated, the future value of this annuity is \$28,185. Note that the annuity payments are considered a cash outflow and must be entered as a negative value. The payments are made at the end of each period, so we enter 0 in the Type field to indicate an ordinary annuity (if we left the Type field blank, Excel would default to an ordinary annuity). The function returns a positive future value as this is deemed a cash inflow.

- b. If we change our facts to indicate that the five \$5,000 deposits are made at the **beginning** of each period, we can easily calculate the future value of an annuity due by changing the value in the Type field to 1, as follows.

Future Value of an Annuity Due

i	6%
n	5
PMT	-\$5,000
PV	\$0
FV	\$29,876.59

Function Arguments

FV

Rate 6% = 0.06

Nper 5 = 5

Pmt -5000 = -5000

Pv 0 = 0

Type 1 = 1

Payments at BEGINNING of period, enter 1 for annuity due

= 29876.59269

Returns the future value of an investment based on periodic, constant payments and a constant interest rate.

Type is a value representing the timing of payment:
payment at the beginning of the period = 1; payment at the end of the period = 0 or omitted.

Formula result = \$29,876.59 See the result of your formula!

With payments at the beginning of the period, the future value increases to \$29,877.

Example 5A.5

Future Value of an Ordinary Annuity

Example 5A.6

Present Value of an Ordinary Annuity

FACTS You wish to determine the value today of receiving rental receipts of \$6,000 each at the end of each of the next 5 years when discounted at 6%.

QUESTIONS (a) What is the present value of these future receipts? (b) What is the present value of the payments, assuming payments occur at the beginning of the period?

SOLUTION

- a. Using Excel, navigate to the Formulas tab, select Insert Function, and then choose the present value (PV) function. Excel will walk you through the inputs using the following Function Arguments box and then show you the result of the formula.

Present Value of an Ordinary Annuity

i 6%

n 5

PMT -\$6,000

FV \$0

PV \$25,274.18

Function Arguments

Argument	Value	Increment	Result
Rate	6%	↑	= 0.06
Nper	5	↑	= 5
Pmt	-6000	↑	= -6000
Fv	0	↑	= 0
Type	0	↑	= 0

Payments at END of period, enter 0 for ordinary annuity

Formula result = \$25,274.18 See the result of your formula!

The present value is \$25,274. Note that the annuity payments are considered a cash outflow and must be entered as a negative value. The payments are made at the end of each period, so we enter 0 in the Type field to indicate an ordinary annuity. The function returns a positive present value as this is deemed a cash inflow.

- b.** If we change our facts to indicate that the five \$6,000 receipts are made at the **beginning** of each period, we can easily calculate the present value of an annuity due by changing the value in the Type field to 1, as the following shows.

In the Type field to 1, as the following shows:

Present Value of an Annuity Due

<i>i</i>	6%
<i>n</i>	5
PMT	-\$6,000
FV	\$0

Function Arguments

PV

Rate	6%	↑	= 0.06
Nper	5	↑	= 5
Pmt	-6000	↑	= -6000
Fv	0	↑	= 0
Type	1	↑	= 1

Payments at **BEGINNING** of period, enter 1 for annuity due

= 26790.63368

Returns the present value of an investment: the total amount that a series of future payments is worth now.

Type is a logical value: payment at the beginning of the period = 1; payment at the end of the period = 0 or omitted.

Formula result = \$26,790.63 See the result of your formula!

As indicated, the present value with payments occurring at the beginning of the period is \$26,791.

Long-Term Bond Example

Now let's take a look at a comprehensive example that combines the calculations for present value of a single sum and present value of an annuity into one function.

FACTS Alltech Corporation on January 1, 2025, issues \$100,000 of 5% bonds due in 5 years with interest payable annually at year-end ($\$100,000 \times .05 = \$5,000$). The current market rate of interest for bonds of similar risk is 6%.

QUESTION What will investors pay for this bond issue?

SOLUTION

Using Excel, navigate to the Formulas tab, select Insert Function, and then choose the present value (PV) function. Excel will walk you through the inputs in the following Function Arguments box and then show you the result of the formula.

Long-Term Bonds Payable

i	6%
n	5
PMT	-\$5,000
FV	-\$100,000
PV	\$95,787.64

Function Arguments

PV

Rate: 6% = 0.06

Nper: 5 = 5

Pmt: $-(100000 * 5\%)$ = -5000

Fv: -100000 = -100000

Type: 0 = 0

Payments at END of period, enter 0 for ordinary annuity

Returns the present value of an investment: the total amount that a series of future payments is worth now.

Formula result = \$95,787.64 See the result of your formula!

In this situation, investors will pay \$95,788 for these bonds. Note that the annuity payments and future value are considered cash outflows and must be entered as negative values. The formula results in a positive present value, representing a cash inflow. Here, too, we see a real advantage of using Excel: we are able to combine the present value of a single sum and present value of an annuity into one calculation.

Example 5A.7 Long-Term Bond Valuation

Using Financial Calculators to Solve Time Value of Money Problems

Another commonly used tool for time value of money problems is a financial (or business) calculator. The concepts and terminology are very consistent with Excel. The five most common keys used to solve time value of money problems are shown in **Illustration 5A.3**. As we just did using Excel functions, we'll take a look at some of the examples covered in Chapter 5 and practice solving those same problems using a financial calculator.

ILLUSTRATION 5A.3 Financial Calculator Time Value Keys

Future and Present Value Single-Sum Problems

Let's start with future and present value single-sum problems.

Example 5A.8

Future Value of a Single Sum

FACTS Bruegger Co. invests \$50,000 for 5 years earning compounded annual interest at a rate of 6%.

QUESTION What is the value of the investment at the end of 5 years?

SOLUTION

Using your financial calculator, enter the inputs shown below. Consistent with our approach in Excel, the initial investment of \$50,000 is considered a cash outflow and must be entered as a negative value. The calculator will return an answer that is positive (\$66,911), representing a cash inflow.

Inputs	5	6	-50,000	0	?
	N	I/Y	PV	PMT	FV
Answer					66,911.28

In Example 5A.8, we assumed that compounding occurs once a year. Some financial calculators have a default setting, which assumes compounding occurs 12 times a year. You must determine what default period has been programmed into your calculator and change it as necessary to arrive at the proper compounding period.

Example 5A.9

Present Value of a Single Sum

FACTS You will receive \$73,466 in 5 years.

QUESTION What is the value today if the appropriate rate is 8% with annual compounding?

SOLUTION

Using your financial calculator, enter the inputs shown below. In this scenario, the future value is considered a cash outflow and must be entered as a negative value. The calculator will return a present value that is positive (\$50,000), representing a cash inflow.

Inputs	5	8	?	0	-73,466
	N	I/Y	PV	PMT	FV
Answer			49,999.73		

Solving for Other Unknowns in Single-Sum Problems

Just like we did for Excel, we can use financial calculators to solve for other unknowns in time value of money problems.

Example 5A.10

Computing the Number of Periods

FACTS The Village of Somonauk wants to accumulate \$70,000 for the construction of a veterans' monument in the town square. At the beginning of the current year, the Village deposited \$47,811 in a memorial fund that earns 10% interest compounded annually.

QUESTION How many years will it take to accumulate \$70,000 in the memorial fund?

SOLUTION

Using your financial calculator, enter the inputs shown below. The initial deposit is deemed a cash outflow and must be entered as a negative value. There are no annuity payments, so we must enter a zero for the PMT field. We can then solve for the number of periods, which is 4.

Inputs	?	10	-47,811	0	70,000
	N	I/Y	PV	PMT	FV
Answer	4				

FACTS Assume that **Amazon** needs \$1,070,584 5 years from now to purchase electric scooters for employees in its new HQ2 location. It currently has \$800,000 to invest for that purpose.

QUESTION At what rate of interest must Amazon invest the \$800,000 to pay for the electric scooters in the amount of \$1,070,584, 5 years from now?

SOLUTION

Using your financial calculator, enter the inputs shown below and solve for the interest rate (6% in this case).

Inputs	5	?	-800,000	0	1,070,584
	N	I/Y	PV	PMT	FV
Answer		6.000070			

Note that the present value of \$800,000 is deemed a cash outflow and must be entered as a negative value. We must enter a zero for the payment as there is no annuity payment in this scenario.

Example 5A.11 Solve for the Interest Rate

Annuities

We can use our financial calculator when solving for scenarios with an annuity payment. Similar to Excel, the default setting on most financial calculators will be an ordinary annuity, meaning the calculator will return a value assuming payments come at the end of each period. While individual calculators may vary, all will have the option of calculating a time value of money problem in begin (BGN) or END mode. For an annuity with payments at the beginning of each period, it is very important that you change to BGN mode to calculate the value of an annuity due.

FACTS You plan to make five \$5,000 deposits made at the end of each of the next 5 years, earning interest of 6%.

QUESTION What is the future value of these five deposits?

SOLUTION

Using your financial calculator in END mode, enter the inputs shown below and solve for the future value (in this situation, \$28,185).

Inputs	5	6	0	-5,000	?
	N	I/Y	PV	PMT	FV
Answer					28,185.46

Note that the annuity payments are considered cash outflows and should be entered as a negative value. We have no beginning value, so the present value is zero.

Example 5A.12 Future Value of an Ordinary Annuity

To practice moving your calculator to BGN mode to reflect an annuity payment at the beginning of each period, assume that you plan to make five \$5,000 deposits at the **beginning** of each of the next 5 years, earning interest of 6%. What will your future value of these five deposits be in this scenario? As shown, the future value of the stream of annuity payments at the beginning of the period returns a value of \$29,876.59.

Inputs	5	6	0	-5,000	?
	N	I/Y	PV	PMT	FV
Answer					29,876.59

We can use the same process as we just used for future values and apply it to a present value example.

Example 5A.13

Present Value of an Ordinary Annuity

FACTS You wish to determine the value today of receiving rental receipts of \$6,000 each at the end of each of the next 5 years when discounted at 6%.

QUESTION What is the present value of these future receipts?

SOLUTION

Using your financial calculator in END mode, enter the inputs below and solve for the present value. The annuity receipts must be entered as negative values, and we must enter a future value of zero. Your calculator will then return a positive present value of the \$6,000 annuity payments (\$26,791).

	END mode				
Inputs	5	6	?	-6,000	0
	N	I/Y	PV	PMT	FV
Answer			25,274.18		

Similar to the future value annuity problems, if we change the facts of the scenario in Example 5A.13 to assume that the \$6,000 rental receipts are received at the **beginning** of each period, we can put our calculator into BGN mode to calculate the present value of an annuity due of \$26,790.63.

	BGN mode				
Inputs	5	6	?	-6,000	0
	N	I/Y	PV	PMT	FV
Answer			26,790.63		

Long-Term Bond Example

Let's look at one final example using a financial calculator. Just as we did with Excel, we can use a financial calculator to value a long-term bond. In determining the value of a long-term bond, we must calculate the present value of both a single-sum and an annuity. We can do this in one combined calculation using our calculator.

Example 5A.14

Long-Term Bond Valuation

FACTS Alltech Corporation on January 1, 2025, issues \$100,000 of 5% bonds due in 5 years with interest payable annually at year-end ($\$100,000 \times .05 = \$5,000$). The current market rate of interest for bonds of similar risk is 6%.

QUESTION What will investors pay for this bond issue?

SOLUTION

Using your financial calculator in END mode, enter the inputs shown below and solve for the present value. Both the interest payments and future value must be entered as negative values. Your calculator will return a present value of \$95,787.64.

	END mode				
Inputs	5	6	?	-5,000	-100,000
	N	I/Y	PV	PMT	FV
Answer			95,787.64		

Benefits of Using Technology Tools

Using technology to help solve time value of money problems can be very valuable and not just for your intermediate accounting course. As you get more comfortable using these tools, you can apply them to many scenarios in your personal life. Any time you borrow money,

whether it is to buy a new car or your first home, understanding how interest rates, time, or down payment will affect your monthly payment obligation can be very useful. Also, it is never too early to start saving for retirement; understanding the impact of interest rates and early investing on the future value of your nest egg can be quite motivating! While using these tools may be cumbersome to start, with just a little practice, you will gain confidence and begin to see how powerful they can be.

Review and Practice

Key Terms Review

annuity 5-14	face rate 5-7	principal 5-3
annuity due 5-14	future value 5-8	risk-free rate of return 5-32
compound interest 5-4	future value of an annuity 5-14	simple interest 5-3
deferred annuity 5-28	interest 5-3	stated rate 5-7
discounting 5-8	nominal rate 5-7	time value of money 5-2
effective yield 5-7	ordinary annuity 5-14	
expected cash flow approach 5-31	present value 5-8	

Learning Objectives Review

1 Describe the fundamental concepts related to the time value of money.

Some of the **applications of present value-based measurements** to accounting topics are (1) notes, (2) leases, (3) pensions and other postretirement benefits, (4) long-term assets, (5) sinking funds, (6) business combinations, (7) disclosures, and (8) installment contracts. See items 1 and 2 in the following Fundamental Concepts box for the distinctions between simple and compound interest.

In order to identify which of the **five compound interest tables** to use, determine whether you are solving for (1) the future value of a single sum, (2) the present value of a single sum, (3) the future value of a series of sums (an annuity), or (4) the present value of a series of sums (an annuity). In addition, when a series of sums (an annuity) is involved, identify whether these sums are received or paid (1) at the beginning of each period (annuity due) or (2) at the end of each period (ordinary annuity).

The following **four variables are fundamental to all compound interest problems**. (1) *Rate of interest*: unless otherwise stated, an annual rate, adjusted to reflect the length of the compounding period if less than a year. (2) *Number of time periods*: the number of compounding periods (a period may be equal to or less than a year). (3) *Future value*: the value at a future date of a given sum or sums invested assuming compound interest. (4) *Present value*: the value now (present time) of a future sum or sums discounted assuming compound interest.

2 Solve future and present value of 1 problems.

See items 5(a) and 6(a) in the following Fundamental Concepts box.

3 Solve future value of ordinary and annuity due problems.

See item 5(b) in the following Fundamental Concepts box.

4 Solve present value of ordinary and annuity due problems.

See item 6(b) in the following Fundamental Concepts box.

5 Solve present value problems related to deferred annuities, bonds, and expected cash flows.

Deferred annuities are annuities in which rents begin after a specified number of periods. The future value of a deferred annuity is computed the same as the future value of an annuity not deferred. To find the present value of a deferred annuity, compute the present value of an ordinary annuity of 1 as if the rents had occurred for the entire period, and then subtract the present value of rents not received during the deferral period. The **expected cash flow approach** uses a range of cash flows and the probabilities of those cash flows to provide the most likely estimate of expected cash flows. The proper interest rate used to discount the cash flows is the risk-free rate of return.

*6 Solve time value of money problems using Excel and financial calculators.

Excel or financial calculators can be used to solve time value of money problems. By entering the amounts for all but one of the unknown

inputs (periods, interest rate, payments, future or present value), these technology tools can be used to solve the same and additional problems as those solved with time value of money tables. Particularly useful situations involve interest rates and compounding periods not presented in these tables. Excel is also useful in conducting sensitivity analysis in time value of money problems.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Fundamental Concepts

1. **Simple interest.** Interest on principal only, regardless of interest that may have accrued in the past.
2. **Compound interest.** Interest accrues on the unpaid interest of past periods as well as on the principal.
3. **Rate of interest.** Interest is usually expressed as an annual rate, but when the compounding period is shorter than one year, the interest rate for the shorter period must be determined.
4. **Annuity.** A series of payments or receipts (called rents) that occur at equal intervals of time. Types of annuities:
 - a. **Ordinary annuity.** Each rent is payable (receivable) at the end of the period.
 - b. **Annuity due.** Each rent is payable (receivable) at the beginning of the period.
5. **Future value.** Value at a later date of a single sum that is invested at compound interest.
 - a. **Future value of 1** (or value of a single sum). The future value of \$1 (or a single given sum), FV , at the end of n periods at i compound interest rate (Table 5.1).
 - b. **Future value of an annuity.** The future value of a series of rents invested at compound interest. In other words, the accumulated total that results from a series of equal deposits at regular intervals invested at compound interest. Both deposits and interest increase the accumulation.
1. **Future value of an ordinary annuity.** The future value on the date of the last rent (Table 5.3).
2. **Future value of an annuity due.** The future value one period after the date of the last rent. When an annuity due table is not available, use Table 5.3 with the following formula:

$$\text{Value of annuity due} = (\text{Value of ordinary annuity for of 1 for } n \text{ rents} \times n \text{ rents}) \times (1 + \text{interest rate})$$
6. **Present value.** The value at an earlier date (usually now) of a given future sum discounted at compound interest.
 - a. **Present value of 1** (or present value of a single sum). The present value (worth) of \$1 (or a given sum), due n periods hence, discounted at i compound interest (Table 5.2).
 - b. **Present value of an annuity.** The present value (worth) of a series of rents discounted at compound interest. In other words, it is the sum when invested at compound interest that will permit a series of equal withdrawals at regular intervals.
 1. **Present value of an ordinary annuity.** The value now of \$1 to be received or paid at the end of each period (rents) for n periods, discounted at i compound interest (Table 5.4).
 2. **Present value of an annuity due.** The value now of \$1 to be received or paid at the beginning of each period (rents) for n periods, discounted at i compound interest (Table 5.5). To use Table 5.4 for an annuity due, apply this formula:

$$\text{Present value of annuity} = (\text{Present value of an due of 1 for } n \text{ rents} \times \text{ordinary annuity of } n \text{ rents}) \times (1 + \text{interest rate})$$

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Questions

1. What is the time value of money? Why should accountants have an understanding of compound interest, annuities, and present value concepts?
2. Identify three situations in which accounting measures are based on present values. Do these present value applications involve single sums or annuities, or both single sums and annuities? Explain.
3. What is the nature of interest? Distinguish between “simple interest” and “compound interest.”
4. What are the components of an interest rate? Why is it important for accountants to understand these components?
5. The following are a number of values taken from compound interest tables involving the same number of periods and the same rate of interest. Indicate what each of these four values represents.

a. 6.71008.	c. .46319.
b. 2.15892.	d. 14.48656.

6. Jose Oliva is considering two investment options for a \$1,500 gift he received for graduation. Both investments have 8% annual interest rates. One offers quarterly compounding; the other compounds on a semiannual basis. Which investment should he choose? Why?
7. Regina Henry deposited \$20,000 in a money market certificate that provides interest of 10% compounded quarterly if the amount is maintained for 3 years. How much will Regina have at the end of 3 years?
8. Will Smith will receive \$80,000 5 years from now, from a trust fund established by his father. Assuming the appropriate interest rate for discounting is 12% (compounded semiannually), what is the present value of this amount today?
9. What are the primary characteristics of an annuity? Differentiate between an “ordinary annuity” and an “annuity due.”
10. Kehoe, Inc. owes \$40,000 to Ritter Company. How much would Kehoe have to pay each year if the debt is retired through four equal payments (made at the end of the year), given an interest rate on the debt of 12%? (Round to two decimal places.)
11. The Kellys are planning for a retirement home. They estimate they will need \$200,000 4 years from now to purchase this home. Assuming an interest rate of 10%, what amount must be deposited at the end of each of the 4 years to fund the home price? (Round to two decimal places.)
12. Assume the same situation as in Question 11, except that the four equal amounts are deposited at the beginning of the period rather than at the end. In this case, what amount must be deposited at the beginning of each period? (Round to two decimals.)
13. Explain how the future value of an ordinary annuity interest table is converted to the future value of an annuity due interest table.
14. Explain how the present value of an ordinary annuity interest table is converted to the present value of an annuity due interest table.
15. In a book named *Treasure*, the reader has to figure out where a 2.2 pound, 24 kt gold horse has been buried. If the horse is found, a prize of \$25,000 a year for 20 years is provided. The actual cost to the publisher to purchase an annuity to pay for the prize is \$245,000. What interest rate (to the nearest percent) was used to determine the amount of the annuity? (Assume end-of-year payments.)
16. Alexander Enterprises leases property to Hamilton, Inc. Because Hamilton is experiencing financial difficulty, Alexander agrees to receive five rents of \$20,000 at the end of each year, with the rents deferred 3 years. What is the present value of the five rents discounted at 12%?
17. Answer the following questions.
 - a. On May 1, 2025, Goldberg Company sold some machinery to Newlin Company on an installment contract basis. The contract required five equal annual payments, with the first payment due on May 1, 2025. What present value concept is appropriate for this situation?
 - b. On June 1, 2025, Seymour Inc. purchased a new machine that it does not have to pay for until June 1, 2027. The total payment on June 1, 2027, will include both principal and interest. Assuming interest at a 12% rate, the cost of the machine would be the total payment multiplied by what time value of money concept?
 - c. Costner Inc. wishes to know how much money it will have available in 5 years if five equal amounts of \$35,000 are invested, with the first amount invested immediately. What interest table is appropriate for this situation?
 - d. Megan Hoffman invests in a “jumbo” \$200,000, 3-year certificate of deposit at First Wisconsin Bank. What table would be used to determine the amount accumulated at the end of 3 years?
18. Recently, Glenda Estes was interested in purchasing a Honda Acura. The salesperson indicated that the price of the car was either \$27,600 cash or \$6,900 at the end of each of 5 years. Compute the effective-interest rate to the nearest percent that Glenda would pay if she chooses to make the five annual payments.
19. Property/casualty insurance companies have been criticized because they reserve for the total loss as much as 5 years before it may happen. The IRS has joined the debate because it says the full reserve is unfair from a taxation viewpoint. What can explain the IRS position?

Brief Exercises

(Unless instructed otherwise, round answers to the nearest dollar.)

- BE5.1 (LO 2)** Chris Spear invested \$15,000 today in a fund that earns 8% compounded annually. To what amount will the investment grow in 3 years? To what amount would the investment grow in 3 years if the fund earns 8% annual interest compounded semiannually?
- BE5.2 (LO 2)** Tony Bautista needs \$25,000 in 4 years. What amount must he invest today if his investment earns 12% compounded annually? What amount must he invest if his investment earns 12% annual interest compounded quarterly?
- BE5.3 (LO 2)** Candice Willis will invest \$30,000 today. She needs \$150,000 in 21 years. What annual interest rate must she earn?
- BE5.4 (LO 2)** Bo Newman will invest \$10,000 today in a fund that earns 5% annual interest. How many years will it take for the fund to grow to \$17,100?
- BE5.5 (LO 3)** Sally Medavoy will invest \$8,000 a year for 20 years in a fund that will earn 6% annual interest. If the first payment into the fund occurs today, what amount will be in the fund in 20 years? If the first payment occurs at year-end, what amount will be in the fund in 20 years?
- BE5.6 (LO 3)** Steve Madison needs \$250,000 in 10 years. How much must he invest at the end of each year, at 5% interest, to meet his needs?
- BE5.7 (LO 2)** John Fillmore’s lifelong dream is to own his own fishing boat to use in his retirement. John has recently come into an inheritance of \$400,000. He estimates that the boat he wants will cost \$300,000 when he retires in 5 years. How much of his inheritance must he invest at an annual rate of 8% (compounded annually) to buy the boat at retirement?

BE5.8 (LO 2) Refer to the data in BE5.7. Assuming quarterly compounding of amounts invested at 8%, how much of John Fillmore's inheritance must be invested to have enough at retirement to buy the boat?

BE5.9 (LO 3) Morgan Freeman is investing \$9,069 at the end of each year in a fund that earns 5% interest. In how many years will the fund be at \$100,000?

BE5.10 (LO 4) Henry Quincy wants to withdraw \$30,000 each year for 10 years from a fund that earns 8% interest. How much must he invest today if the first withdrawal is at year-end? How much must he invest today if the first withdrawal takes place immediately?

BE5.11 (LO 4) Leon Tyler's VISA balance is \$793.15. He may pay it off in 12 equal end-of-month payments of \$75 each. What interest rate is Leon paying?

BE5.12 (LO 4) Maria Alvarez is investing \$300,000 in a fund that earns 4% interest compounded annually. What equal amounts can Maria withdraw at the end of each of the next 20 years?

BE5.13 (LO 3) Adams Inc. will deposit \$30,000 in a 6% fund at the end of each year for 8 years beginning December 31, 2025. What amount will be in the fund immediately after the last deposit?

BE5.14 (LO 4) Amy Monroe wants to create a fund today that will enable her to withdraw \$25,000 per year for 8 years, with the first withdrawal to take place 5 years from today. If the fund earns 8% interest, how much must Amy invest today?

BE5.15 (LO 5) Clancey Inc. issues \$2,000,000 of 7% bonds due in 10 years with interest payable at year-end. The current market rate of interest for bonds of similar risk is 8%. What amount will Clancey receive when it issues the bonds?

BE5.16 (LO 4) Zach Taylor is settling a \$20,000 loan due today by making 6 equal annual payments of \$4,727.53. Determine the interest rate on this loan, if the payments begin one year after the loan is signed.

BE5.17 (LO 4) Consider the loan in BE5.16. What payments must Zach Taylor make to settle the loan at the same interest rate but with the 6 payments beginning on the day the loan is signed?

***BE 5.18 (LO 6)** Stella's Bakery is planning for future expansion by investing \$30,000 now into a fund that earns interest at an annual rate of 7%, compounded annually. Determine how much Stella's will have 5 years from now to purchase a new commercial oven, using the FV function in Excel or a financial calculator.

***BE 5.19 (LO 6)** Stella's Bakery is planning for future expansion. The company estimates that it will need \$50,000 to purchase a new commercial oven 5 years from now. Assuming a 7% annual interest rate compounded annually, use the PV function in Excel or a financial calculator to determine how much Stella's must invest today to have \$50,000 5 years from now.

Exercises

(Unless instructed otherwise, round answers to the nearest dollar. Interest rates are per annum unless otherwise indicated.)

E5.1 (LO 1) (Using Interest Tables) For each of the following cases, indicate (a) to what rate columns, and (b) to what number of periods you would refer in looking up the interest factor.

1. In a future value of 1 table:

	<u>Annual Rate</u>	<u>Number of Years Invested</u>	<u>Compounded</u>
a.	9%	9	Annually
b.	12	5	Quarterly
c.	10	15	Semiannually

2. In a present value of an annuity of 1 table:

	<u>Annual Rate</u>	<u>Number of Years Involved</u>	<u>Number of Rents Involved</u>	<u>Frequency of Rents</u>
a.	9%	25	25	Annually
b.	10	15	30	Semiannually
c.	12	7	28	Quarterly

E5.2 (LO 1, 2) Excel (Simple and Compound Interest Computations) Alan Jackson invests \$20,000 at 8% annual interest, leaving the money invested without withdrawing any of the interest for 8 years. At the end of the 8 years, Alan withdraws the accumulated amount of money.

Instructions

- Compute the amount Alan would withdraw assuming the investment earns simple interest.
- Compute the amount Alan would withdraw assuming the investment earns interest compounded annually.
- Compute the amount Alan would withdraw assuming the investment earns interest compounded semiannually.

E5.3 (LO 2, 3, 4) Excel (Computation of Future Values and Present Values) Using the appropriate interest table, answer each of the following questions. (Each case is independent of the others.)

- What is the future value of \$7,000 at the end of 5 periods at 8% compounded interest?
- What is the present value of \$7,000 due 8 periods hence, discounted at 6%?
- What is the future value of 15 periodic payments of \$7,000 each made at the end of each period and compounded at 10%?
- What is the present value of \$7,000 to be received at the end of each of 20 periods, discounted at 5% compound interest?

E5.4 (LO 3, 4) (Computation of Future Values and Present Values) Using the appropriate interest table, answer the following questions. (Each case is independent of the others.)

- What is the future value of 20 periodic payments of \$4,000 each made at the beginning of each period and compounded at 8%?
- What is the present value of \$2,500 to be received at the beginning of each of 30 periods, discounted at 5% compound interest?
- What is the future value of 15 deposits of \$2,000 each made at the beginning of each period and compounded at 10%? (Future value as of the end of the fifteenth period.)
- What is the present value of six receipts of \$1,000 each received at the beginning of each period, discounted at 9% compounded interest?

E5.5 (LO 4) (Computation of Present Value) Using the appropriate interest table, compute the present values of the following periodic amounts due at the end of the designated periods.

- \$30,000 receivable at the end of each period for 8 periods compounded at 12%.
- \$30,000 payments to be made at the end of each period for 16 periods at 9%.
- \$30,000 payable at the end of the seventh, eighth, ninth, and tenth periods at 12%.

E5.6 (LO 2, 3, 4) (Future Value and Present Value Problems) Presented below are three unrelated situations.

- Dwayne Wade Company recently signed a lease for a new office building, for a lease period of 10 years. Under the lease agreement, a security deposit of \$12,000 is made, with the deposit to be returned at the expiration of the lease, with interest compounded at 5% per year. What amount will the company receive at the time the lease expires?
- Serena Williams Corporation, having recently issued a \$20 million, 15-year bond issue, is committed to make annual sinking fund deposits of \$600,000. The deposits are made on the last day of each year and yield a return of 10%. Will the fund at the end of 15 years be sufficient to retire the bonds? If not, what will the deficiency be?
- Under the terms of his salary agreement, president Rex Walters has an option of receiving either an immediate bonus of \$55,000, or a deferred bonus of \$70,000 payable in 10 years. Ignoring tax considerations and assuming a relevant interest rate of 4%, which form of settlement should Walters accept?

E5.7 (LO 5) (Computation of Bond Prices) What would you pay for a \$100,000 debenture bond that matures in 15 years and pays \$5,000 a year in interest if you wanted to earn a yield of:

- 4%
- 5%
- 6%

E5.8 (LO 5) (Computations for a Retirement Fund) Clarence Weatherspoon, a super salesman contemplating retirement on his fifty-fifth birthday, decides to create a fund on an 8% basis that will enable him to withdraw \$20,000 per year on June 30, beginning in 2029 and continuing through 2032. To develop this fund, Clarence intends to make equal contributions on June 30 of each of the years 2025–2028.

Instructions

- How much must the balance of the fund equal on June 30, 2028, in order for Clarence to satisfy his objective?
- What are each of Clarence's contributions to the fund?

E5.9 (LO 2) (Unknown Rate) LEW Company purchased a machine at a price of \$100,000 by signing a note payable, which requires a single payment of \$123,210 in 2 years. Assuming annual compounding of interest, what rate of interest is being paid on the loan?

E5.10 (LO 2) (Unknown Periods and Unknown Interest Rate) Consider the following independent situations.

- Mike Finley wishes to become a millionaire. His money market fund has a balance of \$92,296 and has a guaranteed interest rate of 10%. How many years must Mike leave that balance in the fund in order to get his desired \$1,000,000?
- Assume that Sally Williams desires to accumulate \$1 million in 15 years using her money market fund balance of \$182,696. At what interest rate must Sally's investment compound annually?

E5.11 (LO 4) (Evaluation of Purchase Options) Rizzo Excavating Inc. is purchasing a bulldozer. The equipment has a price of \$100,000. The manufacturer has offered a payment plan that would allow Rizzo to make 10 equal annual payments of \$16,274.53, with the first payment due one year after the purchase.

Instructions

- How much total interest will Rizzo pay on this payment plan?
- Rizzo could borrow \$100,000 from its bank to finance the purchase at an annual rate of 9%. Should Rizzo borrow from the bank or use the manufacturer's payment plan to pay for the equipment?

E5.12 (LO 4) (Analysis of Alternatives) The Black Knights Inc., a manufacturer of low-sugar, low-sodium, low-cholesterol TV dinners, would like to increase its market share in the Sunbelt. In order to do so, Black Knights has decided to locate a new factory in the Panama City area. Black Knights will either buy or lease a site depending upon which is more advantageous. The site location committee has narrowed down the available sites to the following three very similar buildings that will meet their needs.

Building A: Purchase for a cash price of \$600,000, useful life 25 years.

Building B: Lease for 25 years with annual lease payments of \$69,000 being made at the beginning of the year.

Building C: Purchase for \$650,000 cash. This building is larger than needed; however, the excess space can be sublet for 25 years at a net annual rental of \$7,000. Rental payments will be received at the end of each year. The Black Knights Inc. has no aversion to being a landlord.

Instructions

In which building would you recommend that The Black Knights Inc. locate, assuming a 12% cost of funds?

E5.13 (LO 5) (Computation of Bond Liability) Hincapie Inc. manufactures cycling equipment. Recently, the vice president of operations of the company has requested construction of a new plant to meet the increasing demand for the company's bikes. After a careful evaluation of the request, the board of directors has decided to raise funds for the new plant by issuing \$2,000,000 of 11% term corporate bonds on March 1, 2025, due on March 1, 2040, with interest payable each March 1 and September 1. At the time of issuance, the market interest rate for similar financial instruments is 10%.

Instructions

As the controller of the company, determine the selling price of the bonds.

E5.14 (LO 5) (Computation of Pension Liability) Nerwin, Inc. is a furniture manufacturing company with 50 employees. Recently, after a long negotiation with the local labor union, the company decided to initiate a pension plan as a part of its compensation plan. The plan will start on January 1, 2025. Each employee covered by the plan is entitled to a pension payment each year after retirement. As required by accounting standards, the controller of the company needs to report the pension obligation (liability). On the basis of a discussion with the supervisor of the Personnel Department and an actuary from an insurance company, the controller develops the following information related to the pension plan.

Average length of time to retirement	15 years
Expected life duration after retirement	10 years
Total pension payment expected each year after retirement for all employees. Payment made at the end of the year.	\$700,000 per year

The interest rate to be used is 8%.

Instructions

On the basis of the information above, determine the present value of the pension obligation (liability).

E5.15 (LO 2, 3) (Investment Decision) Andrew Bogut just received a signing bonus of \$1,000,000. His plan is to invest this payment in a fund that will earn 8%, compounded annually.

Instructions

- If Bogut plans to establish the AB Foundation once the fund grows to \$1,999,000, how many years until he can establish the foundation?

- b. Instead of investing the entire \$1,000,000, Bogut invests \$300,000 today and plans to make 9 equal annual investments into the fund beginning one year from today. What amount should the payments be if Bogut plans to establish the \$1,999,000 foundation at the end of 9 years?

E5.16 (LO 3) (Retirement of Debt) Ricky Fowler borrowed \$70,000 on March 1, 2023. This amount plus accrued interest at 6% compounded semiannually is to be repaid March 1, 2033. To retire this debt, Ricky plans to contribute to a debt retirement fund five equal amounts starting on March 1, 2028, and for the next 4 years. The fund is expected to earn 5% per annum.

Instructions

How much must be contributed each year by Ricky Fowler to provide a fund sufficient to retire the debt on March 1, 2033?

E5.17 (LO 4) (Computation of Amount of Rentals) Your client, Albert Almora Leasing Company, is preparing a contract to lease a machine to Souvenirs Corporation for a period of 25 years. Almora has an investment cost of \$365,755 in the machine, which has a useful life of 25 years and no salvage value at the end of that time. Your client is interested in earning an 11% return on its investment and has agreed to accept 25 equal rental payments at the end of each of the next 25 years.

Instructions

You are requested to provide Almora with the amount of each of the 25 rental payments that will yield an 11% return on investment.

E5.18 (LO 4) (Least Costly Payoff) Assume that **Sonic Foundry Corporation** has a contractual debt outstanding. Sonic has available two means of settlement. It can either make immediate payment of \$2,600,000, or it can make annual payments of \$300,000 for 15 years, each payment due on the last day of the year.

Instructions

Which method of payment do you recommend, assuming an expected effective interest rate of 8% during the future period?

E5.19 (LO 4) (Least Costly Payoff) Assuming the same facts as those in E5.18 except that the payments must begin now and be made on the first day of each of the 15 years, what payment method would you recommend?

E5.20 (LO 5) (Expected Cash Flows) For each of the following, determine the expected cash flows.

	<u>Cash Flow Estimate</u>	<u>Probability Assessment</u>
a.	\$ 4,800	20%
	6,300	50
	7,500	30
b.	\$ 5,400	30%
	7,200	50
	8,400	20
c.	\$(1,000)	10%
	3,000	80
	5,000	10

E5.21 (LO 5) (Expected Cash Flows and Present Value) Keith Bowie is trying to determine the amount to set aside so that he will have enough money on hand in 2 years to overhaul the engine on his vintage used car. While there is some uncertainty about the cost of engine overhauls in 2 years, by conducting some research online, Keith has developed the following estimates.

<u>Engine Overhaul Estimated Cash Outflow</u>	<u>Probability Assessment</u>
\$200	10%
450	30
600	50
750	10

Instructions

How much should Keith Bowie deposit today in an account earning 6%, compounded annually, so that he will have enough money on hand in 2 years to pay for the overhaul?

E5.22 (LO 5) (Fair Value Estimate) Killroy Company owns a trade name that was purchased in an acquisition of McClellan Company. The trade name has a book value of \$3,500,000, but according to GAAP, it is assessed for impairment on an annual basis. To perform this impairment test, Killroy must estimate the fair value of the trade name. (You will learn more about intangible asset impairments in

Chapter 11.) It has developed the following cash flow estimates related to the trade name based on internal information. Each cash flow estimate reflects Killroy's estimate of annual cash flows over the next 8 years. The trade name is assumed to have no salvage value after the 8 years. (Assume the cash flows occur at the end of each year.)

<u>Cash Flow Estimate</u>	<u>Probability Assessment</u>
\$380,000	20%
630,000	50
750,000	30

Instructions

- What is the estimated fair value of the trade name? Killroy determines that the appropriate discount rate for this estimation is 8%.
- Is the estimate developed for part (a) a Level 1 or Level 3 fair value estimate? Explain.

***E5.23 (LO 6) (Computing Number of Periods)** With a goal of purchasing one of the coveted trips to space offered by **SpaceX**, you deposit \$55,000 in an account today that earns 6% compounded annually. You estimate the price tag for a trip to space to be \$250,000.

Instructions

Using the NPER function in Excel or a financial calculator, determine how long it will take you to accumulate enough money to purchase a ticket.

***E5.24 (LO 6) (Solve for Interest Rate)** Your ultimate goal is to take a trip to Mars on **SpaceX's** Starship. You estimate these trips will be available in 25 years at a price of \$500,000. You have \$75,000 available to deposit today.

Instructions

Using the Rate function in Excel or a financial calculator, determine the annual interest rate you must earn to make this trip a reality.

***E5.25 (LO 6) (Solving for Present and Future Values)** Consider the following three independent scenarios.

- To save for retirement, you invest \$10,000 at the end of each year for 25 years. If your investment earns interest at an annual rate of 5%, how much will you have when you retire?
- Lobner's Candle Company signed a 20-year lease that requires annual payments of \$7,000 at the beginning of each year. Assuming an annual interest rate of 6.5%, what is the present value of the lease payments?
- Maxwell Enterprises would like to have \$1,000,000 saved up in 10 years to fund equipment and building upgrades. If Maxwell invests \$180,000 today and commits to depositing \$50,000 at the end of each of the next 10 years, what annual interest rate must the fund earn to reach \$1,000,000?

Instructions

Using functions in Excel or a financial calculator, solve for the unknowns in each of the scenarios.

Problems

(Unless instructed otherwise, round answers to the nearest dollar. Interest rates are per annum unless otherwise indicated.)

P5.1 (LO 2, 4) Groupwork (Various Time Value Situations) Answer each of these unrelated questions.

- On January 1, 2025, Fishbone Corporation sold a building that cost \$250,000 and that had accumulated depreciation of \$100,000 on the date of sale. Fishbone received as consideration a \$240,000 non-interest-bearing note due on January 1, 2028. There was no established exchange price for the building, and the note had no ready market. The prevailing rate of interest for a note of this type on January 1, 2025, was 9%. At what amount should the gain from the sale of the building be reported?
- On January 1, 2025, Fishbone Corporation purchased 300 of the \$1,000 face value, 9%, 10-year bonds of Walters Inc. The bonds mature on January 1, 2035, and pay interest annually beginning January 1, 2026. Fishbone purchased the bonds to yield 11%. How much did Fishbone pay for the bonds?
- Fishbone Corporation bought a new machine and agreed to pay for it in equal annual installments of \$4,000 at the end of each of the next 10 years. Assuming that a prevailing interest rate of 8% applies to this contract, how much should Fishbone record as the cost of the machine?

- d. Fishbone Corporation purchased a special tractor on December 31, 2025. The purchase agreement stipulated that Fishbone should pay \$20,000 at the time of purchase and \$5,000 at the end of each of the next 8 years. The tractor should be recorded on December 31, 2025, at what amount, assuming an appropriate interest rate of 12%?
- e. Fishbone Corporation wants to withdraw \$120,000 (including principal) from an investment fund at the end of each year for 9 years. What should be the required initial investment at the beginning of the first year if the fund earns 11%?

P5.2 (LO 2, 3, 4) Groupwork Excel (Various Time Value Situations) Using the appropriate interest table, provide the solution to each of the following four questions by computing the unknowns.

- a. What is the amount of the payments that Ned Winslow must make at the end of each of 8 years to accumulate a fund of \$90,000 by the end of the eighth year, if the fund earns 8% interest, compounded annually?
- b. Robert Hitchcock is 40 years old today and he wishes to accumulate \$500,000 by his sixty-fifth birthday so he can retire to his summer place on Lake Hopatcong. He wishes to accumulate this amount by making equal deposits on his fortieth through his sixty-fourth birthdays. What annual deposit must Robert make if the fund will earn 8% interest compounded annually?
- c. Diane Ross has \$20,000 to invest today at 9% to pay a debt of \$47,347. How many years will it take her to accumulate enough to liquidate the debt?
- d. Cindy Houston has a \$27,600 debt that she wishes to repay 4 years from today; she has \$19,553 that she intends to invest for the 4 years. What rate of interest will she need to earn annually in order to accumulate enough to pay the debt?

P5.3 (LO 2, 4) (Analysis of Alternatives) Assume that **Walmart Inc.** has decided to surface and maintain for 10 years a vacant lot next to one of its stores to serve as a parking lot for customers. Management is considering the following bids involving two different qualities of surfacing for a parking area of 12,000 square yards.

Bid A: A surface that costs \$5.75 per square yard to install. This surface will have to be replaced at the end of 5 years. The annual maintenance cost on this surface is estimated at 25 cents per square yard for each year except the last year of its service. The replacement surface will be similar to the initial surface.

Bid B: A surface that costs \$10.50 per square yard to install. This surface has a probable useful life of 10 years and will require annual maintenance in each year except the last year, at an estimated cost of 9 cents per square yard.

Instructions

Prepare computations showing which bid should be accepted by Walmart. You may assume that the cost of capital is 9%, that the annual maintenance expenditures are incurred at the end of each year, and that prices are not expected to change during the next 10 years.

P5.4 (LO 4) Excel (Evaluating Payment Alternatives) Howie Long has just learned he has won a \$500,000 prize in the lottery. The lottery has given him two options for receiving the payments. (1) If Howie takes all the money today, the state and federal governments will deduct taxes at a rate of 46% immediately. (2) Alternatively, the lottery offers Howie a payout of 20 equal payments of \$36,000 with the first payment occurring when Howie turns in the winning ticket. Howie will be taxed on each of these payments at a rate of 25%.

Instructions

Assuming Howie can earn an 8% rate of return (compounded annually) on any money invested during this period, which payout option should he choose?

P5.5 (LO 2, 4) (Analysis of Alternatives) Julia Baker died, leaving to her husband Brent an insurance policy contract that provides that the beneficiary (Brent) can choose any one of the following four options.

- a. \$55,000 immediate cash.
- b. \$4,000 every 3 months payable at the end of each quarter for 5 years.
- c. \$18,000 immediate cash and \$1,800 every 3 months for 10 years, payable at the beginning of each 3-month period.
- d. \$4,000 every 3 months for 3 years and \$1,500 each quarter for the following 25 quarters, all payments payable at the end of each quarter.

Instructions

If money is worth $2\frac{1}{2}\%$ per quarter, compounded quarterly, which option would you recommend that Brent exercise?

P5.6 (LO 5) (Purchase Price of a Business) During the past year, Stacy McGill planted a new vineyard on 150 acres of land that she leases for \$30,000 a year. She has asked you, as her accountant, to assist her in determining the value of her vineyard operation.

The vineyard will bear no grapes for the first 5 years (1–5). In the next 5 years (6–10), Stacy estimates that the vines will bear grapes that can be sold for \$60,000 each year. For the next 20 years (11–30), she expects the harvest will provide annual revenues of \$110,000. But during the last 10 years (31–40) of the vineyard's life, she estimates that revenues will decline to \$80,000 per year.

During the first 5 years, the annual cost of pruning, fertilizing, and caring for the vineyard is estimated at \$9,000; during the years of production, 6–40, these costs will rise to \$12,000 per year. The relevant market rate of interest for the entire period is 6%. Assume that all receipts and payments are made at the end of each year.

Instructions

Dick Button has offered to buy Stacy's vineyard business by assuming the 40-year lease. On the basis of the current value of the business, what is the minimum price Stacy should accept?

P5.7 (LO 2, 3, 4) (Time Value Concepts Applied to Solve Business Problems) Answer the following questions related to Dubois Inc.

- Dubois Inc. has \$600,000 to invest. The company is trying to decide between two alternative uses of the funds. One alternative provides \$80,000 at the end of each year for 12 years, and the other is to receive a single lump-sum payment of \$1,900,000 at the end of the 12 years. Which alternative should Dubois select? Assume the interest rate is constant over the entire investment.
- Dubois Inc. has completed the purchase of new Dell computers. The fair value of the equipment is \$824,150. The purchase agreement specifies an immediate down payment of \$200,000 and semiannual payments of \$76,952 beginning at the end of 6 months for 5 years. What is the interest rate, to the nearest percent, used in discounting this purchase transaction?
- Dubois Inc. loans money to John Kruk Corporation in the amount of \$800,000. Dubois accepts an 8% note due in 7 years with interest payable semiannually. After 2 years (and receipt of interest for 2 years), Dubois needs money and therefore sells the note to Chicago National Bank, which demands interest on the note of 10% compounded semiannually. What is the amount Dubois will receive on the sale of the note?
- Dubois Inc. wishes to accumulate \$1,300,000 by December 31, 2035, to retire bonds outstanding. The company deposits \$200,000 on December 31, 2025, which will earn interest at 10% compounded quarterly, to help in the retirement of this debt. In addition, the company wants to know how much should be deposited at the end of each quarter for 10 years to ensure that \$1,300,000 is available at the end of 2035. (The quarterly deposits will also earn at a rate of 10%, compounded quarterly.) (Round to even dollars.)

P5.8 (LO 4) (Analysis of Alternatives) Ellison Inc., a manufacturer of steel school lockers, plans to purchase a new punch press for use in its manufacturing process. After contacting the appropriate vendors, the purchasing department received differing terms and options from each vendor. The Engineering Department has determined that each vendor's punch press is substantially identical and each has a useful life of 20 years. In addition, Engineering has estimated that required year-end maintenance costs will be \$1,000 per year for the first 5 years, \$2,000 per year for the next 10 years, and \$3,000 per year for the last 5 years. Following is each vendor's sales package.

Vendor A: \$55,000 cash at time of delivery and 10 year-end payments of \$18,000 each. Vendor A offers all its customers the right to purchase at the time of sale a separate 20-year maintenance service contract, under which Vendor A will perform all year-end maintenance at a one-time initial cost of \$10,000.

Vendor B: Forty semiannual payments of \$9,500 each, with the first installment due upon delivery. Vendor B will perform all year-end maintenance for the next 20 years at no extra charge.

Vendor C: Full cash price of \$150,000 will be due upon delivery.

Instructions

Assuming that both Vendors A and B will be able to perform the required year-end maintenance, that Ellison's cost of funds is 10%, and the machine will be purchased on January 1, from which vendor should the press be purchased?

P5.9 (LO 2, 4) (Analysis of Business Problems) James Kirk is a financial executive with McDowell Enterprises. Although James Kirk has not had any formal training in finance or accounting, he has a "good sense" for numbers and has helped the company grow from a very small company (\$500,000 sales) to a large operation (\$45 million in sales). With the business growing steadily, however, the company needs to make a number of difficult financial decisions in which James Kirk feels a little "over his head." He therefore has decided to hire a new employee with "numbers" expertise to help him. As a basis for determining whom to employ, he has decided to ask each prospective employee to prepare answers to questions relating to the following situations he has encountered recently. Here are the questions.

- a. In 2024, McDowell Enterprises negotiated and closed a long-term lease contract for newly constructed truck terminals and freight storage facilities. The buildings were constructed on land owned by the company. On January 1, 2025, McDowell took possession of the leased property. The 20-year lease is effective for the period January 1, 2025, through December 31, 2044. Advance rental payments of \$800,000 are payable to the lessor (owner of facilities) on January 1 of each of the first 10 years of the lease term. Advance payments of \$400,000 are due on January 1 for each of the last 10 years of the lease term. McDowell has an option to purchase all the leased facilities for \$1 on December 31, 2044. At the time the lease was negotiated, the fair value of the truck terminals and freight storage facilities was approximately \$7,200,000. If the company had borrowed the money to purchase the facilities, it would have had to pay 10% interest. Should the company have purchased rather than leased the facilities?
- b. Last year the company exchanged a piece of land for a non-interest-bearing note. The note is to be paid at the rate of \$15,000 per year for 9 years, beginning one year from the date of disposal of the land. An appropriate rate of interest for the note was 11%. At the time the land was originally purchased, it cost \$90,000. What is the fair value of the note?
- c. The company has always followed the policy to take any cash discounts on goods purchased. Recently, the company purchased a large amount of raw materials at a price of \$800,000 with terms 1/10, n/30 on which it took the discount. McDowell has recently estimated its cost of funds at 10%. Should McDowell continue this policy of always taking the cash discount?

P5.10 (LO 2, 4) (Analysis of Lease vs. Purchase) Dunn Inc. owns and operates a number of hardware stores in the New England region. Recently, the company has decided to locate another store in a rapidly growing area of Maryland. The company is trying to decide whether to purchase or lease the building and related facilities.

Purchase: The company can purchase the site, construct the building, and purchase all store fixtures. The cost would be \$1,850,000. An immediate down payment of \$400,000 is required, and the remaining \$1,450,000 would be paid off over 5 years at \$350,000 per year (including interest payments made at end of year). The property is expected to have a useful life of 12 years, and then it will be sold for \$500,000. As the owner of the property, the company will have the following out-of-pocket expenses each period.

Property taxes (to be paid at the end of each year)	\$40,000
Insurance (to be paid at the beginning of each year)	27,000
Other (primarily maintenance which occurs at the end of each year)	16,000
	<u>\$83,000</u>

Lease: First National Bank has agreed to purchase the site, construct the building, and install the appropriate fixtures for Dunn Inc. if Dunn will lease the completed facility for 12 years. The annual costs for the lease would be \$270,000. Dunn would have no responsibility related to the facility over the 12 years. The terms of the lease are that Dunn would be required to make 12 annual payments (the first payment to be made at the time the store opens and then each following year). In addition, a deposit of \$100,000 is required when the store is opened. This deposit will be returned at the end of the twelfth year, assuming no unusual damage to the building structure or fixtures.

Instructions

Which of the two approaches should Dunn Inc. follow? (Currently, the cost of funds for Dunn Inc. is 10%.)

P5.11 (LO 5) (Pension Funding) You have been hired as a benefit consultant by Jean Honore, the owner of Attic Angels. She wants to establish a retirement plan for herself and her three employees. Jean has provided the following information. The retirement plan is to be based upon annual salary for the last year before retirement and is to provide 50% of Jean's last-year annual salary and 40% of the last-year annual salary for each employee. The plan will make annual payments at the beginning of each year for 20 years from the date of retirement. Jean wishes to fund the plan by making 15 annual deposits beginning January 1, 2025. Invested funds will earn 12% compounded annually. Information about plan participants as of January 1, 2025, is as follows.

Jean Honore, owner: Current annual salary of \$48,000; estimated retirement date January 1, 2050.

Colin Davis, flower arranger: Current annual salary of \$36,000; estimated retirement date January 1, 2055.

Anita Baker, sales clerk: Current annual salary of \$18,000; estimated retirement date January 1, 2045.

Gavin Bryars, part-time bookkeeper: Current annual salary of \$15,000; estimated retirement date January 1, 2040.

In the past, Jean has given herself and each employee a year-end salary increase of 4%. Jean plans to continue this policy in the future.

Instructions

- Based upon the above information, what will be the annual retirement benefit for each plan participant? (Round to the nearest dollar.) (*Hint: Jean will receive raises for 24 years.*)
- What amount must be on deposit at the end of 15 years to ensure that all benefits will be paid? (Round to the nearest dollar.)
- What is the amount of each annual deposit Jean must make to the retirement plan?

P5.12 (LO 5) Ethics (Pension Funding) Craig Brokaw, newly appointed controller of STL, is considering ways to reduce his company's expenditures on annual pension costs. One way to do this is to switch STL's pension fund assets from First Security to NET Life. STL is a very well-respected computer manufacturer that recently has experienced a sharp decline in its financial performance for the first time in its 25-year history. Despite financial problems, STL still is committed to providing its employees with good pension and postretirement health benefits.

Under its present plan with First Security, STL is obligated to pay \$43 million to meet the expected value of future pension benefits that are payable to employees as an annuity upon their retirement from the company. On the other hand, NET Life requires STL to pay only \$35 million for identical future pension benefits. First Security is one of the oldest and most reputable insurance companies in North America. NET Life has a much weaker reputation in the insurance industry. In pondering the significant difference in annual pension costs, Brokaw asks himself, "Is this too good to be true?"

Instructions

- Why might NET Life's pension cost requirement be \$8 million less than First Security's requirement for the same future value?
- What ethical issues should Craig Brokaw consider before switching STL's pension fund assets?
- Who are the stakeholders that could be affected by Brokaw's decision?

P5.13 (LO 4, 5) (Expected Cash Flows and Present Value) Danny's Lawn Equipment sells high-quality lawn mowers and offers a 3-year warranty on all new lawn mowers sold. In 2025, Danny sold \$300,000 of new specialty mowers for golf greens for which Danny's service department does not have the equipment to do the service. Danny has entered into an agreement with Mower Mavens to provide all warranty service on the special mowers sold in 2025. Danny wishes to measure the fair value of the agreement to determine the warranty liability for sales made in 2025. The controller for Danny's Lawn Equipment estimates the following expected warranty cash outflows associated with the mowers sold in 2025.

Year	Cash Flow Estimate	Probability Assessment
2026	\$2,500	20%
	4,000	60
	5,000	20
2027	\$3,000	30%
	5,000	50
	6,000	20
2028	\$4,000	30%
	6,000	40
	7,000	30

Instructions

Using expected cash flow and present value techniques, determine the value of the warranty liability for the 2025 sales. Use an annual discount rate of 5%. Assume all cash flows occur at the end of the year.

P5.14 (LO 4, 5) (Expected Cash Flows and Present Value) At the end of 2025, Sawyer Company is conducting an impairment test and needs to develop a fair value estimate for machinery used in its manufacturing operations. Given the nature of Sawyer's production process, the equipment is for special use. (No secondhand market values are available.) The equipment will be obsolete in 2 years, and Sawyer's accountants have developed the following cash flow information for the equipment.

Year	Net Cash Flow Estimate	Probability Assessment
2026	\$6,000	40%
	9,000	60
2027	\$ (500)	20%
	2,000	60
	4,000	20
Scrap Value		
2027	\$ 500	50%
	900	50

Instructions

Using expected cash flow and present value techniques, determine the fair value of the machinery at the end of 2025. Use a 6% discount rate. Assume all cash flows occur at the end of the year.

P5.15 (LO 5) (Fair Value Estimate) Murphy Mining Company recently purchased a quartz mine that it intends to work for the next 10 years. According to state environmental laws, Murphy must restore the mine site to its original natural prairie state after it ceases mining operations at the site. To properly account for the mine, Murphy must estimate the fair value of this asset retirement obligation. This amount will be recorded as a liability and added to the value of the mine on Murphy's books. (You will learn more about these asset retirement obligations in Chapter 9.)

There is no active market for retirement obligations such as these, but Murphy has developed the following cash flow estimates based on its prior experience in mining-site restoration. It will take 3 years to restore the mine site when mining operations cease in 10 years. Each estimated cash outflow reflects an annual payment at the end of each year of the 3-year restoration period.

<u>Restoration Estimated Cash Outflow</u>	<u>Probability Assessment</u>
\$15,000	10%
22,000	30
25,000	50
30,000	10

Instructions

- What is the estimated fair value of Murphy's asset retirement obligation? Murphy determines that the appropriate discount rate for this estimation is 5%. Round calculations to the nearest dollar.
- Is the estimate developed for part (a) a Level 1 or Level 3 fair value estimate? Explain.

***P5.16 (LO 6) (Future Value of Single Sum and Annuity)** J&L Corporation currently grows and sells fresh produce year-round in its homemade greenhouses. As the business is growing, J&L hopes to significantly expand its number of greenhouses in 5 years. J&L has deposited \$100,000 into an investment account that will earn a 6% annual rate of interest. J&L is also committed to depositing \$10,000 into the same account at the end of each of the next 5 years.

Instructions

- Using the FV function in Excel or a financial calculator, calculate how much J&L will have in its account at the end of 5 years.
- Assume now that J&L will make the \$10,000 deposits at the **beginning** of the next 5 years. Using the FV function in Excel, or a financial calculator, calculate how much J&L will have in its account at the end of year 5.
- J&L knows it needs \$500,000 in 5 years to purchase additional greenhouses. Assuming it will make annual deposits of \$10,000 into an account earning 6% annual interest at the end of the next 5 years, use the PV function in Excel or a financial calculator to determine how much it must deposit today.

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ5.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

- Examining each item in P&G's balance sheet, identify those items that require present value, discounting, or interest computations in establishing the amount reported. (The accompanying notes are an additional source for this information.)
- (1) What interest rates are disclosed by P&G as being used to compute interest and present values?
(2) Why are there so many different interest rates applied to P&G's financial statement elements (assets, liabilities, revenues, and expenses)?

Financial Statement Analysis Case: Consolidated Natural Gas Company

UYJ5.2 Consolidated Natural Gas Company (CNG), with corporate headquarters in Pittsburgh, Pennsylvania, is one of the largest producers, transporters, distributors, and marketers of natural gas in North America. Periodically, the company experiences a decrease in the value of its gas- and oil-producing properties, and a special charge to income was recorded in order to reduce the carrying value of those assets.

Assume the following information. In 2024, CNG estimated the cash inflows from its oil- and gas-producing properties to be \$375,000 per year. During 2025, the write-downs described above caused the estimate to be decreased to \$275,000 per year. Production costs (cash outflows) associated with all these properties were estimated to be \$125,000 per year in 2024, but this amount was revised to \$155,000 per year in 2025.

Instructions

(Assume that all cash flows occur at the end of the year.)

- Calculate the present value of net cash flows for 2024–2026 (3 years), using the 2024 estimates and a 10% discount factor.
- Calculate the present value of net cash flows for 2025–2027 (3 years), using the 2025 estimates and a 10% discount factor.
- Compare the results using the two estimates. Is information on future cash flows from oil- and gas-producing properties useful, considering that the estimates must be revised each year? Explain.

Accounting, Analysis, and Principles

UYJ5.3 Johnson Co. accepts a note receivable from a customer in exchange for some damaged inventory. The note requires the customer make semiannual installments of \$50,000 each for 10 years. The first installment begins 6 months from the date the customer takes delivery of the damaged inventory. Johnson's management estimates that the fair value of the damaged inventory is \$679,517.

Accounting

- What interest rate is Johnson implicitly charging the customer? Express the rate as an annual rate but assume semiannual compounding.
- At what dollar amount do you think Johnson should record the note receivable on the day the customer takes delivery of the damaged inventory?

Analysis

Assume the note receivable for damaged inventory makes up a significant portion of Johnson's assets. If interest rates increase, what happens to the fair value of the receivable? Briefly explain why.

Principles

The Financial Accounting Standards Board has issued an accounting standard that allows companies to report assets such as notes receivable at fair value. Discuss how fair value versus historical cost potentially involves a trade-off of one desired quality of accounting information against another.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE5.1 Access the glossary ("Master Glossary") to answer the following.

- What is the definition of present value?
- Briefly describe the term "discount rate adjustment technique."

CE5.2 In addition to the list of topics identified in footnote 1 in the chapter, identify the specific Codification guidance related to the use of present value in goodwill impairment.

CE5.3 What is interest cost? Briefly describe imputation of interest.

Codification Research Case

At a recent meeting of the accounting staff in your company, the controller raised the issue of using present value techniques to conduct impairment tests for some of the company's fixed assets. Some of the more senior members of the staff admitted having little knowledge of present value concepts in this context, but they had heard about a FASB Concepts Statement that may be relevant. As the junior staff in the department, you have been asked to conduct some research of the authoritative literature on this topic and report back at the staff meeting next week.

Instructions

If your school has a subscription to the FASB Codification, log in and access the FASB Statements of Financial Accounting Concepts. When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following items. (Provide paragraph citations.)

- Identify the concept statement that addresses present value measurement in accounting.
- What are some of the contexts in which present value concepts are applied in accounting measurement?
- Provide definitions for the following terms:
 - Best estimate.
 - Estimated cash flow (contrasted to expected cash flow).
 - Fresh-start measurements.
 - Interest methods of allocation.

Analytics in Action Activities

Using Data Visualizations to Maximize Your Personal Investment Strategy

DA5.1 When it comes to your personal investment strategy, using data visualizations may help you really see the impact of your choices. The adjacent graph highlights the power of compound interest over time. As you consider your personal savings plan, a visualization like this may convince you to invest that new signing bonus you received!

Required

Using the visualization, you will explain why an initial investment of \$50,000 leads to a larger future value than investing \$1,000 each year for the next 50 years. You will also consider why a larger initial investment may not be a viable option and what alternatives there are to grow the value of your investment.

[Go to Wiley Course Resources for complete details and instructions.](#)

DA5.2 Using visualization tools, we can see exactly how compound interest helps our investments grow.

Required

You will review a graph that shows the value of a \$1,000 investment that grows at 7% over 25 years. You will answer two questions related to different components of the investment value and calculate the increase in value due to compound interest.

[Go to Wiley Course Resources for complete details and instructions.](#)

DA5.3 Can you accurately “tell the story” of an investment just by looking at a graph of the value over time?

Required

You are provided with four separate graphs. You must choose the graph that shows a \$1,000 investment growing at 10% compounded annually.

[Go to Wiley Course Resources for complete details and instructions.](#)

Using Data Analytics to Solve Time Value of Money Problems

DA5.4 Appendix 5A demonstrated how to use functions in Excel to solve the most common time value of money problems. Now it is your turn to practice.

Required

You are given several time value of money questions and asked to solve each one using a function in Excel. You will start with basic concepts and then move into more challenging scenarios, applying your time value of money knowledge to more complex questions related to real business decisions.

[Go to Wiley Course Resources for complete details and instructions.](#)

Cash and Receivables

WHAT are cash and receivables?

Cash consists of coin, currency, available funds on deposit at the bank, as well as negotiable instruments such as money orders, certified checks, and personal checks. In addition, financial instruments that can be readily converted to cash (cash equivalents) are also viewed as cash. Receivables (often referred to as **loans and receivables**) are claims held against customers and others for money, goods, or services. An example of a loan is a bank like **BMO** lending money to **Harley-Davidson**. An example of a receivable is a company like **Best Buy** recording an accounts receivable when it sells a flat-screen TV on account.

Overseas Cash as a Percentage of Market Cap

	Cash Parked Overseas	
	Amount (in millions)	As a % of Market Cap
NetApp	\$ 4,300	36%
Cisco Systems	47,400	31
Hewlett-Packard	15,133	24
General Electric	61,100	23
Amgen	25,700	21
Microsoft	77,100	11

WHY is accounting information on cash and receivables important?

A company's liquidity and financial flexibility is defined by how quickly other assets can be converted to cash, thereby being available to meet obligations as they come due. Many companies also rely on accounts receivable from customers in order to facilitate sales. As a result, investors and creditors closely monitor information reported in the financial statements to determine whether a company is holding too much cash, such that it is missing out on good investment opportunities, or if it is collecting receivables on a timely basis.

A good case study on the importance of information on cash and the availability of cash to companies is the issue of "trapped cash." For example, **Apple** recently indicated what it is planning to do with its large cash balance of \$98 billion. However, what it was really talking about is the \$34 billion the company has here in the United States. The other \$64 billion is sitting in foreign bank accounts, held to be reinvested in factories and acquisitions overseas. These trapped cash balances are quite significant for a number of companies, as the table above indicates.

HOW do companies account for and report information on cash and receivables?

To be reported as "cash," an asset must be readily available for the payment of current obligations and free from contractual restrictions that limit its use in satisfying debts. Companies report cash as a current asset in the balance sheet. Companies value and report receivables at the net amount expected to be collected. Determining the net amount expected to be collected requires estimating uncollectible receivables. Companies report receivables with appropriate offset of valuation accounts against receivables, and classify receivables in the balance sheet as current or noncurrent.

6.1 Cash

LEARNING OBJECTIVE 1

Indicate how to report cash and related items.

Cash, the most liquid of assets, is the standard medium of exchange and the basis for measuring and accounting for all other items. Companies generally classify cash as a current asset. Cash consists of:

- Coin, currency, petty cash, and available funds on deposit at the bank, such as checking and savings accounts and money market accounts with check-writing privileges.
- Negotiable instruments such as money orders, certified checks, cashier's checks, personal checks, and bank drafts.

Some negotiable instruments provide investors with an opportunity to earn interest. These items, more appropriately classified as **cash equivalents**, are short-term, highly liquid investments that are:

1. Readily convertible to known amounts of cash.
2. So near their maturity that they present insignificant risk of changes in value because of changes in interest rates.

Generally, only investments with original maturities of three months or less qualify under this definition. Examples of cash equivalents include various types of “short-term paper” such as Treasury bills, certificates of deposit, commercial paper, and money market funds. Most companies combine cash with cash equivalents on the balance sheet and describe the amount of the cash equivalents in the notes. Short-term paper investments with maturities of 3 to 12 months would be reported as short-term investments in current assets.¹

Certain items may seem to be cash but are not. Here are a few items and how they should be classified:

- **Postdated checks.** These are checks, usually from customers, that are dated in the future. These checks cannot be deposited until that future date. Therefore, they are listed as receivables until they can be deposited.
- **I.O.U.s.** These represent amounts owed to the company, typically from employees. I.O.U.s. are classified as receivables.
- **Travel advances.** If a company advances money to employees and intends to collect it from employees in the future or deduct it from their salaries, then the amounts are recorded as receivables. If the travel advance will not be reimbursed by the employee, it is classified as a prepaid expense.
- **Postage stamps on hand.** These are included as part of office supplies inventory or as a prepaid expense.

Reporting Cash

Although the reporting of cash is relatively straightforward, two issues merit special attention: restricted cash and bank overdrafts.

Restricted Cash

Restricted cash is held by a company for a specific purpose and is therefore not available for immediate general use. Petty cash, payroll, and dividend funds are examples of cash set aside for a particular purpose.

- In most situations, these fund balances are not material. Therefore, companies do not separate them from cash in the financial statements.
- When material in amount, companies separate restricted cash from “regular” cash for reporting purposes. Companies classify restricted cash either in the current assets or in the long-term assets section, depending on the date of availability or disbursement.

¹A variety of “short-term paper” is available for investment. For example, **certificates of deposit (CDs)** represent formal evidence of indebtedness, issued by a bank, subject to withdrawal under the specific terms of the instrument. Issued in various denominations, they have maturities anywhere from 7 days to 10 years and generally pay interest at the short-term interest rate in effect at the date of issuance.

In **money-market funds**, a variation of the mutual fund, the mix of Treasury bills and commercial paper making up the fund's portfolio determines the yield. Most money-market funds require an initial minimum investment of \$1,000; many allow withdrawal by check or wire transfer.

Treasury bills are U.S. government obligations generally issued with 4-, 13-, and 26-week maturities; they are sold at weekly government auctions in denominations of \$1,000 up to a maximum purchase of \$5 million.

Commercial paper is a short-term note issued by corporations with good credit ratings. Often issued in \$5,000 and \$10,000 denominations, these notes generally yield a higher rate than Treasury bills.

Among other potential restrictions, companies need to determine whether any of the cash in accounts outside the United States is restricted by regulations against exportation of currency.

Cash classified in the long-term section is frequently set aside for plant expansion, retirement of long-term debt, or, in the case of **Apple Inc.**, as shown in **Illustration 6.1**, for a contractual agreement with its bank.

 Apple Inc. (in millions)	
Cash and cash equivalents	\$48,844
Restricted cash included in other current assets	23
Restricted cash included in other non-current assets	1,357
Cash, cash equivalents and restricted cash	<u>\$50,224</u>

The Company's restricted cash primarily consisted of cash required to be on deposit under a contractual agreement with a bank to support the Company's iPhone Upgrade Program.

ILLUSTRATION 6.1 Disclosure of Restricted Cash

Another type of restricted cash is a compensating balance. A **compensating balance** is a minimum balance that must be maintained in a bank account, which is used to offset the cost incurred by the bank to set up a loan.

FACTS You are interested in purchasing a franchise from **Subway** and need to borrow \$200,000 for one year. Your bank agrees to loan you this money, provided you pay interest at 6% on the loan. In addition, the bank requires that you keep \$20,000 in the bank as a compensating balance related to your loan.

QUESTION Why do you think the bank requires a compensating balance from you?

SOLUTION

The bank requires this compensating balance for two reasons: (1) in case of collection problems, the bank has your \$20,000, and (2) to cover loan-servicing costs, the bank is effectively charging you more than 6% as you are paying \$12,000 ($.06 \times \$200,000$) for a loan of \$180,000, which equates to an interest rate of 6.7% ($\$12,000 \div \$180,000$).

Example 6.1 Compensating Balance

To avoid misleading investors about the amount of cash available to meet recurring obligations, the SEC recommends the following reporting options for **legally restricted deposits** held as compensating balances.

- Compensating balances against **short-term** borrowings should be reported in current assets as “cash and cash equivalents.” **[1]** (See the FASB Codification References near the end of the chapter.)
- Compensating balances against **long-term** borrowings should be reported as noncurrent assets in either the investments or other assets sections, using a caption such as “Cash on deposit maintained as compensating balance.”

In cases where compensating balance arrangements exist without agreements that restrict the use of cash amounts shown on the balance sheet, companies should describe the arrangements and the amounts involved in the notes.²

²Bank overdrafts usually occur because of a simple oversight by the company writing the check. Banks often expect companies to have overdrafts from time to time and therefore negotiate a fee as payment for this possible occurrence. However, at one time, **E.F. Hutton** (a large brokerage firm) began intentionally overdrawing its accounts by astronomical amounts—on some days exceeding \$1 billion—thus obtaining interest-free loans that it could invest. Because the amounts were so large and fees were not negotiated in advance, E.F. Hutton came under criminal investigation for its actions.

Bank Overdrafts

Many individuals (not you, of course) have received a notification from their bank indicating they have overdrawn their bank account. **Bank overdrafts** occur when a company writes a check for more than the amount in its cash account. Companies should report bank overdrafts in the current liabilities section, adding them to the amount reported as accounts payable. If material, companies should disclose these items separately, either on the face of the balance sheet or in the related notes.

Bank overdrafts are generally not offset against the Cash account. A major exception is when available cash is present in another account in the same bank on which the overdraft occurred. Offsetting in this case is required.

Example 6.2 Bank Overdraft

FACTS Caliver Inc. has three bank accounts at First City Bank. Two of the bank accounts have positive balances of \$300,000 and \$50,000. The third account has an overdraft of \$500,000.

QUESTION How should this information be reported in Caliver's balance sheet?

SOLUTION

Caliver reports an account payable (or bank overdraft liability) of \$150,000 ($\$300,000 + \$50,000 - \$500,000$) in the current liability section of the balance sheet. A right of offset is permitted because all the accounts are at First City. If the first two accounts are at First City but the bank overdraft is at Lincoln National Bank, then Caliver reports cash of \$350,000 and accounts payable of \$500,000.

Summary of Cash-Related Items

Cash and cash equivalents include the medium of exchange and most negotiable instruments. If the item cannot be quickly converted to coin or currency, a company separately classifies it as an investment, receivable, or prepaid expense. Companies separate and classify cash that is unavailable for payment of currently maturing liabilities in the long-term assets section.

Illustration 6.2 summarizes the classification of cash-related items.

ILLUSTRATION 6.2
Classification of Cash-Related
Items

Item	Classification	Comment
Cash	Cash	If unrestricted, report as cash. If restricted, identify and classify as current and noncurrent assets.
Petty cash and change funds	Cash	Report as cash.
Short-term paper	Cash equivalents	Investments with maturity of less than 3 months, often combined with cash.
Short-term paper	Short-term investments	Investments with maturity of 3 to 12 months.
Postdated checks and I.O.U.s	Receivables	Assumed to be collectible.
Travel advances	Receivables	Assumed to be collected from employees or deducted from their salaries.
Postage on hand (as stamps or in postage meters)	Prepaid expenses	May also be classified as office supplies inventory.
Bank overdrafts	Current liability	If right of offset exists, reduce cash.
Compensating balances	Cash separately classified as a deposit maintained as compensating balance	Classify as current or noncurrent in the balance sheet. Disclose separately in notes details of the arrangement.

Accounting Matters

What Counts for Cash?

Do you think cryptocurrencies, such as Bitcoin, are cash? These currencies are generating a significant amount of press given their rapid increases in value and extreme volatility. Because of this volatility, the value of Bitcoin in circulation has recently fluctuated between \$100 and \$500 billion.

Yet, under the current U.S. accounting framework, cryptocurrency is not reported as cash, currency, or a financial asset. Some are now urging standard-setters and regulators to provide guidance by developing an accounting framework for cryptocurrency holdings, including the costs related to “mining” efforts. One perspective argues for Bitcoin and other cryptocurrencies being accounted for as an indefinite-life intangible asset. The implication of this model is that declines in the market price of cryptocurrencies should be included in earnings, while increases in value beyond the original cost or recoveries of previous declines in value would not be captured.

Companies also are being encouraged to provide transparent disclosures concerning the reporting of cryptocurrencies and the entity’s risk exposure to such assets. Such disclosure can alert investors to the impact of cryptocurrency holdings on capital resources and liquidity and related risk factors, similar to other cash parking places.

For example, **Square Inc.** indicates it accounts for Bitcoin similar to an intangible asset: “Upon purchase, the Company records the cost of bitcoin within other current assets in its consolidated balance sheets. Upon sale, the Company records the total sale amount received from customers as bitcoin revenue and the associated cost as cost of revenue. . . . The Company assesses the carrying value of bitcoin held by the company at each reporting date and records an impairment charge if the carrying value exceeds the fair value.” That is, like an intangible asset, Bitcoin is only adjusted downward for changes in value.

Sources: PwC, “Cryptocurrencies: Time to Consider Plan B,” *PwC Point of View* (March 2018); and Square Inc. 10-K report.

FACTS Atwood Inc. has the following items related to its balance sheet at December 31, 2025.

1. Cash and money market funds with check-cashing privileges.
2. Petty cash and payroll funds.
3. Short-term treasury bills with a maturity of less than 3 months.
4. Post-dated checks.
5. Travel advances to employees.
6. Postage on hand (as stamps on in postage meters).
7. Cash restricted for future purchase of land.
8. Bank overdrafts.
9. Compensating balances related to long-term loan balance.

INSTRUCTIONS

Determine how to classify each of these items on Atwood’s balance sheet.

SOLUTION

1. Reported as cash.
2. Reported as cash.
3. Reported as cash equivalent.
4. Reported as receivables.
5. Reported as receivables if collected from employees or deducted from their salaries. Otherwise, companies classify as prepaid expense.
6. Reported as office supplies inventory or as prepaid expense.
7. Reported as noncurrent asset.
8. Reported as a current liability unless right of offset is permitted. If right of offset occurs, deduction from cash.
9. Reported as noncurrent asset, often as an investment.

Put It into Practice LO 6.1

Classify Cash

6.2 Receivables

LEARNING OBJECTIVE 2

Define receivables and explain accounting issues related to their recognition.

Like cash, **receivables** are a financial asset. Receivables (often referred to as **loans and receivables**) are claims held against customers and others for money, goods, or services. An example of a loan is a financial institution like **Wells Fargo** providing funds to **Tesla**. An example of a receivable is a company like **GoPro** recording an account receivable when it sells a camera on account to one of its retailers. For purposes of discussion, we will simply use the term receivables to mean loans and receivables.

Companies classify receivables as either **current** (short-term) or **noncurrent** (long-term).

- Companies expect to collect **current receivables** within a year or during the current operating cycle, whichever is longer.
- They classify all other receivables as **noncurrent**.

Receivables are further classified in the balance sheet as either trade or nontrade receivables. Customers often owe a company amounts for goods bought or services rendered. A company may subclassify these **trade receivables** into accounts receivable and notes receivable.

- **Accounts receivable** are oral promises of the purchaser to pay for goods and services sold. They represent “open accounts” resulting from short-term extensions of credit. A company normally collects them within 30 to 60 days.
- **Notes receivable** are written promises to pay a certain sum of money on a specified future date. They may arise from sales, financing, or other transactions. Notes may be short-term or long-term and generally include an interest component.

Nontrade receivables arise from a variety of transactions outside the normal course of business. Some examples of nontrade receivables are as follows.

1. Advances to officers, employees, and subsidiaries.
2. Deposits paid to cover potential damages or losses, or as a guarantee of performance or payment.
3. Dividends and interest receivable.
4. Claims against insurance companies for casualties sustained, for tax refunds, or for damaged or lost goods.

Because of the peculiar nature of nontrade receivables, companies generally report nontrade receivables as separate items in the balance sheet.

Illustration 6.3 shows the reporting of trade and nontrade receivables in the balance sheets of **Molson Coors Brewing Company** and **Seaboard Corporation**.

ILLUSTRATION 6.3 Receivables Balance Sheet Presentations

 Molson Coors Brewing Company (in thousands)		 Seaboard Corporation (in thousands)	
Current assets		Current assets	
Cash and cash equivalents	\$ 377,023	Cash and cash equivalents	\$ 47,346
Accounts and notes receivable		Short-term investments	286,660
Trade, less allowance for doubtful accounts of \$8,827	758,526	Receivables	
Current notes receivable and other receivables, less allowance for doubtful accounts of \$3,181	112,626	Trade	\$251,005
Inventories	369,521	Due from foreign affiliates	90,019
Maintenance and operating supplies, less allowance for obsolete supplies of \$10,556	34,782	Other	26,349
Other current assets, less allowance for advertising supplies of \$948	124,336	Allowance for doubtful accounts	(8,060)
Total current assets	\$1,776,814	Net receivables	359,313
		Inventories	392,946
		Deferred income taxes	19,558
		Other current assets	77,710
		Total current assets	\$1,183,533

Recognition of Accounts Receivable

Accounts receivable generally arise as part of a revenue arrangement. For example, if **Lululemon** sells a yoga outfit to Jennifer Burian for \$100 on account, when does Lululemon recognize revenue and the related accounts receivable? As indicated in earlier chapters, the revenue recognition principle indicates that Lululemon should recognize revenue when it satisfies its performance obligation by transferring the good or service to the customer. It follows that in the Lululemon situation, the yoga outfit is transferred when Jennifer obtains control of this outfit.

When this change in control occurs, Lululemon recognizes an account receivable and sales revenue. Lululemon makes the following entry, assuming that \$100 is the amount it expects to receive from Jennifer.

Accounts Receivable	100	
Sales Revenue		100

The concept of change of control is the deciding factor in determining when a performance obligation is satisfied and an account receivable recognized. Here are some key indicators to determine that Lululemon has transferred and that Jennifer has obtained control of the yoga outfit.

- Lululemon has the right to payment from the customer.** If Jennifer is obligated to pay, it indicates that control has passed to the customer.
- Lululemon has passed legal title to the customer.** If Jennifer has legal title to the goods, it indicates that control has passed to the customer.
- Lululemon has transferred physical possession of the goods.** If Jennifer has physical possession, it indicates that control has passed to the customer.
- Lululemon no longer has significant risks and rewards of ownership of the goods.** If Jennifer now has the significant risks and rewards of ownership, it indicates that control has passed to the customer.
- Jennifer has accepted the asset.**

Measurement of the Transaction Price

The **transaction price** is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods or services. In the Lululemon case, the transaction price is easily determined because Jennifer Burian agrees to pay a fixed amount

to Lululemon over a short period of time. However, in other situations, companies must consider items such as variable consideration, which may affect the accounts receivable balance.

Variable Consideration

In some cases, the price of a good or service is dependent on future events. These future events often include such items as discounts, returns and allowances, rebates, and performance bonuses. Companies should record accounts receivable and related revenue at the amount of consideration expected to be received from a customer. [2] Here are four items that affect the transaction price and thus the accounts receivable balance: (1) trade discounts, (2) cash discounts, (3) sales returns and allowances, and (4) time value of money.

Trade Discounts

Prices may be subject to a trade or quantity discount. Companies use such **trade discounts** to avoid frequent changes in catalogs, to alter prices for different quantities purchased, or to hide the true invoice price from competitors. Trade discounts are commonly quoted in percentages.

For example, say you have an **Apple** smartphone that has a list price of \$600, and Apple sells it to **Best Buy** for the list price less a 40% trade discount. Apple then records a sale of \$360 [$\$600 \times (1.0 - .40)$]. Apple, per normal practice, simply deducts the trade discount from the list price and bills Best Buy the net amount, or \$360 in this case.

Example 6.3 Trade Discount

FACTS Assume that **Ryobi** sells a cordless drill with suggested retail price of \$99.99 to **Home Depot** for \$70, a trade discount of approximately 30%. Home Depot, in turn, sells the drill for \$99.99.

QUESTION What amount should Ryobi and Home Depot record as revenue for this transaction?

SOLUTION

Ryobi should report the net price of \$70 as revenue, while Home Depot should record the retail price of \$99.99 as revenue.

Cash Discounts (Sales Discounts)

Companies offer **cash discounts (sales discounts)** to induce prompt payment. Cash discounts are generally presented in terms such as 2/10, n/30 (2% discount if paid within 10 days, gross amount due in 30 days), or 2/10, E.O.M., net 30, E.O.M. (2% discount if paid any time by the 10th day of the following month, with full payment due by the 30th of the following month).

Customers usually take sales discounts unless their cash is severely limited. Why? A customer that receives a 1% reduction in the sales price for payment within 10 days, total payment due within 30 days, effectively earns 18.25% [$.01 \div (20/365)$], or at least avoids that rate of interest cost.

A company can record the sales discount using the gross method or the net method.

- Under the gross method, a company recognizes the receivable and related revenue at the invoice price.
- Under the net method, a company recognizes the accounts receivable and related revenue at the invoice price less the cash discount.

For example, assume that Hanley Company sells goods for \$10,000 to Murdoch Inc. with terms 2/10, net 30, and Hanley expects that the discount will be taken. As a result, Hanley records the accounts receivable and related sales revenue at its net price of \$9,800 [$\$10,000 - (\$10,000 \times .02)$]. This approach is the **net method** as it attempts to value the receivable at its net realizable value.

FACTS Armour Company sells goods for \$10,000 to Ohara Inc. on April 1 with terms 1/10, net 15.

QUESTION How should Armour record this transaction using (a) the gross method, and (b) the net method?

SOLUTION

a. Gross method:

Accounts Receivable	10,000	
Sales Revenue		10,000

b. Net method:

Accounts Receivable [$\$10,000 - (.01 \times \$10,000)$]	9,900	
Sales Revenue		9,900

As indicated, if Armour uses the gross method, it records the accounts receivable and related sales revenue at \$10,000, not \$9,900.

Example 6.4 Cash Discounts

Continuing with Example 6.4, under the **gross method**, Armour debits Sales Discounts, a contra account to Sales Revenue, when it receives payment within the discount period. Armour's income statement then reports sales discounts as a deduction from sales revenue to arrive at net sales. If Armour uses the net method and the customer fails to take the discount, Armour credits a Sales Discount Forfeited account, which is shown in the "Other revenues and gains" section of the income statement.³

FACTS Hanley Company has the following transactions with Murdoch Inc.

1. On March 1, Hanley Company sells goods for \$10,000 to Murdoch Inc. on March 1 with terms 2/10, net 30.
2. On March 8, Hanley receives a payment of \$3,920 from Murdoch related to the sale on March 1.
3. On March 26, Hanley receives \$6,000 related to the sale on March 1.

QUESTION What entries should Hanley in March make regarding the sale to Murdoch using the gross method and the net method?

SOLUTION

Example 6.5 Discount Not Taken

Gross Method

Net Method

1. To record sales of \$10,000, terms 2/10, n/30:

Accounts Receivable	10,000		Accounts Receivable	9,800	
Sales Revenue		10,000	Sales Revenue		9,800

2. To record payment on \$4,000 of sales received within discount period:

Cash	3,920		Cash	3,920	
Sales Discounts ($\$4,000 \times .02$)	80		Accounts Receivable		3,920
Accounts Receivable		4,000			

3. To record payment on \$6,000 of sales received after discount period:

Cash	6,000		Cash	6,000	
Accounts Receivable		6,000	Accounts Receivable		5,880
			Sales Discounts Forfeited ($\$6,000 \times .02$)		120

The total amount of income reported on the income statement from this transaction is the same under the gross and net method—it is just the presentation that is different. Using the gross method, net sales revenue of \$9,920 ($\$10,000 - \80) is shown in operating income. Under the net method, however, the net sales revenue of \$9,800 is shown in operating income, while \$120 of discounts forfeited is shown as "Other revenues and gains," below operating income. Under each method, the total increase to net income is \$9,920.

³To the extent that discounts not taken reflect short-term financing, some argue that companies could use an interest revenue account to record these amounts.

Theoretically, the net method is correct because the receivable is stated at its net realizable value (assuming estimates are correct). However, most companies use the gross method for practical reasons.

- As shown in the example, an estimate may not materialize. As a result, the receivable and sales numbers may be incorrect.
- If collection periods are relatively short, any differences that arise between the two methods are immaterial.

Sales Returns and Allowances

Sales returns and allowances are common for many companies selling goods to customers. For example, assume that Falco Solar sells solar panels to customers on account. Falco grants the right of return for these panels for a variety of reasons (e.g., dissatisfaction with the product). To account for these sales returns and allowances, Falco should recognize the following two items

1. Revenue and Cost of Goods Sold when solar panels are sold.
2. An asset (and corresponding adjustment to Revenue and Cost of Goods Sold) for the goods returned from customers.

Example 6.6 Sales Returns and Allowances

FACTS On January 12, 2025, assume that **Polaroid** sells 100 cameras for \$100 each on **account** to **Target**. Polaroid allows Target to return any unsold cameras within 45 days of purchase. The cost of each product is \$60. Polaroid estimates that:

- Three cameras will be returned.
- The cost of recovering the products will be immaterial.
- The returned products are expected to be resold at a profit.

On January 24, Target returns two of the cameras because they were the wrong color. On January 31, Polaroid prepares financial statements and determines that it is likely that only one more camera will be returned.

QUESTION What entries should Polaroid make to record the sale on January 12, 2025, and related sales return and allowance on January 24, 2025?

SOLUTION

To record the sale of the cameras and related cost of goods sold:

January 12, 2025

Accounts Receivable	10,000	
Sales Revenue (100 × \$100)		10,000
Cost of Goods Sold	6,000	
Inventory (100 × \$60)		6,000

To record the return of two cameras:

January 24, 2025

Sales Returns and Allowances	200	
Accounts Receivable (2 × \$100)		200
Returned Inventory	120	
Cost of Goods Sold (2 × \$60)		120

The Sales Returns and Allowances account is a contra account to Sales Revenue. Sales Returns and Allowances will be deducted from Sales Revenue on the income statement to arrive at net sales. The Returned Inventory account is used to separate returned inventory from regular inventory.

FACTS Refer to Example 6.6. Assume that **Polaroid** is now ready to prepare financial statements on January 31, 2025. As indicated earlier, Polaroid originally estimated that the most likely outcome was that three cameras would be returned. Polaroid believes the original estimate is correct. Therefore, Polaroid expects one more camera to be returned.

QUESTION What adjusting entries should Polaroid make to account for expected returns?

SOLUTION

To record expected sales returns and the related reduction in cost of goods sold:

January 31, 2025		
Sales Returns and Allowances	100	
Refund Liability ($1 \times \$100$)		100
Estimated Inventory Returns	60	
Cost of Goods Sold ($1 \times \$60$)		60

The Refund Liability account is a liability for estimated future returns. The Estimated Inventory Returns account will generally be added to the Returned Inventory account at the end of the reporting period.

Example 6.7 Adjusting Entries for Estimated Returns

Examples 6.6 and 6.7 highlight the adjusting entry approach that most companies use, as follows.

①

At the date of sale, both sales revenue and accounts receivable are recorded at their gross amounts without consideration of sales returns and allowances.

②

At the end of the reporting period, adjusting entries are made, resulting in both sales revenues and accounts receivable being reported at net amounts, which reflect actual and estimated returns and allowances.

Most companies follow this approach because estimating net sales at the date of sale is often difficult and time-consuming. In addition, recording accounts receivable net at the sale date may lead to a lack of correspondence between the control account and the subsidiary ledger related to accounts receivable. By waiting to make the necessary adjusting entries at the end of the reporting period, information related to actual sales returns and allowances is available, and a company still achieves the FASB's objective of reporting accounts receivable and sales revenue at the expected amount the company is entitled to receive.[3]

Continuing with the information presented in Examples 6.6 and 6.7, for the month of January, **Polaroid**'s income statement reports the information presented in **Illustration 6.4**.

Sales revenue ($100 \times \$100$)	\$10,000
Less: Sales returns and allowances ($\$200 + \100)	300
Net sales	9,700
Cost of goods sold ($97 \times \$60$)	5,820
Gross profit	<u>\$ 3,880</u>

ILLUSTRATION 6.4 Income
Statement Reporting

As a result, at the end of the reporting period, the net sales reflects the amount that Polaroid expects to be entitled to collect.

Polaroid reports the following information in the balance sheet as of January 31, 2025, as shown in **Illustration 6.5**.

ILLUSTRATION 6.5 Balance Sheet Reporting

Current assets		
Accounts receivable (\$10,000 – \$200)		\$9,800
Returned inventory (including estimated) (3 × \$60)		180
Current liabilities		
Refund liability		\$100

Underlying Concepts

Materiality means it could make a difference to a decision-maker. The FASB believes that present value concepts can be ignored for short-term receivables. The overriding cost constraint is also applicable as the cost that companies would incur to calculate their accounts receivable at present value of future cash flows would likely outweigh the benefit of providing that information to users.

Time Value of Money

Another variable consideration issue relates to the time value of money.

- Ideally, a company should measure receivables in terms of their present value, that is, the discounted value of the cash to be received in the future.
- When expected cash receipts require a waiting period, the receivable face amount is not worth the amount that the company ultimately receives.

To illustrate, assume that **Best Buy** makes a sale on account for \$1,000 with payment due in four months. The applicable annual rate of interest is 12%, and payment is made at the end of four months. The present value of that receivable is not \$1,000 but \$961.54 [$\$1,000 \times .96154 (PV_{1,4\%})$]. In other words, the \$1,000 Best Buy receives four months from now is not the same as the \$1,000 received today.

Theoretically, any revenue after the period of sale is interest revenue. In practice, companies ignore interest revenue related to accounts receivable because the amount of the discount is not usually material in relation to the net income for the period (see **Underlying Concepts**). The profession specifically excludes from present value considerations “receivables arising from transactions with customers in the normal course of business which are due in customary trade terms not exceeding approximately one year.” [4]

Put It into Practice
LO 6.2
Record Credit Sales

FACTS You are provided with the following information for Max Glass.

1. On January 4, 2025, Max Glass sells \$5,000 of hurricane glass to Oliver Company on account. The cost of this glass is \$3,000. Max records the sale on account and records cost of goods sold.
2. On January 16, 2025, Max grants an allowance of \$300 because some of the hurricane glass is defective and was discarded by Oliver.
3. On January 31, 2025, before preparing financial statements, Max estimates that another \$100 in allowances will result related to its sale to Oliver due to defective glass.

INSTRUCTIONS

Prepare entries for these transactions and determine what will be reported in the financial statements on January 31, 2025.

SOLUTION

1. To record the sale and the related adjustment to cost of goods sold:			
January 4, 2025			
Accounts Receivable	5,000		
Sales Revenue		5,000	
Cost of Goods Sold	3,000		
Inventory		3,000	
2. To record an allowance given because of damaged hurricane glass:			
January 16, 2025			
Sales Returns and Allowances	300		
Accounts Receivable		300	

3. To adjust for estimated allowances related to damaged hurricane glass:

January 31, 2025		
Sales Returns and Allowances	100	
Refund Liability		100

As a result of these transactions, Max reports net sales revenue on the income statement of \$4,600 (\$5,000 – \$300 – \$100), which is the amount Max expects to receive from Oliver from the sale of the glass. In addition, Max reports on its balance sheet the estimated amount expected to be collected of its accounts receivable from Oliver of \$4,700 (\$5,000 – \$300) and a refund liability of \$100. The use of both Sales Returns and Allowances and Refund Liability accounts is helpful to management because they help identify potential problems associated with inferior merchandise, inefficiencies in filling orders, or delivery or shipment mistakes.

Note that if the hurricane glass were returned instead of an allowance provided, then entries to record cost of goods sold and inventory would have to be made in transactions 2 and 3. **In transaction 2, the following additional entry is made.**

Returned Inventory (.6 × \$300)	180	
Cost of Goods Sold		180

In transaction 3, the following entry is made.

Estimated Returned Inventory (.6 × \$100)	60	
Cost of Goods Sold		60

6.3 Valuation of Accounts Receivable

LEARNING OBJECTIVE 3

Explain accounting issues related to valuation of accounts receivable.

As one revered accountant aptly noted, the credit manager's idea of heaven probably would be a place where everyone (eventually) paid his or her debts.⁴ Unfortunately, this situation often does not occur. For example, a customer may not be able to pay because of a decline in its sales revenue due to a downturn in the economy. Similarly, individuals may be laid off from their jobs or faced with unexpected hospital bills.

- Companies record credit losses as debits to Bad Debt Expense (or Uncollectible Accounts Expense).
- Such losses are a normal and necessary risk of doing business on a credit basis.

Two methods are used in accounting for uncollectible accounts: (1) the direct write-off method and (2) the allowance method. The direct write-off method, which records bad debt expense at the time a specific customer account is deemed uncollectible, is often used for tax purposes, but it is not allowed under GAAP unless the amount uncollectible is immaterial. The allowance method is acceptable under GAAP and is the method we will focus on in this section.

⁴William J. Vatter, *Managerial Accounting* (Englewood Cliffs, N.J.: Prentice-Hall, 1950), p. 60.

Direct Write-Off Method for Uncollectible Accounts (Non-GAAP)

Under the **direct write-off method**, when a company determines a particular account to be uncollectible, it charges the loss to Bad Debt Expense. Assume, for example, that on December 10, Cruz Co. writes off as uncollectible Yusado's \$8,000 balance. The entry is as follows.

December 10			
Bad Debt Expense		8,000	
Accounts Receivable (Yusado)			8,000

Under this method, Bad Debt Expense will show only **actual losses** from uncollectibles.

Supporters of the direct write-off-method contend that it records facts, not estimates. It assumes that a good account receivable resulted from each sale, and that later events revealed certain accounts to be uncollectible and worthless. From a practical standpoint, this method is simple and convenient to apply. However, the direct write-off method is theoretically deficient.

- It usually fails to record expenses in the same period as associated revenues.
- Receivables are not stated at the net amount expected to be collected on the balance sheet.

As a result, using the direct write-off method is not considered appropriate, except when the amount uncollectible is immaterial.

Allowance Method for Uncollectible Accounts (GAAP)

When a company sells goods and services on credit to customers, does the company know in advance which customers may not be able to pay? Of course not. If a company knew which customers would not pay, it would not extend credit to those customers.

- The **allowance method** of accounting for bad debts involves **estimating uncollectible accounts** at the end of each period.
- This ensures that companies state receivables on the balance sheet at the **net amount expected to be collected**, which is gross accounts receivable less estimated uncollectible accounts.
- Companies estimate uncollectible accounts using information about past and current events as well as forecasts of future collectability.

Many companies set their credit policies to provide for a certain percentage of uncollectible accounts. Failure to reach that percentage means that they are losing sales due to overly restrictive credit policies. Thus, the FASB requires the allowance method for financial reporting purposes when bad debts are material in amount. This method has three essential features:

1. Companies **estimate** uncollectible accounts receivable and compare the new estimate to the current balance in the allowance account.
2. Companies debit estimated increases in uncollectibles to Bad Debt Expense and credit them to Allowance for Doubtful Accounts, a contra asset account, through an adjusting entry at the end of each period.
3. When companies write off a specific customer account, they debit actual uncollectibles to Allowance for Doubtful Accounts and credit that amount to Accounts Receivable.

FACTS In 2025, its first year of operations, Brown Furniture has credit sales of \$1,800,000. At December 31, 2025, the company reported accounts receivable of \$150,000 from those sales. The credit manager estimates that \$10,000 of the receivable balance will be uncollectible.

QUESTION What is the adjusting entry to record the estimated uncollectibles (assuming a zero beginning balance in the allowance account)?

SOLUTION

To to record the estimate of uncollectible accounts:

December 31, 2025		
Bad Debt Expense	10,000	
Allowance for Doubtful Accounts		10,000

Brown reports Bad Debt Expense in the income statement as an operating expense. Thus, Brown records the increased estimated uncollectibles as bad debt expense in the period of credit deterioration. The company deducts the allowance account from accounts receivable in the current assets section of the balance sheet as follows.

Brown Furniture Balance Sheet (partial)		
Current assets		
Cash		\$ 15,000
Accounts receivable	\$150,000	
Less: Allowance for doubtful accounts	<u>10,000</u>	<u>140,000</u>
Inventory		300,000
Prepaid insurance		<u>25,000</u>
Total current assets		<u>\$480,000</u>

Example 6.8 Recording Uncollectible Accounts

Allowance for Doubtful Accounts shows the estimated amount of accounts receivable that the company expects it will not collect in the future. The reasons for using an allowance account are as follows.

- Companies do not know which customers will not pay in the future; therefore, they cannot make a direct credit to Accounts Receivable for the estimate. The credit goes to the allowance account which is a contra account to Accounts Receivable.
- The credit balance in the allowance account will absorb the specific customer write-offs when they occur in the future.

For example, the net accounts receivable balance of \$140,000 in the solution to Example 6.8 represents the **net amount expected to be collected** on the accounts receivable at the statement date. **Note that Allowance for Doubtful Accounts is a permanent account and therefore is not closed at the end of the accounting period.**

Recording the Write-Off of an Uncollectible Account

When companies have exhausted all means of collecting a past-due account and collection appears impossible, the company should write off the account. That simply means the company credits, or decreases, the customer's accounts receivable balance since it will not be collected.

Example 6.9

Write-Off of Uncollectible Account

FACTS The financial vice president of Brown Furniture authorizes a write-off of the \$1,000 balance owed by Randall Co. on March 1, 2026.

QUESTION What is the entry to record the write-off of the Randall Co. receivable?

SOLUTION

To record the write-off of the Randall Co. account:

March 1, 2026		
Allowance for Doubtful Accounts	1,000	
Accounts Receivable (Randall Co.)		1,000

In Example 6.9, Brown Furniture does not increase bad debt expense when the write-off occurs. **Under the allowance method, companies debit every bad debt write-off to the allowance account rather than to Bad Debt Expense.** Here's why:

- A debit to Bad Debt Expense would be incorrect because the company has already recognized the expense when it made the adjusting entry for estimated bad debts. Remember, the adjusting entry is made in the year of credit deterioration, which is 2025 in the Brown example.
- The entry to record the write-off of an uncollectible account reduces both Accounts Receivable and Allowance for Doubtful Accounts.

After posting, the general ledger accounts appear as shown in **Illustration 6.6**.

ILLUSTRATION 6.6 Account Balances After Write-Off

Accounts Receivable			Allowance for Doubtful Accounts		
Jan. 1 Bal.	150,000	Mar. 1 1,000	Mar. 1 1,000	Jan. 1 Bal.	10,000
Mar. 1 Bal.	149,000			Mar. 1 Bal.	9,000

A write-off affects **only balance sheet accounts**—not income statement accounts. The write-off of the account reduces both Accounts Receivable and Allowance for Doubtful Accounts. Cash realizable value in the balance sheet, therefore, remains the same, as **Illustration 6.7** shows.

ILLUSTRATION 6.7 Cash Realizable Value

	Before Write-Off	After Write-Off
Accounts receivable	\$150,000	\$149,000
Allowance for doubtful accounts	10,000	9,000
Cash realizable value	<u>\$140,000</u>	<u>\$140,000</u>

Recovery of an Uncollectible Account

Occasionally, a company collects from a customer after it has written off the account as uncollectible. The company makes two entries to record the recovery of a bad debt.

1. It reverses the entry made in writing off the account. This reinstates the customer's account.
2. It journalizes the collection in the usual manner.

FACTS On July 1, 2026, Randall Co. pays the \$1,000 amount that Brown Furniture had written off on March 1.

QUESTION What entry (entries) should Brown make to record this recovery?

SOLUTION

Example 6.10

Recovery of Uncollectible Account

July 1, 2026

To reverse write-off of account:

Accounts Receivable (Randall Co.)	1,000	
Allowance for Doubtful Accounts		1,000

To record collection of the Randall account:

Cash	1,000	
Accounts Receivable (Randall Co.)		1,000

Note that the recovery of a bad debt, like the write-off of a bad debt, affects **only balance sheet accounts**. The net effect of the two entries above is a debit to Cash and a credit to Allowance for Doubtful Accounts for \$1,000.

Estimating the Allowance

To simplify the preceding explanation, we assumed we knew the amount of the expected uncollectibles. In “real life,” companies must estimate that amount when they use the allowance method. There is much judgment involved in developing the estimate, but the goal is to develop the best estimate of expected uncollectible receivables. Companies can estimate the percentage of outstanding receivables that will become uncollectible, without identifying specific accounts. This procedure, referred to as the **percentage-of-receivables approach**, provides a reasonably accurate estimate of the receivables’ realizable value.⁵

- Companies may apply the percentage-of-receivables approach using one **composite rate**, or percentage, that reflects an estimate of the uncollectible receivables.
- Or, companies may set up an **aging schedule** of accounts receivable, which applies a different percentage based on past experience to the various age categories.

An aging schedule also serves as a control device by identifying which accounts require special attention based on how long they have been past due. The aging schedule of Aloha Coffee Company in **Illustration 6.8** is an example.

Aloha Coffee Company Aging Schedule						
<u>Name of Customer</u>	<u>Balance Dec. 31</u>	<u>Under 30 Days</u>	<u>30–60 Days</u>	<u>61–90 Days</u>	<u>91–120 Days</u>	<u>Over 120 Days</u>
Honolulu Cafes	\$ 98,000	\$ 15,000	\$ 65,000	\$18,000		
Hilo Food Mart	320,000	280,000	40,000			
Beaches Cafe	55,000					\$55,000
Whale Coffee Shops	74,000	50,000	10,000		\$14,000	
	<u>\$547,000</u>	<u>\$345,000</u>	<u>\$115,000</u>	<u>\$18,000</u>	<u>\$14,000</u>	<u>\$55,000</u>

ILLUSTRATION 6.8 Accounts Receivable Aging Schedule

⁵In contrast to prior impairment rules, which recorded bad debts only when a loss had occurred, companies must adjust estimates for the possibility that expectations about losses may not be reflected in historical data. That is, companies are required to estimate credit losses over the entire contractual term of the receivables. [5]

ILLUSTRATION 6.8 (continued)

Age	Amount	Percentage Estimated to Be Uncollectible*	Required Balance in Allowance
Under 30 days	\$345,000	0.8%	\$ 2,760
30–60 days	115,000	4.0	4,600
61–90 days	18,000	15.0	2,700
91–120 days	14,000	20.0	2,800
Over 120 days	55,000	25.0	13,750
Year-end balance of allowance for doubtful accounts			\$26,610

*Estimates are based on historical loss rates, taking into consideration whether the historical loss rates differ from what is currently expected over the life of the receivables (on the basis of current conditions and reasonable and supportable forecasts about the future).

In Illustration 6.8, Aloha Coffee reports a balance of \$26,610 in Allowance for Doubtful Accounts. If there is no beginning balance in its allowance account, the company will debit bad debt expense for this same amount.⁶

What happens if we change the illustration slightly **and assume that the allowance account had a beginning credit balance of \$800 before adjustment**? Remember, since bad debt expense is an estimate, there will be “leftover” amounts in the allowance account from period to period. If the leftover balance is a credit, that means the company overestimated and did not write off as many accounts as expected. If the leftover balance is a debit, that means the company underestimated and wrote-off more accounts than expected. To prevent the leftover balances from growing too large over time, a company will adjust the allowance account each period and incorporate the balance that is already in the account.

Returning to the Aloha Coffee example, a leftover credit balance of \$800 means Aloha overestimated from the previous period. From the aging schedule in Illustration 6.8, Aloha wants to reflect a year-end credit balance of \$26,610 in the allowance account. Since the account already has an \$800 credit balance, Aloha only needs to adjust the account by \$25,810 (\$26,610 – \$800) by making the following entry.

Bad Debt Expense	25,810	
Allowance for Doubtful Accounts		25,810

After Aloha posts the adjusting entry, its accounts appear as shown in [Illustration 6.9](#).

ILLUSTRATION 6.9 Bad Debt Expense After Posting

Bad Debt Expense		Allowance for Doubtful Accounts	
Dec. 31 Adj.	25,810	Dec. 31 Bal.	800
		Dec. 31 Adj.	25,810
		Dec. 31 Adj. bal.	26,610

Now let’s change the Aloha example again and assume there was a \$1,000 **debit** balance in the allowance account before adjustment. The adjusting entry would be for \$27,610 (\$26,610 + \$1,000) to arrive at a credit balance of \$26,610, as follows.

Bad Debt Expense	27,610	
Allowance for Doubtful Accounts		27,610

After Aloha posts the adjusting entry, its accounts appear as shown in [Illustration 6.10](#).

ILLUSTRATION 6.10 Bad Debt Expense After Posting

Bad Debt Expense		Allowance for Doubtful Accounts	
Dec. 31 Adj.	27,610	Dec. 31 Bal.	1,000
		Dec. 31 Adj.	27,610
		Dec. 31 Adj. bal.	26,610

⁶The expected loss model does not specify a recognition threshold (e.g., probable and estimable) to record an allowance for uncollectible accounts. As a result, companies must measure expected uncollectible accounts and record bad debt expense on all receivables, even those with a low risk of loss (e.g., receivables that are not past due). Thus, in the Aloha Coffee example, an estimate for uncollectible accounts is developed for balances that are under 30 days past due.

Notice that no matter what the prior balance in the allowance account may be, the goal is for the ending balance to be the current estimate for uncollectible amounts, which is \$26,610 in the Aloha example.

In summary, the percentage-of-receivables basis provides an estimate of the cash realizable value of the receivables. It also provides a reasonable matching of expenses (bad debt) to revenue (sales). The FASB employs a **current expected credit loss (CECL) model** that requires companies to measure expected uncollectible accounts and record bad debt expense on **all** receivables.⁷

Companies use sophisticated models employing data analytics to arrive at more precise estimates on a timely basis. In the Aloha example, the aging analysis was used to classify receivables according to a risk factor (days past due) that is related to the collectibility of the receivables. Other approaches are acceptable as long as the estimation techniques are applied consistently over time with the objective of faithfully estimating expected uncollectible accounts. [6] For example, a company may use historical loss ratios for customers with different credit ratings as a basis for estimating uncollectible accounts. Or, the discounted cash flow approach is generally appropriate when analyzing an individual loan or receivable (we present a comprehensive example of this approach in Appendix 6B).

Analytics in Action: Predicting the Future

Any time a company sells a product or provides a service to a customer and agrees to accept payment at a later date, there is some risk of nonpayment. Advances in data analytics allow companies to not only proactively evaluate their customer base and credit policies before sales are made but also to better estimate their allowance for bad debts at each reporting date.

Under the **current expected credit loss (CECL) model**, companies look at both historical write-offs as well as forward-looking data to best estimate the total allowance for existing receivables. With data analytics, companies can take advantage of vast amounts of data available to not only track historical,

company, and customer-specific trends, but also develop relationships with broader economic indicators. For example, consider a company that correlates changes in U.S. unemployment rates with its bad debt percentages. Management may begin its estimate of bad debts using historical loss rates for each accounts receivable aging category but then adjust that historical loss rate with anticipated trends in unemployment percentages.

Predictive data analytics will allow companies to fine-tune their estimates of allowance for doubtful accounts and provide the most relevant information to users of the financial statements.

Source: Mark D. Mishler, “CECL Isn’t Just for Banks Anymore,” *Journal of Accountancy* (November 1, 2019).

Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

FACTS Rianna.com uses the allowance method of accounting for bad debts. The company produced the following aging of the accounts receivable at year-end.

	Total	Number of Days Outstanding				
		0–30	31–60	61–90	91–120	Over 120
Accounts receivable	\$377,000	\$222,000	\$90,000	\$38,000	\$15,000	\$12,000
% uncollectible		1%	4%	5%	8%	10%
Estimated bad debts						

INSTRUCTIONS

- Calculate the total estimated bad debts based on the above information.
- Prepare the year-end adjusting journal entry to record the bad debts using the aged uncollectible accounts receivable determined in (a). Assume the unadjusted balance in Allowance for Doubtful Accounts is a \$4,000 debit.

Put It into Practice LO 6.3

Estimate and Record Bad Debts

⁷In general, estimating bad debt expense with a focus on the income statement (e.g., percentage-of-sales) is not appropriate. That is, the goal is to arrive at an estimate in the allowance, which reduces the receivables amount to the net amount expected to be collected. While a percentage-of-sales approach may provide a better “matching” of bad debt expense to sales, the balance in the allowance likely will not provide a representationally faithful estimate of the net amount expected to be collected.

- c. Of the above accounts, \$5,000 is determined to be specifically uncollectible. Prepare the journal entry to write off the uncollectible account.
- d. The company collects \$5,000 subsequently on a specific account that had previously been determined to be uncollectible in (c). Prepare the journal entry (entries) necessary to restore the account and record the cash collection.
- e. Comment on how your answers to (a)–(d) would change if Rianna.com used 3% of total accounts receivable, rather than aging the accounts receivable. What are the advantages to the company of aging the accounts receivable rather than applying a percentage to total accounts receivable?

SOLUTION**Allowance for Doubtful Accounts**

Beg. bal.	4,000

Accounts Receivable

5,000

e. If Rianna.com used 3% of total accounts receivable rather than aging the individual accounts, the bad debt expense adjustment would be \$15,310 $[(\$377,000 \times .03) + \$4,000]$. Aging the individual accounts rather than applying a percentage to the total accounts receivable should produce a more accurate estimate of the allowance and bad debt expense.

6.4 Notes Receivable

LEARNING OBJECTIVE 4

Explain accounting issues related to recognition and valuation of notes receivable.

A note receivable is supported by a formal **promissory note**, a written promise to pay a certain sum of money at a specific future date. Such a note is a negotiable instrument that a **maker** signs in favor of a designated **payee** who may legally and readily sell or otherwise transfer the note to others. Although all notes contain an interest element because of the time value of money, companies classify them as interest-bearing or non-interest-bearing as follows.

- **Interest-bearing notes** have a stated rate of interest.
- **Zero-interest-bearing notes** (non-interest-bearing) include interest as part of their face amount.

Notes receivable are considered fairly liquid, even if long-term, because companies may easily convert them to cash (although they might pay a fee to do so).

Companies frequently accept notes receivable from customers who need to extend the payment period of an outstanding receivable. Or, they require notes from high-risk or new customers. In addition, companies often use notes in loans to employees and subsidiaries, and in the sales of property, plant, and equipment. In some industries (e.g., the pleasure and sport boat industry), notes support all credit sales. The majority of notes, however, originate from lending transactions. The basic issues in accounting for notes receivable are the same as those for accounts receivable: **recognition, valuation, and disposition**.

Recognition of Notes Receivable

Companies record and report long-term notes receivable at the **present value of the cash they expect to collect**. It is important to understand the interest rates that are involved when determining the present value:

- **Stated (nominal or face) interest rate.** The interest rate written into the notes receivable contract. The stated rate represents the cash rate of interest paid by the borrower.
- **Effective-interest rate (market rate or effective yield).** The interest rate used in the market to determine the value of the note, also referred to as the discount rate used to determine present value.

When the stated interest rate on an interest-bearing note equals the effective interest rate, the note sells at face value.⁸ When the two interest rates are not equal, the present value of the note will be different from the face value of the note. Companies then record this difference, either a discount or a premium, and amortize it over the life of a note to approximate the effective (market) interest rate. This illustrates one of the many situations in which time value of money concepts are applied to accounting measurement.

Note Issued at Face Value

To illustrate the discounting of a note issued at face value, assume that Fjords Unlimited lends Scandinavian Imports \$10,000 in exchange for a \$10,000, three-year note bearing interest at 10% annually. The market rate of interest for a note of similar risk is also 10%. We show the time diagram depicting both cash flows in **Illustration 6.11**.

ILLUSTRATION 6.11 Time Diagram for Note Issued at Face Value

Fjords Unlimited computes the present value or exchange price of the note as shown in **Illustration 6.12**.

⁸The **stated interest rate**, also referred to as the face rate or the coupon rate, is the rate contracted as part of the note. The **effective-interest rate**, also referred to as the market rate or effective yield, is the rate used in the market to determine the value of the note—that is, the discount rate used to determine present value.

ILLUSTRATION 6.12 Present Value of Note—Stated and Market Rates the Same

Face value of the note		\$10,000
Present value of the principal: \$10,000 ($PVF_{3,10\%}$) = \$10,000 × .75132	\$7,513	
Present value of the interest: \$1,000 ($PVF-OA_{3,10\%}$) = \$1,000 × 2.48685	<u>2,487</u>	
Present value of the note		<u>(10,000)</u>
Difference		<u><u>\$ 0</u></u>

As indicated in Illustration 6.12, the present value of the note equals its face value because the effective (market) and stated rates of interest are the same.

Example 6.11
Note Receivable Entries

Excel Solution

<i>i</i>	10%	
<i>n</i>	3	
PMT	-\$1,000	(\$10,000 × .10)
FV	-\$10,000	
PV	\$10,000	

PV(rate, nper, pmt, [fv], [type])

FACTS Use information on the note receivable from Illustration 6.11.

QUESTION What entries does Fjords Unlimited make for the Scandinavian note when (a) the note is received and (b) interest earned in each year?

SOLUTION

a. To record the receipt of the note:

Notes Receivable	10,000	
Cash		10,000

b. To record the interest earned each year:

Cash	1,000	
Interest Revenue (\$10,000 × .10)		1,000

As indicated, we can use Excel to calculate the present value of the note, or a financial calculator may also be used. See Appendices 5A and 5B for specific guidance on using Excel and financial calculators to solve time value of money problems.

Note Not Issued at Face Value

Zero-Interest-Bearing Notes The name “zero-interest-bearing note” is a bit misleading.

- Interest is associated with the note, but there are no regular, cash interest payments made on the note.
- Instead, the cash received by the borrower when the note is first executed is less than face value, but the borrower must pay back the full face value on the maturity date of the note.

If a company receives a zero-interest-bearing note, its present value is the cash paid to the borrower.

To illustrate, Jeremiah Company receives a three-year, \$10,000 zero-interest-bearing note and gives cash of \$7,721.80 to the issuer of the note (the borrower). At the end of three years, Jeremiah will receive \$10,000 from the issuer. Because Jeremiah knows both the future value (\$10,000) and the present value (\$7,721.80) of the note, Jeremiah can compute the interest rate. This rate is referred to as the **implicit interest rate**, computed as follows.

$$\begin{aligned}
 PV &= FV \times PVF_{3,i} \\
 PVF_{3,i} &= \$7,721.80 \div \$10,000 \text{ (} PVF_{3,i} \text{)} \\
 &= .77218
 \end{aligned}$$

Using the table for the Present Value of 1 for 3 periods, the implicit interest rate is 9%.

We show the time diagram depicting the one cash flow in **Illustration 6.13**.

ILLUSTRATION 6.13 Time Diagram for Zero-Interest-Bearing Note

The difference between the future value and present value of \$2,278.20 (\$10,000 – \$7,721.80) is called a discount, and it represents the implied, or effective, interest on the note. Jeremiah records the transaction as follows.

Notes Receivable	10,000.00	
Discount on Notes Receivable (\$10,000 – \$7,721.80)		2,278.20
Cash		7,721.80

Discount on Notes Receivable is a valuation account. Companies report it on the balance sheet as a contra asset account to notes receivable. Going forward, Jeremiah will amortize, or allocate, the discount to interest revenue over the three years of the note using the **effective-interest method**.

- With the effective-interest method, the carrying value of the note is multiplied by the implied interest rate to determine the amount of interest revenue for the period.
- The difference between cash interest payments (\$0 in this example) and interest revenue is the amount of discount that will be amortized each period.

Illustration 6.14 shows the three-year discount amortization and interest revenue schedule. Notice that by the end of year 3, the carrying amount of the note is the face value which is the amount Jeremiah will receive from the issuer.

Excel Solution

n	3
PMT	\$0 (0%)
PV	-\$7,721.80
FV	\$10,000
RATE	9%

RATE(nper, pmt, pv, [fv], [type], [guess])

	A	B	C	D	E
1	Schedule of Note Discount Amortization

2		Cash Interest Received	Interest Revenue	Discount Amortized	Carrying Amount of Note
3	Date of issue				\$ 7,721.80
4	End of year 1	\$-0-	\$ 694.96 ^a	\$ 694.96	8,416.76 ^b
5	End of year 2	-0-	757.51	757.51	9,174.27
6	End of year 3	-0-	825.73	825.73 ^c	10,000.00
7		\$-0-	\$2,278.20	\$2,278.20	
8	^a \$7,721.80 × .09				
9	^b \$7,821.80 + \$694.96				
10	^c \$.05 adjustment to compensate for rounding				

ILLUSTRATION 6.14 Discount Amortization Schedule—Effective-Interest Method

Jeremiah records interest revenue at the end of the first year using the effective-interest method as follows.

Discount on Notes Receivable	694.96	
Interest Revenue (\$7,721.80 × .09)		694.96

Jeremiah records interest revenue at the end of the second year using the effective-interest method as follows.

Discount on Notes Receivable	757.51	
Interest Revenue (\$8,416.76 × .09)		757.51

Discount on Notes Receivable	
	Beg. bal. 2,278.20
Year 1	694.96
Year 2	757.51
Year 3	825.73
	End. bal. 0.00

Jeremiah records interest revenue at the end of the third year using the effective-interest method as follows.

Discount on Notes Receivable	825.73
Interest Revenue (\$10,000 – \$9,174.27)	825.73

As the carrying amount of the note increases, so too does the amount of interest revenue reported on Jeremiah’s income statement.

The amount of the discount, \$2,278.20 in this case, represents the interest revenue Jeremiah will earn from the note over the three years. Note that by the end of year three when the discount is fully amortized, the carrying amount of the note is the face value. Jeremiah will make the following entry when the issuer pays the note at maturity at the end of year three.

Cash	10,000
Note Receivable	10,000

Interest-Bearing Notes Often, the stated rate and the effective rate differ. The zero-interest-bearing note is one example. To illustrate a more common situation, assume that Morgan Corp. makes a loan to Marie Co. and receives in exchange a three-year, \$10,000 note bearing interest at 10% annually. The market rate of interest for a note of similar risk is 12%. We show the time diagram depicting both cash flows in [Illustration 6.15](#).

ILLUSTRATION 6.15 Time Diagram for Interest-Bearing Note

Morgan computes the present value of the two cash flows as shown in [Illustration 6.16](#).

Excel Solution	
i	12%
n	3
PMT	-\$1,000 (.10 × \$10,000)
FV	-\$10,000
PV	\$9,520
PV(rate, nper, pmt, [fv], [type])	

ILLUSTRATION 6.16 Computation of Present Value—Effective Rate Different from Stated Rate

Face value of the note	\$10,000
Present value of the principal:	
\$10,000 (PVF _{3,12%}) = \$10,000 × .71178	\$7,118
Present value of the interest:	
\$1,000 (PVF-OA _{3,12%}) = \$1,000 × 2.40183	2,402
Present value of the note	(9,520)
Difference (discount)	\$ 480

In this case, because the effective rate of interest (12%) exceeds the stated rate (10%), the present value of the note is less than the face value. That is, Morgan exchanged the note at a **discount**. Morgan records the receipt of the note at a discount as follows.

Notes Receivable	10,000
Discount on Notes Receivable	480
Cash	9,520

Morgan then amortizes the discount and recognizes interest revenue annually using the effective-interest method. [Illustration 6.17](#) shows the three-year discount amortization and interest revenue schedule.

	A	B	C	D	E
1	Schedule of Note Discount Amortization Effective-Interest Method 10% Note Discounted at 12%				
2		Cash Interest Received	Interest Revenue	Discount Amortized	Carrying Amount of Note
3	Date of issue				\$ 9,520
4	End of year 1	\$1,000 ^a	\$1,142 ^b	\$142	9,662 ^c
5	End of year 2	1,000	1,159	159	9,821
6	End of year 3	1,000	1,179	179	10,000
7		\$3,000	\$3,480	\$480	
8	^a \$10,000 × .10				
9	^b \$9,520 × .12				
10	^c \$9,520 + \$142				

ILLUSTRATION 6.17 Discount Amortization Schedule—Effective-Interest Method

On the date of issue, the note has a present value of \$9,520. Its unamortized discount—additional interest revenue spread over the three-year life of the note—is \$480.

At the end of year 1, Morgan receives \$1,000 in cash. But its interest revenue is \$1,142 ($\$9,520 \times .12$). The difference between \$1,000 and \$1,142 is the amortized discount, \$142. In a discount situation, the recorded interest revenue will always be greater than the cash interest received. Morgan records receipt of the annual interest and amortization of the discount for the first year as follows (amounts per amortization schedule).

Cash	1,000	
Discount on Notes Receivable	142	
Interest Revenue		1,142

The carrying amount of the note is now \$9,662 ($\$9,520 + \142).

In the second year, Morgan again receives \$1,000 in cash and makes the following entry (amounts per amortization schedule).

Cash	1,000	
Discount on Notes Receivable	159	
Interest Revenue		1,159

At the end of the third year, Morgan again receives \$1,000 in cash and amortizes the remaining discount in the following entry (amounts per amortization schedule).

Cash	1,000	
Discount on Notes Receivable	179	
Interest Revenue		1,179

Also at the end of the third year, Morgan will make the following entry when the issuer pays the face amount of the note at maturity:

Cash	10,000	
Notes Receivable		10,000

When the present value exceeds the face value, which means the stated rate is greater than the effective rate, the note is exchanged at a **premium**. Companies record the premium on a note receivable as a debit and amortize it using the effective-interest method over the life of the note as annual **reductions** in the amount of interest revenue recognized. Therefore, in a premium situation, the recorded interest revenue will always be less than the cash interest received.

Notes Received for Property, Goods, or Services When a **note is received in exchange for property, goods, or services** in a bargained transaction entered into at arm's length, the stated interest rate is presumed to be fair unless:

1. No interest rate is stated, **or**
2. The stated interest rate is unreasonable, **or**
3. The face amount of the note is materially different from the current cash sales price for the same or similar items or from the current fair value of the debt instrument. [7]

Discount on Notes Receivable

Amort.		Beg. bal.	480
Year 1	142		
			338
Year 2	159		
Year 3	179		
		End. bal.	0

In these circumstances, the company measures the present value of the note by the fair value of the property, goods, or services or by an amount that reasonably approximates the fair value of the note.

Example 6.12

Note Received for Land

Excel Solution

n	5
PMT	\$0
PV	-\$20,000
FV	\$35,247
RATE	12%

RATE(nper, pmt, pv, [fv], [type], [guess])

FACTS Assume that Oasis Development Co. sold a corner lot to **Rusty Pelican** as a restaurant site. Oasis accepted in exchange a 5-year note having a maturity value of \$35,247 and no stated interest rate. The land originally cost Oasis \$14,000. At the date of sale, the land had a fair value of \$20,000. Given the criterion above, Oasis uses the fair value of the land, \$20,000, as the present value of the note.

QUESTION What entry does Oasis make to record the sale of the land in exchange for the note receivable?

SOLUTION

Oasis records the sale as follows.

Notes Receivable	35,247	
Discount on Notes Receivable (\$35,247 – \$20,000)		15,247
Land		14,000
Gain on Disposal of Land (\$20,000 – \$14,000)		6,000

Oasis amortizes the discount to interest revenue over the 5-year life of the note using the effective-interest rate of 12%.

Choice of Interest Rate

In note transactions, other factors involved in the exchange, such as the fair value of the property, goods, or services, determine the effective or real interest rate. But, if a company cannot determine that fair value and if the note has no ready market, determining the present value of the note is more difficult. To estimate the present value of a note under such circumstances, the company must:

- Approximate an applicable interest rate that may differ from the stated interest rate. This process of interest-rate approximation is called **imputation** and results in an **imputed interest rate**.
- Determine the imputed interest rate when it receives the note. The company ignores any subsequent changes in prevailing interest rates.

What factors affect the choice of an interest rate? Items such as the prevailing rates for similar instruments, the existing prime interest rate, restrictive covenants, collateral, and payment schedule affect the choice of an imputed interest rate.

Valuation of Notes Receivable

Like accounts receivable, companies record and report short-term notes receivable at the net amount expected to be collected—that is, at the face amount less all necessary allowances. The primary notes receivable allowance account is Allowance for Doubtful Accounts.

- The estimations involved in valuing short-term notes receivable and in recording bad debt expense and the related allowance **exactly parallel that for trade accounts receivable**.
- Companies estimate the amount of uncollectibles by an analysis of the receivables.

Long-term notes receivable involve additional estimation problems. For example, the value of a note receivable can change significantly over time from its original cost. That is, with the

passage of time, historical numbers become less and less relevant. As discussed earlier (in Chapters 1, 3, and 4), the FASB requires that for financial instruments such as receivables, companies disclose not only their cost but also their fair value in the notes to the financial statements.

FACTS On December 31, 2025, Vincent Company rendered building restoration services to Sylvie Corporation at an agreed price of \$102,049, accepting \$40,000 down and agreeing to accept the balance in four equal installments of \$20,000 receivable each December 31. An assumed interest rate of 11% is imputed.

INSTRUCTIONS

Prepare the entries that would be recorded by Vincent for (a) the sale in exchange for cash and the note receivable (prepare an amortization schedule), and (b) the cash receipts and interest on the following dates. (Assume that the effective-interest method is used for amortization purposes.)

- December 31, 2026.
- December 31, 2029.

SOLUTION

The amortization schedule is as follows.

- a. To record revenue at the present value of the note plus the immediate cash payment:

PV of \$20,000 annuity at 11% for 4 years ($\$20,000 \times 3.10245$)	\$ 62,049
Down payment	40,000
Value of services	<u>\$102,049</u>

Schedule of Note Discount Amortization					
	Date	Cash Received (1)	Interest Revenue (2)	Decrease Carrying Amount (1) – (2)	Carrying Amount of Note
3	12/31/25	—	—		\$62,049
4	12/31/26	\$20,000	\$6,825 ^a	\$13,175	48,874 ^b
5	12/31/27	20,000	5,376	14,624	34,250
6	12/31/28	20,000	3,768	16,232	18,018
7	12/31/29	20,000	1,982	18,018	-
8	^a \$6,825 = \$62,049 × .11				
9	^b \$48,874 = \$62,049 + \$6,825 – \$20,000				

December 31, 2025

Cash	40,000	
Notes Receivable	80,000	
Discount on Notes Receivable ($\$80,000 - \$62,049$)		17,951
Service Revenue		102,049

- b. Entries, with amounts based on the amortization schedule, are as follows.

December 31, 2026

Cash	20,000	
Notes Receivable		20,000
Discount on Notes Receivable	6,825	
Interest Revenue		6,825

December 31, 2029

Cash	20,000	
Notes Receivable		20,000
Discount on Notes Receivable	1,982	
Interest Revenue		1,982

Put It into Practice LO 6.4

Record Note Receivable and Interest

6.5 Other Issues

LEARNING OBJECTIVE 5

Explain additional accounting issues related to accounts and notes receivable.

Two additional special issues for accounting and reporting of receivables relate to the following.

1. Disposition of receivables.
2. Presentation and analysis.

Disposition of Receivables

The old saying that “cash is king” was never more important to businesses than when Covid-19 hit and left so many companies in serious financial difficulties. Even in good times, cash flows are probably the most important financial numbers to understand, particularly for a small or mid-sized business. You can have profits, but positive cash flows generally mean the success or failure of a business. We now look at two common approaches for small and mid-sized companies (and in some cases large companies) to ensure that cash is available to help make their business successful.

Common Financing Options

Congratulations—you are the owner of the Electric Bike Company (EBC), and sales are booming. To meet demand, you allow customers to make down payments and sign an agreement to make final payment when the goods are delivered. However, the manufacturing process takes time and requires significant upfront capital investment. How are you going to solve this cash flow problem? Here are three possibilities, assuming you cannot increase cash sales or extend payments to creditors.

1. Find a rich relative or friend to give you cash outright.
2. Sell your receivables to a third party.
3. Take out a loan.

We wish you luck with the first alternative and suspect that the chances are unlikely. Let's look at the other two possibilities, starting with the sale of the receivables.

Sale of Receivables If you decide to sell your receivables, you will have to find someone to buy them—that party is often a factor. **Factors** are companies that buy receivables for a fee and then collect the payments directly from customers.⁹ A sale of receivables can be arranged in one of two ways.

1. Sale **without recourse**. This means that the factor assumes the credit-risk of some customers not paying their accounts receivable balance.
2. Sale **with recourse**. This means that if a receivable becomes uncollectible, you will be responsible.

It follows that a factor will charge you more for the without recourse approach, because the factor is taking on more risk by being responsible for any bad debts.

⁹Some **purchasers** of receivables buy them to obtain the legal protection of ownership rights afforded a purchaser of assets versus the lesser rights afforded a secured creditor. In addition, banks and other lending institutions may need to purchase receivables because of legal lending limits. That is, they cannot make any additional loans but they can buy receivables and charge a fee for this service.

Sale without Recourse As discussed, for receivables sold **without recourse** (nonrecourse), the seller of the receivable assumes no responsibility for any credit losses associated with the transferred receivables. The transfer of accounts receivable in a nonrecourse transaction is therefore an outright sale of the receivables both in form (transfer of title) and substance (transfer of control). In nonrecourse transactions (similar to any sale of assets), the seller:

1. Debits Cash for the proceeds and credits Accounts Receivable for the face value of the receivables.
2. Recognizes the difference, reduced by any provision for probable adjustments (discounts, returns, allowances, etc.), as Loss on Sale of Receivables.
3. Uses a Receivable from Factor account (reported as a receivable) to account for the proceeds retained by the factor to cover probable sales discounts, sales returns, and sales allowances.

FACTS Your company (EBC) will sell \$500,000 of accounts receivable to Blue Line Factors on a without recourse basis. As part of the agreement, you will transfer the receivable records (sometimes referred to as the invoices) to Blue Line, which will receive the collections. Blue Line assesses a finance charge of 3% of the face amount of the accounts receivable and retains an amount equal to 5% of the accounts receivable (for probable adjustments for sales discounts, and sales returns and allowances).

QUESTION What entry should EBC and Blue Line make to record this transaction?

SOLUTION

Example 6.13
Sale without Recourse

This transaction should be recorded like any sale of an asset, because control of the receivables is now with Blue Line. EBC and Blue Line make the following entries.

EBC		Blue Line	
Cash	460,000	Accounts Receivable	500,000
Receivable from Factor (Blue Line)		Due to Customer (EBC)	25,000
(.05 × \$500,000)	25,000	Interest Revenue	15,000
Loss on Sale of Receivables		Cash	460,000
(.03 × \$500,000)	15,000		
Accounts Receivable	500,000		

Loss on Sale of Receivables (\$15,000) can also be computed as follows.

Carrying (book) value of receivable		\$500,000
Less: Cash proceeds	\$460,000	
Receivable from factor (Blue Line)	25,000	485,000
Loss on sale of receivables		<u>\$ 15,000</u>

Continuing with Example 6.13, note that the Receivable from Factor (Blue Line) account (sometimes referred to as Due from Factor) arises from returns and allowances to EBC customers, whose receivables have been transferred. The factor (EBC) will receive less than the receivable balance from that customer. For example, if EBC accepts a return, it credits the Receivable from Factor account. After the settlement period has concluded, EBC and Blue Line will settle up on the remaining balances, adjusted for returns and allowances; EBC will close out the Receivable from Factor account.

Sale with Recourse Let's look at a different situation. Unfortunately, just before the arrangement between your company (EBC) and Blue Line was signed, Blue Line expressed concern about the collectibility of some of your accounts receivable. As a result, Blue Line indicated that it would not sign the contract unless the receivables were sold on a with recourse basis.

- The with recourse basis means that EBC will have to guarantee payment to Blue Line if any of the accounts receivable sold become uncollectible.
- In other words, you are going to have to recognize a liability related to possible losses on uncollectible accounts.¹⁰

¹⁰**Recourse** is the right of a transferee of receivables to receive payment from the transferor of those receivables for (1) failure of the debtors to pay when due, (2) the effects of prepayments, or (3) adjustments resulting from defects in the eligibility of the transferred receivables. [8]

To record this type of transaction, EBC uses a financial component approach because EBC (the seller) has a continuing involvement with the receivable. Under the **financial component approach**, EBC assigns values to the components, such as the recourse provision, servicing rights, and agreement to reacquire. In this approach, each party to the sale only recognizes the assets controlled and the liabilities incurred after the sale.

Example 6.14 Sale with Recourse

FACTS Assume the same information as in Example 6.13, except that EBC sold the receivables on a with recourse basis. You determine that this recourse liability has a fair value of \$6,000.

QUESTION How would you determine the loss on sale of the receivables, and what entries would EBC and Blue Line make to record this type of transaction?

SOLUTION

You compute the net proceeds from the sale as follows.

Cash received	\$460,000	
Receivable from factor (Blue Line)	<u>25,000</u>	\$485,000
Less: Recourse liability		<u>6,000</u>
Net proceeds		\$479,000

Net proceeds are cash or other assets received in a sale less any liabilities incurred. The loss is computed as follows.

Carrying (book) value	\$500,000
Net proceeds	<u>479,000</u>
Loss on sale of receivables	\$ 21,000

The journal entries for EBC and Blue Line for the receivables sold on a recourse basis are as follows.

EBC		Blue Line	
Cash	460,000	Accounts Receivable	500,000
Receivable from Factor (Blue Line)	25,000	Due to Customer (EBC)	25,000
Loss on Sale of Receivables	21,000	Interest Revenue	15,000
Accounts (Notes) Receivable	500,000	Cash	460,000
Recourse Liability	6,000		

In this case, EBC recognizes a loss of \$21,000. In addition, it records a liability of \$6,000 to indicate the probable payment to Blue Line for uncollectible receivables. If Blue Line collects all the receivables, EBC eliminates its recourse liability and increases income. Blue Lines' net income is the interest revenue of \$15,000. It will have no bad debts related to these receivables.

You should recognize that there are other reasons to sell receivables, such as the following.

- For competitive reasons, providing sales financing for customers is virtually mandatory in many industries. In the sale of durable goods, such as automobiles, trucks, industrial and farm equipment, computers, and appliances, most sales are on an installment contract basis. Many major companies in these industries have created wholly owned subsidiaries specializing in receivables financing. For example, **Ford** has **Ford Motor Credit**, and **John Deere** has **John Deere Credit**.
- The **holder** may sell receivables because money is tight and access to normal credit is unavailable or too expensive.
- A company may sell its receivables, instead of borrowing, to avoid violating existing lending agreements.
- Billing and collection of receivables are often time-consuming and costly. Credit card companies such as **MasterCard**, **Visa**, **American Express**, **Diners Club**, **Discover**, and others take over the collection process and provide merchants with immediate cash.

Loan As indicated earlier, another possibility for EBC is to borrow money from a financial institution like a bank. To borrow funds, you generally will have to pledge or assign your accounts receivable as collateral for the loan.

- Under a pledge, the assigned receivables remain under control of the borrower.
- If the loan is not paid when due, the lender can convert the collateral to cash.

Borrowers, like EBC, report pledged assets like accounts (notes) receivable no different than any other asset on a balance sheet. Only disclosure is needed to indicate that the accounts receivables are pledged or assigned as collateral on the borrowing. If the fair value of the pledged assets falls below the amount borrowed, EBC will be required to make up the difference or face foreclosure.

FACTS EBC borrows \$500,000 from Citizens Bank. The general terms of the loan are that EBC will pledge \$700,000 of its accounts receivable to Citizens Bank as collateral for the loan. EBC will continue to collect the accounts receivable. Citizens Bank assesses a finance charge of 1% of the accounts receivable and interest on the note at 12%. EBC makes monthly payments to the bank for all cash it collects on the receivables. The specific transactions between EBC and Citizens Bank for 2025 are as follows.

- On March 1, EBC enters into the loan agreement with Citizens Bank.
- During March, EBC decreased Accounts Receivable by \$454,000; \$14,000 was due to sales returns, and \$440,000 was collected less cash discounts of \$6,000.
- On April 1, EBC remitted March collections plus accrued interest to the bank.
- During April, EBC collected the balance of accounts receivable less \$2,000 written off as uncollectible.
- On May 1, EBC remitted the balance due of \$66,000 on the note plus interest on May 1.

Example 6.15

Loan

QUESTION What entries should EBC and Citizens Bank make for the above transactions?

SOLUTION

EBC		Citizens Bank	
To record issuance of note and finance fee related to loan using accounts receivable as collateral:		To record issuance of note to EBC:	
March 1		March 1	
Cash	493,000	Notes Receivable	500,000
Interest Expense ($.01 \times \$700,000$)	7,000	Interest Revenue ($.01 \times \$700,000$)	7,000
Notes Payable	500,000	Cash	493,000
To reduce accounts receivable for cash received less sales discounts and sales returns and allowances:		(No entry)	
During March			
Cash (\$440,000 – \$6,000)	434,000		
Sales Discounts	6,000		
Sales Returns and Allowances	14,000		
Accounts Receivable	454,000		
To remit March collections plus accrued interest to the bank on April 1:		To record interest for the month and receive collection on note:	
April 1		April 1	
Interest Expense ($\$500,000 \times .12 \times 1/12$)	5,000	Cash	439,000
Notes Payable	434,000	Interest Revenue ($\$500,000 \times .06 \times 1/12$)	5,000
Cash (\$434,000 + \$5,000)	439,000	Notes Receivable	434,000
To record collection in April of accounts receivable less \$2,000 written off as uncollectible:		(No entry)	
During April			
Cash	244,000		
Allowance for Doubtful Accounts	2,000		
Accounts Receivable (\$700,000 – \$454,000)	246,000		
To remit April collections plus accrued interest to the bank on May 1:		To record interest for the month and receive collection on note:	
May 1		May 1	
Interest Expense ($\$66,000 \times .12 \times 1/12$)	660	Cash	66,660
Notes Payable (\$500,000 – \$434,000)	66,000	Interest Revenue ($\$500,000 \times .06 \times 1/12$)	660
Cash	66,660	Notes Receivable	66,660

Is It a Sale or a Borrowing?

Sales of receivables or secured borrowings are typical ways that companies might use their receivables to increase liquidity. You should recognize that a sale of EBC’s receivables occurs only if it surrenders control of the receivables to Blue Line. Specifically, for a sale to occur, it must meet three conditions.

- 1. The receivables have been isolated from EBC (put beyond the reach of EBC and its creditors).
- 2. Blue Line has the right to pledge or exchange either the receivables or beneficial interest in the receivables.
- 3. EBC does not maintain effective control over the receivables through an agreement to repurchase or redeem them before maturity.

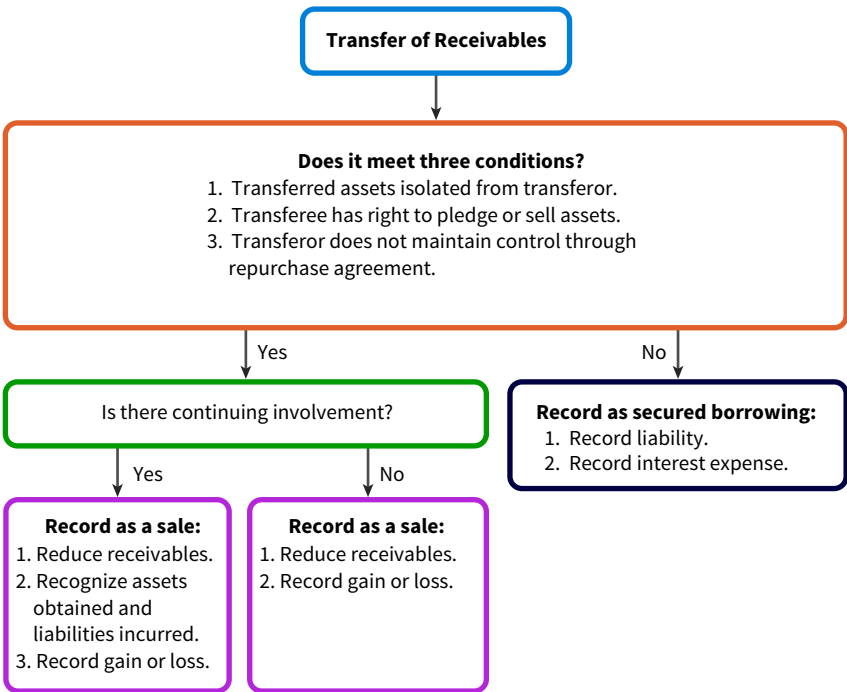

EBC met these conditions in the without recourse situation. However, in the with recourse situation, EBC did not completely isolate itself because it took responsibility for uncollectible accounts. Therefore, it had some continuing involvement but not enough to negate sale accounting. What is enough is somewhat of a judgment call and that is why the FASB developed the three criteria. You should recognize that often companies want sales type accounting here because it often lets them report gains on the sales. In addition, in a sale a liability is not reported. [9]

As shown earlier, we assumed that EBC sold its receivables in both the without and with recourse situation. If the conditions for sale accounting were not met, it then records a liability. The entry in this case is as follows.

Cash	475,000	
Receivable from Factor	25,000	
Notes Payable		500,000

If sale accounting is appropriate, EBC must still consider assets obtained and liabilities incurred in the transaction. Illustration 6.18 shows the rules of accounting for transfers of receivables.

ILLUSTRATION 6.18 Accounting for Transfers of Receivables

Accounting Matters

Securitizations—Good or Bad?

Securitization is a popular form of sale (transfer) of receivables. While not new, securitizations got a black eye in the booming mortgage market leading up to the financial crisis of 2008. Securitizations takes place when a lender with a pool of assets, such as mortgage loans, sells shares in these pools of interest and principle payments. As in our examples, factoring usually involves sale to only one company, fees are high, the quality of the receivables is low, and the seller afterward does not service the receivables. In a securitization, many investors are involved, margins are tight, the receivables are of generally higher quality, and the seller usually continues to service the receivables.

Leading up to 2008, interest rates were low and the economy was growing, leading many to consider home ownership. Mortgage lenders granted credit to high-risk (subprime) borrowers and securitized those loans by selling them to investment banks or trusts (special purpose entities) at a gain. That's right—lenders

were incentivized to sell pools of subprime mortgages because accounting standards, at the time, allowed them to record a gain. Things came to a screeching halt when interest rates began to rise, the economy slowed, and the subprime borrowers could no longer make their mortgage payments.

The moral of the story is that accounting matters. Lenders had strong incentives to want to report upfront gains on 'sales' of loans. But in most cases, these gains should never have been booked. The FASB has since issued rules to tighten up "gain-on-sale" accounting for securitizations and loan losses. With these rules, lenders have to keep the loans on their balance sheets. Under these conditions, lenders would be much less likely to lend so much money to individuals with poor credit ratings.

As the subprime market mortgage market heats up again, new government regulations, and accounting standards, will hopefully prevent history from repeating itself.

Rennison, "U.S. Subprime Mortgage Bonds Back in Fashion," *Financial Times* (March 28, 2018).

Presentation and Decision Analysis

Presentation of Receivables

The general rules in classifying receivables are as follows.

1. Separate the different types of receivables that a company possesses, if material.
2. Appropriately offset the valuation accounts against the proper receivable accounts.
3. Determine that receivables classified in the current assets section will be converted into cash within the year or the operating cycle, whichever is longer.
4. Disclose any loss contingencies that exist on the receivables.
5. Disclose any receivables designated or pledged as collateral.
6. Disclose the nature of credit risk inherent in the receivables, how that risk is analyzed and assessed in arriving at the allowance for credit losses, and the changes and reasons for those changes in the allowance for credit losses.

Presented in **Illustration 6.19** is **PepsiCo's** balance sheet and disclosure information related to its receivables. The side bars highlight some of the important disclosures related to PepsiCo's receivable balances.

	
PepsiCo, Inc. Consolidated Balance Sheet December 28, 2019 (in millions)	
ASSETS	
Current Assets	
Cash and cash equivalents	\$ 5,509
Short-term investments	229
Restricted cash	—
Accounts and notes receivable, net	7,822
Inventories	3,338
Prepaid expenses and others current assets	747
Total Current Assets	\$17,645

How allowance is evaluated

Concentration of credit risk

Note 2—Our Significant Accounting Policies (in part)

Our products are sold for cash or on credit terms. Our credit terms, which are established in accordance with local and industry practices, typically require payment within 30 days of delivery in the United States and generally within 30 to 90 days internationally, and may allow discounts for early payment.

We estimate and reserve for our bad debt exposure based on our experience with past due accounts and collectability, write-off history, the aging of accounts receivable and our analysis of customer data. Bad debt expense is classified within selling, general, and administrative expenses on our income statement.

We are exposed to concentration of credit risk from our major customers, including Walmart. In 2019, sales to Walmart and its affiliates (including Sam’s) represented approximately 13% of our consolidated net revenue, including concentrate sales to our independent bottlers, which were used in finished goods sold by them to Walmart. We have not experienced credit issues with these customers.

Note 15 – Supplemental Financial Information

Balance Sheet

	2019	
Accounts and notes receivable		
Trade receivable	\$ 6,447	Separate types of receivables
Other receivable	1,480	
Total	7,927	
Allowance, beginning of year	101	Roll-forward of allowance for doubtful accounts
Net amounts charged to expense	22	
Deduction	(30)	
Other	12	
Allowance, end of year	105	
Net receivable	\$ 7,822	
Other assets		
Noncurrent notes and accounts receivable	\$85	Separation of long-term receivables

Global View

Holding receivables that it will receive in a foreign currency represents risk that the exchange rate may move against the company. This results in a decrease in the amount collected in terms of U.S. dollars. Companies engaged in cross-border transactions often “hedge” these receivables by buying contracts to exchange currencies at specified amounts at future dates. See the IFRS Insights at the end of the chapter for a discussion of the similarities and differences between IFRS and U.S. GAAP.

With respect to additional disclosures, companies are required to disaggregate based on type of receivable. In response to demands for additional information about credit risk, companies must provide the following disclosures about receivables on a disaggregated basis.

1. A roll-forward schedule of the allowance for doubtful accounts from the beginning of the reporting period to the end of the reporting period.
2. The nonaccrual status of receivables by class of receivables. Lenders classify loans as non-accrual loans when payment is 90 days or more overdue. Because of the overdue status of the receivable, interest is no longer accruing on the outstanding balance.
3. Impaired receivables by type of receivable.

In addition, companies should disclose credit quality indicators and the aging of past due receivables. [10]

Companies must disclose concentrations of credit risk for all financial instruments (including receivables). Concentrations of credit risk exist when receivables have common characteristics that may affect their collection. These common characteristics might be companies in the same industry or same region of the country. Financial statement users want to know if a substantial amount of receivables from such sales are to customers facing uncertain economic conditions (see Global View). No numerical guidelines are provided as to what is meant by a “concentration of credit risk.”¹¹

¹¹Three items should be disclosed with an identified concentration: (1) information on the characteristic that determines the concentration, (2) the amount of loss that could occur upon nonperformance, and (3) information on any collateral related to the receivable. [11]

Accounting Matters

A Foreign Affair

A company like **PepsiCo** is a global organization with sales, and receivables, denominated in foreign currencies. How does this impact the receivables reported in its U.S. GAAP financial statements? At each reporting date, PepsiCo must revalue any foreign receivables to account for any changes in foreign currency exchange rates. As the value of receivables change, PepsiCo must record a gain or loss in other comprehensive income for the period in which the change arises.

This could have a significant impact on a company's results and is worthy of disclosure. Often, companies like PepsiCo will

enter into derivative contracts to hedge their foreign currency exchange risk. PepsiCo states, "We are exposed to foreign exchange risks in the international markets in which our products are made, manufactured, distributed or sold... We manage this risk through sourcing purchases from local suppliers, negotiating contracts in local currencies with foreign suppliers and through the use of derivatives. Exchange rate gains or losses related to foreign currency transactions are recognized on our income statement as incurred."

Decision Analysis of Receivables

Accounts Receivable Turnover Analysts frequently compute financial ratios to evaluate the liquidity of a company's accounts receivable. To assess the liquidity of the receivables, they use the **accounts receivable turnover**.

- The accounts receivable turnover measures the number of times, on average, a company collects receivables during the period.
- The ratio is computed by dividing net sales by average (net) accounts receivable outstanding during the year.

Theoretically, the numerator should include only net credit sales, but this information is frequently unavailable. However, if the relative amounts of credit and cash sales remain fairly constant, the trend indicated by the ratio will still be valid. Barring significant seasonal factors, average receivables outstanding can be computed from the beginning and ending balances of net trade receivables.

To illustrate, **Best Buy** reported recent net sales of \$39,403 million, its beginning and ending accounts receivable balances were \$1,347 million and \$1,162 million, respectively.

Illustration 6.20 shows the computation of its accounts receivable turnover.

$$\frac{\text{Net Sales}}{\text{Average Net Accounts Receivable}} = \text{Accounts Receivable Turnover}$$

$$\frac{\$39,403}{(\$1,347 + \$1,162)/2} = 31.4 \text{ times or every } 11.6 \text{ days } (365 \div 31.4)$$

ILLUSTRATION 6.20

Computation of Accounts Receivable Turnover

This information shows how successful the company is in collecting its outstanding receivables (see **Underlying Concepts**). If possible, an aging schedule should also be prepared to help determine how long receivables have been outstanding. A satisfactory accounts receivable turnover may have resulted because certain receivables were collected quickly though others have been outstanding for a relatively long period. An aging schedule would reveal such patterns.

Average Days to Collect Receivables Often the accounts receivable turnover is transformed to **days to collect accounts receivable or days outstanding**—an average collection period. As shown in Illustration 6.20, 365 days is divided by 31.4, resulting in 11.6 days.¹² That is a quick collection period for Best Buy, which is good for cash flow.

- Companies frequently use the average collection period to assess the effectiveness of a company's credit and collection policies.
- The general rule is that the average collection period should not greatly exceed the credit term period.

Underlying Concepts

Information that helps users assess a company's current liquidity and prospective cash flows is a primary objective of accounting.

¹²Several figures other than 365 could be used. A common alternative is 360 days because it is divisible by 30 (days) and 12 (months). Use 365 days in any homework computations.

For example, if customers are given a 60-day period for payment, then the average collection period should not be too much in excess of 60 days.

Accounting Matters

I'm Still Waiting

Smaller companies many times find themselves in a bind when the economy turns south. Their suppliers demand payment earlier, and their customers (represented by their accounts receivable) take longer to pay. That means companies with the least clout get squeezed the hardest. As one company executive noted, "The slowdown of currency, of money, the exchange, puts us in a very precarious position."

As shown in the adjacent charts, which represent average working capital metrics from the 1,000 largest U.S. public companies, large companies are collecting their own receivables much faster than when they are paying their vendors. For example, **Apple** at one time took 52 days to pay its vendors, up from 43 days a year earlier. As one individual stated, "If you are working with one of these large companies, as your only customer, they have the power. They can go to somebody else, but you can't go anywhere."

Source: CFO/The Hackett Group 2020 Working Capital Scorecard.

Big or small, any company with accounts receivable must use all relevant data to evaluate the collectability of their accounts receivable. With advanced technology and data analytics, those estimates are becoming more complex but hopefully more accurate.

APPENDIX 6A

Cash Controls

LEARNING OBJECTIVE * 6

Explain common techniques employed to control cash.

Cash is the asset most susceptible to improper diversion and use. Management faces two problems in accounting for cash transactions:

1. Establishing proper controls to prevent any unauthorized transactions by officers or employees.
2. Providing information necessary to properly manage cash on hand and cash transactions.

Yet even with sophisticated control devices, errors can and do happen. For example, the *Wall Street Journal* ran a story entitled "A \$7.8 Million Error Has a Happy Ending for a Horrified Bank." The story described how **Manufacturers Hanover Trust Co.** mistakenly overpaid about \$7.8 million in cash dividends to its stockholders. (As implied in the headline, most stockholders returned the monies.)

To safeguard cash and to ensure the accuracy of the accounting records for cash, companies need effective **internal control** over cash. Provisions of the Sarbanes-Oxley Act call for enhanced efforts to increase the quality of internal control (for cash and other assets). Such efforts are expected to result in improved financial reporting. In this appendix, we discuss some of the basic control issues related to cash.

Using Bank Accounts

To obtain desired control objectives, a company can vary the number and location of banks and the types of bank accounts. For large companies operating in multiple locations, the location of bank accounts can be important. Establishing collection accounts in strategic locations can accelerate the flow of cash into the company by shortening the time between a customer's mailing of a payment and the company's use of the cash.

- Multiple collection centers generally reduce the size of a company's **collection float**.
- This is the difference between the amount on deposit according to the company's records and the amount of collected cash according to the bank record.

Large, multilocation companies frequently use **lockbox accounts** to collect in cities with heavy customer billing.

- The company rents a local post office box and authorizes a local bank to pick up the remittances mailed to that box number.
- The bank empties the box at least once a day and immediately credits the company's account for collections.

The greatest advantage of a lockbox is that it accelerates the availability of collected cash. Generally, in a lockbox arrangement, the bank microfilms the checks for record purposes and provides the company with a deposit slip, a list of collections, and any customer correspondence. Thus, a lockbox system improves the control over cash and accelerates collection of cash. If the income generated from accelerating the receipt of funds exceeds the cost of the lockbox system, then it is a worthwhile undertaking.

The **general checking account** is the principal bank account in most companies and frequently the only bank account in small businesses. A company deposits in and disburses cash from this account. A company routes all transactions through it. For example, a company deposits from and disburses to all other bank accounts through the general checking account.

Companies use **imprest bank accounts** to make a specific amount of cash available for a limited purpose.

- The account acts as a clearing account for a large volume of checks or for a specific type of check.
- To clear a specific and intended amount through the imprest account, a company transfers that amount from the general checking account or other source.

Companies often use imprest bank accounts for disbursing payroll checks, dividends, commissions, bonuses, confidential expenses (e.g., officers' salaries), and travel expenses.

The Imprest Petty Cash System

Almost every company finds it necessary to pay small amounts for miscellaneous expenses such as taxi fares, minor office supplies, and employees' lunches. Disbursements by check for such items is often impractical, yet some control over them is important. A simple method of obtaining reasonable control, while adhering to the rule of disbursement by check, is the **imprest system for petty cash** disbursements. This is how the system works.

1. The company designates a petty cash custodian and gives the custodian a small amount of currency from which to make payments. It records transfer of funds (assume \$300) to petty cash as the following.

Petty Cash	300	
Cash		300

- The petty cash custodian obtains signed receipts from each individual to whom he or she pays cash, attaching evidence of the disbursement to the petty cash receipt. Petty cash transactions are not recorded until the fund is reimbursed; someone other than the petty cash custodian records those entries.
- When the supply of cash runs low, the custodian presents to the controller or accounts payable cashier a request for reimbursement supported by the petty cash receipts and other disbursement evidence. The custodian receives a company check to replenish the fund. At this point, the company records transactions based on petty cash receipts.

Supplies Expense	42	
Postage Expense	53	
Miscellaneous Expense	76	
Cash Over and Short	2	
Cash		173

- If the company decides that the amount of cash in the petty cash fund is excessive, it lowers the fund balance as follows.

Cash	50	
Petty Cash		50

- Conversely, if the company decides to add \$100 to the petty cash fund, it increases the fund balance as follows.

Petty Cash	100	
Cash		100

Subsequent to establishment, a company makes entries to the Petty Cash account only to increase or decrease the size of the fund.

A company uses a **Cash Over and Short** account when the petty cash fund fails to prove out. That is, an error occurs such as incorrect change, overpayment of expense, or lost receipt.

- If cash proves out **short** (i.e., the sum of the receipts and cash in the fund is less than the imprest amount), the company debits the shortage to the Cash Over and Short account.
- If cash proves out **over**, it credits the overage to Cash Over and Short.

The company closes Cash Over and Short only at the end of the year. It generally shows Cash Over and Short on the income statement as an "Other expense or revenue."

There are usually expense items in the fund except immediately after reimbursement. Therefore, to maintain accurate financial statements, a company must reimburse the funds at the end of each accounting period and also when nearly depleted.

Under the imprest system, the petty cash custodian is responsible at all times for the amount of the fund on hand either as cash or in the form of signed receipts. These receipts provide the evidence required by the disbursing officer to issue a reimbursement check. Furthermore, a company follows two additional procedures to obtain more complete control over the petty cash fund.

- A superior of the petty cash custodian makes surprise counts of the fund from time to time to determine that a satisfactory accounting of the fund has occurred.
- The company cancels or mutilates petty cash receipts after they have been submitted for reimbursement, so that they cannot be used to secure a second reimbursement.

Physical Protection of Cash Balances

Not only must a company safeguard cash receipts and cash disbursements through internal control measures, but it must also protect the cash on hand and in banks. Because receipts become cash on hand and disbursements are made from cash in banks, adequate control of receipts and disbursements is part of the protection of cash balances, along with certain other procedures.

Physical protection of cash is so elementary a necessity that it requires little discussion. A company should make every effort to minimize the cash on hand in the office.

- It should only have on hand a petty cash fund, the current day's receipts, and perhaps funds for making change. Insofar as possible, it should keep these funds in a vault, safe, or locked cash drawer.
- The company should transmit intact each day's receipts to the bank as soon as practicable.
- Accurately stating the amount of available cash both in internal management reports and in external financial statements is also extremely important.

Every company has a record of cash received, disbursed, and the balance. Because of the many cash transactions, however, errors or omissions may occur in keeping this record. Therefore, a company must periodically prove the balance shown in the general ledger. It can count cash actually present in the office—petty cash, change funds, and undeposited receipts—for comparison with the company records. For cash on deposit, a company prepares a bank reconciliation—a reconciliation of the company's record and the bank's record of the company's cash.

Reconciliation of Bank Balances

At the end of each calendar month, the bank supplies each customer with a **bank statement** (a copy of the bank's record of its account with the customer) together with the customer's checks that the bank paid during the month.¹³ If neither the bank nor the customer made any errors, if all deposits made and all checks drawn by the customer reached the bank within the same month, and if no unusual transactions occurred that affected either the company's or the bank's record of cash, the balance of cash reported by the bank to the customer equals that shown in the customer's own records. This condition seldom occurs due to one or more of the following reconciling items.

1. **Deposits in transit.** End-of-month deposits of cash recorded on the depositor's books in one month are received and recorded by the bank in the following month.
2. **Outstanding checks.** Checks written by the depositor are recorded when written but may not be recorded by (may not "clear") the bank until the next month.
3. **Bank charges.** Charges recorded by the bank against the depositor's balance for such items as bank services, printing checks, **not-sufficient-funds (NSF) checks**, and safe-deposit box rentals. The depositor may not be aware of these charges until the receipt of the bank statement.
4. **Bank credits.** Collections or deposits by the bank for the benefit of the depositor that may be unknown to the depositor until receipt of the bank statement. Examples are note collection for the depositor and interest earned on interest-bearing checking accounts.
5. **Bank or depositor errors.** Errors on either the part of the bank or the part of the depositor cause the bank balance to disagree with the depositor's book balance.

Hence, a company expects differences between its record of cash and the bank's record. Therefore, it must reconcile the two to determine the nature of the differences between the two amounts. A **bank reconciliation** is a schedule explaining any differences between the bank's and the company's records of cash.

- If the difference results only from transactions not yet recorded by the bank, the company's record of cash is considered correct.
- But, if some part of the difference arises from other items, either the bank or the company must adjust its records.

A company may prepare two forms of a bank reconciliation. One form reconciles from the bank statement balance to the book balance or vice versa. The other form reconciles both the

¹³As we mentioned in this chapter, paper checks continue to be used as a means of payment. However, ready availability of desktop publishing software and hardware has created new opportunities for check fraud in the form of duplicate, altered, and forged checks. At the same time, new fraud-fighting technologies, such as ultraviolet imaging, high-capacity barcodes, and biometrics, are being developed. These technologies convert paper documents into electronically processed document files, thereby reducing the risk of fraud.

bank balance and the book balance to a correct cash balance. Most companies use this latter form. **Illustration 6A.1** shows a sample of that form and its common reconciling items.

ILLUSTRATION 6A.1 Bank Reconciliation Form and Content

Balance per bank statement (end of period)		\$\$\$
Add: Deposits in transit	\$\$	
Undeposited receipts (cash on hand)	\$\$	
Bank errors that understate the bank statement balance	<u>\$\$</u>	<u>\$\$</u>
		\$\$\$
Deduct: Outstanding checks	\$\$	
Bank errors that overstate the bank statement balance	\$\$	<u>\$\$</u>
Correct cash balance		<u><u>\$\$\$</u></u>
Balance per depositor's books		\$\$\$
Add: Bank credits and collections not yet recorded in the books		\$\$
Book errors that understate the book balance	<u>\$\$</u>	<u>\$\$</u>
		\$\$\$
Deduct: Bank charges not yet recorded in the books	\$\$	
Book errors that overstate the book balance	<u>\$\$</u>	<u>\$\$</u>
Correct cash balance		<u><u>\$\$\$</u></u>

This form of reconciliation consists of two sections:

1. Balance per bank statement.
2. Balance per depositor's books.

Both sections end with the same "Correct cash balance."

The correct cash balance is the amount to which the books must be adjusted and is the amount reported on the balance sheet. **Companies prepare adjusting journal entries for all the addition and deduction items appearing in the "Balance per depositor's books" section.** Companies should immediately call to the bank's attention any errors attributable to it.

Example 6A.1 Bank Reconciliation

FACTS Nugget Mining Company's books show a cash balance at the Denver National Bank on November 30, 2025, of \$20,502. The bank statement covering the month of November shows an ending balance of \$22,190. An examination of Nugget's accounting records and November bank statement identified the following reconciling items.

1. A deposit of \$3,680 that Nugget mailed November 30 does not appear on the bank statement.
2. Checks written in November but not charged to the November bank statement are:

Check #7327	\$ 150
#7348	4,820
#7349	31

3. Nugget has not yet recorded the \$600 of interest collected by the bank on November 20 for Sequoia Co. bonds held by the bank for Nugget.
4. Bank service charges of \$18 are not yet recorded on Nugget's books.
5. The bank returned one of Nugget's customer's checks for \$220 with the bank statement, marked "NSF." The bank treated this bad check as a disbursement.
6. Nugget discovered that it incorrectly recorded check #7322, written in November for \$131 in payment of an account payable, as \$311.
7. A check for Nugget Oil Co. in the amount of \$175 that the bank incorrectly charged to Nugget accompanied the statement.

QUESTION How would you prepare the bank reconciliation, following the template in Illustration 6A.1?

SOLUTION

Nugget reconciled the bank and book balances to the correct cash balance of \$21,044 as follows.

Nugget Mining Company Bank Reconciliation Denver National Bank, November 30, 2025			
Balance per bank statement (end of period)			\$22,190
Add: Deposit in transit	(1)	\$3,680	
Bank error—incorrect check charged to account by bank	(7)	175	3,855
			26,045
Deduct: Outstanding checks	(2)		5,001
Correct cash balance			<u>\$21,044</u>
Balance per books			\$20,502
Add: Interest collected by the bank	(3)	\$600	
Error in recording check #7322 (\$311 – \$131)	(6)	180	780
			21,282
Deduct: Bank service charges	(4)	18	
NSF check returned	(5)	220	238
Correct cash balance			<u>\$21,044</u>

FACTS Refer to the bank reconciliation in Example 6A.1.

QUESTION What are the required journal entries as a result of Nugget Mining's bank reconciliation?

SOLUTION

The journal entries required to adjust and correct Nugget's books in early December 2025 are taken from the items in the "Balance per books" section and are as follows.

To record interest on Sequoia Co. bonds, collected by bank:

Cash	600	
Interest Revenue		600

To correct error in recording amount of check #7322:

Cash	180	
Accounts Payable		180

To record bank service charges for November:

Office Expense (bank charges)	18	
Cash		18

To record customer's check returned NSF:

Accounts Receivable	220	
Cash		220

After posting the entries, Nugget's cash account will have a balance of \$21,044. Nugget should return the Nugget Oil Co. check to Denver National Bank, informing the bank of the error.

Example 6A.2

Bank Reconciliation Entries

APPENDIX 6B

Collectibility Assessment Based on Expected Cash Flows

LEARNING OBJECTIVE * 7

Describe the estimation of the allowance based on expected cash flows.

Companies continually evaluate their receivables to determine their ultimate collectibility. As discussed in the chapter, many companies start with historical loss rates and modify these rates for changes in economic conditions that could affect a borrower's ability to repay the loan. The discussion in the chapter assumed use of this approach to determine the amount of bad debts to be recorded for a period.

Companies commonly evaluate loans (long-term notes receivable) for collectibility based on an analysis of the expected contractual cash flows (principal and interest). They then apply discounted expected cash flow methods (as discussed in Chapter 5) to measure the allowance and to report the loan at the net amount expected to be collected. This approach uses a range of cash flows and incorporates the probabilities of those cash flows to provide a more relevant measurement of present value.

Measurement of Collectibility

The allowance for doubtful accounts and related bad debt expense on a loan or note receivable can be estimated as the difference between the investment in the loan (generally the principal plus accrued interest or amortized cost) and the expected future cash flows discounted at the loan's historical effective-interest rate.¹⁴

- When using the historical effective loan rate, the value of the investment will change only if some of the legally contracted cash flows are reduced.
- A company recognizes a loss in this case because the expected future cash flows are now lower.
- The company ignores market interest rate changes caused by current economic events that affect the fair value of the loan.

As indicated in the chapter, in estimating future cash flows, the creditor should use reasonable and supportable assumptions and projections.

Example

At December 31, 2024, Ogden Bank recorded an investment of \$100,000 in a loan to Carl King. The loan has an historical effective-interest rate of 10%, the principal is due in full at maturity in three years, and interest is due annually. The loan officer performs a review of the loan's expected future cash flows and utilizes the present value method for measuring the collectibility of the loan. Unfortunately, King is experiencing financial difficulty and thinks he will have a difficult time making full payment. **Illustration 6B.1** shows the cash flow schedule prepared by the loan officer; Ogden anticipates that King will pay the full \$100,000 principle amount, but only \$5,000 in annual interest payments versus the contractual amount of \$10,000.

¹⁴The creditor may also, for the sake of expediency, use the market price of the loan (if such a price is available) or the fair value of the collateral if it is a collateralized loan. [12] Note that the collectibility analysis shown in this appendix only applies to credit risk inherent in a loan or receivable. However, if the loans are bundled into a security (e.g., mortgage-backed securities), the impairment test is different. Impairments of securities are measured based on fair value. We discuss this accounting in Chapter 16.

ILLUSTRATION 6B.1

Collectibility Analysis of Loan

<u>Dec. 31</u>	<u>Contractual Cash Flow</u>	<u>Expected Cash Flow</u>	<u>Loss of Cash Flow</u>
2025	\$ 10,000	\$ 5,000	\$ 5,000
2026	10,000	5,000	5,000
2027	110,000	105,000	5,000
Total cash flows	<u>\$130,000</u>	<u>\$115,000</u>	<u>\$15,000</u>

As indicated, this loan is impaired. The expected cash flows of \$115,000 are less than the contractual cash flows, including principal and interest, of \$130,000. The amount of the impairment to be recorded equals the difference between the recorded investment of \$100,000 and the present value of the expected cash flows, as shown in **Illustration 6B.2**.

ILLUSTRATION 6B.2

Computation of Impairment Loss

Recorded investment		\$100,000
Less: Present value of \$100,000 due in 3 years at 10% (Table 6.2); $FV(PVF_{3,10\%})$; $(\$100,000 \times .75132)$	\$75,132	
Present value of \$5,000 interest payable annually for 3 years at 10% R ($PVF-OA_{3,10\%}$); $(\$5,000 \times 2.48685)$	<u>12,434</u>	<u>87,566</u>
Impairment		<u>\$ 12,434</u>

Excel Solution

<i>i</i>	10%
<i>n</i>	3
PMT	-\$5,000
FV	-\$100,000
PV	\$87,566
PV(rate, nper, pmt, [fv], [type])	

The impairment is \$12,434. Why isn't it \$15,000 (\$130,000 – \$115,000)? Because Ogden Bank must measure the loss at a present-value amount, not at an undiscounted amount, when it records the loss.

Recording Bad Debts

Ogden Bank (the creditor) recognizes an impairment of \$12,434 by debiting Bad Debt Expense for the expected loss. At the same time, it reduces the overall value of the receivable by crediting Allowance for Doubtful Accounts. The journal entry to record the loss is as follows.¹⁵

Bad Debt Expense	12,434	
Allowance for Doubtful Accounts		12,434

What entry does Carl King (the debtor) make? The debtor makes no entry because he still legally owes \$100,000.

In some cases, debtors like King negotiate a modification in the terms of the loan agreement. In such cases, the accounting entries from Ogden Bank are the same as the situation in which the loan officer must estimate the future cash flows—except that the calculation for the amount of the loss becomes more reliable (because the revised expected cash flow amounts are contractually specified in the loan agreement).¹⁶ The entries related to the debtor in this case often change; they are discussed in Appendix 13A.

¹⁵In the event of a loan write-off, the company charges the loss against the allowance. In subsequent periods, if revising estimated expected cash flows based on new information, the company adjusts the allowance account and bad debt expense account (either increased or decreased depending on whether conditions improved or worsened) in the same fashion as the original impairment. We use the terms “loss” and “bad debt expense” interchangeably throughout this discussion. Companies should charge losses related to receivables transactions to Bad Debt Expense or the related Allowance for Doubtful Accounts because they use these accounts to recognize changes in values affecting receivables.

¹⁶Many alternatives are permitted to recognize income by Ogden Bank in subsequent periods. [13]

Learning Objectives Review

1 Indicate how to report cash and related items.

To be reported as “cash,” an asset must be readily available for the payment of current obligations and free from contractual restrictions that limit its use in satisfying debts. Cash consists of coin, currency, and available funds on deposit at the bank. Negotiable instruments such as money orders, certified checks, cashier’s checks, personal checks, and bank drafts are also viewed as cash. Savings accounts are usually classified as cash.

Companies report cash as a current asset in the balance sheet. The reporting of other related items is as follows.

- 1. Restricted cash.** The SEC recommends that companies state separately legally restricted deposits held as compensating balances against short-term borrowing among the “Cash and cash equivalent items” in current assets. Restricted deposits held against long-term borrowing arrangements should be separately classified as noncurrent assets in either the investments or other assets sections.
- 2. Bank overdrafts.** Companies should report overdrafts in the current liabilities section and usually add them to the amount reported as accounts payable. If material, these items should be separately disclosed either on the face of the balance sheet or in the related notes.
- 3. Cash equivalent.** Companies often report this item together with cash as “Cash and cash equivalents.”

2 Define receivables and explain accounting issues related to their recognition.

Receivables are claims held against customers and others for money, goods, or services. The receivables are classified into three types: (1) current or noncurrent, (2) trade or nontrade, and (3) accounts receivable or notes receivable. Two issues that may complicate the measurement of receivables are (1) the availability of discounts (trade and cash discounts), and (2) the length of time between the sale and the payment due dates (the interest element). Ideally, companies should measure receivables in terms of their present value—that is, the discounted value of the cash to be received in the future. The

profession specifically excludes from the present value considerations receivables arising from normal business transactions that are due in customary trade terms within approximately one year.

3 Explain accounting issues related to valuation of accounts receivable.

Companies value and report short-term receivables at the net amount expected to be collected, which is not necessarily the amount legally receivable. Determining the net amount expected to be collected requires estimating uncollectible receivables.

4 Explain accounting issues related to recognition and valuation of notes receivable.

Companies record short-term notes at face value and long-term notes receivable at the present value of the cash they expect to collect. When the interest stated on an interest-bearing note equals the effective (market) rate of interest, the note sells at face value. When the stated rate differs from the effective rate, a company records either a discount or premium. Like accounts receivable, companies record and report short-term notes receivable at the net amount expected to be collected. The same is also true of long-term receivables.

5 Explain additional accounting issues related to accounts and notes receivable.

Disposition of accounts and notes receivable. To accelerate the receipt of cash from receivables, the owner may transfer the receivables to another company for cash in one of two ways. (1) **Sales (factoring) of receivables:** Factors are finance companies or banks that buy receivables from businesses and then collect the remittances directly from the customers. In many cases, transferors may have some continuing involvement with the receivable sold. Companies use a financial components approach to record

this type of transaction. (2) **Secured borrowing:** A creditor often requires that the debtor designate or pledge receivables as security for the loan.

Reporting and analyzing receivables. Companies should report receivables with appropriate offset of valuation accounts against receivables, classify receivables as current or noncurrent, identify pledged or designated receivables, and disclose the credit risk inherent in the receivables. Analysts assess receivables based on turn-over and the days outstanding.

***6 Explain common techniques employed to control cash.**

The common techniques employed to control cash are as follows. (1) **Using bank accounts.** A company can vary the number and location of banks and the types of accounts to obtain desired control objectives. (2) **The imprest petty cash system.** It may be impractical to require small amounts of various expenses be paid by check, yet some control over them is important. (3) **Physical protection of cash balances.** Adequate control of receipts and disbursements is a part of the protection of cash balances. Every effort should be made to minimize the cash on hand. (4) **Reconciliation of bank balances.**

Cash on deposit is not available for count and is proved by preparing a bank reconciliation.

***7 Describe the estimation of the allowance based on expected cash flows.**

Companies commonly evaluate the collectability of loans (long-term notes receivable) based on an analysis of the expected contractual cash flows. The allowance for doubtful accounts and related bad debt expense on a loan or note receivable can be estimated as the difference between the investment in the loan and expected future cash flows discounted at the loan's historical effective-interest rate.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter. *Unless instructed otherwise, round all answers to two decimal places.*

Questions

1. What may be included under the heading of "cash"?
2. In what accounts should the following items be classified?
 - a. Coins and currency.
 - b. U.S. Treasury (government) bonds.
 - c. Certificate of deposit (matures in 5 months).
 - d. Cash in a bank that is in receivership.
 - e. NSF check (returned with bank statement).
 - f. Deposit in foreign bank (exchangeability limited).
 - g. Postdated checks.
 - h. Cash to be used for retirement of long-term bonds.
 - i. Deposits in transit.
 - j. 100 shares of **HP** stock (intention is to sell in one year or less).
 - k. Savings and checking accounts.
 - l. Petty cash.
 - m. Stamps.
 - n. Travel advances.
3. Define a "compensating balance." How should a compensating balance be reported?
4. Springsteen Inc. reported in a recent annual report "Restricted cash for debt redemption." What section of the balance sheet would report this item?
5. What are the reasons that a company gives trade discounts? Why are trade discounts not recorded in the accounts like cash discounts?
6. What are two methods of recording accounts receivable transactions when a cash discount situation is involved? Which is more theoretically correct? Which is used in practice more of the time? Why?
7. Discuss the accounting for sales allowances and how they relate to the concept of variable consideration.
8. What are the basic problems that occur in the valuation of accounts receivable?
9. What is the theoretical justification of the allowance method as contrasted with the direct write-off method of accounting for bad debts?

10. Indicate how the percentage-of-receivables method, based on an aging schedule, accomplishes the objectives of the allowance method of accounting for bad debts. What other methods, besides an aging analysis, can be used for estimating uncollectible accounts?

11. Of what merit is the contention that the allowance method lacks the objectivity of the direct write-off method? Discuss in terms of accounting's measurement function.

12. Briefly describe the process for recording bad debt expense under the allowance method.

13. Because of calamitous earthquake losses, Bernstein Company, one of your client's oldest and largest customers, suddenly and unexpectedly became bankrupt. Approximately 30% of your client's total sales have been made to Bernstein Company during each of the past several years. The amount due from Bernstein Company—none of which is collectible—equals 22% of total accounts receivable, an amount that is considerably in excess of what was determined to be an adequate provision for doubtful accounts at the close of the preceding year. How would your client record the write-off of the Bernstein Company receivable if it is using the allowance method of accounting for bad debts? Justify your suggested treatment.

14. What is the normal procedure for handling the collection of accounts receivable previously written off using the direct write-off method? The allowance method?

15. On January 1, 2025, Lombard Co. sells land for which it had paid \$690,000 to Sargent Company, receiving in return Sargent's zero-interest-bearing note for \$1,000,000 payable in 5 years. What entry would Lombard make to record the sale, assuming that Lombard frequently sells similar items of property for a cash sales price of \$640,000?

16. What is "imputed interest"? In what situations is it necessary to impute an interest rate for notes receivable? What are the considerations in imputing an appropriate interest rate?

17. Indicate three reasons why a company might sell its receivables to another company.

18. When is the financial components approach to recording the transfers of receivables used? When should a transfer of receivables be recorded as a sale?

19. Moon Hardware is planning to factor some of its receivables. The cash received will be used to pay for inventory purchases. The factor has indicated that it will require "recourse" on the sold receivables. Explain to the controller of Moon Hardware what "recourse" is and how the recourse will be reflected in Moon's financial statements after the sale of the receivables.

20. Horizon Outfitters Company includes in its trial balance for December 31 an item for Accounts Receivable \$789,000. This balance consists of the following items.

Due from regular customers	\$523,000
Refund receivable on prior year's income taxes (an established claim)	15,500
Travel advance to employees	22,000
Loan to wholly owned subsidiary	45,500
Advances to creditors for goods ordered	61,000
Accounts receivable assigned as security for loans payable	75,000
Notes receivable past due plus interest on these notes	47,000
Total	<u>\$789,000</u>

Illustrate how these items should be shown in the balance sheet as of December 31.

21. What is the accounts receivable turnover, and what type of information does it provide?

22. You are evaluating Woodlawn Racetrack for a potential loan. An examination of the notes to the financial statements indicates restricted cash at year-end amounts to \$100,000. Explain how you would use this information in evaluating Woodlawn's liquidity.

***23.** Distinguish among the following: (1) a general checking account, (2) an imprest bank account, and (3) a lockbox account.

***24.** What are the general rules for measuring and recognizing gain or loss by both the debtor and the creditor in an impairment?

***25.** Describe the estimation of the allowance, based on expected cash flows.

Brief Exercises

BE6.1 (LO 1) Kraft Enterprises owns the following assets at December 31, 2025.

Cash in bank—savings account	\$68,000	Checking account balance	\$17,000
Cash on hand	9,300	Postdated checks	750
Cash refund due from IRS	31,400	Certificates of deposit (180-day)	90,000

What amount should be reported as cash?

BE6.2 (LO 2) Restin Co. uses the gross method to record sales made on credit. On June 1, 2025, it made sales of \$50,000 with terms 3/15, n/45. On June 12, 2025, Restin received full payment for the June 1 sale. Prepare the required journal entries for Restin Co.

BE6.3 (LO 2) Use the information from BE6.2, assuming Restin Co. uses the net method to account for cash discounts. Prepare the required journal entries for Restin Co.

BE6.4 (LO 2) Roeher Company sold \$9,000 of its specialty shelving to Elkins Office Supply Co. on account. Prepare the entries when (a) Roeher makes the sale, (b) Roeher grants an allowance of \$700 when some of the shelving does not meet exact specifications but still could be sold by Elkins, and (c) at year-end; Roeher estimates that an additional \$200 in allowances will be granted to Elkins.

BE6.5 (LO 3) Wilton, Inc. had net sales in 2025 of \$1,400,000. At December 31, 2025, before adjusting entries, the balances in selected accounts were Accounts Receivable \$250,000 debit, and Allowance for Doubtful Accounts \$2,400 credit. If Wilton estimates that 8% of its receivables will prove to be uncollectible, prepare the December 31, 2025, journal entry to record bad debt expense.

BE6.6 (LO 3) Use the information presented in BE6.5 for Wilton, Inc.

- Instead of an Allowance for Doubtful Accounts Balance of \$2,400 credit, the balance was \$1,900 debit. Assume that 10% of accounts receivable will prove to be uncollectible. Prepare the entry to record bad debt expense.
- Instead of estimating uncollectibles based on a percentage of receivables, assume Wilton prepares an aging schedule that estimates total uncollectible accounts at \$24,600. (Assume an allowance of \$2,400 credit.) Prepare the entry to record bad debt expense.

BE6.7 (LO 4) Milner Family Importers sold goods to Tung Decorators for \$30,000 on November 1, 2025, accepting Tung's \$30,000, 6-month, 6% note. Prepare Milner's November 1 entry, December 31 annual adjusting entry, and May 1 entry for the collection of the note and interest.

BE6.8 (LO 4) Dold Acrobats lent \$16,529 to Donaldson, Inc., accepting Donaldson's 2-year, \$20,000, zero-interest-bearing note. The implied interest rate is 10%. Prepare Dold's journal entries for the initial transaction, recognition of interest each year, and the collection of \$20,000 at maturity.

BE6.9 (LO 5) On October 1, 2025, Chung, Inc. assigns \$1,000,000 of its accounts receivable to Seneca National Bank as collateral for a \$750,000 note. The bank assesses a finance charge of 2% of the receivables assigned and interest on the note of 9%. Prepare the October 1 journal entries for both Chung and Seneca.

BE6.10 (LO 5) Wood Incorporated factored \$150,000 of accounts receivable with Engram Factors Inc. on a without-recourse basis. Engram assesses a 2% finance charge of the amount of accounts receivable and retains an amount equal to 6% of accounts receivable for possible adjustments. Prepare the journal entry for Wood Incorporated and Engram Factors to record the factoring of the accounts receivable to Engram.

BE6.11 (LO 5) Use the information in BE6.10 for Wood. Assume that the receivables are sold with recourse. Prepare the journal entry for Wood to record the sale, assuming that the recourse liability has a fair value of \$7,500.

BE6.12 (LO 5) Arness Woodcrafters sells \$250,000 of receivables to Commercial Factors, Inc. on a with recourse basis. Commercial assesses a finance charge of 5% and retains an amount equal to 4% of accounts receivable. Arness estimates the fair value of the recourse liability to be \$8,000. Prepare the journal entry for Arness to record the sale.

BE6.13 (LO 5) Use the information presented in BE6.12 for Arness Woodcrafters but assume that the recourse liability has a fair value of \$4,000, instead of \$8,000. Prepare the journal entry and discuss the effects of this change in the value of the recourse liability on Arness's financial statements.

BE6.14 (LO 5) Recent financial statements of **General Mills, Inc.** report net sales of \$12,442,000,000. Accounts receivable are \$912,000,000 at the beginning of the year and \$953,000,000 at the end of the year. Compute General Mills' accounts receivable turnover. Compute General Mills' average collection period for accounts receivable in days.

***BE6.15 (LO 6)** Finman Company designated Jill Holland as petty cash custodian and established a petty cash fund of \$200. The fund is reimbursed when the cash in the fund is at \$15, which it is. Petty cash receipts indicate funds were disbursed for office supplies \$94 and miscellaneous expense \$87. Prepare journal entries for the establishment of the fund and the reimbursement.

***BE6.16 (LO 6)** Horton Corporation is preparing a bank reconciliation and has identified the following potential reconciling items. For each item, indicate if it is (1) added to balance per bank statement, (2) deducted from balance per bank statement, (3) added to balance per books, or (4) deducted from balance per books.

- | | |
|--|--------------------------------|
| a. Deposit in transit \$5,500. | d. Outstanding checks \$7,422. |
| b. Bank service charges \$25. | e. NSF check returned \$377. |
| c. Interest credited to Horton's account \$31. | |

***BE6.17 (LO 6)** Use the information presented in BE6.16 for Horton Corporation. Prepare any entries necessary to make Horton's accounting records correct and complete.

***BE6.18 (LO 7)** Assume that Toni Braxton Company has recently fallen into financial difficulties. By reviewing all available evidence on December 31, 2025, one of Toni Braxton's creditors, the National American Bank, determined that Toni Braxton would pay back only 65% of the principal at maturity. As a result, the bank decided that the loan was impaired. If the loss is estimated to be \$225,000, what entry (entries) should National American Bank make to record this loss?

Exercises

E6.1 (LO 1) Excel (Determining Cash Balance) The controller for Clint Eastwood Co. is attempting to determine the amount of cash to be reported on its December 31, 2025, balance sheet. The following information is provided.

1. Commercial savings account of \$600,000 and a commercial checking account balance of \$900,000 are held at First National Bank of Yojimbo.
2. Money market fund account held at Volonte Co. (a mutual fund organization) permits Eastwood to write checks on this balance, \$5,000,000.
3. Travel advances of \$180,000 for executive travel for the first quarter of next year (employee to reimburse through salary reduction).
4. A separate cash fund in the amount of \$1,500,000 is restricted for the retirement of long-term debt.
5. Petty cash fund of \$1,000.
6. An I.O.U. from Marianne Koch, a company customer, in the amount of \$190,000.
7. A bank overdraft of \$110,000 has occurred at one of the banks the company uses to deposit its cash receipts. At the present time, the company has no deposits at this bank.
8. The company has two certificates of deposit, each totaling \$500,000. These CDs have a maturity of 120 days.
9. Eastwood has received a check that is dated January 12, 2026, in the amount of \$125,000.
10. Eastwood has agreed to maintain a cash balance of \$500,000 at all times at First National Bank of Yojimbo to ensure future credit availability.
11. Eastwood has purchased \$2,100,000 of commercial paper of Sergio Leone Co. which is due in 60 days.
12. Currency and coin on hand amounted to \$7,700.

Instructions

- a. Compute the amount of cash and cash equivalents to be reported on Eastwood Co.'s balance sheet at December 31, 2025.
- b. Indicate the proper reporting for items that are not reported as cash and cash equivalents on the December 31, 2025, balance sheet.

E6.2 (LO 1) (Determining Cash Balance) The following are independent situations.

1. Checking account balance \$925,000; certificate of deposit \$1,400,000; cash advance to subsidiary of \$980,000; utility deposit paid to gas company \$180.
2. Checking account balance \$600,000; an overdraft in special checking account at same bank as normal checking account of \$17,000; cash held in a bond sinking fund \$200,000; petty cash fund \$300; coins and currency on hand \$1,350.
3. Checking account balance \$590,000; postdated check from customer \$11,000; cash restricted due to maintaining compensating balance requirement of \$100,000; certified check from customer \$9,800; postage stamps on hand \$620.
4. Checking account balance at bank \$37,000; money market balance at mutual fund (has checking privileges) \$48,000; NSF check received from customer \$800.
5. Checking account balance \$700,000; cash restricted for future plant expansion \$500,000; short-term Treasury bills \$180,000 (which mature in 6 months); cash advance received from customer \$900 (not included in checking account balance); cash advance of \$7,000 to company executive, payable on demand; refundable deposit of \$26,000 paid to federal government to guarantee performance on construction contract.

Instructions

For each individual situation, determine the amount that should be reported as cash. If the item(s) is not reported as cash, explain the rationale.

E6.3 (LO 2) (Financial Statement Presentation of Receivables) Jim Carrie Company shows a balance of \$221,140 in the Accounts Receivable account on December 31, 2025. The balance consists of the following.

Installment accounts due in 2026	\$23,000
Installment accounts due after 2026	34,000
Overpayments to vendors	2,640
Due from regular customers, of which \$40,000 represents accounts pledged as security for a bank loan	79,000
Advances to employees	1,500
Advance to subsidiary company (due in 2026)	81,000

Instructions

Illustrate how the information above should be shown on the balance sheet of Jim Carrie Company on December 31, 2025.

E6.4 (LO 2) (Determining Ending Accounts Receivable) Your accounts receivable clerk, Mitra Adams, to whom you pay a salary of \$1,500 per month, has just purchased a new Acura. You decide to test the accuracy of the accounts receivable balance of \$82,000 as shown in the ledger.

The following information is available for your **first year** in business.

1. Collections from customers	\$198,000
2. Merchandise purchased	320,000
3. Ending merchandise inventory	90,000
4. Goods are marked to sell at 40% above cost	

Instructions

Compute an estimate of the ending balance of accounts receivable from customers that should appear in the ledger and any apparent shortages. Assume that all sales are made on account.

E6.5 (LO 2) Excel (Recording Sales Gross and Net) On June 3, Arnold Company sold to Chester Company merchandise having a sale price of \$3,000 with terms of 2/10, n/60, f.o.b. shipping point. An invoice totalling \$90, terms n/30, was received by Chester on June 8 from John Booth Transport Service for the freight cost. On June 12, the company received a check for the balance due from Chester Company.

Instructions

- a. Prepare journal entries on the Arnold Company books to record all the events noted above under each of the following bases.
 1. Sales and receivables are entered at gross selling price.
 2. Sales and receivables are entered at net of cash discounts.
- b. Prepare the journal entry under basis 2, assuming that Chester Company did not remit payment until July 29.

E6.6 (LO 2) (Recording Sales Transactions) Presented below is information from Perez Computers Incorporated.

- July 1 Sold \$20,000 of computers to Robertson Company with terms 3/15, n/60. Perez uses the gross method to record cash discounts. Perez estimates allowances of \$1,300 will be honored on these sales. (Perez records these estimates at point of sale.)
- 10 Perez received payment from Robertson for the full amount owed from the July transactions.
- 17 Sold \$200,000 in computers and peripherals to The Clark Store with terms of 2/10, n/30.
- 30 The Clark Store paid Perez for its purchase of July 17.

Instructions

Prepare the necessary journal entries for Perez Computers.

E6.7 (LO 3) (Recording Bad Debts) Duncan Company reports the following financial information before adjustments.

	Dr.	Cr.
Accounts Receivable	\$100,000	
Allowance for Doubtful Accounts		\$ 2,000
Sales Revenue (all on credit)		900,000
Sales Returns and Allowances	50,000	

Instructions

Prepare the journal entry to record Bad Debt Expense assuming Duncan Company estimates bad debts at (a) 5% of accounts receivable and (b) 5% of accounts receivable but Allowance for Doubtful Accounts had a \$1,500 debit balance.

E6.8 (LO 3) (Recording Bad Debts) At the end of 2025, Aramis Company has accounts receivable of \$800,000 and an allowance for doubtful accounts of \$40,000. On January 16, 2026, Aramis Company determined that its receivable from Ramirez Company of \$6,000 will not be collected, and management authorized its write-off.

Instructions

- Prepare the journal entry for Aramis Company to write off the Ramirez receivable.
- What is the net amount expected to be collected of Aramis Company's accounts receivable before the write-off of the Ramirez receivable?
- What is the net amount expected to be collected of Aramis Company's accounts receivable after the write-off of the Ramirez receivable?

E6.9 (LO 3) (Computing Bad Debts and Preparing Journal Entries) The adjusted trial balance of Taylor Swift Inc. shows the following balances.

	Dr.	Cr.
Accounts Receivable	\$90,000	
Allowance for Doubtful Accounts	1,750	
Sales Revenue (all on credit)		\$680,000

Instructions

Give the entry for estimated bad debts assuming that the allowance is to provide for doubtful accounts on the basis of (a) 4% of gross accounts receivable and (b) 5% of gross accounts receivable and Allowance for Doubtful Accounts has a \$1,700 credit balance.

E6.10 (LO 3) (Bad-Debt Reporting) The chief accountant for Dickinson Corporation provides you with the following list of accounts receivable written off in the current year.

Date	Customer	Amount
March 31	E. L. Masters Company	\$7,800
June 30	Stephen Crane Associates	6,700
September 30	Amy Lowell's Dress Shop	7,000
December 31	R. Frost, Inc.	9,830

Dickinson follows the policy of debiting Bad Debt Expense as accounts are written off. The chief accountant maintains that this procedure is appropriate for financial statement purposes because the Internal Revenue Service will not accept other methods for recognizing bad debts.

All of Dickinson's sales are on a 30-day credit basis. Sales for the current year total \$2,200,000. The balance in Accounts Receivable at year-end is \$77,000 and an analysis of customer risk and charge-off experience indicates that 12% of receivables will be uncollectible (assume a zero balance in the allowance).

Instructions

- Do you agree or disagree with Dickinson's policy concerning recognition of bad debt expense? Why or why not?
- By what amount would net income differ if bad debt expense was computed using the percentage-of-receivables approach?

E6.11 (LO 3) (Bad Debts—Aging) Danica Patrick, Inc. includes the following account among its trade receivables.

Hopkins Co.					
1/1	Balance forward	700	1/28	Cash (#1710)	1,100
1/20	Invoice #1710	1,100	4/2	Cash (#2116)	1,350
3/14	Invoice #2116	1,350	4/10	Cash (1/1 Balance)	155
4/12	Invoice #2412	1,710	4/30	Cash (#2412)	1,000
9/5	Invoice #3614	490	9/20	Cash (#3614 and	
10/17	Invoice #4912	860		part of #2412)	790
11/18	Invoice #5681	2,000	10/31	Cash (#4912)	860
12/20	Invoice #6347	800	12/1	Cash (#5681)	1,250
			12/29	Cash (#6347)	800

Instructions

Age the balance and specify any items that apparently require particular attention at year-end.

E6.12 (LO 2, 3, 5) (Journalizing Various Receivable Transactions) Presented below is information related to James Garfield Corp., which sells merchandise with terms 2/10, net 60. Garfield records its sales and receivables net.

- July 1 James Garfield Corp. sold to Warren Harding Co. merchandise having a sales price of \$8,000.
- 5 Accounts receivable of \$9,000 (gross) are factored with Andrew Jackson Credit Corp. without recourse at a financing charge of 9%. Cash is received for the proceeds; collections are handled by the finance company. (These accounts were all past the discount period.)
- 9 Specific accounts receivable of \$9,000 (gross) are pledged to Alf Landon Credit Corp. as security for a loan of \$6,000 at a finance charge of 6% of the amount of the loan. The finance company will make the collections. (All the accounts receivable are past the discount period.)
- Dec. 29 Warren Harding Co. notifies Garfield that it is bankrupt and will pay only 10% of its account. Give the entry to write off the uncollectible balance using the allowance method. (Note: First record the increase in the receivable on July 11 when the discount period passed.)

Instructions

Prepare all necessary entries in general journal form for Garfield Corp.

E6.13 (LO 4) (Note Transactions at Unrealistic Interest Rates) On July 1, 2025, Agincourt Inc. made two sales.

1. It sold land having a fair value of \$700,000 in exchange for a 4-year zero-interest-bearing promissory note in the face amount of \$1,101,460. The land is carried on Agincourt's books at a cost of \$590,000.
2. It rendered services in exchange for a 3%, 8-year promissory note having a face value of \$400,000 (interest payable annually).

Agincourt Inc. recently had to pay 8% interest for money that it borrowed from British National Bank. The customers in these two transactions have credit ratings that require them to borrow money at 12% interest.

Instructions

Record the two journal entries that should be recorded by Agincourt Inc. for the sales transactions above that took place on July 1, 2025.

E6.14 (LO 4, 5) (Notes Receivable with Unrealistic Interest Rate) On December 31, 2025, Ed Abbey Co. performed environmental consulting services for Hayduke Co. Hayduke was short of cash, and Abbey Co. agreed to accept a \$200,000 zero-interest-bearing note due December 31, 2027, as payment in full. Hayduke is somewhat of a credit risk and typically borrows funds at a rate of 10%. Abbey is much more creditworthy and has various lines of credit at 6%.

Instructions

- a. Prepare the journal entry to record the transaction of December 31, 2025, for the Ed Abbey Co.
- b. Assuming Ed Abbey Co.'s fiscal year-end is December 31, prepare the journal entry for December 31, 2026.
- c. Assuming Ed Abbey Co.'s fiscal year-end is December 31, prepare the journal entry for December 31, 2027.

E6.15 (LO 5) (Assigning Accounts Receivable) On April 1, 2025, Rasheed Company assigns \$400,000 of its accounts receivable to the Third National Bank as collateral for a \$200,000 loan due July 1, 2025. The assignment agreement calls for Rasheed to continue to collect the receivables. Third National Bank assesses a finance charge of 2% of the accounts receivable, and interest on the loan is 10% (a realistic rate of interest for a note of this type).

Instructions

- a. Prepare the April 1, 2025, journal entry for Rasheed Company.
- b. Prepare the journal entry for Rasheed's collection of \$350,000 of the accounts receivable during the period from April 1, 2025, through June 30, 2025.
- c. On July 1, 2025, Rasheed paid Third National all that was due from the loan it secured on April 1, 2025. Prepare the journal entry to record this payment.

E6.16 (LO 2, 3, 5) (Journalizing Various Receivable Transactions) The trial balance before adjustment for Phil Collins Company shows the following balances.

	Dr.	Cr.
Accounts Receivable	\$82,000	
Allowance for Doubtful Accounts	2,120	
Sales Revenue		\$430,000

Instructions

Using the data above, give the journal entries required to record each of the following cases. (Each situation is independent.)

1. To obtain additional cash, Collins factors without recourse \$25,000 of accounts receivable with Stills Finance. The finance charge is 10% of the amount factored.
2. To obtain a 1-year loan of \$55,000, Collins pledges \$65,000 of specific receivable accounts to Crosby Financial. The finance charge is 8% of the loan; the cash is received and the accounts turned over to Crosby Financial.
3. The company wants to maintain Allowance for Doubtful Accounts at 5% of gross accounts receivable.
4. Based on an aging analysis, an allowance of \$5,800 should be reported. Assume the allowance has a credit balance of \$1,100.

E6.17 (LO 5) (Transfer of Receivables with Recourse) Ames Quartet Inc. factors receivables with a carrying amount of \$200,000 to Joffrey Company for \$160,000 on a with recourse basis.

Instructions

The recourse provision has a fair value of \$1,000. This transaction should be recorded as a sale. Prepare the appropriate journal entry to record this transaction on the books of Ames Quartet Inc.

E6.18 (LO 5) (Transfer of Receivables with Recourse) Beyoncé Corporation factors \$175,000 of accounts receivable with Kathleen Battle Financing, Inc. on a with recourse basis. Kathleen Battle Financing will collect the receivables. The receivables records are transferred to Kathleen Battle Financing on August 15, 2025. Kathleen Battle Financing assesses a finance charge of 2% of the amount of accounts receivable and also reserves an amount equal to 4% of accounts receivable to cover probable adjustments.

Instructions

- a. What conditions must be met for a transfer of receivables with recourse to be accounted for as a sale?
- b. Assume the conditions from part (a) are met. Prepare the journal entry on August 15, 2025, for Beyoncé to record the sale of receivables, assuming the recourse obligation has a fair value of \$2,000.

E6.19 (LO 5) (Transfer of Receivables without Recourse) JFK Corp. factors \$300,000 of accounts receivable with LBJ Finance Corporation on a without recourse basis on July 1, 2025. The receivables records are transferred to LBJ Finance, which will receive the collections. LBJ Finance assesses a finance charge of 1½% of the amount of accounts receivable and retains an amount equal to 4% of accounts receivable to cover sales discounts, returns, and allowances. The transaction is to be recorded as a sale.

Instructions

- a. Prepare the journal entry on July 1, 2025, for JFK Corp. to record the sale of receivables without recourse.
- b. Prepare the journal entry on July 1, 2025, for LBJ Finance Corporation to record the purchase of receivables without recourse.

E6.20 (LO 5) (Analysis of Receivables) Presented below is information for Jones Company.

1. Beginning-of-the-year Accounts Receivable balance was \$15,000.
2. Net sales (all on account) for the year were \$100,000. Jones does not offer cash discounts.
3. Collections on accounts receivable during the year were \$70,000.

Instructions

- a. Prepare (summary) journal entries to record the items noted above.
- b. Compute Jones's accounts receivable turnover and days to collect receivables for the year. The company does not believe it will have any bad debts.
- c. Use the turnover ratio computed in (b) to analyze Jones's liquidity. The turnover ratio last year was 6.0.

E6.21 (LO 5) (Transfer of Receivables) Use the information for Jones Company as presented in E6.20. Jones is planning to factor some accounts receivable at the end of the year. Accounts totaling \$25,000 will be transferred to Credit Factors, Inc. with recourse. Credit Factors will retain 5% of the balances for probable adjustments and assesses a finance charge of 4%. The fair value of the recourse obligation is \$1,200.

Instructions

- a. Prepare the journal entry to record the sale of the receivables.
- b. Compute Jones's accounts receivable turnover for the year, assuming the receivables are sold, and discuss how factoring of receivables affects the turnover ratio.

***E6.22 (LO 6) (Petty Cash)** Carolyn Keene, Inc. decided to establish a petty cash fund to help ensure internal control over its small cash expenditures. The following information is available for the month of April.

- On April 1, it established a petty cash fund in the amount of \$200.
- A summary of the petty cash expenditures made by the petty cash custodian as of April 10, when the balance in petty cash was \$27, is as follows.

Delivery charges paid on merchandise purchased	\$60.00
Supplies purchased and used	25.00
Postage expense	33.00
I.O.U. from employees	17.00
Miscellaneous expense	36.00

- The petty cash fund balance was increased \$100 to \$300 on April 20.

Instructions

Prepare the journal entries to record transactions related to petty cash for the month of April.

***E6.23 (LO 6) (Petty Cash)** The petty cash fund of Fonzarelli's Auto Repair Service, a sole proprietorship, contains the following.

1. Coins and currency	\$ 15.20
2. Postage stamps	2.90
3. An I.O.U. from Richie Cunningham, an employee, for cash advance	40.00
4. Check payable to Fonzarelli's Auto Repair from Pottsie Weber, an employee, marked NSF	34.00
5. Vouchers for the following:	
Postage stamps	\$ 20.00
Two Rose Bowl tickets for Nick Fonzarelli	170.00
Printer cartridge	14.35
	<u>204.35</u>
	<u>\$296.45</u>

The general ledger account Petty Cash has a balance of \$300.

Instructions

Prepare the journal entry to record the reimbursement of the petty cash fund.

***E6.24 (LO 6) (Bank Reconciliation and Adjusting Entries)** Angela Lansbury Company deposits all receipts and makes all payments by check. The following information is available from the cash records.

June 30 Bank Reconciliation

Balance per bank	\$ 7,000
Add: Deposits in transit	1,540
Deduct: Outstanding checks	(2,000)
Balance per books	<u>\$ 6,540</u>

Month of July Results

	<u>Per Bank</u>	<u>Per Books</u>
Balance July 31	\$8,650	\$9,250
July deposits	5,000	5,810
July checks	4,000	3,100
July note collected (not included in July deposits)	1,000	—
July bank service charge	15	—
July NSF check from a customer, returned by the bank (recorded by bank as a charge)	335	—

Instructions

- Prepare a bank reconciliation going from balance per bank and balance per book to correct cash balance. Outstanding checks from the June reconciliation cleared the bank in July.
- Prepare the general journal entry or entries to correct the Cash account.

***E6.25 (LO 6) (Bank Reconciliation and Adjusting Entries)** Logan Bruno Company has just received the August 31, 2025, bank statement, which is summarized below.

<u>County National Bank</u>	<u>Disbursements</u>	<u>Receipts</u>	<u>Balance</u>
Balance, August 1			\$ 9,369
Deposits during August		\$32,200	41,569
Note collected for depositor, including \$40 interest		1,040	42,609
Checks cleared during August	\$34,500		8,109
Bank service charges	20		8,089
Balance, August 31			8,089

The general ledger Cash account contained the following entries for the month of August.

Cash			
Balance, August 1	10,050	Disbursements in August	34,903
Receipts during August	35,000		

Deposits in transit at August 31 are \$3,800, and checks outstanding at August 31 total \$1,050. Cash on hand at August 31 is \$310. The bookkeeper improperly entered one check in the books at \$146.50 which was written for \$164.50 for supplies (expense); it cleared the bank during the month of August.

Instructions

- Prepare a bank reconciliation dated August 31, 2025, proceeding to a correct balance.
- Prepare any entries necessary to make the books correct and complete.
- What amount of cash should be reported in the August 31 balance sheet?

***E6.26 (LO 7) (Expected Cash Flows)** On December 31, 2025, Iva Majoli Company borrowed \$62,092 from Paris Bank, signing a 5-year, \$100,000 zero-interest-bearing note. The note was issued to yield 10% interest. Unfortunately, during 2027, Majoli began to experience financial difficulty. As a result, at December 31, 2027, Paris Bank determined that it was probable that it would receive back only \$75,000 at maturity. The market rate of interest on loans of this nature is now 11%.

Instructions

- Prepare the entry to record the issuance of the loan by Paris Bank on December 31, 2025.
- Prepare the entry, if any, to record the impairment of the loan on December 31, 2027, by Paris Bank.

***E6.27 (LO 7) (Expected Cash Flows)** On December 31, 2025, Conchita Martinez Company signed a \$1,000,000 note to Sauk City Bank. The market interest rate at that time was 12%. The stated interest rate on the note was 10%, payable annually. The note matures in 5 years. Unfortunately, because of lower sales, Conchita Martinez's financial situation worsened. On December 31, 2027, Sauk City Bank determined that it was probable that the company would pay back only \$600,000 of the principal at maturity. However, it was considered likely that interest would continue to be paid, based on the \$1,000,000 loan.

Instructions

- Determine the amount of cash Conchita Martinez received from the loan on December 31, 2025.
- Prepare a note amortization schedule for Sauk City Bank up to December 31, 2027.
- Determine the loss on impairment that Sauk City Bank should recognize on December 31, 2027.

Problems

P6.1 (LO 1) Excel (Determine Proper Cash Balance) Francis Equipment Co. closes its books regularly on December 31, but at the end of 2025 it held its cash book open so that a more favorable balance sheet could be prepared for credit purposes. Cash receipts and disbursements for the first 10 days of January were recorded as December transactions. The information is given below.

- January cash receipts recorded in the December cash book totaled \$45,640, of which \$28,000 represents cash sales, and \$17,640 represents collections on account for which cash discounts of \$360 were given.
- January cash disbursements recorded in the December check register liquidated accounts payable of \$22,450 on which discounts of \$250 were taken.
- The ledger has not been closed for 2025.
- The amount shown as inventory was determined by physical count on December 31, 2025.

The company uses the periodic method of inventory.

Instructions

- Prepare any entries you consider necessary to correct Francis's accounts at December 31.
- To what extent was Francis Equipment Co. able to show a more favorable balance sheet at December 31 by holding its cash book open? (Compute working capital and the current ratio.)

Assume that the balance sheet that was prepared by the company showed the following amounts:

	<u>Dr.</u>	<u>Cr.</u>
Cash	\$39,000	
Accounts receivable	42,000	
Inventory	67,000	
Accounts payable		\$45,000
Other current liabilities		14,200

P6.2 (LO 3) Groupwork (Bad-Debt Reporting) The following are a series of unrelated situations.

1. Halen Company's unadjusted trial balance at December 31, 2025, included the following accounts.

	<u>Debit</u>	<u>Credit</u>
Accounts receivable	\$53,000	
Allowance for doubtful accounts	4,000	
Net sales		\$1,200,000

Halen Company estimates its bad debt expense to be 7% of gross accounts receivable. Determine its bad debt expense for 2025.

2. An analysis and aging of Stuart Corp. accounts receivable at December 31, 2025, disclosed the following.

Amounts estimated to be uncollectible	\$ 180,000
Accounts receivable	1,750,000
Allowance for doubtful accounts (per books)	125,000

What is the net amount expected to be collected of Stuart's receivables at December 31, 2025?

3. Shore Co. provides for doubtful accounts based on 4% of gross accounts receivable. The following data are available for 2025.

Credit sales during 2025	\$4,400,000
Bad debt expense	57,000
Allowance for doubtful accounts 1/1/25	17,000
Collection of accounts written off in prior years (customer credit was reestablished)	8,000
Customer accounts written off as uncollectible during 2025	30,000

What is the balance in Allowance for Doubtful Accounts at December 31, 2025?

4. At the end of its first year of operations, December 31, 2025, Darden Inc. reported the following information.

Accounts receivable, net of allowance for doubtful accounts	\$950,000
Customer accounts written off as uncollectible during 2025	24,000
Bad debt expense for 2025	84,000

What should be the balance in accounts receivable at December 31, 2025, before subtracting the allowance for doubtful accounts?

5. The following accounts were taken from Bullock Inc.'s trial balance at December 31, 2025.

	<u>Debit</u>	<u>Credit</u>
Net credit sales		\$750,000
Allowance for doubtful accounts	\$ 14,000	
Accounts receivable	310,000	

If doubtful accounts are 3% of accounts receivable, determine the bad debt expense to be reported for 2020.

Instructions

Answer the questions relating to each of the five independent situations as requested.

P6.3 (LO 3) Excel (Bad-Debt Reporting—Aging) Manilow Corporation operates in an industry that has a high rate of bad debts. Before any year-end adjustments, the balance in Manilow's Accounts Receivable account was \$555,000 and Allowance for Doubtful Accounts had a credit balance of \$40,000. The year-end balance reported in the balance sheet for Allowance for Doubtful Accounts will be based on the aging schedule shown below.

<u>Days Account Outstanding</u>	<u>Amount</u>	<u>Probability of Collection</u>
Less than 16 days	\$300,000	.98
Between 16 and 30 days	100,000	.90
Between 31 and 45 days	80,000	.85
Between 46 and 60 days	40,000	.80
Between 61 and 75 days	20,000	.55
Over 75 days (to be written off)	15,000	.00

Instructions

- What is the appropriate balance for Allowance for Doubtful Accounts at year-end?
- Show how accounts receivable would be presented on the balance sheet.
- What is the dollar effect of the year-end bad debt adjustment on the before-tax income?

(CMA adapted)

P6.4 (LO 3) (Bad-Debt Reporting) From inception of operations to December 31, 2025, Fortner Corporation provided for uncollectible accounts receivable under the allowance method. The provisions are recorded, based on analyses of customers with different risk characteristics. Bad debts written off were charged to the allowance account; recoveries of bad debts previously written off were credited to the allowance account, and no year-end adjustments to the allowance account were made. Fortner's usual credit terms are net 30 days.

The balance in Allowance for Doubtful Accounts was \$130,000 (Cr.) at January 1, 2025. During 2025, credit sales totaled \$9,000,000, the provision for doubtful accounts was determined to be \$180,000, \$90,000 of bad debts were written off, and recoveries of accounts previously written off amounted to \$15,000. Fortner installed a computer system in November 2025, and an aging of accounts receivable was prepared for the first time as of December 31, 2025. A summary of the aging is as follows.

Classification by Month of Sale	Balance in Each Category	Estimated % Uncollectible
November–December 2025	\$1,080,000	2%
July–October	650,000	10%
January–June	420,000	25%
Prior to 1/1/25	150,000	80%
	<u>\$2,300,000</u>	

Based on the review of collectibility of the account balances in the “prior to 1/1/25” aging category, additional receivables totaling \$60,000 were written off as of December 31, 2025. The 80% uncollectible estimate applies to the remaining \$90,000 in the category. Effective with the year ended December 31, 2025, Fortner adopted a different method for estimating the allowance for doubtful accounts at the amount indicated by the year-end aging analysis of accounts receivable.

Instructions

- Prepare a schedule analyzing the changes in Allowance for Doubtful Accounts for the year ended December 31, 2025. Show supporting computations in good form. (*Hint:* In computing the 12/31/25 allowance, subtract the \$60,000 write-off.)
- Prepare the journal entry for the year-end adjustment to Allowance for Doubtful Accounts balance as of December 31, 2025.

(AICPA adapted)

P6.5 (LO 3) (Bad-Debt Reporting) Presented below is information related to the Accounts Receivable accounts of Gulistan Inc. during the current year 2025.

- An aging schedule of the accounts receivable as of December 31, 2025, is as follows.

Age	Net Debit Balance	% to Be Applied After Correction Is Made
Under 60 days	\$172,342	1%
60–90 days	136,490	3%
91–120 days	39,924*	6%
Over 120 days	23,644	\$3,700 definitely uncollectible; estimated remainder uncollectible is 25%
	<u>\$372,400</u>	

*The \$3,240 write-off of receivables is related to the 91-to-120 day category.

- The Accounts Receivable control account has a debit balance of \$372,400 on December 31, 2025.
- Two entries were made in the Bad Debt Expense account during the year: (1) a debit on December 31 for the amount credited to Allowance for Doubtful Accounts, and (2) a credit for \$3,240 on November 3, 2025, and a debit to Allowance for Doubtful Accounts because of a bankruptcy.
- Allowance for Doubtful Accounts is as follows for 2025.

Allowance for Doubtful Accounts					
Nov. 3	Uncollectible accounts written off	3,240	Jan. 1	Beginning balance	8,750
			Dec. 31	5% of \$372,400	18,620

- A credit balance exists in Accounts Receivable (60–90 days) of \$4,840, which represents an advance on a sales contract.

Instructions

Assuming that the books have not been closed for 2025, make the necessary correcting entries.

P6.6 (LO 2, 3) (Journalize Various Accounts Receivable Transactions) The balance sheet of Starsky Company at December 31, 2024, includes the following.

Notes receivable	\$ 36,000	
Accounts receivable	182,100	
Less: Allowance for doubtful accounts	<u>17,300</u>	\$200,800

Transactions in 2025 include the following.

1. Accounts receivable of \$138,000 were collected including accounts of \$60,000 on which 2% sales discounts were allowed.
2. \$5,300 was received in payment of an account which was written off the books as worthless in 2024.
3. Customer accounts of \$17,500 were written off during the year.
4. At year-end, Allowance for Doubtful Accounts was estimated to need a balance of \$20,000. This estimate is based on an analysis of aged accounts receivable.

Instructions

Prepare all journal entries necessary to reflect the transactions above.

P6.7 (LO 4) (Notes Receivable with Realistic Interest Rate) On October 1, 2025, Arden Farm Equipment Company sold a pecan-harvesting machine to Valco Brothers Farm, Inc. In lieu of a cash payment, Valco Brothers Farm gave Arden a 2-year, \$120,000, 8% note (a realistic rate of interest for a note of this type). The note required interest to be paid annually on October 1. Arden's financial statements are prepared on a calendar-year basis.

Instructions

Assuming Valco Brothers Farm fulfills all the terms of the note, prepare the necessary journal entries for Arden Farm Equipment Company for the entire term of the note.

P6.8 (LO 4) (Notes Receivable Journal Entries) On December 31, 2025, Oakbrook Inc. rendered services to Beghun Corporation at an agreed price of \$102,049, accepting \$40,000 down and agreeing to accept the balance in four equal installments of \$20,000 receivable each December 31. An assumed interest rate of 11% is imputed.

Instructions

Prepare the entries that would be recorded by Oakbrook Inc. for the sale and for the receipts and interest on the following dates (prepare an amortization schedule). (Assume that the effective-interest method is used for amortization purposes.)

- a. December 31, 2025.
- b. December 31, 2026.
- c. December 31, 2027.
- d. December 31, 2028.
- e. December 31, 2029.

P6.9 (LO 4) (Comprehensive Receivables Problem) Braddock Inc. had the following long-term receivable account balances at December 31, 2024.

Note receivable from sale of division	\$1,500,000
Note receivable from officer	400,000

Transactions during 2025 and other information relating to Braddock's long-term receivables were as follows.

1. The \$1,500,000 note receivable is dated May 1, 2024, bears interest at 9%, and represents the balance of the consideration received from the sale of Braddock's electronics division to New York Company. Principal payments of \$500,000 plus appropriate interest are due on May 1, 2025, 2026, and 2027. The first principal and interest payment were made on May 1, 2025. Collection of the note installments is reasonably assured.
2. The \$400,000 note receivable is dated December 31, 2024, bears interest at 8%, and is due on December 31, 2027. The note is due from Sean May, president of Braddock Inc. and is collateralized by 10,000 shares of Braddock's common stock. Interest is payable annually on December 31, and all interest payments were paid on their due dates through December 31, 2025. The quoted market price of Braddock's common stock was \$45 per share on December 31, 2025.
3. On April 1, 2025, Braddock sold a patent to Pennsylvania Company in exchange for a \$100,000 zero-interest-bearing note due on April 1, 2027. There was no established exchange price for the patent, and the note had no ready market. The prevailing rate of interest for a note of this type at

April 1, 2025, was 12%. The present value of \$1 for two periods at 12% is 0.797 (use this factor). The patent had a carrying value of \$40,000 at January 1, 2025, and the amortization for the year ended December 31, 2025, would have been \$8,000. The collection of the note receivable from Pennsylvania is reasonably assured.

4. On July 1, 2025, Braddock sold a parcel of land to Splinter Company for \$200,000 under an installment sale contract. Splinter made a \$60,000 cash down payment on July 1, 2025, and signed a 4-year 11% note for the \$140,000 balance. The equal annual payments of principal and interest on the note will be \$45,125 payable on July 1, 2026, through July 1, 2029. The land could have been sold at an established cash price of \$200,000. The cost of the land to Braddock was \$150,000. Circumstances are such that the collection of the installments on the note is reasonably assured.

Instructions

- a. Prepare the long-term receivables section of Braddock's balance sheet at December 31, 2025.
- b. Prepare a schedule showing the current portion of the long-term receivables and accrued interest receivable that would appear in Braddock's balance sheet at December 31, 2025.
- c. Prepare a schedule showing interest revenue from the long-term receivables that would appear on Braddock's income statement for the year ended December 31, 2025.

P6.10 (LO 5) (Assigned Accounts Receivable—Journal Entries) Salen Company finances some of its current operations by assigning accounts receivable to a finance company. On July 1, 2025, it assigned, under guarantee (with recourse), specific accounts amounting to \$150,000. The finance company advanced to Salen 80% of the accounts assigned (20% of the total to be withheld until the finance company has made its full recovery), less a finance charge of $\frac{1}{2}\%$ of the total accounts assigned.

On July 31, Salen Company received a statement that the finance company had collected \$80,000 of these accounts and had made an additional charge of $\frac{1}{2}\%$ of the total accounts outstanding as of July 31. This charge is to be deducted at the time of the first remittance due Salen Company from the finance company. (*Hint:* Make entries at this time.) On August 31, 2025, Salen Company received a second statement from the finance company, together with a check for the amount due. The statement indicated that the finance company had collected an additional \$50,000 and had made a further charge of $\frac{1}{2}\%$ of the balance outstanding as of August 31.

Instructions

Make all entries on the books of Salen Company that are involved in the transactions above.

(AICPA adapted)

P6.11 (LO 5) Groupwork (Income Effects of Receivables Transactions) Sandburg Company requires additional cash for its business. Sandburg has decided to use its accounts receivable to raise the additional cash and has asked you to determine the income statement effects of the following contemplated transactions.

1. On July 1, 2025, Sandburg assigned \$400,000 of accounts receivable to Keller Finance Company. Sandburg received an advance from Keller of 80% of the assigned accounts receivable less a commission of 3% on the advance. Prior to December 31, 2025, Sandburg collected \$220,000 on the assigned accounts receivable, and remitted \$232,720 to Keller, \$12,720 of which represented interest on the advance from Keller.
2. On December 1, 2025, Sandburg sold \$300,000 of net accounts receivable to Wunsch Company for \$270,000. The receivables were sold outright on a without recourse basis.
3. On December 31, 2025, an advance of \$120,000 was received from First Bank by pledging \$160,000 of Sandburg's accounts receivable. Sandburg's first payment to First Bank is due on January 30, 2026.

Instructions

Prepare a schedule showing the income statement effects for the year ended December 31, 2025, as a result of the above facts.

***P6.12 (LO 6) (Petty Cash, Bank Reconciliation)** Bill Jovi is reviewing the cash accounting for Nottleman, Inc., a local mailing service. Jovi's review will focus on the petty cash account and the bank reconciliation for the month ended May 31, 2025. He has collected the following information from Nottleman's bookkeeper for this task.

Petty Cash

1. The petty cash fund was established on May 10, 2025, in the amount of \$250.
2. Expenditures from the fund by the custodian as of May 31, 2025, were evidenced by approved receipts for the following.

Postage expense	\$33.00
Mailing labels and other supplies	65.00
I.O.U. from employees	30.00
Shipping charges (to customer)	57.45
Newspaper advertising	22.80
Miscellaneous expense	15.35

On May 31, 2025, the petty cash fund was replenished and increased to \$300; currency and coin in the fund at that time totaled \$26.40.

Bank Reconciliation:

Third National Bank			
Bank Statement			
	Disbursements	Receipts	Balance
Balance, May 1, 2025			\$8,769
Deposits		\$28,000	
Note payment direct from customer (interest of \$30)		930	
Checks cleared during May	\$31,150		
Bank service charges	27		
Balance, May 31, 2025			6,522

Nottleman's Cash Account:

Balance, May 1, 2025	\$ 8,850
Deposits during May 2025	31,000
Checks written during May 2025	(31,835)

Deposits in transit are determined to be \$3,000, and checks outstanding at May 31 total \$850. Cash on hand (besides petty cash) at May 31, 2025, is \$246.

Instructions

- Prepare the journal entries to record the transactions related to the petty cash fund for May.
- Prepare a bank reconciliation dated May 31, 2025, proceeding to a correct cash balance, and prepare the journal entries necessary to make the books correct and complete.
- What amount of cash should be reported in the May 31, 2025, balance sheet?

***P6.13 (LO 6) (Bank Reconciliation and Adjusting Entries)** The cash account of Aguilar Co. showed a ledger balance of \$3,969.85 on June 30, 2025. The bank statement as of that date showed a balance of \$4,150. Upon comparing the statement with the cash records, the following facts were determined.

- There were bank service charges for June of \$25.
- A bank memo stated that Bao Dai's note for \$1,200 and interest of \$36 had been collected on June 29, and the bank had made a charge of \$5.50 on the collection. (No entry had been made on Aguilar's books when Bao Dai's note was sent to the bank for collection.)
- Receipts for June 30 for \$3,390 were not deposited until July 2.
- Checks outstanding on June 30 totaled \$2,136.05.
- The bank had charged the Aguilar Co.'s account for a customer's uncollectible check amounting to \$253.20 on June 29.
- A customer's check for \$90 (as payment on the customer's Accounts Receivable) had been entered as \$60 in the cash receipts journal by Aguilar on June 15.
- Check no. 742 in the amount of \$491 had been entered in the cash journal as \$419, and check no. 747 in the amount of \$58.20 had been entered as \$582. Both checks had been issued to pay for purchases and were payments on Aguilar's Accounts Payable.

Instructions

- Prepare a bank reconciliation dated June 30, 2025, proceeding to a correct cash balance.
- Prepare any entries necessary to make the books correct and complete.

***P6.14 (LO 6) (Bank Reconciliation and Adjusting Entries)** Presented below is information related to Haselhof Inc.

Balance per books at October 31, \$41,847.85; receipts \$173,523.91; disbursements \$164,893.54. Balance per bank statement November 30, \$56,274.20.

The following checks were outstanding at November 30.

1224	\$1,635.29
1230	2,468.30
1232	2,125.15
1233	482.17

Included with the November bank statement and not recorded by the company were a bank debit memo for \$27.40 covering bank charges for the month, a debit memo for \$372.13 for a customer's check returned and marked NSF, and a credit memo for \$1,400 representing bond interest collected by the bank in the name of Haselhof Inc. Cash on hand at November 30 recorded and awaiting deposit amounted to \$1,915.40.

Instructions

- Prepare a bank reconciliation (to the correct balance) at November 30, for Haselhof Inc. from the information above.
- Prepare any journal entries required to adjust the cash account at November 30.

***P6.15 (LO 7) (Expected Cash Flows)** On January 1, 2025, Botosan Company issued a \$1,200,000, 5-year, zero-interest-bearing note to National Organization Bank. The note was issued to yield 8% annual interest. Unfortunately, during 2026 Botosan fell into financial trouble due to increased competition. After reviewing all available evidence on December 31, 2026, National Organization Bank decided that the loan was impaired. Botosan will probably pay back only \$800,000 of the principal at maturity.

Instructions

- Prepare journal entries for both Botosan Company and National Organization Bank to record the issuance of the note on January 1, 2025. (Round to the nearest \$10.)
- Assuming that both Botosan Company and National Organization Bank use the effective-interest method to amortize the discount, prepare the amortization schedule for the note.
- Under what circumstances can National Organization Bank consider Botosan's note to be impaired?
- Compute the loss National Organization Bank will suffer from Botosan's financial distress on December 31, 2026. What journal entries should be made to record this loss?

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ6.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- As of June 30, 2020, what balances did P&G have in cash and cash equivalents? What were the major uses of cash during the year?
- P&G reports no allowance for doubtful accounts, suggesting that bad debt expense is not material for this company. Is it reasonable that a company like P&G would not have material bad debt expense? Explain.

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ6.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- What were the cash and cash equivalents reported by Coca-Cola and PepsiCo at the end of 2020? What does each company classify as cash equivalents?
- What were the accounts receivable (net) for Coca-Cola and PepsiCo at the end of 2020? Which company reports the greater allowance for doubtful accounts (amount and percentage of gross receivable) at the end of 2020? Assume PepsiCo's allowance account relates to trade receivables only.
- Assuming that all "net operating revenues" (Coca-Cola) and all "net revenues" (PepsiCo) were net **credit** sales, compute the accounts receivable turnover for 2020 for Coca-Cola and PepsiCo; also compute the days outstanding for receivables. What is your evaluation of the difference?

Financial Statement Analysis Case: Occidental Petroleum Corporation

UYJ6.3 Occidental Petroleum Corporation reported the following information in a recent annual report.

Occidental Petroleum Corporation Consolidated Balance Sheets (in millions)		
	Current Year	Prior Year
Current assets		
Cash and cash equivalents	\$ 683	\$ 146
Trade receivables, net of allowances	804	608
Receivables from joint ventures, partnerships, and other	330	321
Inventories	510	491
Prepaid expenses and other	147	307
Total current assets	<u>2,474</u>	<u>1,873</u>
Long-term receivables, net	264	275

Notes to Consolidated Financial Statements

Cash and Cash Equivalents. Cash equivalents consist of highly liquid investments. Cash equivalents totaled approximately \$661 million and \$116 million at current and prior year-ends, respectively.

Trade Receivables. Occidental has agreement to sell, under a revolving sale program, an undivided percentage ownership interest in a designated pool of non-interest-bearing receivables. Under this program, Occidental serves as the collection agent with respect to the receivables sold. An interest in new receivables is sold as collections are made from customers. The balance sold at current year-end was \$360 million.

Instructions

- What items other than coin and currency may be included in “cash”?
- What items may be included in “cash equivalents”?
- What are compensating balance arrangements, and how should they be reported in financial statements?
- What are the possible differences between cash equivalents and short-term (temporary) investments?
- Assuming that the sale agreement meets the criteria for sale accounting, cash proceeds were \$345 million, the carrying value of the receivables sold was \$360 million, and the fair value of the recourse liability was \$15 million, what was the effect on income from the sale of receivables?
- Briefly discuss the impact of the transaction in (e) on Occidental’s liquidity.

Financial Statement Analysis Case: Microsoft

UYJ6.4 Microsoft is the leading developer of software in the world. To continue to be successful Microsoft must generate new products, which requires significant amounts of cash. The following is the current asset and current liability information from Microsoft’s recent balance sheets (in millions). Following the Microsoft data is the current asset and current liability information from **Oracle**’s balance sheets of the same year (in millions). Oracle is another major software developer.

Microsoft Corporation Balance Sheets (partial) As of June 30 (in millions)		
	Current Year	Prior Year
Current assets		
Cash and cash equivalents	\$ 13,576	\$ 11,356
Short-term investments	122,951	122,463
Accounts receivable, net	32,011	29,524
Inventories	1,895	2,063
Other	11,482	10,146
Total current assets	<u>\$181,915</u>	<u>\$175,552</u>
Total current liabilities	\$ 72,310	\$106,132

Oracle Balance Sheets (partial) As of May 31 (in millions)		
	<u>Current Year</u>	<u>Prior Year</u>
Current assets		
Cash and cash equivalents	\$37,239	\$20,514
Marketable securities	5,818	17,313
Accounts receivable, net	5,551	5,134
Other current assets	3,532	3,425
Total current assets	<u>\$52,140</u>	<u>\$46,386</u>
Total current liabilities	\$17,200	\$18,630
Part 1 (Cash and Cash Equivalents)		

Instructions

- What is the definition of a cash equivalent? Give some examples of cash equivalents. How do cash equivalents differ from other types of short-term investments?
- Calculate (1) the current ratio and (2) working capital for each company for the current year and discuss your results.
- Is it possible to have too many liquid assets?

Part 2 (Accounts Receivable) Microsoft provided the following disclosure related to its accounts receivable.

Allowance for Doubtful Accounts. The allowance for doubtful accounts reflects our best estimate of probable losses inherent in the accounts receivable balance. We determine the allowance based on known troubled accounts, historical experience, and other currently available evidence. Activity in the allowance for doubtful accounts is as follows:

(in millions)

<u>Year Ended June 30</u>	<u>Balance at Beginning of Period</u>	<u>Charged to Costs and Expenses</u>	<u>Write-Offs</u>	<u>Balance at End of Period</u>
Two years ago	\$361	\$134	\$ (98)	\$397
Prior year	397	153	(116)	434
Current year	434	560	(178)	816

Instructions

- Compute Microsoft's accounts receivable turnover for the current year and discuss your results. Microsoft had sales revenue of \$143,015 million in the current year.
- Reconstruct the summary journal entries for current year based on the information in the disclosure.
- Briefly discuss how the accounting for bad debts affects the analysis in Part 2 (a).

Accounting, Analysis, and Principles

UYJ6.5 The Flatiron Pub provides catering services to local businesses. The following information was available for The Flatiron Pub for the years ended December 31, 2024 and 2025.

	<u>December 31, 2024</u>	<u>December 31, 2025</u>
Cash	\$ 2,000	\$ 1,685
Accounts receivable	46,000	?
Allowance for doubtful accounts	550	?
Other current assets	8,500	7,925
Current liabilities	37,000	44,600
Total credit sales	205,000	255,000
Collections on accounts receivable	190,000	228,000

Flatiron management is preparing for a meeting with its bank concerning renewal of a loan and has collected the following information related to the above balances.

- The cash reported at December 31, 2025, reflects the following items: petty cash \$1,575 and postage stamps \$110. The other current assets balance at December 31, 2025, includes the checking account balance of \$4,000.
- On November 30, 2025, Flatiron agreed to accept a 6-month, \$5,000 note bearing 12% interest, payable at maturity, from a major client in settlement of a \$5,000 bill. The above balances do not reflect this transaction.

3. Flatiron factored some accounts receivable at the end of 2025. It transferred accounts totaling \$10,000 to Final Factor, Inc. with recourse. Final Factor will receive the collections from Flatiron's customers and will retain 2% of the balances. Final Factor assesses Flatiron a finance charge of 3% on this transfer. The fair value of the recourse liability is \$400. However, management has determined that the amount due from the factor and the fair value of the resource obligation have not been recorded, and neither are included in the balances above.
4. Flatiron charged off uncollectible accounts with balances of \$1,600. On the basis of the latest available information, the 2025 provision for bad debts is based on uncollectibles being 2.5% of accounts receivable.

Accounting

- a. Based on the above transactions, determine the balance for (1) Accounts Receivable and (2) Allowance for Doubtful Accounts at December 31, 2025.
- b. Prepare the current assets section of The Flatiron Pub's balance sheet at December 31, 2025.

Analysis

- a. Compute Flatiron's current ratio and accounts receivable turnover for December 31, 2025. Use these measures to analyze Flatiron's liquidity. The accounts receivable turnover in 2024 was 4.37.
- b. Discuss how the analysis you did above of Flatiron's liquidity would be affected if Flatiron had transferred the receivables in a secured borrowing transaction.

Principles

What is the conceptual basis for recording bad debt expense based on the percentage-of-receivables approach at December 31, 2025?

Developing Your Professional Skills

Critical-Thinking Cases

CT6.1 (LO 3) (Bad-Debt Accounting) Simms Company has significant amounts of trade accounts receivable. Simms uses the allowance method to estimate bad debts instead of the direct write-off method. During the year, some specific accounts were written off as uncollectible, and some that were previously written off as uncollectible were collected.

Instructions

- a. What are the deficiencies of the direct write-off method?
- b. Briefly describe the allowance method to estimate bad debts and the theoretical justification for its use?
- c. How should Simms account for the collection of the specific accounts previously written off as uncollectible?

CT6.2 (LO 2, 5) (Various Receivable Accounting Issues) Kimmel Company uses the net method of accounting for sales discounts. Kimmel also offers trade discounts to various groups of buyers. On August 1, 2025, Kimmel sold some accounts receivable on a without recourse basis. Kimmel incurred a finance charge. Kimmel also has some notes receivable bearing an appropriate rate of interest. The principal and total interest are due at maturity. The notes were received on October 1, 2025, and mature on September 30, 2027. Kimmel's operating cycle is less than one year.

Instructions

- a. 1. Using the net method, how should Kimmel account for the sales discounts at the date of sale? What is the rationale for the amount recorded as sales under the net method?
2. Using the net method, what is the effect on Kimmel's sales revenues and net income when customers do not take the sales discounts?
- b. What is the effect of trade discounts on sales revenues and accounts receivable? Why?
- c. How should Kimmel account for the accounts receivable factored on August 1, 2025? Why?
- d. How should Kimmel account for the note receivable and the related interest on December 31, 2025? Why?

CT6.3 (LO 3) Writing (Bad-Debt Reporting Issues) Clark Pierce conducts a wholesale merchandising business that sells approximately 5,000 items per month with a total monthly average sales value of \$250,000. Its annual bad debt rate has been approximately 1½% of sales. In recent discussions with his bookkeeper, Mr. Pierce has become confused by all the alternatives apparently available in handling the Allowance for Doubtful Accounts balance. The following information has been presented to Pierce.

1. An allowance can be set up (a) on the basis of a percentage of receivables or (b) on the basis of a valuation of all past due or otherwise questionable accounts receivable. Those considered uncollectible can be charged to such allowance at the close of the accounting period, or specific items can be charged off directly against (1) Gross Sales or to (2) Bad Debt Expense in the year in which they are determined to be uncollectible.
2. Collection agency and legal fees, and so on, incurred in connection with the attempted recovery of bad debts can be charged to (a) Bad Debt Expense, (b) Allowance for Doubtful Accounts, (c) Legal Expense, or (d) Administrative Expense.
3. Debts previously written off in whole or in part but currently recovered can be credited to (a) Other Revenue, (b) Bad Debt Expense, or (c) Allowance for Doubtful Accounts.

Instructions

Which of the foregoing methods would you recommend to Mr. Pierce in regard to (1) allowances and charge-offs, (2) collection expenses, and (3) recoveries? State briefly and clearly the reasons supporting your recommendations.

CT6.4 (LO 2, 4) Writing (Basic Note and Accounts Receivable Transactions)

Part 1: On July 1, 2025, Wallace Company, a calendar-year company, sold special-order merchandise on credit and received in return an interest-bearing note receivable from the customer. Wallace Company will receive interest at the prevailing rate for a note of this type. Both the principal and interest are due in one lump sum on June 30, 2026.

Instructions

When should Wallace Company report interest revenue from the note receivable? Discuss the rationale for your answer.

Part 2: On December 31, 2025, Wallace Company had significant amounts of accounts receivable as a result of credit sales to its customers. Wallace uses the allowance method based on credit sales to estimate bad debts. Past experience indicates a reliable estimate of uncollectible accounts can be developed based on an aging analysis of receivable balances. This pattern is expected to continue.

Instructions

- a. Discuss the rationale for using the allowance method based on the balance in the trade receivables accounts.
- b. How should Wallace Company report the allowance for doubtful accounts on its balance sheet at December 31, 2025? Also, describe the alternatives, if any, for presentation of bad debt expense in Wallace Company's 2025 income statement.

(AICPA adapted)

CT6.5 (LO 5) (Sale of Notes Receivable) Corrs Wholesalers Co. sells industrial equipment in exchange for a standard 3-year note receivable. Revenue is recognized at time of sale. Each note is secured by a lien on the equipment and has a face amount equal to the equipment's list price. Each note's stated interest rate is below the customer's market rate at date of sale. All notes are to be collected in three equal annual installments beginning one year after sale. Some of the notes are subsequently sold to a bank with recourse, some are subsequently sold without recourse, and some are retained by Corrs. At year-end, Corrs evaluates all outstanding notes receivable and provides for estimated losses arising from defaults.

Instructions

- a. What is the appropriate valuation basis for Corrs's notes receivable at the date it sells equipment?
- b. How should Corrs account for the sale, without recourse, of a February 1, 2025, note receivable sold on May 1, 2025? Why is it appropriate to account for it in this way?
- c. At December 31, 2025, how should Corrs measure and account for the impact of estimated losses resulting from notes receivable that it:
 1. Retained and did **not** sell?
 2. Sold to bank with recourse?

(AICPA adapted)

CT6.6 (LO 4) (Zero-Interest-Bearing Note Receivable) On September 30, 2024, Rolen Machinery Co. sold a machine and accepted the customer's zero-interest-bearing note. Rolen normally makes sales on a cash basis. Since the machine was unique, its sales price was not determinable using Rolen's normal pricing practices.

After receiving the first of two equal annual installments on September 30, 2025, Rolen immediately sold the note with recourse. On October 9, 2026, Rolen received notice that the note was dishonored, and it paid all amounts due. At all times prior to default, the note was reasonably expected to be paid in full.

Instructions

- a.
 1. How should Rolen determine the sales price of the machine?
 2. How should Rolen report the effects of the zero-interest-bearing note on its income statement for the year ended December 31, 2024? Why is this accounting presentation appropriate?
- b. What are the effects of the sale of the note receivable with recourse on Rolen's income statement for the year ended December 31, 2025, and its balance sheet at December 31, 2025?
- c. How should Rolen account for the effects of the note being dishonored?

CT6.7 (LO 4, 5) Groupwork (Reporting of Notes Receivable, Interest, and Sale of Receivables)

On July 1, 2025, Moresan Company sold special-order merchandise on credit and received in return an interest-bearing note receivable from the customer. Moresan will receive interest at the prevailing rate for a note of this type. Both the principal and interest are due in one lump sum on June 30, 2026.

On September 1, 2025, Moresan sold special-order merchandise on credit and received in return a zero-interest-bearing note receivable from the customer. The prevailing rate of interest for a note of this type is determinable. The note receivable is due in one lump sum on August 31, 2027.

Moresan also has significant amounts of trade accounts receivable as a result of credit sales to its customers. On October 1, 2025, some trade accounts receivable were assigned to Indigo Finance Company on a non-notification basis (Moresan handles collections) for an advance of 75% of their amount at an interest charge of 8% on the balance outstanding.

On November 1, 2025, other trade accounts receivable were sold on a without recourse basis. The factor withheld 5% of the trade accounts receivable factored as protection against sales returns and allowances and charged a finance charge of 3%.

Instructions

- a. How should Moresan determine the interest revenue for 2025 on the:
 1. Interest-bearing note receivable? Why?
 2. Zero-interest-bearing note receivable? Why?
- b. How should Moresan report the interest-bearing note receivable and the zero-interest-bearing note receivable on its balance sheet at December 31, 2025?
- c. How should Moresan account for subsequent collections on the trade accounts receivable assigned on October 1, 2025, and the payments to Indigo Finance? Why?
- d. How should Moresan account for the trade accounts receivable factored on November 1, 2025? Why? (AICPA adapted)

CT6.8 (LO 4) Writing (Accounting for Zero-Interest-Bearing Note) Soon after beginning the year-end audit work on March 10 at Engone Company, the auditor has the following conversation with the controller.

- Controller: The year ended March 31 should be our most profitable in history and, as a consequence, the board of directors has just awarded the officers generous bonuses.
- Auditor: I thought profits were down this year in the industry, according to your latest interim report.
- Controller: Well, they were down, but 10 days ago we closed a deal that will give us a substantial increase for the year.
- Auditor: Oh, what was it?
- Controller: Well, you remember a few years ago our former president bought stock in Henderson Enterprises because he had those grandiose ideas about becoming a conglomerate. For 6 years we have not been able to sell this stock, which cost us \$3,000,000 and has not paid a nickel in dividends. Thursday we sold this stock to Bimini Inc. for \$4,000,000. So, we will have a gain of \$700,000 (\$1,000,000 pretax) which will increase our net income for the year to \$4,000,000, compared with last year's \$3,800,000. As far as I know, we'll be the only company in the industry to register an increase in net income this year. That should help the market value of the stock!

- Auditor: Do you expect to receive the \$4,000,000 in cash by March 31, your fiscal year-end?
- Controller: No. Although Bimini Inc. is an excellent company, they are a little tight for cash because of their rapid growth. Consequently, they are going to give us a \$4,000,000 zero-interest-bearing note with payments of \$400,000 per year for the next 10 years. The first payment is due on March 31 of next year.
- Auditor: Why is the note zero-interest-bearing?
- Controller: Because that's what everybody agreed to. Since we don't have any interest-bearing debt, the funds invested in the note do not cost us anything and besides, we were not getting any dividends on the Henderson Enterprises stock.

Instructions

Do you agree with the way the controller has accounted for the transaction? If not, how should the transaction be accounted for?

CT6.9 (LO 2, 3) Writing (Receivables Management) As the manager of the accounts receivable department for Beavis Leather Goods, Ltd., you recently noticed that Kelly Collins, your accounts receivable clerk who is paid \$2,500 per month, has been wearing unusually tasteful and expensive clothing. (This is Beavis's first year in business.) This morning, Collins drove up to work in a brand new Lexus.

Naturally suspicious by nature, you decide to test the accuracy of the accounts receivable balance of \$192,000 as shown in the ledger. The following information is available for your first year (precisely 9 months ended September 30, 2025) in business.

1. Collections from customers	\$188,000
2. Merchandise purchased	360,000
3. Ending merchandise inventory	90,000
4. Goods are marked to sell at 40% above cost.	

Instructions

Assuming all sales were made on account, compute the ending accounts receivable balance that should appear in the ledger, noting any apparent shortage. Then, draft a memo dated October 3, 2025, to Mark Price, the branch manager, explaining the facts in this situation. Remember that this problem is serious, and you do not want to make hasty accusations.

CT6.10 (LO 3) Ethics (Bad-Debt Reporting) Marvin Company is a subsidiary of Hughes Corp. The controller believes that the yearly allowance for doubtful accounts for Marvin should be 8% of gross accounts receivable. Given the recession and the high interest rate environment, the president, nervous that the parent company might expect the subsidiary to sustain its 10% growth rate, suggests that the controller increase the allowance for doubtful accounts to 9%. The president thinks that the lower net income, which reflects a 6% growth rate, will be a more sustainable rate for Marvin Company.

Instructions

- In a recessionary environment with tight credit and high interest rates:
 - Identify steps Marvin Company might consider to improve the accounts receivable situation.
 - Then evaluate each step identified in terms of the risks and costs involved.
- Should the controller be concerned with Marvin Company's growth rate in estimating the allowance? Explain your answer.
- Does the president's request pose an ethical dilemma for the controller? Give your reasons.

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE6.1 Access the glossary (“Master Glossary”) to answer the following.

- a. What is the definition of cash?
- b. What is the definition of securitization?
- c. What are the three contexts that give rise to recourse?

CE6.2 Carrie Underwood believes that by establishing an allowance for uncollectible receivables, a company recognizes losses that have occurred in the past. What does the authoritative literature say about this belief?

CE6.3 In addition to securitizations, what are the other types of transfers of financial assets identified in the Codification?

CE6.4 The controller for Nesheim Construction Company believes that it is appropriate to offset a note payable to Oregon Bank against an account receivable from Oregon Bank related to remodeling services provided to the bank. What is the authoritative guidance concerning the criteria to be met to allow such offsetting?

Codification Research Case

As the new staff person in your company’s treasury department, you have been asked to conduct research related to a proposed transfer of receivables. Your supervisor wants the authoritative sources for the following items that are discussed in the securitization agreement.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- a. Identify relevant Codification section that addresses transfers of receivables.
- b. Provide definitions for the following:
 - 1. Transfer.
 - 2. Recourse.
 - 3. Collateral.

Additional Professional Resources

Go to Wiley Course Resources for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

Analytics in Action Activities

Using Data Visualizations to Estimate Allowance for Doubtful Accounts

DA6.1 Estimates are an inherent part of financial reporting, and many of the largest line items on a company's balance sheet and income statement are directly impacted by estimates. For example, consider uncollectible accounts. Companies must estimate their allowance for doubtful accounts at each balance sheet date, which directly impacts the amount of bad debt expense reported on the income statement.

Using data visualizations like the following graph can help managers to identify trends and understand correlations among financial statement data, which in turn can lead to more accurate estimation of their bad debts.

**Required**

For this exercise, you will use a dashboard of visualizations related to bad debts to answer questions about how effective certain companies are at estimating their allowance for doubtful accounts.

[Go to Wiley Course Resources for complete details and instructions.](#)

DA6.2 Benchmarking financial metrics against similar companies in the same industry can help refine estimates and also provide insights on any company-specific activities that could lead to variations from the benchmark data.

Required

Using the visualization dashboard from DA6.1, you will review a variety of metrics related to allowance for doubtful accounts for several public companies and document what conclusions you can draw from the data.

[Go to Wiley Course Resources for complete details and instructions.](#)

Using Data Analytics to Evaluate Estimates

DA6.3 If estimates are inherently uncertain, how can we evaluate the accuracy of a company's estimates? However, by using data analytics and some tools in Excel, we can evaluate the reasonableness of estimates included in a company's financial statements.

Required

In this exercise, you will read about different techniques for analyzing estimates of uncollectible receivables. Each technique compares different financial metrics, such as cumulative bad debt expense to bad debt write-offs over the same period, and provides a general benchmark for the result. Using financial data from public companies, you will use Excel to calculate various metrics related to bad debts and create charts to help draw conclusions from the data.

[Go to Wiley Course Resources for complete details and instructions.](#)

IFRS Insights

LEARNING OBJECTIVE 8

Compare the accounting procedures for cash and receivables under GAAP and IFRS.

The basic accounting and reporting issues related to recognition and measurement of receivables, such as the use of allowance accounts, how to record discounts, use of the allowance method to account for bad debts, and factoring, are similar for both IFRS and GAAP. *IAS 1* (“Presentation of Financial Statements”) is the only standard that discusses issues specifically related to cash. *IFRS 7* (“Financial Instruments: Disclosure”) and *IFRS 9* (“Financial Instruments”) are the two international standards that address issues related to financial instruments and more specifically receivables.

Following are the key similarities and differences between GAAP and IFRS related to cash and receivables.

Similarities

- The accounting and reporting related to cash is essentially the same under both IFRS and GAAP. In addition, the definition used for cash equivalents is the same.
- Like GAAP, cash and receivables are generally reported in the current assets section of the statement of financial position under IFRS.
- Like GAAP, for trade and other accounts receivable without a significant financing component, an allowance for uncollectible accounts should be recorded to result in receivables reported at the net amount expected to be collected. The estimation approach used is similar to that under GAAP.
- Similar to GAAP, IFRS requires that loans and receivables be accounted for at amortized cost, adjusted for allowances for doubtful accounts. IFRS sometimes refers to these allowances as *provisions*. The entry to record the allowance would be as follows.

Bad Debt Expense	xxxxxx
Provision for Doubtful Accounts	xxxxxx

Differences

- Under IFRS, companies may report cash and receivables as the last items in current assets under IFRS. Under GAAP, these items are reported in order of liquidity.
- While IFRS implies that receivables with different characteristics should be reported separately, there is no standard that mandates this segregation. GAAP has explicit guidance in the area.
- Unlike GAAP, IFRS has a different approach to estimating uncollectible accounts on receivables with a significant financing component (e.g., notes receivable). For long-term receivables that *have not* experienced a deterioration in credit quality after origination, uncollectible accounts are estimated based on expected losses over the next 12 months. For long-term receivables that experience a credit quality decline, uncollectible accounts are estimated based on lifetime expected losses (which is the model used under GAAP for all receivables).
- The fair value option is similar under GAAP and IFRS but not identical. The international standard related to the fair value option is subject to certain qualifying criteria not in the U.S. standard. In addition, there are some differences in the financial instruments covered.
- Under IFRS, bank overdrafts are generally reported as cash. Under GAAP, such balances are reported as liabilities.
- IFRS and GAAP differ in the criteria used to account for transfers of receivables. IFRS is a combination of an approach focused on risks and rewards and loss of control. GAAP uses loss of control as the primary criterion. In addition, IFRS generally permits partial transfers; GAAP does not.

Valuation of Inventories: A Cost-Basis Approach

WHAT is inventory?

Inventories are assets that a company holds for sale. For retailers, like **Best Buy** or **Urban Outfitters**, purchases of merchandise inventory are held for reselling to customers. Manufacturers, such as **Ford**, **SC Johnson**, or **3M**, hold inventory in three inventory accounts—Raw Materials, Work in Process, and Finished Goods. Regardless of the type of company, when inventory is sold, it results in gross profit, measured as the sales value less the cost of the inventory sold.

	Target (in millions)	
	Consolidated Statements of Financial Position	Consolidated Statements of Operations
Assets		
Cash and cash equivalents	\$2,577	Sales \$78,112
Inventory	8,992	Cost of sales 54,864
Other current assets	1,333	Gross profit \$23,248
Total current assets	\$12,902	Net income \$3,281

WHY is accounting information about inventory important?

The investment in inventories is frequently the largest current asset of merchandising (retail) and manufacturing businesses. For example, consider the recent financial statements of **Target**. Inventory comprises 70% ($\$8,992 \div \$12,902$) of cur-

rent assets. Cost of sales, which measures the cost of inventory sold during the year, is a key determinant of gross profit. For Target, gross profit represents 30% ($\$23,248 \div \$78,112$) of sales revenue and is the main driver of net income.

The importance of comparable information on inventory costs is illustrated by how some online companies insist on reporting some selling costs, such as fulfillment costs related to inventory shipping and warehousing, as part of administrative expenses instead of as cost of goods sold. For example, **Amazon** reported \$58.5 billion of costs associated with fulfilling customer orders (this practice is allowable within GAAP if applied consistently and adequately disclosed). Some experts thought Amazon should include those expenses in costs of goods sold, which would substantially lower its gross profit, as the adjacent table shows (dollars in millions).

As indicated, Amazon's reporting of these costs conveys a much rosier gross profit story and may not be comparable to traditional retailers. This example highlights the importance of good reporting of accounting information about inventories and related costs.

HOW do we account for inventories?

Companies record purchases of inventory at historical cost when they obtain control of the goods. Cost of goods sold is recorded at the time of a sale, generally using one of three cost flow assumptions: (1) average-cost; (2) first-in, first-out (FIFO); or (3) last-in, first-out (LIFO). The choice of cost flow assumption is affected by a number of business and tax-related factors. In many cases, companies that use the LIFO method follow an approach called dollar-value LIFO. [1] (See the FASB Codification References section near the end of the chapter.)

Source: "Amazon's Deceptive Accounting Games," *Seeking Alpha* (February 12, 2018).

	As Reported	With Fulfillment Expense
Total net sales	\$386,064	\$386,064
Cost of sales	233,307	291,824
Gross profit	\$152,757	\$ 94,240
Gross margin %	39.57%	24.41%

7.1 Inventory Issues

LEARNING OBJECTIVE 1

Identify inventory classifications and different inventory systems.

Classification

Inventories are asset items that a company holds for sale in the ordinary course of business, or goods that it will use or consume in the production of goods to be sold. The description and measurement of inventory requires careful attention. The investment in inventories is frequently the largest current asset of merchandising (retail) and manufacturing businesses.

- **Merchandising companies**, such as **Walmart Inc.**, usually purchase their merchandise in a form ready for sale. They report the cost assigned to unsold units left on hand as **merchandise inventory**. Only one inventory account, Inventory, appears in the financial statements.
- **Manufacturing companies**, such as **Procter & Gamble**, produce goods to sell to merchandising companies. Although the products they produce may differ, manufacturers normally have the three following inventory accounts.
 1. **Raw materials inventory**. This account represents the cost of goods and materials on hand but not yet placed into production. Raw materials include the wood to make a baseball bat or the steel to make a car. These materials can be traced directly to the end product.
 2. **Work in process inventory**. At any point in a continuous production process, some units are only partially processed. This account represents the cost of the raw material for these unfinished units, plus the direct labor cost applied specifically to this material and a ratable share of manufacturing overhead costs.
 3. **Finished goods inventory**. This account includes the costs identified with the completed but unsold units on hand at the end of the fiscal period.

Illustration 7.1 contrasts the financial statement presentation of inventories of Walmart with those of Procter & Gamble (P&G).

ILLUSTRATION 7.1 Comparison of Presentation of Current Assets for Merchandising and Manufacturing Companies

Merchandising Company		Manufacturing Company	
Walmart Inc. Balance Sheets		Procter & Gamble Company Balance Sheets	
	Jan. 31, 2020		Jan. 30, 2020
Current assets (in millions)		Current assets (in millions)	
Cash and cash equivalents	\$ 9,465	Cash and cash equivalents	\$16,181
Receivables, net	6,284	Accounts receivable	4,178
Inventories:	44,435	Inventories:	
Prepaid expenses and other	1,622	Materials and supplies	\$1,414
Total current assets	<u>\$61,806</u>	Work in process	674
		Finished goods	3,410
		Total inventories	5,498
		Prepaid expenses and other current assets	2,130
		Total current assets	<u>\$27,987</u>

Note that a manufacturing company like P&G also might include a Manufacturing or Factory **Supplies Inventory** account. In it, P&G would include such items as machine oils, nails, cleaning material, and the like—supplies that are used in production but are not the primary materials being produced. The remainder of the balance sheet is essentially the same for the two types of companies.

Illustration 7.2 shows the differences in the flow of costs through a merchandising company and a manufacturing company.

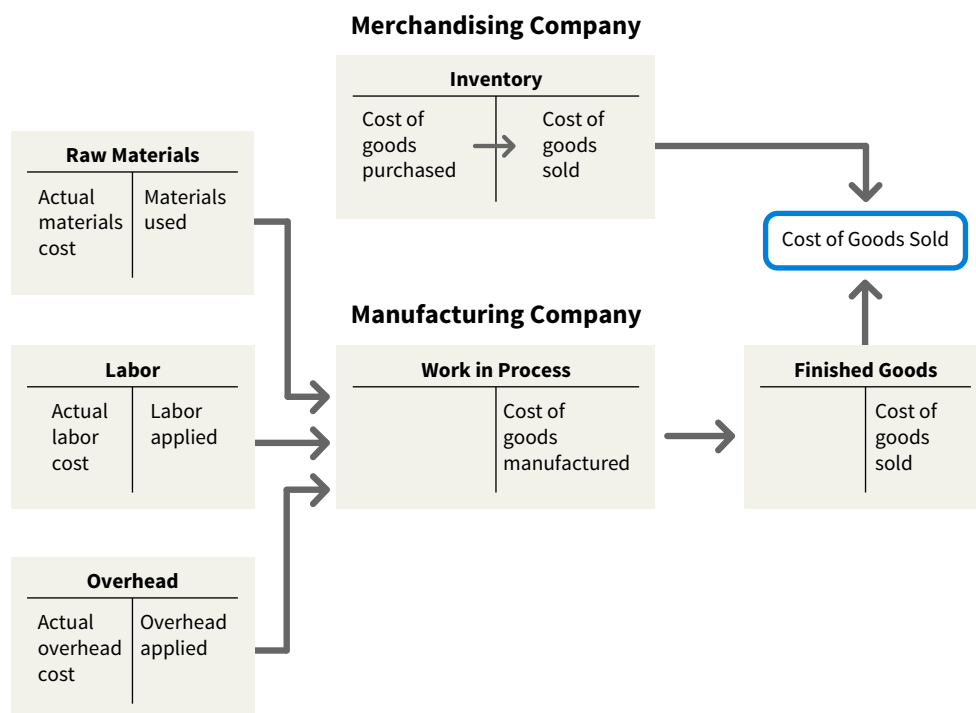

ILLUSTRATION 7.2 Flow of Costs Through Manufacturing and Merchandising Companies

Inventory Cost Flow

Understanding the flow of inventory costs is important to mastering the accounting for inventory and cost of goods sold. Remember—**inventory on hand**, on the shelves or in a warehouse, is an asset. The inventory provides a future economic benefit because the company can sell it and generate profit and cash flow. Companies that sell or produce goods report inventory and cost of goods sold at the end of each accounting period. The flow of costs for a company is as follows.

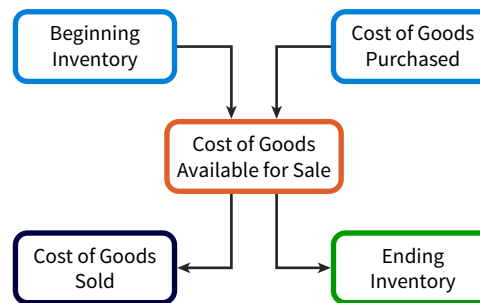

Illustration 7.3 shows these relationships.

ILLUSTRATION 7.3 Inventory Cost Flow

As indicated, goods are either sold or they are left on hand as follows.

- **Ending inventory.** The total cost of inventory that remains on hand that will be reported on the balance sheet as a current asset.
- **Cost of goods sold.** The total cost of the items that were sold that will be reported as an expense on the income statement.

One of the tools we use to address some of these inventory issues is the **cost of goods sold formula**. Companies use the cost of goods sold formula when determining how to allocate inventory costs at the end of a period. **Illustration 7.4** shows the calculation of the cost of goods sold formula with some example numbers.

ILLUSTRATION 7.4 Computation of Cost of Goods Sold

<p>The cost of goods available for sale or use is the sum of (1) the cost of the goods on hand at the beginning of the period, and (2) the cost of the goods acquired or produced during the period.</p>	
Beginning inventory, Jan. 1	\$100,000
Cost of goods acquired or produced during the year	800,000
Total cost of goods available for sale	900,000
Ending inventory, Dec. 31	(200,000)
Cost of goods sold during the year	\$700,000
<p>The cost of goods sold is the difference between (1) the cost of goods available for sale during the period, and (2) the cost of goods on hand at the end of the period.</p>	

Keep in mind that the number of goods sold during a period seldom corresponds exactly to the number of goods purchased. As a result, a company's inventory either increases or decreases during the period. Companies use one of two types of systems for maintaining accurate inventory records for these costs—the perpetual system or the periodic system.

Perpetual System

A **perpetual inventory system** continuously tracks changes in the Inventory account. That is, a company records all purchases and sales of goods directly in the Inventory account **as they occur**. The accounting features of a perpetual inventory system are as follows.

1. Purchases of merchandise for resale or raw materials for production are debited to Inventory rather than to Purchases.

- Freight-in is debited to Inventory, not Purchases. Purchase returns and allowances and purchase discounts are credited to Inventory rather than to separate accounts.
- Cost of goods sold is recorded at the time of each sale by debiting Cost of Goods Sold and crediting Inventory.
- A subsidiary ledger of individual inventory records is maintained as a control measure. The subsidiary records show the quantity and cost of each type of inventory on hand.

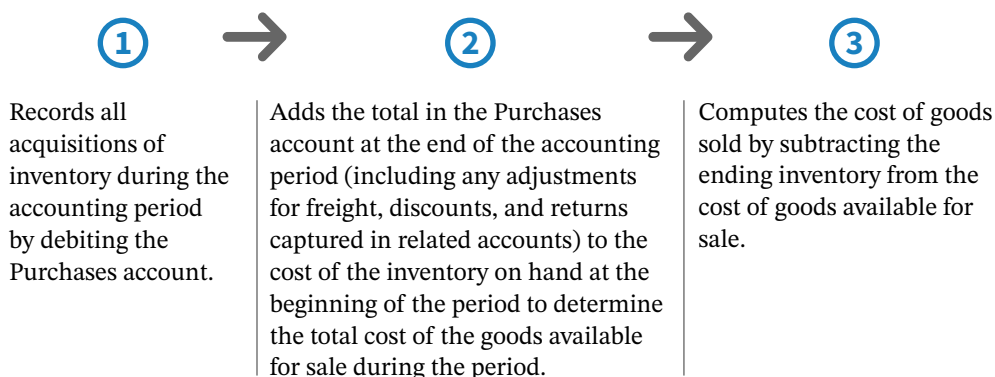

Remember, inventory is an asset which is a permanent account. Therefore, any remaining, or ending, balance in inventory rolls forward to the next period as beginning inventory. It is rare that inventory would ever have a zero balance.

The perpetual inventory system provides a continuous record of the balances in both the Inventory account and the Cost of Goods Sold account. Think about the optical scanners when you check out at **Target**, **Best Buy**, or your favorite grocery store. Those systems include accounting software that automatically records the sales information. It is those scanners that make the perpetual inventory system possible.

Inventory (perpetual system)	
Debit	Credit
Beg. bal.	
Purchases	Returns/allow.
Freight-in	Discounts
	Sales
End. bal.	

Periodic System

Under a **periodic inventory system**, a company determines the quantity of inventory on hand only periodically, as the name implies. To do so, a company does the following.

**Purchases and Related Accounts
(periodic system)**

Debit	Credit
Beg. bal.	
Purchases	Returns/allow.
Freight-in	Discounts
End. bal.	

Note that under a periodic inventory system, the cost of goods sold is a residual amount that depends on a physical count of ending inventory. This process is referred to as “taking a physical inventory.” Companies that use the periodic system take a physical inventory at least once a year.

FACTS To illustrate the difference between a perpetual and a periodic system, assume that **Trader Joe's** had the following transactions during the current year related to jars of its famous cookie butter spread.

Beginning inventory	100 jars at \$ 6 = \$ 600
Purchases	900 jars at \$ 6 = \$5,400
Sales	600 jars at \$12 = \$7,200
Ending inventory	400 jars at \$ 6 = \$2,400

QUESTION How should Trader Joe's record these transactions under perpetual and periodic inventory systems?

Example 7.1 Inventory Systems

SOLUTION

Perpetual Inventory System		Periodic Inventory System	
Beginning inventory, 100 units at \$6:			
The Inventory account shows the inventory on hand at \$600.		The Inventory account shows the inventory on hand at \$600.	
Purchase 900 units at \$6:			
Inventory	5,400	Purchases	5,400
Accounts Payable	5,400	Accounts Payable	5,400
Sales of 600 units at \$12:			
Accounts Receivable	7,200	Accounts Receivable	7,200
Sales Revenue	7,200	Sales Revenue	7,200
Cost of Goods Sold (600 at \$6)	3,600	No entry	
Inventory	3,600		
End-of-period entries for Inventory account, 400 units at \$6:			
No entry necessary. The Inventory account shows the ending balance of \$2,400 (\$600 + \$5,400 – \$3,600).		Inventory (ending by count)	2,400
		Cost of Goods Sold	3,600
		Purchases	5,400
		Inventory (beginning)	600
Using the perpetual method, Trader Joe’s can quickly and easily track its inventory of cookie butter spread throughout the year. Under the periodic method, Trader Joe’s must (1) count the jars of cookie butter spread on its shelf at the end of the year and (2) record an end-of-period journal entry to close out the Purchases account and record ending inventory.			

Inventory Control

All companies need an accurate inventory accounting system. Think about these situations:

- **What happens if a company does not stock enough inventory?** It may lose sales and customers to competitors.
- **What happens if a company stocks too much inventory?** The costs of storing the inventory may be too high, or the inventory may become obsolete and customers do not want to purchase it.
- **What happens if a company does not adequately protect its inventory?** The items could be stolen or damaged.

Remember, a company spends considerable amounts on purchasing inventory for resale, so it should also spend resources to track it and protect it.

We discussed earlier that companies using a periodic inventory system must physically count inventory each period to determine how much remains on hand and how much was sold. To maintain proper inventory control, **all companies should physically count inventory on hand at least once a year.** Ideally, the count should take place near the end of the company’s fiscal year to properly report inventory quantities on the financial statements.¹

Companies that use a perpetual inventory system take a physical count to ensure that actual inventory on hand matches the inventory balance in the accounting records. What would cause differences between the counted amount and the amount showing in the

¹Some companies have developed methods of determining inventories, including statistical sampling, that are sufficiently reliable to make unnecessary an annual physical count of each item of inventory.

accounting records? It depends on the type of inventory the company carries, but in general, differences are caused by theft, damage, spoilage, and errors in recordkeeping.

When differences are discovered in a perpetual system, a company makes an adjusting entry to correct the inventory and cost of goods sold accounts. In practice, companies sometimes report the difference in Inventory Over and Short rather than the Cost of Goods Sold account. Inventory Over and Short is reported on the income statement in the “Other revenue and gains” or “Other expenses and losses” section.

FACTS At the end of the reporting period, the perpetual inventory account reported an inventory balance of \$4,000. However, a physical count indicates inventory of \$3,800 is actually on hand.

QUESTION What entry would the company make to record the shortage?

SOLUTION

To record the necessary write-down:

Inventory Over and Short	200	
Inventory		200

Example 7.2 Inventory Shortage

A company using the periodic inventory system does not report the account Inventory Over and Short. The reason: The periodic method does not have accounting records against which to compare the physical count. As a result, a company buries inventory overages and shortages in Cost of Goods Sold. This is a disadvantage of the periodic method because a company may not be aware that goods are being stolen, spoiling, or being thrown away. The company can only count what is on hand and assume that the rest of the goods were sold.

Accounting Matters

Staying Lean

When you drop by a **Walmart** store, you are witnessing one of history's greatest logistical and operational successes. With over 10,500 retail locations in 24 countries, Walmart manages \$45 billion in inventory. With a business model built on “everyday low price,” effective and efficient inventory control and supply chain management is imperative. Walmart uses its buying power in the supply chain to purchase an increasing proportion of its goods directly from manufacturers and on a combined basis across geographic borders. Walmart estimates that it saves 5–15% across its

supply chain by implementing direct purchasing on a combined basis for the 15 countries in which it operates.

And for Walmart, no detail is too small. Recently, Walmart began testing a new system of bringing extra inventory out of its back storage rooms onto the top shelves of the sales floor. The change makes the inventory more accessible, brings more sales associates into the store where they can help customers, and opens up storage space for more productive uses. In one location, the freed-up space was used for career-building education for Walmart employees!

Sources: J. Birchall, “Walmart Aims to Cut Supply Chain Cost,” *Financial Times* (January 4, 2010); and S. Nassauer, “Wal-Mart Shrinks the Big Box, Vexing Vendors,” *Wall Street Journal* (October 25, 2015).

FACTS Assume that **The Gap** uses a perpetual inventory system. Beginning inventory consists of 50 T-shirts that cost \$34 each. During June, The Gap purchased 150 units at \$34 each on account, returned 6 T-shirts for credit, and sold 125 T-shirts for \$45 each on account.

INSTRUCTIONS

- Journalize the June inventory transactions for The Gap.
- Use a T-account to post the June transactions to the inventory account and calculate the ending inventory balance.

Put It into Practice LO 7.1 Record Inventory

SOLUTION

a.	Inventory ($150 \times \$34$)	5,100	
	Accounts Payable		5,100
	Accounts Payable ($6 \times \$34$)	204	
	Inventory		204
	Accounts Receivable ($125 \times \$45$)	5,625	
	Sales Revenue		5,625
	Cost of Goods Sold ($125 \times \$34$)	4,250	
	Inventory		4,250
b.	Inventory		
	Beg. inventory ($50 \times \$34$)	1,700	
	Purchases	5,100	
			Returns 204
			Sales 4,250
	End. inventory	2,346	

7.2 Goods and Costs Included in Inventory

LEARNING OBJECTIVE 2

Determine the goods and costs included in inventory.

Goods Included in Inventory

A company recognizes inventory and accounts payable at the time it controls the asset. Control is therefore the key factor in determining when purchases and sales of a product are recognized. For example, consider the following.

- When **Verizon** purchases **Apple** watches for resale, Verizon records these watches as inventory at the time control passes to Verizon.
- Verizon controls the Apple watches when it has the ability to direct the use of and obtain substantially all the benefits from these watches.
- Control also includes Verizon's ability to prevent other companies from directing the use of or receiving the benefits from these watches.

Companies often look to various indicators to determine whether control has passed, as indicated in Chapter 3. One of these indicators, passage of title, is often used to determine control because the rights and obligations are established legally. For example, when Verizon purchases the Apple watches, legal title belongs to Verizon until the watches are sold to customers.²

²As indicated in Chapter 6, Lululemon recognized accounts receivable and sales revenue when it transferred control of its yoga outfit to its customer, Jennifer Burian.

Goods in Transit

Often, a company like **Walgreens** purchases merchandise that remains in transit—not yet received—at the end of a fiscal period. Who owns the goods while they are in transit? The accounting for these goods depends on who controls the merchandise. In these situations, companies generally determine control based on who has legal title to the goods by applying the “passage of title” rule.

- If a supplier ships goods to Walgreens **f.o.b. shipping point**, title passes to Walgreens when the supplier delivers the goods to the common carrier, which acts as an agent for Walgreens. (The abbreviation f.o.b. stands for free on board.)
- If the supplier ships the goods **f.o.b. destination**, title passes to Walgreens only when it receives the goods from the common carrier.

“Shipping point” and “destination” are often designated by a particular location, for example, f.o.b. Denver.

Illustration 7.5 indicates how legal title and ownership are determined by the terms of sale.

ILLUSTRATION 7.5 Terms of Sale

When Walgreens obtains legal title to goods, it records them as purchases in that fiscal period, assuming a periodic inventory system. Therefore, goods shipped to Walgreens f.o.b. shipping point, but in transit at the end of the period, belong to Walgreens. Walgreens should show the purchase and the related accounts payable in its records because legal title to these goods passed to Walgreens upon shipment of the goods. To disregard such purchases results in understating inventories and accounts payable in the balance sheet.

Consigned Goods

Companies market certain products through a **consignment** shipment. Under this arrangement, a company like Williams Art Gallery (the consignor) ships various art merchandise to **Sotheby's Holdings** (the consignee), which acts as Williams' agent in selling the **consigned goods**. Sotheby's agrees to accept the goods without any liability, except to exercise due care and reasonable protection from loss or damage, until it sells the goods to a third party. When Sotheby's sells the goods, it remits to Williams the revenue, less a selling commission and expenses incurred.

Goods out on consignment remain the property of the consignor (Williams in the example above). Although Sotheby's has physical possession of the goods, it does not have control because legal title and the risks and rewards of ownership remain with Williams. Williams therefore includes the goods in its inventory at cost. If goods out on consignment are a material amount, a consignor discloses the inventory on consignment in the notes to the financial statements.

The consignee makes **no entry** to the Inventory account for goods received. The consignee should be extremely careful not to include any of the goods consigned as a part of its inventory. Additional discussion related to consignments is provided in Chapter 17.

Consignor

Other current assets	XXX

Sales with Returns

As we indicated earlier, transfer of legal title is the general guideline used to determine whether a company should include an item in inventory. Unfortunately, transfer of legal title and the underlying substance of the transaction sometimes do not match. For example, legal title may have passed to the purchaser, but the seller of the goods retains control of the inventory.

Sales with high rates of return illustrates the types of problems companies encounter in practice. In industries such as publishing, music, toys, and sporting goods, formal or informal agreements often exist that permit purchasers to return inventory for a full or partial refund.

Example 7.3 Returns

FACTS Quality Publishing Company sells textbooks to Campus Bookstores with an agreement that Campus may return for full credit any books not sold. Historically, Campus Bookstores returned approximately 25% of the textbooks from Quality Publishing.

QUESTION How should Quality Publishing report its sales transactions with Campus Bookstores?

SOLUTION

The key question to determine whether a sale occurs is: Has Quality Publishing transferred control of these goods to Campus Bookstore?

- Because Campus Bookstore now has the ability to direct the use of and obtain substantially all the benefits from these textbooks, these transactions are normally recorded as a sale by Quality Publishing.
- In addition, the normal indicators for transfer of control, such as passage of legal title, loss of physical control, and transfer of risks and rewards of ownership, appear to have occurred. However, Quality Publishing must also recognize that only partial control has transferred to Campus Bookstore.

Therefore, Quality Publishing does the following.

1. **Record sales revenue at the amount it expects to receive from the transaction.** As discussed in Chapter 6, this transaction involves variable consideration. Therefore, the transaction price is adjusted to recognize that a portion of these textbooks will be returned.
2. **Establish an estimated inventory return account to recognize that some of its textbooks will be returned.** The reason for recording estimated inventory return is that control over a significant number of the textbooks has not passed to Campus Bookstore.

Underlying Concepts

Recognizing revenue at the time the inventory is “parked” violates the revenue recognition principle. As discussed in Chapter 3, a performance obligation is not met because control has not been transferred to the buyer.

As indicated in Example 7.3, control does pass from seller (Quality Publishers) to buyer (Campus Bookstores) for a majority of the textbooks but not all of them. Quality Publishing therefore records an estimated inventory return amount to recognize that fact. If returns are unpredictable and uncertain, Quality Publishing should not consider the textbooks sold and should not remove the goods from its inventory.

A similar situation occurs when a company “sells” inventory but enters into either an implicit or explicit repurchase agreement. These arrangements are often described in practice as “**parking transactions**.” As with sales returns, when a repurchase agreement exists, the company should report the inventory and related liability (to repurchase the inventory) on its books. [2] The reason? The seller has retained control of the asset (see **Underlying Concepts**).

These examples illustrate the difficulty of determining when control has passed in situations where substantial returns or repurchase agreements are involved. [3] We provide expanded discussion of special sales agreements and high rates of returns in Chapter 17.

Accounting Matters

No Parking

In one of the more elaborate accounting frauds, employees at **Kurzweil Applied Intelligence Inc.** booked millions of dollars in phony sales during a two-year period that straddled two audits and an initial public stock offering (IPO). They dummed up phony shipping documents and logbooks to support bogus sales transactions. Then, they shipped high-tech equipment, not to customers but to a public warehouse for “temporary” storage, where some of it sat for 17 months. So Kurzweil still had ownership and as discussed, no sale should be recorded on these parking transactions, since Kurzweil still controlled the inventory.

To foil auditors’ attempts to verify the existence of the inventory, Kurzweil employees moved the goods from warehouse to warehouse. To cover the fraudulently recorded sales transactions as auditors closed in, the employees brought back the still-hidden goods, under the pretense that the goods were returned

by customers. When auditors uncovered the fraud, the bottom dropped out of Kurzweil’s stock.

In response to these shady practices, companies and auditors are harnessing technology-enabled tools to monitor and better track inventory. For example, **EY** is expanding the use of drones in inventory observations, as part of its digital auditing capabilities, which helps improve monitoring capabilities as well as the accuracy and frequency of inventory counts. And a growing number of companies are using barcode systems and radio-frequency identification (RFID), which attaches a digital tag to items of inventory. This enables individual products or components to be tracked throughout the supply chain, enhancing inventory control, stock security, and quality management. The costs of these technology tools have come down recently, so that we now have more tools to crack down on inventory fraudsters.

Sources: Adapted from “Anatomy of a Fraud,” *BusinessWeek* (September 16, 1996), pp. 90–94; “EY Scaling the Use of Drones in the Audit Process,” *EY London* (June 13, 2017); and B. Dohrer, “How Auditors Can Test Inventory Without a Site Visit,” *Journal of Accountancy* (March 26, 2020).

Costs Included in Inventory

One of the most important problems in dealing with inventory concerns the dollar amount at which to carry the inventory in the accounts. **Companies generally account for the acquisition of inventories, like other assets, on a cost basis.**

Product Costs versus Period Costs

Product costs are those costs **directly** connected with bringing the inventory to the buyer’s place of business and converting the goods to a salable condition. **Period costs** are **indirectly** related to the acquisition of goods and are generally more difficult to assign to specific inventory items. **Illustration 7.6** lists examples of product and period costs and the accounting treatment of each.

Type of Cost	Examples	Accounting Treatment
Product cost	<ul style="list-style-type: none"> Freight charges on goods purchased Insurance costs incurred by buyer while goods are in transit Unpacking and unloading costs Preparing goods for sale 	Included in the inventory asset account in the balance sheet
Period cost	<ul style="list-style-type: none"> Selling expenses related to inventory Interest costs related to financing inventory purchases³ General and administrative costs related to inventory 	Expensed as incurred in the income statement

ILLUSTRATION 7.6 Product versus Period Costs

³The FASB ruled that companies should not capitalize interest costs for inventories that they routinely manufacture or otherwise produce in large quantities on a repetitive basis. On the other hand, companies should capitalize interest costs related to assets constructed for internal use or assets produced as discrete projects (such as ships or real estate projects) for sale or lease. We discuss interest capitalization as it relates to these assets in Chapter 9. [4]

Even though period costs are just as much a cost of the product as the initial purchase price, they may be so indirectly related to the inventory purchasing process that any allocation of these costs is arbitrary and time-consuming. It is more practical for companies to simply expense the costs as incurred.⁴

Cash Discounts (Purchase Discounts)

We discussed cash discounts (sales discounts) from the seller's perspective in Chapter 6. We now consider cash discounts (purchase discounts) from the purchaser's perspective. **Purchase Discounts** can be accounted for using either the gross method or the net method.

If a company uses the **gross method** under the periodic inventory system, it records the purchases and accounts payable at the invoice price (**the gross amount**). A purchase discount is recorded if the company pays within the discount period. A company reports purchase discounts as a deduction from purchases when determining cost of goods sold.

Under the **net method**, a company recognizes the purchase and related accounts payable at the invoice price **less the cash discount**. If the company does not take the discount within the discount period, it records a Purchase Discount Loss. Purchase Discount Loss is a financial expense and is reported in the "Other Expenses and losses" section of the income statement.

Example 7.4 Purchase Discounts

FACTS Assume that **BCycle** has the following transactions.

- Purchased bicycle inventory with cost \$10,000, terms 2/10, net 30.
- Invoices of \$4,000 are paid within discount period.
- Invoices of \$6,000 are paid after discount period.

QUESTION How should BCycle record these transactions under gross and net methods using a periodic system?

SOLUTION

Gross Method		Net Method	
Purchase cost \$10,000, terms 2/10, net 30:			
Purchases	10,000	Purchases	9,800 ^b
Accounts Payable	10,000	Accounts Payable	9,800
Invoices of \$4,000 are paid within discount period:			
Accounts Payable	4,000	Accounts Payable	3,920
Purchase Discounts	80 ^a	Cash	3,920
Cash	3,920		
Invoices of \$6,000 are paid after discount period:			
Accounts Payable	6,000	Accounts Payable	5,880
Cash	6,000	Purchase Discounts Lost ^c	120 ^c
		Cash	6,000
^a \$4,000 × .02; ^b \$10,000 × .98; ^c \$6,000 × .02			
If using a perpetual inventory system, entries to Purchases and Purchase Discounts are recorded in the Inventory account.			

⁴Companies should not record abnormal freight, handling costs, and amounts of wasted materials (spoilage) as inventory costs. If the costs associated with the actual level of spoilage or product defects are greater than the costs associated with normal spoilage or defects, the company should charge the excess as an expense in the current period. [5]

The net method is considered better for two reasons.

1. It provides a correct reporting of the cost of the asset and related liability.
2. It can measure management inefficiency by holding management responsible for discounts not taken.

However, many believe that the somewhat more complicated net method is not justified by the resulting benefits (see **Underlying Concepts**). This could account for the widespread use of the less logical but simpler gross method. In addition, some contend that management is reluctant to report in the financial statements the amount of purchase discounts lost. *Use the gross method to record purchase discounts for homework problems unless specified otherwise.*

Underlying Concepts

Not using the net method because of resultant difficulties is an example of the application of the cost constraint.

FACTS Gard Company sells basketballs and basketball hoops and is analyzing the following inventory information at year-end 2025.

1. Gard took a physical inventory of basketballs on December 31 and determined that there were \$200,000 worth of basketballs on hand. Not included in the physical count were \$25,000 of basketballs purchased from Ryan Corporation, f.o.b. shipping point, and \$22,000 of basketballs sold to Moore Inc. for \$30,000, f.o.b. destination. Both the Ryan purchase and the Moore sale were in transit at year-end.
2. Gard had the following information for basketball hoops in its general ledger for the year 2025.

Basketball hoops purchased for resale	\$507,500
Purchase returns	9,000
Marketing expense	7,100
Freight-in	19,220
Interest on notes payable to vendors	4,100
Freight-out (delivery expense on sales)	22,650
Cash discounts on purchases	5,190

Put It into Practice LO 7.2

Determine and Record Inventory Costs

INSTRUCTIONS

- a. What amount should Gard report as its December 31 basketball inventory?
- b. What is Gard's inventoriable cost related to basketball hoops for 2025?

SOLUTION

- a. Basketball inventory balance:

December 31 inventory per physical count	\$200,000
Goods-in-transit purchased FOB shipping point	25,000
Goods-in-transit sold FOB destination	22,000
December 31 inventory	<u>\$247,000</u>

- b. Basketball hoops inventoriable costs for 2025:

Merchandise purchased	\$507,500
Add: Freight-in	<u>19,220</u>
	526,720
Less: Purchase returns	\$9,000
Purchase discounts	<u>5,190</u>
Inventoriable cost	<u>\$512,530</u>

Marketing expense and freight-out are recorded as selling expenses.

7.3 Which Cost Flow Assumption to Adopt?

LEARNING OBJECTIVE 3

Describe and compare the cost flow assumptions used to account for inventories.

During any given fiscal period, companies typically purchase merchandise at several different prices. If a company prices inventories at cost and it made numerous purchases at different unit costs, which cost price should it use? Conceptually, a specific identification of the given items sold and unsold seems optimal. But this measure often proves both expensive and impossible to achieve. **So what is a company to do?**

Tracking costs of inventory depends heavily on the type of inventory carried. Companies that have small amounts of unique inventory items can use the specific identification method. For example, a small jewelry store has limited inventory and many of the items are unique. In this situation, the store knows its cost for each unique piece of jewelry, and it can easily track the cost of each item in its accounting system.

Companies with large amounts of inventory of similar items do not use the specific identification method. As a result, companies use one of several systematic inventory cost flow assumptions.

- Accounting standards allow these companies to make a cost flow assumption. The key word here is “assumption.” The company is going to “assume” that goods are sold in a certain pattern.
- There is no requirement that the cost flow assumption adopted be consistent with the physical movement of goods. A company’s major objective in selecting a method should be to choose the one that, under the circumstances, most clearly reflects periodic income. [6]

For example, assume that ZenLife Inc. had the following transactions for its inventory of stress reduction balls in its first month of operations, as shown in **Illustration 7.7**.

ILLUSTRATION 7.7 ZenLife Transactions in the Cost of Goods Sold Formula

	No. of Units	Cost per Unit	Total Cost
Beginning inventory	0	\$0.00	\$ 0
Purchases			
March 2	2,000	4.00	8,000
March 15	6,000	4.40	26,400
March 30	2,000	4.75	9,500
Cost of goods available for sale	10,000		\$43,900
Ending inventory	6,000		?
Cost of goods sold	4,000		?

As indicated in Illustration 7.7, we are focusing on ZenLife’s **cost** of inventory items, not on ZenLife’s selling price of the goods. In addition, we highlight the ZenLife information in the cost of goods sold formula. The goal is to determine the amounts for the “question marks.”

Cost Flow Assumptions

We will determine ending inventory and cost of goods sold for Zenlife, using four different cost flow assumptions: specific identification, average-cost, first-in, first-out (FIFO), and last-in, first-out (LIFO).

Specific Identification

Specific identification calls for identifying the specific cost of each item sold and each item left in inventory. This method may be used only in instances where it is practical to separate physically the different purchases made. Companies only use this method when handling a relatively small number of costly, easily distinguishable items. In the retail trade, this includes some types of jewelry, automobiles, and some furniture. In manufacturing, it includes special orders and many products manufactured under contract. Example 7.5 shows how ZenLife computes the ending inventory and cost of goods sold, using specific identification.

FACTS Refer to the information in Illustration 7.7. ZenLife Inc.'s 6,000 units of ending inventory consists of:

- 1,000 units from the March 2 purchase.
- 3,000 from the March 15 purchase.
- 2,000 from the March 30 purchase.

QUESTION How would you compute the cost of ZenLife's ending inventory and cost of goods sold under the specific identification method?

SOLUTION

<u>Date</u>	<u>No. of Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
March 2	1,000	\$4.00	\$ 4,000
March 15	3,000	4.40	13,200
March 30	2,000	4.75	9,500
Ending inventory	<u>6,000</u>		<u>\$26,700</u>
Cost of goods available for sale (computed in Illustration 7.7)		\$43,900	
Deduct: Ending inventory		26,700	
Cost of goods sold		<u>\$17,200</u>	

Example 7.5 Specific Identification Inventory Cost Flow

The specific identification method appears ideal.

- Specific identification matches actual costs against actual revenue, and it reports ending inventory at actual cost.
- In other words, **under specific identification, the cost flow matches the physical flow of the goods.**

On closer observation, however, this method has certain deficiencies.

Some argue that specific identification allows a company to manipulate net income. For example, assume that a wholesaler purchases identical plywood early in the year at three different costs. When it sells the plywood, the wholesaler can select either the lowest or the highest cost to charge to cost of goods sold. It simply selects the plywood from a specific lot for delivery to the customer. A business manager, therefore, can manipulate net income by delivering to the customer the higher- or lower-cost item, depending on whether the company seeks lower or higher reported earnings for the period.

Another problem relates to the arbitrary allocation of costs that sometimes occurs with specific inventory items. For example, a company often faces difficulty in relating shipping charges, storage costs, and discounts directly to a given inventory item. This results in allocating these costs somewhat arbitrarily, leading to a “breakdown” in the precision of the specific identification method.⁵

⁵The film industry provides a good illustration of the cost allocation problem. Actors often receive a percentage of net income for a given movie or TV program. Some actors, however, have alleged that the studios allocate additional costs to successful projects to avoid sharing profits.

Average-Cost

As the name implies, the **average-cost method** tracks inventory items on the basis of the average cost of all similar goods available during the period. Determining the average cost of inventory will vary depending on whether the company uses a periodic or perpetual inventory system.

When using the **periodic inventory method**, in which the amount of inventory is computed at the end of the period, ZenLife determines the ending inventory and cost of goods sold using a **weighted-average method**, as shown in Example 7.6. Note that when companies have beginning inventory, it is also included in the calculation of total goods available for sale.

Example 7.6 Average-Cost Inventory Cost Flow (periodic method)

FACTS ZenLife Inc. uses the periodic method and has 6,000 units of ending inventory.

QUESTION How would you compute ZenLife's ending inventory and cost of goods sold using the weighted-average method?

SOLUTION

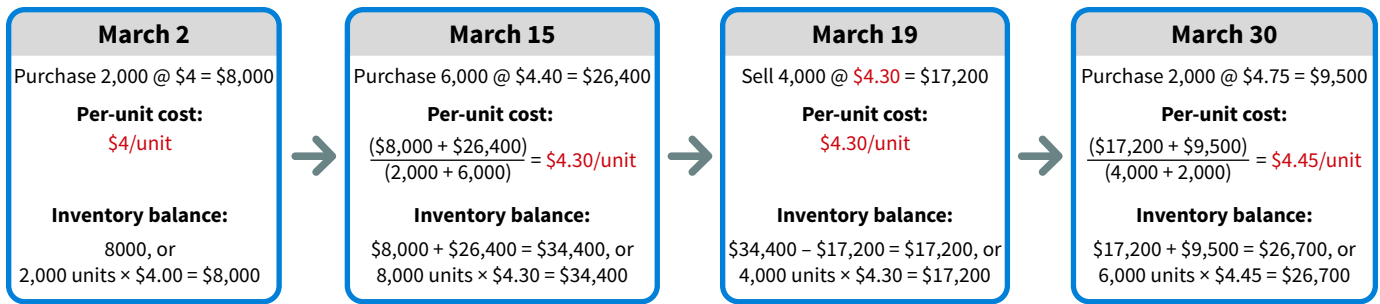

<u>Date of Invoice</u>	<u>No. Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
Beginning inventory			\$ 0
March 2	2,000	\$4.00	8,000
March 15	6,000	4.40	26,400
March 30	2,000	4.75	9,500
Total goods available	<u>10,000</u>		<u>\$43,900</u>
Weighted-average cost per unit		$\frac{\$43,900}{10,000} = \4.39	
Inventory in units	6,000 units		
Ending inventory		$6,000 \times \$4.39 = \$26,340$	
Cost of goods available for sale			\$43,900
Deduct: Ending inventory			<u>26,340</u>
Cost of goods sold			<u>\$17,560</u>

When using the **perpetual inventory method**, companies use the **moving-average method**. Since the inventory account is continuously updated for purchases of inventory, the average inventory cost will change each time a purchase is made, which results in a “moving average.” **Illustration 7.8** shows the application of the average-cost method for perpetual records.

ILLUSTRATION 7.8 Moving-Average Method—Perpetual Inventory

<u>Date</u>	<u>Purchased</u>	<u>Sold</u>	<u>Balance</u>
March 2	(2,000 @ \$4.00) \$ 8,000		(2,000 @ \$4.00) \$ 8,000
March 15	(6,000 @ 4.40) 26,400		(8,000 @ 4.30) 34,400
March 19		(4,000 @ \$4.30) \$17,200	(4,000 @ 4.30) 17,200
March 30	(2,000 @ 4.75) 9,500		(6,000 @ 4.45) 26,700

As indicated, ZenLife computes a **new average unit cost** each time it makes a purchase, as follows.

Companies often use average-cost methods for practical rather than conceptual reasons. These methods have the following advantages.

- They are both simple to apply and objective.
- They are not as subject to income manipulation as some of the other inventory costing methods.

In addition, proponents of the average-cost methods reason that measuring a specific physical flow of inventory is often impossible. Therefore, it is better to cost items on an average-price basis. This argument is particularly persuasive when dealing with similar inventory items.

First-In, First-Out (FIFO)

The **first-in, first-out (FIFO) method** assumes that a company sells goods in the order in which it purchases them. In other words, the FIFO method assumes that **the first goods purchased are the first sold**. The inventory remaining must therefore represent the most recent purchases. Example 7.7 shows how ZenLife computes the ending inventory and cost of goods sold using the FIFO method, assuming ZenLife uses the **periodic inventory system**.

FACTS ZenLife Inc. uses the periodic system and has 6,000 units of ending inventory.

QUESTION What is ZenLife's ending inventory and cost of goods sold using the FIFO cost flow assumption?

SOLUTION

We know that 6,000 units are left in ending inventory. If we assume the first items (old items) into inventory are the first ones to be sold, that means the last items (newer items) into inventory are still on hand, as summarized in the following.

Date	No. Units	Unit Cost	Total Cost
Beginning inventory			\$ 0
March 30	2,000	\$4.75	9,500
March 15	4,000	4.40	17,600
Ending inventory	6,000		\$27,100
Cost of goods available for sale (computed in Illustration 7.7)		\$43,900	
Deduct: Ending inventory		27,100	
Cost of goods sold		\$16,800	

As indicated, the ending inventory consists of all 2,000 units from the March 30 purchase, and 4,000 units from the March 15 purchase. Once the cost of ending inventory is determined, it is easy to calculate cost of goods sold by subtracting ending inventory from cost of goods available for sale.

Example 7.7 FIFO Inventory Cost Flow (periodic system)

If ZenLife instead uses a **perpetual inventory system** in quantities and dollars, it attaches a cost figure to each sale of inventory. The cost of the 4,000 units removed on March 19 consists of the cost of the items purchased on March 2 and March 15. **Illustration 7.9** shows the inventory on a FIFO basis **perpetual system** for ZenLife.

ILLUSTRATION 7.9 FIFO Method—Perpetual Inventory

Date	Purchased		Sold	Balance	
March 2	(2,000 @ \$4.00)	\$ 8,000		2,000 @ \$4.00	\$ 8,000
March 15	(6,000 @ 4.40)	26,400		2,000 @ 4.00 6,000 @ 4.40	34,400
March 19			2,000 @ \$4.00 2,000 @ 4.40 (\$16,800)	4,000 @ 4.40	17,600
March 30	(2,000 @ 4.75)	9,500		4,000 @ 4.40 2,000 @ 4.75	27,100

Here, the ending inventory is \$27,100, and the cost of goods sold is \$16,800 $[(2,000 @ \$4.00) + (2,000 @ \$4.40)]$, which is the same result as FIFO under the periodic method in Example 7.7. **In all cases where FIFO is used, the inventory and cost of goods sold would be the same at the end of the month whether a perpetual or periodic system is used.** Why? Because the same costs will always be first in and, therefore, first out. This is true whether a company computes cost of goods sold as it sells goods throughout the accounting period (the perpetual system) or as a residual at the end of the accounting period (the periodic system).

Global View

IFRS does not permit LIFO. See the *IFRS Insights in Chapter 8* for a discussion of the similarities and differences between IFRS and GAAP regarding inventory.

Last-In, First-Out (LIFO)

The **last-in, first-out (LIFO) method** matches the cost of the last goods purchased against revenue (see **Global View**). If ZenLife Inc. uses a **periodic inventory system**, it assumes that **the cost of the total quantity sold during the month comes from the most recent purchases**. Example 7.8 shows how ZenLife computes the ending inventory and cost of goods sold, using the LIFO method, assuming use of the periodic inventory system.

Example 7.8

LIFO Inventory Cost Flow (periodic system)

FACTS ZenLife Inc. uses a periodic system and has 6,000 units of ending inventory.

QUESTION How would you compute ZenLife's ending inventory and cost of goods sold using the LIFO cost flow assumption?

SOLUTION

We know that 6,000 units are left in ending inventory. If we assume the last items (newer items) into inventory are the first ones to be sold, that means the first items (older items) in inventory are still on hand, as summarized in the following.

Date of Invoice	No. Units	Unit Cost	Total Cost
Beginning inventory	0	\$0.00	\$ 0
March 2	2,000	4.00	8,000
March 15	4,000	4.40	17,600
Ending inventory	6,000		\$25,600
Goods available for sale (computed in Illustration 7.7)			
		\$43,900	
Deduct: Ending inventory		25,600	
Cost of goods sold		\$18,300	

As indicated, the ending inventory consists of all 2,000 units from the March 2 purchase, and 4,000 units from the March 15 purchase. Using the unit costs from those two purchases, the cost of ending inventory is \$25,600. Once the cost of ending inventory is determined, it is easy to calculate cost of goods sold (\$18,300) by subtracting ending inventory from cost of goods available for sale.

If ZenLife keeps a **perpetual inventory** record in quantities and dollars—such that it can reprice inventory layers with every sale—use of the LIFO method results in **different ending inventory and cost of goods sold amounts than the amounts calculated under the periodic method**. **Illustration 7.10** shows these differences under the perpetual method.

Date	Purchased	Sold	Balance
Beginning inventory			\$ 0
March 2	(2,000 @ \$4.00) \$ 8,000		2,000 @ \$4.00 8,000
March 15	(6,000 @ 4.40) 26,400		2,000 @ 4.00 } 6,000 @ 4.40 } 34,400
March 19		(4,000 @ \$4.40) \$17,600	2,000 @ 4.00 } 2,000 @ 4.40 } 16,800
March 30	(2,000 @ 4.75) 9,500		2,000 @ 4.00 } 2,000 @ 4.40 } 2,000 @ 4.75 } 26,300

ILLUSTRATION 7.10 LIFO Method—Perpetual Inventory

Under LIFO, the amounts calculated for ending inventory and cost of goods sold will be different when using a perpetual system versus a periodic system. The month-end periodic inventory computation presented in Example 7.8 (inventory \$25,600 and cost of goods sold \$18,300) shows a different amount from the perpetual inventory computation in Illustration 7.10 (inventory \$26,300 and cost of goods sold \$17,600). This occurs because the perpetual system continuously updates inventory for both sales and purchases.

Therefore, when a sale occurs, a perpetual system assigns the cost from the immediately preceding purchase. For example, after the March 30 purchase, there are three layers of inventory because each layer has a different cost. When the next sale of inventory occurs, ZenLife assumes that the \$4.75 layer will be sold first.

In contrast, the periodic system matches the total withdrawals for the month with the total purchases for the month in applying the LIFO method. The periodic computation assumed that ZenLife included the cost of the goods that it purchased on March 30 in the sale or issue on March 19. In contrast, the perpetual system matches each withdrawal with the immediately preceding purchases.

Inventory Valuation Methods—A Summary Analysis

Using the ZenLife example, let's compare the three major cost flow assumptions to show the effects they have on the financial statements. This comparison assumes the use of the **periodic inventory system** as well as the following additional information for ZenLife for the month of March.

- The selling price of the inventory items is \$7.00 each. ZenLife sold 4,000 units in March; therefore, total sales revenue is \$28,000. Note that selling price is not impacted by the inventory cost flow assumption chosen by the company.
- Operating expenses for March are \$5,000.
- Income tax rate is 30%.

Illustration 7.11 shows the comparative results on financial statement items of the use of FIFO, average-cost, and LIFO. The amounts for cost of goods sold and inventory are obtained from Example 7.6 for average-cost, Example 7.7 for FIFO, and Example 7.8 for LIFO. Take a minute to review the results.

ILLUSTRATION 7.11 Comparative Results of FIFO, Average-Cost, and LIFO for ZenLife

	FIFO	Average-Cost	LIFO
Income Statement			
Sales	\$28,000	\$28,000	\$28,000
Cost of goods sold	16,800	17,560	18,300
Gross profit	11,200	10,440	9,700
Operating expenses	5,000	5,000	5,000
Income before taxes	6,200	5,440	4,700
Income tax (30%)	1,860	1,632	1,410
Net income	\$ 4,340	\$ 3,808	\$ 3,290
Balance Sheet			
Inventory	\$27,100	\$26,340	\$25,600

What do you notice about the comparative income statements from Illustration 7.11? Since each method computes a different amount for cost of goods sold, it follows that each method results in a different amount for gross profit, income taxes, and net income. Also, the ending inventory amounts on the balance sheet are different.

What is causing these differences? During the month of March, ZenLife's cost of inventory increased. It started at \$4.00 per unit and gradually increased to \$4.75 per unit. When **inventory costs are rising**, the different methods will impact the income statement and balance sheet as follows.

- **LIFO: Results in the lowest gross profit, income tax, and net income.** Why? Because the higher inventory costs (\$4.75 and \$4.40) are included in cost of goods sold. The lower inventory costs are left in ending inventory on the balance sheet.
- **FIFO: Results in the highest gross profit, income tax, and net income.** Why? Because the lower inventory costs (\$4.00 and \$4.40) are included in cost of goods sold. The higher inventory costs are left in ending inventory on the balance sheet.
- **Average cost: Results in gross profit, income tax, net income, and inventory amounts that are between FIFO and LIFO.**

What if inventory costs are declining during the period? The analysis above would then yield the opposite results. FIFO would have the lowest net income, and LIFO would have the highest net income.

Basis for Selection of Inventory Method

How does a company choose among the various inventory methods? There are no absolute rules regarding the choice, and each method has its advantages and disadvantages. **Illustration 7.12** provides a summary of factors that companies consider when deciding between the extremes of FIFO and LIFO. Some of these factors were demonstrated with the ZenLife comparison analysis in Illustration 7.11.

As you can see, company managers have many factors to consider when deciding which inventory cost flow method to use. But there is one requirement that must be followed. If a company uses LIFO for the tax benefit of paying less income tax, then it must also use LIFO for financial reporting purposes. This requirement is referred to as the **LIFO conformity rule**. Essentially, if the company wants to take advantage of lower taxes, it must also report lower income and inventory in its financial statements.

Companies are allowed to combine inventory methods. For example, **John Deere** uses LIFO for most of its inventories and prices the remainder using FIFO. Although a company may use a variety of inventory methods to assist in accurate computation of net income, once it selects a costing method, it must apply it consistently thereafter. If conditions indicate that

ILLUSTRATION 7.12 Factors to Consider when Deciding Between FIFO and LIFO

Factors	FIFO	LIFO
Physical flow of goods	<ul style="list-style-type: none"> Typically, companies like to sell older goods first, so FIFO may mirror the actual flow of goods. For example, grocery stores want to sell older produce and dairy items before they spoil. 	<ul style="list-style-type: none"> Typically, goods are not sold on a LIFO basis except in specific situations. Therefore, LIFO generally does not mirror the actual flow of goods. For example, a coal pile is a unique situation. The last coal poured on top will be the first coal to be removed. The coal remover is not going to take coal from the bottom of the pile.
Income tax effects	<ul style="list-style-type: none"> In periods of rising inventory costs, FIFO results in higher income taxes. Higher tax payments reduce cash flows. 	<ul style="list-style-type: none"> In periods of rising inventory costs, LIFO results in lower income taxes. Lower income taxes owed translates to a true cash savings. This is often seen as the biggest advantage of LIFO.⁶
Earnings impact	<ul style="list-style-type: none"> In periods of rising inventory costs, FIFO results in higher reported earnings, which is pleasing to investors and the company's stock price. Corporate managers may prefer to have higher reported profits than lower taxes. 	<ul style="list-style-type: none"> In periods of rising inventory costs, LIFO results in lower reported earnings, which may not be pleasing to investors and may negatively impact the company's stock price. Corporate managers may prefer to have lower taxes to conserve cash than to have higher reported profits.
Matching of revenues and current costs on the income statement	<ul style="list-style-type: none"> Results in poor matching because older inventory costs (first in) are matched against current revenue. As shown in Illustration 7.11, a company appears more profitable under FIFO, but it is a "paper profit" or an "inventory profit." 	<ul style="list-style-type: none"> Results in better matching because recent inventory costs (last in) are matched against current selling price. As shown in Illustration 7.11, LIFO reduces or eliminates the "paper profit" or the "inventory profit."
Inventory on the balance sheet	<ul style="list-style-type: none"> Reflects current inventory costs because the old items (first in) are assumed to be sold. This can be a disadvantage because the inventory is more vulnerable to declines in value, which can lead to a substantial write-down. This can be an advantage because the more recent costs in inventory boosts the company's working capital position. 	<ul style="list-style-type: none"> Reflects old inventory costs because the new items (last in) are assumed to be sold. This can be an advantage because it substantially minimizes write-downs to market if inventory value declines. This can be a disadvantage because the old costs in inventory makes the working capital position of the company appear worse than it is.

the inventory costing method in use is unsuitable, the company must seriously consider all other possibilities before selecting another method and it should clearly explain any change and disclose its effect in the financial statements.

Switching Inventory Methods

Can a company switch from FIFO to LIFO, or from LIFO to FIFO? Yes it can, but switching will trigger tax consequences. For example, when **Chrysler** changed from LIFO to FIFO, it became responsible for an additional \$53 million in taxes that the company had deferred

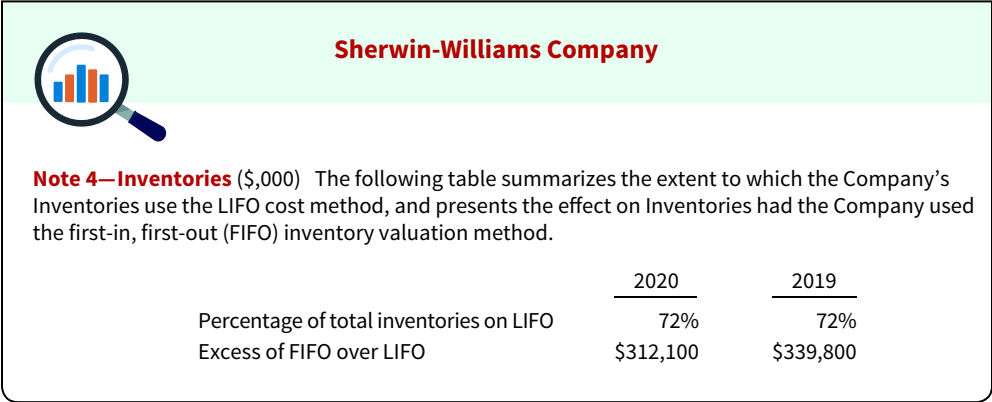

Using LIFO:	Using LIFO:
\$27	\$7
Million Loss	Million Loss

⁶A study [D. Tinkelman, "Who Benefits from LIFO?" *Tax Notes* (December 2017)] of all public companies documented that less than 10% of large and small companies use LIFO, a decline from nearly 30% in 1985. Because of steady or falling raw materials costs and costs savings from electronic data interchange and just-in-time technologies in recent years, many businesses using LIFO no longer experience substantial tax benefits. Even some companies for which LIFO is creating a benefit are finding that the administrative costs associated with LIFO are higher than the LIFO benefit obtained. As a result, some companies are moving to FIFO or average-cost.

over 14 years of LIFO inventory valuation. Why, then, would Chrysler, and other companies, change to FIFO? The major reason was the profit crunch of that era. Although Chrysler showed a loss of \$7.6 million after the switch, the loss would have been **\$20 million more** if the company had not changed its inventory valuation from LIFO to FIFO.

The concern about reduced income resulting from adoption of LIFO has even less substance now because the IRS has relaxed restrictions against providing non-LIFO income numbers as supplementary information. As a result, companies now provide supplemental non-LIFO disclosures. While not intended to override the basic LIFO method adopted for financial reporting, these disclosures may be useful in comparing operating income and working capital with companies not using LIFO. For example, **Sherwin-Williams Company**, a LIFO user, presented the information in its annual report as shown in **Illustration 7.13**.

ILLUSTRATION 7.13
 Supplemental Non-LIFO
 Disclosure

Sherwin-Williams Company

Note 4—Inventories (\$,000) The following table summarizes the extent to which the Company's Inventories use the LIFO cost method, and presents the effect on Inventories had the Company used the first-in, first-out (FIFO) inventory valuation method.

	2020	2019
Percentage of total inventories on LIFO	72%	72%
Excess of FIFO over LIFO	\$312,100	\$339,800

Accounting Matters

LIFO has a lot going for it in terms of tax savings and providing an income number that better reflects the gross profit associated with inventories with different historical costs. While many believe that LIFO provides a more useful income measure, other methods, such as FIFO and average-cost, better reflect the current value of inventory on the balance sheet. Here are some reasons why companies have not adopted LIFO.

- Many companies discontinued LIFO use to support uniformity of inventory valuation across operations. That is, companies were using LIFO in their U.S. operations but FIFO and/or average-cost in international units. The switch from LIFO simplifies the external reporting for these multinational companies.
- The recent periods of low inflation have resulted in less significant tax benefits associated with LIFO use. That is, in times of rising costs, by expensing the most recently purchased items, cost of goods sold is higher (compared to FIFO or average-cost) and taxable income is lower. Indeed, a

The Itch to Switch?

number of companies do not believe the smaller tax benefits of LIFO offset the costs.

- Finally, the companies most resistant to make the switch from LIFO are those with large inventory balances. That is, the higher the inventory balance, the higher the additional tax payment will be upon the switch to FIFO. However, a growing number of companies have implemented just-in-time (JIT) or other lean manufacturing techniques, under which much lower inventories are kept on hand. In the extreme, JIT leads to zero inventory and no LIFO effect relative to other methods. For example, **JC Penney** recently switched from LIFO to FIFO in the same period that it rolled out its “door-to-floor” lean inventory strategy. As a result, the accounting effect of the change to FIFO was immaterial.

In summary, the merits of LIFO use (about which you have learned in this chapter) are many. However, these benefits appear to be waning. We expect more companies to consider a voluntary switch away from LIFO in the future.

Sources: Adapted from Shumsky, “Oil Price Rally, Accounting Method Push Down Oil Inventories,” *Wall Street Journal* (December 14, 2016); and D. P. Tinkelman and C. E. I. Tan, “Estimating the Potential Revenue Impact of Taxing LIFO Reserves in the Current Low Commodity Price Environment,” *Journal of the American Tax Association* (January 2018).

FACTS Harper Company uses a periodic inventory system. The following information is available for June, when the company sold 1,200 units.

<u>Date</u>	<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
Beginning inventory			\$ 0
June 1 inventory	500	\$7	3,500
June 12 purchase	800	8	6,400
June 25 purchase	700	9	6,300
	<u>2,000</u>		<u>\$16,200</u>

INSTRUCTIONS

Compute the cost of goods sold for the month of June and the June 30 ending inventory using each of the following methods.

- Average-cost.
- FIFO.
- LIFO.

SOLUTION

If the company sold 1,200 units, that means 800 are left in ending inventory (2,000 – 1,200).

a. Average-cost method:

<u>Date</u>	<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
June 1	500	\$7	\$ 3,500
June 12	800	8	6,400
June 25	700	9	6,300
Goods available for sale	<u>2,000</u>		<u>\$16,200</u>

Weighted-average cost per unit = $\$16,200 \div 2,000 = \8.10

Ending inventory = $(2,000 - 1,200) \times \$8.10 = \$6,480$

Cost of goods sold = $1,200 \times \$8.10 = \$9,720$

b. FIFO method:

<u>Date</u>	<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
June 25	700	\$9	\$6,300
June 12	100	8	800
Ending inventory	<u>800</u>		<u>\$7,100</u>

<u>Date</u>	<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
June 1 inventory	500	\$7	\$ 3,500
June 12 purchase	700	8	5,600
Cost of goods sold	<u>1,200</u>		<u>\$ 9,100</u>

c. LIFO method:

<u>Date</u>	<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
June 1	500	\$7	\$3,500
June 12	300	8	2,400
Ending inventory	<u>800</u>		<u>\$5,900</u>

<u>Date</u>	<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
June 12 purchase	500	\$8	\$ 4,000
June 25 purchase	700	9	6,300
Cost of goods sold	<u>1,200</u>		<u>\$10,300</u>

Put It into Practice LO 7.3
Compute Inventory
Using Cost Flow
Assumptions

7.4 Special Issues Related to LIFO

LEARNING OBJECTIVE 4

Identify special issues related to LIFO.

LIFO Reserve

Companies that use LIFO for tax and external reporting purposes often maintain a FIFO or average-cost system for internal reporting purposes. They do this for several reasons.

1. Companies often base their sales pricing decisions on a FIFO or average-cost assumption, rather than on a LIFO basis.
2. Recordkeeping on some other basis is easier because the LIFO assumption usually does not approximate the physical flow of the product.
3. Profit-sharing and other bonus arrangements often depend on a non-LIFO inventory assumption.
4. The use of a pure LIFO system is troublesome for interim periods, which require estimates of year-end quantities and prices.

At the end of a period when it's time to prepare financial statements, a company makes an entry to adjust the internal reporting system to the LIFO amounts for ending inventory and cost of goods sold. Companies use an allowance account to record this adjustment, rather than adjusting the inventory account directly.

- The allowance account is called the Allowance to Reduce Inventory to LIFO account, also referred to as the **LIFO reserve**. The balance in this allowance account is carried forward each year and adjusted as necessary.
- The **change** in the allowance balance from one period to the next is called the **LIFO effect**.

Example 7.9 LIFO Reserve/LIFO Effect

Allowance to Reduce Inventory to LIFO

	Beg. bal.	20,000
		30,000
	End. bal.	50,000

FACTS Acme Boot Company uses the FIFO method for internal reporting purposes and LIFO for external reporting purposes. At January 1, 2025, the Allowance to Reduce Inventory to LIFO balance is \$20,000. At December 31, 2025, Acme's trial balance shows an inventory value of \$850,000 under FIFO while LIFO inventory is \$800,000.

QUESTION What entry would you make to record the LIFO effect?

SOLUTION

Acme Boot must report an ending balance in its Allowance to Reduce Inventory to LIFO account of \$50,000 (\$850,000 – \$800,000). Acme Boot adjusts the allowance for the LIFO effect of \$30,000 (\$50,000 – \$20,000) and makes the following entry at year-end.

Cost of Goods Sold	30,000	
Allowance to Reduce Inventory to LIFO		30,000

On the December 31, 2025, balance sheet, Acme Boot deducts Allowance to Reduce Inventory to LIFO from inventory to ensure that it states the inventory on a LIFO basis at year-end.

In the notes to the financial statements, companies generally should disclose the LIFO reserve, as shown in [Illustration 7.14](#). [7]

		
Caterpillar Inc.		
(in millions)		
Inventories	<u>Current Year</u>	<u>Previous Year</u>
	\$11,402	\$11,266
<p>Note 1 (partial): Inventories We state inventories at the lower of cost or net realizable value. We principally determine cost using the last-in, first-out (LIFO) method. If the FIFO (first-in, first-out) method had been in use, inventories would have been \$2,132 million and \$2,086 million higher than reported in the current and prior year, respectively.</p>		

ILLUSTRATION 7.14 Note Disclosures of LIFO Reserve

Investors commonly use the current ratio (current assets divided by current liabilities) to evaluate a company's liquidity. A higher current ratio indicates that a company is better able to meet its current obligations when they come due. It is not meaningful to compare the current ratio for a company using LIFO to one for a company using FIFO. It would be like comparing apples to oranges since the two companies measure inventory and cost of goods sold differently.

Analysts therefore use the following adjustment to make information reported by LIFO companies comparable to the information provided by FIFO companies.

$$\text{Inventory Adjustment: LIFO Inventory} + \text{LIFO Reserve} = \text{FIFO Inventory}$$

For cost of goods sold, deduct the change in the LIFO reserve (the LIFO effect) from the LIFO cost of goods sold to yield the comparable FIFO cost of goods sold.

FACTS Refer to Illustration 7.14 for information about **Caterpillar's** inventory. The company has current assets of \$39,464 million and current liabilities of \$25,717 million.

QUESTION Using Illustration 7.14 and the above information, what is Caterpillar's current ratio after adjusting for the LIFO reserve?

SOLUTION

For Caterpillar, the current ratio using LIFO is $\$39,464 \div \$25,717 = 1.5$. After adjusting for the LIFO effect, Caterpillar's current ratio under FIFO would be $(\$39,464 + \$2,132) \div \$25,717 = 1.6$. Without the LIFO adjustment, Caterpillar's current ratio is lower.

Example 7.10
LIFO Reserve
Adjustment

LIFO Liquidation

Up to this point, we have emphasized a **specific-goods approach** to costing LIFO inventories (also called **traditional LIFO** or **unit LIFO**). This approach is often unrealistic for two reasons.

1. When a company has many different inventory items, the accounting cost of tracking each inventory item is expensive.

2. A rapid decline in a company’s LIFO inventory levels can occur. This results in considerably older inventory being matched with current revenues which distorts net income and leads to substantial tax payments. This situation is called **LIFO liquidation**.

To understand the LIFO liquidation problem, assume that Basler Co. has 30,000 pounds of steel in its inventory on December 31, 2025, with cost determined on a specific-goods LIFO approach.

Ending Inventory (2025)			
	Pounds	Unit Cost	LIFO Cost
2022	8,000	\$ 4	\$ 32,000
2023	10,000	6	60,000
2024	7,000	9	63,000
2025	5,000	10	50,000
	<u>30,000</u>		<u>\$205,000</u>

ILLUSTRATION 7.15 Layers of LIFO Inventory

The ending 2025 inventory for Basler consists of costs from past periods. These costs are called **layers** (increases from period to period). The first layer, 2022, is identified as the base layer. **Illustration 7.15** shows the layers for Basler.

Note the increased price of steel over the four-year period, which means outdated costs are included in the 2025 ending inventory balance. In 2026, due to metal shortages, Basler had to sell off, or liquidate, much of its inventory (a LIFO liquidation). At the end of 2026, only 6,000 pounds of steel remained in inventory. Because the company uses LIFO, Basler liquidates the most recent layer, 2025, first, followed by the 2024 layer, and so on. The result: Basler matches costs from preceding periods against sales revenues reported in current dollars. As **Illustration 7.16** shows, this leads to a distortion in net income and increased taxable income in the current period.

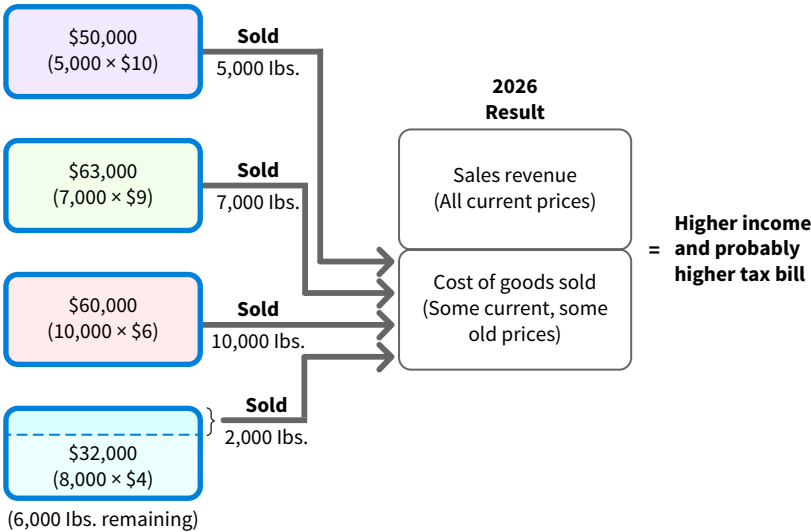

ILLUSTRATION 7.16 LIFO Liquidation

Unfortunately, **LIFO liquidations can occur frequently when using a specific-goods LIFO approach**. To alleviate the LIFO liquidation problems and to simplify the accounting, companies can combine goods into pools.

- A **pool** groups items of a similar nature. Instead of only identical units, a company combines, and counts as a group, a number of similar units or products.
- This method, the **specific-goods pooled LIFO approach**, usually results in fewer LIFO liquidations. Why? Because the reduction of one quantity in the pool may be offset by an increase in another.⁷

⁷Companies should disclose the effects on income of LIFO inventory liquidations in the notes to the financial statements. [8]

The specific-goods pooled LIFO approach eliminates some of the disadvantages of the specific-goods (traditional) accounting for LIFO inventories. However, this pooled approach, using quantities as its measurement basis, creates two main problems:

1. Most companies continually change the mix of their products, materials, and production methods. As a result, in employing a pooled approach using quantities, companies must continually redefine the pools. This can be time-consuming and costly.
2. Even when practical, the approach often results in an “erosion” (LIFO liquidation) of the layers, thereby losing much of the LIFO costing benefit. Erosion of the layers occurs when a specific good or material in the pool is replaced with another good or material. The new item may not be similar enough to be treated as part of the old pool. Therefore, a company may need to recognize any inflationary profit deferred on the old goods as it replaces them.

Dollar-Value LIFO

The dollar-value LIFO method overcomes the problems of redefining pools and eroding layers. **The dollar-value LIFO method determines and measures any increases and decreases in a pool in terms of total dollar value, not the physical quantity of the goods in the inventory pool.** Such an approach has two important advantages over the specific-goods pooled approach.

1. Companies may include a broader range of goods in a dollar-value LIFO pool.
2. A dollar-value LIFO pool permits replacement of goods that are similar items, similar in use, or interchangeable. (In contrast, a specific-goods LIFO pool only allows replacement of items that are substantially identical.)

FACTS Enrico Company first adopts dollar-value LIFO on December 31, 2024 (base period). The inventory at current prices on that date was \$20,000. The inventory on December 31, 2025, at current prices is \$26,400.

QUESTION Can we conclude that Enrico’s inventory quantities increased 32% during the year ($\$26,400 \div \$20,000 = 132\%$)?

SOLUTION

To answer this question, we need to do the following.

1. **Determine the value of the ending inventory in terms of beginning-of-the-year prices.** Assuming that prices have increased 20% during the year, the ending inventory at beginning-of-the-year prices amounts to \$22,000 ($\$26,400 \div 1.20$). Therefore, the inventory quantity has increased only 10%, or from \$20,000 to \$22,000 in terms of beginning-of-the-year prices.
2. **Price this real-dollar quantity increase.** This real-dollar quantity increase of \$2,000 valued at year-end prices is \$2,400 ($1.20 \times \$2,000$). This increment (layer) of \$2,400, when added to the beginning inventory of \$20,000, totals \$22,400 for the December 31, 2025, inventory, as follows.

First layer—(beginning inventory) in terms of 100	\$20,000
Second layer—(2025 increase) in terms of 120	2,400
Dollar-value LIFO inventory, December 31, 2025	<u>\$22,400</u>

Note that a layer forms only when the ending inventory at base-year prices exceeds the beginning inventory at base-year prices. Only when a new layer forms must Enrico compute a new index.

Example 7.11 Dollar-Value LIFO

Therefore, dollar-value LIFO techniques help protect LIFO layers from erosion. Because of this advantage, companies frequently use the dollar-value LIFO method in practice. Companies use the more traditional LIFO approaches only when dealing with few goods and expecting little change in product mix.

Under the dollar-value LIFO method, one pool may contain the entire inventory. However, companies generally use several pools.⁸ In general, the following holds true.

- The more goods included in a pool, the more likely that increases in the quantities of some goods will offset decreases in other goods in the same pool which avoids liquidation of the LIFO layers.
- Fewer pools means less cost and less chance of a reduction of a LIFO layer.⁹

Comprehensive Dollar-Value LIFO Example

To illustrate the use of the dollar-value LIFO method in a more complex situation, assume that Monarch Company develops the following information.

December 31		Inventory at End-of- Year Prices	Price Index ÷ (percentage)	=	End-of-Year Inventory at Base-Year Price
(Base year)	2022	\$200,000	100		\$200,000
	2023	299,000	115		260,000
	2024	300,000	120		250,000
	2025	351,000	130		270,000

At December 31, 2022, Monarch computes the ending inventory under dollar-value LIFO as \$200,000, as [Illustration 7.17](#) shows.

ILLUSTRATION 7.17
Computation of 2022 Inventory at
LIFO Cost

Ending Inventory at Base-Year Prices	Layer at Base-Year Prices	Price Index (percentage)	=	Ending Inventory at LIFO Cost
\$200,000	\$200,000	× 100		\$200,000

- At December 31, 2023, a comparison of the ending inventory at base-year prices (\$260,000) with the beginning inventory at base-year prices (\$200,000) indicates that the quantity of goods (in base-year prices) increased \$60,000 (\$260,000 – \$200,000).
- Monarch prices this increment (layer) at the 2023 index of 115% to arrive at a new layer of \$69,000.
 - Ending inventory for 2023 is \$269,000, composed of the beginning inventory of \$200,000 and the new layer of \$69,000.

⁸A survey of companies reported that the vast majority of respondent companies applying LIFO use the dollar-value method or the dollar-value retail method to apply LIFO. Only a small minority of companies use the specific-goods (unit LIFO) approach or the specific-goods pooling approach. In addition, most companies have only a few pools—the median is six for retailers and three for nonretailers. Retailers that use LIFO have significantly more pools than nonretailers. About a third of the nonretailers (mostly manufacturers) use a single pool for their entire LIFO inventory. See J.M. Reeve and K.G. Stanga, “The LIFO Pooling Decision,” *Accounting Horizons* (June 1987), p. 27.

⁹One study shows that when quantities are increasing, multiple pools over a period of time may produce (under rather general conditions) significantly higher cost of goods sold deductions than a single-pool approach. When a stock-out occurs, a single-pool approach may lessen the layer liquidation for that year, but it may not erase the cumulative cost of goods sold advantage accruing to the use of multiple pools built up over the preceding years. See William R. Coon and Randall B. Hayes, “The Dollar Value LIFO Pooling Decision: The Conventional Wisdom Is Too General,” *Accounting Horizons* (December 1989), pp. 57–70.

Illustration 7.18 shows the computations.

Ending Inventory at Base-Year Prices		Layers at Base-Year Prices		Price Index (percentage)		Ending Inventory at LIFO Cost
\$260,000	→	2022	\$200,000	×	100	= \$200,000
	→	2023	60,000	×	115	= 69,000
			<u>\$260,000</u>			<u>\$269,000</u>

ILLUSTRATION 7.18

Computation of 2023 Inventory at LIFO Cost

At December 31, 2024, a comparison of the ending inventory at base-year prices (\$250,000) with the beginning inventory at base-year prices (\$260,000) indicates a decrease in the quantity of goods of \$10,000 (\$250,000 – \$260,000).

In Monarch’s situation, this means that it removes \$10,000 in base-year prices from the 2023 layer of \$60,000 at base-year prices. It values the balance of \$50,000 (\$60,000 – \$10,000) at base-year prices at the 2023 price index of 115%. As a result, it now values this 2023 layer at \$57,500 (\$50,000 × 1.15). Therefore, Monarch computes the ending inventory at \$257,500, consisting of the beginning inventory of \$200,000 and the second layer of \$57,500. **Illustration 7.19** shows the computations for 2024.

Ending Inventory at Base-Year Prices		Layers at Base-Year Prices		Price Index (percentage)		Ending Inventory at LIFO Cost
\$250,000	→	2022	\$200,000	×	100	= \$200,000
	→	2023	50,000	×	115	= 57,500
			<u>\$250,000</u>			<u>\$257,500</u>

ILLUSTRATION 7.19

Computation of 2024 Inventory at LIFO Cost

Note that if Monarch eliminates a layer or base (or portion thereof), it cannot rebuild it in future periods. That is, the layer is gone forever.

At December 31, 2025, a comparison of the ending inventory at base-year prices (\$270,000) with the beginning inventory at base-year prices (\$250,000) indicates an increase in the quantity of goods (in base-year prices) of \$20,000 (\$270,000 – \$250,000). After converting the \$20,000 increase, using the 2025 price index, the ending inventory is \$283,500, composed of the beginning layer of \$200,000, a 2023 layer of \$57,500, and a 2025 layer of \$26,000 (\$20,000 × 1.30). **Illustration 7.20** shows this computation.

Ending Inventory at Base-Year Prices		Layers at Base-Year Prices		Price Index (percentage)		Ending Inventory at LIFO Cost
\$270,000	→	2022	\$200,000	×	100	= \$200,000
	→	2023	50,000	×	115	= 57,500
	→	2025	20,000	×	130	= 26,000
			<u>\$270,000</u>			<u>\$283,500</u>

ILLUSTRATION 7.20

Computation of 2025 Inventory at LIFO Cost

The ending inventory at base-year prices must always equal the total of the layers at base-year prices. Checking that this situation exists will help to ensure correct dollar-value computations.

Selecting a Price Index

Obviously, price changes are critical in dollar-value LIFO. How do companies determine the price indexes?

- Many companies use the general price-level index that the federal government prepares and publishes each month. The most popular general external price-level index is the **Consumer Price Index for Urban Consumers (CPI-U)**.¹⁰
- Companies also use more-specific external price indexes. For instance, various organizations compute and publish daily indexes for most commodities (gold, silver, other metals, corn, wheat, and other farm products). Many trade associations prepare indexes for specific product lines or industries.

Any of these indexes may be used for dollar-value LIFO purposes.

When a relevant specific external price index is not readily available, a company may compute its own specific internal price index. The desired approach is to price ending inventory at the most current cost, known as the **double-extension method**. As its name implies, the value of the units in inventory is extended at **both** base-year prices and current-year prices.

Therefore, a company that chose to compute its own specific internal price index would ordinarily determine current cost by referring to the actual cost of the goods most recently purchased. The price index provides a measure of the change in price or cost levels between the base year and the current year. The company then computes the index for each year after the base year. The general formula for computing the index is as shown as follows.

$$\frac{\text{Ending Inventory for the Period at Current Cost}}{\text{Ending Inventory for the Period at Base-Year Cost}} = \text{Price Index for Current Year}$$

Example 7.12 Double-Extension Method

FACTS Sweet Sock Company's base-year inventory (January 1, 2025) consisted of the following.

Items	Quantity	Cost per Unit	Total Cost
Wool	1,000	\$ 6	\$ 6,000
Cashmere	2,000	20	40,000
January 1, 2025, inventory at base-year costs			<u>\$46,000</u>

Examination of the ending inventory indicates that the company holds 3,000 pairs of wool socks and 6,000 pairs of cashmere socks on December 31, 2025. The most recent actual purchases related to these items were as follows.

Items	Purchase Date	Quantity Purchased	Cost per Unit
Wool	December 1, 2025	4,000	\$ 7
Cashmere	December 15, 2025	5,000	25
Cashmere	November 16, 2025	1,000	22

QUESTION How does Sweet Sock double-extend its inventory?

¹⁰Indexes may be **general** (composed of several commodities, goods, or services) or **specific** (for one commodity, good, or service). Additionally, they may be **external** (computed by an outside party, such as the government, commodity exchange, or trade association) or **internal** (computed by the enterprise for its own product or service).

SOLUTION

Sweet Sock double-extends the inventory as follows.

12/31/25 Inventory at Base-Year Costs				12/31/25 Inventory at Current-Year Costs		
Items	Units	Base-Year Cost per Unit	Total	Units	Current-Year Cost per Unit	Total
Wool	3,000	\$ 6	\$ 18,000	3,000	\$ 7	\$ 21,000
Cashmere	6,000	20	120,000	5,000	25	125,000
Cashmere				1,000	22	22,000
			<u>\$138,000</u>			<u>\$168,000</u>

After the inventories are double-extended, Sweet Sock calculates the index for the current year (2025) as follows.

$$\frac{\text{Ending Inventory for the Period at Current Cost}}{\text{Ending Inventory for the Period at Base-Year Cost}} = \frac{\$168,000}{\$138,000} = 121.74\%$$

As indicated in Example 7.12, Sweet Sock then applies this index (121.74%) to the layer added in 2025. Note in this example that Sweet Sock used the most recent actual purchases to determine current cost. Alternatively, it could have used other approaches such as FIFO and average-cost. Whichever flow assumption is adopted, a company must use it consistently from one period to another.

Use of the double-extension method is time-consuming and difficult where substantial technological change has occurred or where many items are involved. That is, as time passes, the company must determine a new base-year cost for new products and must keep a base-year cost for each inventory item.¹¹

Comparison of LIFO Approaches

We present three different approaches to computing LIFO inventories in this chapter—specific-goods LIFO, specific-goods pooled LIFO, and dollar-value LIFO. Here are some quick reminders about each one:

- 1. The use of the specific-goods LIFO is unrealistic.** Most companies have numerous goods in inventory at the end of a period. Costing them on a unit basis is extremely expensive and time-consuming.
- 2. The specific-goods pooled LIFO approach reduces recordkeeping and clerical costs.** In addition, it is more difficult to erode the layers because the reduction of one quantity in the pool may be offset by an increase in another. Nonetheless, the pooled approach using **quantities** as its measurement basis can lead to untimely LIFO liquidations.
- 3. Most companies using a LIFO system employ dollar-value LIFO.** This is because of the disadvantages of the specific-goods LIFO and specific-goods pooled LIFO approaches. Although the dollar-value LIFO approach appears complex, the logic and the computations are actually quite simple, after determining an appropriate index.

However, problems do exist with the dollar-value LIFO method. The primary issue is that selection of the items to be put in a pool can be subjective and lead to income manipulation.

¹¹To simplify the analysis, companies may use another approach, initially sanctioned by the IRS for tax purposes. Under this method, a company obtains an index from an outside source or by double-extending only a sample portion of the inventory. For example, the IRS allows all companies to use as their inflation rate for a LIFO pool as 80% of the inflation rate reported by the appropriate consumer or producer price indexes prepared by the Bureau of Labor Statistics (BLS). Once the company obtains the index, it divides the ending inventory at current cost by the index to find the base-year cost. Using generally available external indexes greatly simplifies LIFO computations, and frees companies from having to compute internal indexes.

To curb this practice, the SEC has taken a much harder line on the number of pools that companies may establish. In a well-publicized case, **Stauffer Chemical Company** increased the number of LIFO pools from 8 to 280, boosting its net income by \$16,515,000 or approximately 13%. Stauffer justified the change in its annual report on the basis of “achieving a better matching of cost and revenue.” The SEC required Stauffer to reduce the number of its inventory pools, contending that some pools were inappropriate and alleging income manipulation.

Put It into
Practice LO 7.4
Use the Dollar-Value
LIFO Method

FACTS Truman Company uses the dollar-value LIFO method of computing its inventory. Inventory for the last three years is as follows.

Year Ended December 31	Inventory at Current-Year Cost	Price Index
2023	\$60,000	100
2024	84,000	105
2025	87,000	116

INSTRUCTIONS

What are the values of the 2023, 2024, and 2025 inventories using the dollar-value LIFO method?

SOLUTION

Year	Inventory at End-of-Year Prices	Inventory at Base-Year Prices	Layers at Base-Year Prices	×	Price-Index Layers at LIFO Cost	Dollar-Value LIFO Inventory
2023	\$60,000	$\$60,000 \div 100 = \$60,000$	2023 \$60,000	×	$100 = \$60,000$	\$60,000
2024	84,000	$\$84,000 \div 105 = \$80,000$	2023 \$60,000	×	$100 = \$60,000$	
			2024 20,000	×	$105 = \$21,000$	\$81,000
2025	87,000	$\$87,000 \div 116 = \$75,000$	2023 \$60,000	×	$100 = \$60,000$	
			2024 15,000	×	$105 = \$15,750$	\$75,750

As indicated, consistent with LIFO costing in times of rising prices, the dollar-value LIFO inventory amount is less than inventory stated at end-of-year prices. The company did not add layers at the 2025 prices. This is because the increases in inventory at end-of-year (current) prices was due to higher prices. Also establishing the LIFO layers based on price adjusted dollars relative to base year layers reduces the likelihood of a LIFO liquidation; thereby preserving the tax cash flow benefits of using LIFO.

7.5 Effect of Inventory Errors

LEARNING OBJECTIVE 5

Determine the effects of inventory errors on the financial statements.

Items incorrectly included or excluded in determining cost of goods sold through inventory misstatements will result in errors in the financial statements. We next look at two cases, assuming a **periodic inventory system**.

Ending Inventory Misstated

What would happen if **IBM** correctly records its beginning inventory and purchases, but fails to include some items in ending inventory? Recall the cost of goods sold formula: Goods

available for sale minus ending inventory equals cost of goods sold. If ending inventory is understated (too small), then the resulting cost of goods sold will be overstated (too large).

Illustration 7.21 shows the effects on the financial statements at the end of the period.

Balance Sheet		Income Statement	
Inventory	Understated	Cost of goods sold	Overstated
Retained earnings	Understated		
Working capital	Understated	Net income	Understated
Current ratio	Understated		

ILLUSTRATION 7.21 Financial Statement Effects of Understated Ending Inventory

If ending inventory is understated, working capital (current assets less current liabilities) and the current ratio (current assets divided by current liabilities) are understated. If cost of goods sold is overstated, then net income is understated.

To illustrate the effect on net income over a two-year period (2024–2025), assume that **GameStart** understates its ending inventory by \$10,000 in 2024; all other items are correctly stated. The effect of this error is to decrease net income in 2024 and to increase net income in 2025. The error is counterbalanced (offset) in 2025 because beginning inventory is understated and net income is overstated. As **Illustration 7.22** shows, the income statement misstates the net income figures for both 2024 and 2025 although the **total** for the two years is correct.

GameStart (assumed data)				
	Incorrect Recording		Correct Recording	
	2024	2025	2024	2025
Revenues	\$100,000	\$100,000	\$100,000	\$100,000
Cost of goods sold				
Beginning inventory	25,000	20,000	25,000	30,000
Purchased or produced	45,000	60,000	45,000	60,000
Goods available for sale	70,000	80,000	70,000	90,000
Less: Ending inventory	20,000*	40,000	30,000	40,000
Cost of goods sold	50,000	40,000	40,000	50,000
Gross profit	50,000	60,000	60,000	50,000
Administrative and selling expenses	40,000	40,000	40,000	40,000
Net income	\$ 10,000	\$ 20,000	\$ 20,000	\$ 10,000
	Total income for two years = \$30,000		Total income for two years = \$30,000	

*Ending inventory understated by \$10,000 in 2024.

ILLUSTRATION 7.22 Effect of Ending Inventory Error on Two Periods

If GameStart **overstates** ending inventory in 2024, the reverse effect occurs. Inventory, working capital, current ratio, and net income are overstated, and cost of goods sold is understated. The effect of the error on net income will be counterbalanced in 2025, but the income statement misstates both years' net income figures.

Purchases and Inventory Misstated

Suppose that GameStart does not record as a purchase certain goods that it owns and does not count them in ending inventory. The effect on the financial statements (assuming this is a purchase on account) is shown in **Illustration 7.23**.

ILLUSTRATION 7.23 Financial Statement Effects of Understated Purchases and Ending Inventory

Balance Sheet		Income Statement	
Inventory	Understated	Purchases	Understated
Retained earnings	No effect	Cost of goods sold	No effect
Accounts payable	Understated	Net income	No effect
Working capital	No effect	Inventory(ending)	Understated
Current ratio	Overstated		

Omission of goods from purchases and ending inventory results in an understatement of inventory and accounts payable in the balance sheet. It also results in an understatement of purchases and ending inventory in the income statement. However, the omission of such goods does not affect net income for the period. Why not? Because GameStart understates both purchases and ending inventory by the same amount—the error is thereby offset in cost of goods sold. Total working capital is unchanged, but the current ratio is overstated because of the omission of equal amounts from inventory and accounts payable.

To illustrate the effect on the current ratio, assume that GameStart **understated** accounts payable and ending inventory by \$40,000. **Illustration 7.24** shows the understated and correct data.

ILLUSTRATION 7.24 Effects of Purchases and Ending Inventory Errors

Purchases and Ending Inventory Understated		Purchases and Ending Inventory Correct	
Current assets	\$120,000	Current assets	\$160,000
Current liabilities	40,000	Current liabilities	80,000
Current ratio	3 to1	Current ratio	2 to1

The understated data indicate a current ratio of 3 to 1, whereas the correct ratio is 2 to 1. Thus, understatement of accounts payable and ending inventory can lead to a “window-dressing” of the current ratio. That is, GameStart can make the current ratio appear better than it is.

If GameStart **overstates** both purchases (on account) and ending inventory, then the effects on the balance sheet are exactly the reverse. The financial statements overstate inventory and accounts payable and understate the current ratio. The overstatement does not affect cost of goods sold and net income because the errors offset one another. Similarly, working capital is not affected.

We cannot overemphasize the importance of proper inventory measurement in presenting accurate financial statements (see **Underlying Concepts**). **Illustration 7.25** highlights the effects of inventory errors.

Underlying Concepts
When inventory is misstated, its presentation is not representationally faithful.

ILLUSTRATION 7.25 Inventory Errors

Company	Nature of Error
Leslie Fay	Had accounting irregularities that wiped out one year’s net income and caused a restatement of the prior year’s earnings. One reason: It inflated inventory and deflated cost of goods sold.
Anixter Bros. Inc.	Had to restate its income by \$1.7 million because an accountant in the antenna manufacturing division overstated the ending inventory, thereby reducing its cost of sales.
AM International	Allegedly recorded as sold products that were only being rented. As a result, inaccurate inventory and sales figures inappropriately added \$7.9 million to pretax income.

Analytics in Action: Inventory Matters

Effective inventory management is key to a company's success, especially in the retail industry. At retailer **Urban Outfitters**, the CFO reviews metrics on inventory supply by brand, channel, and category at least weekly.

As you now know, inventory is one of the largest components of retailers' current assets. Until the inventory is sold, a retailer must carry the cost of holding the inventory, including the risk of changing trends and potential obsolescence. Some retailers are looking to become more agile by ordering smaller amounts of inventory from their suppliers, selling less but charging more.

Any inventory strategy hinges on a significant amount of data for management to monitor on a regular basis. The adjacent charts are some common inventory-related metrics for Urban Outfitters. Reviewing metrics to identify trends, issues, and opportunities is imperative for management. Using data provided from the accounting system, management can get detailed daily snapshots of their most important inventory metrics.

Learning Objectives Review

1 Identify inventory classifications and different inventory systems.

Only one inventory account, Inventory, appears in the financial statements of a merchandising concern. A manufacturer normally

has three inventory accounts: Raw Materials, Work in Process, and Finished Goods. Companies report the cost assigned to goods and materials on hand but not yet placed into production as raw materials inventory. They report the cost of the raw materials on which production has been started but not completed, plus the direct labor cost applied specifically to this material and a ratable share of manufacturing overhead costs, as work in process inventory.

Finally, they report the costs identified with the completed but unsold units on hand at the end of the fiscal period as finished goods inventory.

A **perpetual inventory system** maintains a continuous record of inventory changes in the Inventory account. That is, a company records all purchases and sales (issues) of goods directly in the Inventory account as they occur. Under a **periodic inventory system**, companies determine the quantity of inventory on hand only periodically. A company debits a Purchases account, but the Inventory account remains the same. It determines cost of goods sold at the end of the period by subtracting ending inventory from cost of goods available for sale. A company ascertains ending inventory by physical count.

2 Determine the goods and costs included in inventory.

Companies record purchases of inventory when they obtain control of the goods (generally when they receive legal title to the goods). Shipping terms must be evaluated to determine when legal title passes, and careful consideration must be made for cost of goods sold on consignment and sales with high rates of return and repurchase agreements.

Product costs are those costs that attach to the inventory and are recorded in the Inventory account. Such charges include freight charges on goods purchased, other direct costs of acquisition, and labor and other production costs incurred in processing the goods up to the time of sale. **Period costs** are those costs that are indirectly related to the acquisition or production of goods. These changes, such as selling expense and general and administrative expenses, are therefore not included as part of inventory cost.

3 Describe and compare the cost flow assumptions used to account for inventories.

(1) *Average-cost* prices items in the inventory on the basis of the average cost of all similar goods available during the period. (2) *First-in, first-out (FIFO)* assumes that a company uses goods in the order in which it purchases them. The inventory remaining must therefore represent the most recent purchases. (3) *Last-in, first-out (LIFO)* matches the cost of the last goods purchased against revenue.

4 Identify special issues related to LIFO.

The difference between the inventory method used for internal reporting purposes and LIFO is referred to as **Allowance to Reduce Inventory**

to LIFO, or the **LIFO reserve**. The change in LIFO reserve is referred to as the LIFO effect. Companies should disclose either the LIFO reserve or the replacement cost of the inventory in the financial statements.

LIFO liquidations match costs from preceding periods against sales revenues reported in current dollars. This distorts net income and results in increased taxable income in the current period. LIFO liquidations can occur frequently when using a specific-goods LIFO approach.

For the **dollar-value LIFO method**, companies determine and measure increases and decreases in a pool in terms of total dollar value, not the physical quantity of the goods in the inventory pool.

The major advantages of LIFO are the following. (1) It matches recent costs against current revenues to provide a better measure of current earnings. (2) As long as the price level increases and inventory quantities do not decrease, a deferral of income tax occurs in LIFO. (3) Because of the deferral of income tax, cash flow improves. **Major disadvantages** are (1) reduced earnings, (2) understated inventory, (3) does not approximate physical flow of the items except in peculiar situations, and (4) involuntary liquidation issues.

Companies ordinarily prefer LIFO in the following circumstances: (1) if selling prices and revenues have been increasing faster than costs and (2) if a company has a fairly constant “base stock.” Conversely, LIFO would probably not be appropriate in the following circumstances: (1) if sale prices tend to lag behind costs, (2) if specific identification is traditional, and (3) when unit costs tend to decrease as production increases, thereby nullifying the tax benefit that LIFO might provide.

5 Determine the effects of inventory errors on the financial statements.

If the company misstates ending inventory: (1) In the balance sheet, the inventory and retained earnings will be misstated, which will lead to miscalculation of the working capital and current ratio, and (2) in the income statement, the cost of goods sold and net income will be misstated. **If the company misstates purchases (and related accounts payable) and inventory:** (1) In the balance sheet, the inventory and accounts payable will be misstated, which will lead to miscalculation of the current ratio, and (2) in the income statement, purchases and ending inventory will be misstated.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Questions

1. In what ways are the inventory accounts of a retailing company different from those of a manufacturing company?
2. Why should inventories be included in (a) a statement of financial position and (b) the computation of net income?
3. What is the difference between a perpetual inventory and a physical inventory? If a company maintains a perpetual inventory, should its physical inventory at any date be equal to the amount indicated by the perpetual inventory records? Why?

4. Mishima, Inc. indicated in a recent annual report that approximately \$19 million of merchandise was received on consignment. Should Mishima, Inc. report this amount on its balance sheet? Explain.
5. What are sales with high rates of return? How should sales with returns be reported in the financial statements?
6. Where, if at all, should the following items be classified on a balance sheet?
 - a. Goods out on approval to customers.
 - b. Goods in transit that were recently purchased f.o.b. destination.
 - c. Land held by a realty firm for sale.
 - d. Raw materials.
 - e. Goods received on consignment.
 - f. Manufacturing supplies.
7. Define “cost” as applied to the valuation of inventories.
8. Distinguish between product costs and period costs as they relate to inventory.
9. **Ford Motor Co.** is considering alternate methods of accounting for the cash discounts it takes when paying suppliers promptly. One method suggested was to report these discounts as financial income when payments are made. Comment on the propriety of this approach.
10. Zonker Inc. purchases 500 units of an item at an invoice cost of \$30,000. What is the cost per unit? If the goods are shipped f.o.b. shipping point and the freight bill was \$1,500, what is the cost per unit if Zonker Inc. pays the freight charges? If these items were bought on 2/10, n/30 terms and the invoice and the freight bill were paid within the 10-day period, what would be the cost per unit?
11. Specific identification is sometimes said to be the ideal method of assigning cost to inventory and to cost of goods sold. Briefly indicate the arguments for and against this method of inventory valuation.
12. FIFO, average-cost, and LIFO methods are often used instead of specific identification for inventory valuation purposes. Compare these methods with the specific identification method, discussing the theoretical propriety of each method in the determination of income and asset valuation.
13. How might a company obtain a price index in order to apply dollar-value LIFO?
14. Describe the LIFO double-extension method. Using the following information, compute the index at December 31, 2025, applying the double-extension method to a LIFO pool consisting of 25,500 units of product A and 10,350 units of product B. The base-year cost of product A is \$10.20 and of product B is \$37.00. The price at December 31, 2025, for product A is \$21.00 and for product B is \$45.60. (Round to two decimal places.)
15. As compared with the FIFO method of costing inventories, does the LIFO method result in a larger or smaller net income in a period of rising prices? What is the comparative effect on net income in a period of falling prices?
16. What is the dollar-value method of LIFO inventory valuation? What advantage does the dollar-value method have over the specific goods approach of LIFO inventory valuation? Why will the traditional LIFO inventory costing method and the dollar-value LIFO inventory costing method produce different inventory valuations if the composition of the inventory base changes?
17. Explain the following terms.
 - a. LIFO layer.
 - b. LIFO reserve.
 - c. LIFO effect.
18. On December 31, 2024, the inventory of Powhattan Company amounts to \$800,000. During 2025, the company decides to use the dollar-value LIFO method of costing inventories. On December 31, 2025, the inventory is \$1,053,000 at December 31, 2025, prices. Using the December 31, 2024, price level of 100 and the December 31, 2025, price level of 108, compute the inventory value at December 31, 2025, under the dollar-value LIFO method.
19. In an article that appeared in the *Wall Street Journal*, the phrases “phantom (paper) profits” and “high LIFO profits” through involuntary liquidation were used. Explain these phrases.
20. At the balance sheet date, Clarkson Company held title to goods in transit amounting to \$214,000. This amount was omitted from the purchases figure for the year and also from the ending inventory. What is the effect of this omission on the net income for the year as calculated when the books are closed? What is the effect on the company’s financial position as shown in its balance sheet? Is materiality a factor in determining whether an adjustment for this item should be made?

Brief Exercises

BE7.1 (LO 1) Included in the December 31 trial balance of Rivera Company are the following assets.

Cash	\$ 190,000	Work in process	\$200,000
Equipment (net)	1,100,000	Accounts receivable (net)	400,000
Prepaid insurance	41,000	Patents	110,000
Raw materials	335,000	Finished goods	170,000

Prepare the current assets section of the December 31 balance sheet.

BE7.2 (LO 1) Matlock Company uses a perpetual inventory system. Its beginning inventory consists of 50 units that cost \$34 each. During June, the company purchased 150 units at \$34 each, returned 6 units for credit, and sold 125 units at \$50 each. Journalize the June transactions.

BE7.3 (LO 2) Stallman Company took a physical inventory on December 31 and determined that goods costing \$200,000 were on hand. Not included in the physical count were \$25,000 of goods purchased from Pelzer Corporation, f.o.b. shipping point, and \$22,000 of goods sold to Alvarez Company for \$30,000, f.o.b. destination. Both the Pelzer purchase and the Alvarez sale were in transit at year-end. What amount should Stallman report as its December 31 inventory?

BE7.4 (LO 3) Amsterdam Company uses a periodic inventory system. For April, when the company sold 600 units, the following information is available.

	<u>Units</u>	<u>Unit Cost</u>	<u>Total Cost</u>
April 1 inventory	250	\$10	\$ 2,500
April 15 purchase	400	12	4,800
April 23 purchase	350	13	4,550
	<u>1,000</u>		<u>\$11,850</u>

Compute the April 30 inventory and the April cost of goods sold using the average-cost method.

BE7.5 (LO 3) Data for Amsterdam Company are presented in BE7.4. Compute the April 30 inventory and the April cost of goods sold using the FIFO method.

BE7.6 (LO 3) Data for Amsterdam Company are presented in BE7.4. Compute the April 30 inventory and the April cost of goods sold using the LIFO method.

BE7.7 (LO 4) Trout Company uses the LIFO method for financial reporting purposes but FIFO for internal reporting purposes. At January 1, 2025, the LIFO reserve has a credit balance of \$1,300,000. At December 31, 2025, Trout's internal reports indicated that the FIFO inventory balance was \$2,900,000 and for external reporting purposes the LIFO inventory balance was \$1,500,000. What is the amount of the LIFO reserve and the LIFO effect related to 2025? What is the journal entry needed to record the LIFO effect at December 31, 2025?

BE7.8 (LO 4) Midori Company had ending inventory at end-of-year prices of \$100,000 at December 31, 2024; \$119,900 at December 31, 2025; and \$134,560 at December 31, 2026. The year-end price indexes were 100 at 12/31/24, 110 at 12/31/25, and 116 at 12/31/26. Compute the ending inventory for Midori Company for 2024 through 2026 using the dollar-value LIFO method.

BE7.9 (LO 4) Arna, Inc. uses the dollar-value LIFO method of computing its inventory. Data for the past 3 years follow.

<u>Year Ended December 31</u>	<u>Inventory at Current-Year Cost</u>	<u>Price Index</u>
2024	\$19,750	100
2025	22,140	108
2026	25,935	114

Compute the value of the 2025 and 2026 inventories using the dollar-value LIFO method.

BE7.10 (LO 5) Bienvenu Enterprises reported cost of goods sold for 2025 of \$1,400,000 and retained earnings of \$5,200,000 at December 31, 2025. Bienvenu later discovered that its ending inventories at December 31, 2024 and 2025, were overstated by \$110,000 and \$35,000, respectively. Determine the corrected amounts for 2025 cost of goods sold and December 31, 2025, retained earnings.

Exercises

E7.1 (LO 2) (Inventoriable Goods and Costs) Presented below is a list of items that may or may not be reported as inventory in a company's December 31 balance sheet.

1. Goods out on consignment at another company's store.
2. Goods sold on an installment basis (bad debts can be reasonably estimated).
3. Goods purchased f.o.b. shipping point that are in transit at December 31.
4. Goods purchased f.o.b. destination that are in transit at December 31.
5. Goods sold to another company, for which our company has signed an agreement to repurchase at a set price that covers all costs related to the inventory.
6. Goods sold where large returns are predictable.
7. Goods sold f.o.b. shipping point that are in transit at December 31.
8. Freight charges on goods purchased.
9. Interest costs incurred for inventories that are routinely manufactured.
10. Costs incurred to advertise goods held for resale.
11. Materials on hand not yet placed into production by a manufacturing firm.
12. Office supplies.
13. Raw materials on which a manufacturing firm has started production but which are not completely processed.
14. Factory supplies.

15. Goods held on consignment from another company.
16. Costs identified with units completed by a manufacturing firm but not yet sold.
17. Goods sold f.o.b. destination that are in transit at December 31.
18. Short-term investments in stocks and bonds that will be resold in the near future.

Instructions

Indicate which of these items would typically be reported as inventory in the financial statements. If an item should not be reported as inventory, indicate how it should be reported in the financial statements.

E7.2 (LO 2) Excel (Inventoriable Goods and Costs) In your audit of Jose Oliva Company, you find that a physical inventory on December 31, 2025, showed merchandise with a cost of \$441,000 was on hand at that date. You also discover the following items were all excluded from the \$441,000.

1. Merchandise of \$61,000 which is held by Oliva on consignment. The consignor is the Max Suzuki Company.
2. Merchandise costing \$38,000 which was shipped by Oliva f.o.b. destination to a customer on December 31, 2025. The customer was expected to receive the merchandise on January 6, 2026.
3. Merchandise costing \$46,000 which was shipped by Oliva f.o.b. shipping point to a customer on December 29, 2025. The customer was scheduled to receive the merchandise on January 2, 2026.
4. Merchandise costing \$83,000 shipped by a vendor f.o.b. destination on December 30, 2025, and received by Oliva on January 4, 2026.
5. Merchandise costing \$51,000 shipped by a vendor f.o.b. shipping point on December 31, 2025, and received by Oliva on January 5, 2026.

Instructions

Based on the above information, calculate the amount that should appear on Oliva's balance sheet at December 31, 2025, for inventory.

E7.3 (LO 2) (Inventoriable Goods and Costs) Assume that in an annual audit of Harlowe Inc. at December 31, 2025, you find the following transactions near the closing date.

1. A special machine, fabricated to order for a customer, was finished and specifically segregated in the back part of the shipping room on December 31, 2025. The customer was billed on that date and the machine excluded from inventory although it was shipped on January 4, 2026.
2. Merchandise costing \$2,800 was received on January 3, 2026, and the related purchase invoice recorded January 5. The invoice showed the shipment was made on December 29, 2025, f.o.b. destination.
3. A packing case containing a product costing \$3,400 was standing in the shipping room when the physical inventory was taken. It was not included in the inventory because it was marked "Hold for shipping instructions." Your investigation revealed that the customer's order was dated December 18, 2025, but that the case was shipped and the customer billed on January 10, 2026. The product was a stock item of your client.
4. Merchandise received on January 6, 2026, costing \$680 was entered in the purchase journal on January 7, 2026. The invoice showed shipment was made f.o.b. supplier's warehouse on December 31, 2025. Because it was not on hand at December 31, it was not included in inventory.
5. Merchandise costing \$720 was received on December 28, 2025, and the invoice was not recorded. You located it in the hands of the purchasing agent; it was marked "on consignment."

Instructions

Assuming that each of the amounts is material, state whether the merchandise should be included in the client's inventory, and give your reason for your decision on each item.

E7.4 (LO 2) (Inventoriable Goods and Costs—Perpetual) Colin Davis Machine Company maintains a general ledger account for each class of inventory, debiting such accounts for increases during the period and crediting them for decreases. The transactions below relate to the Raw Materials inventory account, which is debited for materials purchased and credited for materials requisitioned for use.

1. An invoice for \$8,100, terms f.o.b. destination, was received and entered January 2, 2025. The receiving report shows that the materials were received December 28, 2024.
2. Materials costing \$28,000, shipped f.o.b. destination, were not entered by December 31, 2024, "because they were in a railroad car on the company's siding on that date and had not been unloaded."
3. Materials costing \$7,300 were returned to the supplier on December 29, 2024, and were shipped f.o.b. shipping point. The return was entered on that date, even though the materials are not expected to reach the supplier's place of business until January 6, 2025.

4. An invoice for \$7,500, terms f.o.b. shipping point, was received and entered December 30, 2024. The receiving report shows that the materials were received January 4, 2025, and the bill of lading shows that they were shipped January 2, 2025.
5. Materials costing \$19,800 were received December 30, 2024, but no entry was made for them because “they were ordered with a specified delivery of no earlier than January 10, 2025.”

Instructions

Prepare correcting general journal entries required at December 31, 2024, assuming that the books have not been closed.

E7.5 (LO 2) (Inventoriable Goods and Costs—Error Adjustments) Craig Company asks you to review its December 31, 2025, inventory values and prepare the necessary adjustments to the books. The following information is given to you.

1. Craig uses the periodic method of recording inventory. A physical count reveals \$234,890 of inventory on hand at December 31, 2025.
2. Not included in the physical count of inventory is \$13,420 of merchandise purchased on December 15 from Browser. This merchandise was shipped f.o.b. shipping point on December 29 and arrived in January. The invoice arrived and was recorded on December 31.
3. Included in inventory is merchandise sold to Champy on December 30, f.o.b. destination. This merchandise was shipped after it was counted. The invoice was prepared and recorded as a sale on account for \$12,800 on December 31. The merchandise cost \$7,350, and Champy received it on January 3.
4. Included in inventory was merchandise received from Dudley on December 31 with an invoice price of \$15,630. The merchandise was shipped f.o.b. destination. The invoice, which has not yet arrived, has not been recorded.
5. Not included in inventory is \$8,540 of merchandise purchased from Glowser Industries. This merchandise was received on December 31 after the inventory had been counted. The invoice was received and recorded on December 30.
6. Included in inventory was \$10,438 of inventory held by Craig on consignment from Jackel Industries.
7. Included in inventory is merchandise sold to Kemp f.o.b. shipping point. This merchandise was shipped on December 31 after it was counted. The invoice was prepared and recorded as a sale for \$18,900 on December 31. The cost of this merchandise was \$10,520, and Kemp received the merchandise on January 5.
8. Excluded from inventory was a carton labeled “Please accept for credit.” This carton contains merchandise costing \$1,500 which had been sold to a customer for \$2,600. No entry had been made to the books to reflect the return, but none of the returned merchandise seemed damaged; Craig will honor the return.

Instructions

- a. Determine the proper inventory balance for Craig Company at December 31, 2025.
- b. Prepare any correcting entries to adjust inventory to its proper amount at December 31, 2025. Assume the books have not been closed.

E7.6 (LO 2) (Determining Merchandise Amounts—Periodic) Two or more items are omitted in each of the following tabulations of income statement data. Fill in the amounts that are missing.

	2024	2025	2026
Sales revenue	\$290,000	\$?	\$410,000
Sales returns and allowances	11,000	13,000	?
Net sales	?	347,000	?
Beginning inventory	20,000	32,000	?
Ending inventory	?	?	?
Purchases	?	260,000	298,000
Purchase returns and allowances	5,000	8,000	10,000
Freight-in	8,000	9,000	12,000
Cost of goods sold	233,000	?	293,000
Gross profit on sales	46,000	91,000	97,000

E7.7 (LO 2) (Purchases Recorded Net) Presented below are transactions related to Tom Brokaw, Inc.

- May 10 Purchased goods billed at \$15,000 subject to cash discount terms of 2/10, n/60.
- 11 Purchased goods billed at \$13,200 subject to terms of 1/15, n/30.
- 19 Paid invoice of May 10.
- 24 Purchased goods billed at \$11,500 subject to cash discount terms of 2/10, n/30.

Instructions

- Prepare general journal entries for the transactions above under the assumption that purchases are to be recorded at net amounts after cash discounts and that discounts lost are to be treated as financial expense.
- Assuming no purchase or payment transactions other than those given above, prepare the adjusting entry required on May 31 if financial statements are to be prepared as of that date.

E7.8 (LO 2) (Purchases Recorded, Gross Method) Cruise Industries purchased \$10,800 of merchandise on February 1, 2025, subject to a trade discount of 10% and with credit terms of 3/15, n/60. It returned \$2,500 (gross price before trade or cash discount) on February 4. The invoice was paid on February 13.

Instructions

- Assuming that Cruise uses the perpetual method for recording merchandise transactions, record the purchase, return, and payment using the gross method.
- Assuming that Cruise uses the periodic method for recording merchandise transactions, record the purchase, return, and payment using the gross method.
- At what amount would the purchase on February 1 be recorded if the net method were used?

E7.9 (LO 3) Excel (Periodic versus Perpetual Entries) Fong Sai-Yuk Company sells one product. Presented below is information for January for Fong Sai-Yuk Company.

Jan. 1	Inventory	100 units at \$5 each
4	Sale	80 units at \$8 each
11	Purchase	150 units at \$6 each
13	Sale	120 units at \$8.75 each
20	Purchase	160 units at \$7 each
27	Sale	100 units at \$9 each

Fong Sai-Yuk uses the FIFO cost flow assumption. All purchases and sales are on account.

Instructions

- Assume Fong Sai-Yuk uses a periodic system. Prepare all necessary journal entries, including the end-of-month closing entry to record cost of goods sold. A physical count indicates that the ending inventory for January is 110 units.
- Compute gross profit using the periodic system.
- Assume Fong Sai-Yuk uses a perpetual system. Prepare all necessary journal entries.
- Compute gross profit using the perpetual system.

E7.10 (LO 3) (FIFO and LIFO—Periodic and Perpetual) Inventory information for Part 311 of Monique Aaron Corp. discloses the following information for the month of June.

June 1	Balance	300 units @ \$10	June 10	Sold	200 units @ \$24
11	Purchased	800 units @ \$12	15	Sold	500 units @ \$25
20	Purchased	500 units @ \$13	27	Sold	300 units @ \$27

Instructions

- Assuming that the periodic inventory method is used, compute the cost of goods sold and ending inventory under (1) LIFO and (2) FIFO.
- Assuming that the perpetual inventory method is used and costs are computed at the time of each withdrawal, what is the value of the ending inventory at LIFO?
- Assuming that the perpetual inventory method is used and costs are computed at the time of each withdrawal, what is the gross profit if the inventory is valued at FIFO?
- Why is it stated that LIFO usually produces a lower gross profit than FIFO?

E7.11 (LO 3) (FIFO, LIFO and Average-Cost Determination) John Adams Company's record of transactions for the month of April was as follows.

Purchases		Sales	
April 1 (balance on hand)	600 @ \$6.00	April 3	500 @ \$10.00
4	1,500 @ 6.08	9	1,400 @ 10.00
8	800 @ 6.40	11	600 @ 11.00
13	1,200 @ 6.50	23	1,200 @ 11.00
21	700 @ 6.60	27	900 @ 12.00
29	500 @ 6.79		<u>4,600</u>
	<u>5,300</u>		

Instructions

- Assuming that periodic inventory records are kept in units only, compute the inventory at April 30 using (1) LIFO and (2) average-cost.
- Assuming that perpetual inventory records are kept in dollars, determine the inventory using (1) FIFO and (2) LIFO.
- Compute cost of goods sold assuming periodic inventory procedures and inventory priced at FIFO.
- In an inflationary period, which inventory method—FIFO, LIFO, average-cost—will show the highest net income?

E7.12 (LO 3) (FIFO, LIFO, Average-Cost Inventory) Shania Twain Company was formed on December 1, 2024. The following information is available from Twain's inventory records for Product BAP.

	<u>Units</u>	<u>Unit Cost</u>
January 1, 2025 (beginning inventory)	600	\$ 8.00
Purchases:		
January 5, 2025	1,200	9.00
January 25, 2025	1,300	10.00
February 16, 2025	800	11.00
March 26, 2025	600	12.00

A physical inventory on March 31, 2025, shows 1,600 units on hand.

Instructions

Prepare schedules to compute the ending inventory at March 31, 2025, under each of the following inventory methods.

- FIFO
- LIFO.
- Weighted-average (round unit costs to two decimal places).

E7.13 (LO 3) (Compute FIFO, LIFO, Average-Cost—Periodic) Presented below is information related to Blowfish radios for the Hootie Company for the month of July.

<u>Date</u>	<u>Transaction</u>	<u>Units In</u>	<u>Unit Cost</u>	<u>Total</u>	<u>Units Sold</u>	<u>Selling Price</u>	<u>Total</u>
July 1	Balance	100	\$4.10	\$ 410			
6	Purchase	800	4.20	3,360			
7	Sale				300	\$7.00	\$ 2,100
10	Sale				300	7.30	2,190
12	Purchase	400	4.50	1,800			
15	Sale				200	7.40	1,480
18	Purchase	300	4.60	1,380			
22	Sale				400	7.40	2,960
25	Purchase	500	4.58	2,290			
30	Sale				200	7.50	1,500
	Totals	2,100		\$9,240	1,400		\$10,230

Instructions

- Assuming that the periodic inventory method is used, compute the inventory cost at July 31 under each of the following cost flow assumptions.
 - FIFO.
 - LIFO.
 - Weighted-average.
- Answer the following questions.
 - Which of the methods used above will yield the lowest figure for gross profit for the income statement? Explain why.
 - Which of the methods used above will yield the lowest figure for ending inventory for the balance sheet? Explain why.

E7.14 (LO 3) (FIFO and LIFO—Periodic and Perpetual) The following is a record of Pervis Ellison Company's transactions for Boston Teapots for the month of May 2025.

May 1	Balance 400 units @ \$20	May 10	Sale 300 units @ \$38
12	Purchase 600 units @ \$25	20	Sale 540 units @ \$38
28	Purchase 400 units @ \$30		

Instructions

- Assuming that perpetual inventories are not maintained and that a physical count at the end of the month shows 560 units on hand, what is the cost of the ending inventory using (1) FIFO and (2) LIFO?
- Assuming that perpetual records are maintained and they tie into the general ledger, calculate the ending inventory using (1) FIFO and (2) LIFO.

E7.15 (LO 3) (FIFO and LIFO; Income Statement Presentation) The board of directors of Ichiro Corporation is considering whether or not it should instruct the accounting department to shift from a first-in, first-out (FIFO) basis of pricing inventories to a last-in, first-out (LIFO) basis. The following information is available.

Sales	21,000 units @ \$50
Inventory, January 1	6,000 units @ 20
Purchases	6,000 units @ 22
	10,000 units @ 25
	7,000 units @ 30
Inventory, December 31	8,000 units @ ?
Operating expenses	\$200,000

Instructions

Prepare a condensed income statement for the year on both bases for comparative purposes.

E7.16 (LO 3) (FIFO and LIFO Effects) You are the vice president of finance of Sandy Alomar Corporation, a retail company that prepared two different schedules of gross margin for the first quarter ended March 31, 2025. These schedules appear below.

	<u>Sales</u> <u>(\$5 per unit)</u>	<u>Cost of</u> <u>Goods Sold</u>	<u>Gross</u> <u>Margin</u>
Schedule 1	\$150,000	\$124,900	\$25,100
Schedule 2	150,000	129,400	20,600

The computation of cost of goods sold in each schedule is based on the following data.

	<u>Units</u>	<u>Cost</u> <u>per Unit</u>	<u>Total</u> <u>Cost</u>
Beginning inventory, January 1	10,000	\$4.00	\$40,000
Purchase, January 10	8,000	4.20	33,600
Purchase, January 30	6,000	4.25	25,500
Purchase, February 11	9,000	4.30	38,700
Purchase, March 17	11,000	4.40	48,400

Jane Torville, the president of the corporation, cannot understand how two different gross margins can be computed from the same set of data. As the vice president of finance, you have explained to Ms. Torville that the two schedules are based on different assumptions concerning the flow of inventory costs, i.e., FIFO and LIFO. Schedules 1 and 2 were not necessarily prepared in this sequence of cost flow assumptions.

Instructions

Prepare two separate schedules computing cost of goods sold and supporting schedules showing the composition of the ending inventory under both cost flow assumptions.

E7.17 (LO 3) (FIFO and LIFO—Periodic) Brady Sports began operations on January 2, 2025. The following stock record card for footballs was taken from the records at the end of the year.

<u>Date</u>	<u>Voucher</u>	<u>Terms</u>	<u>Units</u> <u>Received</u>	<u>Unit Invoice</u> <u>Cost</u>	<u>Gross Invoice</u> <u>Amount</u>
1/15	10624	Net 30	50	\$20	\$1,000
3/15	11437	1/5, net 30	65	16	1,040
6/20	21332	1/10, net 30	90	15	1,350
9/12	27644	1/10, net 30	84	12	1,008
11/24	31269	1/10, net 30	76	11	836
Totals			<u>365</u>		<u>\$5,234</u>

A physical inventory on December 31, 2025, reveals that 100 footballs were in stock. The bookkeeper informs you that all the discounts were taken. Assume that Brady Sports uses the invoice price less discount for recording purchases.

Instructions

- Compute the December 31, 2025, inventory using the FIFO method.
- Compute the 2025 cost of goods sold using the LIFO method.
- What method would you recommend to the owner to minimize income taxes in 2025, using the inventory information for footballs as a guide?

E7.18 (LO 4) (LIFO Effect) The following example was provided to encourage the use of the LIFO method. In a nutshell, LIFO subtracts inflation from inventory costs, deducts it from taxable income, and records it in a LIFO reserve account on the books. The LIFO benefit grows as inflation widens the gap between current-year and past-year (minus inflation) inventory costs. This gap is:

	<u>With LIFO</u>	<u>Without LIFO</u>
Revenues	\$3,200,000	\$3,200,000
Cost of goods sold	2,800,000	2,800,000
Operating expenses	150,000	150,000
Operating income	250,000	250,000
LIFO adjustment	40,000	0
Taxable income	<u>\$ 210,000</u>	<u>\$ 250,000</u>
Income taxes (36%)	<u>\$ 75,600</u>	<u>\$ 90,000</u>
Cash flow	<u>\$ 174,400</u>	<u>\$ 160,000</u>
Extra cash	<u>\$ 14,400</u>	<u>0</u>
Increased cash flow	9%	0%

Instructions

- Explain what is meant by the LIFO reserve account.
- How does LIFO subtract inflation from inventory costs?
- Explain how the cash flow of \$174,400 in this example was computed. Explain why this amount may not be correct.
- Why does a company that uses LIFO have extra cash? Explain whether this situation will always exist.

E7.19 (LO 3, 4) (Alternative Inventory Methods—Comprehensive) Tori Amos Corporation began operations on December 1, 2024. The only inventory transaction in 2024 was the purchase of inventory on December 10, 2024, at a cost of \$20 per unit. None of this inventory was sold in 2024. Relevant information is as follows.

Ending inventory units	
December 31, 2024	100
December 31, 2025, by purchase date	
December 2, 2025	100
July 20, 2025	50 150

During the year, the following purchases and sales were made.

<u>Purchases</u>			<u>Sales</u>	
March 15	300 units at	\$24	April 10	200
July 20	300 units at	25	August 20	300
September 4	200 units at	28	November 18	150
December 2	100 units at	30	December 12	200

The company uses the periodic inventory method.

Instructions

- Determine ending inventory under (1) specific identification, (2) FIFO, (3) LIFO, and (4) average-cost.
- Determine ending inventory using dollar-value LIFO. Assume that the December 2, 2025, purchase cost is the current cost of inventory. (*Hint:* The beginning inventory is the base layer priced at \$20 per unit.)

E7.20 (LO 4) (Dollar-Value LIFO) Oasis Company has used the dollar-value LIFO method for inventory cost determination for many years. The following data were extracted from Oasis' records.

<u>Date</u>	<u>Price Index</u>	<u>Ending Inventory at Base Prices</u>	<u>Ending Inventory at Dollar-Value LIFO</u>
December 31, 2025	105	\$92,000	\$92,600
December 31, 2026	?	97,000	98,350

Instructions

Calculate the index used for 2026 that yielded the above results.

E7.21 (LO 4) (Dollar-Value LIFO) The dollar-value LIFO method was adopted by Enya Corp. on January 1, 2025. Its inventory on that date was \$160,000. On December 31, 2025, the inventory at prices existing on that date amounted to \$140,000. The price level at January 1, 2025, was 100, and the price level at December 31, 2025, was 112.

Instructions

- Compute the amount of the inventory at December 31, 2025, under the dollar-value LIFO method.
- On December 31, 2026, the inventory at prices existing on that date was \$172,500, and the price level was 115. Compute the inventory on that date under the dollar-value LIFO method.

E7.22 (LO 4) (Dollar-Value LIFO) Presented below is information related to Dino Radja Company.

<u>Date</u>	<u>Ending Inventory (End-of-Year Prices)</u>	<u>Price Index</u>
December 31, 2022	\$ 80,000	100
December 31, 2023	115,500	105
December 31, 2024	108,000	120
December 31, 2025	122,200	130
December 31, 2026	154,000	140
December 31, 2027	176,900	145

Instructions

Compute the ending inventory for Dino Radja Company for 2022 through 2027 using the dollar-value LIFO method.

E7.23 (LO 4) (Dollar-Value LIFO) The following information relates to the Jimmy Johnson Company.

<u>Date</u>	<u>Ending Inventory (End-of-Year Prices)</u>	<u>Price Index</u>
December 31, 2021	\$ 70,000	100
December 31, 2022	90,300	105
December 31, 2023	95,120	116
December 31, 2024	105,600	120
December 31, 2025	100,000	125

Instructions

Use the dollar-value LIFO method to compute the ending inventory for Johnson Company for 2021 through 2025.

E7.24 (LO 5) (Inventory Errors—Periodic) Ann M. Martin Company makes the following errors during the current year. (Evaluate each case independently and assume ending inventory in the following year is correctly stated.)

- Ending inventory is overstated, but purchases and related accounts payable are recorded correctly.
- Both ending inventory and purchases and related accounts payable are understated. (Assume this purchase was recorded and paid for in the following year.)
- Ending inventory is correct, but a purchase on account was not recorded. (Assume this purchase was recorded and paid for in the following year.)

Instructions

Indicate the effect of each of these errors on working capital, current ratio (assume that the current ratio is greater than 1), retained earnings, and net income for the current year and the subsequent year.

E7.25 (LO 5) (Inventory Errors) At December 31, 2024, Stacy McGill Corporation reported current assets of \$370,000 and current liabilities of \$200,000. The following items may have been recorded incorrectly. McGill uses a perpetual inventory system.

- Goods purchased costing \$22,000 were shipped f.o.b. shipping point by a supplier on December 28. McGill received and recorded the invoice on December 29, 2024, but the goods were not included in McGill's inventory because they were not received until January 4, 2025.

2. Goods purchased costing \$15,000 were shipped f.o.b. destination by a supplier on December 26. McGill received and recorded the invoice on December 31, but the goods were not included in McGill's 2024 inventory because they were not received until January 2, 2025.
3. Goods held on consignment from Claudia Kishi Company were included in McGill's December 31, 2024, inventory at \$13,000.

Instructions

- a. Compute the current ratio based on McGill's balance sheet.
- b. Recompute the current ratio after corrections are made.
- c. By what amount will income (before taxes) be adjusted up or down as a result of the corrections?

E7.26 (LO 5) (Inventory Errors) The net income per books of Linda Patrick Company was determined without knowledge of the errors indicated.

<u>Year</u>	<u>Net Income per Books</u>	<u>Error in Ending Inventory</u>	
2020	\$50,000	Overstated	\$ 3,000
2021	52,000	Overstated	9,000
2022	54,000	Understated	11,000
2023	56,000	No error	
2024	58,000	Understated	2,000
2025	60,000	Overstated	8,000

Instructions

Prepare a worksheet to show the adjusted net income figure for each of the 6 years after taking into account the inventory errors.

Problems

P7.1 (LO 2, 3, 4) Groupwork (Various Inventory Issues) The following independent situations relate to inventory accounting.

1. Kim Co. purchased goods with a list price of \$175,000, subject to trade discounts of 20% and 10%, with no cash discounts allowable. How much should Kim Co. record as the cost of these goods?
2. Keillor Company's inventory of \$1,100,000 at December 31, 2025, was based on a physical count of goods priced at cost and before any year-end adjustments relating to the following items.
 - a. Goods shipped from a vendor f.o.b. shipping point on December 24, 2025, at an invoice cost of \$69,000 to Keillor Company were received on January 4, 2026.
 - b. The physical count included \$29,000 of goods billed to Sakic Corp. f.o.b. shipping point on December 31, 2025. The carrier picked up these goods on January 3, 2026.
What amount should Keillor report as inventory on its balance sheet?
3. Zimmerman Corp. had 1,500 units of part M.O. on hand May 1, 2025, costing \$21 each. Purchases of part M.O. during May were as follows.

	<u>Units</u>	<u>Unit Cost</u>
May 9	2,000	\$22.00
17	3,500	23.00
26	1,000	24.00

A physical count on May 31, 2025, shows 2,000 units of part M.O. on hand. Using the FIFO method, what is the cost of part M.O. inventory at May 31, 2025? Using the LIFO method, what is the inventory cost? Using the average-cost method, what is the inventory cost?

4. Ashbrook Company adopted the dollar-value LIFO method on January 1, 2025 (using internal price indexes and multiple pools). The following data are available for inventory pool A for the 2 years following adoption of LIFO.

<u>Inventory</u>	<u>At Base-Year Cost</u>	<u>At Current-Year Cost</u>
1/1/25	\$200,000	\$200,000
12/31/25	240,000	264,000
12/31/26	256,000	286,720

Computing an internal price index and using the dollar-value LIFO method, at what amount should the inventory be reported at December 31, 2026?

5. Donovan Inc., a retail store chain, had the following information in its general ledger for the year 2026.

Merchandise purchased for resale	\$909,400
Interest on notes payable to vendors	8,700
Purchase returns	16,500
Freight-in	22,000
Freight-out (delivery expense)	17,100
Cash discounts on purchases	6,800

What is Donovan's inventoriable cost for 2026?

Instructions

Answer each of the preceding questions about inventories, and explain your answers.

P7.2 (LO 2) Groupwork (Inventory Adjustments) Dimitri Company, a manufacturer of small tools, provided the following information from its accounting records for the year ended December 31, 2025.

Inventory at December 31, 2025 (based on physical count of goods in Dimitri's plant, at cost, on December 31, 2025)	\$1,520,000
Accounts payable at December 31, 2025	1,200,000
Net sales (sales less sales returns)	8,150,000

Additional information is as follows.

- Included in the physical count were tools billed to a customer f.o.b. shipping point on December 31, 2025. These tools had a cost of \$31,000 and were billed at \$40,000. The shipment was on Dimitri's loading dock waiting to be picked up by the common carrier.
- Goods were in transit from a vendor to Dimitri on December 31, 2025. The invoice cost was \$76,000, and the goods were shipped f.o.b. shipping point on December 29, 2025.
- Work in process inventory costing \$30,000 was sent to an outside processor for plating on December 30, 2025.
- Tools returned by customers and held pending inspection in the returned goods area on December 31, 2025, were not included in the physical count. On January 8, 2026, the tools costing \$32,000 were inspected and returned to inventory. Credit memos totaling \$47,000 were issued to the customers on the same date.
- Tools shipped to a customer f.o.b. destination on December 26, 2025, were in transit at December 31, 2025, and had a cost of \$26,000. Upon notification of receipt by the customer on January 2, 2026, Dimitri issued a sales invoice for \$42,000.
- Goods, with an invoice cost of \$27,000, received from a vendor at 5:00 p.m. on December 31, 2025, were recorded on a receiving report dated January 2, 2026. The goods were not included in the physical count, but the invoice was included in accounts payable at December 31, 2025.
- Goods received from a vendor on December 26, 2025, were included in the physical count. However, the related \$56,000 vendor invoice was not included in accounts payable at December 31, 2025, because the accounts payable copy of the receiving report was lost.
- On January 3, 2026, a monthly freight bill in the amount of \$8,000 was received. The bill specifically related to merchandise purchased in December 2025, one-half of which was still in the inventory at December 31, 2025. The freight charges were not included in either the inventory or in accounts payable at December 31, 2025.

Instructions

Using the following tabular format, prepare a schedule of adjustments as of December 31, 2025, to the initial amounts per Dimitri's accounting records. Show separately the effect, if any, of each of the eight transactions on the December 31, 2025, amounts. If the transactions would have no effect on the initial amount shown, enter NONE.

	<u>Inventory</u>	<u>Accounts Payable</u>	<u>Net Sales</u>
Initial amounts	\$1,520,000	\$1,200,000	\$8,150,000
Adjustments—increase (decrease)			
1			
2			
3			
4			
5			
6			
7			
8			
Total adjustments	_____	_____	_____
Adjusted amounts	\$ _____	\$ _____	\$ _____

(AICPA adapted)

P7.3 (LO 2) Excel (Purchases Recorded Gross and Net) Some of the transactions of Torres Company during August are listed below. Torres uses the periodic inventory method.

August 10	Purchased merchandise on account, \$12,000, terms 2/10, n/30.
13	Returned part of the purchase of August 10, \$1,200, and received credit on account.
15	Purchased merchandise on account, \$16,000, terms 1/10, n/60.
25	Purchased merchandise on account, \$20,000, terms 2/10, n/30.
28	Paid invoice of August 15 in full.

Instructions

- Assuming that purchases are recorded at gross amounts and that discounts are to be recorded when taken:
 - Prepare general journal entries to record the transactions.
 - Describe how the various items would be shown in the financial statements.
- Assuming that purchases are recorded at net amounts and that discounts lost are treated as financial expenses:
 - Prepare general journal entries to enter the transactions.
 - Prepare the adjusting entry necessary on August 31 if financial statements are to be prepared at that time.
 - Describe how the various items would be shown in the financial statements.
- Which of the two methods do you prefer and why?

P7.4 (LO 3) Excel (Compute FIFO, LIFO, and Average-Cost) Hull Company's record of transactions concerning part X for the month of April was as follows.

<u>Purchases</u>		<u>Sales</u>	
April 1 (balance on hand)	100 @ \$5.00	April 5	300
4	400 @ 5.10	12	200
11	300 @ 5.30	27	800
18	200 @ 5.35	28	150
26	600 @ 5.60		
30	200 @ 5.80		

Instructions

- Compute the inventory at April 30 on each of the following bases. Assume that perpetual inventory records are kept in units only. Carry unit costs to the nearest cent.
 - First-in, first-out (FIFO).
 - Last-in, first-out (LIFO).
 - Average-cost.

- b. If the perpetual inventory record is kept in dollars, and costs are computed at the time of each withdrawal, what amount would be shown as ending inventory in (1), (2), and (3) above? (Carry average unit costs to four decimal places.)

P7.5 (LO 3) (Compute FIFO, LIFO, and Average-Cost) Some of the information found on a detail inventory card for Slatkin Inc. for the first month of operations is as follows.

Date	Received		Issued, No. of Units	Balance, No. of Units
	No. of Units	Unit Cost		
January 2	1,200	\$3.00		1,200
7			700	500
10	600	3.20		1,100
13			500	600
18	1,000	3.30	300	1,300
20			1,100	200
23	1,300	3.40		1,500
26			800	700
28	1,600	3.50		2,300
31			1,300	1,000

Instructions

- a. From these data compute the ending inventory on each of the following bases. Assume that perpetual inventory records are kept in units only. (Carry unit costs to the nearest cent and ending inventory to the nearest dollar.)
1. First-in, first-out (FIFO).
 2. Last-in, first-out (LIFO).
 3. Average-cost.
- b. If the perpetual inventory record is kept in dollars, and costs are computed at the time of each withdrawal, would the amounts shown as ending inventory in (1), (2), and (3) above be the same? Explain and compute. (Round average unit costs to four decimal places.)

P7.6 (LO 3) Groupwork (Compute FIFO, LIFO, Average-Cost—Periodic and Perpetual)

Ehlo Company is a multiproduct firm. Presented below is information concerning one of its products, the Hawkeye.

Date	Transaction	Quantity	Price/Cost
1/1	Beginning inventory	1,000	\$12
2/4	Purchase	2,000	18
2/20	Sale	2,500	30
4/2	Purchase	3,000	23
11/4	Sale	2,200	33

Instructions

Compute cost of goods sold, assuming Ehlo uses:

- Periodic system, FIFO cost flow.
- Periodic system, LIFO cost flow.
- Periodic system, weighted-average cost flow.
- Periodic system, LIFO cost flow.
- Perpetual system, FIFO cost flow.
- Perpetual system, LIFO cost flow.
- Perpetual system, moving-average cost flow.
- Perpetual system, weighted-average cost flow.

P7.7 (LO 3) Groupwork (Financial Statement Effects of FIFO and LIFO) The management of Tritt Company has asked its accounting department to describe the effect upon the company's financial position and its income statements of accounting for inventories on the LIFO rather than the FIFO basis during 2025 and 2026. The accounting department is to assume that the change to LIFO would have been effective on January 1, 2025, and that the initial LIFO base would have been the inventory value on December 31, 2024. The following are the company's financial statements and other data for the years 2025 and 2026 when the FIFO method was employed.

	Financial Position as of		
	12/31/24	12/31/25	12/31/26
Cash	\$ 90,000	\$130,000	\$154,000
Accounts receivable	80,000	100,000	120,000
Inventory	120,000	140,000	176,000
Other assets	160,000	170,000	200,000
Total assets	\$450,000	\$540,000	\$650,000

Financial Position as of			
	12/31/24	12/31/25	12/31/26
Accounts payable	\$ 40,000	\$ 60,000	\$ 80,000
Other liabilities	70,000	80,000	110,000
Common stock	200,000	200,000	200,000
Retained earnings	140,000	200,000	260,000
Total liabilities and equity	<u>\$450,000</u>	<u>\$540,000</u>	<u>\$650,000</u>

Income for Years Ended		
	12/31/25	12/31/26
Sales revenue	\$900,000	\$1,350,000
Less: Cost of goods sold	505,000	756,000
Other expenses	205,000	304,000
	<u>710,000</u>	<u>1,060,000</u>
Income before income taxes	190,000	290,000
Income taxes (40%)	76,000	116,000
Net income	<u>\$114,000</u>	<u>\$ 174,000</u>

Other data:

- Inventory on hand at December 31, 2024, consisted of 40,000 units valued at \$3.00 each.
- Sales (all units sold at the same price in a given year):
2025—150,000 units @ \$6.00 each 2026—180,000 units @ \$7.50 each
- Purchases (all units purchased at the same price in given year):
2025—150,000 units @ \$3.50 each 2026—180,000 units @ \$4.40 each
- Income taxes at the effective rate of 40% are paid on December 31 each year.

Instructions

Name the account(s) presented in the financial statements that would have different amounts for 2026 if LIFO rather than FIFO had been used, and state the new amount for each account that is named. Show computations.

(CMA adapted)

P7.8 (LO 4) (Dollar-Value LIFO) Norman's Televisions produces television sets in three categories: portable, midsize, and flat-screen. On January 1, 2025, Norman adopted dollar-value LIFO and decided to use a single inventory pool. The company's January 1 inventory consists of:

Category	Quantity	Cost per Unit	Total Cost
Portable	6,000	\$100	\$ 600,000
Midsize	8,000	250	2,000,000
Flat-screen	3,000	400	1,200,000
	<u>17,000</u>		<u>\$3,800,000</u>

During 2025, the company had the following purchases and sales.

Category	Quantity Purchased	Cost per Unit	Quantity Sold	Selling Price per Unit
Portable	15,000	\$110	14,000	\$150
Midsize	20,000	300	24,000	405
Flat-screen	10,000	500	6,000	600
	<u>45,000</u>		<u>44,000</u>	

Instructions

(Round to four decimals.)

- Compute ending inventory, cost of goods sold, and gross profit.
- Assume the company uses three inventory pools instead of one. Repeat instruction (a).

P7.9 (LO 4) Groupwork (Internal Indexes—Dollar-Value LIFO) On January 1, 2025, Bonanza Wholesalers Inc. adopted the dollar-value LIFO inventory method for income tax and external financial reporting purposes. However, Bonanza continued to use the FIFO inventory method for internal accounting and management purposes. In applying the LIFO method, Bonanza uses internal conversion price indexes and the multiple pools approach under which substantially identical inventory items are grouped into LIFO inventory pools. The following data were available for inventory pool no. 1, which comprises products A and B, for the 2 years following the adoption of LIFO.

FIFO Basis per Records			
	Units	Unit Cost	Total Cost
Inventory, 1/1/25			
Product A	10,000	\$30	\$300,000
Product B	9,000	25	225,000
			<u>\$525,000</u>
Inventory, 12/31/25			
Product A	17,000	36	\$612,000
Product B	9,000	26	234,000
			<u>\$846,000</u>
Inventory, 12/31/26			
Product A	13,000	40	\$520,000
Product B	10,000	32	320,000
			<u>\$840,000</u>

Instructions

- Prepare a schedule to compute the internal conversion price indexes for 2025 and 2026. Round indexes to two decimal places.
- Prepare a schedule to compute the inventory amounts at December 31, 2025 and 2026, using the dollar-value LIFO inventory method.

(AICPA adapted)

P7.10 (LO 4) (Internal Indexes—Dollar-Value LIFO) Presented below is information related to Kaisson Corporation for the last 3 years.

Item	Quantities in Ending Inventories	Base-Year Cost		Current-Year Cost	
		Unit Cost	Amount	Unit Cost	Amount
December 31, 2024					
A	9,000	\$ 2.00	\$18,000	\$2.20	\$19,800
B	6,000	3.00	18,000	3.55	21,300
C	4,000	5.00	20,000	5.40	21,600
		Totals	<u>\$56,000</u>		<u>\$62,700</u>
December 31, 2025					
A	9,000	\$ 2.00	\$18,000	\$2.60	\$23,400
B	6,800	3.00	20,400	3.75	25,500
C	6,000	5.00	30,000	6.40	38,400
		Totals	<u>\$68,400</u>		<u>\$87,300</u>
December 31, 2026					
A	8,000	\$ 2.00	\$16,000	\$2.70	\$21,600
B	8,000	3.00	24,000	4.00	32,000
C	6,000	5.00	30,000	6.20	37,200
		Totals	<u>\$70,000</u>		<u>\$90,800</u>

Instructions

Compute the ending inventories under the dollar-value LIFO method for 2024, 2025, and 2026. The base period is January 1, 2024, and the beginning inventory cost at that date was \$45,000. Compute indexes to two decimal places.

P7.11 (LO 4) Writing (Dollar-Value LIFO) Richardson Company cans a variety of vegetable-type soups. Recently, the company decided to value its inventories using dollar-value LIFO pools. The clerk who accounts for inventories does not understand how to value the inventory pools using this new method, so, as a private consultant, you have been asked to teach him how this new method works.

He has provided you with the following information about purchases made over a 6-year period.

Ending Inventory		
Date	(End-of-Year Prices)	Price Index
Dec. 31, 2021	\$ 80,000	100
Dec. 31, 2022	111,300	105
Dec. 31, 2023	108,000	120
Dec. 31, 2024	128,700	130
Dec. 31, 2025	147,000	140
Dec. 31, 2026	174,000	145

You have already explained to him how this inventory method is maintained, but he would feel better about it if you were to leave him detailed instructions explaining how these calculations are done and why he needs to put all inventories at a base-year value.

Instructions

- Compute the ending inventory for Richardson Company for 2021 through 2026 using dollar-value LIFO.
- Using your computation schedules as your illustration, write a step-by-step set of instructions explaining how the calculations are done. Begin your explanation by briefly explaining the theory behind this inventory method, including the purpose of putting all amounts into base-year price levels.

Using Your Judgment

Financial Statement Analysis Case: T J International

UYJ7.1 T J International was founded in 1969 as Trus Joist International. The firm, a manufacturer of specialty building products, has its headquarters in Boise, Idaho. The company, through its partnership in the Trus Joist MacMillan joint venture, develops and manufactures engineered lumber. This product is a high-quality substitute for structural lumber and uses lower-grade wood and materials formerly considered waste. The company also is majority owner of the Outlook Window Partnership, which is a consortium of three wood and vinyl window manufacturers.

Following is T J International's adapted income statement and information concerning inventories from its annual report.

T J International		
Sales		\$618,876,000
Cost of goods sold		<u>475,476,000</u>
Gross profit		143,400,000
Selling and administrative expenses		<u>102,112,000</u>
Income from operations		41,288,000
Other expense		<u>24,712,000</u>
Income before Income tax		16,576,000
Income tax		<u>7,728,000</u>
Net income		<u>\$ 8,848,000</u>

Inventories. Inventories are valued at the lower of cost or market and include material, labor, and production overhead costs. Inventories consisted of the following:

	<u>Current Year</u>	<u>Prior Year</u>
Finished goods	\$27,512,000	\$23,830,000
Raw materials and work-in-progress	<u>34,363,000</u>	<u>33,244,000</u>
	61,875,000	57,074,000
Reduction to LIFO cost	<u>(5,263,000)</u>	<u>(3,993,000)</u>
	<u>\$56,612,000</u>	<u>\$53,081,000</u>

The last-in, first-out (LIFO) method is used for determining the cost of lumber, veneer, Microllam lumber, TJI joists, and open web joists. Approximately 35 percent of total inventories at the end of the current year were valued using the LIFO method. The first-in, first-out (FIFO) method is used to determine the cost of all other inventories.

Instructions

- How much would income before taxes have been if FIFO costing had been used to value all inventories?
- If the income tax rate is 46.6%, what would income tax have been if FIFO costing had been used to value all inventories? In your opinion, is this difference in net income between the two methods material? Explain.
- Does the use of a different costing system for different types of inventory mean that there is a different physical flow of goods among the different types of inventory? Explain.

Financial Statement Analysis Case: Noven Pharmaceuticals, Inc.

UYJ7.2 Noven Pharmaceuticals, Inc., headquartered in Miami, Florida, describes itself in a recent annual report as follows.

Noven Pharmaceuticals, Inc.

Noven is a place of ideas—a company where scientific excellence and state-of-the-art manufacturing combine to create new answers to human needs. Our transdermal delivery systems spend drugs painlessly and effortlessly into the bloodstream by means of a simple skin patch. This technology has proven applications in estrogen replacement, but at Noven we are developing a variety of systems incorporating bestselling drugs that fight everything from asthma, anxiety and dental pain to cancer, heart disease and neurological illness. Our research portfolio also includes new technologies such as fontophoresis, in which drugs are delivered through the skin by means of electrical currents, as well as products that could satisfy broad consumer needs, such as our anti-microbial mouthrinse.

Noven also reported in its annual report that its activities to date have consisted of product development efforts, some of which have been independent and some of which have been completed in conjunction with **Rhone-Poulenc Rorer (RPR)** and **Ciba-Geigy**. The revenues so far have consisted of money received from licensing fees, “milestone” payments (payments made under licensing agreements when certain stages of the development of a certain product have been completed), and interest on its investments. The company expects that it will have significant revenue in the upcoming fiscal year from the launch of its first product, a transdermal estrogen delivery system.

The current assets portion of Noven’s balance sheet follows.

Cash and cash equivalents	\$12,070,272
Securities held to maturity	23,445,070
Inventory of supplies	1,264,553
Prepaid and other current assets	825,159
Total current assets	<u>\$37,605,054</u>

Inventory of supplies is recorded at the lower-of-cost (first-in, first-out)-or-net realizable value and consists mainly of supplies for research and development.

Instructions

- What would you expect the physical flow of goods for a pharmaceutical manufacturer to be most like: FIFO, LIFO, or random (flow of goods does not follow a set pattern)? Explain.
- What are some of the factors that Noven should consider as it selects an inventory measurement method?
- Suppose that Noven had \$49,000 in an inventory of transdermal estrogen delivery patches. These patches are from an initial production run and will be sold during the coming year. Why do you think that this amount is not shown in a separate inventory account? In which of the accounts shown is the inventory likely to be? At what point will the inventory be transferred to a separate inventory account?

Financial Statement Analysis Case: The Kroger Company

UYJ7.3 The Kroger Company reported the following data in its annual report (in millions).

	February 1, 2020	February 2, 2019	February 3, 2018
Net sales	\$122,286	\$121,852	\$122,662
Cost of sales (using LIFO)	95,294	95,103	95,662
Year-end inventories using FIFO	8,464	8,123	7,781
Year-end inventories using LIFO	7,084	6,846	6,533

Instructions

- Compute Kroger’s inventory turnovers for fiscal years ending February 1, 2020, and February 2, 2019, using:
 - Cost of sales and LIFO inventory.
 - Cost of sales and FIFO inventory.

- b. Some firms calculate inventory turnover using sales rather than cost of goods sold in the numerator. Calculate Kroger's fiscal years ending February 1, 2020, and February 2, 2019, turnover, using:
1. Sales and LIFO inventory.
 2. Sales and FIFO inventory.
- c. State which method you would choose to evaluate Kroger's performance. Justify your choice.

Accounting, Analysis, and Principles

UYJ7.4 Englehart Company sells two types of pumps. One is large and is for commercial use. The other is smaller and is used in residential swimming pools. The following inventory data is available for the month of March.

	<u>Units</u>	<u>Price per Unit</u>	<u>Total</u>
Residential Pumps			
Inventory at Feb. 28:	200	\$ 400	\$ 80,000
Purchases:			
March 10	500	\$ 450	\$225,000
March 20	400	\$ 475	\$190,000
March 30	300	\$ 500	\$150,000
Sales:			
March 15	500	\$ 540	\$270,000
March 25	400	\$ 570	\$228,000
Inventory at March 31:	500		
Commercial Pumps			
Inventory at Feb. 28:	600	\$ 800	\$480,000
Purchases:			
March 3	600	\$ 900	\$540,000
March 12	300	\$ 950	\$285,000
March 21	500	\$1,000	\$500,000
Sales:			
March 18	900	\$1,080	\$972,000
March 29	600	\$1,140	\$684,000
Inventory at March 31:	500		

Accounting

- a. Assuming Englehart uses a periodic inventory system, determine the cost of inventory on hand at March 31 and the cost of goods sold for March under first-in, first-out (FIFO).
- b. Assume Englehart uses dollar-value LIFO and one pool, consisting of the combination of residential and commercial pumps. Determine the cost of inventory on hand at March 31 and the cost of goods sold for March. Assume Englehart's initial adoption of LIFO is on March 1. Use the double-extension method to determine the appropriate price indices. (*Hint:* The price index for February 28/March 1 should be 1.00.) (Round the index to three decimal places.)

Analysis

- a. Assume you need to compute a current ratio for Englehart. Which inventory method (FIFO or dollar-value LIFO) do you think would give you a more meaningful current ratio?
- b. Some of Englehart's competitors use LIFO inventory costing and some use FIFO. How can an analyst compare the results of companies in an industry, when some use LIFO and others use FIFO?

Principles

Can companies change from one inventory accounting method to another? If a company changes to an inventory accounting method used by most of its competitors, what are the trade-offs in terms of the conceptual framework discussed in Chapter 1 of the text?

Developing Your Professional Skills

Critical-Thinking Cases

CT7.1 (LO 2) (Inventoriable Goods and Costs) You are asked to travel to Milwaukee to observe and verify the inventory of the Milwaukee branch of one of your clients. You arrive on Thursday, December 30, and find that the inventory procedures have just been started. You spot a railway car on the sidetrack at the unloading door and ask the warehouse superintendent, Buck Rogers, how he plans to inventory the contents of the car. He responds, “We are not going to include the contents in the inventory.”

Later in the day, you ask the bookkeeper for the invoice on the carload and the related freight bill. The invoice lists the various items, prices, and extensions of the goods in the car. You note that the carload was shipped December 24 from Albuquerque, f.o.b. Albuquerque, and that the total invoice price of the goods in the car was \$35,300. The freight bill called for a payment of \$1,500. Terms were net 30 days. The bookkeeper affirms the fact that this invoice is to be held for recording in January.

Instructions

- Does your client have a liability that should be recorded at December 31? Discuss.
- Prepare a journal entry(ies), if required, to reflect any accounting adjustment required. Assume a perpetual inventory system is used by your client.
- For what possible reason(s) might your client wish to postpone recording the transaction?

CT7.2 (LO 2) (Inventoriable Goods and Costs) Clay Matthews, an inventory control specialist, is interested in better understanding the accounting for inventories. Although Clay understands the more sophisticated computer inventory control systems, he has little knowledge of how inventory cost is determined. In studying the records of Strider Enterprises, which sells normal brand-name goods from its own store and on consignment through Chavez Inc., he asks you to answer the following questions.

Instructions

- Should Strider Enterprises include in its inventory normal brand-name goods purchased from its suppliers but not yet received if the terms of purchase are f.o.b. shipping point (manufacturer's plant)? Why?
- Should Strider Enterprises include freight-in expenditures as an inventory cost? Why?
- If Strider Enterprises purchases its goods on terms 2/10, net 30, should the purchases be recorded gross or net? Why?
- What are products on consignment? How should they be reported in the financial statements?

(AICPA adapted)

CT7.3 (LO 2) (Inventoriable Goods and Costs) George Solti, the controller for Garrison Lumber Company, has recently hired you as assistant controller. He wishes to determine your expertise in the area of inventory accounting and therefore asks you to answer the following unrelated questions.

- A company is involved in the wholesaling and retailing of automobile tires for foreign cars. Most of the inventory is imported, and it is valued on the company's records at the actual inventory cost plus freight-in. At year-end, the warehousing costs are prorated over cost of goods sold and ending inventory. Are warehousing costs considered a product cost or a period cost?
- A certain portion of a company's "inventory" is composed of obsolete items. Should obsolete items that are not currently consumed in the production of "goods or services to be available for sale" be classified as part of inventory?
- A company purchases airplanes for sale to others. However, until they are sold, the company charts and services the planes. What is the proper way to report these airplanes in the company's financial statements?
- A company wants to buy coal deposits but does not want the financing for the purchase to be reported on its financial statements. The company therefore establishes a trust to acquire the coal deposits. The company agrees to buy the coal over a certain period of time at specified prices. The trust is able to finance the coal purchase and pay off the loan as it is paid by the company for the minerals. How should this transaction be reported?

CT7.4 (LO 2) (Accounting Treatment of Purchase Discounts) Shawnee Corp., a household appliances dealer, purchases its inventories from various suppliers. Shawnee has consistently stated its inventories at FIFO cost.

Instructions

Shawnee is considering alternate methods of accounting for the cash discounts it takes when paying its suppliers promptly. From a theoretical standpoint, discuss the acceptability of each of the following methods.

- Financial income when payments are made.
- Reduction of cost of goods sold for the period when payments are made.
- Direct reduction of purchase cost.

(AICPA adapted)

CT7.5 (LO 2) (General Inventory Issues) In January 2025, Susquehanna Inc. requested and secured permission from the commissioner of the Internal Revenue Service to compute inventories under the last-in, first-out (LIFO) method and elected to determine inventory cost under the dollar-value LIFO method. Susquehanna Inc. satisfied the commissioner that cost could be accurately determined by use of an index number computed from a representative sample selected from the company's single inventory pool.

Instructions

- Why should inventories be included in (1) a balance sheet and (2) the computation of net income?
- The Internal Revenue Code allows some accountable events to be considered differently for income tax reporting purposes and financial accounting purposes, while other accountable events must be reported the same for both purposes. Discuss why it might be desirable to report some accountable events differently for financial accounting purposes than for income tax reporting purposes.
- Discuss the ways and conditions under which the FIFO and LIFO inventory costing methods produce different inventory valuations. Do not discuss procedures for computing inventory cost.

(AICPA adapted)

CT7.6 (LO 3) (LIFO Inventory Advantages) Jane Yoakam, president of Estefan Co., recently read an article that claimed that at least 100 of the country's largest 500 companies were either adopting or considering adopting the last-in, first-out (LIFO) method for valuing inventories. The article stated that the firms were switching to LIFO to (1) neutralize the effect of inflation in their financial statements, (2) eliminate inventory profits, and (3) reduce income taxes. Ms. Yoakam wonders if the switch would benefit her company.

Estefan currently uses the first-in, first-out (FIFO) method of inventory valuation in its periodic inventory system. The company has a high inventory turnover rate, and inventories represent a significant proportion of the assets.

Ms. Yoakam has been told that the LIFO system is more costly to operate and will provide little benefit to companies with high turnover. She intends to use the inventory method that is best for the company in the long run rather than selecting a method just because it is the current fad.

Instructions

- Explain to Ms. Yoakam what "inventory profits" are and how the LIFO method of inventory valuation could reduce them.
- Explain to Ms. Yoakam the conditions that must exist for Estefan Co. to receive tax benefits from a switch to the LIFO method.

CT7.7 (LO 3) Writing (Average-Cost, FIFO, and LIFO) Prepare a memorandum containing responses to the following items.

- Describe the cost flow assumptions used in average-cost, FIFO, and LIFO methods of inventory valuation.
- Distinguish between weighted-average-cost and moving-average-cost for inventory costing purposes.
- Identify the effects on both the balance sheet and the income statement of using the LIFO method instead of the FIFO method for inventory costing purposes over a substantial time period when purchase prices of inventoriable items are rising. State why these effects take place.

CT7.8 (LO 4) Writing (LIFO Application and Advantages) Geddes Corporation is a medium-sized manufacturing company with two divisions and three subsidiaries, all located in the United States. The Metallic Division manufactures metal castings for the automotive industry, and the Plastic Division produces small plastic items for electrical products and other uses. The three subsidiaries manufacture various products for other industrial users.

Geddes Corporation plans to change from the lower of first-in, first-out (FIFO)-cost-or market method of inventory valuation to the last-in, first-out (LIFO) method of inventory valuation to obtain tax benefits. To make the method acceptable for tax purposes, the change also will be made for its annual financial statements.

Instructions

- a. Describe the establishment of and subsequent pricing procedures for each of the following LIFO inventory methods.
 1. LIFO applied to units of product when the periodic inventory system is used.
 2. Application of the dollar-value method to LIFO units of product.
- b. Discuss the specific advantages and disadvantages of using the dollar-value LIFO application as compared to specific goods LIFO (unit LIFO). (Ignore income tax considerations.)
- c. Discuss the general advantages and disadvantages claimed for LIFO methods.

CT7.9 (LO 4) Writing (Dollar-Value LIFO Issues) Arruza Co. is considering switching from the specific-goods LIFO approach to the dollar-value LIFO approach. Because the financial personnel at Arruza know very little about dollar-value LIFO, they ask you to answer the following questions.

- a. What is a LIFO pool?
- b. Is it possible to use a LIFO pool concept and not use dollar-value LIFO? Explain.
- c. What is a LIFO liquidation?
- d. How are price indexes used in the dollar-value LIFO method?
- e. What are the advantages of dollar-value LIFO over specific-goods LIFO?

CT7.10 (LO 3, 4) Writing (FIFO and LIFO) Harrisburg Company is considering changing its inventory valuation method from FIFO to LIFO because of the potential tax savings. However, management wishes to consider all of the effects on the company, including its reported performance, before making the final decision.

The inventory account, currently valued on the FIFO basis, consists of 1,000,000 units at \$8 per unit on January 1, 2025. There are 1,000,000 shares of common stock outstanding as of January 1, 2025, and the cash balance is \$400,000.

The company has made the following forecasts for the period 2025–2027.

	<u>2025</u>	<u>2026</u>	<u>2027</u>
Unit sales (in millions of units)	1.1	1.0	1.3
Sales price per unit	\$10	\$12	\$12
Unit purchases (in millions of units)	1.0	1.1	1.2
Purchase price per unit	\$8	\$9	\$10
Annual depreciation (in thousands of dollars)	\$300	\$300	\$300
Cash dividends per share	\$0.15	\$0.15	\$0.15
Cash payments for additions to and replacement of plant and equipment (in thousands of dollars)	\$350	\$350	\$350
Income tax rate	20%	20%	20%
Operating expenses (exclusive of depreciation) as a percentage of sales	15%	15%	15%
Common shares outstanding (in millions)	1	1	1

Instructions

- a. Prepare a schedule that illustrates and compares the following data for Harrisburg Company under the FIFO and the LIFO inventory method for 2025–2027. Assume the company would begin LIFO at the beginning of 2025.
 1. Year-end inventory balances.
 2. Annual net income after taxes.
 3. Earnings per share.
 4. Cash balance.

Assume all sales are collected in the year of sale and all purchases, operating expenses, and taxes are paid during the year incurred.

- b. Using the data above, your answer to (a), and any additional issues you believe need to be considered, prepare a report that recommends whether or not Harrisburg Company should change to the LIFO inventory method. Support your conclusions with appropriate arguments.

(CMA adapted)

CT7.11 (LO 3, 4) Ethics (LIFO Choices) Wilkens Company uses the LIFO method for inventory costing. In an effort to lower net income, company president Mike Wilkens tells the plant accountant to take the unusual step of recommending to the purchasing department a large purchase of inventory at year-end. The price of the item to be purchased has nearly doubled during the year, and the item represents a major portion of inventory value.

Instructions

Answer the following questions.

- a. Identify the major stakeholders. If the plant accountant recommends the purchase, what are the consequences?
- b. If Wilkens Company were using the FIFO method of inventory costing, would Mike Wilkens give the same order? Why or why not?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE7.1 Access the glossary (“Master Glossary”) to answer the following.

- a. What is the definition provided for inventory?
- b. What is a customer?
- c. Under what conditions is a distributor considered a customer?
- d. What is a product financing arrangement?

CE7.2 Due to rising fuel costs, your client, **Overstock.com**, is considering adding a charge for shipping and handling costs on products sold through its website. What is the authoritative guidance for reporting these costs?

CE7.3 What guidance does the Codification provide concerning reporting inventories above cost?

CE7.4 What is the nature of the SEC guidance concerning the reporting of LIFO liquidations?

Codification Research Case

In conducting year-end inventory counts, your audit team is debating the impact of the client’s right of return policy both on inventory valuation and revenue recognition. The assistant controller argues that there is no need to worry about the return policies since they have not changed in a while. The audit senior wants a more authoritative answer, given the recently issued standard on revenue recognition. You have been asked to conduct some research of the authoritative literature before she presses the point with the client.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- a. What is the authoritative guidance for revenue recognition when right of return exists?
- b. When is this guidance important for a company? That is, for which of steps in the five-step revenue recognition model does right of return come into play?

- c. Does the FASB literature provide an example of the accounting for right of return? If so, summarize the example.
- d. What are the general guidelines for constraining estimates of the transaction price (variable consideration)?

Go to Wiley Course Resources for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

Analytics in Action Activities

Using Data Visualizations to Analyze Inventory

DA7.1 Accounting systems house vast amounts of raw data that can provide useful insights to management. However, the raw data alone can be overwhelming and difficult to interpret without using tools like Excel.

Excel allows us to organize the data into charts and graphs, calculate financial ratios, and quickly manipulate the data to compare and contrast different metrics. For example, the following chart, based on five years of historical inventory and cost of goods sold information, and generated in just a few minutes, allows management to see trends in the data that may otherwise remain hidden.

Required

For this exercise, you will use pivot tables and pivot charts in Excel. You will first organize a large set of raw data for a company. Then, you will create multiple charts and visualizations to help provide insights into how the company can better manage its inventories.

Go to Wiley Course Resources for complete details and instructions.

Inventories: Additional Valuation Issues

WHAT are additional inventory valuation issues?

One issue is what to do when inventory has lost value as a result of competitive or economic factors. Another problem arises if cost information is difficult to determine. Consider also the situation in which you have to estimate the inventory because it has been destroyed or you don't have time to count it.

WHY is understanding additional inventory valuation issues important?

The reason is that the investment in inventories is frequently the largest current asset of merchandising (retail) and manufacturing businesses. For example, consider these recent financial statements of **Best Buy**. As you can see, inventory comprises over 44% of current assets, and gross profit is over 22% of sales revenue.

Inventory information is used to compute key ratios, such as inventory turnover

and gross profit rate, as well as liquidity measures such as the acid-test ratio, to provide decision-useful information about the company to investors, creditors, and management. In addition to the use of LIFO or FIFO cost flow assumptions for inventory costs that you learned about in Chapter 7, you must also understand how the comparability and therefore the usefulness of the accounting information may also be affected by inventory writes-downs, valuation at net realizable value by some companies, and the use of estimation techniques.

HOW do we account for inventory at other than historical cost?

If inventory declines in value below its original cost, for whatever reason, a company should write down the inventory to reflect this loss. The general rule is to abandon the historical cost principle when the revenue-producing ability of the asset drops below its original cost. Companies value inventory at net realizable value (similar to net selling price) in certain industries where net realizable values are easily available and cost figures are difficult to obtain. Companies estimate the value of inventory by employing the gross profit method or the retail method. As you will learn, these methods rely on historical relationships between the cost and retail values to estimate the value of inventory without taking a physical count.

Best Buy (\$ in millions)

Partial Balance Sheet

Current assets	
Cash and cash equivalents	\$ 2,432
Short-term investments	1,456
Receivables	1,280
Merchandise inventory	5,174
Other current assets	1,387
Total current assets	<u>\$11,729</u>

Partial Income Statement

Revenue	\$40,339
Cost of goods sold	<u>31,292</u>
Gross profit	\$ 9,047
Net income (loss)	<u>\$ 1,233</u>

8.1 Lower-of-Cost-or-Net Realizable Value

LEARNING OBJECTIVE 1

Describe and apply the lower-of-cost-or-net realizable value rule.

Inventories are recorded at their cost. **Cost** is the acquisition price of inventory computed using one of the historical cost-based methods—specific identification, average-cost, FIFO, or LIFO. However, if inventory declines in value below its original cost, a major departure from the historical cost principle occurs. And whatever the reason for a decline—damage, physical deterioration, obsolescence, changes in price levels, or other causes—a company should write down the inventory to net realizable value (or market) to report this loss. **A company abandons the historical cost principle when the future utility (revenue-producing ability) of the asset drops below its original cost.**

Definition of Net Realizable Value

The term **net realizable value (NRV)** refers to the net amount that a company expects to realize from the sale of inventory. Net realizable value is the estimated selling price in the ordinary course of business, less reasonably predictable costs of completion, disposal (selling), and transportation. [1] (See the FASB Codification References near the end of the chapter.) We show you a simple application of this concept in Example 8.1

Example 8.1 Net Realizable Value

FACTS Assume that **Starbucks Corporation** has unfinished inventory (unroasted coffee beans) with a cost of \$950, a sales value of \$1,000, estimated cost of completion of \$50, and estimated selling costs of \$200.

QUESTION What is the net realizable value of Starbuck’s inventory?

SOLUTION

Inventory (estimated selling price)		\$1,000
Less: Estimated cost of completion	\$ 50	
Estimated selling costs	<u>200</u>	<u>250</u>
Net realizable value		<u>\$ 750</u>

Starbucks thus reports inventory on its balance sheet at \$750. In its income statement, Starbucks reports an inventory loss of \$200 (\$950 – \$750).

Underlying Concepts

Recall from Chapter 1 that NRV is more relevant than cost, but cost is more representationally faithful than NRV.

In Example 8.1, a departure from cost is justified because inventories should not be reported at amounts higher than the amount that is expected to be realized from sale or use.

- Companies should record the loss of utility in income in the period in which the loss occurs, not in the period of sale.
- Companies therefore report their inventories at the **lower-of-cost-or-net realizable value (LCNRV)** at each reporting date (see **Underlying Concepts**). [2]

Illustration of LCNRV

When companies report inventory at LCNRV, keep in mind that estimates are involved in this process, so it is not an “exact science.” A company estimates net realizable value based on the most predictable evidence of the inventories’ realizable amounts (expected selling price, expected costs of completion, disposal, and transportation), as shown in Example 8.2.

FACTS Assume that **Whole Foods** provides the following information related to its inventories.

<u>Food</u>	<u>Cost</u>	<u>Net Realizable Value</u>
Spinach	\$ 80,000	\$120,000
Carrots	100,000	100,000
Cut beans	50,000	40,000
Peas	90,000	72,000
Mixed vegetables	95,000	92,000

Example 8.2 Final Inventory Value

QUESTION What is the final inventory value for Whole Foods?

SOLUTION

<u>Food</u>	<u>Cost</u>	<u>Net Realizable Value</u>	<u>Final Inventory Value</u>
Spinach	\$ 80,000	\$120,000	\$ 80,000
Carrots	100,000	100,000	100,000
Cut beans	50,000	40,000	40,000
Peas	90,000	72,000	72,000
Mixed vegetables	95,000	92,000	92,000
			<u>\$384,000</u>

Final inventory value:

Spinach	Cost (\$80,000) is selected because it is lower than net realizable value.
Carrots	Cost (\$100,000) is the same as net realizable value.
Cut beans	Net realizable value (\$40,000) is selected because it is lower than cost.
Peas	Net realizable value (\$72,000) is selected because it is lower than cost.
Mixed vegetables	Net realizable value (\$92,000) is selected because it is lower than cost.

Note that the final inventory value of \$384,000 equals the sum of the LCNRV for each of the inventory items; Whole Foods applies the LCNRV rule to each individual type of food.

Methods of Applying LCNRV

In Example 8.2, we assumed that Whole Foods applied the lower-of-cost-or-net realizable value to each individual type of food. However, companies may apply the LCNRV rule either directly to each item, to each major category, or to the total of the inventory. If a company follows a major categories or total inventory approach in applying the LCNRV rule, increases in selling prices on some items can offset decreases in selling prices of other items. To illustrate, assume that Whole Foods separates its food products into two major categories, frozen and canned, as shown in [Illustration 8.1](#).

ILLUSTRATION 8.1 Alternative Applications of LCNRV

	Cost	NRV	Lower-of-Cost-or-NRV by:		
			Individual Items	Major Categories	Total Inventory
Frozen					
Spinach	\$ 80,000	\$120,000	\$ 80,000		
Carrots	100,000	100,000	100,000		
Cut beans	50,000	40,000	40,000		
Total frozen	230,000	260,000		\$230,000	
Canned					
Peas	90,000	72,000	72,000		
Mixed vegetables	95,000	92,000	92,000		
Total canned	185,000	164,000		164,000	
Total	\$415,000	\$424,000	\$384,000	\$394,000	\$415,000

As indicated, the reported value of inventory depends on application to individual items, major categories, or the total inventory.

- If Whole Foods applied the LCNRV rule to individual items, the amount of inventory is \$384,000.
- If applying the rule to major categories, inventory value increases to \$394,000.
- If applying LCNRV to the total inventory, inventory totals \$415,000.

Why this difference? When a company uses a major categories or total inventory approach, selling prices higher than cost offset selling prices lower than cost. For Whole Foods, using the major categories approach partially offsets the high selling price for spinach. However, in some situations—using the total inventory approach—lower selling prices on some items are totally offset by higher selling prices for other items.

Companies usually value inventory on an item-by-item basis for two reasons.

1. Tax rules require that companies use an individual-item basis if it is practicable to do so.
2. The individual-item approach gives the most conservative valuation for balance sheet purposes.

Companies that sell only one final product (comprised of many different raw materials) typically value inventory on a total-inventory basis. If a company produces several end products, it might use a major category approach instead.

The method selected should be the one that most clearly reflects income. **Whichever method a company selects, it should apply the method consistently from one period to another.**

Accounting Matters

Where Does Excess Inventory Go?

Accurately forecasting how much inventory to hold is a high-stakes balance between art and science, understanding the consumer, and following the data. Not surprisingly, companies don't always get it right.

Some companies like **Nike** disclose the risks that come with inaccurately forecasting consumer demand relative to their inventory. An excerpt from Nike's annual report to investors states, "Failure to accurately forecast consumer demand could lead to excess inventories or inventory shortages, which could result in decreased operating margins, reduced cash flows and harm to our business."

So, what happens when companies overestimate the amount of inventory to hold? Consider that most industry forecasts didn't predict the Covid-19 pandemic in 2020, which led to a large excess of inventory for many retailers. Whenever companies have significant amounts of excess inventory, they have to weigh their options in how they physically offload their goods. For many brands, there is the option of selling their inventory to off-price retailers at significantly discounted prices, but this isn't always an attractive option as it leads to dilution of the brand name.

Some brands turn to the more charitable choice of donating excess inventory. Clothing donation firm **Good360** received over \$600 million in clothes during 2020, more than double the donations received in past years. **Gap** alone donated over \$60 million of unworn apparel during 2020.

Selling to discounted retailers and charitable giving are much less controversial than the practice of destroying inventory. High-end retailer **Burberry Group** shocked some investors when it reported that it had destroyed (burned) \$37 million of inventory! As companies worldwide enhance their focus on sustainability, inventory levels will play a key role in that analysis.

Source: “What Happens to All of the Unsold Clothes?” *Wall Street Journal* (August 2020).

Adjusting Cost to NRV

One of two methods may be used to record the income effect of valuing inventory at NRV.

- The **cost-of-goods-sold method** debits Cost of Goods Sold for the write-down of the inventory to NRV. As a result, the company does not report a separate loss in the income statement because the cost of goods sold already includes the amount of the loss.
- The **loss method** debits a loss account for the write-down of the inventory to NRV.

We apply both methods in Example 8.3.

As indicated in Example 8.3, you'll see that the cost-of-goods-sold method buries the loss in the Cost of Goods Sold account. The loss method, by identifying the loss due to the

FACTS Ricardo Company reports the following information related to its inventory.

Sales revenue	\$200,000
Cost of goods sold (before NRV adjustment)	108,000
Ending inventory (at cost)	82,000
Ending inventory (at NRV)	70,000

QUESTIONS

- What are the journal entries to adjust inventory to NRV using (1) the cost-of-goods-sold method and (2) the loss method, assuming the use of the perpetual inventory system?
- How should the income statement for Ricardo be reported if (1) the cost-of-goods-sold method is used or (2) the loss method is used?

SOLUTION

a. To adjust inventory to NRV:

Cost-of-Goods-Sold Method		Loss Method	
Cost of Goods Sold	12,000	Inventory Loss	12,000
Inventory (\$82,000 – \$70,000)	12,000	Inventory (\$82,000 – \$70,000)	12,000

b. 1. Cost-of-goods-sold method:

Sales revenue	\$200,000
Cost of goods sold (after adjustment to NRV*)	120,000
Gross profit on sales	<u>\$ 80,000</u>

2. Loss method:

Sales revenue	\$200,000
Cost of goods sold	108,000
Gross profit on sales	92,000
Inventory loss	12,000
	<u>\$ 80,000</u>

Example 8.3 Cost-of-Goods-Sold and Loss Methods

*Cost of goods sold (before adjustment to NRV)	\$108,000
Difference between inventory at cost and NRV (\$82,000 – \$70,000)	<u>12,000</u>
Cost of goods sold (after adjustment to NRV)	<u>\$120,000</u>

Underlying Concepts

The income statement under the cost-of-goods-sold method presentation lacks *representational faithfulness*. The loss method illustrates the concepts of full disclosure and materiality. Most importantly, companies must be consistent in which method they use to allow for a consistent presentation of their financial information each year.

write-down, shows the loss separate from Cost of Goods Sold in the income statement. GAAP does not specify a particular account to debit for the write-down. We believe the loss method presentation is preferable because it clearly discloses the loss resulting from a decline in inventory to NRV (see **Underlying Concepts**).

After adjustment to NRV, that inventory value becomes the new cost basis.

- Under GAAP, if inventory values increase in subsequent periods, inventory is not written up.
- This accounting can sometimes lead to distortions in cost of goods sold and gross profit in subsequent periods when inventory that had been written down in a previous period is sold.

For example, **Trek Bicycle Corp.** likely incurs some inventory write-downs each year as newer, better bicycle models replace last year's best seller. Remaining inventory would usually be discounted to be sold and to make space for new inventory. Now consider this scenario against the unprecedented boom in bike sales during the Covid-19 crisis when consumers were desperate for outdoor activities. The increase in bike sales saw global supply chains backed-up, and inventory that may have once been discounted was now selling at a premium!

Accounting Matters

Are These Profit Margins for Real?

The process of writing down inventory is not an exact science and the estimated losses may not come to fruition. The example of **Trek Bicycle** writing down its season-ending inventory, only to go on to sell the inventory at a premium, shows the imperfect nature of these estimates.

How might users of financial statements understand when changes in profit margins are due to real changes in a company's operations or due to an accounting estimate? Well, not all disclosures are created equal, but **Nike** does a nice job of highlighting the details of changes in its profit margin in its annual report to investors as shown in the following chart.

As indicated in the following chart, Nike's margin declined by 1.3% (from 44.7% to 43.4%). While Nike saw a slight increase in selling price in excess of product cost (1.5% – 1.4%), its Other Costs were that main source of margin decline. Nike indicated these increased costs were due to the impacts of Covid-19, including increased factory cancellations costs, higher inventory obsolescence, and the adverse rate impact of supply chain costs on a lower volume of wholesale shipments.

Changes in Gross Margin from Fiscal 2019 to 2020

Put It into Practice LO 8.1

Determine LCNRV

FACTS Gard Corporation has the following four items in its ending inventory.

Item	Cost	Selling Price	Costs to Complete and Sell
M	\$2,000	\$3,000	\$ 900
N	5,000	8,000	3,050
O	4,400	6,000	1,375
P	3,200	5,000	1,170

INSTRUCTIONS

Determine the following.

- The LCMNRV for each item.
- The amount of write-down, if any, using (1) an item-by-item LCMNRV evaluation and (2) total inventory LCMNRV evaluation.

SOLUTION

- a. The LCMNRV for each item is presented as follows.

<u>Item</u>	<u>Cost</u>	<u>NRV</u>	<u>LCMNRV</u>
M	\$ 2,000	\$ 2,100 (\$3,000 – \$900)	\$ 2,000
N	5,000	4,950 (\$8,000 – \$3,050)	4,950
O	4,400	4,625 (\$6,000 – \$1,375)	4,400
P	3,200	3,830 (\$5,000 – \$1,170)	3,200
Total	<u>\$14,600</u>	<u>\$15,505</u>	<u>\$14,550</u>

- b. 1. On an item-by-item basis, the write-down is \$50, which is due to the decline in NRV for item N (\$5,000 – \$4,950).
2. There is no write-down when performing the assessment on the total inventory (\$15,505 > \$14,600).

8.2 Lower-of-Cost-or-Market

LEARNING OBJECTIVE 2

Describe and apply the lower-of-cost-or-market rule.

The use of the LCMNRV method works well to measure the decline in value of inventory for most companies. It was designed to simplify and reduce the cost and complexity of inventory measurement under GAAP. However, the FASB determined that for companies using LIFO or the retail inventory methods, LCMNRV results in potentially significant costs and does not simplify the subsequent measurement of inventory.¹

As a solution, companies that use the LIFO or retail inventory method (to be discussed later in the chapter) may use an alternative approach that compares a designated market value of the inventory to cost. This approach is commonly referred to as **lower-of-cost-or-market (LCM)**. Under LCM, you start with replacement cost (the amount the company would pay to replace the inventory) and then apply two additional limitations to value ending inventory: **(1) net realizable value and (2) net realizable value less a normal profit margin**.

¹ Specifically, as was discussed in Chapter 7, LIFO costing generally results in inventory stated at lower historical cost amounts in times of rising prices. However, applying LCMNRV to already lower-stated LIFO inventory amounts (in a period when prices decline) results in an **increase** in income. This leads to distortions in income, significant costs to track changes in the LIFO reserve, and is inconsistent with the goal of LCMNRV. The Board did not want LIFO inventory method companies to incur these costs, given the change to LCMNRV might not simplify the accounting nor improve the information reported to users for these companies. See *FASB Accounting Standards Update 2015-11, Inventory (Topic 330)*: “Simplifying the Measurement of Inventory” (July 2015), paras. BC5–BC9.

- As discussed earlier, net realizable value (NRV) is the estimated selling price in the ordinary course of business, less reasonably predictable costs of completion and disposal (selling).
- A normal profit margin is subtracted from NRV to arrive at **net realizable value less a normal profit margin**.

Let's see how this works in practice in Example 8.4.

Example 8.4 LCM Measures

FACTS Parker Corp. has unfinished inventory with an estimated selling price of \$1,000, estimated cost of completion and disposal of \$300, and a normal profit margin of 10% of sales.

QUESTION What is the net realizable value and net realizable value less a normal profit margin for Parker's inventory?

SOLUTION

Inventory—(based on estimated selling price)	\$1,000
Less: Estimated cost of completion and disposal	<u>300</u>
Net realizable value	700
Less: Allowance for normal profit margin (10% of sales)	<u>100</u>
Net realizable value less a normal profit margin	<u>\$ 600</u>

The general LCM rule is: **A company values inventory at the lower-of-cost-or-market, with market limited to an amount that is not more than net realizable value or less than net realizable value less a normal profit margin.** [3]

- The **upper limit (ceiling)** is the net realizable value of inventory.
- The **lower limit (floor)** is the net realizable value less a normal profit margin.

Ceiling

Floor

Establishing these limits for the value of the inventory prevents companies from over- or understating inventory.

The maximum limitation, **not to exceed the net realizable value (ceiling)**, prevents overstatement of the value of obsolete or damaged inventories. That is, if the replacement cost of an item exceeds its net realizable value, a company should not report inventory at replacement cost. This is because the company can receive only the selling price less cost of disposal (see **Global View**). As Example 8.5 demonstrates, to report the inventory at replacement cost would result in an overstatement of inventory and understatement of the loss in the current period.

Global View

IFRS requires all companies to apply LCNRV. Thus, IFRS does not use a ceiling or floor to determine market. *See the IFRS Insights at the end of the chapter for a discussion of the similarities and differences between GAAP and IFRS.*

Example 8.5 Evaluation of Replacement Cost

FACTS Assume that **Costco** paid \$1,000 for an infrared sauna that it can now purchase for \$900. The net realizable value of the sauna is \$700.

QUESTION What amount—replacement cost or net realizable value—should Costco use in its LCM evaluation?

SOLUTION

Costco should use the \$700 net realizable value as the ceiling. This is the amount it could receive upon disposal. To report the replacement cost of \$900 overstates the ending inventory and understates the loss for the period.

The minimum limitation (floor) is **not to be less than net realizable value reduced by an estimated normal profit margin**. The floor establishes a value below which a company should not price inventory, regardless of replacement cost. It makes no sense to price inventory below net realizable value less a normal margin. This minimum amount (floor) measures what the company can receive for the inventory and still earn a normal profit. Use of a floor deters understatement of inventory and overstatement of the loss in the current period.

Companies using LCM must incorporate a “normal” profit margin into their analysis, which begs the question, what is normal?

- Profit margins will vary quite substantially across different industries, product categories, and markets.
- **This is another area where companies will rely heavily on data analytics to track historical trends in profit margins at the product level to establish their estimate of a normal profit margin.**

Illustration 8.2 presents the guidelines for valuing inventory at the lower-of-cost-or-market.

ILLUSTRATION 8.2 Inventory Valuation—Lower-of-Cost-or-Market

How Lower-of-Cost-or-Market Works

The **designated market value** is the amount that a company compares to cost. It is **always the middle value of three amounts**: replacement cost, net realizable value, and net realizable value less a normal profit margin. To illustrate how to compute designated market value, let us return to the inventory data for **Whole Foods**, as shown in **Illustration 8.3**. (Designated market values are shown in red.) Assume now that Whole Foods uses the LIFO method.

Food	Replacement Cost	Net Realizable Value (Ceiling)	Net Realizable Value Less a Normal Profit Margin (Floor)	Designated Market Value
Spinach	\$ 88,000	\$120,000	\$104,000	\$104,000
Carrots	90,000	100,000	70,000	90,000
Cut beans	45,000	40,000	27,500	40,000
Peas	36,000	72,000	48,000	48,000
Mixed vegetables	105,000	92,000	80,000	92,000

For each food category, the designated market value (in red) is the middle value among replacement cost, net realizable value and net realizable value less a normal profit margin.

ILLUSTRATION 8.3 Computation of Designated Market Value

Example 8.6

Final Inventory Value

FACTS Refer to the Whole Foods information from Illustration 8.3.

QUESTION How would you compute the final inventory value for Whole Foods?

SOLUTION

Using the designated market values in Illustration 8.3, the final inventory value for each food category is the lower value between cost and designated market value.

Food	Cost	Designated Market Value	Final Inventory Value
Spinach	\$ 80,000	\$104,000	\$ 80,000
Carrots	100,000	90,000	90,000
Cut beans	50,000	40,000	40,000
Peas	90,000	48,000	48,000
Mixed vegetables	95,000	92,000	92,000
	<u>\$415,000</u>		<u>\$350,000</u>

As with the LCMRV approach, the application of the lower-of-cost-or-market rule incorporates only losses in value that occur in the normal course of business. Whole Foods makes the following entry (using the loss method) to adjust cost to LCM.

Inventory Loss	65,000
Inventory (\$415,000 – \$350,000)	65,000

Methods of Applying Lower-of-Cost-or-Market

In the Whole Foods illustration, we assumed that the company applied the LCM rule to each individual type of food. As in the application of LCMRV presented earlier, companies may apply the LCM rule either directly to each item, to each category, or to the total of the inventory. To illustrate, assume that Whole Foods separates its food products into two major categories, frozen and canned, as shown in [Illustration 8.4](#).

ILLUSTRATION 8.4
Alternative Applications of
Lower-of-Cost-or-Market

	Cost	Designated Market	Lower-of-Cost-or-Market by:		
			Individual Items	Major Categories	Total Inventory
Frozen					
Spinach	\$ 80,000	\$104,000	\$ 80,000		
Carrots	100,000	90,000	90,000		
Cut beans	50,000	40,000	40,000		
Total frozen	<u>230,000</u>	<u>234,000</u>		\$230,000	
Canned					
Peas	90,000	48,000	48,000		
Mixed vegetables	95,000	92,000	92,000		
Total canned	<u>185,000</u>	<u>140,000</u>		140,000	
Total	<u>\$415,000</u>	<u>\$374,000</u>	<u>\$350,000</u>	<u>\$370,000</u>	<u>\$374,000</u>

Summarizing the analysis in Illustration 8.4:

- If Whole Foods applied the LCM rule to individual items, the amount of inventory is **\$350,000**.
- If applying the rule to major categories, inventory increases to **\$370,000**.
- If applying LCM to the total inventory, it increases to **\$374,000**.

Why this difference? When a company uses a major categories or total inventory approach, market values higher than cost offset market values lower than cost. For Whole Foods, using the major categories approach partially offsets the high market value for spinach. Using the total inventory approach totally offsets the high market value for spinach.

Recall that companies usually value inventory on an item-by-item basis and this approach gives the most conservative valuation for balance sheet purposes.

- The method selected should be the one that most clearly reflects income.
- Whichever method a company selects, it should apply the method consistently from one period to another.

Evaluation of the LCNRV and LCM Rules

Both the LCNRV and LCM rules suffer some conceptual deficiencies, as shown in [Illustration 8.5](#).

Major Disadvantages	Result
Mismatch in valuation	A company recognizes decreases in the value of the asset and the charge to expense in the period in which the loss in utility occurs—not in the period of sale. On the other hand, it recognizes increases in the value of the asset only at the point of sale. In other words, a company may value the inventory at cost in one year and at market or NRV in the next year.
Mismatch in income	Net income for the year in which a company takes the loss is lower. Net income of the subsequent period may be higher than normal if the expected reductions in sales price do not materialize.
Use of estimates	Application of these rules uses “normal profit” or “ordinary” costs to sell or dispose in determining inventory values. Since companies develop these estimates based on past experience (which they may not attain in the future), this subjective measure presents an opportunity for income manipulation.

ILLUSTRATION 8.5

Disadvantages of LCNRV and LCM Rules

Analytics in Action: Role of Big Data in Inventory

With thousands of inventory products and product categories, imagine the amount of data that companies like **Amazon**, **Target**, or **Apple** must evaluate to report their inventory at the LCNRV or LCM. These companies must consider historical trends on obsolescence coupled with current economic conditions and consumer demand for their products, all to report inventory on the balance sheet.

To limit inventory losses, companies use predictive analytics to make sure they are carrying the right amount of the right type of inventory in the right locations. For example, the following chart represents inventory data from Target. A company like Target will track many different inventory data points, such as total inventory on hand and inventory turnover trends, to ensure that it is effectively managing one of its largest balance sheet items.

Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

Put It into Practice LO 8.2

Determine LCM

FACTS Presented below is information related to Fowler Golf, Inc.'s inventory. Assume Fowler uses LIFO and LCM.

Measurement	Golf Bags	Shoes	Rain Suits
Historical cost	\$190.00	\$106.00	\$53.00
Selling price	212.00	145.00	73.75
Cost to complete	19.00	8.00	2.50
Current replacement cost	203.00	105.00	51.00
Normal profit margin	32.00	29.00	21.25

INSTRUCTIONS

Determine the following.

- The ceiling and the floor that should be used in the lower-of-cost-or-market computation for golf bags.
- The designated market value that should be used in the lower-of-cost-or-market comparison for shoes.
- The lower-of-cost-or-market for the rain suits.

SOLUTION

- a. The ceiling for golf bags is \$193 (net realizable value), computed as follows.

Selling price	\$212
Costs to complete	(19)
Ceiling	\$193

The floor for golf bags is \$161 (NRV less a normal profit margin), computed as follows.

NRV	\$193
Normal profit margin	(32)
Floor	\$161

- b. The designated market value for shoes is \$108 (net realizable value), determined as follows.

NRV (Selling price less costs to complete)	\$137 (\$145 - \$8)
Designated market (NRV less normal profit margin)	\$108 (\$137 - \$29)
Replacement cost	\$105

- c. The LCM for rain suits is \$51.00 (replacement cost). It is the designated market value, which is less than the historical cost of \$53. The designated market value is determined as follows.

NRV (Selling price less costs to complete)	\$71.25 (\$73.75 - \$2.50)
Designated market (Replacement cost)	\$51.00
NRV less normal profit margin	\$50.00 (\$71.25 - \$21.25)

8.3 Other Valuation Approaches

LEARNING OBJECTIVE 3

Identify other inventory valuation issues.

Valuation at Net Realizable Value

As indicated, companies report inventory at cost or at the LCM.² Under limited circumstances, support exists for **recording inventory at net realizable value**, even if that amount is above cost. GAAP permits this exception to the normal recognition rule when **all** the following conditions are met.

1. There is a controlled market with a quoted price applicable to all quantities.
2. No significant costs of disposal are involved.
3. The product is available for immediate delivery.

Unless items of inventory meet the three NRV conditions, they are accounted for based on historical cost.³

For example, mining companies ordinarily report inventories of certain minerals (rare metals, especially) at selling prices because there is often a controlled market without significant costs of disposal. Similar treatment is given agricultural products (such as harvested crops or animals held-for-sale) that are immediately marketable at quoted prices.

Another situation in which valuation at net realizable value is allowed is when it is difficult to obtain cost figures. For example, the accounting for inventory in a meat-packing plant presents a costing challenge.

- The “raw material” consists of cattle, each unit of which the company purchases as a whole and then divides into parts that are the products.
- Instead of one product out of many raw materials or parts, the meat-packing company makes many products from one “unit” of raw material.
- To allocate the cost of the animal “on the hoof” into the cost of ribs, chuck, and shoulders is a practical impossibility.

Therefore, because of a peculiarity of the industry, meat-packing companies sometimes carry **inventories at sales price less distribution costs**. It is much easier and more useful for the company to determine the market price of the various products and value them in the inventory at selling price less the various costs necessary to get them to market (costs such as shipping and handling).

This costing situation is in stark contrast to a manufacturing plant, where the company combines various raw materials and purchased parts to create a finished product. The manufacturer can use the cost basis to account for various items in inventory because it knows the cost of each individual component part.

² Manufacturing companies frequently employ a **standardized cost system** that predetermines the unit costs for material, labor, and manufacturing overhead and values raw materials, work in process, and finished goods inventories at their standard costs. For financial reporting purposes, it is acceptable to price inventories at standard costs if there is no significant difference between the actual costs and standard costs. **Burlington Industries** and **Hewlett-Packard** use standard costs for valuing at least a portion of their inventories.

³ Companies that meet the three conditions for valuation at net realizable value (NRV) have an option to use either NRV or LCM. [4]

Valuation Using Relative Sales Value

A special problem arises when a company buys a group of varying units in a single **lump-sum purchase**, also called a **basket purchase**. To illustrate, assume that Woodland Developers purchases land for \$1 million that it will subdivide into 400 lots. These lots are of different sizes and shapes but can be roughly sorted into three groups graded A, B, and C. As Woodland sells the lots, it allocates the purchase cost of \$1 million among the lots sold and the lots remaining on hand.

You might wonder, why wouldn't Woodland simply divide the total cost of \$1 million by 400 lots, to get a cost of \$2,500 for each lot?

- This approach would not recognize that the lots vary in size, shape, and attractiveness.
- Therefore, to accurately value each unit, the common and most logical practice is to allocate the total among the various units on the basis of their **relative sales value**, as shown in Example 8.7.

Example 8.7

Relative Sales Value

FACTS Woodland Developers purchases land for \$1 million that it will subdivide into 400 lots. Area A has 100 lots, which will sell for \$1,000,000 (100 × \$10,000). Area B has 100 lots with a sales price of \$600,000 (100 × \$6,000). Area C has 200 lots with a sales price of \$900,000 (200 × \$4,500). The sales prices across the areas vary based on the view afforded by each lot on the adjacent lake. Area C has no view of the lake, Area B has a partial view, and Area A has an unobstructed view of the lake.

QUESTION How would you compute the cost per lot in Areas A, B, and C, using the relative sales value method?

SOLUTION

AutoSave Off															↶ ↷ 🏠		✖	
fx																		
	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O			
1	Woodland Developers																	
2	Relative Sales Value																	
3																		

With the cost per lot calculated in Example 8.7, Woodland can then determine gross profit upon selling the lots, as shown in Example 8.8.

FACTS Use the information about Woodland Developers from Example 8.7. Woodland sold 77 Area A lots, 80 Area B lots, and 100 Area C lots.

QUESTION How would you compute Woodland's cost of lots sold and gross profit?

SOLUTION

Example 8.8 Gross Profit Using Relative Sales Value

AutoSave Off										↶	↷	🏠	🔍				
										▼	:	✕	✓	fx			
	A	B	C	D	E	F	G	H	I	J	K						
1	Woodland Developers																
	Gross Profit																
2																	
3	Areas		Number of Lots Sold		Cost per Lot	=	Cost of Lots Sold		Sales		Gross Profit						
4	A		77	×	\$4,000	=	\$308,000		\$ 770,000 ⁽¹⁾		\$ 462,000						
5	B		80	×	2,400	=	192,000		480,000 ⁽²⁾		288,000						
6	C		100	×	1,800	=	180,000		450,000 ⁽³⁾		270,000						
7							\$680,000		\$1,700,000		\$1,020,000						
8																	
9	⁽¹⁾ \$10,000/lot × 77 lots; ⁽²⁾ \$6,000/lot × 80 lots; ⁽³⁾ \$4,500/lot × 100 lots																
	Sheet1	+															

As indicated in the worksheet, the cost of lots sold is \$680,000, and the gross profit is \$1,020,000. The ending inventory is \$320,000 (\$1,000,000 beginning inventory – \$680,000 cost of goods sold).

Woodland also can compute its ending inventory amount another way than the relative sales value (see Example 8.7).

①

The ratio of cost to selling price for all the lots is \$1 million divided by \$2,500,000, or **40%**.

②

Accordingly, if the total sales price of lots sold is \$1,700,000, then the cost of the lots sold is 40% of \$1,700,000, or **\$680,000**.

③

The inventory of lots on hand is then \$1 million less \$680,000, or **\$320,000**.

Purchase Commitments—A Special Problem

In many lines of business, a company's survival and continued profitability depends on it having a sufficient stock of merchandise to meet customer demand. Consequently, a company often makes purchase commitments.

- **Purchase commitments** are agreements to buy inventory weeks, months, or even years in advance.
- Purchase commitments are popular because the buyer can secure a supply of inventory and the seller knows it has a sale of its goods at a given price.

Usually, it is not necessary for the buyer to make any journal entries to record purchase commitments of goods that the seller has not shipped. Ordinary orders, for which the buyer and seller will determine prices at the time of shipment, and **which are subject to cancellation**,

Underlying Concepts

Reporting the loss is *conservative*. However, reporting the decline in market price is debatable because no asset is recorded. This area demonstrates the need for good definitions of assets and liabilities.

do not represent either an asset or a liability to the buyer. Therefore, the buyer does not record the purchase commitments or report them in the financial statements.

What happens, though, if a buyer enters into a **noncancelable** purchase contract? Is the purchase commitment recorded in the financial statements because it is noncancelable?

- The answer is that it depends on the relationship between the current year-end market price of the good and the agreed upon contract (selling) price.
- If the contract price is greater than the market price and the buyer expects to realize a loss, the buyer should recognize a loss in the period during which such declines in market value take place (see **Underlying Concepts**). [5]⁴

While there is risk in entering into purchase commitments, there may be an even greater risk in not securing inventory at a good price. As you can see from the disclosures shown in **Illustration 8.6**, purchase commitments are a common practice for a variety of companies to ensure they have the inventory they need, when they need it.

ILLUSTRATION 8.6
Purchase Commitment Disclosures

Company	Disclosure on Purchase Commitments
Starbucks	As of September 29, 2019, we had committed to purchasing green coffee totaling \$854 million under fixed-price contracts and an estimated \$203 million under price-to-be-fixed contracts....
Amazon.com	During the normal course of business, in order to manage manufacturing lead times and help ensure adequate supply, we enter into agreements with contract manufacturers and suppliers for certain electronic device components. A portion of our reported purchase commitments arising from these agreements consists of firm, non-cancellable commitments. These commitments are based on forecasted customer demand. If we reduce these commitments, we may incur additional costs. We also have firm, non-cancellable commitments for certain products offered in our Whole Foods Market stores.
Apple	The Company orders components for its products and builds inventory in advance of product announcements and shipments. Manufacturing purchase obligations cover the Company’s forecasted component and manufacturing requirements, typically for periods up to 150 days. Because the Company’s markets are volatile, competitive, and subject to rapid technology and price changes, there is a risk the Company will forecast incorrectly and order or produce excess or insufficient amounts of components or products, or not fully utilize firm purchase commitments.
Target	Purchase obligations, which include all legally binding contracts such as firm commitments for inventory purchases, merchandise royalties, equipment purchases, marketing-related contracts, software acquisition/license commitments, and service contracts, were \$676 million and \$992 million as of February 1, 2020 and February 2, 2019, respectively. These purchase obligations are primarily due within three years and recorded as liabilities when goods are received or services rendered.

Source: Company 10-K reports.

Example 8.9 shows the accounting behind a purchase commitment.

⁴ There is a long-standing controversy on the accounting in this area. See, for example, Yuji Ijiri, *Recognition of Contractual Rights and Obligations, Research Report* (Stamford, Conn.: FASB, 1980), who argues that companies should capitalize firm purchase commitments. “Firm” means that it is unlikely that companies can avoid performance under the contract without a severe penalty.

FACTS Assume that **Starbucks** signed a contract early in 2025 to purchase coffee beans in 2026 at a price of \$10,000,000. Assume further that the market price of the coffee beans on December 31, 2025, dropped to \$7,000,000.

QUESTIONS

- What entry does Starbucks make on December 31, 2025, related to the purchase commitment?
- What entry does Starbucks make on March 30, 2026, when it receives the coffee beans at a cost of \$10 million?

SOLUTION

a. To record the loss on the purchase commitment:

December 31, 2025

Loss on Purchase Commitments	3,000,000
Estimated Liability on Purchase Commitments	3,000,000

Starbucks would report the loss in the income statement under “Other expenses and losses.” And because the contract is to be executed within the next fiscal year, Starbucks would report the Estimated Liability on Purchase Commitments in the current liabilities section on the balance sheet.

b. To record purchase of the inventory:

March 30, 2026

Purchases (Inventory)	7,000,000
Estimated Liability on Purchase Commitments	3,000,000
Cash	10,000,000

The result of the purchase commitment was that Starbucks paid \$10 million for a contract worth only \$7 million. It recorded the loss in the previous period—when the price declined.

Example 8.9 Purchase Commitment

Let's continue with Example 8.9. If Starbucks can partially or fully recover the contract price before it receives the coffee beans, it reduces the Estimated Liability on Purchase Commitments. In that case, it then reports in the period of the price increase a resulting gain for the amount of the partial or full recovery. For example, say that drought conditions in Latin America has decreased the global supply of coffee beans, thereby increasing the market value of Starbucks' inventory from its current \$7,000,000 to \$8,000,000. The entry to record the gain on the purchase commitment is as follows.

Estimated Liability on Purchase Commitments	1,000,000
Gain on Purchase Commitments	1,000,000

If the market price at the time Starbucks receives the coffee beans is more than \$2,000,000 below the contract price, Starbucks will have to recognize an additional loss and record the purchase at the lower-of-cost-or-net realizable value.

In general, it is not necessary for the buyer to make any journal entries to reflect commitments for purchases of goods that the seller has not shipped.

- Ordinary orders, for which the buyer and seller will determine prices at the time of shipment and **which are subject to cancellation**, do not represent either an asset or a liability to the buyer.⁵
- This is because **the contract is “executory” in nature**—neither party has performed nor fulfilled its part of the contract.

However, if material, the buyer should disclose such contract details in a note to its financial statements.

⁵ Appendix 16A provides a complete discussion of hedging and the use of derivatives such as futures.

Put It into Practice LO 8.3

Account for
Relative Sales
Value and Purchase
Commitments

FACTS Remote, Inc. buys 500 USB speaker/microphone headsets from a distributor that is experiencing a decline in demand for those products due to the growing popularity of Bluetooth technology. The purchase price for the headsets is \$8,000. Bell will group the headsets into three price categories for resale, as indicated below.

Group	No. of Headsets	Price per Headset
1	50	\$10
2	400	20
3	50	30

INSTRUCTIONS

- Determine the cost per headset for each group, using the relative sales value method.
- At December 31, 2025, Remote has outstanding noncancelable purchase commitments for 12,000 USB cords, at \$2.00 per cord, which is raw material for a variety of Remote's products. The company prices its raw material inventory at cost or net realizable value, whichever is lower.
 - Assuming that the market price as of December 31, 2025, is \$2.30 per cord, how would you report this matter in the accounts and statements? Explain.
 - Assuming that the market price as of December 31, 2025, is \$1.70 per cord, instead of \$2.30, how would you report this situation in the accounts and statements?
 - Give the entry in January 2026, when the cord shipment is received, assuming that the situation given in part (b2) existed at December 31, 2025, and that the market price in January 2026 is \$1.70 per cord. Give an explanation of your treatment.

SOLUTION

a. Group	Number of Headsets	Sales Price per Headsets	Total Sales Price	Relative Sales Price*	Total Cost	Cost Allocated to Headsets	Cost per Headset**
1	50	\$10	\$ 500	5/100	\$8,000	\$ 400	\$ 8
2	400	20	8,000	80/100	8,000	6,400	16
3	50	30	1,500	15/100	8,000	1,200	24
			<u>\$10,000</u>			<u>\$8,000</u>	

*5/100 = \$500/\$10,000; 80/100 = \$8,000/\$10,000; 15/100 = \$1,500/\$10,000

**\$8 = \$400/50; \$16 = \$6,400/400; \$24 = \$1,200/50

- If the commitment is material in amount, there should be a note disclosure sheet stating the nature and extent of the commitment. The note may also disclose the market price of the materials.
 - The drop in the market price of the commitment should be charged to operations in the current year. The following entry would be made.

Loss on Purchase Commitments	3,600
Estimated Liability on Purchase Commitments [12,000 × (\$2.00 – \$1.70)]	3,600

The entry is made because a loss in utility has occurred during the period in which the market decline took place. The estimated liability account should be included among the current liabilities on the balance sheet, with an appropriate footnote indicating the nature and extent of the commitment. This liability indicates the minimum obligation on the commitment contract at the present time—the amount that would have to be forfeited in case of breach of contract.

- Assuming the \$3,600 market decline entry was made on December 31, 2025, as indicated in part (b2), the entry when the materials are received in January 2026 would be:

Raw Materials	20,400
Estimated Liability on Purchase Commitments	3,600
Accounts Payable	24,000

This entry records the raw materials at the actual cost (\$1.70 per unit), eliminates the \$3,600 liability set up at December 31, 2025, and records the contractual liability for the purchase (at \$2.00 per unit). Cost of Goods Sold in 2026 is \$20,400. The additional cost of \$3,600 is reported in income in 2025.

8.4 The Gross Profit Method of Estimating Inventory

LEARNING OBJECTIVE 4

Determine ending inventory by applying the gross profit method.

Gross profit is an important computation for retail companies like **Best Buy**, **Costco**, and **Target** because it gives investors information to evaluate the profitability of a company's selling activities. Gross profit also is useful in another connection, which is to determine inventory when a physical count is not practicable. Here are two situations where it might be used to compute inventory.

1. As the junior auditor on your first audit assignment, you are tasked with developing an estimate of inventory on hand as part of your interim review procedures. However, you are the only staff assigned to this part of the audit and there are not enough hours budgeted to permit a full count of the inventory.
2. You are the manager of the lumber warehouse for Lowery Stores. Unfortunately, a fire over the weekend destroyed all the inventory on hand. To file an insurance claim, your supervisor asks if you can provide the dollar amount of inventory lost. Coming up with a value will be a challenge since the last time a physical inventory was taken was at the beginning of the month.

What would you do in these two situations? Is there a way to come up with a reasonable measure of inventory on hand in these two situations? The answer is yes—you use the gross profit method for determining the inventory. To use the **gross profit method** to determine ending inventory, you follow these steps, using the accounting records on hand related to inventory.

Let's continue with Lowery Stores in Example 8.10 to show how the gross profit method works.

Example 8.10

Gross Profit Method

FACTS Lowery Stores has a beginning lumber inventory of \$60,000 and purchases of \$200,000, both at cost. Sales at selling price amount to \$280,000. The gross profit on selling price is 30%.

QUESTION How would you determine the ending inventory amount for Lowery if it uses the gross profit method to estimate ending inventory, given the fire damage?

SOLUTION

Beginning inventory (at cost)		\$ 60,000
Purchases (at cost)		<u>200,000</u>
Cost of goods available for sale		260,000
Sales revenue (at selling price)	\$280,000	
Less: Gross profit (30% of \$280,000)	<u>84,000</u>	
Estimated cost of goods sold		<u>(196,000)</u>
Estimated ending inventory (at cost)		<u>\$ 64,000</u>

The current period's records contain all the information Lowery needs to compute inventory at cost, except for the gross profit percentage. Lowery determines the gross profit percentage by reviewing company policies or prior period records. In some cases, companies must adjust this percentage if they consider prior periods unrepresentative of the current period.

Computation of Gross Profit Percentage

In most situations, the **gross profit percentage** is stated as a percentage of selling price. In the previous example, Lowery used a 30% gross profit on sales. Gross profit on selling price is the common method for quoting the profit for several reasons.

- Many companies state goods on a retail basis, not a cost basis.
- A profit quoted on selling price is lower than one based on cost. This lower rate gives a favorable impression to the consumer.
- The gross profit based on selling price can never exceed 100%.⁶

In Example 8.10, the gross profit was a given. To see how to compute a gross profit percentage, assume that an article cost \$15 and sells for \$20, a gross profit of \$5. As shown in the following computations, this markup is $\frac{1}{4}$ or 25% of retail, and $\frac{1}{3}$ or $33\frac{1}{3}\%$ of cost.

$$\frac{\text{Markup}}{\text{Retail}} = \frac{\$5}{\$20} = 25\% \text{ at retail} \quad \frac{\text{Markup}}{\text{Cost}} = \frac{\$5}{\$15} = 33\frac{1}{3}\% \text{ on cost}$$

Although companies normally compute the gross profit based on selling price, you should understand the basic relationship between markup on cost and markup on selling price. For example, assume that a company marks up a given item by 25%. What, then, is the **gross profit on selling price**? To find the answer, assume that the item sells for \$1. In this case, the following formula applies.

$$\text{Cost} + \text{Gross Profit} = \text{Selling Price}$$

$$C + .25C = SP$$

$$(1 + .25)C = SP$$

$$1.25C = \$1.00$$

$$C = \$0.80$$

⁶The terms *gross margin percentage*, *rate of gross profit*, and *percentage markup* are synonymous, although companies more commonly use *markup* in reference to cost and *gross profit* in reference to sales.

The gross profit equals \$0.20 (\$1.00 – \$0.80). The rate of gross profit on selling price is therefore 20% (\$0.20 ÷ \$1.00).

Conversely, assume that the gross profit on selling price is 20%. What is the **markup on cost**? To find the answer, again assume that the item sells for \$1. The same formula holds:

$$\text{Cost} + \text{Gross Profit} = \text{Selling Price}$$

$$C + .20SP = SP$$

$$C = (1 - .20)SP$$

$$C = .80SP$$

$$C = .80(\$1.00)$$

$$C = \$0.80$$

As in the previous example, the markup equals \$0.20 (\$1.00 – \$0.80). The markup on cost is 25% (\$0.20 ÷ \$0.80). Retailers use the following formulas to express these relationships.

$$\begin{aligned} 1. \text{ Gross Profit on Selling Price} &= \frac{\text{Percentage Markup on Cost}}{100\% + \text{Percentage Markup on Cost}} \\ 2. \text{ Percentage Markup on Cost} &= \frac{\text{Gross Profit on Selling Price}}{100\% - \text{Gross Profit on Selling Price}} \end{aligned}$$

To understand how to use these formulas, consider their application in Example 8.11

FACTS Tea Time has **gross profit on selling price** of 20% on its jasmine tea and 25% **gross profit on selling price** on its matcha green tea latte. Tea Time has a 25% **markup on cost** for its herbal tea and a 50% **markup on cost** on its chai tea.

QUESTIONS

- What is percentage markup on cost for jasmine and matcha tea?
- What is the gross profit on selling price for herbal and chai tea?

SOLUTION

<u>Gross Profit on Selling Price</u>		<u>Percentage Markup on Cost</u>
a. Given: 20% (jasmine)	→	$\frac{.20}{1.00 - .20} = 25\%$
Given: 25% (matcha)	→	$\frac{.25}{1.00 - .25} = 33\frac{1}{3}\%$
b. $\frac{.25}{1.00 + .25} = 20\%$	→	Given: 25% (herbal)
$\frac{.50}{1.00 + .50} = 33\frac{1}{3}\%$	→	Given: 50% (chai)

Example 8.11 Gross Profit Formulas

Because selling price exceeds cost and with the gross profit amount being the same for both, **gross profit on selling price will always be less than the related percentage based on cost**. Note that companies do not multiply sales by a cost-based markup percentage. Instead, they must convert the gross profit percentage to a percentage based on selling price.

Evaluation of Gross Profit Method

Illustration 8.7 summarizes the three main disadvantages of the gross profit method.

ILLUSTRATION 8.7

Disadvantages of Gross Profit Method

Major Disadvantages	Result
Estimated value	Companies must take a physical inventory once a year to verify the inventory. The gross profit test does not take into consideration the possibility that some goods have been damaged or stolen.
Generally relies on past percentages	Although the past often provides answers to the future, a current rate is more appropriate. Note that whenever significant fluctuations occur, companies should adjust the percentage as appropriate.
Varying gross profits require caution	Frequently, a store or department handles merchandise with widely varying rates of gross profit. In these situations, the company may need to apply the gross profit method by subsections, lines of merchandise, or a similar basis that classifies merchandise according to their respective rates of gross profit.

The gross profit method is normally unacceptable for financial reporting purposes because it provides only an estimate. GAAP requires a physical inventory as additional verification of the inventory indicated in the records. Nevertheless, GAAP permits the gross profit method to determine ending inventory for interim (generally quarterly) reporting purposes, provided a company discloses the use of this method. Note that the gross profit method will follow closely the inventory method used (FIFO, LIFO, average-cost) because it relies on historical records.

Put It into Practice LO 8.4

Estimate Inventory Using Gross Profit Method

FACTS Marling Corporation's April 30 inventory was washed away in a hurricane storm surge. The beginning inventory on January 1 was \$300,000, and purchases for January through April totaled \$700,000. Sales revenue for the same period was \$1,200,000. Marling's normal gross profit percentage is 40% on sales.

INSTRUCTIONS Using the gross profit method, estimate Marling's April 30 inventory that was lost in the storm surge.

SOLUTION

Beginning inventory		\$300,000
Purchases		<u>700,000</u>
Cost of goods available for sale		1,000,000
Sales revenue	\$1,200,000	
Less: Gross profit (.40 × 1,200,000)	<u>480,000</u>	
Estimated cost of goods sold		<u>720,000</u>
Estimated ending inventory destroyed in fire		<u><u>\$280,000</u></u>

8.5 Retail Inventory Method

LEARNING OBJECTIVE 5

Determine ending inventory by applying the retail inventory method.

Accounting for inventory in a retail operation can present several challenges. Consider this situation. You oversee the housewares department at a **Target** store. It is the end of the

quarter and you need to determine inventory for the quarter as part of the quarterly planning process. What should you do? One option is to take a physical count of the inventory. Does this mean you will have to take a physical inventory every month or quarter? No way! There are 12 aisles in your department, with hundreds of unique products. That is why a physical count is only done once a year (and usually at a time when inventories levels are at their lowest).

This is the challenge faced by many retailers, such as **Home Depot**, **Costco**, or **American Eagle Outfitters**—high-volume retailers that have many different types of merchandise. Other retailers with certain types of inventory, such as cars or pianos, can use the specific identification method to value their inventories. It is not so easy in other retail settings. Think how difficult it would be to determine the cost of each sale, enter costs on the tickets (or barcodes), change the costs to reflect declines in value of the merchandise, and allocate costs such as transportation for thousands of items. A solution to this challenge is to use the retail inventory method.

- The **retail inventory method** has the advantage that enables a company like **Best Buy** to approximate the inventory balance **without a physical count**.
- To avoid a potential overstatement of the inventory, companies still make periodic inventory counts, which are especially important in retail operations where loss due to shoplifting or breakage is common.

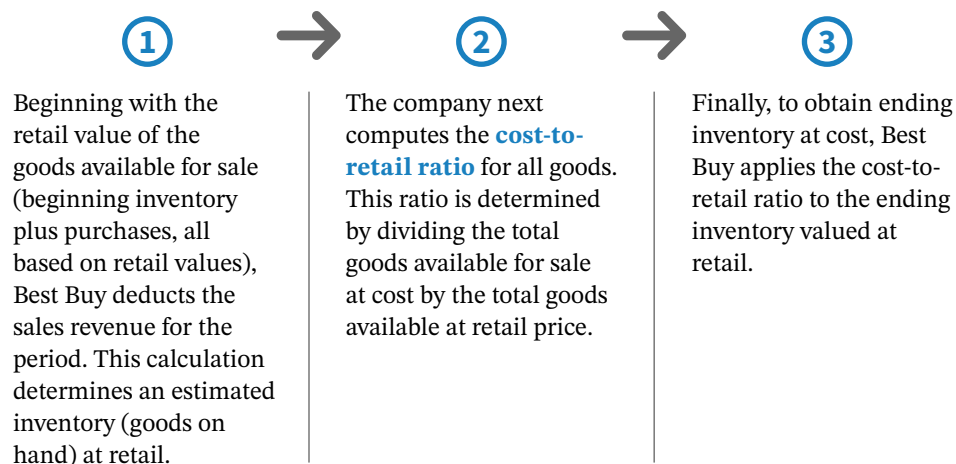

The retail inventory method is particularly useful in the situations shown in **Illustration 8.8**.

When to Use the Retail Inventory Method	Advantage
Interim reports	Provides a fairly quick and reliable measure of inventory.
To estimate losses	Is helpful to insurance adjusters who use this method to estimate losses from fire, flood, or other type of casualty.
As a control device	Forces companies to explain any deviations from a physical count at the end of the year.
To expedite the physical count	Saves time and expense because the crew taking the physical inventory need record only the retail price of each item, not each item's invoice cost, thereby saving time and expense.

ILLUSTRATION 8.8 Advantages of Retail Inventory Method

Use of the retail inventory method is quite common. For example, **Kroger**, **Target**, and **Best Buy** use the retail inventory method. To gain the advantages of the retail method, these companies compile the inventories at retail prices and then use the historical observable relationship between cost and retail prices to convert retail prices to cost. Specifically, the retail method requires that the retailer keep a record of (1) the total cost and retail value of goods purchased, (2) the total cost and retail value of the goods available for sale, and (3) the sales for the period.

Here is how it works at a company like **Best Buy**.

In Example 8.12, we put some numbers to this method.

Example 8.12 Retail Inventory Method

FACTS Kelvie Company's beginning inventory has a cost of \$14,000 and a retail price of \$20,000. The company has also purchased inventory at a cost of \$63,000, which has a retail price of \$90,000. Kelvie has sales revenue for the period of \$85,000.

QUESTION How would you compute ending inventory at both retail and cost using the retail inventory method?

SOLUTION

	<u>Cost</u>	<u>Retail</u>
Beginning inventory	\$14,000	\$ 20,000
Purchases	63,000	90,000
Goods available for sale	<u>\$77,000</u>	110,000
Less: Sales revenue		85,000
Ending inventory, at retail		<u>\$ 25,000</u>
Cost-to-retail ratio $(\$77,000 \div \$110,000) = 70\%$		
Ending inventory, at cost $(.70 \times \$25,000) = \underline{\underline{\$17,500}}$		

There are different versions of the retail inventory method: the conventional method (based on lower-of-average-cost-or-market), the cost method, the LIFO retail method, and the dollar-value LIFO retail method (we discuss these latter two approaches in the appendix). Regardless of which version a company uses, the IRS, various retail associations, and the accounting profession all sanction use of the retail inventory method.

Retail-Method Concepts

The amounts shown in the "Retail" column of Example 8.12 represent the original retail prices, assuming no price changes. In practice, though, retailers frequently mark up or mark down the prices they charge buyers. The term **markup** means an additional markup of the original retail price. (In another context, such as the earlier gross profit discussion, we often think of markup, based on cost.)

- **Markup cancellations** are decreases in prices of merchandise that the retailer had marked up above the original retail price.
- **Markdowns** are decreases in the original sales prices. Such cuts in sales prices may be necessary because of a decrease in the general level of prices, special sales, soiled or damaged goods, overstocking, and market competition.
- **Markdown cancellations** occur when the markdowns are later offset by increases in the prices of goods that the retailer had marked down—such as after a one-day sale, for example.

Neither a markup cancellation nor a markdown cancellation can exceed the original markup or markdown.

FACTS Designer Clothing Store recently purchased 100 dress shirts from Marroway Inc. The total cost for these shirts was \$1,500, or \$15 a shirt. Designer Clothing established the selling price on these shirts at \$30 a shirt. The shirts were selling quickly in anticipation of Father's Day, so the manager added a markup of \$5 per shirt. This markup made the price too high for customers, and sales slowed. The manager then reduced the price to \$32. Right after Father's Day, the manager marked down the remaining shirts by \$9. The manager later increases the price by \$1.

QUESTION What is the final price after the markups, markup cancellations, markdowns, and markdown cancellations?

SOLUTION

The selling price of the shirts was	\$30
The company had a markup of	5
The total price was reduced by \$3, which is a markup cancellation	(3)
The company then reduced by price by \$9 to \$23, which results in a markup cancellation of \$2 (\$32 – \$30) and a markdown of \$7	(9)
The company then increases the price by \$1 to \$24 (markdown cancellation)	<u>1</u>
The total price is then	<u><u>\$24</u></u>

Example 8.13
Retail-Method
Concepts

Retail Inventory Method with Markups and Markdowns—Conventional Method

Retailers use markup and markdown concepts in developing the proper inventory valuation at the end of the accounting period. To obtain the appropriate inventory figures, companies must give proper treatment to markups, markup cancellations, markdowns, and markdown cancellations.

To illustrate the different possibilities, consider the data for In-Fusion Inc., shown in **Illustration 8.9**. In-Fusion can calculate its ending inventory at cost under two assumptions, A and B. (We'll explain the reasons for the two later.)

ILLUSTRATION 8.9 Retail
Inventory Method with Markups
and Markdowns

	<u>Cost</u>	<u>Retail</u>
Beginning inventory	\$ 500	\$ 1,000
Purchases (net)	20,000	35,000
Markups		3,000
Markup cancellations		1,000
Markdowns		2,500
Markdown cancellations		2,000
Sales (net)		25,000

In-Fusion Inc.		
	<u>Cost</u>	<u>Retail</u>
Beginning inventory	\$ 500	\$ 1,000
Purchases (net)	20,000	35,000
Merchandise available for sale	20,500	36,000
Add: Markups		3,000
Less: Markup cancellations		<u>1,000</u>
Net markups		<u>2,000</u>
	20,500	38,000
 (A) Cost-to-retail ratio = $\frac{\$20,500}{\$38,000} = 53.9\%$		
Less:		
Markdowns		2,500
Markdown cancellations		<u>(2,000)</u>
Net markdowns		<u>500</u>
	<u>\$20,500</u>	<u>37,500</u>
 (B) Cost-to-retail ratio = $\frac{\$20,500}{\$37,500} = 54.7\%$		
Less: Sales (net)		<u>25,000</u>
Ending inventory, at retail		<u>\$12,500</u>

Assumption A: Computes a cost ratio after markups (and markup cancellations) but before markdowns (and markdown cancellations).

Assumption B: Computes a cost ratio after both markups (and mark-up cancellations) and markdowns (and markdown cancellations).

The computations for In-Fusion are:

$$\text{Ending Inventory at Retail} \times \text{Cost Ratio} = \text{Value of Ending Inventory}$$

$$\text{Assumption A: } \$12,500 \times .539 = \$6,737.50$$

$$\text{Assumption B: } \$12,500 \times .547 = \$6,837.50$$

The question becomes: Which assumption and which cost ratio should In-Fusion use to compute the ending inventory valuation? The answer depends on which retail inventory method In-Fusion chooses.

One approach uses only assumption A (a cost ratio using markups but not markdowns). It approximates the lower-of-average-cost-or-market. We refer to this approach as the **conventional retail inventory method**, or the **lower-of-cost-or-market approach**.⁷

⁷As a result, companies using the retail inventory method are eligible for the exception to LCNRV previously discussed for LIFO method companies. Specifically, implementation of the conventional retail inventory method results in a reasonable approximation for LCNRV in many situations, without the additional cost to estimate net realizable value.

To understand why this method considers only the markups, not the markdowns, in the cost percentage, you must understand how a retail business operates.

- A markup normally indicates an increase in the market value of the item. On the other hand, a markdown means a decline in the utility of that item.
- Therefore, to approximate the LCM, we would consider markdowns a current loss and so would not include them in calculating the cost-to-retail ratio.
- Omitting the markdowns would make the cost-to-retail ratio lower, which leads to an approximate LCM, which provides a more conservative measure.

An example will make the distinction between the two methods clear. Assume In-Fusion purchased two items for \$5 apiece; the original sales price was \$10 each. One item was subsequently written down to \$2. Assuming no sales for the period, if **markdowns are considered** in the cost-to-retail ratio; this is assumption B—the **cost method**, under which we compute the ending inventory as shown in **Illustration 8.10**.

Markdowns Included in Cost-to-Retail Ratio		
	<u>Cost</u>	<u>Retail</u>
Purchases	\$10	\$20
Less: Markdowns		<u>8</u>
Ending inventory, at retail		<u>\$12</u>
Cost-to-retail ratio = $\frac{\$10}{\$12} = 83.3\%$		
Ending inventory, at cost $(\$12 \times .833) = \10		

ILLUSTRATION 8.10 Retail Inventory Method Including Markdowns—Cost Method

- This approach, referred to as the cost method, reflects an **average cost** of the two items of the commodity without considering the loss on the one item.
- It values ending inventory at \$10.

If **markdowns are not considered** in the cost-to-retail ratio (assumption A—the **conventional retail method**), we compute the ending inventory as shown in **Illustration 8.11**.

Markdowns not Included in Cost-to-Retail Ratio		
	<u>Cost</u>	<u>Retail</u>
Purchases	\$10	\$20
Cost-to-retail ratio = $\frac{\$10}{\$20} = 50\%$		
Less: Markdowns		<u>8</u>
Ending inventory, at retail		<u>\$12</u>
Ending inventory, at cost $(\$12 \times .50) = \6		

ILLUSTRATION 8.11 Retail Inventory Method Excluding Markdowns—Conventional Method (LCM)

Under this approach, the conventional retail method—in which markdowns are **not considered**—ending inventory would be \$6.

- The inventory valuation of \$6 reflects two inventory items, one inventoried at \$5 and the other at \$1.
- It reflects the fact that In-Fusion reduced the sales price from \$10 to \$2, and reduced the cost from \$5 to \$1.⁸

⁸ This figure is not really market (replacement cost), but it is net realizable value less the normal margin that is allowed. In other words, the sale price of the goods written down is \$2, but subtracting a normal margin of 50% (\$5 cost, \$10 price), the figure becomes \$1.

To approximate the LCM, In-Fusion must establish the **cost-to-retail ratio**.

- It does this by dividing the cost of goods available for sale by the sum of the original retail price of these goods plus the net markups.
- This calculation excludes markdowns and markdown cancellations.

Example 8.14 Conventional Retail Inventory Method

FACTS Use the information for In-Fusion Inc. shown in Illustration 8.9.

QUESTION What is the ending inventory for In-Fusion using the conventional retail method?

SOLUTION

	<u>Cost</u>	<u>Retail</u>
Beginning inventory	\$ 500	\$ 1,000
Purchases (net)	<u>20,000</u>	<u>35,000</u>
Totals	20,500	36,000
Add: Net markups		
Markups		\$3,000
Markup cancellations		<u>1,000</u>
Totals (goods available for sale)	<u>\$20,500</u>	38,000
Less: Net markdowns		
Markdowns		2,500
Markdown cancellations		<u>(2,000)</u>
Sales price of goods available		37,500
Less: Sales (net)		<u>25,000</u>
Ending inventory, at retail		<u>\$12,500</u>
$\text{Cost-to-retail ratio} = \frac{\text{Cost of goods available}}{\text{Original retail price of goods available, plus net markups}}$ $= \frac{\$20,500}{\$38,000} = 53.9\%$		
Ending inventory, at lower-of-cost-or-market (.539 × \$12,500) = <u>\$6,737.50</u>		

Because an averaging effect occurs, an exact lower-of-cost-or-market inventory valuation is ordinarily not obtained, but an adequate approximation can be achieved. In contrast, adding net markups and deducting net markdowns yields **approximate cost**.

Special Items Relating to Retail Method

The retail inventory method becomes more complicated when we consider such items as freight-in, purchase returns and allowances, and purchase discounts. In the retail method, we treat such items as follows.

- **Freight costs** are part of the purchase cost.
- **Purchase returns** are ordinarily considered as a reduction of the price at both cost and retail.
- **Purchase discounts and allowances** usually are considered as a reduction of the cost of purchases.

In short, the treatment for the items affecting the cost column of the retail inventory approach follows the computation for cost of goods available for sale.⁹

Note also that **sales returns and allowances** are considered as proper adjustments to gross sales. However, when sales are recorded gross, companies do not recognize **sales discounts**. To adjust for the sales discount account in such a situation would provide an ending inventory figure at retail that would be overvalued.

In addition, a number of special items require careful analysis:

- **Transfers-in** from another department are reported in the same way as purchases from an outside company.
- **Normal shortages** (breakage, damage, theft, shrinkage) should reduce the retail column because these goods are no longer available for sale. Such costs are reflected in the selling price because a certain amount of shortage is considered normal in a retail enterprise. As a result, companies do not consider this amount in computing the cost-to-retail percentage. Rather, to arrive at ending inventory at retail, they show normal shortages as a deduction similar to sales.
- **Abnormal shortages**, on the other hand, are deducted from both the cost and retail columns and reported as a special inventory amount or as a loss. To do otherwise distorts the cost-to-retail ratio and overstates ending inventory.
- **Employee discounts** (given to employees to encourage loyalty, better performance, and so on) are deducted from the retail column in the same way as sales. These discounts should not be considered in the cost-to-retail percentage because they do not reflect an overall change in the selling price.¹⁰

Illustration 8.12 shows some of these concepts. The company, Extreme Sport Apparel, determines its inventory using the conventional retail inventory method.

Extreme Sport Apparel		
	Cost	Retail
Beginning inventory	\$ 1,000	\$ 1,800
Purchases	30,000	60,000
Freight-in	600	—
Purchase returns	(1,500)	(3,000)
Totals	30,100	58,800
Net markups		9,000
Abnormal shortage	(1,200)	(2,000)
Totals (Goods available for sale)	\$28,900	65,800
Less:		
Net markdowns		1,400
Sales revenue	\$36,000	
Sales returns	(900)	35,100
Employee discounts		800
Normal shortage		1,300
Ending inventory, at retail		\$27,200
Cost-to-retail ratio = $\frac{\$28,900}{\$65,800} = 43.9\%$		
Ending inventory, at lower-of-cost-or-market ($.439 \times \$27,200$) =		\$11,940.80

ILLUSTRATION 8.12

Conventional Retail Inventory Method—Special Items Included

⁹ When the purchase allowance is not reflected by a reduction in the selling price, no adjustment is made to the retail column.

¹⁰ Note that if employee sales are recorded gross, no adjustment is necessary for employee discounts in the retail column.

Evaluation of Retail Inventory Method

Companies like **Gap Inc.**, **Home Depot**, or your local department store use the retail inventory method of computing inventory because it:

- Permits the computation of net income without a physical count of inventory.
- Provides a control measure in determining inventory shortages.
- Provides insurance information in case of a fire, flood, or other casualty.

One characteristic of the retail inventory method is that it **has an averaging effect on varying rates of gross profit**. This can be problematic when companies apply the method to an entire business, where rates of gross profit vary among departments. There is no allowance for possible distortion of results because of such differences. Companies refine the retail method under such conditions by computing inventory separately by departments or by classes of merchandise with similar gross profits. In addition, the reliability of this method assumes that the distribution of items in inventory is similar to the “mix” in the total goods available for sale.

As popular as the retail method might seem, not all companies use it. And that could create some challenges for investors. The challenge arises from the differences in the treatment of markdowns under the cost and retail methods.

- Under the cost method, markdowns are not recorded until merchandise is sold.
- Under the retail method, markdowns are recorded immediately (reflected in the cost-to-retail ratio).

Depending on the method used, the timing of when the markdown affects cost of goods sold (and gross margin) varies.

So for a cost-method retailer with a lot of clearance items sitting on the shelves, the effect of a markdown will not hit income until, say, the fourth quarter when the goods are sold at the discounted price. Under the retail method, the margin hit happens right away. Some specialty retailers such as **Abercrombie & Fitch** and **L Brands** use the cost method. Department stores such as **TJX Companies** and **Macy's** tend to use the retail method. So investors who want to make valid comparisons need to be tuned into the use of retail or cost methods, even for companies in the same industry.

Put It into Practice LO 8.5

Calculate Ending Inventory Using the Retail Method

FACTS Boylen Inc. had beginning inventory of \$24,000 at cost and \$40,000 at retail. Net purchases were \$240,000 at cost and \$350,000 at retail. Net markups were \$10,000, net markdowns were \$7,000, and sales revenue was \$301,000.

INSTRUCTIONS Compute ending inventory at cost using the conventional retail method.

SOLUTION

	<u>Cost</u>	<u>Retail</u>
Beginning inventory	\$ 24,000	\$ 40,000
Net purchases	240,000	350,000
Net markups		10,000
Totals	<u>\$264,000</u>	<u>400,000</u>
Less:		
Net markdowns		7,000
Sales revenue		<u>301,000</u>
Ending inventory, at retail		<u>\$ 92,000</u>
Cost-to-retail ratio: $\$264,000 \div \$400,000 = 66\%$		
Ending inventory, at lower-of cost-or-market ($.66 \times \$92,000$) =	<u>\$60,720</u>	

8.6 Presentation and Decision Analysis

LEARNING OBJECTIVE 6

Explain how to report and analyze inventory.

Presentation of Inventories

Financial reporting for inventories is extensive. Here are the major types of disclosures provided:

- The basis on which a company states its inventory amounts (lower-of-cost-or-net realizable value or lower-of-cost-or-market).
- The method used in determining cost (specific identification, FIFO, average-cost, LIFO).
- The composition of inventory. For example, a manufacturer should report the relative mix of raw materials, work in process, and finished goods.
- Significant or unusual financing arrangements relating to inventories. Examples include transactions with related parties, product financing arrangements, noncancelable purchase commitments, involuntary liquidation of LIFO inventories, and pledging of inventories as collateral. Companies should present inventories pledged as collateral for a loan in the current assets section rather than as an offset to the liability.

Inventory standards require the consistent application of costing methods from one period to the next.

Decision Analysis of Inventories

The amount of inventory that a company carries can have significant economic consequences. As a result, companies must manage inventories. But, inventory management is a double-edged sword, as shown in [Illustration 8.13](#). It requires constant attention.

- On the one hand, management wants to stock a great variety and quantity of items. Doing so will provide customers with the greatest selection. However, such an inventory policy may incur excessive carrying costs (e.g., investment, storage, insurance, taxes, obsolescence, and damage).
- On the other hand, low inventory levels lead to stockouts, lost sales, and disgruntled customers.

Using financial ratios helps companies to chart a middle course between these two dangers. Common ratios used in the management and evaluation of inventory levels are inventory turnover and a related measure, average days to sell inventory.

Inventory Turnover

The **inventory turnover** measures the number of times on average a company sells the inventory during the period. It measures the liquidity of the inventory. To compute inventory turnover, divide the cost of goods sold by the average inventory on hand during the period.

Barring seasonal factors, analysts compute average inventory from beginning and ending inventory balances. For example, in a recent annual report, **Kellogg Company** reported a beginning inventory of \$1,238 million, an ending inventory of \$1,217 million, and cost of goods sold of \$7,901 million for the year. The following shows the inventory turnover formula and Kellogg Company's ratio computation.

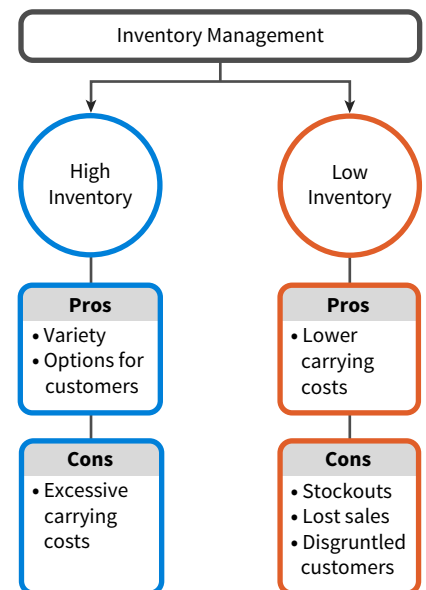

ILLUSTRATION 8.13 The Pros and Cons of Inventory Management

$$\frac{\text{Cost of Goods Sold}}{\text{Average Inventory}} = \text{Inventory Turnover}$$

$$\frac{\$7,901}{(\$1,217 + \$1,238) \div 2} = 6.44 \text{ times}$$

Average Days to Sell Inventory

A variant of the inventory turnover is the **average days to sell inventory**. This measure represents the average number of days' sales for which a company has inventory on hand. For example, the inventory turnover for **Kellogg Company** of 6.44 times divided into 365 is approximately 56.7 days.

There are typical levels of inventory in every industry. However, companies that keep their inventory at lower levels with higher turnovers than those of their competitors, and that still can satisfy customer needs, are the most successful. Consider the implications of inventory management and sustainability. There are many facets to inventory management and a company's focus on environmental, social, and governance (ESG) reporting includes inventory management practices. Investors are increasingly focused on a company's long-term value creation, which includes financial and nonfinancial components.

- More inventory requires more warehouse space, which translates to larger energy consumption, carbon emissions, and an overall larger environmental footprint.
- More inventory can lead to more waste if inventory becomes obsolete.

In addition to the economic consequences of holding the “right” amount of the “right” type of inventory, companies must consider the broader impacts of their inventory management practices. A delicate balance indeed.

APPENDIX 8A

LIFO Retail Methods

LEARNING OBJECTIVE *7

Determine ending inventory by applying the LIFO retail methods.

A number of retail establishments have changed from the more conventional retail method treatment to a **LIFO retail method**. For example, the world's largest retailer, **Walmart Inc.**, uses the LIFO retail method.

- The primary reason is for the tax advantages associated with valuing inventories on a LIFO basis.
- Adoption of LIFO also results in a better matching of costs and revenues.

The use of LIFO retail is made under two assumptions: (1) stable prices and (2) fluctuating prices.

Stable Prices—LIFO Retail Method

It is much more complex to compute the final inventory balance using a LIFO flow than using the conventional retail method. Under the LIFO retail method, companies like **Walmart**

or **Target** consider **both markups and markdowns** in obtaining the proper cost-to-retail percentage. Furthermore, since the LIFO method is concerned only with the additional layer, or the amount that should be subtracted from the previous layer, the beginning inventory is excluded from the cost-to-retail percentage.

- A major assumption of the LIFO retail method is that the markups and markdowns apply only to the goods purchased during the current period and not to the beginning inventory.
- This assumption is debatable and may explain why some companies do not adopt this method.

Illustration 8A.1 presents the major concepts involved in the LIFO retail method applied to the Hernandez Company. Note that, to simplify the accounting, we have assumed that the price level has remained unchanged.

	<u>Cost</u>	<u>Retail</u>
Beginning inventory—2025	\$ 27,000	\$ 45,000
Net purchases during the period	346,500	480,000
Net markups		20,000
Net markdowns		(5,000)
Total (excluding beginning inventory)	346,500	495,000
Total (including beginning inventory)	<u>\$373,500</u>	<u>540,000</u>
Net sales during the period		(484,000)
Ending inventory, at retail		<u>\$ 56,000</u>
Establishment of cost-to-retail percentage under assumptions of LIFO retail ($\$346,500 \div \$495,000 = 70\%$)		

ILLUSTRATION 8A.1 LIFO Retail Method—Stable Prices

Illustration 8A.2 indicates that the inventory is composed of two layers: the beginning inventory and the additional increase that occurred in the inventory this period (2025). When we start the next period (2026), the beginning inventory will be composed of those two layers. If an increase in inventory occurs again, an additional layer will be added.

<u>Ending Inventory at Retail Prices—2025</u>	<u>Layers at Retail Prices</u>	<u>Cost-to-Retail</u>	<u>Ending Inventory at LIFO Cost</u>
\$56,000	2024 \$45,000	× .60*	= \$27,000
	2025 11,000	× .70	= 7,700
	<u>\$56,000</u>		<u>\$34,700</u>
* .60 = $\frac{\$27,000}{\$45,000}$ (prior year's cost-to-retail)			

ILLUSTRATION 8A.2 Ending Inventory at LIFO Cost, 2025—Stable Prices

However, if the final inventory figure is below the beginning inventory, Hernandez must reduce the beginning inventory starting with the most recent layer. For example, assume that the ending inventory for 2026 at retail is \$50,000. **Illustration 8A.3** shows the computation of the ending inventory at cost. Notice that the 2025 layer is reduced from \$11,000 to \$5,000.

ILLUSTRATION 8A.3 Ending Inventory at LIFO Cost, 2026—Stable Prices

Ending Inventory at Retail Prices—2026		Layers at Retail Prices		Cost-to-Retail		Ending Inventory at LIFO Cost
\$50,000	→ 2024	\$45,000	×	.60	=	\$27,000
	→ 2025	5,000	×	.70	=	3,500
		<u>\$50,000</u>				<u>\$30,500</u>

Fluctuating Prices—Dollar-Value LIFO Retail Method

The previous example simplified the LIFO retail method by ignoring changes in the selling price of the inventory. Let us now assume that a change in the price level of the inventories occurs (as is usual).

- If the price level does change, the company must **eliminate the price change** so as to measure the real increase in inventory, not the dollar increase.
- This approach is referred to as the **dollar-value LIFO retail method**.

To illustrate, assume that the beginning inventory had a retail market value of \$10,000 and the ending inventory had a retail market value of \$15,000. Assume further that the price level has risen from 100 to 125. It is inappropriate to suggest that a real increase in inventory of \$5,000 has occurred. Instead, the company must deflate the ending inventory at retail, as the computation in **Illustration 8A.4** shows.

ILLUSTRATION 8A.4 Ending Inventory at Retail—Deflated and Restated

Ending inventory, at retail (deflated) (\$15,000 ÷ 1.25*)	\$12,000	
Beginning inventory at retail	<u>10,000</u>	
Real increase in inventory at retail	<u>\$ 2,000</u>	
Ending inventory, at retail on LIFO basis:		
First layer	\$10,000	
Second layer (\$2,000 × 1.25)	<u>2,500</u>	<u>\$12,500</u>
*1.25 = 125 ÷ 100		

This approach is essentially the dollar-value LIFO method discussed in Chapter 7. In computing the LIFO inventory under a dollar-value LIFO approach, the company finds the dollar increase in inventory and deflates it to beginning-of-the-year prices. This indicates whether actual increases or decreases in quantity have occurred.

- If an increase in quantities occurs, the company prices this increase at the new index, in order to compute the value of the new layer.
- If a decrease in quantities happens, the company subtracts the decrease from the most recent layers to the extent necessary.

The following computations, based on those in Illustration 8A.1 for Hernandez Company, illustrate the differences between the dollar-value LIFO retail method and the regular LIFO retail approach.

Assume that the current 2025 price index is 112 (prior year = 100) and that the inventory (\$56,000) has remained unchanged. In comparing Illustration 8A.1 with **Illustration 8A.5**, note that the computations involved in finding the cost-to-retail percentage are exactly the same. However, the dollar-value method determines the increase that has occurred in the inventory in terms of base-year prices.

ILLUSTRATION 8A.5 Dollar-Value LIFO Retail Method—Fluctuating Prices

	<u>Cost</u>	<u>Retail</u>
Beginning inventory—2025	\$ 27,000	\$ 45,000
Net purchases during the period	346,500	480,000
Net markups		20,000
Net markdowns		(5,000)
Total (excluding beginning inventory)	346,500	495,000
Total (including beginning inventory)	<u>\$373,500</u>	540,000
Net sales during the period at retail		(484,000)
Ending inventory, at retail		<u>\$ 56,000</u>
Establishment of cost-to-retail percentage under assumptions of LIFO retail ($\$346,500 \div \$495,000$) =		
		<u>70%</u>
A. Ending inventory, at retail prices deflated to base-year prices ($\$56,000 \div 1.12$)		\$50,000
B. Beginning inventory (retail) at base-year prices		45,000
C. Inventory increase (retail) from beginning of period		\$ 5,000

From this information, we compute the inventory amount at cost, as shown in **Illustration 8A.6**.

ILLUSTRATION 8A.6 Ending Inventory at LIFO Cost, 2025—Fluctuating Prices

Ending Inventory at Base-Year Retail Prices—2025	Layers at Base-Year Retail Prices	Price Index	Cost-to-Retail	Ending Inventory at LIFO Cost
\$50,000	2024 \$45,000	× 1.00	× .60	= \$27,000
	2025 5,000	× 1.12	× .70	= 3,920
	<u>\$50,000</u>			<u>\$30,920</u>

As Illustration 8A.6 shows, before the conversion to cost takes place, Hernandez must restate layers of a particular year to the prices in effect in the year when the layer was added.

Note the difference between the LIFO approach (stable prices) and the dollar-value LIFO method as indicated in **Illustration 8A.7**.

ILLUSTRATION 8A.7 Comparison of Effect of Price Assumptions

	<u>LIFO (stable prices)</u>	<u>LIFO (fluctuating prices)</u>
Beginning inventory	\$27,000	\$27,000
Increment	7,700	3,920
Ending inventory	<u>\$34,700</u>	<u>\$30,920</u>

The difference of \$3,780 ($\$34,700 - \$30,920$) results from an increase in the **price** of goods, not from an increase in the **quantity** of goods.

Subsequent Adjustments Under Dollar-Value LIFO Retail

The dollar-value LIFO retail method follows the same procedures in subsequent periods as the traditional dollar-value method discussed in Chapter 7. That is, when a real increase in inventory occurs, Hernandez adds a new layer.

To illustrate, using the data from the previous example, assume that the retail value of the 2026 ending inventory at current prices is \$64,800, the 2026 price index is 120% of base-year, and the cost-to-retail percentage is 75%. In base-year dollars, the ending inventory is therefore \$54,000 ($\$64,800 \div 1.20$). **Illustration 8A.8** shows the computation of the ending inventory at LIFO cost.

ILLUSTRATION 8A.8 Increased Ending Inventory at LIFO Cost, 2026—Fluctuating Prices

Ending Inventory at Base-Year Retail Prices—2026	Layers at Base-Year Retail Prices		Price Index	Cost-to-Retail		Ending Inventory at LIFO Cost
\$54,000	→ 2024	\$45,000	×	1.00	×	.60 = \$27,000
	→ 2025	5,000	×	1.12	×	.70 = 3,920
	→ 2026	4,000	×	1.20	×	.75 = 3,600
		<u>\$54,000</u>				<u>\$34,520</u>

Conversely, when a real decrease in inventory develops, Hernandez “peels off” previous layers at prices in existence when the layers were added. To illustrate, assume that in 2026 the ending inventory in base-year prices is \$48,000. The computation of the LIFO inventory is as shown in **Illustration 8A.9**.

ILLUSTRATION 8A.9 Decreased Ending Inventory at LIFO Cost, 2026—Fluctuating Prices

Ending Inventory at Base-Year Retail Prices—2026	Layers at Base-Year Retail Prices		Price Index	Cost-to-Retail		Ending Inventory at LIFO Cost
\$48,000	→ 2024	\$45,000	×	1.00	×	.60 = \$27,000
	→ 2025	3,000	×	1.12	×	.70 = 2,352
		<u>\$48,000</u>				<u>\$29,352</u>

The advantages and disadvantages of the lower-of-cost-or-market method (conventional retail) versus LIFO retail are the same for retail operations as for non-retail operations. As a practical matter, a company’s selection of which retail inventory method to use often involves determining which method provides a lower taxable income. It might appear that retail LIFO will provide the lower taxable income in a period of rising prices. But this is not always the case.

- LIFO will provide an approximate current cost matching, but it states ending inventory at cost.
- The conventional retail method may have a large write-off because of the use of the lower-of-cost-or-market approach, which may offset the LIFO current cost matching.

Changing from Conventional Retail to LIFO

Because conventional retail is a lower-of-cost-or-market approach, the company must restate beginning inventory to a cost basis when changing from the conventional retail to the LIFO method.¹¹ The usual approach is to compute the cost basis from the purchases of the prior year, adjusted for both markups and markdowns.¹²

To illustrate, assume that Hakeman Clothing Store employs the conventional retail method but wishes to change to the LIFO retail method beginning in 2026. The amounts shown on the company’s books are as follows.

¹¹ Changing from the conventional retail method to LIFO retail represents a change in accounting principle. We provide an expanded discussion of accounting principle changes in Chapter 21.

¹² A logical question to ask is, “Why are only the purchases from the prior period considered and not also the beginning inventory?” Apparently, the IRS believes that “the purchases-only approach” provides a more reasonable cost basis. The IRS position is debatable. However, for our purposes, it seems appropriate to use the purchases-only approach.

	<u>At Cost</u>	<u>At Retail</u>
Inventory, January 1, 2025	\$ 5,210	\$ 15,000
Net purchases in 2025	47,250	100,000
Net markups in 2025		7,000
Net markdowns in 2025		2,000
Sales revenue in 2025		95,000

Illustration 8A.10 shows the computation of ending inventory under the **conventional retail method** for 2025.

	<u>Cost</u>	<u>Retail</u>
Inventory January 1, 2025	\$ 5,210	\$ 15,000
Net purchases	47,250	100,000
Net additional markups		7,000
	<u>\$52,460</u>	<u>122,000</u>
Net markdowns		(2,000)
Sales revenue		<u>(95,000)</u>
Ending inventory, at retail		<u>\$ 25,000</u>
Establishment of cost-to-retail percentage (\$52,460 ÷ \$122,000) =		<u>43%</u>
December 31, 2025, inventory at cost		
Inventory at retail		\$ 25,000
Cost-to-retail ratio		× .43
Ending inventory, at cost under conventional retail		<u>\$ 10,750</u>

ILLUSTRATION 8A.10

Conventional Retail Inventory Method

Hakeman Clothing can then quickly approximate the ending inventory for 2025 under the **LIFO retail method**, as shown in **Illustration 8A.11**.

December 31, 2025, Inventory at LIFO Cost

$$\text{Ending inventory} = \frac{\text{Retail}}{\$25,000} \times \frac{\text{Ratio}}{.45} = \frac{\text{LIFO}}{\$11,250}$$

*The cost-to-retail ratio was computed as follows.

$$\frac{\text{Net purchases at cost}}{\text{Net purchases at retail plus markups less markdowns}} = \frac{\$47,250}{\$100,000 + \$7,000 - \$2,000} = 45\%$$

ILLUSTRATION 8A.11

Conversion to LIFO Retail Inventory Method

The difference of \$500 (\$11,250 – \$10,750) between the LIFO retail method and the conventional retail method in the ending inventory for 2025 is the amount by which the company must adjust beginning inventory for 2026. The entry to adjust the inventory to a cost basis is as follows.

Inventory	500
Adjustment to Record Inventory at Cost (Cost of Goods Sold)	500

Review and Practice

inventory turnover 8-31		

Learning Objectives Review

1 Describe and apply the lower-of-cost-or-net realizable value rule.

If inventory declines in value below its original cost, for whatever reason, a company should write down the inventory to reflect this loss. The general rule is to **abandon the historical cost principle when the future utility (revenue-producing ability) of the asset drops below its original cost**. In these situations, companies write down inventory to net realizable value to record this loss.

2 Describe and apply the lower-of-cost-or-market rule.

For companies that use the LIFO or the retail inventory methods of costing inventory, a better measure for reporting the decline in value of inventories is to use replacement cost subject to certain constraints. Rather than comparing cost to net realizable value, under the **lower-of-cost-or-market approach**, companies compare a “designated market value” of the inventory to cost. Under this exception to the general rule, companies write inventory down to the designated market value to record the loss.

3 Identify other inventory valuation issues.

Companies **value inventory at net realizable value** when (1) there is a controlled market with a quoted price applicable to all quantities, (2) no significant costs of disposal are involved, and (3) the cost figures are too difficult to obtain.

When a company purchases a group of varying units at a single lump-sum price—a so-called basket purchase—the company may allocate the total purchase price to the individual items on the **basis of relative sales value**.

In **accounting for purchase commitments**, the FASB neither excludes nor recommends the recording of assets and liabilities for purchase commitments. However, companies record losses when market prices fall relative to the commitment price.

4 Determine ending inventory by applying the gross profit method.

Companies follow these steps to determine ending inventory by the **gross profit method**. (1) Compute the gross profit percentage on selling price. (2) Compute gross profit by multiplying net sales by the gross profit percentage. (3) Compute cost of goods sold by subtracting gross profit from net sales. (4) Compute ending inventory by subtracting cost of goods sold from total goods available for sale.

5 Determine ending inventory by applying the retail inventory method.

Companies follow these steps to determine ending inventory by the **conventional retail method**. (1) To estimate inventory at retail, deduct the sales for the period from the retail value of the goods available for sale. (2) To find the cost-to-retail ratio for all goods passing through a department or company, divide the total goods available for sale at cost by the total goods available at retail. (3) Convert the inventory valued at retail to approximate cost by applying the cost-to-retail ratio.

6 Explain how to report and analyze inventory.

Accounting standards require financial statement disclosure of (1) the composition of the inventory (in the balance sheet or a separate schedule in the notes), (2) significant or unusual inventory financing arrangements, and (3) inventory costing methods employed (which may differ for different elements of inventory). Accounting standards also require the consistent application of costing methods from one period to another. Common ratios used in the management and evaluation of inventory levels are inventory turnover and average days to sell inventory.

*7 Determine ending inventory by applying the LIFO retail methods.

The application of LIFO retail is made under two assumptions: stable prices and fluctuating prices.

Procedures under stable prices: (a) Because the LIFO method is a cost method, both markups and markdowns must be considered in obtaining the proper cost-to-retail percentage. (b) Since the LIFO method is concerned only with the additional layer, or the amount that should be subtracted from the previous layer, the beginning inventory is excluded from the cost-to-retail percentage. (c) The markups and markdowns apply only to the goods purchased during the current period and not to the beginning inventory.

Procedures under fluctuating prices: The steps are the same as for stable prices except that in computing the LIFO inventory under

a dollar-value LIFO approach, the dollar increase in inventory is found and deflated to beginning-of-the-year prices. Doing so will determine whether actual increases or decreases in quantity have occurred. If quantities increase, this increase is priced at the new index to compute the new layer. If quantities decrease, the decrease is subtracted from the most recent layers to the extent necessary.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

- Where there is evidence that the utility of inventory goods, as part of their disposal in the ordinary course of business, will be less than cost, what is the proper accounting treatment?
- Why are inventories valued at the lower-of-cost-or-net realizable value (LCNRV)? What are the arguments against the use of the LCNRV method of valuing inventories?
- What approaches may be employed in applying the LCNRV procedure? Which approach is normally used and why?
- In some instances, accounting principles require a departure from valuing inventories at cost alone. Determine the proper unit inventory price in the following cases using LCNRV.

	Cases				
	1	2	3	4	5
Cost	\$15.90	\$16.10	\$15.90	\$15.90	\$15.90
Sales value	14.80	19.20	15.20	10.40	17.80
Estimated cost to complete	1.50	1.90	1.65	.80	1.00
Estimated cost to sell	.50	.70	.55	.40	.60

- What method(s) might be used in the accounts to record a loss due to a price decline in the inventories? Discuss.
- Explain the rationale for the ceiling and floor in the lower-of-cost-or-market method of valuing inventories.
- In some instances, accounting principles require a departure from valuing inventories at cost alone. Determine the proper unit inventory price in the following cases, under the lower-of-cost-or-market rule.

	Cases				
	1	2	3	4	5
Cost	\$15.90	\$16.10	\$15.90	\$15.90	\$15.90
Net realizable value	14.50	19.20	15.20	10.40	16.40
Net realizable value less normal profit	12.80	17.60	13.75	8.80	14.80
Market (replacement cost)	14.80	17.20	12.80	9.70	16.80

- What factors might call for inventory valuation at sales prices (net realizable value or market price)?
- Under what circumstances is relative sales value an appropriate basis for determining the price assigned to inventory?
- At December 31, 2025, Ashley Co. has outstanding purchase commitments for 150,000 gallons, at \$6.20 per gallon, of a raw material to be used in its manufacturing process. The company prices its raw material inventory at cost or market, whichever is lower. Assuming that the market price as of December 31, 2025, is \$5.90, how would you treat this situation in the accounts?
- What are the major uses of the gross profit method?
- Distinguish between gross profit as a percentage of cost and gross profit as a percentage of sales price. Convert the following gross profit percentages based on cost to gross profit percentages based on sales price: 25% and 33⅓%. Convert the following gross profit percentages based on sales price to gross profit percentages based on cost: 33⅓% and 60%.

13. Adriana Co., with annual net sales of \$5 million, maintains a markup of 25% based on cost. Adriana's expenses average 15% of net sales. What is Adriana's gross profit and net profit in dollars?

14. A fire destroys all of the merchandise of Assante Company on February 10, 2025. Presented below is information compiled up to the date of the fire.

Inventory, January 1, 2025	\$ 400,000
Sales revenue to February 10, 2025	1,950,000
Purchases to February 10, 2025	1,140,000
Freight-in to February 10, 2025	60,000
Rate of gross profit on selling price	40%

What is the approximate inventory on February 10, 2025?

15. What conditions must exist for the retail inventory method to provide valid results?

16. The conventional retail inventory method yields results that are essentially the same as those yielded by the lower-of-cost-or-market method. Explain. Prepare an illustration of how the retail inventory method reduces inventory to market.

17. a. Determine the ending inventory under the conventional retail method for the furniture department of Mayron Department Stores from the following data.

	<u>Cost</u>	<u>Retail</u>
Inventory, Jan. 1	\$ 149,000	\$ 283,500
Purchases	1,400,000	2,160,000
Freight-in	70,000	
Markups, net		92,000
Markdowns, net		48,000
Sales revenue		2,175,000

b. If the results of a physical inventory indicated an inventory at retail of \$295,000, what inferences would you draw?

18. **Deere and Company** reported inventory in its balance sheet as follows.

Inventories	\$1,999,100,000
-------------	-----------------

What additional disclosures might be necessary to present the inventory fairly?

19. Of what significance is inventory turnover to a retail store?

*20. What modifications to the conventional retail method are necessary to approximate a LIFO retail flow?

Brief Exercises

BE8.1 (LO 1) Presented below is information related to Rembrandt Inc.'s inventory.

<u>(per unit)</u>	<u>Skis</u>	<u>Boots</u>	<u>Parkas</u>
Historical cost	\$190.00	\$106.00	\$53.00
Selling price	212.00	145.00	73.75
Cost to sell	19.00	8.00	2.50
Cost to complete	32.00	29.00	21.25

Determine the following: (a) the net realizable value for each item, and (b) the carrying value of each item under LCNRV.

BE8.2 (LO 1) Floyd Corporation has the following four items in its ending inventory.

<u>Item</u>	<u>Cost</u>	<u>Net Realizable Value (NRV)</u>
Jokers	\$2,000	\$2,100
Penguins	5,000	4,950
Riddlers	4,400	4,625
Scarecrows	3,200	3,830

Determine the following: (a) the LCNRV for each item, and (b) the amount of write-down, if any, using (1) an item-by-item LCNRV evaluation and (2) a total category LCNRV evaluation.

BE8.3 (LO 1) Stallworth Inc. uses a perpetual inventory system. At January 1, 2025, inventory was \$428,000 at both cost and net realizable value. At December 31, 2025, the inventory was \$572,000 at cost and \$530,000 at net realizable value. Prepare the entry under (a) the cost-of-goods-sold method and (b) the loss method.

BE8.4 (LO 2) Presented below is information related to Rembrandt Inc.'s inventory, assuming Rembrandt uses lower-of-LIFO cost-or-market.

<u>(per unit)</u>	<u>Skis</u>	<u>Boots</u>	<u>Parkas</u>
Historical cost	\$190.00	\$106.00	\$53.00
Selling price	212.00	145.00	73.75
Cost to distribute	19.00	8.00	2.50
Current replacement cost	203.00	105.00	51.00
Normal profit margin	32.00	29.00	21.25

Determine the following: (a) the two limits to market value (i.e., the ceiling and the floor) that should be used in the lower-of-cost-or-market computation for skis, (b) the cost amount that should be used in the lower-of-cost-or-market comparison of boots, and (c) the market amount that should be used to value parkas on the basis of the lower-of-cost-or-market.

BE8.5 (LO 2) Kumar Inc. uses LIFO inventory costing. At January 1, 2025, inventory was \$214,000 at both cost and market value. At December 31, 2025, the inventory was \$286,000 at cost and \$265,000 at market value. Prepare the necessary December 31 entry under (a) the cost-of-goods-sold method and (b) the loss method.

BE8.6 (LO 3) Bell, Inc. buys 1,000 video game CDs from a distributor who is discontinuing those games. The purchase price for the lot is \$8,000. Bell will group the CDs into three price categories for resale, as indicated below.

Group	No. of CDs	Price per CD
1	100	\$ 5
2	800	10
3	100	15

Determine the cost per CD for each group, using the relative sales value method.

BE8.7 (LO 3) Kemper Company signed a long-term noncancelable purchase commitment with a major supplier to purchase raw materials in 2026 at a cost of \$1,000,000. At December 31, 2025, the raw materials to be purchased have a market value of \$950,000. Prepare any necessary December 31, 2025, entry.

BE8.8 (LO 3) Use the information for Kemper Company from BE8.7. In 2026, Kemper paid \$1,000,000 to obtain the raw materials which were worth \$950,000. Prepare the entry to record the purchase.

BE8.9 (LO 4) Fosbre Corporation's April 30 inventory was destroyed by fire. January 1 inventory was \$150,000, and purchases for January through April totaled \$500,000. Sales revenue for the same period was \$700,000. Fosbre's normal gross profit percentage is 35% on sales. Using the gross profit method, estimate Fosbre's April 30 inventory that was destroyed by fire.

BE8.10 (LO 5) Boyne Inc. had beginning inventory of \$12,000 at cost and \$20,000 at retail. Net purchases were \$120,000 at cost and \$170,000 at retail. Net markups were \$10,000, net markdowns were \$7,000, and sales revenue was \$147,000. Compute ending inventory at cost using the conventional retail method.

BE8.11 (LO 6) In a recent annual report, Gap Inc. reported beginning inventory of \$1,997 million and ending inventory of \$1,830 million, cost of goods sold of \$9,789 million, and net sales of \$15,855 million. Compute Gap's inventory turnover and the average days to sell inventory.

***BE8.12 (LO 7)** Use the information for Boyne Inc. from BE8.10. Compute ending inventory at cost using the LIFO retail method.

***BE8.13 (LO 7)** Use the information for Boyne Inc. from BE8.10, and assume the price level increased from 100 at the beginning of the year to 115 at year-end. Compute ending inventory at cost using the dollar-value LIFO retail method.

Exercises

E8.1 (LO 1) Excel (LCNRV) The inventory of Oheto Company on December 31, 2025, consists of the following items.

Part	Quantity	Cost per Unit	Net Realizable Value
110	600	\$ 95	\$100
111	1,000	60	52
112	500	80	76
113	200	170	180
120	400	205	208
121 ^a	1,600	16	1
122	300	240	235

^aPart No. 121 is obsolete and has a realizable value of \$1 each as scrap.

Instructions

- Determine the inventory as of December 31, 2025, by the LCNRV method, applying this method to each item.
- Determine the inventory by the LCNRV method, applying the method to the total of the inventory.

E8.2 (LO 1) (LCNRV) Riegel Company uses the LCNRV method, on an individual-item basis, in pricing its inventory items. The inventory at December 31, 2025, consists of products D, E, F, G, H, and I. Relevant per unit data for these products appear below.

	Item					
	D	E	F	G	H	I
Estimated selling price	\$120	\$110	\$95	\$90	\$110	\$90
Cost	75	80	80	80	50	36
Cost to complete	30	30	25	35	30	30
Selling costs	10	18	10	20	10	20

Instructions

Using the LCNRV rule, determine the proper unit value for balance sheet reporting purposes at December 31, 2025, for each of the inventory items above.

E8.3 (LO 1) (LCNRV) Sedato Company follows the practice of pricing its inventory at LCNRV, on an individual-item basis.

Item No.	Quantity	Cost per Unit	Estimated Selling Price	Cost to Complete and Sell
1320	1,200	\$3.20	\$4.50	\$1.60
1333	900	2.70	3.40	1.00
1426	800	4.50	5.00	1.40
1437	1,000	3.60	3.20	1.35
1510	700	2.25	3.25	1.40
1522	500	3.00	3.90	0.80
1573	3,000	1.80	2.50	1.20
1626	1,000	4.70	6.00	1.50

Instructions

From the information above, determine the amount of Sedato Company inventory.

E8.4 (LO 1) (LCNRV—Journal Entries) Dover Company began operations in 2025 and determined its ending inventory at cost and at LCNRV at December 31, 2025, and December 31, 2026. This information is presented below.

	Cost	Net Realizable Value
12/31/25	\$346,000	\$322,000
12/31/26	410,000	390,000

Instructions

- Prepare the journal entries required at December 31, 2025, and December 31, 2026, assuming inventory is recorded at LCNRV and a perpetual inventory system using the cost-of-goods-sold method.
- Prepare journal entries required at December 31, 2025, and December 31, 2026, assuming inventory is recorded at LCNRV and a perpetual system using the loss method.
- Which of the two methods above provides the higher net income in each year?

E8.5 (LO 1) (LCNRV) Presented below is information related to Knight Enterprises.

	Jan. 31	Feb. 28	Mar. 31	Apr. 30
Inventory at cost	\$15,000	\$15,100	\$17,000	\$14,000
Inventory at LCNRV	14,500	12,600	15,600	14,500
Purchases for the month		17,000	24,000	26,500
Sales for the month		29,000	35,000	40,000

Instructions

- From the information, prepare (as far as the data permit) monthly income statements in columnar form for February, March, and April. The inventory is to be shown in the statement at cost; the loss due to market fluctuations is to be shown separately.
- Prepare the journal entry required at January 31 (using the loss method) and entries to adjust it monthly thereafter.

E8.6 (LO 1) (LCNRV—Error Effect) LaGreca Company uses the LCNRV method, on an individual-item basis, in pricing its inventory items. The inventory at December 31, 2025, included product X. Relevant per-unit data for product X are as follows.

Estimated selling price	\$50
Cost	40
Estimated selling costs	14
Normal profit	9

There were 1,000 units of product X on hand at December 31, 2025. Product X was incorrectly valued at \$38 per unit for reporting purposes. All 1,000 units were sold in 2026.

Instructions

Compute the effect of this error on net income for 2025 and the effect on net income for 2026, and indicate the direction of the misstatement for each year.

E8.7 (LO 2) (Lower-of-Cost-or-Market) Wangerin Company follows the practice of pricing its inventory at the lower-of-cost-or-market, on an individual-item basis.

Item No.	Quantity	Cost per Unit	Cost to Replace	Estimated Selling Price	Cost of Completion and Disposal	Normal Profit
1320	1,200	\$3.20	\$3.00	\$4.50	\$0.35	\$1.25
1333	900	2.70	2.30	3.50	0.50	0.50
1426	800	4.50	3.70	5.00	0.40	1.00
1437	1,000	3.60	3.10	3.20	0.25	0.90
1510	700	2.25	2.00	3.25	0.80	0.60
1522	500	3.00	2.70	3.80	0.40	0.50
1573	3,000	1.80	1.60	2.50	0.75	0.50
1626	1,000	4.70	5.20	6.00	0.50	1.00

Instructions

From the information above, determine the amount of Wangerin Company inventory.

E8.8 (LO 2) (Lower-of-Cost-or-Market—Journal Entries) Corrs Company began operations in 2024 and determined its ending inventory at cost and at lower-of-LIFO cost-or-market at December 31, 2024, and December 31, 2025. This information is presented below.

	Cost	Lower-of-Cost-or-Market
12/31/24	\$356,000	\$327,000
12/31/25	420,000	395,000

Instructions

- Prepare the journal entries required at December 31, 2024, and December 31, 2025, assuming that the inventory is recorded at market, and a perpetual inventory system (cost-of-goods-sold method) is used.
- Prepare journal entries required at December 31, 2024, and December 31, 2025, assuming that the inventory is recorded at market under a perpetual system (loss method is used).
- Which of the two methods above provides the higher net income in each year?

E8.9 (LO 3) Excel (Relative Sales Value Method) Phil Collins Realty Corporation purchased a tract of unimproved land for \$55,000. This land was improved and subdivided into building lots at an additional cost of \$34,460. These building lots were all of the same size but owing to differences in location were offered for sale at different prices as follows.

Group	No. of Lots	Price per Lot
1	9	\$3,000
2	15	4,000
3	17	2,400

Operating expenses for the year allocated to this project total \$18,200. Lots unsold at the year-end were as follows.

Group 1	5 lots
Group 2	7 lots
Group 3	2 lots

Instructions

At the end of the fiscal year Phil Collins Realty Corporation instructs you to arrive at the net income realized on this operation to date.

E8.10 (LO 3) (Relative Sales Value Method) During 2025, Pretenders Furniture Company purchases a carload of wicker chairs. The manufacturer sells the chairs to Pretenders for a lump sum of \$59,850 because it is discontinuing manufacturing operations and wishes to dispose of its entire stock. Three types of chairs are included in the carload. The three types and the estimated selling price for each are listed below.

Type	No. of Chairs	Estimated Selling Price Each
Lounge chairs	400	\$90
Armchairs	300	80
Straight chairs	700	50

During 2025, Pretenders sells 200 lounge chairs, 100 armchairs, and 120 straight chairs.

Instructions

- What is the amount of gross profit realized during 2025?
- What is the amount of inventory of unsold straight chairs on December 31, 2025?

E8.11 (LO 3) (Purchase Commitments) Marvin Gaye Company has been having difficulty obtaining key raw materials for its manufacturing process. The company therefore signed a long-term noncancelable purchase commitment with its largest supplier of this raw material on November 30, 2025, at an agreed price of \$400,000. At December 31, 2025, the raw material had declined in price to \$365,000.

Instructions

What entry would you make on December 31, 2025, to recognize these facts?

E8.12 (LO 3) (Purchase Commitments) At December 31, 2025, Indigo Girls Company has outstanding noncancelable purchase commitments for 36,000 gallons, at \$3.00 per gallon, of raw material to be used in its manufacturing process. The company prices its raw material inventory at cost or market, whichever is lower, and uses a perpetual inventory system.

Instructions

- Assuming that the market price as of December 31, 2025, is \$3.30, how would this matter be treated in the accounts and statements? Explain.
- Assuming that the market price as of December 31, 2025, is \$2.70, instead of \$3.30, how would you treat this situation in the accounts and statements?
- Give the entry in January 2026, when the 36,000-gallon shipment is received, assuming that the situation given in (b) above existed at December 31, 2025, and that the market price in January 2026 was \$2.70 per gallon. Give an explanation of your treatment.

E8.13 (LO 4) (Gross Profit Method) Each of the following gross profit percentages is expressed in terms of cost.

- 20%.
- 25%.
- 33⅓%.
- 50%.

Instructions

Indicate the gross profit percentage in terms of sales for each of the above.

E8.14 (LO 4) (Gross Profit Method) Mark Price Company uses the gross profit method to estimate inventory for monthly reporting purposes. Presented below is information for the month of May.

Inventory, May 1	\$ 160,000
Purchases (gross)	640,000
Freight-in	30,000
Sales revenue	1,000,000
Sales returns	70,000
Purchase discounts	12,000

Instructions

- Compute the estimated inventory at May 31, assuming that the gross profit is 30% of sales.
- Compute the estimated inventory at May 31, assuming that the gross profit is 30⅓% of cost.

E8.15 (LO 4) (Gross Profit Method) Tim Legler requires an estimate of the cost of goods lost by fire on March 9. Merchandise on hand on January 1 was \$38,000. Purchases since January 1 were \$72,000; freight-in, \$3,400; purchase returns and allowances, \$2,400. Sales are made at 33⅓% above cost and

totaled \$100,000 to March 9. Goods costing \$10,900 were left undamaged by the fire; remaining goods were destroyed.

Instructions

- Compute the cost of goods destroyed.
- Compute the cost of goods destroyed, assuming that the gross profit is $33\frac{1}{3}\%$ of sales.

E8.16 (LO 4) (Gross Profit Method) Wallace Company lost most of its inventory in a fire in December just before the year-end physical inventory was taken. The corporation's books disclosed the following.

Beginning inventory	\$170,000	Sales revenue	\$650,000
Purchases for the year	390,000	Sales returns	24,000
Purchase returns	30,000	Rate of gross profit on net sales	40%

Merchandise with a selling price of \$21,000 remained undamaged after the fire. Damaged merchandise with an original selling price of \$15,000 had a net realizable value of \$5,300.

Instructions

Compute the amount of the loss as a result of the fire, assuming that the corporation had no insurance coverage.

E8.17 (LO 4) (Gross Profit Method) You are called by Tim Duncan of Spurs Co. on July 16 and asked to prepare a claim for insurance as a result of a theft that took place the night before. You suggest that an inventory be taken immediately. The following data are available.

Inventory, July 1	\$ 38,000
Purchases—goods placed in stock July 1–15	85,000
Sales revenue—goods delivered to customers (gross)	116,000
Sales returns—goods returned to stock	4,000

Your client reports that the goods on hand on July 16 cost \$30,500, but you determine that this figure includes goods of \$6,000 received on a consignment basis. Your past records show that sales are made at approximately 40% over cost. Duncan's insurance covers only goods owned.

Instructions

Compute the claim against the insurance company. (Carry computation of gross profit rate to five decimal places.)

E8.18 (LO 4) (Gross Profit Method) Gheorghe Moresan Lumber Company handles three principal lines of merchandise with these varying rates of gross profit on cost.

Lumber	25%
Millwork	30%
Hardware and fittings	40%

On August 18, a fire destroyed the office, lumber shed, and a considerable portion of the lumber stacked in the yard. To file a report of loss for insurance purposes, the company must know what the inventories were immediately preceding the fire. No detail or perpetual inventory records of any kind were maintained. The only pertinent information you are able to obtain are the following facts from the general ledger, which was kept in a fireproof vault and thus escaped destruction.

	<u>Lumber</u>	<u>Millwork</u>	<u>Hardware</u>
Inventory, Jan. 1, 2025	\$ 250,000	\$ 90,000	\$ 45,000
Purchases to Aug. 18, 2025	1,500,000	375,000	160,000
Sales revenue to Aug. 18, 2025	2,080,000	533,000	210,000

Instructions

Submit your estimate of the inventory amounts immediately preceding the fire.

E8.19 (LO 4) (Gross Profit Method) Presented below is information related to Aaron Rodgers Corporation for the current year.

Beginning inventory	\$ 600,000	
Purchases	<u>1,500,000</u>	
Total goods available for sale		\$2,100,000
Sales revenue		2,500,000

Instructions

Compute the ending inventory, assuming that (a) gross profit is 45% of sales, (b) gross profit is 60% of cost, (c) gross profit is 35% of sales, and (d) gross profit is 25% of cost.

E8.20 (LO 5) (Retail Inventory Method) Presented below is information related to Bobby Engram Company.

	<u>Cost</u>	<u>Retail</u>
Beginning inventory	\$ 58,000	\$100,000
Purchases (net)	122,000	200,000
Net markups		10,345
Net markdowns		26,135
Sales revenue		186,000

Instructions

- Compute the ending inventory at retail.
- Compute a cost-to-retail percentage (round to two decimals) under the following conditions.
 - Excluding both markups and markdowns.
 - Excluding markups but including markdowns.
 - Excluding markdowns but including markups.
 - Including both markdowns and markups.
- Which of the methods in (b) above (1, 2, 3, or 4) does the following?
 - Provides the most conservative estimate of ending inventory.
 - Provides an approximation of lower-of-cost-or-market.
 - Is used in the conventional retail method.
- Compute ending inventory at lower-of-cost-or-market (round to nearest dollar).
- Compute cost of goods sold based on (d).
- Compute gross profit based on (d).

E8.21 (LO 5) (Retail Inventory Method) Presented below is information related to Ricky Henderson Company.

	<u>Cost</u>	<u>Retail</u>
Beginning inventory	\$ 200,000	\$ 280,000
Purchases	1,375,000	2,140,000
Markups		95,000
Markup cancellations		15,000
Markdowns		35,000
Markdown cancellations		5,000
Sales revenue		2,200,000

Instructions

Compute the inventory by the conventional retail inventory method.

E8.22 (LO 5) (Retail Inventory Method) The records of Ellen's Boutique report the following data for the month of April.

Sales revenue	\$99,000	Purchases (at cost)	\$48,000
Sales returns	2,000	Purchases (at sales price)	88,000
Markups	10,000	Purchase returns (at cost)	2,000
Markup cancellations	1,500	Purchase returns (at sales price)	3,000
Markdowns	9,300	Beginning inventory (at cost)	30,000
Markdown cancellations	2,800	Beginning inventory (at sales price)	46,500
Freight on purchases	2,400		

Instructions

Compute the ending inventory by the conventional retail inventory method.

E8.23 (LO 6) (Analysis of Inventories) The financial statements of **ConAgra Foods, Inc.**'s recent annual report disclose the following information.

(in millions)	<u>Current Year</u>	<u>Prior Year</u>
Year-end inventories	\$ 934.2	\$1,044.1
Net sales	7,826.9	8,664.1
Cost of goods sold	5,484.8	6,234.9
Net income	648.0	(665.9)

Instructions

Compute ConAgra's (a) inventory turnover (inventory at the beginning of the prior year was \$1,642.6) and (b) the average days to sell inventory for the current and prior years.

***E8.24 (LO 7) (Retail Inventory Method—Conventional and LIFO)** Keller Company began operations on January 1, 2024, adopting the conventional retail inventory system. None of the company's merchandise was marked down in 2024 and, because there was no beginning inventory, its ending inventory for 2024 of \$38,100 would have been the same under either the conventional retail system or the LIFO retail system.

On December 31, 2025, the store management considers adopting the LIFO retail system and desires to know how the December 31, 2025, inventory would appear under both systems. All pertinent data regarding purchases, sales, markups, and markdowns are shown below. There has been no change in the price level.

	<u>Cost</u>	<u>Retail</u>
Inventory, Jan. 1, 2025	\$ 38,100	\$ 60,000
Markdowns (net)		13,000
Markups (net)		22,000
Purchases (net)	130,900	178,000
Sales (net)		167,000

Instructions

Determine the cost of the 2025 ending inventory under both (a) the conventional retail method and (b) the LIFO retail method.

***E8.25 (LO 7) (Retail Inventory Method—Conventional and LIFO)** Leonard Company began operations late in 2024 and adopted the conventional retail inventory method. Because there was no beginning inventory for 2024 and no markdowns during 2024, the ending inventory for 2024 was \$14,000 under both the conventional retail method and the LIFO retail method. At the end of 2025, management wants to compare the results of applying the conventional and LIFO retail methods. There was no change in the price level during 2025. The following data are available for computations.

	<u>Cost</u>	<u>Retail</u>
Inventory, January 1, 2025	\$14,000	\$20,000
Sales revenue		80,000
Net markups		9,000
Net markdowns		1,600
Purchases	58,800	81,000
Freight-in	7,500	
Estimated theft		2,000

Instructions

Compute the cost of the 2025 ending inventory under both (a) the conventional retail method and (b) the LIFO retail method.

***E8.26 (LO 7) (Dollar-Value LIFO Retail)** You assemble the following information for Seneca Department Store, which computes its inventory under the dollar-value LIFO method.

	<u>Cost</u>	<u>Retail</u>
Inventory on January 1, 2025	\$216,000	\$300,000
Purchases	364,800	480,000
Increase in price level for year		9%

Instructions

Compute the cost of the inventory on December 31, 2025, assuming that the inventory at retail is (a) \$294,300 and (b) \$365,150.

***E8.27 (LO 7) (Dollar-Value LIFO Retail)** Presented below is information related to Langston Hughes Corporation.

	<u>Price Index</u>	<u>LIFO Cost</u>	<u>Retail</u>
Inventory on December 31, 2025, when dollar-value LIFO is adopted	100	\$36,000	\$ 74,500
Inventory, December 31, 2026	110	?	100,100

Instructions

Compute the ending inventory under the dollar-value LIFO method at December 31, 2026. The cost-to-retail ratio for 2026 was 60%.

***E8.28 (LO 7) (Conventional Retail and Dollar-Value LIFO Retail)** Amiras Corporation began operations on January 1, 2025, with a beginning inventory of \$30,100 at cost and \$50,000 at retail. The following information relates to 2025.

	<u>Retail</u>
Net purchases (\$108,500 at cost)	\$150,000
Net markups	10,000
Net markdowns	5,000
Sales revenue	126,900

Instructions

- Assume Amiras decided to adopt the conventional retail method. Compute the ending inventory to be reported in the balance sheet.
- Assume instead that Amiras decides to adopt the dollar-value LIFO retail method. The appropriate price indexes are 100 at January 1 and 110 at December 31. Compute the ending inventory to be reported in the balance sheet.
- On the basis of the information in part (b), compute cost of goods sold.

***E8.29 (LO 7) (Dollar-Value LIFO Retail)** Connie Chung Corporation adopted the dollar-value LIFO retail inventory method on January 1, 2024. At that time the inventory had a cost of \$54,000 and a retail price of \$100,000. The following information is available.

	<u>Year-End Inventory at Retail</u>	<u>Current Year Cost—Retail %</u>	<u>Year-End Price Index</u>
2024	\$118,720	57%	106
2025	138,750	60%	111
2026	125,350	61%	115
2027	162,500	58%	125

The price index at January 1, 2024, is 100.

Instructions

Compute the ending inventory at December 31 of the years 2024–2027. (Round to the nearest dollar.)

***E8.30 (LO 7) (Change to LIFO Retail)** John Olerud Ltd., a local retailing concern in the Bronx, New York, has decided to change from the conventional retail inventory method to the LIFO retail method starting on January 1, 2026. The company recomputed its ending inventory for 2025 in accordance with the procedures necessary to switch to LIFO retail. The inventory computed was \$212,600.

Instructions

Assuming that John Olerud Ltd.'s ending inventory for 2025 under the conventional retail inventory method was \$205,000, prepare the appropriate journal entry on January 1, 2026.

Problems

P8.1 (LO 1) (LCNRV) Remmers Company manufactures desks. Most of the company's desks are standard models and are sold on the basis of catalog prices. At December 31, 2025, the following finished desks (10 desks in each category) appear in the company's inventory.

<u>Finished Desks</u>	<u>A</u>	<u>B</u>	<u>C</u>	<u>D</u>
2025 catalog selling price	\$45	\$48	\$90	\$105
FIFO cost per inventory list 12/31/25	47	45	83	96
Estimated cost to complete and sell	5	11	26	20
2026 catalog selling price	50	54	90	120

The 2025 catalog was in effect through November 2025, and the 2026 catalog is effective as of December 1; catalog prices are net of the usual discounts.

Instructions

At what amount should each of the four desks appear in the company's December 31, 2025, inventory, assuming that the company has adopted a lower-of-FIFO-cost-or-net realizable value (LCNRV) approach for valuation of inventories on an individual-item basis?

P8.2 (LO 1) (LCNRV) Garcia Home Improvement Company installs replacement siding, windows, and louvered glass doors for single-family homes and condominium complexes. The company is in the process of preparing its annual financial statements for the fiscal year ended May 31, 2025. Jim Alcide, controller for Garcia, has gathered the following data concerning inventory.

At May 31, 2025, the balance in Garcia's Raw Materials Inventory account was \$408,000. Alcide summarized the relevant inventory cost and market data at May 31, 2025, in the schedule below.

Alcide assigned Patricia Devereaux, an intern from a local college, the task of calculating the amount that should appear on Garcia's May 31, 2025, financial statements for inventory under the LCNRV rule as applied to each item in inventory. Devereaux expressed concern over departing from the historical cost principle.

	<u>Cost</u>	<u>Sales Price</u>	<u>Net Realizable Value</u>
Aluminum siding	\$ 70,000	\$ 64,000	\$ 56,000
Cedar shake siding	86,000	94,000	84,800
Louvered glass doors	112,000	186,400	168,300
Thermal windows	140,000	154,800	140,000
Total	<u>\$408,000</u>	<u>\$499,200</u>	<u>\$449,100</u>

Instructions

- Determine the inventory write-down, if any, at May 31, 2025.
- For the fiscal year ended May 31, 2025, prepare the entry to record the inventory write-down, if any, using the loss method.
- Explain the rationale for the use of the LCNRV rule as it applies to inventories.

P8.3 (LO 1) (LCNRV—Cost-of-Goods-Sold and Loss) Malone Company determined its ending inventory at cost and at LCNRV at December 31, 2025, December 31, 2026, and December 31, 2027, as shown below.

	<u>Cost</u>	<u>NRV</u>
12/31/25	\$650,000	\$650,000
12/31/26	780,000	712,000
12/31/27	905,000	830,000

Instructions

- Prepare the journal entries required at December 31, 2026, and at December 31, 2027, assuming that a perpetual inventory system and the cost-of-goods-sold method of adjusting to LCNRV is used.
- Prepare the journal entries required at December 31, 2026, and at December 31, 2027, assuming that a perpetual inventory is recorded at cost and reduced to LCNRV using the loss method.

P8.4 (LO 2) Excel (Lower-of-Cost-or-Market) Referring to the situation in P8.2 for Garcia Home Improvement Company, consider the following expanded data at May 31, 2025. Assume Garcia uses LIFO inventory costing.

	<u>Cost</u>	<u>Replacement Cost</u>	<u>Sales Price</u>	<u>Net Realizable Value</u>	<u>Normal Profit</u>
Aluminum siding	\$ 70,000	\$ 62,500	\$ 64,000	\$ 56,000	\$ 5,100
Cedar shake siding	86,000	79,400	94,000	84,800	7,400
Louvered glass doors	112,000	124,000	186,400	168,300	18,500
Thermal windows	140,000	126,000	154,800	140,000	15,400
Total	<u>\$408,000</u>	<u>\$391,900</u>	<u>\$499,200</u>	<u>\$449,100</u>	<u>\$46,400</u>

Instructions

- Determine the write-down, if any, at May 31, 2025.
 - For the fiscal year ended May 31, 2025 prepare the entry to record the decline in inventory to market, if any.
- Explain the rationale for the use of the lower-of-cost-or-market rule as it applies to inventories. (CMA adapted)

P8.5 (LO 2) Writing (Lower-of-Cost-or-Market) Fiedler Co. follows the practice of valuing its inventory at the lower-of-cost-or-market. The following information is available from the company's inventory records as of December 31, 2025.

Item	Quantity	Unit Cost	Replacement Cost/Unit	Estimated Selling Price/Unit	Completion & Disposal Cost/Unit	Normal Profit Margin/Unit
A	1,100	\$7.50	\$8.40	\$10.50	\$1.50	\$1.80
B	800	8.20	7.90	9.40	0.90	1.20
C	1,000	5.60	5.40	7.20	1.15	0.60
D	1,000	3.80	4.20	6.30	0.80	1.50
E	1,400	6.40	6.30	6.70	0.70	1.00

Instructions

Greg Forda is an accounting clerk in the accounting department of Fiedler Co., and he cannot understand why the market value keeps changing from replacement cost to net realizable value to something that he cannot even figure out. Greg is very confused, and he is the one who records inventory purchases and calculates ending inventory. You are the manager of the department and an accountant.

- Calculate the lower-of-cost-or-market using the individual-item approach.
- Show the journal entry he will need to make in order to write down the ending inventory from cost to market.
- Write a memo to Greg explaining what designated market value is as well as how it is computed. Use your calculations to aid in your explanation.

P8.6 (LO 4) (Gross Profit Method) Eastman Company lost most of its inventory in a fire in December just before the year-end physical inventory was taken. Corporate records disclose the following.

Inventory (beginning)	\$ 80,000	Sales revenue	\$415,000
Purchases	290,000	Sales returns	21,000
Purchase returns	28,000	Gross profit % based on net selling price	35%

Merchandise with a selling price of \$30,000 remained undamaged after the fire, and damaged merchandise has a net realizable value of \$8,150. The company does not carry fire insurance on its inventory.

Instructions

Prepare a formal labeled schedule computing the fire loss incurred. (Do not use the retail inventory method.)

P8.7 (LO 4) Groupwork (Gross Profit Method) On April 15, 2026, fire damaged the office and warehouse of Stanislaw Corporation. The only accounting record saved was the general ledger, from which the balance sheet data below was prepared.

Stanislaw Corporation March 31, 2026		
	Dr.	Cr.
Cash	\$ 20,000	
Accounts receivable	40,000	
Inventory, December 31, 2025	75,000	
Land	35,000	
Buildings	110,000	
Accumulated depreciation		\$ 41,300
Equipment	3,600	
Accounts payable		23,700
Other accrued expenses		10,200
Common stock		100,000
Retained earnings		52,000
Sales revenue		135,000
Purchases	52,000	
Miscellaneous expense	26,600	
	<u>\$362,200</u>	<u>\$362,200</u>

The following data and information have been gathered.

- The fiscal year of the corporation ends on December 31.
- An examination of the April bank statement and canceled checks revealed that checks written during the period April 1–15 totaled \$13,000: \$5,700 paid to accounts payable as of March 31, \$3,400 for April merchandise shipments, and \$3,900 paid for other expenses. Deposits during the same

period amounted to \$12,950, which consisted of receipts on account from customers with the exception of a \$950 refund from a vendor for merchandise returned in April.

3. Correspondence with suppliers revealed unrecorded obligations at April 15 of \$15,600 for April merchandise shipments, including \$2,300 for shipments in transit (f.o.b. shipping point) on that date.
4. Customers acknowledged indebtedness of \$46,000 at April 15, 2026. It was also estimated that customers owed another \$8,000 that will never be acknowledged or recovered. Of the acknowledged indebtedness, \$600 will probably be uncollectible.
5. The companies insuring the inventory agreed that the corporation's fire-loss claim should be based on the assumption that the overall gross profit rate for the past 2 years was in effect during the current year. The corporation's audited financial statements disclosed this information:

	Year Ended December 31	
	2025	2024
Net sales	\$530,000	\$390,000
Net purchases	280,000	235,000
Beginning inventory	50,000	66,000
Ending inventory	75,000	50,000

6. Inventory with a cost of \$7,000 was salvaged and sold for \$3,500. The balance of the inventory was a total loss.

Instructions

Prepare a schedule computing the amount of inventory fire loss. The supporting schedule of the computation of the gross profit should be in good form.

(AICPA adapted)

P8.8 (LO 5) Excel (Retail Inventory Method) The records for the Clothing Department of Shrapova's Discount Store are summarized below for the month of January.

Inventory, January 1: at retail \$25,000; at cost \$17,000
Purchases in January: at retail \$137,000; at cost \$82,500
Freight-in: \$7,000
Purchase returns: at retail \$3,000; at cost \$2,300
Transfers in from suburban branch: at retail \$13,000; at cost \$9,200
Net markups: \$8,000
Net markdowns: \$4,000
Inventory losses due to normal breakage, etc.: at retail \$400
Sales revenue at retail: \$95,000
Sales returns: \$2,400

Instructions

- a. Compute the inventory for this department as of January 31, at retail prices.
- b. Compute the ending inventory using lower-of-average-cost-or-market.

P8.9 (LO 5) Groupwork (Retail Inventory Method) Presented below is information related to Waveland Inc.

	Cost	Retail
Inventory, 12/31/25	\$250,000	\$ 390,000
Purchases	914,500	1,460,000
Purchase returns	60,000	80,000
Purchase discounts	18,000	—
Gross sales revenue (after employee discounts)	—	1,410,000
Sales returns	—	97,500
Markups	—	120,000
Markup cancellations	—	40,000
Markdowns	—	45,000
Markdown cancellations	—	20,000
Freight-in	42,000	—
Employee discounts granted	—	8,000
Loss from breakage (normal)	—	4,500

Instructions

Assuming that Waveland Inc. uses the conventional retail inventory method, compute the cost of its ending inventory at December 31, 2026.

P8.10 (LO 5) Groupwork (Retail Inventory Method) Fuque Inc. uses the retail inventory method to estimate ending inventory for its monthly financial statements. The following data pertain to a single department for the month of October 2026.

Inventory, October 1, 2026	
At cost	\$ 52,000
At retail	78,000
Purchases (exclusive of freight and returns)	
At cost	272,000
At retail	423,000
Freight-in	16,600
Purchase returns	
At cost	5,600
At retail	8,000
Markups	9,000
Markup cancellations	2,000
Markdowns (net)	3,600
Normal spoilage and breakage	10,000
Sales revenue	390,000

Instructions

- Using the conventional retail method, prepare a schedule computing estimated lower-of-cost-or-market inventory for October 31, 2026.
- A department store using the conventional retail inventory method estimates the cost of its ending inventory as \$60,000. An accurate physical count reveals only \$47,000 of inventory at lower-of-cost-or-market. List the factors that may have caused the difference between the computed inventory and the physical count.

P8.11 (LO 1, 3, 6) (Statement and Note Disclosure, LCNRV, and Purchase Commitment)

MaddoxSpecialty Company, a division of Lost World Inc., manufactures three models of gear shift components for bicycles that are sold to bicycle manufacturers, retailers, and catalog outlets. Since beginning operations in 1993, Maddox has used normal absorption costing and has assumed a first-in, first-out cost flow in its perpetual inventory system. The balances of the inventory accounts at the end of Maddox's fiscal year, November 30, 2025, are shown below. The inventories are stated at cost before any year-end adjustments.

Finished goods	\$647,000
Work in process	112,500
Raw materials	264,000
Factory supplies	69,000

The following information relates to Maddox's inventory and operations.

- The finished goods inventory consists of the items analyzed below.

	<u>Cost</u>	<u>NRV</u>
<u>Down tube shifter</u>		
Standard model	\$ 67,500	\$ 67,000
Click adjustment model	94,500	89,000
Deluxe model	108,000	110,000
Total down tube shifters	<u>270,000</u>	<u>266,000</u>
<u>Bar end shifter</u>		
Standard model	83,000	90,050
Click adjustment model	99,000	97,550
Total bar end shifters	<u>182,000</u>	<u>187,600</u>
<u>Head tube shifter</u>		
Standard model	78,000	77,650
Click adjustment model	117,000	119,300
Total head tube shifters	<u>195,000</u>	<u>196,950</u>
Total finished goods	<u>\$647,000</u>	<u>\$650,550</u>

2. One-half of the head tube shifter finished goods inventory is held by catalog outlets on consignment.
3. Three-quarters of the bar end shifter finished goods inventory has been pledged as collateral for a bank loan.
4. One-half of the raw materials balance represents derailleur acquired at a contracted price 20% above the current market price. The NRV of the rest of the raw materials is \$127,400.
5. The total NRV of the work in process inventory is \$108,700.
6. Included in the cost of factory supplies are obsolete items with an historical cost of \$4,200. The market value of the remaining factory supplies is \$65,900.
7. Maddox applies the LCNRV method to each of the three types of shifters in finished goods inventory. For each of the other three inventory accounts, Maddox applies the LCNRV method to the total of each inventory account.
8. Consider all amounts presented above to be material in relation to Maddox's financial statements taken as a whole.

Instructions

- a. Prepare the inventory section of Maddox's balance sheet as of November 30, 2025, including any required note(s).
- b. Without prejudice to your answer to (a), assume that the NRV of Maddox's inventories is less than cost. Explain how this decline would be presented in Maddox's income statement for the fiscal year ended November 30, 2025.
- c. Assume that Maddox has a firm purchase commitment for the same type of derailleur included in the raw materials inventory as of November 30, 2025, and that the purchase commitment is at a contracted price 15% greater than the current market price. These derailleurs are to be delivered to Maddox after November 30, 2025. Discuss the impact, if any, that this purchase commitment would have on Maddox's financial statements prepared for the fiscal year ended November 30, 2025.

(CMA adapted)

***P8.12 (LO 7) (Conventional and Dollar-Value LIFO Retail)** As of January 1, 2025, Aristotle Inc. adopted the retail method of accounting for its merchandise inventory.

To prepare the store's financial statements at June 30, 2025, you obtain the following data.

	<u>Cost</u>	<u>Selling Price</u>
Inventory, January 1	\$ 30,000	\$ 43,000
Markdowns		10,500
Markups		9,200
Markdown cancellations		6,500
Markup cancellations		3,200
Purchases	104,800	155,000
Sales revenue		154,000
Purchase returns	2,800	4,000
Sales returns and allowances		8,000

Instructions

- a. Prepare a schedule to compute Aristotle's June 30, 2025, inventory under the conventional retail method of accounting for inventories.
- b. Without prejudice to your solution to part (a), assume that you computed the June 30, 2022, inventory to be \$59,400 at retail and the ratio of cost to retail to be 70%. The general price level has increased from 100 at January 1, 2025, to 108 at June 30, 2025. Prepare a schedule to compute the June 30, 2025, inventory at the June 30 price level under the dollar-value LIFO retail method.

(AICPA adapted)

***P8.13 (LO 7) Groupwork (Retail, LIFO Retail, and Inventory Shortage)** Late in 2022, Joan Seceda and four other investors took the chain of Becker Department Stores private, and the company has just completed its third year of operations under the ownership of the investment group. Andrea Selig, controller of Becker Department Stores, is in the process of preparing the year-end financial statements. Based on the preliminary financial statements, Seceda has expressed concern over inventory shortages, and she has asked Selig to determine whether an abnormal amount of theft and breakage has occurred. The accounting records of Becker Department Stores contain the following amounts on November 30, 2025, the end of the fiscal year.

	<u>Cost</u>	<u>Retail</u>
Beginning inventory	\$ 68,000	\$100,000
Purchases	255,000	400,000
Net markups		50,000
Net markdowns		110,000
Sales revenue		320,000

According to the November 30, 2025, physical inventory, the actual inventory at retail is \$115,000.

Instructions

- Describe the circumstances under which the retail inventory method would be applied and the advantages of using the retail inventory method.
- Assuming that prices have been stable, calculate the value, at cost, of Becker Department Stores' ending inventory using the last-in, first-out (LIFO) retail method. Be sure to furnish supporting calculations.
- Estimate the amount of shortage, at retail, that has occurred at Becker Department Stores during the year ended November 30, 2025.
- Complications in the retail method can be caused by such items as (1) freight-in costs, (2) purchase returns and allowances, (3) sales returns and allowances, and (4) employee discounts. Explain how each of these four special items is handled in the retail inventory method.

(CMA adapted)

***P8.14 (LO 7) (Change to LIFO Retail)** Diderot Stores Inc., which uses the conventional retail inventory method, wishes to change to the LIFO retail method beginning with the accounting year ending December 31, 2025.

Amounts as shown below appear on the store's books before adjustment.

	<u>Cost</u>	<u>Retail</u>
Inventory, January 1, 2025	\$ 15,800	\$ 24,000
Purchases in 2025	116,200	184,000
Markups in 2025		12,000
Markdowns in 2025		5,500
Sales revenue in 2025		175,000

You are to assume that all markups and markdowns apply to 2025 purchases, and that it is appropriate to treat the entire inventory as a single department.

Instructions

Compute the inventory at December 31, 2025, under the following methods.

- The conventional retail method.
- The last-in, first-out retail method, effecting the change in method as of January 1, 2025. Assume that the cost-to-retail percentage for 2024 was recomputed correctly in accordance with procedures necessary to change to LIFO. This ratio was 59%.

(AICPA adapted)

***P8.15 (LO 7) (Change to LIFO Retail; Dollar-Value LIFO Retail)** Davenport Department Store converted from the conventional retail method to the LIFO retail method on January 1, 2025, and is now considering converting to the dollar-value LIFO inventory method. During your examination of the financial statements for the year ended December 31, 2026, management requested that you furnish a summary showing certain computations of inventory cost for the past 3 years.

Here is the available information.

- The inventory at January 1, 2024, had a retail value of \$56,000 and cost of \$29,800 based on the conventional retail method.
- Transactions during 2024 were as follows.

	<u>Cost</u>	<u>Retail</u>
Purchases	\$311,000	\$554,000
Purchase returns	5,200	10,000
Purchase discounts	6,000	
Gross sales revenue (after employee discounts)		551,000
Sales returns		9,000
Employee discounts		3,000
Freight-in	17,600	
Net markups		20,000
Net markdowns		12,000

3. The retail value of the December 31, 2025, inventory was \$75,600, the cost ratio for 2025 under the LIFO retail method was 61%, and the regional price index was 105% of the January 1, 2025, price level.
4. The retail value of the December 31, 2026, inventory was \$62,640, the cost ratio for 2026 under the LIFO retail method was 60%, and the regional price index was 108% of the January 1, 2025, price level.

Instructions

- a. Prepare a schedule showing the computation of the cost of inventory on hand at December 31, 2024, based on the conventional retail method.
- b. Prepare a schedule showing the recomputation of the inventory to be reported on December 31, 2024, in accordance with procedures necessary to convert from the conventional retail method to the LIFO retail method beginning January 1, 2025. Assume that the retail value of the December 31, 2024, inventory was \$60,000.
- c. Without prejudice to your solution to part (b), assume that you computed the December 31, 2024, inventory (retail value \$60,000) under the LIFO retail method at a cost of \$33,300. Prepare a schedule showing the computations of the cost of the store's 2025 and 2026 year-end inventories under the dollar-value LIFO method.

(AICPA adapted)

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ8.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- a. How does P&G value its inventories? Which inventory costing method does P&G use as a basis for reporting its inventories?
- b. How does P&G report its inventories in the balance sheet? In the notes to its financial statements, what three descriptions are used to classify its inventories?
- c. What costs does P&G include in Inventory and Cost of Products Sold?
- d. What was P&G's inventory turnover in 2020? What is its gross profit percentage? Evaluate P&G's inventory turnover and its gross profit percentage.

Comparative Analysis Case: The Coca-Cola Company and PepsiCo, Inc.

UYJ8.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What is the amount of inventory reported by Coca-Cola at December 31, 2020, and by PepsiCo at December 31, 2020? What percent of total assets is invested in inventory by each company?
- b. What inventory costing methods are used by Coca-Cola and PepsiCo? How does each company value its inventories?
- c. In the notes, what classifications (description) are used by Coca-Cola and PepsiCo to categorize their inventories?
- d. Compute and compare the inventory turnovers and days to sell inventory for Coca-Cola and PepsiCo for 2020. Indicate why there might be a significant difference between the two companies.

Financial Statement Analysis Case: Robots, Inc.

UYJ8.3 Robots, Inc. reported the following information regarding 2024–2025 inventory.

Robots, Inc.		
	2025	2024
Current assets		
Cash	\$ 153,010	\$ 538,489
Accounts receivable, net of allowance for doubtful accounts of \$46,000 in 2025 and \$160,000 in 2024	1,627,980	2,596,291
Inventories (Note 2)	1,340,494	1,734,873
Other current assets	123,388	90,592
Assets of discontinued operations	—	32,815
Total current assets	3,244,872	4,993,060

Notes to Consolidated Financial Statements		
Note 1 (in part): Nature of Business and Significant Accounting Policies		
<i>Inventories</i> —Inventories are stated at the lower-of-cost-or-market. Cost is determined by the last-in, first-out (LIFO) method.		
Note 2: Inventories		
Inventories consist of the following.		
	2025	2024
Raw materials	\$1,264,646	\$2,321,178
Work in process	240,988	171,222
Finished goods and display units	129,406	711,252
Total inventories	1,635,040	3,203,652
Less: Amount classified as long-term	294,546	1,468,779
Current portion	\$1,340,494	\$1,734,873

Inventories are stated at the lower of cost determined by the LIFO method or market for Robots, Inc. If the FIFO method had been used for the entire consolidated group, inventories after an adjustment to the lower-of-cost-or-market would have been approximately \$2,000,000 and \$3,800,000 at October 31, 2025 and 2024, respectively.

Inventory has been written down to estimated net realizable value, and results of operations for 2025, 2024, and 2023 include a corresponding charge of approximately \$868,000, \$960,000, and \$273,000, respectively, which represents the excess of LIFO cost over market.

Inventory of \$294,546 and \$1,468,779 at October 31, 2025 and 2024, respectively, shown on the balance sheet as a noncurrent asset represents that portion of the inventory that is not expected to be sold currently.

Reduction in inventory quantities during the years ended October 31, 2025, 2024, and 2023 resulted in liquidation of LIFO inventory quantities carried at a lower cost prevailing in prior years as compared with the cost of fiscal 2022 purchases. The effect of these reductions was to decrease the net loss by approximately \$24,000, \$157,000, and \$90,000 at October 31, 2025, 2024, and 2023, respectively.

Instructions

- Comment on why Robots, Inc., might disclose how its LIFO inventories would be valued under FIFO.
- Why does the LIFO liquidation reduce operating costs?
- Comment on whether Robots, Inc. would report more or less income if it had been on a FIFO basis for all its inventory.

Financial Statement Analysis Case: Barrick Gold Corporation

UYJ8.4 Barrick Gold Corporation, with headquarters in Toronto, Canada, is the world's most profitable and largest gold mining company outside South Africa. Part of the key to Barrick's success has been due to its ability to maintain cash flow while improving production and increasing its reserves of gold-containing property. In the most recent year, Barrick achieved record growth in cash flow, production, and reserves.

The company maintains an aggressive policy of developing previously identified target areas that have the possibility of a large amount of gold ore, and that have not been previously developed. Barrick limits the riskiness of this development by choosing only properties that are located in politically stable regions, and by the company's use of internally generated funds, rather than debt, to finance growth.

Barrick's inventories are as follows.

Barrick Gold Corporation	
<u>Inventories (in millions, US dollars)</u>	
Current	
Gold in process	\$133
Mine operating supplies	<u>82</u>
	\$215
Non-current (included in Other assets)	
Ore in stockpiles	\$65

Instructions

- Why do you think that there are no finished goods inventories? Why do you think the raw material, ore in stockpiles, is considered to be a non-current asset?
- Consider that Barrick has no finished goods inventories. What journal entries are made to record a sale?
- Suppose that gold bullion that cost \$1.8 million to produce was sold for \$2.4 million. The journal entry was made to record the sale, but no entry was made to remove the gold from the gold in process inventory. How would this error affect the following?

<u>Balance Sheet</u>		<u>Income Statement</u>	
Inventory	?	Cost of goods sold	?
Retained earnings	?	Net income	?
Accounts payable	?		
Working capital	?		
Current ratio	?		

Accounting, Analysis, and Principles

UYJ8.5 Englehart Company sells two types of pumps. One is large and is for commercial use. The other is smaller and is used in residential swimming pools. The following inventory data is available for the month of March.

	<u>Units</u>	<u>Price per Unit</u>	<u>Total</u>
<i>Residential Pumps</i>			
Inventory at Feb. 28:	200	\$ 400	\$ 80,000
Purchases:			
March 10	500	\$ 450	\$225,000
March 20	400	\$ 475	\$190,000
March 30	300	\$ 500	\$150,000
Sales:			
March 15	500	\$ 540	\$270,000
March 25	400	\$ 570	\$228,000
Inventory at March 31:	500		
<i>Commercial Pumps</i>			
Inventory at Feb. 28:	600	\$ 800	\$480,000
Purchases:			
March 3	600	\$ 900	\$540,000
March 12	300	\$ 950	\$285,000
March 21	500	\$1,000	\$500,000
Sales:			
March 18	900	\$1,080	\$972,000
March 29	600	\$1,140	\$684,000
Inventory at March 31:	500		

In addition to the above information, due to a downturn in the economy that has hit Englehart's commercial customers especially hard, Englehart expects commercial pump prices from March 31 onward to be considerably different (and lower) than at the beginning of and during March. Englehart has developed the following additional information.

	Commercial Pumps	Residential Pumps
Net realizable value (per unit)	\$900	\$580

The normal profit margin is 16.67% of cost. Englehart uses the FIFO accounting method.

Accounting

- Determine the dollar amount that Englehart should report on its March 31 balance sheet for inventory. Assume Englehart applies lower-of-cost-or-net realizable value at the individual product level.
- Repeat part (a) but assume Englehart applies lower-of-cost-or-net realizable value at the major categories level. Englehart places both commercial and residential pumps into the same (and only) category.

Analysis

Which of the two approaches above (individual product level or major categories) for applying LCNRV do you think gives the financial statement reader better information?

Principles

Assume that during April, the net realizable value of commercial pumps rebounds to \$1,050.

- Briefly describe how Englehart will report in its April financial statements the inventory remaining from March 31.
- Briefly describe the conceptual trade-offs inherent in the accounting in part (a).

Developing Your Professional Skills

Critical-Thinking Cases

CT8.1 (LO 1) (LCNRV) You have been asked by the financial vice president to develop a short presentation on the LCNRV method for inventory purposes. The financial VP needs to explain this method to the president because it appears that a portion of the company's inventory has declined in value.

Instructions

The financial vice president asks you to answer the following questions.

- What is the purpose of the LCNRV method?
- What is meant by "net realizable value"?
- Do you apply the LCNRV method to each individual item, to a category, or to the total of the inventory? Explain.
- What are the potential disadvantages of the LCNRV method?

CT8.2 (LO 1) Ethics (LCNRV) The net realizable value of Lake Corporation's inventory has declined below its cost. Allyn Conan, the controller, wants to use the loss method to write down inventory because it more clearly discloses the decline in the net realizable value and does not distort the cost of goods sold. His supervisor, financial vice president Bill Ortiz, prefers the cost-of-goods-sold method to write down inventory because it does not call attention to the decline in net realizable value.

Instructions

Answer the following questions.

- What, if any, is the ethical issue involved?
- Is any stakeholder harmed if Bill Ortiz's preference is used?
- What should Allyn Conan do?

CT8.3 (LO 1) (LCNRV) Ogala Corporation purchased a significant amount of raw materials inventory for a new product that it is manufacturing. Ogala uses the LCNRV rule for these raw materials. The net realizable value of the raw materials is below the original cost.

Ogala uses the FIFO inventory method for these raw materials. In the last 2 years, each purchase has been at a lower price than the previous purchase, and the ending inventory quantity for each period has been higher than the beginning inventory quantity for that period.

Instructions

- a. At which amount should Ogala's raw materials inventory be reported on the balance sheet? Why?
- b. In general, why is the LCNRV rule used to report inventory?
- c. What would have been the effect on ending inventory and cost of goods sold had Ogala used the average-cost inventory method instead of the FIFO inventory method for the raw materials? Why?

CT8.4 (LO 1) (LCNRV) Steele Corporation purchased a significant amount of raw materials inventory for a new product that it is manufacturing. Steele uses the lower-of-average-cost-or-net realizable value (LCNRV) rule for these raw materials. The net realizable value of the raw materials is below the original cost.

In the last 2 years, each purchase has been at a lower price than the previous purchase, and the ending inventory quantity for each period has been higher than the beginning inventory quantity for that period.

Instructions

- a. 1. At which amount should Steele's raw materials inventory be reported on the balance sheet? Why?
2. In general, why is the LCNRV rule used to report inventory?
- b. What would have been the effect on ending inventory and cost of goods sold had Steele used the LIFO inventory method instead of the average-cost inventory method for the raw materials? Why?

CT8.5 (LO 5) Writing (Retail Inventory Method) Saurez Company, your client, manufactures paint. The company's president, Maria Saurez, has decided to open a retail store to sell Saurez paint as well as wallpaper and other supplies that would be purchased from other suppliers. She has asked you for information about the conventional retail method of pricing inventories at the retail store.

Instructions

Prepare a report to the president explaining the retail method of pricing inventories. Your report should include the following points.

- a. Description and accounting features of the method.
- b. The conditions that may distort the results under the method.
- c. A comparison of the advantages of using the retail method with those of using cost methods of inventory pricing.
- d. The accounting theory underlying the treatment of net markdowns and net markups under the method.

(AICPA adapted)

CT8.6 (LO 1, 2, 5) (Cost Determination, LCM, Retail Method) Olson Corporation, a retailer and wholesaler of national brand-name household lighting fixtures, purchases its inventories from various suppliers.

Instructions

- a. 1. What criteria should be used to determine which of Olson's costs are inventoriable?
2. Are Olson's administrative costs inventoriable? Defend your answer.
- b. 1. Olson uses LIFO and the lower-of-cost-or-market rule for its wholesale inventories. What are the theoretical arguments for that rule?
2. The replacement cost of the inventories is below the net realizable value less a normal profit margin, which, in turn, is below the original cost. What amount should be used to value the inventories? Why?
- c. Assume instead that Olson calculates the estimated cost of its ending inventories held for sale at retail using the conventional retail inventory method. How would Olson treat the beginning inventories and net markdowns in calculating the cost ratio used to determine its ending inventories? Why?

(AICPA adapted)

CT8.7 (LO 3) Ethics (Purchase Commitments) Prophet Company signed a long-term purchase contract to buy timber from the U.S. Forest Service at \$300 per thousand board feet. Under these terms, Prophet must cut and pay \$6,000,000 for this timber during the next year. Currently, the market value is \$250 per thousand board feet. At this rate, the market price is \$5,000,000. Jerry Herman, the controller, wants to recognize the loss in value on the year-end financial statements, but the financial vice president, Billie Hands, argues that the loss is temporary and should be ignored. Herman notes that market value has remained near \$250 for many months, and he sees no sign of significant change.

Instructions

- a. What are the ethical issues, if any?
- b. Is any particular stakeholder harmed by the financial vice president's decision?
- c. What should the controller do?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE8.1 Access the glossary ("Master Glossary") to answer the following.

- a. What is the definition of inventory?
- b. What is the definition of market as it relates to inventory?
- c. What is the definition of net realizable value?

CE8.2 Based on increased competition for one of its key products, Tutaj Company is concerned that it will not be able to sell its products at a price that would cover its costs. Since the company is already having a bad year, the sales manager proposes writing down the inventory to the lowest level possible, so that all the bad news will be in the current year. Explain to the sales manager the rationale for lower-of-cost-or-net realizable value adjustments, according to GAAP.

CE8.3 What are the provisions for subsequent measurement of inventory in the context of a hedging transaction?

CE8.4 What is the nature of the SEC guidance concerning inventory disclosures?

Codification Research Case

Jones Co. is in a technology-intensive industry. Recently, one of its competitors introduced a new product with technology that might render obsolete some of Jones's inventory. The accounting staff wants to follow the appropriate authoritative literature in determining the accounting for this significant market event.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- a. Identify the primary authoritative guidance for the accounting for inventories. What is the predecessor literature?
- b. List three types of goods that are classified as inventory. What characteristic will automatically exclude an item from being classified as inventory?
- c. Define "market" as used in the phrase "lower-of-cost-or-market."
- d. Explain when it is acceptable to state inventory above cost and which industries allow this practice.

Analytics in Action Activities

Using Data Visualizations to Manage Inventory

DA8.1 Effective inventory management is critical for many companies. With thousands of individual products and millions of dollars invested, inventory is often one of the largest balance sheet items.

Data visualizations can provide quick insights into a company's inventory balance and identify potential issues before they become large-scale problems. For example, the following chart compares the value of inventory items included in the trial balance with those from a recent physical count. Management can easily identify any inventory variances and then further drill into the difference by inventory type or location.

Required

For this exercise, you will use data visualizations and other analytical tools to answer several questions about a hospital's inventory.

[Go to Wiley Course Resources for complete details and instructions.](#)

DA8.2 Beyond simply answering questions about values or variances, the visualizations used in DA8.1 can also be used to develop conclusions about a company's inventory.

Required

For this exercise, you will use inventory visualizations to develop deeper insights into a hospital's perpetual inventory system.

[Go to Wiley Course Resources for complete details and instructions.](#)

Using Data Analytics to Account for Inventory Adjustments

DA8.3 Completing a physical inventory count is an important control over inventory. Some companies complete one annual physical count of all inventory, while others cycle through their inventory throughout the year, counting different items at different points in time. In either case, inventory balances in the general ledger are often adjusted to match the physical counts.

Required

For this exercise, you will use Excel to account for a variety of inventory adjustments related to the physical inventory count.

[Go to Wiley Course Resources for complete details and instructions.](#)

IFRS Insights

LEARNING OBJECTIVE 8

Compare the accounting procedures related to valuation of inventories under GAAP and IFRS.

The major IFRS requirements related to accounting and reporting for inventories are found in *IAS 2* (“Inventories”), and *IAS 41* (“Agriculture”). In most cases, IFRS and GAAP are the same. The major differences are that IFRS prohibits the use of the LIFO cost flow assumption and does not have an exception to LCNRV. Following are the key similarities and differences between GAAP and IFRS related to inventories.

Similarities

- IFRS and GAAP account for inventory acquisitions at historical cost and evaluate inventory for LCNRV subsequent to acquisition.
- Who owns the goods—goods in transit, consigned goods, special sales agreements—as well as the costs to include in inventory are essentially accounted for the same under IFRS and GAAP.

Differences

- The requirements for accounting for and reporting inventories are more principles-based under IFRS. That is, GAAP provides more detailed guidelines in inventory accounting.
- A major difference between IFRS and GAAP relates to the LIFO cost flow assumption. GAAP permits the use of LIFO for inventory valuation. IFRS prohibits its use. FIFO and average-cost are the only two acceptable cost flow assumptions permitted under IFRS. Both sets of standards permit specific identification where appropriate.
- IFRS does not have an exception to the LCNRV rule for the LIFO/retail inventory methods (IFRS does not allow LIFO). GAAP, on the other hand, for LIFO/retail inventory method companies, defines market as replacement cost subject to the constraints of net realizable value (the ceiling) and net realizable value less a normal markup (the floor). IFRS does not use a ceiling or a floor to determine lower-of-cost-or-market.
- Under GAAP, if inventory is written down under the LCNRV or lower-of-cost-or-market valuation, the new basis is now considered its cost. As a result, the inventory may not be written back up to its original cost in a subsequent period. Under IFRS, the write-down may be reversed in a subsequent period up to the amount of the previous write-down. Both the write-down and any subsequent reversal should be reported on the income statement.
- IFRS requires both biological assets and agricultural produce at the point of harvest to be reported at net realizable value. GAAP does not require companies to account for all biological assets in the same way. Furthermore, these assets generally are not reported at net realizable value. Disclosure requirements also differ between the two sets of standards.

Acquisition and Disposition of Property, Plant, and Equipment

WHAT are property, plant, and equipment?

Property, plant, and equipment are assets that have physical substance, are used in the operations of a business, and are not intended for sale to customers. They are called various names—plant assets, fixed assets, or simply PP&E. By whatever name, these assets are long-lived and expected to be of service to the company for a number of years. Except for property (land), these assets decline in service potential (ability to produce revenue) over their useful lives.

WHY is accounting information about property, plant and equipment important?

Investments in property, plant, and equipment (referred to as **capital expenditures**) are often the driving force in generating company cash flows. These assets are critical to a company's success because they determine the company's capacity and therefore its ability to meet customer demand. In many cases, these are the most significant items on companies' balance sheets. For example, at **JetBlue Airways**, plant assets are 69% of its total assets. For **Walmart**, it's 56%. The table shown here reports the amounts and trends in these investments.

Capital Expenditures (in millions)			
Industry	2019	2018	Percent Change
Manufacturing	\$ 272,878	\$ 258,073	5.7%
Finance and insurance	195,328	181,508	7.6
Utilities	172,646	151,043	14.3
Nondurable goods industries	131,485	120,288	9.3
Transportation and warehousing	128,515	122,356	5.0
Health care and social assistance	116,735	108,552	7.5
Retail trade	98,594	89,233	10.5
Other (15 industry groups)	806,470	772,774	4.4
Total expenditures	\$1,807,827	\$1,699,123	6.4%

Source: Annual Capital Expenditures: 2019, Census.gov (December 16, 2020).

Investors and creditors closely monitor these amounts, as reported in the financial statements as part of total assets, depreciation expense, cash flows, and net income, as companies that overspend in this area find that income is reduced as depreciation increases. As a result, these companies often lose financial flexibility. That is, they find themselves in a cash bind as their cash flows from operations can no longer meet their obligations.

HOW do companies account for property, plant, and equipment?

At acquisition, companies record plant assets at historical cost. Cost consists of all expenditures necessary to acquire an asset and make it ready for its intended use. Once cost is established, it becomes the basis of accounting for the plant asset over its useful life. Fair value is not used to increase the recorded cost after acquisition. Determining which costs to include in property, plant, and equipment is very important. In general, costs are included if they are expected to result in greater future benefits, whereas expenditures that simply maintain a given level of service should be expensed.

Chapter Roadmap

LEARNING OBJECTIVES	TOPICS	REVIEW AND PRACTICE
LO 9.1 Identify property, plant, and equipment and its related costs.	9.1 Property, Plant, and Equipment <ul style="list-style-type: none"> Acquisition of property, plant, and equipment Cost of land Cost of land improvements Cost of equipment Cost of buildings Asset retirement costs and obligations 	Examples <div> 9.1 Land Costs 9.4 Building Costs </div> <div> 9.2 Equipment Costs—Truck 9.5 ARO—Oil Tanks </div> <div> 9.3 Equipment Costs—Machinery 9.6 ARO—Drilling Platform </div> Put It into Practice LO 9.1 Record PP&E Costs

9.1 Property, Plant, and Equipment

LEARNING OBJECTIVE 1

Identify property, plant, and equipment and its related costs.

Companies like **Boeing**, **Target**, and **Starbucks** use assets of a durable nature. These assets are called **property, plant, and equipment**. Other terms commonly used are **plant assets** and **fixed assets**. Property, plant, and equipment include land, building structures (offices, factories, warehouses), and equipment (machinery, computers, vehicles, furniture, tools). The major characteristics of property, plant, and equipment are as follows.

1. **They are acquired for use in operations and not for resale.** Only assets used to support normal business operations are classified as property, plant, and equipment. What is not property, plant, and equipment? An idle building is more appropriately classified separately as an investment. Land developers that subdivide and sell land would classify it as inventory, not as property, plant, and equipment.
2. **They are long-term in nature and usually depreciated.** Property, plant, and equipment provide services over a number of years. Companies allocate the cost of these assets to future periods through periodic depreciation charges. The exception is land, which is impaired only if a material decrease in value occurs, such as a loss in fertility of agricultural land because of poor crop rotation, drought, or soil erosion.
3. **They possess physical substance.** Property, plant, and equipment are tangible assets characterized by physical existence or substance. They can be seen, touched, and in some cases moved. This differentiates them from intangible assets, such as patents or goodwill, which may only be evidenced by legal rights or documentation.

Global View

Under international accounting standards, historical cost is the benchmark (preferred) treatment for property, plant, and equipment. However, companies may also use revalued amounts. When using revaluation, companies must revalue the class of assets regularly. *See the IFRS Insights in Chapter 10 for a discussion of the similarities and differences between IFRS and GAAP.*

Acquisition of Property, Plant, and Equipment

Most companies use historical cost as the basis for valuing property, plant, and equipment. **Historical cost** consists of:

1. The acquisition price plus sales tax.
2. Costs incurred bringing the asset to its location, such as freight/shipping costs.
3. Costs incurred getting the asset ready for its intended use, such as installing it or testing it prior to use (see **Global View**).

Once recorded, companies should not write up property, plant, and equipment to fair value when it is above cost. Why not? The major concern is the difficulty of developing a reliable fair value for these types of assets.

For example, how does one value **Tesla's** Gigafactory where it manufactures battery packs for its electric vehicles or the information technology assets that **Netflix** carries on its balance sheet? Even those who favor fair value measurement for inventory and financial instruments often take the position that property, plant, and equipment should not be revalued from its historical cost.

Cost of Land

All expenditures made to acquire land and ready it for intended use are considered part of the land cost. When **Home Depot** purchases land on which to build a new store, its land costs typically include:

1. The purchase price.
2. Closing costs, such as title to the land, attorney's fees, commissions to real estate agents, and recording fees.

3. Costs incurred in getting the land in condition for its intended use, such as grading, filling, draining, and clearing.
4. Assumption of any liens, mortgages, or other encumbrances on the property.
5. Any additional land improvements that have an indefinite life.

Furthermore, when Home Depot purchases land for the purpose of constructing a building, it considers all costs incurred up to the excavation for the new building as land costs. **Removal of old buildings—clearing, grading, and filling—is a land cost because this activity is necessary to get the land in condition for its intended purpose.** Sometimes a company can salvage items from a demolition and sell them or sell timber that has been cleared. If Home Depot sells any salvaged items, the amount received is treated as a **reduction in the cost of the land**.

When Home Depot purchases land, it may assume certain obligations on the land such as back taxes or liens. For example, if the purchase price of the land is \$50,000 cash but Home Depot assumes accrued property taxes of \$5,000 and liens of \$10,000, its land cost is \$65,000. Home Depot also might incur **special assessments** for local improvements, such as pavements, street lights, sewers, and drainage systems. It should charge these costs to the Land account because they are relatively permanent in nature. After installation, they are maintained by the local government.

Generally, land is part of property, plant, and equipment. However, if the major purpose of acquiring and holding land is speculative, a company more appropriately classifies the land as an **investment**. If a real estate concern holds the land for resale, it should classify the land as **inventory**.

Cost of Land Improvements

Land improvements are structural additions with limited lives that are made to land. Some examples include:

- Driveways.
- Parking lots.
- Fencing.
- Lighting.
- Landscaping with a limited life, such as plants, trees, sprinkler systems, and retaining walls for planting beds.

The cost of land improvements includes all expenditures necessary to make the improvements ready for their intended use. For example, the cost of a parking lot for a new Home Depot location includes the amount paid for paving, fencing, and lighting. The company would debit the total of these costs to Land Improvements. Land improvements have limited useful lives. Even when well-maintained, they will eventually need to be replaced. As a result, companies depreciate the cost of land improvements over their useful lives.

FACTS Assume that **Tesla** acquires property on the outskirts of Austin, Texas, for a factory site. Tesla paid \$2,000,000 for the site and agreed to assume unpaid property taxes of \$42,000 as well as an unpaid mortgage loan of \$210,000. The city also assessed the company \$38,000 for sewers, street pavement, and water mains. Tesla will be using the site as a manufacturing facility for its cybertruck. Additional costs related to the property are as follows.

Real estate commissions paid to McConaughy Realty	\$120,000
Title search and title transfer fees	4,000
Costs related to demolition of an old warehouse on the land	10,000
Salvage value related to demolition of the building	1,000
Costs of surveying and grading of property	30,000
Cost of landscaping (useful life of 20 years)	101,000

Example 9.1 Land Costs

QUESTION What amount should be reported for the cost of the land and any land improvements?

SOLUTION

Land costs:

Land purchase cost	\$2,000,000
Assumption of unpaid property taxes	42,000
Assumption of unpaid mortgage	210,000
Assessment for sewers, pavement, and water main	38,000
Real estate commissions	120,000
Title	4,000
Demolition costs related to old warehouse	10,000
Salvage value related to old warehouse	(1,000)
Cost of surveying and grading of property	30,000
Cost of land	<u>\$2,453,000</u>

Land improvement costs:

Cost of landscaping (limited life)	\$101,000
------------------------------------	-----------

The journal entry to record these transactions (assuming cash paid) is as follows.

Land	2,453,000	
Land Improvements	101,000	
Cash		2,554,000

Cost of Equipment

Equipment includes assets used in operations, such as store checkout counters, office furniture, factory machinery, and delivery trucks. **Delta Air Lines'** equipment includes aircraft, in-flight entertainment systems, and trucks for ground operations. The cost of equipment consists of:

- Cash purchase price plus sales taxes.
- Freight or shipping charges.
- Insurance during transit paid by the purchaser.
- Assembling, installing, and testing the equipment.

What about recurring costs related to equipment, such as vehicle licenses and accident insurance on company trucks and cars? These items are **annual recurring expenditures and do not benefit future periods**. Therefore, these expenditures are expensed when incurred. Or, they might be recorded in a prepaid asset account if they are paid in advance.

Example 9.2 Equipment Costs—Truck

FACTS Assume that **FedEx** purchases its first battery-powered delivery truck on January 1 at a cash price of \$22,000. Related expenditures are sales taxes \$1,320, painting and lettering \$500, vehicle license \$80, and a 3-year accident insurance policy \$1,600.

QUESTION What journal entry would FedEx make to record the cost of the truck?

SOLUTION

The cost of the delivery truck is \$23,820, computed as follows.

Cash price	\$22,000
Sales taxes	1,320
Painting and lettering	500
Cost of delivery truck	<u>\$23,820</u>

FedEx treats the cost of a motor vehicle license as an expense and the cost of an insurance policy as a prepaid asset.

To record the purchase of the truck and related expenditures:

Equipment—Trucks	23,820	
License Expense	80	
Prepaid Insurance	1,600	
Cash		25,500

Here is a second example of equipment costs.

FACTS Assume that **Trader Joe's** purchases a new commercial freezer at a cash price of \$50,000. Related expenditures are sales taxes \$3,000, insurance during shipping \$500, and installation and testing \$1,000.

QUESTION What journal entry would Trader Joe's make to record the cost of the freezer?

SOLUTION

The cost of the freezer is \$54,500, computed as follows.

Cash price	\$50,000
Sales taxes	3,000
Insurance during shipping	500
Installation and testing	1,000
Cost of factory machinery	<u>\$54,500</u>

To record the purchase and related expenditures:

Equipment	54,500	
Cash		54,500

Example 9.3 Equipment Costs—Machinery

Cost of Buildings

The cost of buildings should include all expenditures related directly to their acquisition or construction. Companies may obtain use of a building by purchase, construction by an independent contractor, or by constructing the building itself. **Illustration 9.1** shows the costs related to each way of obtaining a building. Take a moment to familiarize yourself with these different types of costs.

ILLUSTRATION 9.1 Building Acquisition Costs

Purchase	Construction by Independent Contractor	Self-Construction
 <ul style="list-style-type: none"> • Purchase price • Closing costs, such as attorney fees, title insurance, real estate agent fees • Assumption of any unpaid taxes or mortgages on the property • Costs of remodeling or repairs to ready the building for its intended use 	 <ul style="list-style-type: none"> • Contract price • Architect fees and building permits • Excavation costs • Third-party costs directly attributable to the construction, such as advisory or valuation costs • Interest on construction financing during the construction period (discussed in detail later in the chapter) 	 <ul style="list-style-type: none"> • Materials, labor, and overhead directly related to construction • Pro rata portion of fixed overhead • Interest on construction financing during the construction period (discussed in detail later in the chapter)

Notice that salaries and wages of employees are not included in the cost of purchasing a building or constructing one with an independent contractor. Salaries and wages of

employees are only included in the cost of a **self-constructed asset** if the employees are directly involved with the construction, such as a plant supervisor overseeing the construction.¹

Example 9.4 Building Costs

FACTS As a civic gesture, Art-in-Bloom is hiring an independent contractor to build a museum on land it owns. The land had been used as a park for residents in the community. To obtain a building permit for the new building, Art-in-Bloom must commit to fund the purchase of land adjacent to the museum for a new park. The CFO asks you, as the accounting intern, to determine the total cost of the building that should be capitalized on Art-in-Bloom's balance sheet based on the following information.

Payment to building contractor for cost of construction	\$31,000,000
Cost of additional security during construction	80,000
Allocation of overhead cost related to Art-in-Bloom management team	200,000
Excavation costs	100,000
Cost of building permit	20,000
Funding for the cost of land for a new park	150,000
Cost of hiring a project manager to oversee the work for Art-in-Bloom	180,000
Donations to offset the cost of the building	(2,000,000)
Net total costs	<u>\$29,730,000</u>

QUESTION At what amount should the museum be reported in the financial statements at the completion of the building?

SOLUTION

The cost of the building should include all the costs mentioned above except the allocation of overhead costs related to the management team and the donations to offset the cost of the building.

- The allocation of the overhead costs is not considered a cost of the building because these costs are not avoidable and not direct costs of the building.
- The donations should not offset the cost of the building but should be reported as revenue when received.
- The payment for funding the land for the new park should be reported as part of the cost of the building because the building could not be built if the permit were not granted.

The cost of the building is therefore \$31,530,000 (\$29,730,000 – \$200,000 + \$2,000,000) comprised of cost of construction, excavation costs, security costs, cost of building permit, cost of park land, and project manager cost.

Asset Retirement Costs and Obligations

What do **Republic Services** (owner of landfills), **Noble Energy Inc.** (oil and gas producer), and **Freeport-McMoRan** (mining operations) have in common? All three of these companies have **asset retirement obligations**.

For example, when Republic Service buys a landfill, it incurs not only the cost of the landfill but also a future liability for remediation costs when the landfill is no longer useful.

- Remediation costs would include cleaning up the groundwater, removing soil contamination, and controlling methane gas migration.
- These expected remediations are referred to as **asset retirement obligations (AROs)**, and the costs are referred to as asset retirement costs (ARC).

Republic Service records a liability for an ARO equal to the fair value of the estimated costs to retire the landfill. The ARO liability is recorded in the period in which the obligation meets the definition of a liability, which in Republic's case is at the time it buys the landfill. Companies generally use an expected present value model to determine the fair value of the ARO because fair value information based on market prices is not available.

¹A committee of the AICPA argues against allocation of overhead. Instead, it supports capitalization of only direct costs (costs directly related to the specific activities involved in the construction process). Not reporting these costs as period costs during the construction period may affect comparisons of period costs and resulting net income from one period to the next. See Accounting Standards Executive Committee, "Accounting for Certain Costs and Activities Related to Property, Plant, and Equipment," Exposure Draft (New York: AICPA, June 29, 2001).

When the liability is recorded, Republic also increases the cost of the landfill by an amount equal to the fair value of the ARO. The specific asset (in this case, the landfill) should be increased because the future economic benefit comes from the use of the landfill. Republic should not record the capitalized ARC in a separate account because there is no future economic benefit that can be associated with these costs alone. [1] (See the FASB Codification References near the end of the chapter.)

The cost of the landfill should then be depreciated over the life of the landfill using a rational and systemic method, such as the straight-line method. The ARO should be recorded initially at fair value and then increased to its disposal cost over the life of the landfill.

- Companies use the effective-interest method to increase the ARO over time with an off-setting entry to accretion expense.
- **Accretion expense** is a periodic expense recognized when updating the present value of a balance sheet liability.
- It is reported as an operating expense on the income statement.

FACTS Hillman Company determines that it has an ARO of \$100,000 related to underground tanks for a gas station it purchased on January 1, 2025. The gas station tanks have a useful life of 10 years and are depreciated using the straight-line method. The present value of the ARO liability using a discount rate of 6% is \$55,839.

QUESTION What entries should you make to record the ARO and ARC for Hillman in 2025?

SOLUTION

To record asset retirement cost for the oil tanks:

January 1, 2025		
Buildings (asset retirement cost)	55,839	
Asset Retirement Obligation		55,839

To record depreciation related to the building and accretion of the asset retirement obligation up to its disposal cost:

December 31, 2025		
Depreciation Expense (\$55,839 ÷ 10)	5,584	
Accumulated Depreciation—Buildings		5,584
Accretion Expense (\$55,839 × .06)	3,350	
Asset Retirement Obligation		3,350

Example 9.5 Asset Retirement Obligation (ARO)— Oil Tanks

Excel Solution

<i>i</i>	6%
<i>n</i>	10
<i>FV</i>	-\$100,000

PV \$55,839.48

PV(rate, nper, pmt, [fv], [type])

As indicated in Example 9.5, Hillman records the ARO and related costs at fair value. It depreciates the ARC (as part of the building in this case) over its useful life of 10 years. In addition, the accretion, or increase, of the liability involves debiting accretion expense, an operating expense, and crediting the ARO liability. Assuming there are no changes in the estimates at the end of 10 years, the asset retirement cost will be fully depreciated and therefore has a value of \$0; the ARO will have a valuation of \$100,000. If the remediation or disposal costs are less than \$100,000, Hillman will report a gain for the difference. If remediation costs are more than \$100,000, it will report a loss.

Obligating Events

Examples of existing legal obligations that require recognition of an ARO include, but are not limited, to:

- Decommissioning of nuclear facilities.
- Dismantling, restoring, and reclaiming of oil and gas properties.
- Certain closure, reclamation, and removal costs of mining facilities.
- Closure and post-closure costs of landfills.

To capture the benefits of these long-lived assets, **the company is generally legally obligated for the costs associated with retirement of the asset, whether the company hires another party to perform the retirement activities or performs the activities**

with its own workforce and equipment. AROs give rise to various recognition patterns. For example, the obligation may arise at the outset of the asset's use (e.g., erection of an oil-rig), or it may build over time (e.g., a landfill that expands over time).

Example 9.6

Asset Retirement Obligation (ARO)—Drilling Platform

FACTS On January 1, 2025, Wildcat Oil Company erects a drilling platform in the Gulf of Mexico. Wildcat is legally required to dismantle and remove the platform at the end of its useful life, estimated to be 5 years. Wildcat estimates that dismantling and removal will cost \$1,000,000. Based on a 10% discount rate, the fair value of the ARO is estimated to be \$620,920. Wildcat has developed the following schedule to help in accounting for the ARO.

Year	ARO Liability	Accretion Expense	ARO Liability	Drilling Platform
	at Jan. 1		at Dec. 31	Depreciation Expense
2025	\$620,920	\$62,092 ¹	\$ 683,012 ²	\$124,184 ³
2026	683,012	68,301	751,313	124,184
2027	751,313	75,131	826,444	124,184
2028	826,444	82,644	909,088	124,184
2029	909,088	90,912 ⁴	1,000,000	124,184

¹\$620,920 × .10; ²\$620,920 + \$62,092; ³\$620,920 ÷ 5; ⁴Rounded.

On January 10, 2030, Wildcat contracts with Rig Reclaimers Inc. to dismantle the platform at a contract price of \$980,000.

QUESTION What entries would Wildcat make related to the ARO in 2025 and 2027, and for the disposal of the platform in 2030?

SOLUTION

To record 2025 asset retirement costs:

January 1, 2025

Drilling Platform (asset retirement cost)	620,920	
Asset Retirement Obligation		620,920

To record 2025 depreciation and accretion expense:

December 31, 2025

Depreciation Expense	124,184	
Accumulated Depreciation—Platform		124,184
Accretion Expense	62,092	
Asset Retirement Obligation		62,092

To record 2027 depreciation and accretion expense:

December 31, 2027

Depreciation Expense	124,184	
Accumulated Depreciation—Platform		124,184
Accretion Expense	75,131	
Asset Retirement Obligation		75,131

To record gain on settlement of ARO:

January 10, 2030

Asset Retirement Obligation	1,000,000	
Cash		980,000
Gain on Settlement of Asset Retirement Obligation		20,000

Asset Retirement Obligation		
	01/25	620,920
	12/25	62,092
	12/26	68,301
	12/27	75,131
	12/28	82,644
	12/29	90,912
	Bal.	1,000,000
01/30	1,000,000	
		0

Illustration 9.2 summarizes the general guidelines for recognition and measurement of the ARC and ARO.

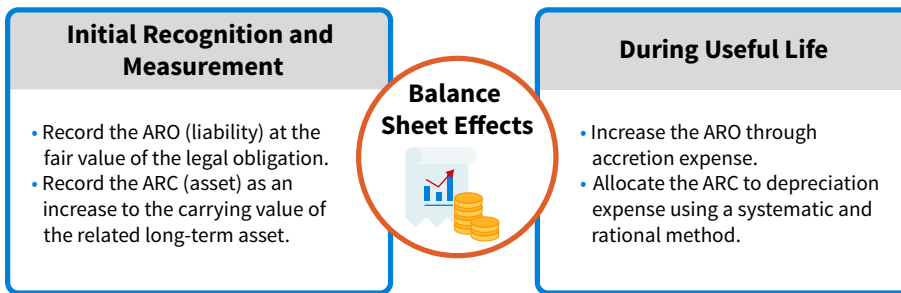

ILLUSTRATION 9.2 Summary of Accounting for Asset Retirement Costs

FACTS Columbia Company manufactures machine tools. On January 1, 2025, Columbia purchased a stamping machine at a retail price of \$12,000. Columbia paid 6% sales tax on this purchase. Columbia paid a contractor \$2,800 for a specially wired platform for the machine, to ensure uninterrupted power to the machine. Columbia estimates the machine will have a 4-year useful life, with a salvage value of \$2,000 at the end of 4 years.

Columbia constructed a small manufacturing facility specifically to manufacture one particular accessory. Columbia paid the construction contractor \$600,000 cash (which was the total contract price) and placed the facility into service on January 1, 2025. Because of technological changes, Columbia anticipates that the manufacturing facility will be useful for no more than 10 years. The local government, where the facility is located, requires that Columbia remediate the facility site at the end of the 10-year period so that it can be used as a community center. Columbia estimates the cost of remediation in 10 years to be \$75,000.

Put It into Practice LO 9.1

Record PP&E Costs

INSTRUCTIONS

- At what amount should Columbia record the acquisition cost of the machine?
- Prepare the journal entries to record the manufacturing facility and the ARO. Based on an effective-interest rate of 6%, the present value of the ARO on January 1, 2025, is \$41,879.
- On December 31, 2034, Columbia pays a restoration firm to remediate the site at a price of \$80,000. Prepare the journal entry for the settlement of the ARO.

SOLUTION

- Historical cost is measured by the cash or cash equivalent price of obtaining the asset and bringing it to the location and condition for its intended use. For Columbia, this is calculated as follows.

Price	\$12,000
Sales tax ($\$12,000 \times .06$)	720
Platform	2,800
Total	<u>\$15,520</u>

- To record the facility cost and the related ARO:

January 1, 2025		
Plant Assets (asset retirement cost)	600,000	
Cash		600,000
Plant Assets (asset retirement cost)	41,879	
Asset Retirement Obligation		41,879

- To record the settlement of the ARO:

December 31, 2034		
Asset Retirement Obligation	75,000	
Loss on ARO Settlement	5,000	
Cash		80,000

9.2 Interest Costs During Construction

LEARNING OBJECTIVE 2

Discuss the accounting problems associated with interest capitalization.

Underlying Concepts

The objective of capitalizing interest is to obtain a measure of acquisition cost that reflects a company's total investment in the asset and to charge that cost to future periods benefited through depreciation expense.

As we have discussed, the historical cost of acquiring an asset should include all costs incurred to bring the asset to the condition and location necessary for its intended use. This concept also applies to interest costs incurred in securing financing needed during construction of a fixed asset.

It is common for a company to borrow money to construct an asset. Interest on the construction loan is considered part of the cost of the asset; without the loan, the asset could not be constructed. Plus, during construction, the asset is not generating revenues. Therefore, a company should record, or capitalize, these interest costs in the related asset account (see **Underlying Concepts**). [2] Once construction is complete, the asset is ready for its intended use such that it will begin generating revenues for the company. At this same time, the company should report any future interest as an expense.

To capitalize interest, companies consider three items:

1. Qualifying assets.
2. Capitalization period.
3. Amount to capitalize.

Qualifying Assets

To qualify for interest capitalization, assets must require a period of time to get them ready for their intended use. A company capitalizes interest costs starting with the first expenditure related to the asset. Capitalization continues until the company substantially readies the asset for its intended use.

Assets that qualify for interest cost capitalization include assets under construction for a company's own use (including buildings, manufacturing plants, and large machinery) and assets intended for sale or lease that are constructed or otherwise produced as discrete projects (e.g., ships or real estate developments). Examples of assets that do **not** qualify for interest capitalization include:

1. Assets that are in use or ready for their intended use.
2. Assets that the company does not use in its earnings activities and that are not undergoing the activities necessary to get them ready for use.

Examples of the second type include land remaining undeveloped and assets not used because of obsolescence, excess capacity, or need for repair.

Capitalization Period

The **capitalization period** is the period of time during which a company must capitalize interest. It begins with the presence of three conditions:

1. Expenditures for the asset have been made.
2. Activities that are necessary to get the asset ready for its intended use are in progress.
3. Interest cost is being incurred.

Interest capitalization **continues as long as these three conditions are present**. The capitalization period ends when the asset is substantially complete and ready for its intended use.

Amount to Capitalize

The amount of interest to capitalize is limited to the **lower** of actual interest cost incurred during the period or avoidable interest. **Avoidable interest** is the amount of interest cost that a company could theoretically avoid if it had not made expenditures for the asset. **Illustration 9.3** summarizes the decision rule for the amount of interest to capitalize—avoidable or actual interest.

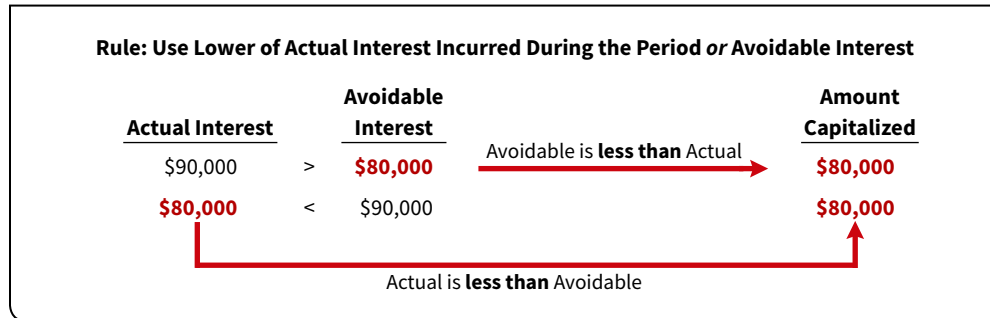

ILLUSTRATION 9.3 Decision Rule for Amount of Interest to Capitalize

As indicated in Illustration 9.3, the lower of actual or avoidable interest is capitalized. In no situation should interest cost include a cost of capital charge for stockholders' equity. Furthermore, GAAP requires interest capitalization for a qualifying asset only if its effect, compared with the effect of expensing interest, is material. [3] To apply the avoidable interest concept, a company determines the potential amount of interest that it may capitalize during an accounting period by multiplying the interest rate(s) by the **weighted-average accumulated expenditures** for qualifying assets during the period.

Weighted-Average Accumulated Expenditures

In computing the weighted-average accumulated expenditures (WAAE), a company weights the construction expenditures by the amount of time (fraction of a year or accounting period) that it can incur interest cost on the expenditure.

FACTS Assume that **Tesla** contracts to build a tram for its Nevada Gigafactory, which is expected to be completed in 17 months. The current-year payments to the contractor are \$240,000 on March 1, \$480,000 on July 1, and \$360,000 on November 1.

QUESTION How would you compute the weighted-average accumulated expenditures for Tesla?

SOLUTION

Tesla computes the weighted-average accumulated expenditures for the year ended December 31 as follows.

Expenditures		×	Capitalization Period*	=	Weighted-Average Accumulated Expenditures
Date	Amount				
March 1	\$ 240,000		10/12		\$200,000
July 1	480,000		6/12		240,000
November 1	360,000		2/12		60,000
	<u>\$1,080,000</u>				<u>\$500,000</u>

*Months between date of expenditure and date interest capitalization stops or end of year, whichever comes first (in this case, December 31).

To compute the weighted-average accumulated expenditures, Tesla weights the expenditures by the amount of time that it can incur interest cost on each one. For the March 1 expenditure, the company associates 10 months of interest cost with the expenditure. For the expenditure on July 1, it incurs only 6 months of interest costs. For the expenditure made on November 1, the company incurs only 2 months of interest cost.

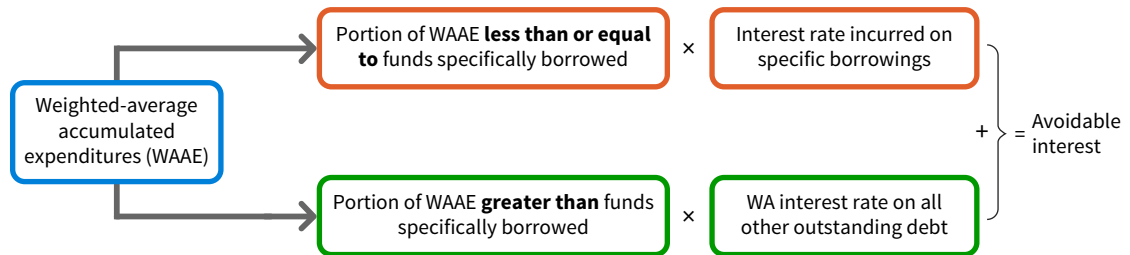

Example 9.7 Weighted-Average Accumulated Expenditures

Interest Rates

Once the weighted-average accumulated expenditure amount is determined, it is multiplied by an appropriate interest rate to determine avoidable interest, as shown in **Illustration 9.4**.²

ILLUSTRATION 9.4 Interest Rate for Computing

With respect to the Tesla project in Example 9.7, if it only had a specific borrowing with an interest rate of 7% to finance the project, it would use that rate to compute avoidable interest.

Example 9.8 Using Weighted-Average Interest Rate to Determine Interest Capitalization

FACTS Refer to the facts in Example 9.7. Assume that **Tesla** did not finance the cost of the tram with a specific loan. Instead, it used a weighted-average of its debt outstanding. Here is how Tesla determined its interest rate using the following information.

	<u>Principal</u>	<u>Interest</u>
12%, 2-year note	\$ 600,000	\$ 72,000
9%, 10-year bonds	2,000,000	180,000
7.5%, 20-year bonds	5,000,000	375,000
	<u>\$7,600,000</u>	<u>\$627,000</u>

$$\text{Weighted-Average Interest Rate} = \frac{\text{Total Interest}}{\text{Total Principal}} = \frac{\$627,000}{\$7,600,000} = 8.25\%$$

QUESTION Given the weighted-average interest rate, what is the amount of interest cost that Tesla should capitalize for the year ended December 31, 2025?

SOLUTION

To answer this question, Tesla should first determine the amount of avoidable interest related to the project, which is computed as follows.

$$\text{Weighted-Average Accumulated Expenditures} \times \text{Interest Rate} = \text{Avoidable Interest}$$

$$\$500,000 \text{ (see Example 9.7)} \times .0825 = \$41,250$$

Tesla should capitalize the avoidable interest of \$41,250, because it is less than the actual interest incurred of \$627,000.

Other Issues

Expenditures for Land

If Tesla had purchased land with the intention of building a new building, interest costs associated with these expenditures qualify for interest capitalization. When Tesla purchases land as a site for the building, interest costs capitalized are part of the cost of the building, not the land, because the building is the reason for the interest costs.

Interest Revenue

What happens if Tesla temporarily invests the excess of the borrowed funds in interest-bearing securities until it needs the funds to pay for construction? Should Tesla offset the

²The interest rate to be used may rely exclusively on an average rate of all the borrowings, if desired. For our purposes, we use the specific borrowing rate followed by the average interest rate because we believe it to be more conceptually consistent. Either method can be used; GAAP does not provide explicit guidance on this measurement.

revenue against the interest cost when determining the amount of interest to capitalize as part of the construction cost of the building? GAAP requires that companies should not offset nor net interest revenue against interest cost. The reason? Temporary investment decisions are not related to the interest cost that resulted as part of the acquisition cost of the assets. Therefore, companies should capitalize the interest cost on qualifying assets whether or not they temporarily invest excess funds in short-term securities.

FACTS On November 1, 2024, Key Company contracted Peel Construction Co. to construct a building for \$1,400,000 on land costing \$100,000 (purchased from the contractor and included in the first payment). Key made the following payments to the construction company during 2025.

January 1	March 1	May 1	December 31	Total
\$210,000	\$300,000	\$540,000	\$450,000	\$1,500,000

Peel Construction completed the building, ready for occupancy, on December 31, 2025. Key had the following debt outstanding at December 31, 2025.

Specific Construction Debt

- 15%, 3-year note to finance purchase of land and construction of the building, \$750,000 dated December 31, 2024, with interest payable annually on December 31

Other Debt

- 10%, 5-year note payable, dated December 31, 2021, with interest payable annually on December 31 \$550,000
- 12%, 10-year bonds issued December 31, 2020, with interest payable annually on December 31 \$600,000

QUESTIONS (a) What is the amount of interest to capitalize, and (b) what entries are made to record the cost of the building in 2025?

SOLUTION

- a. Key computed the weighted-average accumulated expenditures during 2025 as follows.

Expenditures		×	Current-Year Capitalization	=	Weighted-Average Accumulated Expenditures
Date	Amount		Period		
January 1	\$ 210,000		12/12		\$210,000
March 1	300,000		10/12		250,000
May 1	540,000		8/12		360,000
December 31	450,000		-0-		-0-
	<u>\$1,500,000</u>				<u>\$820,000</u>

Note that the expenditure made on December 31, the last day of the year, does not have any interest cost.

Key computes the avoidable interest as follows.

Weighted-Average Accumulated Expenditures	×	Interest Rate	=	Avoidable Interest
\$750,000		.15 (construction note)		\$112,500
70,000 ^a		.1104 (other debt) ^b		7,728
<u>\$820,000</u>				<u>\$120,228</u>

^aThe amount by which the weighted-average accumulated expenditures exceeds the specific construction loan.

^bWeighted-average interest rate computation:

	Principal	Interest
10%, 5-year note	\$ 550,000	\$ 55,000
12%, 5-year note	600,000	72,000
	<u>\$1,150,000</u>	<u>\$127,000</u>

$$\text{Weighted-Average Interest Rate} = \frac{\text{Total Interest}}{\text{Total Principal}} = \frac{\$127,000}{\$1,150,000} = 11.04\%$$

Example 9.9 Comprehensive Interest Capitalization

The company determines the actual interest cost, which represents the maximum amount of interest that it may capitalize during 2025, as follows.

Construction note	$\$750,000 \times .15 =$	\$112,500
5-year note	$550,000 \times .10 =$	55,000
10-year bonds	$600,000 \times .12 =$	72,000
Actual interest		<u>\$239,500</u>

The interest cost that Key capitalizes is the lesser of \$120,228 (avoidable interest) and \$239,500 (actual interest), or \$120,228.

b. Key records the following journal entries during 2025.

January 1

Land	100,000	
Buildings (or Construction in Process)	110,000	
Cash		210,000

March 1

Buildings	300,000	
Cash		300,000

May 1

Buildings	540,000	
Cash		540,000

December 31

Buildings	450,000	
Cash		450,000
Buildings (Capitalized Interest)	120,228	
Interest Expense (\$239,500 – \$120,228)	119,272	
Cash (\$112,500 + \$55,000 + \$72,000)		239,500

	Buildings	
Jan. 1	110,000	
Mar. 1	300,000	
May 1	540,000	
Dec. 31	450,000	
Interest	120,228	
	<u>1,520,228</u>	

In Example 9.9, the capitalized interest is part of the building account and will be depreciated over the useful life of the building. At December 31, 2025, Key discloses the amount of interest capitalized either as part of the nonoperating section of the income statement or in the notes accompanying the financial statements. We illustrate both forms of disclosure, in [Illustration 9.5](#) and [Illustration 9.6](#).³

ILLUSTRATION 9.5 Capitalized Interest Reported in the Income Statement

Income from operations		\$ XXXX
Other expenses and losses:		
Interest expense	\$239,500	
Less: Capitalized interest	<u>120,228</u>	<u>119,272</u>
Income before income taxes		XXXX
Income taxes		<u>XXX</u>
Net income		<u>\$ XXXX</u>

³In subsequent years of a multi-year project, Key would follow the same procedures as presented for year 1. That is, interest to be capitalized each year is determined, based on weighted-average expenditures **in that year** multiplied by the appropriate interest rate, and then compared to actual interest. Total interest for the year is then allocated to interest expense and capitalized interest.

Tesla, Inc.

Note 8: Property, Plant and Equipment, Net (In Part) We are currently constructing Gigafactory Berlin under conditional permits. Completed assets are transferred to their respective asset classes, and depreciation begins when an asset is ready for its intended use. Interest on outstanding debt is capitalized during periods of significant capital asset construction and amortized over the useful lives of the related assets. During the years ended December 31, 2020 and 2019, we capitalized \$48 million and \$31 million, respectively, of interest.

ILLUSTRATION 9.6 Capitalized Interest Disclosed in a Note

FACTS On December 31, 2024, Barton Inc. borrowed \$300,000 at 12% payable annually to finance the construction of a storage building. In 2025, the company made the following expenditures related to this building.

March 1	\$ 36,000
June 1	60,000
July 1	150,000
December 1	150,000

The building was completed in February 2026. Additional information is provided as follows.

- Other debt outstanding:
 - 10-year, 13% bond, dated December 31, 2018, interest payable annually \$4,000,000.
 - 6-year, 10% note, dated December 31, 2022, interest payable annually \$1,600,000.
- March 1, 2025, expenditure included land costs of \$15,000.
- Interest revenue earned in 2025, \$4,900.

INSTRUCTIONS

- Determine the amount of interest to be capitalized in 2025 in relation to the construction of the building.
- Prepare the journal entry to record the capitalization of interest and the recognition of interest expense, if any, at December 31, 2025.

SOLUTION

- a. Computation of weighted-average accumulated expenditures:

Expenditures		×	Capitalization Period	=	Weighted-Average Accumulated Expenditures
Date	Amount				
March 1	\$ 36,000		10/12		\$ 30,000
June 1	60,000		7/12		35,000
July 1	150,000		6/12		75,000
December 1	150,000		1/12		12,500
	<u>\$396,000</u>				<u>\$152,500</u>

Computation of avoidable interest:

Weighted-Average Accumulated Expenditures	×	Interest Rate	=	Avoidable Interest
\$152,500	×	.12*	=	<u>\$18,300</u>

*The 12% interest is used because the \$152,200 of WAAE is less than the \$300,000 borrowed.

Computation of actual interest:

\$300,000 × .12	\$ 36,000
\$4,000,000 × .13	520,000
\$1,600,000 × .10	160,000
	<u>\$716,000</u>

Note: Use avoidable interest for capitalization purposes because it is lower than actual.

Put It into Practice LO 9.2 Determine Interest Capitalization

b. Buildings	18,300	
Interest Expense*	697,700	
Cash (\$36,000 + \$520,000 + \$160,000)		716,000
*Actual interest for year	\$716,000	
Less: Amount capitalized	18,300	
Interest expense debit	<u>\$697,700</u>	

9.3 Valuation of Property, Plant, and Equipment

LEARNING OBJECTIVE 3

Explain the accounting issues related to acquiring and valuing plant assets.

Like other assets, **companies should record property, plant, and equipment at the fair value of what they give up or at the fair value of the asset received, whichever is more clearly evident.** However, the process of asset acquisition sometimes obscures fair value. For example, if **The Walt Disney Company** buys land and buildings together for one price, how does it determine separate values for the land and buildings?

Deferred-Payment Contracts

Companies frequently purchase plant assets on long-term credit contracts, using notes, mortgages, bonds, or equipment obligations. **To record the proper cost, companies account for assets purchased on long-term credit contracts at the present value of the consideration exchanged between the contracting parties at the date of the transaction.**

Example 9.10 Deferred Payment

Excel Solution

i	9%
n	4
FV	-\$10,000

PV \$7,084.25

PV(rate, nper, pmt, [fv], [type])

FACTS Assume that **Caribou Coffee** purchases a new espresso machine today in exchange for a \$10,000 zero-interest-bearing note payable due 4 years from now.

QUESTION How would you record the asset, assuming the market rate of interest is 9%?

SOLUTION

Caribou would not record the asset at \$10,000. Instead, the present value of the \$10,000 note establishes the exchange price of the transaction or the purchase price of the asset. Given an interest rate of 9% at which to discount this single payment of \$10,000 due 4 years from now, Caribou records this asset at \$7,084 ($\$10,000 \times .7084$). [See Table 5.2 for the present value of a single sum, $PV = \$10,000 (PVF_{4,9\%})$.]

When no interest rate is stated or if the specified rate is unreasonable, a company imputes an appropriate interest rate. The objective is to approximate the interest rate that the buyer and seller would negotiate at arm's length in a similar borrowing transaction. In imputing an interest rate, companies consider such factors as the borrower's credit rating, the amount and maturity date of the note, and prevailing interest rates. **The company uses the cash exchange price of the asset acquired (if determinable) as the basis for recording the asset and measuring the interest element.**

FACTS Sutter Company purchases a specially built robot spray painter for its production line on January 2, 2025. The company issues a \$100,000, 5-year, zero-interest-bearing note to Wrigley Robotics, Inc. for the new equipment. The prevailing market rate of interest for obligations of this nature is 10%. Sutter is to pay off the note in five \$20,000 installments, made at the end of each year. Sutter cannot readily determine the fair value of this specially built robot.

QUESTIONS (a) What entries would you make to record the purchase of the spray painter? (b) What entries would you make on December 31, 2025, and December 31, 2026, to record payments on the installment note?

SOLUTION

- a. Sutter approximates the robot's value by establishing the fair value, or present value, of the note. Since the payments are due at the end of each year, the note is an ordinary annuity. Entries for the date of purchase and dates of payments, plus computation of the present value of the note, are as follows.

January 2, 2025		
Equipment	75,816*	
Discount on Notes Payable	24,184	
Notes Payable		100,000
*Present value of note = \$20,000 ($PVF-OA_{5,10\%}$)		
= \$20,000 (3.79079); Table 5.4		
= \$75,816		

- b. Interest expense and payment on the note in the first year under the effective-interest approach are recorded as follows (see partial amortization schedule below).

December 31, 2025		
Interest Expense	7,582	
Notes Payable	20,000	
Cash		20,000
Discount on Notes Payable		7,582

The entry at the end of the second year to record interest and principal payment is as follows (see partial amortization schedule below).

December 31, 2026		
Interest Expense	6,340	
Notes Payable	20,000	
Cash		20,000
Discount on Notes Payable		6,340

The partial amortization schedule is as follows.

Year	Note Payment	10% Interest	Reduction of Principal	Balance
01/02/2025				\$75,816
12/31/2025	\$20,000	\$7,582 ^a	\$12,418 ^b	63,398 ^c
12/31/2026	20,000	6,340	13,660	49,738

^a\$75,816 × .10; ^b\$20,000 − \$7,582; ^c\$75,816 − \$12,418

Example 9.11 Deferred Payment—Robot

Excel Solution

i	10%
n	5
PMT	-\$20,000
PV	\$75,816

PV(rate, nper, pmt, [fv], [type])

In Example 9.11, if Sutter did not impute an interest rate for deferred-payment contracts, it would record the asset at an amount greater than its fair value and overstate depreciation expense. In addition, Sutter would understate interest expense in the income statement for all periods involved.

Lump-Sum Purchases

A special problem of valuing fixed assets arises when a company purchases a group of assets at a single **lump-sum price**.

- When this situation occurs, the company allocates the total cost among the various assets on the basis of their relative fair values.
- The assumption is that costs will vary in direct proportion to fair value.
- This is the same principle that companies apply to allocate a lump-sum cost among different inventory items.

To determine fair value, a company should use valuation techniques that are appropriate in the circumstances. In some cases, a single valuation technique will be appropriate. In other cases, multiple valuation approaches might have to be used.⁴

Example 9.12 Lump-Sum Purchase

FACTS Ecohomes, Inc. decides to purchase several assets of a small heating business, Green Heating, for \$80,000. Green Heating is in the process of liquidation. Its assets sold are as follows.

	<u>Book Value</u>	<u>Fair Value</u>
Inventory	\$30,000	\$ 25,000
Land	20,000	25,000
Building	35,000	50,000
	<u>\$85,000</u>	<u>\$100,000</u>

QUESTIONS (a) How would you allocate the cost between the Inventory, Land, and Building?
(b) What journal entry would you then make to record the purchase?

SOLUTION

- a. Ecohomes allocates the \$80,000 purchase price on the basis of the relative fair values (assuming specific identification of costs is impracticable) as follows.

Inventory	$\frac{\$25,000}{\$100,000} \times \$80,000 = \$20,000$
Land	$\frac{\$25,000}{\$100,000} \times \$80,000 = \$20,000$
Building	$\frac{\$50,000}{\$100,000} \times \$80,000 = \$40,000$

- b. The journal entry to record the lump sum purchase is as follows, based on relative fair values.

Inventory	20,000	
Land	20,000	
Buildings	40,000	
Cash		80,000

Issuance of Stock

When companies acquire property by issuing securities, such as common stock, the par or stated value of such stock fails to properly measure the property cost. If trading of the stock

⁴The valuation approaches that should be used are the market, income, or cost approach, or a combination of these approaches. The **market approach** uses observable prices and other relevant information generated by market transactions involving comparable assets. The **income approach** uses valuation techniques to convert future amounts (for example, cash flows or earnings) to a single present value amount (discounted). The **cost approach** is based on the amount that currently would be required to replace the service capacity of an asset (often referred to as current replacement cost). In determining the fair value, the company should assume the highest and best use of the asset. [4]

is active, **the market price of the stock issued is a fair indication of the cost of the property acquired. The stock is a good measure of the current cash equivalent price.**

FACTS Upgrade Living Co. decides to purchase some adjacent land for expansion of its carpeting and cabinet operation. Instead of paying cash for the land, the company issues 5,000 shares of common stock (par value \$10) to Deedland Company that have a fair value of \$12 per share.

QUESTION What entry should Upgrade Living make to record this transaction?

SOLUTION

To record issuance of stock:

Land (5,000 × \$12)	60,000	
Common Stock (5,000 × \$10)		50,000
Paid-in Capital in Excess of Par—Common Stock		10,000

The amount credited to paid-in capital is the excess of the fair value of the stock over the par value, which in this case is \$2 per share.

Example 9.13 Issuance of Stock

In Example 9.13, if Upgrade Living cannot determine the market price of the common stock exchanged, it establishes the fair value of the property. It then uses the value of the property as the basis for recording the asset and issuance of the common stock.

Exchanges of Nonmonetary Assets

Sometimes instead of paying cash for an asset or borrowing money to acquire an asset, a company may exchange one asset for another. For example, a company may exchange a piece of equipment for a piece of land. This is called an exchange of **nonmonetary assets**.

- In most cases, companies account for the exchange on the basis of **the fair value of the asset given up or the fair value of the asset received, whichever is clearly more evident.**⁵ [5]
- Companies **should generally recognize immediately** any gains or losses on the exchange.

The rationale for immediate recognition is that most transactions have **commercial substance**, and therefore gains and losses should be recognized.

Meaning of Commercial Substance

Fair value is the basis for measuring an asset acquired in a nonmonetary exchange if the transaction has commercial substance. An exchange has **commercial substance** if the future cash flows change as a result of the transaction. That is, if the two parties' economic positions change, the transaction has commercial substance.

FACTS Andrew Co. exchanges some of its equipment for land held by Roddick Inc. It is likely that the timing and amount of the cash flows arising from the land will differ significantly from the cash flows arising from the equipment.

QUESTION Does this transaction have commercial substance and, if so, how would you record this transaction?

SOLUTION

Both Andrew Co. and Roddick Inc. are in different economic positions after the exchange. Therefore, the exchange has commercial substance. The companies would record their acquired asset at fair value and recognize a gain or loss on the exchange.

Example 9.14 Commercial Substance

⁵Nonmonetary assets are items whose price in terms of the monetary unit may change over time. Monetary assets—cash and short- or long-term accounts and notes receivable—are fixed in terms of units of currency by contract or otherwise.

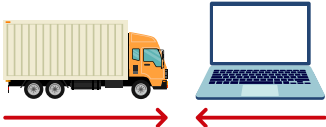

What if companies exchange similar assets, such as one truck for another truck? Even in an exchange of similar assets, a change in the economic position of the company can result. For example, let's say the useful life of the truck received is significantly longer than that of the truck given up. The cash flows for the trucks can differ significantly. As a result, the transaction has commercial substance, and the company should use fair value as a basis for measuring the asset received in the exchange.

However, it is possible to exchange similar assets but not have a significant difference in cash flows. That is, the company is in the same economic position as before the exchange. In that case, the company recognizes a loss but generally defers a gain.

- Use of fair value generally results in recognizing a gain or loss at the time of the exchange.
- Consequently, companies must determine if the transaction has commercial substance.
- To make this determination, they must carefully evaluate the cash flow characteristics of the assets exchanged.⁶

Illustration 9.7 summarizes asset exchange situations and the related accounting.

ILLUSTRATION 9.7 Accounting for Exchanges

	Type of Exchange	Accounting Guidance
	Exchange has commercial substance.	Recognize gains and losses immediately.
	Exchange lacks commercial substance—no cash received.	Defer gains; recognize losses immediately.
	Exchange lacks commercial substance—cash received.	Recognize partial gain; recognize losses immediately.*

*If cash is 25% or more of the fair value of the exchange, recognize entire gain because the earnings process is complete.

As indicated in Illustration 9.7, companies immediately recognize losses they incur on all exchanges. The accounting for gains depends on whether the exchange has commercial substance. If the exchange has commercial substance, the company recognizes the gain immediately. However, the profession modifies the rule for immediate recognition of a gain when an exchange lacks commercial substance: **If the company receives no cash in such an exchange, it defers recognition of a gain. If the company receives cash in such an exchange, it may recognize part or all of the gain immediately.**

Exchanges—Loss Situation

When a company exchanges nonmonetary assets and a loss results, the company recognizes the loss immediately. The rationale: Companies should not value assets at more than their cash equivalent price. If the loss were deferred, assets would be overstated. Therefore, companies recognize a loss immediately whether the exchange has commercial substance or not.

Example 9.15 Exchange with a Loss

FACTS Assume that **Caribou Coffee** trades its used espresso machine for a new model at Gourmet Coffee Solutions Inc. The exchange has commercial substance. The used espresso machine has a book value of \$8,000 (original cost \$12,000 less \$4,000 accumulated depreciation) and a fair value of \$6,000. The new model lists for \$16,000. Gourmet Coffee Solutions gives Caribou a trade-in allowance of \$9,000 if the balance is paid in cash.

QUESTIONS (a) At what amount would you record the cost of the new espresso machine? (b) What journal entry would Caribou Coffee make to record this exchange?

⁶The determination of the commercial substance of a transaction requires significant judgment. In determining whether future cash flows change, it is necessary to do one of two things: (1) determine whether the risk, timing, and amount of cash flows arising for the asset received differ from the cash flows associated with the outbound asset, or, (2) evaluate whether cash flows are affected with the exchange versus without the exchange. Also note that if companies cannot determine fair values of the assets exchanged, then they should use recorded book values in accounting for the exchange.

SOLUTION

- a. The cost of the new espresso machine is \$13,000, computed as follows.

List price of new machine	\$16,000	
Less: Trade-in allowance for used machine	9,000	
Cash payment due	7,000	
Fair value of used machine	6,000	Fair value of assets given up
Cost of new machine	\$13,000	

- b. Caribou records this transaction as follows.

Equipment (new)	13,000	
Accumulated Depreciation—Equipment	4,000	
Loss on Disposal of Equipment	2,000	
Equipment (used)		12,000
Cash		7,000

We verify the loss on the disposal of the used machine as follows.

Fair value of used machine	\$6,000
Less: Book value of used machine	8,000
Loss on disposal of used machine	\$2,000

In Example 9.15, why did Caribou not use the trade-in allowance or the book value of the used asset as a basis for the new equipment? Because the exchange included a price concession (similar to a price discount). Few companies pay list price for equipment. Equipment dealers, such as Gourmet Coffee Solutions in Example 9.15, often inflate trade-in allowances on the used equipment so that actual selling prices fall below list prices. To record the equipment at list price would state it at an amount in excess of its cash equivalent price because of the new equipment's inflated list price. Use of book value in this situation would overstate the value of the new equipment by \$2,000.⁷

Exchanges—Gain Situation

For exchanges that result in a gain, the accounting will depend on answers to the following questions.

1. Does the transaction have commercial substance?
2. Was cash **received** in the exchange?

Has Commercial Substance If a nonmonetary exchange has commercial substance, a company usually records the cost of the asset acquired at the **fair value of the asset given up** and immediately recognizes a gain. The company should use the **fair value of the asset received** only if it is more clearly evident than the fair value of the asset given up.

FACTS Interstate Transportation Company exchanged a number of used trucks plus cash for a semi-truck. The used trucks have a combined book value of \$42,000 (cost \$64,000 less \$22,000 accumulated depreciation). Interstate's purchasing agent, experienced in the secondhand market, indicates that the used trucks have a fair value of \$49,000. In addition to the trucks, Interstate must pay \$11,000 cash for the semi-truck. This exchange is considered to have commercial substance.

QUESTIONS (a) At what amount would you record the cost of the semi-truck? (b) What entry should Interstate make to record this transaction?

Example 9.16 Exchange with a Gain

⁷Recognize that for Gourmet Coffee (the dealer), the asset given up in the exchange is considered inventory. As a result, Gourmet Coffee records a sale and related cost of goods sold. The used machine received by Gourmet Coffee is recorded at fair value.

SOLUTION

- a. Interstate computes the cost of the semi-truck as follows.

Fair value of used trucks exchanged	\$49,000
Cash paid	<u>11,000</u>
Cost of semi-truck	<u>\$60,000</u>

- b. After the exchange, Interstate is in a different economic position. Therefore, the transaction has commercial substance. Interstate recognizes a gain and records the exchange transaction as follows.

Trucks (semi)	60,000	
Accumulated Depreciation—Trucks	22,000	
Trucks (used)		64,000
Gain on Disposal of Trucks		<u>7,000</u>
Cash		<u>11,000</u>

The gain is the difference between the fair value of the used trucks and their book value. We verify the computation as follows.

Fair value of used trucks		\$49,000
Cost of used trucks	\$64,000	
Less: Accumulated depreciation	<u>22,000</u>	
Book value of used trucks		<u>(42,000)</u>
Gain on disposal of used trucks		<u>\$ 7,000</u>

Lacks Commercial Substance—No Cash Received Now assume that the Interstate Transportation Company exchange from Example 9.16 lacks commercial substance. That is, the economic position of Interstate did not change significantly as a result of this exchange. In this case, Interstate **defers** the gain of \$7,000 and reduces the basis of the semi-truck. **Illustration 9.8** shows two different but acceptable computations to illustrate this reduction.

ILLUSTRATION 9.8 Basis of Semi-Truck—Fair Value vs. Book Value

Fair value of semi-truck	\$60,000		Book value of used trucks	\$42,000
Less: Gain deferred	<u>7,000</u>	or	Plus: Cash paid	<u>11,000</u>
Basis of semi-truck	<u>\$53,000</u>		Basis of semi-truck	<u>\$53,000</u>

Interstate records this transaction as follows.

Trucks (semi)	53,000	
Accumulated Depreciation—Trucks	22,000	
Trucks (used)		64,000
Cash		<u>11,000</u>

In Illustration 9.8, since the recorded value of the semi-truck is lower, depreciation expense over the life of the semi-truck will be lower. Therefore, the gain is recognized over time through lower depreciation expense or when the company later sells the semi-truck. The gain is not recognized at the time of the exchange.

Lacks Commercial Substance—Some Cash Received When a company receives cash, sometimes called “boot,” in an exchange that lacks commercial substance, it must

immediately recognize a portion of the gain. The general formula for gain recognition when an exchange includes some cash is as follows.

$$\frac{\text{Cash Received (Boot)}}{\text{Cash Received (Boot) + Fair Value of Other Assets Received}} \times \text{Total Gain} = \text{Recognized Gain}$$

It's important to note that if the cash received is 25% or more of the fair value of the exchange, then both parties consider the transaction a **monetary exchange**. With monetary transactions, gains or losses are fully recognized. Our focus here is on **nonmonetary exchanges** with any cash received being less than 25% of the fair value of the exchange.

FACTS Assume that **Publix Corporation** traded in a blue, used delivery vehicle with a book value of \$60,000 (cost \$110,000 less accumulated depreciation of \$50,000) and a fair value of \$100,000. It receives in exchange a green delivery vehicle with a fair value of \$90,000 plus cash of \$10,000. This exchange lacks commercial substance.

QUESTIONS (a) What is the total gain, if any, on this exchange? (b) What amount of gain, if any will be recorded on this exchange? (c) What entry would Publix make to record this exchange?

SOLUTION

- a. The total gain on the transaction is as follows.

Fair value of machine given up	\$100,000
Less: Book value of machine given up	60,000
Total gain	\$ 40,000

- b. Generally, when a transaction lacks commercial substance, a company defers any gain. But because Publix received \$10,000 in cash, it recognizes a partial gain. The portion of the gain a company recognizes is the ratio of monetary assets (cash in this case) to the total consideration received. Publix computes the partial gain as follows.

$$\frac{\$10,000}{\$10,000 + \$90,000} \times \$40,000 = \$4,000$$

Because Publix recognizes only a gain of \$4,000 on this transaction, it defers the remaining \$36,000 (\$40,000 – \$4,000) and reduces the basis (recorded cost) of the new machine, as shown in the following summary.

Fair value of new machine	\$90,000	Book value of old machine	\$60,000
Less: Gain deferred	36,000	Less: Portion of book value	
Basis of new machine	\$54,000	presumed sold	6,000*
		Basis of new machine	\$54,000

$$\frac{*\$10,000}{\$100,000} \times \$60,000 = \$6,000$$

- c. Publix records the transaction with the following entry.

Cash	10,000
Machinery (new)	54,000
Accumulated Depreciation—Machinery	50,000
Machinery (old)	110,000
Gain on Disposal of Machinery	4,000

Example 9.17 Exchange Lacks Commercial Substance, Cash Received

The rationale for the treatment of a partial gain is as follows.

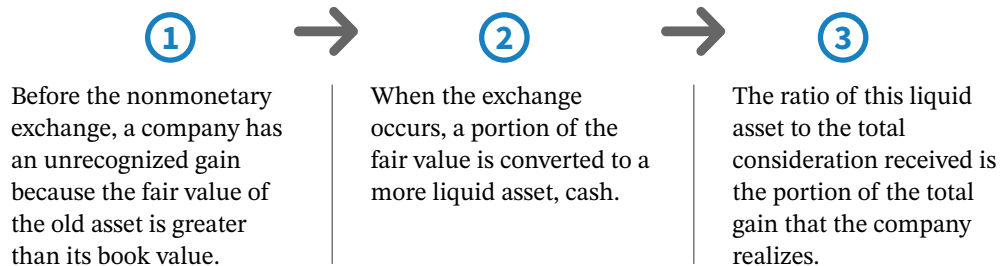

Illustration 9.9 presents in summary form the accounting requirements for recognizing gains and losses on exchanges of nonmonetary assets.

ILLUSTRATION 9.9 Summary of Gain and Loss Recognition on Exchanges of Nonmonetary Assets

1. Compute the total gain or loss on the transaction. This amount is equal to the difference between the fair value of the asset given up and the book value of the asset given up.
2. If a loss is computed in Step 1, always recognize the entire loss.
3. If a gain is computed in Step 1,
 - (a) and the exchange has commercial substance, recognize the entire gain
 - (b) and the exchange lacks commercial substance.
 - (1) and no cash is involved, no gain is recognized.
 - (2) and some cash is given, no gain is recognized.
 - (3) and some cash is received, the following portion of the gain is recognized:

$$\frac{\text{Cash Received (Boot)}}{\text{Cash Received (Boot) + Fair Value of Other Assets Received}} \times \text{Total Gain}^8$$

Companies disclose in their financial statements nonmonetary exchanges during a period. Such disclosure indicates the nature of the transaction(s), the method of accounting for the assets exchanged, and gains or losses recognized on the exchanges. [7]

Other Asset Valuation Issues

An exception to the historical cost principle for assets is the **prudent cost** concept. This concept states that if for some reason a company ignorantly paid too much for an asset originally, it is theoretically preferable to charge a loss immediately. For example, assume that Marlow Company believes the cost of an asset acquisition exceeds the fair value of the assets acquired. If Marlow has done its due diligence and believes it is correct in its analysis, Marlow should reallocate the excess cost over fair value on the basis of the relative fair value of the assets purchased. No loss should be recognized at the date of acquisition.

What happens, on the other hand, if Marlow makes a bargain purchase or internally constructs a piece of equipment at a cost savings? GAAP indicates that the excess of the fair value over cost should not result in an immediate gain under any circumstances. In this situation, the costs (including cost savings) for the asset or assets acquired should be allocated in relation to the fair value of the assets acquired.

Put It into Practice LO 9.3

Account for Valuation Scenarios

FACTS Warbler Corporation entered into the following transactions.

1. Warbler purchased a computer on December 31, 2024, for \$105,000, paying \$30,000 down and agreeing to pay the balance in five equal installments of \$15,000 payable each December 31 beginning in 2025. An assumed interest rate of 10% is implicit in the purchase price.
2. Warbler has negotiated the purchase of a new piece of automatic equipment on January 1, 2025, at a price of \$8,000 plus trade-in, f.o.b. factory. Warbler paid \$8,000 cash and traded in used equipment. The used equipment had originally cost \$62,000; it had a book value of \$42,000 and a secondhand fair value of \$47,800, as indicated by recent transactions involving similar equipment. Freight and installation charges for the new equipment required a cash payment of \$1,100.

⁸When the monetary consideration is significant, i.e., **25% or more** of the fair value of the exchange, both parties consider the transaction a **monetary exchange**. Such “monetary” exchanges rely on the fair values to measure the gains or losses that are recognized in their entirety. [6]

INSTRUCTIONS

- a. Prepare the journal entry (entries) for the computer at (1) the date of purchase; (2) at December 31, 2025, to record the payment and interest (effective-interest method employed); and (3) December 31, 2026, to record the payment and interest (effective-interest method employed).
- b. Prepare the journal entry to record the new piece of automatic equipment, assuming that the exchange has commercial substance.
- c. Assuming the same facts as in (b) except that fair value information for the assets exchanged is not determinable, prepare the journal entry to record this transaction.

SOLUTION

a. 1.		December 31, 2024			
	Equipment		86,861.85*		
	Discount on Notes Payable (\$105,000 – \$86,861.85)		18,138.15		
	Cash			30,000.00	
	Notes Payable (\$105,000 – \$30,000)			75,000.00	
	*PV of \$15,000 ordinary annuity @ 10% for 5 years				
	(\$15,000 × 3.79079)		\$56,861.85		
	Down payment		<u>30,000.00</u>		
	Capitalized value of equipment		<u>\$86,861.85</u>		
2.		December 31, 2025			
	Notes Payable		15,000.00		
	Interest Expense (see below schedule)		5,686.19		
	Cash			15,000.00	
	Discount on Notes Payable			5,686.19	
	<u>Year</u>	<u>Note Payment</u>	<u>10% Interest</u>	<u>Reduction of Principal</u>	<u>Balance</u>
	12/31/24				\$56,861.85
	12/31/25	\$15,000.00	\$5,686.19 ^a	\$ 9,313.81 ^b	47,548.04 ^c
	12/31/26	15,000.00	4,754.80	10,245.20	37,302.84
	^a \$56,861.85 × .10; ^b \$15,000.00 – \$9,313.81; ^c \$56,861.85 – \$9,313.81				
3.		December 31, 2026			
	Notes Payable		15,000.00		
	Interest Expense (see above schedule)		4,754.80		
	Cash			15,000.00	
	Discount on Notes Payable			4,754.80	
b.		Exchange has commercial substance, and no cash is received. The full gain would be recognized as follows.			
		January 1, 2025			
	Equipment		56,900*		
	Accumulated Depreciation—Equipment		20,000		
	Gain on Disposal of Equipment			5,800**	
	Equipment			62,000	
	Cash (\$8,000 + \$1,100)			9,100	
	*Valuation of equipment:				
	Cash	\$ 8,000			
	Installation cost	1,100			
	Fair value of used equipment	<u>47,800</u>			
	Cost of new equipment	<u>\$56,900</u>			
	**Computation of gain:				
	Fair value of old asset			\$47,800	
	Cost of old asset	\$62,000			
	Less: Accumulated depreciation	<u>20,000^a</u>			
	Book value of old asset			(42,000)	
	Gain on disposal of equipment			<u>\$ 5,800</u>	
	^a Cost – Book Value = \$62,000 – \$42,000				

c. Fair value information is not determinable. The transaction would be recognized as follows.

January 1, 2025			
Equipment	51,100*		
Accumulated Depreciation—Equipment	20,000		
Equipment		62,000	
Cash		9,100	
*Basis of new equipment:			
Book value of old equipment	\$42,000		
Cash paid (including installation costs)	9,100		
Basis of new equipment		<u>\$51,100</u>	

9.4 Costs Subsequent to Acquisition

LEARNING OBJECTIVE 4

Describe the accounting treatment for costs subsequent to acquisition.

After installing plant assets and readying them for use, a company incurs additional costs over the life of the asset that range from ordinary repairs to significant additions. You experience this when you own a car. **Illustration 9.10** provides examples of expenditures you make over the life of owning a car. Take a moment to study the illustration.

ILLUSTRATION 9.10 Costs over the Life of an Asset (Car)

		
Examples of costs	To maintain car in normal working order: <ul style="list-style-type: none"> • Oil change • Repair/replace tires • Replace windshield 	To increase the life or operating efficiency of the car: <ul style="list-style-type: none"> • New transmission • New suspension system • New battery for a hybrid car
Accounting treatment of these costs	Expense when incurred.	Capitalize (debit) the asset (car) account and depreciate over the remaining useful life of the asset.
Accounting definition	Revenue expenditures —Maintain a given level of service and do not increase an asset’s future benefits.	Capital expenditures —Achieve greater future benefits for the asset, such as increased useful life, enhanced quality of output, or increased quantity of output.

In general, costs incurred to achieve greater future benefits should be capitalized, whereas expenditures that simply maintain a given level of services should be expensed.

The distinction between a **capital expenditure (asset)** and a **revenue expenditure (expense)** is not always clear-cut. Most companies develop internal policies to ensure consistent **application of a capital/expense policy**. You should recognize the most companies expense some capital costs due to expediency and lack of materiality. For example, companies expense wastepaper baskets because of administrative convenience, although you could argue that theoretically these waste baskets are capital expenditures (see **Underlying Concepts**).

Underlying Concepts

Expensing long-lived wastepaper baskets is an application of the materiality concept.

- A general rule that companies often follow is whether expensing capital items will affect the financial statements either in a quantitative or qualitative way.
- If material, expensing capital costs or capitalizing expenses are violations of GAAP.

Companies generally incur four major types of expenditures related to fixed assets.

Major Types of Expenditures

Additions. Increase or extension of existing assets.

Improvements and replacements. Substitution of an improved asset for an existing one.

Rearrangement and reinstallation. Movement of assets from one location to another.

Repairs. Expenditures that maintain assets in condition for operation.

Additions

Additions should present no major accounting problems. By definition, **companies capitalize any addition to plant assets because a new asset is created**. For example, the addition of a wing to a hospital, or of an air conditioning system to an office, increases the service potential of that facility. Companies should capitalize these expenditures and record depreciation expense over the remaining useful life of the asset.

One problem that arises in this area is the accounting for any changes related to the existing structure as a result of the addition. Is the cost incurred to tear down an old wall, to make room for the addition, a cost of the addition or an expense or loss of the period? The answer is that it depends on the original intent.

- If the company had anticipated building an addition later, then this cost of removal is a proper cost of the addition.
- If the company had not anticipated this development, it should properly report the removal as a loss in the current period on the basis of inefficient planning.

Normally, the company retains the carrying amount of the old wall in the accounts, although theoretically the company should remove it.

FACTS Assume that **Lululemon** has decided to expand the size of its store to provide additional sales space for its inventory. It contracts with an adjacent store to take some of its available space, but it will involve substantial remodeling costs of \$200,000. As part of the remodeling costs, Lululemon will have to remove one wall and build a new wall in a different space at a cost of \$35,000.

QUESTION How would you account for these costs, assuming Lululemon anticipated expanding the size of the store?

SOLUTION

Lululemon should capitalize the remodeling costs of \$200,000, as well as the \$35,000 related to the tearing down of the old wall, as it had anticipated expanding the size of the store.

Example 9.18 Additions to Stores

Improvements and Replacements

Companies substitute one asset for another through **improvements** and **replacements**. What is the difference between an improvement and a replacement?

- An **improvement, or betterment**, is the substitution of a **better asset** for the one currently used (say, a concrete floor for a wooden floor).
- A **replacement** is the substitution of a **similar asset** (a wooden floor for a wooden floor).

Many times, improvements and replacements result from a general policy to modernize or rehabilitate an older building or piece of equipment. The problem is differentiating these types of expenditures from normal repairs. Does the expenditure increase the **future service potential** of the asset? Or does it merely **maintain the existing level** of service? Frequently, the answer is not clear-cut. Good judgment is required to correctly classify these expenditures.

If the expenditure increases the future service potential of the asset, a company should capitalize it. The accounting is therefore handled in one of three ways, depending on the circumstances: using the substitution approach, capitalizing the new cost, or charging to accumulated depreciation.

Using the Substitution Approach

Conceptually, the **substitution approach** is correct if the carrying amount of the old asset is available. It is then a simple matter to remove the cost of the old asset and replace it with the cost of the new asset.

Example 9.19
Replacement—
Substitution

FACTS Instinct Enterprises decides to replace the pipes in its plumbing system. A plumber suggests that the company use plastic tubing in place of the cast-iron pipes and copper tubing. The old pipe and tubing have a book value of \$15,000 (cost of \$150,000 less accumulated depreciation of \$135,000). The plastic tubing costs \$125,000.

QUESTION If Instinct pays \$125,000 for the new tubing after exchanging the old tubing, what entry would it make to record this replacement?

SOLUTION

To record a replacement using the substitution approach:			
Plant Assets (plumbing system)		125,000	
Accumulated Depreciation—Plant Assets		135,000	
Loss on Disposal of Plant Assets (\$150,000 – \$135,000)		15,000	
Plant Assets (old plumbing system)			150,000
Cash			125,000

Often, determining the book value of the old asset can be problematic. The components of a given asset depreciate at different rates. However, generally no separate accounting is made. For example, the tires, motor, and body of a truck depreciate at different rates, but most companies use one rate for the entire truck. Companies can set separate depreciation rates, but it is often impractical. If a company cannot determine the carrying amount of the old asset, it adopts one of two other approaches.

Capitalizing the New Cost

Another approach capitalizes the improvement and keeps the carrying amount of the old asset on the books. The justification for this approach is that the old item is sufficiently depreciated to reduce its carrying amount almost to zero, meaning it has little to no impact on the

balance sheet. Although this assumption may not always be true, the differences are often insignificant. Companies usually handle improvements in this manner.

FACTS Refer to the facts in Example 9.19.

QUESTION If Instinct decides to capitalize the cost of the new asset and ignore the book value of the old asset, what entry would it make to record this replacement?

SOLUTION

To capitalize a new asset:

Plant Assets (plumbing system)	125,000	
Cash		125,000

Example 9.20 Replacement— Capitalization

Charging to Accumulated Depreciation

If an addition does not improve the quantity or quality of the asset itself but instead extends its useful life, the company debits the expenditure to Accumulated Depreciation rather than to an asset account. In the Instinct example (Examples 9.19 and 9.20), the entry is as follows.

Accumulated Depreciation—Plant Assets	125,000	
Cash		125,000

The theory behind this approach is that the replacement extends the useful life of the asset and thereby recaptures some or all of the past depreciation. The net carrying amount of the asset is the same whether debiting the asset or accumulated depreciation.

Rearrangement and Reinstallation

Companies incur **rearrangement and reinstallation costs** to benefit future periods. An example is the rearrangement and reinstallation of machines to facilitate future production.

- If a company like **The Coca-Cola Company** can determine or estimate the original installation cost and the accumulated depreciation to date, it handles the rearrangement and reinstallation cost using the substitution approach.
- If not, which is generally the case, Coca-Cola should capitalize the new costs as an asset to be amortized over future periods expected to benefit.
- If these costs are immaterial, if they cannot be separated from other operating expenses, or if their future benefit is questionable, the company should immediately expense them.

FACTS Leonard Co. has an existing factory that it intends to demolish and redevelop. During the redevelopment period, the company will move its production facilities to another temporary site. The following costs will be incurred for the project: (1) rent of \$500,000 for the temporary site, (2) removal costs of \$300,000 to transport the machinery from the old location to the temporary location, and (3) \$1,000,000 to install the machinery in the temporary location.

QUESTION Can all of these costs be capitalized as part of the cost of the new building? Explain.

SOLUTION

No, all of these costs cannot be capitalized as part of the cost of the new building. Even though the costs are incremental, they are not directly attributable to the new building and not necessary for it to be capable of operating in the manner intended by management. The costs related to the temporary facility should be expensed as incurred.

Example 9.21 Rearrangement

Repairs

A company makes **ordinary repairs** to maintain plant assets in operating condition. It charges ordinary repairs to an expense account in the period incurred, on the basis that **it is the primary period benefited**. Maintenance charges that occur regularly include replacing minor parts, lubricating and adjusting equipment, repainting, and cleaning. A company treats these as ordinary operating expenses.

It is often difficult to distinguish a repair from an improvement or replacement.

- The major consideration is whether the expenditure benefits more than one year or one operating cycle, whichever is longer.
- If a **major repair** (such as an overhaul) occurs, several periods will benefit.

A company should handle the cost of a major repair as an addition, improvement, or replacement.⁹

Example 9.22
Planned
Maintenance

FACTS Assume that **Southwest Airlines** schedules major overhauls of its planes every 3 years.

QUESTION How should Southwest account for these overhaul costs?

SOLUTION

Once Southwest incurs the overhaul costs, it would record them as an asset and then depreciate them over a 3-year period (until the next overhaul).

Some argue that an accrue-in-advance approach better matches expenses to revenues and reports a company’s obligation for these costs. However, reporting a liability is inappropriate. For example, in Example 9.22, to whom does **Southwest Airlines** owe? In other words, Southwest has no obligation to an outside party until it has to pay for the overhaul costs, and therefore it has no liability. As a result, companies are not permitted to accrue in advance for planned major overhaul costs either for interim or annual periods. [8]

Summary of Costs Subsequent to Acquisition

Illustration 9.11 summarizes the accounting treatment for various costs incurred subsequent to the acquisition of capitalized assets.

ILLUSTRATION 9.11
Summary of
Costs Subsequent to Acquisition
of Property, Plant, and Equipment

Type of Expenditure	Normal Accounting Treatment
Additions, Improvements, and replacements	Capitalize cost of addition to asset account. (a) Carrying value known: Remove cost of and accumulated depreciation on old asset, recognizing any gain or loss. Capitalize the cost of improvement/replacement. (b) Carrying value unknown: <ol style="list-style-type: none"> 1. If the asset’s useful life is extended, debit accumulated depreciation for cost of improvement/replacement. 2. If the quantity or quality of the asset’s productivity is increased, capitalize cost of improvement/replacement to asset account.
Rearrangement and reinstallation	(a) If original installation cost is known , account for cost of rearrangement/reinstallation as a replacement (carrying value known). (b) If original installation cost is unknown and rearrangement/reinstallation cost is material in amount and benefits future periods, capitalize as an asset. (c) If original installation cost is unknown and rearrangement/reinstallation cost is not material or future benefit is questionable , expense the cost when incurred.
Repairs	(a) Ordinary: Expense cost of repairs when incurred. (b) Major: As appropriate, treat as an addition, improvement, or replacement.

⁹A committee of the AICPA has proposed (see footnote 1) that companies expense as incurred costs involved for planned major expenditures unless they represent an **additional** component or the **replacement** of an existing component.

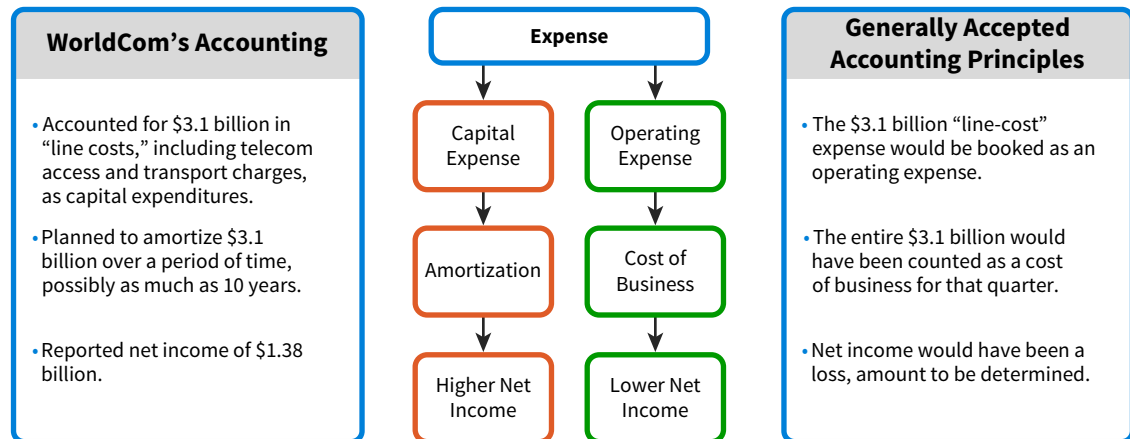

Accounting Matters

Is that an Asset or an Expense?

No example better illustrates the importance of correctly categorizing expenditures as capital assets or operating expenses than a fraud perpetrated by **WorldCom Inc.** As one of the world's largest telecommunications companies, one of WorldCom's largest expenditures related to amounts paid to local telephone networks to complete long-distance calls. Instead of recording these

charges as operating expenses, WorldCom recorded a significant portion as capital expenditures, to the tune of \$3.1 billion dollars!

This maneuver was worth hundreds of millions of dollars to WorldCom's bottom line. It effectively turned a loss for all of one year and the first quarter of the next year into a profit. The following graphic compares WorldCom's accounting to that under GAAP.

Getting the accounting right matters. Soon after this discovery, WorldCom filed for bankruptcy.

FACTS The following transactions occurred during 2025. Assume that depreciation of 10% per year is charged on all machinery and 5% per year on buildings, on a straight-line basis, with no estimated salvage value. Depreciation is charged for a full year on all fixed assets acquired during the year, and no depreciation is charged on fixed assets disposed of during the year.

- Feb. 3 A building that cost \$132,000 in 2008 is torn down to make room for a new building. The wrecking contractor was paid \$5,100 and was permitted to keep all materials salvaged.
- Apr. 10 A gear breaks on a machine that cost \$9,000 in 2017. The gear is replaced at a cost of \$2,000. The replacement does not extend the useful life of the machine but does make the machine more efficient.
- May 18 A special base installed for a machine in 2019 when the machine was purchased has to be replaced at a cost of \$5,500 because of defective workmanship on the original base. The cost of the machinery was \$14,200 in 2019. The cost of the base was \$3,500, and this amount was charged to the Machinery account in 2019.
- June 5 One of the buildings is repainted at a cost of \$6,900. It had not been painted since it was constructed in 2021.

INSTRUCTIONS

Prepare journal entries for the transactions. (Round to the nearest dollar.)

SOLUTION

February 3, 2025			
Accumulated Depreciation—Buildings	112,200*		
Loss on Disposal of Buildings	24,900**		
Buildings		132,000	
Cash		5,100	
* $.05 \times \$132,000 = \$6,600$; $\$6,600 \times 17 \text{ years} = \$112,200$			
** $(\$132,000 - \$112,200) + \$5,100$			

Put It into Practice LO 9.4

Account for Subsequent Costs

April 10, 2025

Machinery	2,000	
Cash		2,000

This replacement is treated as a capital expenditure since it makes the machine more efficient.

May 18, 2025

Machinery	5,500	
Accumulated Depreciation—Machinery	2,100*	
Loss on Disposal of Machinery	1,400**	
Machinery		3,500
Cash		5,500

*.10 × \$3,500 = \$350; \$350 × 6 years = \$2,100

**\$3,500 – \$2,100

This is a replacement being accounted for using the substitution approach.

June 5, 2025

Maintenance and Repairs Expense	6,900	
Cash		6,900

This is a revenue expenditure that is expensed immediately. Repainting is considered ordinary maintenance.

9.5 Disposition of Property, Plant, and Equipment

LEARNING OBJECTIVE 5

Describe the accounting treatment for the disposal of property, plant, and equipment.

A company may retire plant assets voluntarily or dispose of them by sale, exchange, involuntary conversion, or abandonment. Regardless of the type of disposal, depreciation must be taken up to the date of disposition. Then, the company should remove all accounts related to the retired asset.

Generally, the book value of the plant asset does not equal its disposal value. Why not? Because depreciation is an estimate of cost allocation and **not** a process of valuation. As a result, a gain or loss is recognized on the disposal. You can think of the gain or loss as a correction of net income for the years during which the asset was used.

Sale of Plant Assets

Companies record depreciation for the period of time between the date of the last depreciation entry and the date of sale.

FACTS Barret Company recorded depreciation on a machine costing \$18,000 for 9 years at the rate of \$1,200 per year. It sells the machine in the middle of the tenth year for \$7,000.

QUESTION What entry would you make to record this transaction?

SOLUTION

To record depreciation for the first half of the 10th year:

Depreciation Expense ($\$1,200 \times \frac{1}{2}$)	600	
Accumulated Depreciation—Machinery		600

To record the sale of the asset:

Cash	7,000	
Accumulated Depreciation—Machinery $[(\$1,200 \times 9) + \$600]$	11,400	
Machinery		18,000
Gain on Disposal of Machinery		400

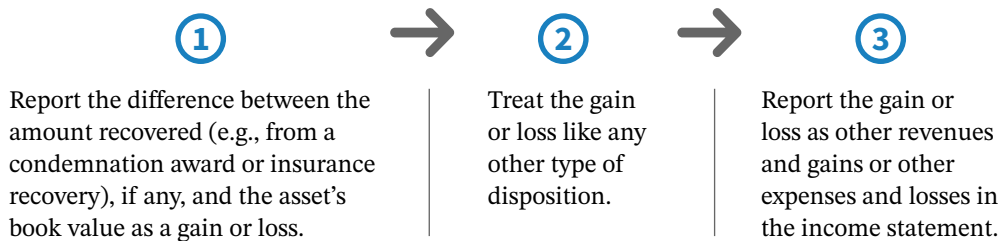

The book value of the machinery at the time of the sale is \$6,600 ($\$18,000 - \$11,400$). Because the machinery sold for \$7,000, the amount of the gain on the sale is \$400 ($\$7,000 - \$6,600$).

Example 9.23 Sale of Asset

Involuntary Conversion

Sometimes an asset's service is terminated through an **involuntary conversion** such as fire, flood, theft, or condemnation. Companies account for an involuntary conversion as follows.

FACTS Camel Transport Corp. had to sell a plant located on company property that stood directly in the path of an interstate highway. For a number of years, the state had sought to purchase the land on which the plant stood, but the company resisted. The state ultimately exercised its right of eminent domain, which the courts upheld. In settlement, Camel received \$500,000, which substantially exceeded the \$200,000 book value of the plant and land (cost of \$400,000 less accumulated depreciation of \$200,000).

QUESTION How would you record this involuntary conversion?

SOLUTION

To record the involuntary conversion:

Cash	500,000	
Accumulated Depreciation—Plant Assets	200,000	
Plant Assets		400,000
Gain on Disposal of Plant Assets		300,000

The gain is calculated as follows.

Cash received		\$500,000
Less: Book value of plant and land		
Cost	\$400,000	
Accumulated depreciation	(200,000)	200,000
Gain on disposition		<u>\$300,000</u>

Example 9.24 Involuntary Conversion

If a company scraps or abandons an asset without any cash recovery, it recognizes a loss equal to the asset's book value. If scrap value exists, the gain or loss that occurs is the difference between the asset's scrap value and its book value. If an asset still can be used even though it is fully depreciated, it may be kept on the books at historical cost less depreciation, with proper disclosure.

Some object to the recognition of a gain or loss in certain **involuntary** conversions. For example, the federal government often condemns forests for national parks. The paper companies that owned these forests must report a gain or loss on the condemnation. However, companies such as **Georgia-Pacific** contend that no gain or loss should be reported because they must replace the condemned forest land immediately and so are in the same economic position as they were before. The issue is whether condemnation and subsequent purchase should be viewed as one or two transactions. GAAP requires "that a gain or loss be recognized when a nonmonetary asset is involuntarily converted to monetary assets even though an enterprise reinvests or is obligated to reinvest the monetary assets in replacement nonmonetary assets." [9]

Analytics in Action: Capital Expenditure Trends

Capital expenditures is an important metric for any company. It tells us the investment a company is making not only in maintaining existing assets, but whether it is investing in growth and innovation. Capital expenditures is a longer-term metric that help investors understand the strategic direction of a company. For example, **Amazon.com** recently invested \$40 billion in capital

expenditures to expand fulfillment centers and bolster technology infrastructure to support Amazon Web Services. Analyzing trends in capital expenditures over time by company and industry can provide valuable insights to financial statement users.

The following charts show a shift from 2011–2020 in which industries are making in capital expenditures.

Source: S & P Global Market Intelligence.

Capital expenditures in the energy industry declined from 32% to 18%. At the same time, investments by companies in the financial,

information technology, and consumer discretionary industries has increased.

Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

APPENDIX 9A

Accounting for Contributions

LEARNING OBJECTIVE *6

Describe the accounting for contributions.

Companies sometimes receive or make contributions (often referred to as grants, donations, or gifts). A **contribution** is often some type of asset (such as cash, securities, land, or buildings), services, or use of facilities, but it also could be the forgiveness of a debt. The accounting for contributions is generally straightforward.

- The recipient records the asset received and contribution revenue at the fair value of the asset(s) received.
- The donor (resource provider) records a contribution expense for the fair value of the asset(s) donated.

Contributions are either unconditional or conditional. The criteria for evaluating whether contributions are unconditional (and thus recognized immediately in income) or conditional (for which income recognition is deferred) depend on the terms of the gift or grant agreement. The focus is whether a gift or grant agreement has the following terms.

1. Specifies a “barrier or hurdle” that the recipient must overcome to be entitled to the resources. A barrier is the inclusion of a measurable performance requirement such as degree of completion or specific output or outcome.
2. Releases the donor from its obligation to transfer resources (or if assets are advanced, a right to demand their return) if the barrier or hurdle is not achieved by the recipient.

An agreement that contains both terms is a conditional contribution. An agreement that omits one or both is unconditional.¹⁰ [11] The distinction between a conditional and unconditional contribution is important from an accounting point of view because it affects when expense and revenue are reported.

Conditional Contribution

Example 9A.1 presents an analysis of a conditional contribution made by State Insurance Company to Disabled Veterans (DV), a not-for-profit organization.

FACTS State Insurance Company agrees to contribute \$1,000,000 to DV to provide specific career training to disabled veterans. The contribution requires DV to provide training to at least 8,000 disabled veterans during the next fiscal year, with specified minimum targets that must be met each quarter. State Insurance requires a right of release stipulation from the obligation in that it will only give DV \$250,000 each quarter if DV demonstrates that those services have been provided to at least 2,000 disabled veterans during the quarter. State Insurance makes the payments at the end of each quarter.

QUESTION Is the arrangement between State Insurance Company and DV a conditional contribution? Explain.

Example 9A.1 Conditional Contribution

¹⁰The accounting for contributions applies to both business entities and not-for-profits. [10] Although GAAP is silent on how to account for the transfers of assets **from governmental units to business enterprises**, the FASB is working on a project to develop disclosure requirements about government assistance (see the FASB website; click on the Presentation and Disclosure tab under the Technical Agenda). However, we believe that these basic recognition requirements should also hold for these types of contributions. Therefore, companies should record all assets at fair value and all credits as revenue.

SOLUTION

State Insurance Company and DV conclude that this contribution is conditional. The agreement contains a right of release from the obligation because State Insurance will only transfer assets if DV provides training to 8,000 disabled veterans during the year (with a minimum requirement of 2,000 disabled veterans per quarter). State Insurance requires DV to achieve a specific level of service that would be considered a measurable performance-related barrier (in the form of milestones by specifying 2,000 disabled veterans per quarter).

In the situation described in Example 9A.1, assuming the first quarter milestone is met, State Insurance Company would make the following entry.

Contribution Expense	250,000	
Cash		250,000

DV would also make an entry in the first quarter as follows.

Cash	250,000	
Contribution Revenue		250,000

If the arrangement between State Insurance and DV is such that the contribution is unconditional, the entries are as follows at the time of the agreement.

State Insurance Company		
Contribution Expense	1,000,000	
Accounts Payable (DV)		1,000,000
DV		
Accounts Receivable	1,000,000	
Contribution Revenue		1,000,000

Unconditional Contribution

Presented in Example 9A.2 is a contribution made by Progress Pharma Company to Gillar Science (a not-for-profit).

Example 9A.2
Unconditional Contribution

FACTS Gillar Science receives a grant of land with a fair value of \$1 million (cost of \$600,000) from Progress Pharma Company to build additional research facilities to advance Gillar Science’s study on stem cell adaptations. Progress Pharma does not specify any restrictions to the grant.

QUESTION Is the arrangement between Gillar Science and Progress Pharma unconditional? If so, prepare the journal entry for Gillar Science.

SOLUTION

This grant is unconditional, as there are no restrictions associated with the contribution. Gillar Science records the land received at its fair value and contribution revenue as follows.

Land	1,000,000	
Contribution Revenue		1,000,000

When Progress Pharma contributes land in Example 9A.2, it records the donation as contribution expense at \$1,000,000 (the fair value of the land). Because a difference exists between the fair value of the land and its book value, Progress Pharma should record a gain

of \$400,000. As indicated, the land has a cost basis of \$600,000. The entry to record this contribution is as follows.

Contribution Expense	1,000,000	
Land		600,000
Gain on Disposal of Land		400,000

Exchange Transactions

In the examples thus far, the contributions arose because both State Insurance and Progress Pharma did not receive any value in exchange for the assets transferred, or the value received was incidental to the potential public benefit using the asset transferred. What happens, however, if both the recipient and the resource provider agree on the amount of assets transferred in goods or services—which are essentially of the same value? In this case, the gift or grant is no longer considered a contribution for accounting purposes but is accounted for as an exchange.

Presented in Example 9A.3 is a grant made by Precision Company (a pharmaceutical company) to Outstanding University, a not-for-profit organization.¹¹

FACTS Outstanding University is a large research university with a cancer research department. Outstanding University receives \$800,000 from Precision Company to finance the cost of a clinical trial of an experimental cancer drug that Precision developed. Precision specifies the protocol of the testing, including the number of participants to be tested, the dosages to be administered, and the frequency of follow-up examinations. Precision requires a detailed report of the test outcomes within three months of the test's conclusions; the rights to the results of the study belong to Outstanding University.

QUESTION Should this arrangement be considered an exchange? Explain.

SOLUTION

Outstanding University and Precision Company should consider this grant to be an exchange transaction. Because the results of the clinical trial have commercial value for Precision, Precision is receiving commensurate value as the resource provider. Therefore, the receipt of the resources is not a contribution received by Outstanding University, nor is the disbursement of the resources a contribution made by Precision. The accounting for this transaction would follow the normal rules for exchanges using the revenue recognition guidelines discussed in Chapters 3 and 17 [12].

Example 9A.3 Contribution or Exchange?

In summary, if the resource provider has full discretion in determining the amount of the transferred assets, the transaction is considered a contribution. If both the recipient and the resource provider agree on the amount of assets transferred in exchange for goods and services that are of commensurate value, the transaction is an exchange transaction.¹²

¹¹The FASB decided that including both a barrier and either a right of return of assets transferred or a right of release of the promisor's obligation to transfer assets better reflects the economics of the transaction. That is, without barriers, the right of return or right of release has little substance. Similarly, without right of return or right of release, failure to meet barriers has little substance. See Accounting Standards Update 2018-08, *Clarifying the Scope and the Accounting Guidance for Contributions Received and Contributions Made* (Norwalk, Conn.: FASB, June 2018), par. BC 18.

¹²The examples for conditional contribution arrangements and exchange transactions are adapted from Accounting Standards Update 2018-08, *Clarifying the Scope and the Accounting Guidance for Contributions Received and Contributions Made* (Norwalk, Conn.: FASB, June 2018), par. BC 18, Examples 13 and 8, respectively.

Review and Practice

Key Terms Review

accretion expense 9-7	historical cost 9-2	prudent cost 9-24
additions 9-27	improvements (betterments) 9-28	rearrangement and reinstallation costs 9-29
asset retirement obligation (ARO) 9-6	involuntary conversion 9-33	replacements 9-28
avoidable interest 9-11	land improvement 9-3	revenue expenditure 9-27
capital expenditure 9-27	lump-sum price 9-18	self-constructed asset 9-6
capitalization period 9-10	major repairs 9-30	weighted-average accumulated expenditures 9-11
commercial substance 9-19	nonmonetary assets 9-19	
*contribution 9-35	ordinary repairs 9-30	
equipment 9-4	plant assets 9-2	
fixed assets 9-2	property, plant, and equipment 9-2	

Learning Objectives Review

1 Identify property, plant, and equipment and its related costs.

The major characteristics of property, plant, and equipment are as follows. (1) They are acquired for use in operations and not for resale. (2) They are long-term in nature and usually subject to depreciation. (3) They possess physical substance. The costs included in initial valuation of property, plant, and equipment are as follows.

Cost of land. Includes all expenditures made to acquire land and to ready it for use. Land costs typically include (1) the purchase price; (2) closing costs, such as title to the land, attorney's fees, and recording fees; (3) costs incurred in getting the land in condition for its intended use, such as grading, filling, draining, and clearing; (4) assumption of any liens, mortgages, or encumbrances on the property; and (5) any additional land improvements that have an indefinite life.

Cost of buildings. Includes all expenditures related directly to their acquisition or construction. These costs include (1) materials, labor, and overhead costs incurred during construction, and (2) professional fees and building permits.

Cost of equipment. Includes the purchase price, freight and handling charges incurred, insurance on the equipment while in transit, cost of special foundations if required, assembling and installation costs, and costs of conducting trial runs.

Self-constructed assets. Indirect costs of manufacturing create special problems because companies cannot easily trace these costs directly to work and material orders related to the constructed assets. Companies might handle these costs in one of two ways: (1) assign no fixed overhead to the cost of the constructed asset, or (2) assign a portion of all overhead to the construction process. Companies use the second method extensively.

Asset retirement obligations (AROs). A company must recognize AROs when it has an existing legal obligation related to the retirement of a long-lived asset and it can reasonably estimate the amount. AROs are recorded as a cost of the related asset because these costs are directly related to operating the asset and are necessary to prepare the asset for its intended use.

2 Discuss the accounting problems associated with interest capitalization.

Only actual interest (with modifications) should be capitalized. The rationale for this approach is that during construction, the asset is not generating revenue and therefore companies should defer (capitalize) interest cost. Once construction is completed, the asset is ready for its intended use and revenues can be recognized. Any interest cost incurred in purchasing an asset that is ready for its intended use should be expensed.

3 Explain the accounting issues related to acquiring and valuing plant assets.

The following issues relate to acquiring and valuing plant assets.

(1) **Cash discounts.** Whether taken or not, they are generally considered a reduction in the cost of the asset; the real cost of the asset is the cash or cash equivalent price of the asset. (2) **Deferred-payment contracts.** Companies account for assets purchased on long-term credit contracts at the present value of the consideration exchanged between the contracting parties. (3) **Lump-sum purchase.** Allocate the total cost among the various assets on the basis of their relative fair values. (4) **Issuance of stock.** If the stock is actively traded, the market price of the stock issued is a fair indication of the cost of the property acquired. If the market price of the common stock exchanged is not determinable, establish the fair value of the property and use it as the basis for recording the asset and issuance of the common stock. (5) **Exchanges of nonmonetary assets.** The accounting for exchanges of nonmonetary assets depends on whether the exchange has commercial substance. See Illustrations 9.7 and 9.9 for summaries of how to account for exchanges.

4 Describe the accounting treatment for costs subsequent to acquisition.

Illustration 9.11 summarizes how to account for costs subsequent to acquisition.

5 Describe the accounting treatment for the disposal of property, plant, and equipment.

Regardless of the time of disposal, companies take depreciation up to the date of disposition and then remove all accounts related to the retired asset. Gains or losses on the retirement of plant assets are shown in the income statement along with other items that arise from customary business activities. Gains or losses on involuntary conversions are reported as other revenues and gains or other expenses and losses in the income statement.

*6 Describe the accounting for contributions.

Recipients of contributions record the asset received and contribution revenue at the fair value of the asset(s) received. The donor records Contribution Expense for the fair value of the asset(s) donated. The timing of recognition of revenue and expense depends on whether the contribution (1) includes a hurdle and (2) releases the donor from any obligation if the hurdle is not met by the recipient. An agreement that contains both terms is a conditional contribution. An agreement that omits one or both is unconditional. If the contribution arrangement is such that both the recipient and the donor agree on the amount of assets transferred in goods or services that are essentially of the same value, the gift or grant is no longer considered a contribution but is accounted for as an exchange.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Note: All asterisked Questions, Exercises, and Problems relate to the material in the appendix to the chapter.

Questions

1. What are the major characteristics of plant assets?
2. Mickelson Inc. owns land that it purchased on January 1, 2005, for \$450,000. At December 31, 2025, its current value is \$770,000 as determined by appraisal. At what amount should Mickelson report this asset on its December 31, 2025, balance sheet? Explain.
3. Name the items, in addition to the amount paid to the former owner or contractor, that may properly be included as part of the acquisition cost of the following plant assets.
 - a. Land.
 - b. Machinery and equipment.
 - c. Buildings.
4. Indicate where the following items would be shown on a balance sheet.
 - a. A lien that was attached to the land when purchased.
 - b. Landscaping costs.
 - c. Attorney's fees and recording fees related to purchasing land.
 - d. Variable overhead related to construction of machinery.
 - e. A parking lot servicing employees in the building.
 - f. Cost of temporary building for workers during construction of building.
 - g. Interest expense on bonds payable incurred during construction of a building.
 - h. Assessments for sidewalks that are maintained by the city.
 - i. The cost of demolishing an old building that was on the land when purchased.
5. Two positions have normally been taken with respect to the recording of fixed manufacturing overhead as an element of the cost of plant assets constructed by a company for its own use:
 - a. It should be excluded completely.
 - b. It should be included at the same rate as is charged to normal operations.

What are the circumstances or rationale that support or deny the application of these methods?
6. The Buildings account of Postera Inc. includes the following items that were used in determining the basis for depreciating the cost of a building.
 - a. Organization and promotion expenses.
 - b. Architect's fees.
 - c. Interest and taxes during construction.
 - d. Interest revenue on investments held to fund construction of a building.

Do you agree with these charges? If not, how would you deal with each of the items above in the corporation's books and in its annual financial statements?

7. Burke Company has purchased two tracts of land. One tract will be the site of its new manufacturing plant, while the other is being purchased with the hope that it will be sold in the next year at a profit. How should these two tracts of land be reported in the balance sheet?

8. When must a company recognize an asset retirement obligation?

9. One financial accounting issue encountered when a company constructs its own plant is whether the interest cost on funds borrowed to finance construction should be capitalized and then amortized over the life of the assets constructed. What is the justification for capitalizing such interest?

10. Provide examples of assets that do not qualify for interest capitalization.

11. What interest rates should be used in determining the amount of interest to be capitalized? How should the amount of interest to be capitalized be determined?

12. How should the amount of interest capitalized be disclosed in the notes to the financial statements? How should interest revenue from temporarily invested excess funds borrowed to finance the construction of assets be accounted for?

13. Discuss the basic accounting problem that arises in handling each of the following situations.

- a. Assets purchased by issuance of common stock.
- b. Acquisition of plant assets by gift or donation.
- c. Purchase of a plant asset subject to a cash discount.
- d. Assets purchased on a long-term credit basis.
- e. A group of assets acquired for a lump sum.
- f. An asset traded in or exchanged for another asset.

14. Magilke Industries acquired equipment this year to be used in its operations. The equipment was delivered by the suppliers, installed by Magilke, and placed into operation. Some of it was purchased for cash with discounts available for prompt payment. Some of it was purchased under long-term payment plans for which the interest charges approximated prevailing rates. What costs should Magilke capitalize for the new equipment purchased this year? Explain.

15. Schwartzkopf Co. purchased for \$2,200,000 property that included both land and a building to be used in operations. The seller's book value was \$300,000 for the land and \$900,000 for the building. By appraisal, the fair value was estimated to be \$500,000 for the land and \$2,000,000 for the building. At what amount should Schwartzkopf report the land and the building at the end of the year?

16. Pueblo Co. acquires machinery by paying \$10,000 cash and signing a \$5,000, 2-year, zero-interest-bearing note payable. The note has a present value of \$4,208, and Pueblo purchased a similar machine last month for \$13,500. At what cost should the new equipment be recorded?

17. Stan Ott is evaluating two recent transactions involving exchanges of equipment. In one case, the exchange has commercial substance. In the second situation, the exchange lacks commercial substance. Explain to Stan the differences in accounting for these two situations.

18. Crowe Company purchased a heavy-duty truck on July 1, 2021, for \$30,000. It was estimated that it would have a useful life of 10 years

and then would have a trade-in value of \$6,000. The company uses the straight-line method. It was traded on August 1, 2026, for a similar truck costing \$42,000; \$16,000 was allowed as trade-in value (also fair value) on the old truck and \$26,000 was paid in cash. A comparison of expected cash flows for the trucks indicates the exchange lacks commercial substance. What is the entry to record the trade-in?

19. Once equipment has been installed and placed in operation, subsequent expenditures relating to this equipment are frequently thought of as repairs or general maintenance and, hence, chargeable to operations in the period in which the expenditure is made. Actually, determination of whether such an expenditure should be charged to operations or capitalized involves a much more careful analysis of the character of the expenditure. What are the factors that should be considered in making such a decision? Discuss fully.

20. What accounting treatment is normally given to the following items in accounting for plant assets?

- a. Additions.
- b. Major repairs.
- c. Improvements and replacements.

21. New machinery, which replaced a number of employees, was installed and put in operation in the last month of the fiscal year. The employees had been dismissed after payment of an extra month's wages, and this amount was added to the cost of the machinery. Discuss the propriety of the charge. If it was improper, describe the proper treatment.

22. To what extent do you consider the following items to be proper costs of the fixed asset? Give reasons for your opinions.

- a. Overhead of a business that builds its own equipment.
- b. Cash discounts on purchases of equipment.
- c. Interest paid during construction of a building.
- d. Cost of a safety device installed on a machine.
- e. Freight on equipment returned before installation, for replacement by other equipment of greater capacity.
- f. Cost of moving machinery to a new location.
- g. Cost of plywood partitions erected as part of the remodeling of the office.
- h. Replastering of a section of the building.
- i. Cost of a new motor for one of the trucks.
- j. Cost to restore land after extracting ore.

23. Neville Enterprises has a number of fully depreciated assets that are still being used in the main operations of the business. Because the assets are fully depreciated, the president of the company decides not to show them on the balance sheet or disclose this information in the notes. Evaluate this procedure.

24. What are the general rules for how gains or losses on retirement of plant assets should be reported in income?

*25. What is the difference between a conditional and unconditional contribution?

*26. Why is the distinction between a conditional and unconditional contribution important for accounting purposes?

Brief Exercises

BE9.1 (LO 1) Previn Brothers Inc. purchased land at a price of \$27,000. Closing costs were \$1,400. An old building was removed at a cost of \$10,200. What amount should be recorded as the cost of the land?

BE9.2 (LO 1) Schultz Department Store determines it will cost \$100,000 to restore the area (considered a land improvement) surrounding one of its store parking lots, when the store is closed in 2 years. Schultz estimates the fair value of the obligation at December 31, 2025, is \$84,000. Prepare the journal entry to record the asset retirement obligation.

BE9.3 (LO 1) Calaf's Drillers erects and places into service an off-shore oil platform on January 1, 2025, at a cost of \$10,000,000. Calaf estimates it will cost \$1,000,000 to dismantle and remove the platform at the end of its useful life in 10 years, which the company is legally required to do. (The fair value at January 1, 2025, of the dismantle and removal costs is \$450,000.) Prepare the entry to record the asset retirement obligation.

BE9.4 (LO 2) Hanson Company is constructing a building. Construction began on February 1 and was completed on December 31. Expenditures were \$1,800,000 on March 1, \$1,200,000 on June 1, and \$3,000,000 on December 31. Compute Hanson's weighted-average accumulated expenditures for interest capitalization purposes.

BE9.5 (LO 2) Hanson Company (see BE9.4) borrowed \$1,000,000 on March 1 on a 5-year, 12% note to help finance construction of the building. In addition, the company had outstanding all year a 10%, 5-year, \$2,000,000 note payable and an 11%, 4-year, \$3,500,000 note payable. Compute the weighted-average interest rate used for interest capitalization purposes.

BE9.6 (LO 2) Use the information for Hanson Company from BE9.4 and BE9.5. Compute avoidable interest for Hanson Company.

BE9.7 (LO 3) Garcia Corporation purchased a truck by issuing an \$80,000, 4-year, zero-interest-bearing note to Equinox Inc. The market rate of interest for obligations of this nature is 10%. Prepare the journal entry to record the purchase of this truck.

BE9.8 (LO 3) Mohave Inc. purchased land, building, and equipment from Laguna Corporation for a cash payment of \$315,000. The estimated fair values of the assets are land \$60,000, building \$220,000, and equipment \$80,000. At what amounts should each of the three assets be recorded?

BE9.9 (LO 3) Fielder Company obtained land by issuing 2,000 shares of its \$10 par value common stock. The land was recently appraised at \$85,000. The common stock is actively traded at \$40 per share. Prepare the journal entry to record the acquisition of the land.

BE9.10 (LO 3) Navajo Corporation traded a used truck (cost \$20,000, accumulated depreciation \$18,000) for a small computer with a fair value of \$3,300. Navajo also paid \$500 in the transaction. Prepare the journal entry to record the exchange. (The exchange has commercial substance.)

BE9.11 (LO 3) Use the information for Navajo Corporation from BE9.10. Prepare the journal entry to record the exchange, assuming the exchange lacks commercial substance.

BE9.12 (LO 3) Mehta Company traded a used welding machine (cost \$9,000, accumulated depreciation \$3,000) for office equipment with an estimated fair value of \$5,000. Mehta also paid \$3,000 cash in the transaction. Prepare the journal entry to record the exchange. (The exchange has commercial substance.)

BE9.13 (LO 3) Cheng Company traded a used truck for a new truck. The used truck cost \$30,000 and has accumulated depreciation of \$27,000. The new truck is worth \$37,000. Cheng also made a cash payment of \$36,000. Prepare Cheng's entry to record the exchange. (The exchange lacks commercial substance.)

BE9.14 (LO 3) Slaton Corporation traded a used truck for a new truck. The used truck cost \$20,000 and has accumulated depreciation of \$17,000. The new truck is worth \$35,000. Slaton also made a cash payment of \$33,000. Prepare Slaton's entry to record the exchange. (The exchange has commercial substance.)

BE9.15 (LO 4) Indicate which of the following costs should be expensed when incurred.

- a. \$13,000 paid to rearrange and reinstall machinery.
- b. \$200,000 paid for addition to building.
- c. \$200 paid for tune-up and oil change on delivery truck.
- d. \$7,000 paid to replace a wooden floor with a concrete floor.
- e. \$2,000 paid for a major overhaul on a truck, which extends the useful life.

BE9.16 (LO 5) Ottawa Corporation owns machinery that cost \$20,000 when purchased on July 1, 2021. Depreciation has been recorded at a rate of \$2,400 per year, resulting in a balance in accumulated depreciation of \$8,400 at December 31, 2025. The machinery is sold on September 1, 2026, for \$10,500. Prepare journal entries to (a) update depreciation for 2026 and (b) record the sale.

BE9.17 (LO 5) Use the information presented for Ottawa Corporation in BE9.16, but assume the machinery is sold for \$5,200 instead of \$10,500. Prepare journal entries to (a) update depreciation for 2026 and (b) record the sale.

***BE9.18 (LO 6)** Research Science Inc. provides funding to University Hospital to perform a research study on the benefits of a new drug for insomnia. The agreement requires University Hospital to plan the study, perform the research, and summarize and submit the research to Research Science. Research Science retains all rights to the study. Explain whether this is an exchange transaction or a contribution.

***BE9.19 (LO 6)** Pet Aware is an animal shelter and receives an upfront, unsolicited 2-year grant of \$800,000 from Kindig Company (the owner of Kindig is a dog lover). The grant specifies that the money should be used to expand Pet Aware's operations. The agreement indicates that Pet Aware must expand its operations by 6,000 square feet to accommodate additional animals by the end of 2 years. The grant contains a right of return for any unused assets. Explain whether this grant is an unconditional or conditional grant.

***BE9.20 (LO 6)** Knowledge University received a grant from a private foundation to conduct scientific research for purposes of discovering planets potentially habitable to humans. Knowledge University is required to submit a summary of research findings to the foundation at the end of the study, but Knowledge University retains all rights to the findings and has permission to publish them, if desired. Is this an exchange or nonexchange arrangement? Explain.

Exercises

E9.1 (LO 1) (Acquisition Costs of Realty) The following expenditures and receipts are related to land, land improvements, and buildings acquired for use in a business enterprise. The receipts are enclosed in parentheses.

a. Money borrowed to pay building contractor (signed a note)	\$(275,000)
b. Payment for construction from note proceeds	275,000
c. Cost of land fill and clearing	8,000
d. Delinquent real estate taxes on property assumed by purchaser	7,000
e. Premium on 6-month insurance policy during construction	6,000
f. Refund of 1-month insurance premium because construction completed early	(1,000)
g. Architect's fee on building	22,000
h. Cost of real estate purchased as a plant site (land \$200,000 and building \$50,000)	250,000
i. Commission fee paid to real estate agency	9,000
j. Installation of fences around property	4,000
k. Cost of razing and removing building	11,000
l. Proceeds from salvage of demolished building	(5,000)
m. Interest paid during construction on money borrowed for construction	13,000
n. Cost of parking lots and driveways	19,000
o. Cost of trees and shrubbery planted (permanent in nature)	14,000
p. Excavation costs for new building	3,000

Instructions

Identify each item by letter and list the items in columnar form, using the headings shown below. All receipt amounts should be reported in parentheses. For any amounts entered in the Other Accounts column, also indicate the account title.

<u>Item</u>	<u>Land</u>	<u>Land Improvements</u>	<u>Buildings</u>	<u>Other Accounts</u>
-------------	-------------	--------------------------	------------------	-----------------------

E9.2 (LO 1) Excel (Acquisition Costs of Realty) Martin Buber Co. purchased land as a factory site for \$400,000. The process of tearing down two old buildings on the site and constructing the factory required 6 months.

The company paid \$42,000 to raze the old buildings and sold salvaged lumber and brick for \$6,300. Legal fees of \$1,850 were paid for title investigation and drawing the purchase contract. Martin Buber paid \$2,200 to an engineering firm for a land survey, and \$68,000 for drawing the factory plans. The land survey had to be made before definitive plans could be drawn. Title insurance on the property cost \$1,500, and a liability insurance premium paid during construction was \$900. The contractor's charge

for construction was \$2,740,000. The company paid the contractor in two installments: \$1,200,000 at the end of 3 months and \$1,540,000 upon completion. Interest costs of \$170,000 were incurred to finance the construction.

Instructions

Determine the cost of the land and the cost of the building as they should be recorded on the books of Martin Buber Co. Assume that the land survey was for the building.

E9.3 (LO 1) Excel (Acquisition Costs of Trucks) Kelly Clarkson Corporation operates a retail computer store. To improve delivery services to customers, the company purchases four new trucks on April 1, 2025. The terms of acquisition for each truck are described below.

1. Truck #1 has a list price of \$15,000 and is acquired for a cash payment of \$13,900.
2. Truck #2 has a list price of \$16,000 and is acquired for a down payment of \$2,000 cash and a zero-interest-bearing note with a face amount of \$14,000. The note is due April 1, 2026. Clarkson would normally have to pay interest at a rate of 10% for such a borrowing, and the dealership has a borrowing rate of 8%.
3. Truck #3 has a list price of \$16,000. It is acquired in exchange for a computer system that Clarkson carries in inventory. The computer system cost \$12,000 and is normally sold by Clarkson for \$15,200. Clarkson uses a perpetual inventory system.
4. Truck #4 has a list price of \$14,000. It is acquired in exchange for 1,000 shares of common stock in Clarkson Corporation. The stock has a par value per share of \$10 and a market price of \$13 per share.

Instructions

Prepare the appropriate journal entries for the above transactions for Clarkson Corporation.

E9.4 (LO 1) (Purchase and Self-Constructed Cost of Assets) Worf Co. both purchases and constructs various equipment it uses in its operations. The following items for two different types of equipment were recorded in random order during the calendar year 2025.

Purchase	
Cash paid for equipment, including sales tax of \$5,000	\$105,000
Freight and insurance cost while in transit	2,000
Cost of moving equipment into place at factory	3,100
Wage cost for technicians to test equipment	4,000
Insurance premium paid during first year of operation on this equipment	1,500
Special plumbing fixtures required for new equipment	8,000
Repair cost incurred in first year of operations related to this equipment	1,300
Construction	
Material and purchased parts (gross cost \$200,000; failed to take 2% cash discount)	\$200,000
Imputed interest on funds obtained from stock financing used during construction	14,000
Labor costs	190,000
Allocated overhead costs (fixed—\$20,000; variable—\$30,000)	50,000
Profit on self-construction	30,000
Cost of installing equipment	4,400

Instructions

Compute the total cost for each of these two pieces of equipment. If an item is not capitalized as a cost of the equipment, indicate how it should be reported.

E9.5 (LO 1) (Asset Retirement Obligation) Oil Products Company purchases an oil tanker depot on January 1, 2025, at a cost of \$600,000. Oil Products expects to operate the depot for 10 years, at which time it is legally required to dismantle the depot and remove the underground storage tanks. The company estimates the dismantle and removal will cost \$75,000 at the end of the depot's useful life.

Instructions

- a. Prepare the journal entries to record the depot and asset retirement obligation for the depot on January 1, 2025. Based on an effective-interest rate of 6%, the present value of the asset retirement obligation on January 1, 2025, is \$41,879.
- b. Prepare any journal entries required for the depot and the asset retirement obligation at December 31, 2025. Oil Products uses straight-line depreciation; the estimated salvage value for the depot is zero.
- c. On December 31, 2034, Oil Products pays a demolition firm to dismantle the depot and remove the tanks at a price of \$80,000. Prepare the journal entry for the settlement of the asset retirement obligation.

E9.6 (LO 1, 2) (Treatment of Various Costs) Ben Sisko Supply Company, a newly formed corporation, incurred the following expenditures related to Land, to Buildings, and to Machinery and Equipment.

Abstract company's fee for title search		\$ 520
Architect's fees		3,170
Cash paid for land and dilapidated building thereon		87,000
Removal of old building	\$20,000	
Less: Salvage	<u>5,500</u>	14,500
Interest on short-term loans during construction		7,400
Excavation before construction for basement		19,000
Machinery purchased (subject to 2% cash discount, which was not taken)		55,000
Freight on machinery purchased		1,340
Storage charges on machinery, necessitated by noncompletion of building when machinery was delivered		2,180
New building constructed (building construction took 6 months from date of purchase of land and old building)		485,000
Assessment by city for drainage project		1,600
Hauling charges for delivery of machinery from storage to new building		620
Installation of machinery		2,000
Trees, shrubs, and other landscaping after completion of building (permanent in nature)		5,400

Instructions

Determine the amounts that should be debited to Land, to Buildings, and to Machinery and Equipment. Assume the benefits of capitalizing interest during construction exceed the cost of implementation. Indicate how any costs not debited to these accounts should be recorded.

E9.7 (LO 1, 3, 6) (Correction of Improper Cost Entries) Plant acquisitions for selected companies are as follows.

1. Belanna Industries Inc. acquired land, buildings, and equipment from a bankrupt company, Torres Co., for a lump-sum price of \$700,000. At the time of purchase, Torres's assets had the following book and appraisal values.

	<u>Book Values</u>	<u>Appraisal Values</u>
Land	\$200,000	\$150,000
Buildings	250,000	350,000
Equipment	300,000	300,000

To be conservative, the company decided to take the lower of the two values for each asset acquired. The following entry was made.

Land	150,000	
Buildings	250,000	
Equipment	300,000	
Cash		700,000

2. Harry Enterprises purchased store equipment by making a \$2,000 cash down payment and signing a 1-year, \$23,000, 10% note payable. The purchase was recorded as follows.

Equipment	27,300	
Cash		2,000
Notes Payable		23,000
Interest Payable		2,300

3. Kim Company purchased office equipment for \$20,000, terms 2/10, n/30. Because the company intended to take the discount, it made no entry until it paid for the acquisition. The entry was:

Equipment	20,000	
Cash		19,600
Purchase Discounts		400

- *4. Kaisson Inc. recently received at zero cost land from the Village of Cardassia as an inducement to locate its business in the Village. The appraised value of the land is \$27,000. The company made no entry to record the land because it had no cost basis.

5. Zimmerman Company built a warehouse for \$600,000. It could have purchased the building for \$740,000. The controller made the following entry.

Buildings	740,000	
Cash		600,000
Profit on Construction		140,000

Instructions

Prepare the entry that should have been made at the date of each acquisition.

E9.8 (LO 2) (Capitalization of Interest) Harrisburg Furniture Company started construction of a combination office and warehouse building for its own use at an estimated cost of \$5,000,000 on January 1, 2025. Harrisburg expected to complete the building by December 31, 2025. Harrisburg has the following debt obligations outstanding during the construction period.

Construction loan—12% interest, payable semiannually, issued December 31, 2024	\$2,000,000
Short-term loan—10% interest, payable monthly, and principal payable at maturity on May 30, 2026	1,400,000
Long-term loan—11% interest, payable on January 1 of each year; principal payable on January 1, 2029	1,000,000

Instructions

(Carry all computations to two decimal places.)

- Assume that Harrisburg completed the office and warehouse building on December 31, 2025, as planned, at a total cost of \$5,200,000, and the weighted-average amount of accumulated expenditures was \$3,600,000. Compute the avoidable interest on this project.
- Compute the depreciation expense for the year ended December 31, 2026. Harrisburg elected to depreciate the building on a straight-line basis and determined that the asset has a useful life of 30 years and a salvage value of \$300,000.

E9.9 (LO 2) (Capitalization of Interest) On December 31, 2024, Main Inc. borrowed \$3,000,000 at 12% payable annually to finance the construction of a new building. In 2025, the company made the following expenditures related to this building: March 1, \$360,000; June 1, \$600,000; July 1, \$1,500,000; December 1, \$1,500,000. The building was completed in February 2026. Additional information is provided as follows.

- Other debt outstanding:

10-year, 13% bond, December 31, 2018, interest payable annually	\$4,000,000
6-year, 10% note, dated December 31, 2022, interest payable annually	1,600,000
- March 1, 2025, expenditure included land costs of \$150,000.
- Interest revenue of \$49,000 earned in 2025.

Instructions

- Determine the amount of interest to be capitalized in 2025 in relation to the construction of the building.
- Prepare the journal entry to record the capitalization of interest and the recognition of interest expense, if any, at December 31, 2025.

E9.10 (LO 2) (Capitalization of Interest) On July 31, 2025, Amsterdam Company engaged Minsk Tooling Company to construct a special-purpose piece of factory machinery. Construction began immediately and was completed on November 1, 2025. To help finance construction, on July 31 Amsterdam issued a \$300,000, 3-year, 12% note payable at Netherlands National Bank, on which interest is payable each July 31. \$200,000 of the proceeds of the note was paid to Minsk on July 31. The remainder of the proceeds was temporarily invested in short-term marketable securities (trading securities) at 10% until November 1. On November 1, Amsterdam made a final \$100,000 payment to Minsk. Other than the note to Netherlands, Amsterdam's only outstanding liability at December 31, 2025, is a \$30,000, 8%, 6-year note payable, dated January 1, 2022, on which interest is payable each December 31.

Instructions

- Calculate weighted-average accumulated expenditures, avoidable interest, and total interest cost to be capitalized during 2025. (Round all computations to the nearest dollar.)
- Prepare the journal entries needed on the books of Amsterdam Company at each of the following dates.
 - July 31, 2025.
 - November 1, 2025.
 - December 31, 2025.

E9.11 (LO 2) (Capitalization of Interest) The following three situations involve the capitalization of interest.

Situation I: On January 1, 2025, Ohno, Inc. signed a fixed-price contract to have Builder Associates construct a major plant facility at a cost of \$4,000,000. It was estimated that it would take 3 years to complete the project. Also on January 1, 2025, to finance the construction cost, Ohno borrowed \$4,000,000 payable in 10 annual installments of \$400,000, plus interest at the rate of 10%. During 2025, Ohno made deposit and progress payments totaling \$1,500,000 under the contract; the weighted-average amount of accumulated expenditures was \$800,000 for the year. The excess borrowed funds were invested in short-term securities, from which Ohno realized investment income of \$250,000.

Instructions

What amount should Ohno report as capitalized interest at December 31, 2025?

Situation II: During 2025, Zagitova Corporation constructed and manufactured certain assets and incurred the following interest costs in connection with those activities.

	<u>Interest Costs Incurred</u>
Warehouse constructed for Zagitova's own use	\$30,000
Special-order machine for sale to unrelated customer, produced according to customer's specifications	9,000
Inventories routinely manufactured, produced on a repetitive basis	8,000

All of these assets required an extended period of time for completion.

Instructions

Assuming the effect of interest capitalization is material, what is the total amount of interest costs to be capitalized?

Situation III: Fleming, Inc. has a fiscal year ending April 30. On May 1, 2025, Fleming borrowed \$10,000,000 at 11% to finance construction of its own building. Repayments of the loan are to commence the month following completion of the building. During the year ended April 30, 2026, expenditures for the partially completed structure totaled \$7,000,000 (weighted-average accumulated expenditures were \$3,500,000). Interest earned on the unexpended portion of the loan amounted to \$650,000 for the year.

Instructions

How much should be shown as capitalized interest on Fleming's financial statements at April 30, 2026? (CPA adapted)

E9.12 (LO 1, 3) (Entries for Equipment Acquisitions) Geddes Engineering Corporation purchased conveyor equipment with a list price of \$10,000. Presented below are three independent cases related to the equipment. (Round to the nearest dollar.)

- Geddes paid cash for the equipment 8 days after the purchase. The vendor's credit terms are 2/10, n/30. Assume that equipment purchases are initially recorded gross.
- Geddes traded in equipment with a book value of \$2,000 (initial cost \$8,000), and paid \$9,500 in cash one month after the purchase. The old equipment could have been sold for \$400 at the date of trade. (The exchange has commercial substance.)
- Geddes gave the vendor a \$10,800 zero-interest-bearing note for the equipment on the date of purchase. The note was due in one year and was paid on time. Assume that the effective-interest rate in the market was 9%.

Instructions

Prepare the general journal entries required to record the acquisition and payment in each of the independent cases above.

E9.13 (LO 1, 3, 6) (Entries for Asset Acquisition, Including Self-Construction) Below are transactions related to Duffner Company.

- The City of Pebble Beach gives the company 5 acres of land as a plant site. The fair value of this land is determined to be \$81,000.
- 13,000 shares of common stock with a par value of \$50 per share are issued in exchange for land and buildings. The property has been appraised at a fair value of \$810,000, of which \$180,000 has been allocated to land and \$630,000 to buildings. The stock of Duffner Company is not listed on any exchange, but a block of 100 shares was sold by a stockholder 12 months ago at \$65 per share, and a block of 200 shares was sold by another stockholder 18 months ago at \$58 per share.
- No entry has been made to remove from the accounts for Materials, Direct Labor, and Overhead the amounts properly chargeable to plant asset accounts for machinery constructed during the year. The following information is given relative to costs of the machinery constructed.

Materials used	\$12,500
Factory supplies used	900
Direct labor incurred	15,000
Additional overhead (over regular) caused by construction of machinery, excluding factory supplies used	2,700
Fixed overhead rate applied to regular manufacturing operations	60% of direct labor cost
Cost of similar machinery if it had been purchased from outside suppliers	44,000

Instructions

Prepare journal entries on the books of Duffner Company to record these transactions.

E9.14 (LO 1, 3) (Entries for Acquisition of Assets) Presented below is information related to Zonker Company.

- On July 6, Zonker Company acquired the plant assets of Doonesbury Company, which had discontinued operations. The appraised value of the property is:

Land	\$ 400,000
Buildings	1,200,000
Equipment	<u>800,000</u>
Total	<u>\$2,400,000</u>

Zonker Company gave 12,500 shares of its \$100 par value common stock in exchange. The stock had a market price of \$168 per share on the date of the purchase of the property.

- Zonker Company expended the following amounts in cash between July 6 and December 15, the date when it first occupied the building.

Repairs to building	\$105,000
Construction of bases for equipment to be installed later	135,000
Driveways and parking lots	122,000
Remodeling of office space in building, including new partitions and walls	161,000
Special assessment by city on land	18,000

- On December 20, the company paid cash for equipment, \$260,000, subject to a 2% cash discount, and freight on equipment of \$10,500.

Instructions

Prepare entries on the books of Zonker Company for these transactions.

E9.15 (LO 3) (Purchase of Equipment with Zero-Interest-Bearing Debt) Flint Inc. has decided to purchase equipment from Central Michigan Industries on January 2, 2025, to expand its production capacity to meet customers' demand for its product. Flint issues an \$800,000, 5-year, zero-interest-bearing note to Central Michigan for the new equipment when the prevailing market rate of interest for obligations of this nature is 12%. The company will pay off the note in five \$160,000 installments due at the end of each year over the life of the note.

Instructions

(Round to nearest dollar in all computations.)

- Prepare the journal entry (entries) at the date of purchase.
- Prepare the journal entry (entries) at the end of the first year to record the payment and interest, assuming that the company employs the effective-interest method.
- Prepare the journal entry (entries) at the end of the second year to record the payment and interest.
- Assuming that the equipment had a 10-year life and no salvage value, prepare the journal entry necessary to record depreciation in the first year. (Straight-line depreciation is employed.)

E9.16 (LO 3) (Purchase of Computer with Zero-Interest-Bearing Debt) Cardinals Corporation purchased a computer on December 31, 2024, for \$105,000, paying \$30,000 down and agreeing to pay the balance in five equal installments of \$15,000 payable each December 31 beginning in 2025. An assumed interest rate of 10% is implicit in the purchase price.

Instructions

(Round to two decimal places.)

- Prepare the journal entry (entries) at the date of purchase.
- Prepare the journal entry (entries) at December 31, 2025, to record the payment and interest (effective-interest method employed).
- Prepare the journal entry (entries) at December 31, 2026, to record the payment and interest (effective-interest method employed).

E9.17 (LO 2, 3) Groupwork (Asset Acquisition) Hayes Industries purchased the following assets and constructed a building as well. All this was done during the current year.

Assets 1 and 2: These assets were purchased as a lump sum for \$100,000 cash. The following information was gathered.

<u>Description</u>	<u>Initial Cost on Seller's Books</u>	<u>Depreciation to Date on Seller's Books</u>	<u>Book Value on Seller's Books</u>	<u>Appraised Value</u>
Machinery	\$100,000	\$50,000	\$50,000	\$90,000
Equipment	60,000	10,000	50,000	30,000

Asset 3: This machine was acquired by making a \$10,000 down payment and issuing a \$30,000, 2-year, zero-interest-bearing note. The note is to be paid off in two \$15,000 installments made at the end of the first and second years. It was estimated that the asset could have been purchased outright for \$35,900.

Asset 4: This machinery was acquired by trading in used machinery. (The exchange lacks commercial substance.) Facts concerning the trade-in are as follows.

Cost of machinery traded	\$100,000
Accumulated depreciation to date of sale	40,000
Fair value of machinery traded	80,000
Cash received	10,000
Fair value of machinery acquired	70,000

Asset 5: Equipment was acquired by issuing 100 shares of \$8 par value common stock. The stock had a market price of \$11 per share.

Construction of Building: A building was constructed on land purchased last year at a cost of \$150,000. Construction began on February 1 and was completed on November 1. The payments to the contractor were as follows.

<u>Date</u>	<u>Payment</u>
2/1	\$120,000
6/1	360,000
9/1	480,000
11/1	100,000

To finance construction of the building, a \$600,000, 12% construction loan was taken out on February 1. The loan was repaid on November 1. The firm had \$200,000 of other outstanding debt during the year at a borrowing rate of 8%.

Instructions

Record the acquisition of each of these assets.

E9.18 (LO 3) (Nonmonetary Exchange) Busytown Corporation, which manufactures shoes, hired a recent college graduate to work in its accounting department. On the first day of work, the accountant was assigned to total a batch of invoices with the use of an adding machine. Before long, the accountant, who had never before seen such a machine, managed to break the machine. Busytown Corporation gave the machine plus \$340 to Dick Tracy Business Machine Company (dealer) in exchange for a new machine. Assume the following information about the machines.

	<u>Busytown Corp. (Old Machine)</u>	<u>Dick Tracy Co. (New Machine)</u>
Machine cost	\$290	\$270
Accumulated depreciation	140	—0—
Fair value	85	425

Instructions

For each company, prepare the necessary journal entry to record the exchange. (The exchange has commercial substance.)

E9.19 (LO 3) (Nonmonetary Exchange) Cannondale Company purchased an electric wax melter on April 30, 2020, by trading in its old gas model and paying the balance in cash. The following data relate to the purchase.

List price of new melter	\$15,800
Cash paid	10,000
Cost of old melter (5-year life, \$700 salvage value)	11,200
Accumulated depreciation—old melter (straight-line)	6,300
Secondhand fair value of old melter	5,200

Instructions

Prepare the journal entry (entries) necessary to record this exchange, assuming that the exchange **(a)** has commercial substance, and **(b)** lacks commercial substance. Cannondale's fiscal year ends on December 31, and depreciation has been recorded through December 31, 2024.

E9.20 (LO 3) (Nonmonetary Exchange) Arruza Company exchanged equipment used in its manufacturing operations plus \$3,000 in cash for similar equipment used in the operations of LoBianco Company. The following information pertains to the exchange.

	<u>Arruza Co.</u>	<u>LoBianco Co.</u>
Equipment (cost)	\$28,000	\$28,000
Accumulated depreciation	19,000	10,000
Fair value of equipment	12,500	15,500
Cash given up	3,000	

Instructions

- Prepare the journal entries to record the exchange on the books of both companies. Assume that the exchange lacks commercial substance.
- Prepare the journal entries to record the exchange on the books of both companies. Assume that the exchange has commercial substance.

E9.21 (LO 3) (Nonmonetary Exchange) Ashbrook Inc. has negotiated the purchase of a new piece of automatic equipment at a price of \$8,000 plus trade-in, f.o.b. factory. Ashbrook Inc. paid \$8,000 cash and traded in used equipment. The used equipment had originally cost \$62,000; it had a book value of \$42,000 and a secondhand fair value of \$47,800, as indicated by recent transactions involving similar equipment. Freight and installation charges for the new equipment required a cash payment of \$1,100.

Instructions

- Prepare the general journal entry to record this transaction, assuming that the exchange has commercial substance.
- Assuming the same facts as in (a) except that fair value information for the assets exchanged is not determinable, prepare the general journal entry to record this transaction.

E9.22 (LO 4) Groupwork (Analysis of Subsequent Expenditures) Donovan Resources Group has been in its plant facility for 15 years. Although the plant is quite functional, numerous repair costs are incurred to maintain it in sound working order. The company's plant asset book value is currently \$800,000, as indicated below.

Original cost	\$1,200,000
Accumulated depreciation	<u>400,000</u>
Book value	<u>\$ 800,000</u>

During the current year, the following expenditures were made to the plant facility.

- Because of increased demands for its product, the company increased its plant capacity by building a new addition at a cost of \$270,000.
- The entire plant was repainted at a cost of \$23,000.
- The roof was an asbestos cement slate. For safety purposes, it was removed and replaced with a wood shingle roof at a cost of \$61,000. Book value of the old roof was \$41,000.
- The electrical system was completely updated at a cost of \$22,000. The cost of the old electrical system was not known. It is estimated that the useful life of the building will not change as a result of this updating.
- A series of major repairs were made at a cost of \$47,000, because parts of the wood structure were rotting. The cost of the old wood structure was not known. These extensive repairs are estimated to increase the useful life of the building.

Instructions

Indicate how each of these transactions would be recorded in the accounting records.

E9.23 (LO 4, 5) (Analysis of Subsequent Expenditures) The following transactions occurred during 2025. Assume that depreciation of 10% per year is charged on all machinery and 5% per year on buildings, on a straight-line basis, with no estimated salvage value. Depreciation is charged for a full year on all fixed assets acquired during the year, and no depreciation is charged on fixed assets disposed of during the year.

- Jan. 30 A building that cost \$132,000 in 2008 is torn down to make room for a new building. The wrecking contractor was paid \$5,100 and was permitted to keep all materials salvaged.
- Mar. 10 Machinery that was purchased in 2018 for \$16,000 is sold for \$2,900 cash, f.o.b. purchaser's plant. Freight of \$300 is paid on the sale of this machinery.
- Mar. 20 A gear breaks on a machine that cost \$9,000 in 2017. The gear is replaced at a cost of \$2,000. The replacement does not extend the useful life of the machine but does make the machine more efficient.
- May 18 A special base installed for a machine in 2019 when the machine was purchased has to be replaced at a cost of \$5,500 because of defective workmanship on the original base. The cost of the machinery was \$14,200 in 2019. The cost of the base was \$3,500, and this amount was charged to the Machinery account in 2019.
- June 23 One of the buildings is repainted at a cost of \$6,900. It had not been painted since it was constructed in 2021.

Instructions

Prepare general journal entries for the transactions. (Round to the nearest dollar.)

E9.24 (LO 4) (Analysis of Subsequent Expenditures) Plant assets often require expenditures subsequent to acquisition. It is important that they be accounted for properly. Any errors will affect both the balance sheets and income statements for a number of years.

Instructions

For each of the following items, indicate whether the expenditure should be capitalized (C) or expensed (E) in the period incurred.

- _____ Improvement.
- _____ Replacement of a minor broken part on a machine.
- _____ Expenditure that increases the useful life of an existing asset.
- _____ Expenditure that increases the efficiency and effectiveness of a productive asset but does not increase its salvage value.
- _____ Expenditure that increases the efficiency and effectiveness of a productive asset and increases the asset's salvage value.
- _____ Expenditure that increases the quality of the output of the productive asset.
- _____ Improvement to a machine that increased its fair market value and its production capacity by 30% without extending the machine's useful life.
- _____ Ordinary repairs.

E9.25 (LO 5, 6) (Entries for Disposition of Assets) On December 31, 2025, Tritt Inc. has a machine with a book value of \$940,000. The original cost and related accumulated depreciation at this date are as follows.

Machine	\$1,300,000
Less: Accumulated depreciation	360,000
Book value	<u>\$ 940,000</u>

Depreciation is computed at \$60,000 per year on a straight-line basis.

Instructions

Presented below is a set of independent situations. For each independent situation, indicate the journal entry to be made to record the transaction. Make sure that depreciation entries are made to update the book value of the machine prior to its disposal.

- A fire completely destroys the machine on August 31, 2026. An insurance settlement of \$430,000 was received for this casualty. Assume the settlement was received immediately.
- On April 1, 2026, Tritt sold the machine for \$1,040,000 to Yoakam Company.
- *On July 31, 2026, the company donated this machine to the Mountain King City Council. The fair value of the machine at the time of the donation was estimated to be \$1,100,000.

E9.26 (LO 5) (Disposition of Assets) On April 1, 2025, Estefan Company received a condemnation award of \$430,000 cash as compensation for the forced sale of the company's land and building, which stood in the path of a new state highway. The land and building cost \$60,000 and \$280,000, respectively, when they were acquired. At April 1, 2025, the accumulated depreciation relating to the building amounted to \$160,000. On August 1, 2025, Estefan purchased a piece of replacement property for cash. The new land cost \$90,000, and the new building cost \$400,000.

Instructions

Prepare the journal entries to record the transactions on April 1 and August 1, 2025.

Problems

P9.1 (LO 1) Excel (Classification of Acquisition and Other Asset Costs) At December 31, 2024, certain accounts included in the property, plant, and equipment section of Reagan Company's balance sheet had the following balances.

Land	\$230,000
Buildings	890,000
Leasehold improvements	660,000
Equipment	875,000

During 2025, the following transactions occurred.

1. Land site number 621 was acquired for \$850,000. In addition, to acquire the land Reagan paid a \$51,000 commission to a real estate agent. Costs of \$35,000 were incurred to clear the land. During the course of clearing the land, timber and gravel were recovered and sold for \$13,000.
2. A second tract of land (site number 622) with a building was acquired for \$420,000. The closing statement indicated that the land value was \$300,000 and the building value was \$120,000. Shortly after acquisition, the building was demolished at a cost of \$41,000. A new building was constructed for \$330,000 plus the following costs.

Excavation fees	\$38,000
Architectural design fees	11,000
Building permit fee	2,500
Imputed interest on funds obtained from stock financing used during construction	8,500

The building was completed and occupied on September 30, 2025.

3. A third tract of land (site number 623) was acquired for \$650,000 and was put on the market for resale.
4. During December 2025, costs of \$89,000 were incurred to improve leased office space. The related lease will terminate on December 31, 2027, and is not expected to be renewed. (*Hint: Leasehold improvements should be handled in the same manner as land improvements.*)
5. A group of new machines was purchased under a royalty agreement that provides for payment of royalties based on units of production for the machines. The invoice price of the machines was \$87,000, freight costs were \$3,300, installation costs were \$2,400, and royalty payments for 2025 were \$17,500.

Instructions

- a. Prepare a detailed analysis of the changes in each of the following balance sheet accounts for 2025.

Land	Leasehold Improvements
Buildings	Equipment

Disregard the related accumulated depreciation accounts.

- b. List the items in the situation that were not used to determine the answer to (a) above, and indicate where, or if, these items should be included in Reagan's financial statements.

(AICPA adapted)

P9.2 (LO 1) (Asset Retirement Obligation) During 2024, YellowCard constructed a small manufacturing facility specifically to manufacture one particular accessory. YellowCard paid the construction contractor \$5,000,000 cash (which was the total contract price) and placed the facility into service on January 1, 2025. Because of technological change, YellowCard anticipates that the manufacturing facility will be useful for no more than 10 years. The local government where the facility is located required that, at the end of the 10-year period, YellowCard remediate the facility so that it can be used as a community center. YellowCard estimates the cost of remediation will be \$500,000.

YellowCard uses straight-line depreciation with \$0 salvage value for its plant asset and a 10% discount rate for asset retirement obligations.

Instructions

- Prepare the journal entries to record the January 1, 2025, transactions
- Prepare adjusting entries to record depreciation and interest expense on December 31, 2025.

P9.3 (LO 1, 5) (Classification of Acquisition Costs) Selected accounts included in the property, plant, and equipment section of Lobo Corporation's balance sheet at December 31, 2024, had the following balances.

Land	\$ 300,000
Land improvements	140,000
Buildings	1,100,000
Equipment	960,000

During 2025, the following transactions occurred.

- A tract of land was acquired for \$150,000 as a potential future building site.
- A plant facility consisting of land and building was acquired from Mendota Company in exchange for 20,000 shares of Lobo's common stock. On the acquisition date, Lobo's stock had a closing market price of \$37 per share on a national stock exchange. The plant facility was carried on Mendota's books at \$110,000 for land and \$320,000 for the building at the exchange date. Current appraised values for the land and building, respectively, are \$230,000 and \$690,000.
- Items of machinery and equipment were purchased at a total cost of \$400,000. Additional costs were incurred as follows.

Freight and unloading	\$13,000
Sales taxes	20,000
Installation	26,000

- Expenditures totaling \$95,000 were made for new parking lots, streets, and sidewalks at the corporation's various plant locations. These expenditures had an estimated useful life of 15 years.
- A machine costing \$80,000 on January 1, 2017, was scrapped on June 30, 2025. Double-declining-balance depreciation has been recorded on the basis of a 10-year life.
- A machine was sold for \$20,000 on July 1, 2025. Original cost of the machine was \$44,000 on January 1, 2022, and it was depreciated on the straight-line basis over an estimated useful life of 7 years and a salvage value of \$2,000.

Instructions

(Round to the nearest dollar.)

- Prepare a detailed analysis of the changes in each of the following balance sheet accounts for 2025.

Land	Buildings
Land Improvements	Equipment

(Hint: Disregard the related accumulated depreciation accounts.)

- List the items in the fact situation that were not used to determine the answer to (a), showing the pertinent amounts and supporting computations in good form for each item. In addition, indicate where, or if, these items should be included in Lobo's financial statements.

(AICPA adapted)

P9.4 (LO 1, 3) (Classification of Land and Building Costs) Spitfire Company was incorporated on January 2, 2025, but was unable to begin manufacturing activities until July 1, 2025, because new factory facilities were not completed until that date.

The Land and Buildings account reported the following items during 2025.

January 31	Land and buildings	\$160,000
February 28	Cost of removal of building	9,800
May 1	Partial payment of new construction	60,000
May 1	Legal fees paid	3,770
June 1	Second payment on new construction	40,000
June 1	Insurance premium	2,280
June 1	Special tax assessment	4,000
June 30	General expenses	36,300
July 1	Final payment on new construction	30,000
December 31	Asset write-up	53,800
		<hr/>
		399,950
December 31	Depreciation—2025 at 1%	(4,000)
		<hr/>
December 31, 2025	Account balance	\$395,950
		<hr/>

The following additional information is to be considered.

1. To acquire land and building, the company paid \$80,000 cash and 800 shares of its 8% cumulative preferred stock, par value \$100 per share. Fair value of the stock is \$117 per share.
2. Cost of removal of old buildings amounted to \$9,800, and the demolition company retained all materials of the building.
3. Legal fees covered the following.

Cost of organization	\$ 610
Examination of title covering purchase of land	1,300
Legal work in connection with construction contract	<u>1,860</u>
	<u>\$3,770</u>

4. Insurance premium covered the building for a 2-year term beginning May 1, 2025.
5. The special tax assessment covered street improvements that are permanent in nature.
6. General expenses covered the following for the period from January 2, 2025, to June 30, 2025.

President's salary	\$32,100
Plant superintendent's salary—supervision of new building	<u>4,200</u>
	<u>\$36,300</u>

7. Because of a general increase in construction costs after entering into the building contract, the board of directors increased the value of the building \$53,800, believing that such an increase was justified to reflect the current market at the time the building was completed. Retained earnings was credited for this amount.
8. Estimated life of building—50 years.
Depreciation for 2025—1% of asset value (1% of \$400,000, or \$4,000).

Instructions

- a. Prepare entries to reflect correct land, buildings, and depreciation accounts at December 31, 2025.
- b. Show the proper presentation of land, buildings, and depreciation on the balance sheet at December 31, 2025.

(AICPA adapted)

P9.5 (LO 1, 3, 5, 6) Groupwork (Dispositions, Including Condemnation, Demolition, and Trade-In) Presented below is a schedule of property dispositions for Hollerith Co.

Schedule of Property Dispositions					
	Cost	Accumulated Depreciation	Cash Proceeds	Fair Value	Nature of Disposition
Land	\$40,000	—	\$31,000	\$31,000	Condemnation
Building	15,000	—	3,600	—	Demolition
Warehouse	70,000	\$16,000	74,000	74,000	Destruction by fire
Machine	8,000	2,800	900	7,200	Trade-in
Furniture	10,000	7,850	—	3,100	Contribution
Automobile	9,000	3,460	2,960	2,960	Sale

The following additional information is available.

Land: On February 15, a condemnation award was received as consideration for unimproved land held primarily as an investment, and on March 31, another parcel of unimproved land to be held as an investment was purchased at a cost of \$35,000.

Building: On April 2, land and building were purchased at a total cost of \$75,000, of which 20% was allocated to the building on the corporate books. The real estate was acquired with the intention of demolishing the building, and this was accomplished during the month of November. Cash proceeds received in November represent the net proceeds from demolition of the building.

Warehouse: On June 30, the warehouse was destroyed by fire. The warehouse was purchased January 2, 2017, and had depreciated \$16,000. On December 27, the insurance proceeds and other funds were used to purchase a replacement warehouse at a cost of \$90,000.

Machine: On December 26, the machine was exchanged for another machine having a fair value of \$6,300 and cash of \$900 was received. (The exchange lacks commercial substance.)

***Furniture:** On August 15, furniture was contributed to a qualified charitable organization. No other contributions were made or pledged during the year.

Automobile: On November 3, the automobile was sold to Jared Winger, a stockholder.

Instructions

Indicate how these items would be reported on the income statement of Hollerith Co.

(AICPA adapted)

P9.6 (LO 1, 2) Excel (Classification of Costs and Interest Capitalization) On January 1, 2025, Blair Corporation purchased for \$500,000 a tract of land (site number 101) with a building. Blair paid a real estate broker's commission of \$36,000, legal fees of \$6,000, and title guarantee insurance of \$18,000. The closing statement indicated that the land value was \$500,000 and the building value was \$100,000. Shortly after acquisition, the building was razed at a cost of \$54,000.

Blair entered into a \$3,000,000 fixed-price contract with Slatkin Builders, Inc. on March 1, 2025, for the construction of an office building on land site number 101. The building was completed and occupied on September 30, 2026. Additional construction costs were incurred as follows.

Plans, specifications, and blueprints	\$21,000
Architects' fees for design and supervision	82,000

The building is estimated to have a 40-year life from date of completion and will be depreciated using the 150% declining-balance method.

To finance construction costs, Blair borrowed \$3,000,000 on March 1, 2025. The loan is payable in 10 annual installments of \$300,000 starting on March 1, 2026, plus interest at the rate of 10%. Blair's weighted-average amounts of accumulated building construction expenditures were as follows.

For the period March 1 to December 31, 2025	\$1,300,000
For the period January 1 to September 30, 2026	1,900,000

Instructions

- Prepare a schedule that discloses the individual costs making up the balance in the land account in respect of land site number 101 as of September 30, 2026.
- Prepare a schedule that discloses the individual costs that should be capitalized in the office building account as of September 30, 2026. Show supporting computations in good form.

(AICPA adapted)

P9.7 (LO 1, 2) (Interest During Construction) Grieg Landscaping began construction of a new plant on December 1, 2025. On this date, the company purchased a parcel of land for \$139,000 in cash. In addition, it paid \$2,000 in surveying costs and \$4,000 for a title insurance policy. An old dwelling on the premises was demolished at a cost of \$3,000, with \$1,000 being received from the sale of materials.

Architectural plans were also formalized on December 1, 2025, when the architect was paid \$30,000. The necessary building permits costing \$3,000 were obtained from the city and paid for on December 1 as well. The excavation work began during the first week in December with payments made to the contractor in 2026 as follows.

<u>Date of Payment</u>	<u>Amount of Payment</u>
March 1	\$240,000
May 1	330,000
July 1	60,000

The building was completed on July 1, 2026.

To finance construction of this plant, Grieg borrowed \$600,000 from the bank on December 1, 2025. Grieg had no other borrowings. The \$600,000 was a 10-year loan bearing interest at 8%.

Instructions

Compute the balance in each of the following accounts at December 31, 2025, and December 31, 2026. (Round amounts to the nearest dollar.)

- Land.
- Buildings.
- Interest Expense.

P9.8 (LO 2) Groupwork (Capitalization of Interest) Laserwords Inc. is a book distributor that had been operating in its original facility since 1995. The increase in certification programs and continuing education requirements in several professions has contributed to an annual growth rate of 15% for Laserwords since 2020. Laserwords' original facility became obsolete by early 2025 because of the increased sales volume and the fact that Laserwords now carries DVDs in addition to books.

On June 1, 2025, Laserwords contracted with Black Construction to have a new building constructed for \$4,000,000 on land owned by Laserwords. The payments made by Laserwords to Black Construction are shown in the schedule below.

<u>Date</u>	<u>Amount</u>
July 30, 2025	\$ 900,000
January 30, 2026	1,500,000
May 30, 2026	1,600,000
Total payments	<u>\$4,000,000</u>

Construction was completed and the building was ready for occupancy on May 27, 2026. Laserwords had no new borrowings directly associated with the new building but had the following debt outstanding at May 31, 2026, the end of its fiscal year.

10%, 5-year note payable of \$2,000,000, dated April 1, 2022, with interest payable annually on April 1.

12%, 10-year bond issue of \$3,000,000 sold at par on June 30, 2018, with interest payable annually on June 30.

The new building qualifies for interest capitalization. The effect of capitalizing the interest on the new building, compared with the effect of expensing the interest, is material.

Instructions

- Compute the weighted-average accumulated expenditures on Laserwords' new building during the capitalization period.
- Compute the avoidable interest on Laserwords' new building. (Round to one decimal place.)
- Some interest cost of Laserwords Inc. is capitalized for the year ended May 31, 2026.
 - Identify the items relating to interest costs that must be disclosed in Laserwords' financial statements.
 - Compute the amount of each of the items that must be disclosed.

(CMA adapted)

P9.9 (LO 3) (Nonmonetary Exchanges) Holyfield Corporation wishes to exchange a machine used in its operations. Holyfield has received the following offers from other companies in the industry.

- Dorsett Company offered to exchange a similar machine plus \$23,000. (The exchange has commercial substance for both parties.)
- Winston Company offered to exchange a similar machine. (The exchange lacks commercial substance for both parties.)
- Liston Company offered to exchange a similar machine, but wanted \$3,000 in addition to Holyfield's machine. (The exchange has commercial substance for both parties.)

In addition, Holyfield contacted Greeley Corporation, a dealer in machines. To obtain a new machine, Holyfield must pay \$93,000 in addition to trading in its old machine.

	<u>Holyfield</u>	<u>Dorsett</u>	<u>Winston</u>	<u>Liston</u>	<u>Greeley</u>
Machine cost	\$160,000	\$120,000	\$152,000	\$160,000	\$130,000
Accumulated depreciation	60,000	45,000	71,000	75,000	—0—
Fair value	92,000	69,000	92,000	95,000	185,000

Instructions

For each of the four independent situations, prepare the journal entries to record the exchange on the books of each company.

P9.10 (LO 3) (Nonmonetary Exchanges) On August 1, Hyde, Inc. exchanged productive assets with Wiggins, Inc. Hyde's asset is referred to below as "Asset A," and Wiggins' is referred to as "Asset B." The following facts pertain to these assets.

	<u>Asset A</u>	<u>Asset B</u>
Original cost	\$96,000	\$110,000
Accumulated depreciation (to date of exchange)	40,000	47,000
Fair value at date of exchange	60,000	75,000
Cash paid by Hyde, Inc.	15,000	
Cash received by Wiggins, Inc.		15,000

Instructions

- Assuming that the exchange of Assets A and B has commercial substance, record the exchange for both Hyde, Inc. and Wiggins, Inc. in accordance with generally accepted accounting principles.

- b. Assuming that the exchange of Assets A and B lacks commercial substance, record the exchange for both Hyde, Inc. and Wiggins, Inc. in accordance with generally accepted accounting principles.

P9.11 (LO 3) (Nonmonetary Exchanges) During the current year, Marshall Construction trades an old crane that has a book value of \$90,000 (original cost \$140,000 less accumulated depreciation \$50,000) for a new crane from Brigham Manufacturing Co. The new crane cost Brigham \$165,000 to manufacture and is classified as inventory. The following information is also available.

	<u>Marshall Const.</u>	<u>Brigham Mfg. Co.</u>
Fair value of old crane	\$ 82,000	
Fair value of new crane		\$200,000
Cash paid	118,000	
Cash received		118,000

Instructions

- Assuming that this exchange is considered to have commercial substance, prepare the journal entries on the books of (1) Marshall Construction and (2) Brigham Manufacturing.
- Assuming that this exchange lacks commercial substance for Marshall, prepare the journal entries on the books of Marshall Construction.
- Assuming the same facts as those in (a), except that the fair value of the old crane is \$98,000 and the cash paid is \$102,000, prepare the journal entries on the books of (1) Marshall Construction and (2) Brigham Manufacturing.
- Assuming the same facts as those in (b), except that the fair value of the old crane is \$97,000 and the cash paid \$103,000, prepare the journal entries on the books of (1) Marshall Construction and (2) Brigham Manufacturing.

P9.12 (LO 1, 3) (Purchases by Deferred Payment, Lump-Sum, and Nonmonetary Exchanges) Klamath Company, a manufacturer of ballet shoes, is experiencing a period of sustained growth. In an effort to expand its production capacity to meet the increased demand for its product, the company recently made several acquisitions of plant and equipment. Rob Joffrey, newly hired in the position of fixed-asset accountant, requested that Danny Nolte, Klamath's controller, review the following transactions.

Transaction 1: On June 1, 2025, Klamath Company purchased equipment from Wyandot Corporation. Klamath issued a \$28,000, 4-year, zero-interest-bearing note to Wyandot for the new equipment. Klamath will pay off the note in four equal installments due at the end of each of the next 4 years. At the date of the transaction, the prevailing market rate of interest for obligations of this nature was 10%. Freight costs of \$425 and installation costs of \$500 were incurred in completing this transaction. The appropriate factors for the time value of money at a 10% rate of interest are given below.

Future value of \$1 for 4 periods	1.46
Future value of an ordinary annuity for 4 periods	4.64
Present value of \$1 for 4 periods	0.68
Present value of an ordinary annuity for 4 periods	3.17

Transaction 2: On December 1, 2025, Klamath Company purchased several assets of Yakima Shoes Inc., a small shoe manufacturer whose owner was retiring. The purchase amounted to \$220,000 and included the assets listed below. Klamath Company engaged the services of Tennyson Appraisal Inc., an independent appraiser, to determine the fair values of the assets which are also presented below.

	<u>Yakima Book Value</u>	<u>Fair Value</u>
Inventory	\$ 60,000	\$ 50,000
Land	40,000	80,000
Buildings	70,000	120,000
	<u>\$170,000</u>	<u>\$250,000</u>

During its fiscal year ended May 31, 2026, Klamath incurred \$8,000 for interest expense in connection with the financing of these assets.

Transaction 3: On March 1, 2026, Klamath Company exchanged a number of used trucks plus cash for vacant land adjacent to its plant site. (The exchange has commercial substance.) Klamath intends to use the land for a parking lot. The trucks had a combined book value of \$35,000, as Klamath had recorded \$20,000 of accumulated depreciation against these assets. Klamath's purchasing agent, who has had previous dealings in the secondhand market, indicated that the trucks had a fair value of \$46,000 at the time of the transaction. In addition to the trucks, Klamath Company paid \$19,000 cash for the land.

Instructions

- a. Plant assets such as land, buildings, and equipment receive special accounting treatment. Describe the major characteristics of these assets that differentiate them from other types of assets.
- b. For each of the three transactions described above, determine the value at which Klamath Company should record the acquired assets. Support your calculations with an explanation of the underlying rationale.
- c. The books of Klamath Company show the following additional transactions for the fiscal year ended May 31, 2026.
 1. Acquisition of a building for speculative purposes.
 2. Purchase of a 2-year insurance policy covering plant equipment.
 3. Purchase of the rights for the exclusive use of a process used in the manufacture of ballet shoes.

For each of these transactions, indicate whether the asset should be classified as a plant asset. If it is a plant asset, explain why it is. If it is not a plant asset, explain why not, and identify the proper classification.

(CMA adapted)

Using Your Judgment

Financial Statement Analysis Case: Johnson & Johnson

UYJ 9.1 Johnson & Johnson, the world's leading and most diversified healthcare corporation, serves its customers through specialized worldwide franchises. Each of its franchises consists of a number of companies throughout the world that focus on a particular healthcare market, such as surgical sutures, consumer pharmaceuticals, or contact lenses. Information related to its property, plant, and equipment in a recent annual report is shown in the following notes to the financial statements.

1. Property, Plant and Equipment and Depreciation

Property, plant and equipment are stated at cost. The Company utilizes the straight-line method of depreciation over the estimated useful lives of the assets:

Building and building equipment	20–30 years
Land and leasehold improvements	10–20 years
Machinery and equipment	2–13 years

2. Property, Plant and Equipment

At the end of the current and prior years, property, plant and equipment at cost and accumulated depreciation were:

<u>(dollars in millions)</u>	<u>Current Year</u>	<u>Prior Year</u>
Land and land improvements	\$ 829	\$ 753
Buildings and building equipment	11,240	10,112
Machinery and equipment	25,949	23,554
Construction in progress	3,448	3,354
	41,466	37,773
Less: accumulated depreciation	24,461	21,861
	<u>\$17,005</u>	<u>\$15,912</u>

The Company capitalizes interest expense as part of the cost of construction of facilities and equipment. Interest expense capitalized in the current and prior two years was \$94 million, \$102 million and \$102 million, respectively. Depreciation expense, including the amortization of capitalized interest in the current and prior two years was \$2.6 billion, \$2.5 billion and \$2.5 billion, respectively.

Johnson & Johnson provided the following selected information in its cash flow statement.

Johnson & Johnson Consolidated Financial Statements (excerpts)	
Net cash flows from operating activities	\$21,056
Cash flows from investing activities	
Additions to property, plant and equipment	(3,279)
Proceeds from the disposal of assets	1,832
Acquisitions, net of cash acquired	(35,151)
Purchases of investments	(6,153)
Sales of investments	28,117
Other (primarily intangibles)	(234)
Net cash used by investing activities	(14,868)
Cash flows from financing activities	
Dividends to shareholders	(8,943)
Repurchase of common stock	(6,358)
Proceeds from short-term debt	869
Retirement of short-term debt	(1,330)
Proceeds from long-term debt	8,992
Retirement of long-term debt	(1,777)
Proceeds from the exercise of stock options/excess tax benefits	1,062
Other	(188)
Net cash used by financing activities	(7,673)
Effect of exchange rate changes on cash and cash equivalents	337
Increase in cash and cash equivalents	(1,148)
Cash and cash equivalents, beginning of year (Note 1)	18,972
Cash and cash equivalents, end of year (Note 1)	<u>\$17,824</u>
Supplemental cash flow data	
Cash paid during the year for:	
Interest	\$ 960
Interest, net amount capitalized	866
Income taxes	3,312

Instructions

- What was the cost of buildings and building equipment at the end of the current year?
- Does Johnson & Johnson use a conservative or liberal method to depreciate its property, plant, and equipment?
- What was the actual interest paid by the company in the current year?
- What is Johnson & Johnson's free cash flow? From the information provided, comment on Johnson & Johnson's financial flexibility.

Accounting, Analysis, and Principles

UYJ9.2 Durler Company purchased equipment on January 2, 2021, for \$112,000. The equipment had an estimated useful life of 5 years with an estimated salvage value of \$12,000. Durler uses straight-line depreciation on all assets. On January 2, 2025, Durler exchanged this equipment plus \$12,000 in cash for newer equipment. The old equipment has a fair value of \$50,000.

Accounting

Prepare the journal entry to record the exchange on the books of Durler Company. Assume that the exchange has commercial substance.

Analysis

How will this exchange affect comparisons of the return on asset ratio for Durler in the year of the exchange compared to prior years?

Principles

How does the concept of commercial substance affect the accounting and analysis of this exchange?

Developing Your Professional Skills

Critical-Thinking Cases

CT9.1 (LO 1, 5) Writing (Acquisition, Improvements, and Sale of Realty) Tonkawa Company purchased land for use as its corporate headquarters. A small factory that was on the land when it was purchased was torn down before construction of the office building began. Furthermore, a substantial amount of rock blasting and removal had to be done to the site before construction of the building foundation began. Because the office building was set back on the land far from the public road, Tonkawa Company had the contractor construct a paved road that led from the public road to the parking lot of the office building.

Three years after the office building was occupied, Tonkawa Company added four stories to the office building. The four stories had an estimated useful life of 5 years more than the remaining estimated useful life of the original office building.

Ten years later, the land and building were sold at an amount more than their net book value, and Tonkawa Company had a new office building constructed in another state for use as its new corporate headquarters.

Instructions

- Which of the expenditures above should be capitalized? How should each be depreciated or amortized? Discuss the rationale for your answers.
- How would the sale of the land and building be accounted for? Include in your answer an explanation of how to determine the net book value at the date of sale. Discuss the rationale for your answer.

CT9.2 (LO 1) (Accounting for Self-Constructed Assets) Troopers Medical Labs, Inc., began operations 5 years ago producing stetricks, a new type of instrument it hoped to sell to doctors, dentists, and hospitals. The demand for stetricks far exceeded initial expectations, and the company was unable to produce enough stetricks to meet demand.

The company was manufacturing its product on equipment that it built at the start of its operations. To meet demand, more efficient equipment was needed. The company decided to design and build the equipment, because the equipment currently available on the market was unsuitable for producing stetricks.

In 2025, a section of the plant was devoted to development of the new equipment and a special staff was hired. Within 6 months, a machine developed at a cost of \$714,000 increased production dramatically and reduced labor costs substantially. Elated by the success of the new machine, the company built three more machines of the same type at a cost of \$441,000 each.

Instructions

- In general, what costs should be capitalized for self-constructed equipment?
- Discuss the propriety of including in the capitalized cost of self-constructed assets:
 - The increase in overhead caused by the self-construction of fixed assets.
 - A proportionate share of overhead on the same basis as that applied to goods manufactured for sale.
- Discuss the proper accounting treatment of the \$273,000 (\$714,000 – \$441,000) by which the cost of the first machine exceeded the cost of the subsequent machines. This additional cost should not be considered research and development costs.

CT9.3 (LO 2) Writing (Capitalization of Interest) Vania Magazines started construction of a warehouse building for its own use at an estimated cost of \$5,000,000 on January 1, 2019, and completed

the building on December 31, 2024. During the construction period, Vania has the following debt obligations outstanding.

Construction loan—12% interest, payable semiannually, issued December 31, 2023	\$2,000,000
Short-term loan—10% interest, payable monthly, and principal payable at maturity, on May 30, 2025	1,400,000
Long-term loan—11% interest, payable on January 1 of each year; principal payable on January 1, 2027	1,000,000

Total cost amounted to \$5,200,000, and the weighted-average accumulated expenditures was \$3,500,000.

Jane Esplanade, the president of the company, has been shown the costs associated with this construction project and capitalized on the balance sheet. She is bothered by the “avoidable interest” included in the cost. She argues that, first, all the interest is unavoidable—no one lends money without expecting to be compensated for it. Second, why can’t the company use all the interest on all the loans when computing this avoidable interest? Finally, why can’t her company capitalize all the annual interest that accrued over the period of construction?

Instructions

(Round the weighted-average interest rate to two decimal places.)

You are the manager of accounting for the company. In a memo, explain what avoidable interest is, how you computed it (being especially careful to explain why you used the interest rates that you did), and why the company cannot capitalize all its interest for the year. Attach a schedule supporting any computations that you use.

CT9.4 (LO 3) Writing (Nonmonetary Exchanges) You have two clients that are considering trading machinery with each other. Although the machines are different from each other, you believe that an assessment of expected cash flows on the exchanged assets will indicate the exchange lacks commercial substance. Your clients would prefer that the exchange be deemed to have commercial substance, to allow them to record gains. Here are the facts:

	<u>Client A</u>	<u>Client B</u>
Original cost	\$100,000	\$150,000
Accumulated depreciation	40,000	80,000
Fair value	80,000	100,000
Cash received (paid)	(20,000)	20,000

Instructions

- Record the trade-in on Client A’s books assuming the exchange has commercial substance.
- Record the trade-in on Client A’s books assuming the exchange lacks commercial substance.
- Write a memo to the controller of Company A indicating and explaining the dollar impact on current and future statements of treating the exchange as having, versus lacking, commercial substance.
- Record the entry on Client B’s books assuming the exchange has commercial substance.
- Record the entry on Client B’s books assuming the exchange lacks commercial substance.
- Write a memo to the controller of Company B indicating and explaining the dollar impact on current and future statements of treating the exchange as having, versus lacking, commercial substance.

CT9.5 (LO 1) (Costs of Acquisition) The invoice price of a machine is \$50,000. Various other costs relating to the acquisition and installation of the machine including transportation, electrical wiring, special base, and so on amount to \$7,500. The machine has an estimated life of 10 years, with no salvage value at the end of that period.

The owner of the business suggests that the incidental costs of \$7,500 be charged to expense immediately for the following reasons.

- If the machine should be sold, these costs cannot be recovered in the sales price.
- The inclusion of the \$7,500 in the machinery account on the books will not necessarily result in a closer approximation of the market price of this asset over the years, because of the possibility of changing demand and supply levels.
- Charging the \$7,500 to expense immediately will reduce federal income taxes.

Instructions

Discuss each of the points raised by the owner of the business.

(AICPA adapted)

CT9.6 (LO 1) Ethics (Cost of Land vs. Building—Ethics) Tones Company purchased a warehouse in a downtown district where land values are rapidly increasing. Gerald Carter, controller, and Wilma Ankara, financial vice president, are trying to allocate the cost of the purchase between the land and the building. Noting that depreciation can be taken only on the building, Carter favors placing a very high proportion of the cost on the warehouse itself, thus reducing taxable income and income taxes. Ankara, his supervisor, argues that the allocation should recognize the increasing value of the land, regardless of the depreciation potential of the warehouse. Besides, she says, net income is negatively impacted by additional depreciation and will cause the company's stock price to go down.

Instructions

Answer the following questions.

- a. What stakeholder interests are in conflict?
- b. What ethical issues does Carter face?
- c. How should these costs be allocated?

Codification Exercises

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

CE9.1 Access the glossary (“Master Glossary”) to answer the following.

- What does it mean to “capitalize” an item?
- What is the definition of a nonmonetary asset?
- What is a nonreciprocal transfer?
- What is the definition of “contribution”?

CE9.2 Herb Scholl, the owner of Scholl’s Company, wonders whether interest costs associated with developing land can ever be capitalized. What does the Codification say on this matter?

CE9.3 What guidance does the Codification provide on the accrual of costs associated with planned major maintenance activities?

CE9.4 Briefly describe how the purchases and sales of inventory with the same counterparty are similar to the accounting for other nonmonetary exchanges.

Codification Research Case

Your client is in the planning phase for a major plant expansion, which will involve the construction of a new warehouse. The assistant controller does not believe that interest cost can be included in the cost of the warehouse, because it is a financing expense. Others on the planning team believe that some interest cost can be included in the cost of the warehouse, but no one could identify the specific authoritative guidance for this issue. Your supervisor asks you to research this issue.

Instructions

If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Provide Codification references for your responses.

- Is it permissible to capitalize interest into the cost of assets? Provide authoritative support for your answer.
- What are the objectives for capitalizing interest?
- Discuss which assets qualify for interest capitalization.
- Is there a limit to the amount of interest that may be capitalized in a period?
- If interest capitalization is allowed, what disclosures are required?

Additional Professional Resources

Go to Wiley Course Resources for other career-readiness resources, such as career coaching, internship opportunities, and CPAexcel prep.

Analytics in Action Activities

Using Data Visualizations to Analyze the Impact of Capital Investments

DA9.1 Investments in property, plant, and equipment often make up a significant portion of a company’s total assets. It makes sense, then, that management and investors alike would want to understand how these investments affect the company, from potential tax savings to the income they help produce. Data visualizations such as the following can provide an effective way to quickly evaluate the impact of capital expenditures on a company’s overall performance.

**Required**

For this exercise, you will review four different visualizations and identify which chart best shows the total dollar amount of tax deductions by category over time.

[Go to Wiley Course Resources for complete details and instructions.](#)

DA9.2 Capital investments will fluctuate over time, depending on where a company is in its life cycle. Investors can pull financial data from a company's 10-K report and evaluate that data over time and compare across different companies.

Required

Using a graph that compares net property, plant, and equipment balances for three different companies over a five-year period, you will evaluate which company is increasing its capital investment and then document your insights on the comparisons among the three companies.

[Go to Wiley Course Resources for complete details and instructions.](#)

DA9.3 Capital investments are a key component of company growth and often correlated with a focus on innovation. Successful investments will provide a return in the form of net income.

Required

For this exercise, you will review a graph that shows trends in net income relative to capital expenditures for two different companies over a five-year period. Using the visualization, you will explain the relationship between capital spending and net income for the companies and then document your insights regarding which company is more innovative.

[Go to Wiley Course Resources for complete details and instructions.](#)

Using Data Analytics to Evaluate the Cost-Benefit of a Policy Change

DA9.4 For many companies, their detailed list of fixed assets can be quite long. From vehicles to buildings, to computers, copiers, and desks, the number of fixed assets held by a company certainly accumulates over time. However, the more assets a company holds, the greater number of potential repairs and maintenance transactions.

Companies must evaluate these expenditures to understand if they should be capitalized as part of the long-term asset or expensed as incurred. To do that, management will often establish a dollar threshold; all transactions above that threshold will be reviewed for potential capitalization. What happens, though, if management wants to consider changing that threshold amount? Using analytical tools like Excel can help companies sift through large amounts of data and evaluate all aspects of a business decision.

Required

Using a large data set of fixed asset repair expenditures over the course of a year, you will use Excel to help summarize the cost of those repairs for potential capitalization. Your analysis will evaluate the cost-benefit of increasing the dollar value threshold.

Depreciation, Impairments, and Depletion

WHAT are depreciation, impairments, and depletion?

In Chapter 9, you learned how to account for companies' significant investments in tangible long-lived assets at acquisition. What about the accounting in the periods after acquisition, as companies use these assets in their operations? Depreciation is the accounting process of allocating the historical cost of tangible assets to expense in a systematic and rational manner to those periods expected to benefit from the use of the asset. The term impairment applies to the situation when events or changes in circumstances indicate that the company may not be able to recover the carrying amount of a long-lived asset. Mining and oil companies use the term depletion to describe the allocation of the cost of natural resources (such as gravel, oil, and coal) over periods when those assets are generating cash flows and income.

WHY is information on depreciation, impairments, and depletion important?

Investors and creditors expect that the cost of acquiring long lived assets and natural resources to be captured in the amounts reported as assets on the balance sheet and as expenses in income. That is, the periodic depreciation process results in a reduction in the carrying value of the asset on the balances sheet and an increase in depreciation expense, which reduces income.

When companies report impairments, they are giving investors important information about the prospects for future cash flows—a key element of the objective of financial reporting. For investors and creditors to have assurance that the amounts reported on the balance sheet for property, plant, and equipment are relevant and representationally faithful, appropriate and timely impairment charges must be reported. For example, when the economy falters, impairment losses for many companies can be substantial. The adjacent chart indicates that impairments are on the rise in the wake of the pandemic-induced economic downturn. For example, **Disney** booked a \$4.95 billion charge, due to an under-performance of the international channels business that was exacerbated by the impact of Covid-19.

HOW do companies account for depreciation, impairments, and depletion?

The accounting for depreciation and depletion involves three factors: (1) determining the depreciation or depletion base, (2) estimating service (useful) lives, and (3) applying a method of cost allocation (depreciation or depletion). Common allocation methods for depreciation are activity (based on the use of the asset), straight-line, or decreasing-charge approaches. Depletion is generally a function of the number of units of natural resource withdrawn during the period. Impairment losses are recorded if events and changes in circumstances indicate a possible impairment and it is determined that the sum of the expected future net cash flows from the long-lived asset is less than the carrying amount of the asset. The impairment loss is the amount by which the carrying amount of the asset exceeds the fair value of the asset.

10.1 Depreciation—A Method of Cost Allocation

LEARNING OBJECTIVE 1

Describe depreciation concepts and methods of depreciation.

You will probably purchase a used or new car in your lifetime. One common observation about this purchase is that once you buy the car and drive it off the lot, your car immediately drops in value. And as you drive the car over time, the value continues to decline because you are putting more mileage on it. In both cases, people generally say the car **depreciates** in value over time. Why does it lose value? Because over time, normal wear and tear occurs—parts get old and need to be replaced, scratches or dents happen, and the interior becomes stained or worn.

For accounting purposes, however, depreciation refers to cost allocation of an asset and not to valuation of an asset. Depreciation is therefore the process of allocating the cost of tangible assets to expense in a systematic and rational manner to those periods expected to benefit from the use of the asset. For example, assume that **Costco** purchases equipment that costs \$1,000,000 on January 1, 2025, and estimates that the equipment has a useful life of 10 years. Costco depreciates this equipment over a 10-year period. At the end of 2025, Costco reports the book value of the equipment as follows, assuming it has accumulated depreciation of \$100,000.

Equipment	\$1,000,000
Accumulated depreciation—equipment	<u>100,000</u>
Book value of equipment	<u>\$ 900,000</u>

What does book value represent? It shows how much of the tangible assets cost (in this case, Costco’s equipment) is left to be depreciated or expensed. For a company like Costco, book value is a computation that you need to understand because:

- Companies report book values on their balance sheets and notes to the financial statements.
- Book value is used in any calculation of gains and losses on possible disposal of the equipment, as well as sometimes used in some depreciation calculations.

It is unlikely that Costco’s book value will be equal to the equipment’s fair value. But why would Costco not use the fair value of the equipment rather than its book value? Using fair value is problematic because:

1. It would be time-consuming and costly to determine the fair value of all of Costco’s equipment (or property, plant, and equipment) when preparing financial statements.
2. It may lead to management bias as valuations of equipment often will be subjective and lack verifiability. The only way to determine the fair value of equipment (or property, plant, and equipment) is to sell these types of assets to a willing buyer.

Therefore, accounting standards allow companies to follow a cost allocation process rather than trying to determine the fair value of property, plant, and equipment. Other types of assets are also subject to the cost allocation process. Different terminology is used, depending on the type of asset involved in the cost allocation:

- **Depreciation.** Cost allocation of property, plant, and equipment. Remember that land is not depreciated, but land improvements are depreciated.
- **Depletion.** Cost allocation of natural resources (such as timber, gravel, oil, and coal).
- **Amortization.** Cost allocation of intangible assets (such as patents and copyrights).

This chapter discusses depreciation and depletion, and Chapter 11 covers amortization of intangible assets. Let's begin with more detail about the depreciation process.

Factors Involved in the Depreciation Process

Before establishing a systematic pattern for depreciation expense, you must answer three basic questions:

1. What depreciable base is to be used for the asset?
2. What is the asset's useful life?
3. What method of cost allocation is best for this asset?

To answer these questions, you have to combine several estimates into one single figure. Note the use of the term **estimates**. The depreciation process is based on estimates because no one can predict with certainty how long an asset will be used or what events might happen that would impact the use of the asset.

Depreciable Base for the Asset

The base established for depreciation is a function of two factors:

1. **Original cost of the asset.** The determination of original, or historical, cost was discussed in Chapter 9.
2. **Salvage value (disposal value).** This is the estimated amount that a company will receive when it sells the asset or removes it from service. The salvage value is **not** depreciated because the company expects to receive that amount when the asset is later sold or scrapped. It is the amount to which a company writes down or depreciates the asset during its useful life.

FACTS Assume that **Exact Science** has a machine that costs \$10,000 and has a salvage value of \$1,000.

QUESTION How would you compute the depreciable base of Exact Science's machine?

SOLUTION

The depreciable base of the machine is computed as follows.

Original cost	\$10,000
Less: Salvage value	<u>1,000</u>
Depreciation base	<u>\$ 9,000</u>

Exact Science would depreciate the \$9,000 over the period the asset is used.

Example 10.1 Depreciable Base

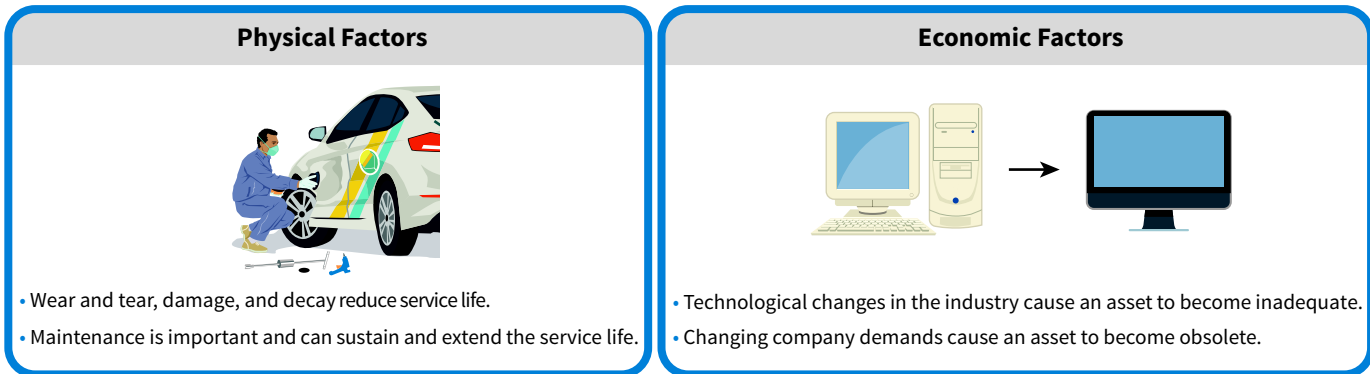

From a practical standpoint, companies often assign a zero salvage value simply because it is difficult to determine a reasonable estimate. If the salvage value is zero, then the depreciable base is the original cost of the asset.

Estimation of Service Lives

The service, or useful, life of an asset often differs from its physical life. A piece of machinery may be physically capable of producing a given product for many years beyond its service life. But a company may not use the equipment for all that time because the cost of producing the product in later years may be too high. For example, the old Slater cotton mill in Pawtucket, Rhode Island, is preserved in remarkable physical condition as an historic landmark in U.S. industrial development, although its service life was terminated many years ago.

Companies retire assets for two reasons: **physical factors** (such as casualty or expiration of physical life) and **economic factors** (obsolescence). As shown in **Illustration 10.1**, physical and economic factors affect the service life of an asset. These factors impact company decisions about when to dispose of an asset.

ILLUSTRATION 10.1 Physical and Economic Factors of Service Life

In most cases, a company estimates the service life of an asset based on its past experience with the same or similar assets. If the company does not have experience to draw upon, it should select a service life that is reasonable for the situation. For example, it would not be reasonable to depreciate a company truck over 40 years. With the amount of wear and tear put on company vehicles, it is probable the truck would be replaced much sooner than that.

Note that the service life is an estimate used for the purpose of cost allocation and determining the amount of depreciation expense recorded each accounting period. If a company determines that the service life of a machine is 10 years, does that mean the company is obligated to dispose of the machine at the end of 10 years? No, it does not. If the machine is still in good working order and has not become obsolete, the company can continue to use it. But after 10 years, there would be no more depreciation expense recognized on the machine. The cost would have been fully allocated to expense over the 10-year period and the book value would be as \$0.¹

Methods of Depreciation

Underlying Concepts

Depreciation attempts to recognize the cost of an asset in the periods that benefit from the use of that asset.

The third factor involved in the depreciation process is the **method** of cost allocation. The profession requires that the depreciation method employed be “systematic and rational” (see **Underlying Concepts**). Companies may use a number of depreciation methods, as follows.

1. Activity method (units of use or production).
2. Straight-line method.
3. Decreasing-charge methods (accelerated):
 - a. Sum-of-the-years'-digits.
 - b. Declining-balance method.
4. Group and composite methods.

To illustrate these depreciation methods, assume that Gordon Dining Services recently purchased an autonomous food delivery robot to meet increased demand. **Illustration 10.2** contains the pertinent data concerning this purchase.

¹The airline industry illustrates the type of problem involved in estimation. In the past, aircraft were assumed not to wear out—they just became obsolete. However, some jets have been in service as long as 20 years, and maintenance of these aircraft has become increasingly expensive. As a result, some airlines now replace aircraft not because of obsolescence but because of physical deterioration.

Cost of robot	\$500,000
Estimated useful life	5 years
Estimated salvage value	\$50,000
Productive life in hours	30,000 hours

ILLUSTRATION 10.2 Data Used to Illustrate Depreciation Methods

Activity Method

The **activity method** (also called the **variable-charge** or **units-of-production approach**) assumes that depreciation is **a function of use or productivity, instead of the passage of time**. In other words, more depreciation should be recognized the more the asset is used. A company considers the life of the asset in terms of either:

- An **output** measure, such as units it produced from equipment or miles driven on a vehicle.
- An **input** measure, such as the number of hours a machine works.

For some assets, determining the usage is difficult or not feasible. For example, what would be an input or output measure for a building? A building steadily deteriorates due to the elements (time) regardless of its use. In addition, where economic or physical factors affect an asset, independent of its use, the activity method loses much of its significance.

FACTS Refer to the Gordon Dining Services data in Illustration 10.2. Gordon Dining decides to use the activity method to compute its depreciation for the current year.

QUESTION If Gordon Dining Services uses the delivery bot for 4,000 hours in the first year, how would you compute its depreciation expense?

SOLUTION

The depreciation expense for Gordon Dining is computed as follows.

$$\frac{\text{Cost} - \text{Salvage Value}}{\text{Total Estimated Activity}} = \text{Depreciation Expense}$$

$$\frac{\$500,000 - \$50,000}{30,000 \text{ hours}} = \$15 \text{ per hour}$$

First-year depreciation expense is therefore 4,000 hours × \$15 per hour = \$60,000.

Example 10.2 Activity Method Depreciation

An advantage of the activity method is that it records expenses in the same period as the associated revenues. When companies have periods of low productivity, the related depreciation expense will be low. In periods of high productivity, depreciation expense will be higher. In this way, a plant running at just 40% of capacity generates lower depreciation charges. This will benefit a company like **International Paper** which uses the units-of-production method.

Straight-Line Method

The **straight-line method** considers depreciation as a **function of time rather than a function of usage** (see **Underlying Concepts**). Companies widely use this method because of its simplicity. The straight-line procedure is often the most conceptually appropriate, too. When creeping obsolescence is the primary reason for a limited service life, the decline in usefulness may be constant from period to period. The major objection to the straight-line method is that it rests on two assumptions:

1. The asset's economic usefulness is the same each year. In reality, the asset may not be utilized the same each year.
2. The maintenance and repair expense is essentially the same each period. In reality, as the asset gets older, it will probably have more down time as it will need more repairs to maintain its operating utility.

Example 10.3 shows the calculation of straight-line depreciation for Gordon Dining Services.

Underlying Concepts

If benefits flow on a "straight-line" basis, then justification exists for recording the cost of the asset on a straight-line basis.

Example 10.3

Straight-Line Depreciation

FACTS Refer to the Gordon Dining Services data in Illustration 10.2. Gordon Dining decides to use the straight-line method to compute its depreciation for the current year.

QUESTION If Gordon Dining Services uses the straight-line method, how would you compute its depreciation expense in the first year?

SOLUTION

The depreciation expense for Gordon Dining using the straight-line method is computed as follows.

$$\frac{\text{Cost} - \text{Salvage Value}}{\text{Estimated Service Life}} = \text{Depreciation Expense}$$

$$\frac{\$500,000 - \$50,000}{5 \text{ years}} = \$90,000 \text{ per year}$$

The straight-line method results in the same amount of depreciation expense recognized each year. The amount can be expressed as a percentage by dividing 1 by the useful life. In the Gordon Dining example, the straight-line rate would be 1/5, or 20%. So, 20% of the asset's depreciable base is allocated to depreciation expense each year for 5 years.

Decreasing-Charge Methods

The **decreasing-charge methods** provide for a higher depreciation expense in the earlier years and lower expense in later years (see **Underlying Concepts**). Because these methods allow for higher early-year expenses than in the straight-line method, they are often called **accelerated depreciation methods**.

What is the main justification for this approach?

- Companies should recognize more depreciation in earlier years because the asset is most productive in its earlier years.
- Accelerated methods likely provide a constant total cost because the depreciation expense is lower in the later periods, at the time when the repair and maintenance costs are often higher.

Generally, companies use one of two decreasing-charge methods: the sum-of-the-years'-digits method or the declining-balance method.

Sum-of-the-Years'-Digits The **sum-of-the-years'-digits method** results in a decreasing depreciation expense based on a decreasing fraction of the depreciable base (original cost less salvage value). Each fraction uses the sum of the years as a denominator. For example, for an asset with a 5-year useful life, the sum of the years would be $5 + 4 + 3 + 2 + 1 = 15$. The numerator is the number of years of useful life remaining as of the beginning of the year. In this method, the numerator decreases year by year, and the denominator remains constant ($5/15$, $4/15$, $3/15$, $2/15$, and $1/15$). At the end of the asset's useful life, the balance remaining should equal the salvage value. Example 10.4 shows this method of computation.²

Underlying Concepts

The expense recognition principle does not justify a constant charge to income. If the benefits from the asset decline as the asset ages, then a decreasing charge to income better captures the use of the asset.

²What happens if the estimated service life of the asset is 51 years? How would we calculate the sum-of-the-years'-digits? Fortunately, mathematicians have developed the following formula that permits easy computation:

$$\frac{n(n+1)}{2} = \frac{51(51+1)}{2} = 1,326.$$

FACTS Refer to the Gordon Dining Services data in Illustration 10.2. Gordon Dining decides to use the sum-of-the-years'-digits method to compute its depreciation for the current year.

QUESTION If Gordon Dining Company uses the sum-of-the-years-digits method, how would you compute its depreciation expense over the 5-year period?

SOLUTION

Example 10.4
Decreasing-Charge
(Sum-of-the-Years'-
Digits) Depreciation

Gordon Dining computes depreciation using the sum-of-the-years-digits method as follows.

	A	B	C	D	E	F	G	H	I
1	Year	Remaining Life in Years	Depreciation Fraction		Depreciable Base		Depreciation Expense	Accumulated Depreciation	Book Value, End of Year ^a
2	1	5	5/15	×	\$ 450,000	=	\$ 150,000	\$ 150,000	\$ 350,000
3	2	4	4/15	×	450,000	=	120,000	270,000	230,000
4	3	3	3/15	×	450,000	=	90,000	360,000	140,000
5	4	2	2/15	×	450,000	=	60,000	420,000	80,000
6	5	1	1/15	×	450,000	=	30,000	450,000	50,000 ^b
7		15	15/15				\$ 450,000		

^aCost – Accumulated depreciation = Book value.

^bSalvage value.

In Example 10.4, note that we are using a declining rate of depreciation (depreciation fraction) multiplied by the constant depreciable base. This methodology is in contrast with the declining-balance method (discussed next), where the rate of depreciation is the same but is multiplied by a declining depreciation base.

Declining-Balance Method A second decreasing-charge depreciation method—the **declining-balance method**—determines depreciation expense by applying a constant percentage to the declining **book value of the asset** each year. This method **does not deduct the salvage value** in computing depreciation expense. Here is how it works:

①

Determine the declining-balance rate. This rate is some multiple of the straight-line rate. For example, the straight-line rate for a 10-year asset is 1/10, or 10%. A commonly used approach is the **double-declining rate**, which for that 10-year asset is then 20%, or double the straight-line rate.

②

Multiply the declining-balance rate by the book value of the asset each year. Recall the formula for book value (Cost – Accumulated Depreciation). Each year, as the asset is depreciated, the balance in accumulated depreciation will get larger and the book value will decline, resulting in a smaller depreciation expense each year.

③

Repeat Step 2 until the book value equals the salvage value. Recall that the amount of the salvage value is **not** depreciated. A general rule of thumb for the final year is instead of applying Step 2, **change the calculation to book value less salvage value**. This will give you the appropriate amount of depreciation expense so that the final book value equals salvage value.

Companies use various multiples for the declining balance method in practice, although the **double-declining-balance method** is quite common.

Example 10.5

Declining-Balance (Double-Declining-Balance) Depreciation

FACTS Refer to the Gordon Dining Services data in Illustration 10.2.

QUESTION If Gordon Dining Services uses the double-declining-balance method, how would you compute its depreciation expense over the 5-year period?

SOLUTION

Gordon Dining computes depreciation using the double-declining-balance method as follows.

1. Determine the double-declining-balance rate. The straight-line rate is 20% ($1 \div 5$ years). Double the straight-line rate is 40% ($.20 \times 2$).
2. Multiply the double-declining-balance rate by the book value each year, as shown in the following table.

	A	B	C	D	E	F	G	H
1	Year	Book Value of Asset, Beginning of Year		Rate on Declining Balance ^a		Depreciation Expense	Balance Accumulated Depreciation	Book Value, End of Year
2	1	\$ 500,000	×	40%	=	\$ 200,000	\$ 200,000	\$ 300,000
3	2	300,000	×	40%	=	120,000	320,000	180,000
4	3	180,000	×	40%	=	72,000	392,000	108,000
5	4	108,000	×	40%	=	43,200	435,200	64,800
6	5	64,800		N/A		14,800 ^b	450,000	50,000 ^c

^aThe straight-line rate is 20% ($1/5$). Double the straight-line rate is $.20 \times 2 = 40\%$.

^bLimited to \$14,800 because book value should not be less than salvage value. Calculated as $\$64,800 - \$50,000 = \$14,800$.

^cThe final book value should equal salvage value.

3. In the final year (Year 5), the declining-balance rate is not used because too much depreciation expense would result and cause the final book value to be less than salvage value.

Companies often switch from the declining-balance method to the straight-line method near the end of the asset's useful life to ensure that they depreciate the asset only to its salvage value.³

Group and Composite Methods

The previous examples have focused on depreciating an individual asset. For large companies, it may be impractical to calculate depreciation on a single-unit basis because the company has so many fixed assets. For example, **Madison Gas and Electric** might depreciate utility poles and other components of its transmission and distribution system, which are too numerous to track individually, particularly given their small value. This type of depreciation on a mass basis is referred to as the **group method** of depreciation. The group method:

- Is used when the assets are similar in nature and have approximately the same useful lives.
- Closely approximates a single-unit cost procedure because any deviation from the average amount in most cases is not that great.

³A pure form of the declining-balance method (sometimes appropriately called the "fixed percentage of book value method") has also been suggested as a possibility. This approach finds a rate that depreciates the asset exactly to salvage value at the end of its expected useful life. The formula for determination of this rate is

Depreciation rate = $1 - \sqrt[n]{\frac{\text{Salvage value}}{\text{Acquisition cost}}}$. The life in years is n . After computing the depreciation rate, a company applies it on the declining book value of the asset from period to period, which means that depreciation expense will be successively lower. This method is not used extensively in practice due to cumbersome computations. Further, it is not permitted for tax purposes.

A method similar to the group method is the **composite method**. In the composite method, the assets are larger in value and often contain numerous components. For example, a utility might have electric-generating stations that have various components which are difficult to track separately. The composite method is:

- Used when the assets are dissimilar and have different useful lives.
- Essentially the same as the group method—find an average and depreciate on that basis.

The computation for these methods involves finding an average (composite) depreciation rate and the average life for the group of assets. Using the composite method, a company determines an average (composite) depreciation rate by dividing the depreciation per year by the total cost of the assets.

FACTS Assume that **Alaskan Adventures** provides you with the following information for its fleet of cars, trucks, and campers.

Asset	Original Cost	Salvage Value	Depreciation Base	Estimated Life (yrs.)	Depreciation per Year (Straight-line)
Cars	\$145,000	\$25,000	\$120,000	3	\$40,000
Trucks	44,000	4,000	40,000	4	10,000
Campers	35,000	5,000	30,000	5	6,000
	<u>\$224,000</u>	<u>\$34,000</u>	<u>\$190,000</u>		<u>\$56,000</u>

Example 10.6 Composite Depreciation

QUESTIONS (a) How would you compute the average (composite) depreciation rate? (b) How would you compute the length of time it takes Alaskan Adventures to depreciate its assets, often referred to as the average (composite) life?

SOLUTION

- Alaskan Adventures will depreciate the group of assets to their salvage value at \$56,000 per year. The average (composite) depreciation rate is the depreciation per year divided by the total original cost, or 25% ($\$56,000 \div \$224,000$).
- The average life identifies the time needed to depreciate this composite account. In this case, the average (composite) life is 3.39 years ($\$190,000 \div \$56,000$).

We can highlight the differences between the group or composite method and the single-unit depreciation method by looking at asset retirements. In Example 10.6, if **Alaskan Adventures** retires an asset before or after the average service life of the group is reached, it buries the resulting gain or loss in the Accumulated Depreciation account. This practice is justified because Alaskan Adventures will retire some assets before the average service life and others after the average life. For this reason, when an asset that had been depreciated using the group or composite method is retired, the debit to Accumulated Depreciation is the difference between original cost and cash received. Alaskan Adventures does not record a gain or loss on disposition.

To illustrate, suppose that Alaskan Adventures sold one of the campers with a cost of \$5,000 for \$2,600 at the end of the third year. The entry is:

Accumulated Depreciation—Equipment	2,400	
Cash	2,600	
Cars, Trucks, and Campers		5,000

If Alaskan Adventures purchases a new type of asset (mopeds, for example), it must compute a new depreciation rate and apply this rate in subsequent periods. **Illustration 10.3** presents a typical financial statement disclosure of the group depreciation method for **AT&T Inc.**

ILLUSTRATION 10.3 Disclosure of Group Depreciation Method**AT&T****Note 1: Summary of Significant Accounting Policies (partial)**

Certain subsidiaries follow group depreciation methodology. Accordingly, when a portion of their depreciable property, plant and equipment is retired in the ordinary course of business, the gross book value is reclassified to accumulated depreciation, and no gain or loss is recognized on the disposition of these assets.

The group or composite method simplifies the bookkeeping process and tends to average out errors caused by over- or under-depreciation. As a result, gains or losses on disposals of assets do not distort periodic income.

On the other hand, the single-unit method (depreciation of single assets) has several advantages over the group or composite methods:

1. It simplifies the computation mathematically.
2. It identifies gains and losses on disposal.
3. It isolates depreciation on idle equipment.
4. It represents the best estimate of the depreciation of each asset, not the result of averaging the cost over a longer period of time.

As a consequence, companies generally use the unit method.⁴ *Unless stated otherwise, you should use the unit method in homework problems.*

Accounting Matters**Depreciation Choices Abound**

Which depreciation method should management select? If a company can reliably estimate revenues from the asset, choosing a depreciation method that matches costs with those revenues would provide the most useful information to investors. But, don't investors just remove depreciation anyways? Investors and analysts do often use a metric identified as **EBITDA** (or earnings before interest, taxes, depreciation and amortization). Some argue that EBITDA is a better metric to evaluate a company's ability to generate profits from sales alone and to make better comparisons across different companies who may use different depreciation methods.

The real estate industry faces additional challenges when considering depreciation choices, given that real estate most often increases in value over time. Some argue that an **increasing-charge** method, whereby depreciation expense would increase over time, would be more appropriate. Similar to EBITDA, the real estate industry discloses a non-GAAP metric called funds from operations (FFO) that adds depreciation and other noncash charges back to net income. In each case, consistency and full disclosure of the depreciation methods used enhance the value of financial information for users.

Source: D. Harper, "How to Assess a Real Estate Investment Trust (REIT)," *Investopedia* (April 6, 2018).

Other Depreciation Issues

We still need to discuss a couple of special issues related to depreciation:

1. How should companies compute depreciation for partial periods?
2. How should companies handle revisions in depreciation rates?

Depreciation and Partial Periods

Companies seldom purchase plant assets on the first day of a fiscal period or dispose of them on the last day of a fiscal period. A practical question is: How much depreciation should a company charge for the partial periods involved?

⁴Many believe that an even better way to depreciate property, plant, and equipment is to use **component depreciation**. Under component depreciation, a company should depreciate over its expected useful life any part or portion of property, plant, and equipment that can be separately identified as an asset. For example, a company could separate the various components of a building (e.g., roof, heating and cooling system, elevator, leasehold improvements) and depreciate each component over its useful life. In fact, IFRS requires use of component depreciation.

In computing depreciation expense for partial periods, companies must determine the depreciation expense for the full year and then prorate this depreciation expense between the two periods involved. This process should continue throughout the useful life of the asset.

Assume, for example, that Jelly Belly Candy Company purchases a large mixing machine with a 5-year life for \$45,000 (no salvage value) on June 10, 2025. The company's fiscal year ends December 31. Jelly Belly therefore charges depreciation for only $6\frac{2}{3}$ months during that year. The total depreciation for a full year (assuming straight-line depreciation) is \$9,000 ($\$45,000 \div 5$ years). The depreciation for the first, partial year is therefore:

$$\frac{6\frac{2}{3}}{12} \times \$9,000 = \$5,000$$

The partial-period calculation is relatively simple when Jelly Belly uses straight-line depreciation. But how is partial-period depreciation handled when it uses an accelerated method, such as sum-of-the-years'-digits or double-declining-balance?

FACTS Lynch Inc. purchases equipment with a 5-year life for \$10,000 (no salvage value) on July 1, 2025. The company's fiscal year ends on December 31, 2025. Lynch decides to use either the sum-of-the-years'-digits method or the double-declining-balance method.

QUESTION How would you compute depreciation for these two methods for 2025, 2026, and 2027?

SOLUTION

Lynch computes depreciation expense using each method for the 3-year period as follows.

	Sum-of-the-Years'-Digits	Double-Declining-Balance
1st full year	$(5/15 \times \$10,000) = \$3,333.33$	$(.40 \times \$10,000) = \$4,000$
2nd full year	$(4/15 \times \$10,000) = 2,666.67$	$(.40 \times 6,000) = 2,400$
3rd full year	$(3/15 \times \$10,000) = 2,000.00$	$(.40 \times 3,600) = 1,440$

Depreciation from July 1, 2025, to December 31, 2025:

$$6/12 \times \$3,333.33 = \underline{\underline{\$1,666.67}} \quad | \quad 6/12 \times \$4,000 = \underline{\underline{\$2,000}}$$

Depreciation for 2026:

$$\begin{array}{l|l} 6/12 \times \$3,333.33 = \$1,666.67 & 6/12 \times \$4,000 = \$2,000 \\ 6/12 \times 2,666.67 = \underline{1,333.33} & 6/12 \times 2,400 = \underline{1,200} \\ \underline{\underline{\$3,000.00}} & \underline{\underline{\$3,200*}} \end{array}$$

$$* \text{Or } (\$10,000 - \$2,000) \times .40$$

Depreciation for 2027:

$$\begin{array}{l|l} 6/12 \times \$2,666.67 = \$1,333.33 & 6/12 \times \$2,400 = \$1,200 \\ 6/12 \times 2,000.00 = \underline{1,000.00} & 6/12 \times 1,440 = \underline{720} \\ \underline{\underline{\$2,333.33}} & \underline{\underline{\$1,920*}} \end{array}$$

$$* \text{Or } (\$10,000 - \$5,200) \times .40$$

Example 10.7
Accelerated
Methods
Comparison

Sometimes a company, like Lynch in Example 10.7, modifies the process of allocating costs to a partial period to handle acquisitions and disposals of plant assets more simply.

- One variation is to take no depreciation in the year of acquisition and a full year's depreciation in the year of disposal.
- Other variations charge one-half year's depreciation both in the year of acquisition and in the year of disposal, referred to as the **half-year convention**, or charge a full year in the year of acquisition and none in the year of disposal.

In fact, Lynch may adopt any one of these fractional-year policies in allocating cost to the first and last years of an asset's life so long as it applies the method consistently. However, **unless otherwise stipulated, companies normally compute depreciation on the basis of the nearest full month.**

Illustration 10.4 shows depreciation allocated under five different fractional-year policies using the straight-line method on the \$45,000 equipment purchased by Jelly Belly Candy on June 10, 2025, discussed earlier.

ILLUSTRATION 10.4 Fractional-Year Depreciation Policies

Mixer Cost = \$45,000	Depreciation Allocated per Period over 5-Year Life*						
Fractional-Year Policy	2025	2026	2027	2028	2029	2030	Total Cost / Depreciation
1. Nearest fraction of a year.	\$5,000 ^a	\$9,000	\$9,000	\$9,000	\$9,000	\$4,000 ^b	\$45,000
2. Nearest full month.	5,250 ^c	9,000	9,000	9,000	9,000	3,750 ^d	\$45,000
3. Half year in period of acquisition and disposal.	4,500	9,000	9,000	9,000	9,000	4,500	\$45,000
4. Full year in period of acquisition, none in period or disposal.	9,000	9,000	9,000	9,000	9,000	-0-	\$45,000
5. None in period of acquisition, full year in period of disposal.	-0-	9,000	9,000	9,000	9,000	9,000	\$45,000
*Rounded to nearest dollar.							
^a 6.667/12 (\$9,000); ^b 5.333/12 (\$9,000); ^c 7/12 (\$9,000); ^d 5/12 (\$9,000).							

Depreciation and Replacement of Property, Plant, and Equipment

A common misconception about depreciation is that it provides funds for the replacement of fixed assets. Depreciation is like other expenses in that it reduces net income. It differs, though, in that **it does not involve a current cash outflow**. To illustrate why depreciation does not provide funds for replacement of plant assets, assume Felly Florists starts operating with plant assets of \$500,000 that have a useful life of five years and no salvage value. The company’s balance sheet at the beginning of the period is:

Plant assets	\$500,000	Stockholders’ equity	\$500,000
--------------	-----------	----------------------	-----------

If we assume that Felly’s earns no revenue over the five years, the income statements are:

	Year 1	Year 2	Year 3	Year 4	Year 5
Revenue	\$ -0-	\$ -0-	\$ -0-	\$ -0-	\$ -0-
Depreciation	(100,000)	(100,000)	(100,000)	(100,000)	(100,000)
Loss	<u>\$(100,000)</u>	<u>\$(100,000)</u>	<u>\$(100,000)</u>	<u>\$(100,000)</u>	<u>\$(100,000)</u>

Total depreciation of the plant assets over the five years is \$500,000. The balance sheet at the end of the five years therefore is:

Plant assets	\$0	Stockholders’ equity	\$0
--------------	-----	----------------------	-----

This extreme example illustrates that depreciation **in no way** provides funds for the replacement of assets. **The funds for the replacement of the assets come from the revenues (generated through use of the asset)**. Without the revenues, no income materializes, and no cash inflow results.

Revision of Depreciation Rates

When purchasing a plant asset, companies carefully determine depreciation rates based on past experience with similar assets and other pertinent information. But remember that depreciation is an estimate.

- Companies may need to revise their estimate during the life of the asset.
- Unexpected physical deterioration or unforeseen obsolescence may decrease the estimated useful life.
- Improved maintenance procedures, revision of operating procedures, or similar developments may prolong the life of the asset beyond the expected period.⁵

For example, assume that **General Motors (GM)** purchased machinery with an original cost of \$90,000 on January 1, 2020. It estimates a 20-year life with no salvage value. However, on January 1, 2025, GM estimates that it will use the machine for an additional 25 years. Its total life, therefore, will be 30 years (5 years already used plus additional 25 years) instead of 20. Depreciation has been recorded at the rate of $1/20$ of \$90,000, or \$4,500 per year by the straight-line method. On the basis of a 30-year life, GM should have recorded depreciation as $1/30$ of \$90,000, or \$3,000 per year. It has therefore overstated depreciation, and understated net income, by \$1,500 for each of the past five years, or a total amount of \$7,500. **Illustration 10.5** shows this computation.

	Per Year	For 5 Years
Depreciation charged per books ($1/20 \times \$90,000$)	\$4,500	\$22,500
Depreciation based on a 30-year life ($1/30 \times \$90,000$)	(3,000)	(15,000)
Excess depreciation charged	\$1,500	\$ 7,500

ILLUSTRATION 10.5

Computation of Accumulated Difference Due to Revisions

Does GM need to go back and restate the financial statements from the past five years to adjust the depreciation? The answer is no. **No adjustments need to be made to prior periods.** Changes in estimates happen and are part of the inherent estimation process. The change is handled in the year the estimate is revised and prospectively, or going forward in future periods. GM would calculate a revised depreciation amount by using the following formula.

$$\text{Revised Depreciation Expense} = \frac{\text{Book Value} - \text{Revised Salvage Value}}{\text{Remaining Useful Life}}$$

Companies may revise both the useful life and the salvage value, so both of the revised amounts would be used in the formula.

FACTS Use the information related to **General Motors (GM)** in the previous discussion.

QUESTIONS (a) What is the book value of GM's machinery at the time it changed the estimate of the machinery's useful life? (b) What journal entry would you make to record depreciation expense in each year following the change in estimate?

SOLUTION

- a. GM's book value is as follows at the date of the change.

Machinery	\$90,000
Less: Accumulated depreciation ($\$4,500 \times 5$)	22,500
Book value of machinery at January 1, 2025	\$67,500

Example 10.8

Revision in Depreciation

⁵As an example of a change in operating procedures, **General Motors (GM)** used to write off its tools—such as dies and equipment used to manufacture car bodies—over the life of the body type. Through this procedure, it expensed tools twice as fast as **Ford** and three times as fast as **Chrysler**. However, with changes in body types, it slowed the depreciation process on these tools and lengthened the lives on its plant and equipment. These revisions reduced depreciation and amortization charges by approximately \$1.23 billion, or \$2.55 per share, in the year of the change. In Chapter 21, we provide a more complete discussion of changes in estimates.

To determine revised depreciation:

$$\text{Depreciation (future periods)} = \frac{\$67,500 - \$0}{25 \text{ years}} = \$2,700$$

b. To record depreciation for each of the remaining 25 years:

Depreciation Expense	2,700	
Accumulated Depreciation—Machinery		2,700

Put It into Practice LO 10.1

Apply Depreciation Methods

FACTS Griffith Company purchased equipment for \$106,000 on October 1, 2025. Griffith estimated that the equipment will have a useful life of 8 years and a salvage value of \$6,000. Estimated production is 20,000 units, and estimated working hours are 10,000. During 2025, Griffith uses the equipment for 800 hours, and the equipment produces 2,000 units.

INSTRUCTIONS

- Compute depreciation expense under each of the following methods. Griffith has a calendar-year end.
 - Straight-line method for 2025.
 - Activity method (units of output) for 2025.
 - Activity method (working hours) for 2025.
 - Sum-of-the-years'-digits method for 2027.
 - Double-declining-balance method for 2026.
- At the beginning of 2027, Griffith determines the equipment will have a remaining useful life of 10 years, with a salvage value of zero. Assuming use of straight-line depreciation, prepare the journal entry to record depreciation expense in 2027.

SOLUTION

1. Straight-line (2025): $\frac{\$106,000 - \$6,000}{8} = \$12,500/\text{year}$
 3 months' depreciation = \$3,125 (\$12,500 × 3/12)
2. Output (2025): $\frac{\$106,000 - \$6,000}{20,000} = \$5.00/\text{output unit}$
 2,000 units × \$5.00 = \$10,000
3. Working hours (2025): $\frac{\$106,000 - \$6,000}{10,000} = \$10.00/\text{hour}$
 800 hours × \$10.00 = \$8,000
4. $(8 + 7 + 6 + 5 + 4 + 3 + 2 + 1) = 36$ **or** $\frac{n(n+1)}{2} = \frac{8(9)}{2} = 36$

Sum-of-the-Years'-Digits		Total	Allocated to		
			2025	2026	2027
Year 1	$8/36 \times \$100,000 =$	\$22,222	\$5,556 ^a	\$16,666 ^b	
2	$7/36 \times \$100,000 =$	\$19,444		4,861 ^c	\$14,583 ^d
3	$6/36 \times \$100,000 =$	\$16,667			4,167 ^e
			<u>\$5,556</u>	<u>\$21,527</u>	<u>\$18,750</u>

2027: $\$18,751 = (9/12 \text{ of year 2 of machine's life plus } 3/12 \text{ of year 3 of machine's life})$

^a\$22,222 × 3/12; ^b\$22,222 × 9/12; ^c\$19,444 × 3/12; ^d\$19,444 × 9/12; ^e\$16,667 × 3/12

5. Double-declining-balance rate: $1/8 \times 2 = 25\%$

2025: $.25 \times \$106,000 \times 3/12 = \$6,625$

Book value at end of year = $\$106,000 - \$6,625 = \$99,375$

2026: $.25 \times \$99,375 = \underline{\underline{\$24,844}}$

b. To calculate book value at the end of 2026:

Cost	\$106,000
Less: Accumulated depreciation (\$3,125 + \$12,500)	<u>15,625</u>
Book value of equipment	<u>\$ 90,375</u>

To calculate the revised depreciation expense:

$$\begin{aligned} \text{Revised Depreciation Expense} &= \frac{\text{Book Value} - \text{Revised Salvage Value}}{\text{Remaining Useful Life}} \\ &= \frac{\$90,375 - \$0}{10} \\ &= \$9,038 \text{ per year} \end{aligned}$$

To record depreciation expense in 2027:

Depreciation Expense	9,038	
Accumulated Depreciation—Equipment		9,038

10.2 Impairments

LEARNING OBJECTIVE 2

Identify the accounting issues related to asset impairment.

We have already discussed that determining the fair value of property, plant, and equipment can be subjective, costly, and time-consuming. That is why most property, plant, and equipment is reported on the balance sheet at its book value, or carrying amount. Note that land is reported at historical cost because land is not depreciated.

However, what if certain events happen that substantially decrease the usefulness of one or more fixed assets? Are there situations in which a company will write-down the recorded amount of property, plant, and equipment below its carrying amount and record a loss? For example, based on more consumers shopping online, **Macy's** had to decide whether to write-down the value of its store locations. Sales were declining, and only time would tell if restructuring strategies would pay off. Would Macy's be able to recover its investments in the buildings that housed its stores, along with all of the furniture and fixtures? Even if the Macy's decided to write off the value of these long-term assets, how much should be written off?

The write-off of all or part of the carrying value of property, plant, and equipment is referred to as **impairment**. Examples of events that might lead to an impairment are:

- A significant decrease in the fair value of an asset.
- A significant change in the extent or manner in which an asset is used.
- A significant adverse change in legal factors or in the business climate that affects the value of an asset.

- An accumulation of costs significantly in excess of the amount originally expected to acquire or construct an asset.
- A projection or forecast that demonstrates continuing losses associated with an asset.

These events or changes in circumstances indicate that the company may not be able to recover the carrying amount of the asset. In that case, a **recoverability test** is used to determine whether an impairment has occurred. [1] (See the FASB Codification References near the end of the chapter.)

To apply the recoverability test, a company estimates the future net cash flows expected from the **use of that asset and its eventual disposition**, and compares it to the carrying amount as follows.

- If the sum of expected future cash flows (undiscounted) is **greater than** the carrying value of the intangible asset, **there is no impairment**.
- If the sum of expected future cash flows (undiscounted) is **less than** the carrying value of the intangible asset, **there is an impairment loss**.

For example, if the expected future net cash flows from an asset are \$400,000 and its carrying amount is \$350,000, no impairment has occurred. However, if the expected future net cash flows are \$300,000, an impairment has occurred. The rationale for the recoverability test relies on a basic presumption: A balance sheet should report long-lived assets at no more than the carrying amounts that are recoverable.

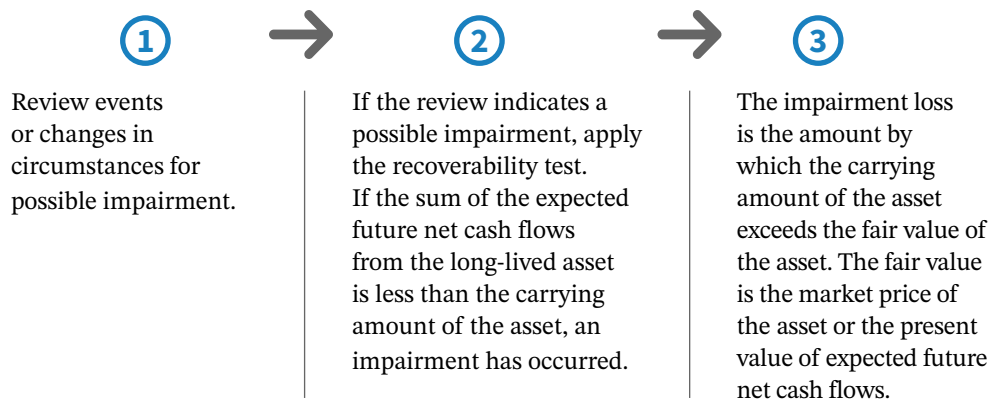

Measuring Impairments

Global View

IFRS also uses a fair value test to measure the impairment loss. However, IFRS does not use the first-stage recoverability test under GAAP. As a result, the IFRS test is more strict than GAAP. *See the IFRS Insights at the end of the chapter for a discussion of the similarities and differences between IFRS and GAAP.*

If the recoverability test indicates an impairment, a company computes a loss. The **impairment loss** is the amount by which the carrying amount of the asset **exceeds its fair value** (see **Global View**). How does a company determine the fair value of an asset? It is measured based on the market price if an active market for the asset exists. If no active market exists, a company uses the **present value of expected future net cash flows to determine fair value**.

To summarize, the process of determining an impairment loss is as follows.

Assuming an impairment, the journal entry to record the impairment is a debit to a loss account and a credit to accumulated depreciation. By increasing accumulated depreciation with a credit, the asset's carrying amount (book value) is decreased to reflect the impairment.

FACTS Alou Inc. has equipment that, due to changes in its use, it reviews for possible impairment. The equipment's carrying amount is \$600,000 (\$800,000 cost - \$200,000 accumulated depreciation). Alou determines the expected future net cash flows (undiscounted) from the use of the equipment and its eventual disposal to be \$650,000. The asset has a fair value of \$525,000.

QUESTION At what amount, if any, would you record an impairment on Alou's equipment?

SOLUTION

Apply the recoverability test:

Sum of the expected (undiscounted) net cash flows (\$650,000) is greater than that carrying amount of the asset (\$600,000).

No impairment has occurred. Therefore, Alou does not recognize an impairment loss.

Example 10.9 Impairment— Example 1

Let's continue the Alou example with different facts.

FACTS Assume the same facts as in Example 10.9, except that the expected future net cash flows from Alou's equipment are \$580,000 (instead of \$650,000).

QUESTION At what amount, if any, would you record an impairment on Alou's equipment?

SOLUTION

Apply the recoverability test:

Sum of the expected (undiscounted) net cash flows (\$580,000) is less than that carrying amount of the asset (\$600,000).

An impairment has occurred. Therefore, Alou will record an impairment loss. The amount of the impairment loss is calculated as follows.

Carrying amount of the equipment	\$600,000
Fair value of equipment	(525,000)
Loss on impairment	<u>\$ 75,000</u>

To record the impairment loss:

Loss on Impairment	75,000
Accumulated Depreciation—Equipment	75,000

Following the impairment, the asset's carrying amount is \$525,000, calculated as follows.

Cost	\$800,000
Accumulated depreciation (200,000 + 75,000)	<u>275,000</u>
Carrying amount (book value)	<u>\$525,000</u>

After the impairment journal entry, the updated carrying amount equals the fair value.

Example 10.10 Impairment— Example 2

In Example 10.10, Alou reports the impairment loss as part of income from continuing operations, in the "Other expenses and losses" section of the income statement. Alou will continue to use these assets in operations. Therefore, it should not report the loss below "Income from continuing operations."

A company that recognizes an impairment loss should disclose in the notes the asset(s) impaired, the events leading to the impairment, the amount of the loss, and how it determined fair value (disclosing the interest rate used, if appropriate), as shown in **Illustration 10.6** for **Macy's**.

ILLUSTRATION 10.6 Disclosure of Asset Impairment

Macy's

Note 4 (partial): Restructuring, Impairment, Store Closing and Other Costs

During 2020, primarily as a result of the COVID-19 pandemic, the Company incurred non-cash impairment charges totaling \$3,280 million, the majority of which was recognized during the first quarter of 2020 and consisted of \$200 million of impairments primarily related to long-lived tangible and right of use assets to adjust the carrying value of certain store locations to their estimated fair value.

Note 14 (partial): Fair Value Measurements

During 2020, long-lived assets with a carrying value of \$295 million were written down to their fair value of \$95 million, resulting in asset impairment charges of \$200 million. The fair values of these assets were calculated based on the projected cash flows and an estimated risk-adjusted rate of return that would be used by market participants in valuing these assets or prices of similar assets.

Restoration of Impairment Loss

After recording an impairment loss, the reduced carrying amount of an asset held for use becomes its new cost basis. A company does not change the new cost basis except for depreciation in future periods or for additional impairments.

Example 10.11 Restoration of Impairment Loss

FACTS At December 31, 2024, assume **Kodak Company** has a piece of equipment that assembles disposable cameras with a carrying amount of \$500,000. Given that most people carry a cell phone with a high-quality camera, sales of disposable cameras have declined. Kodak determined the equipment was impaired and wrote it down to its fair value of \$400,000. At the end of 2025, disposable cameras started to make a comeback, and Kodak determines that the fair value of the equipment is now \$480,000.

QUESTION At what amount would you record Kodak's equipment on December 31, 2025?

SOLUTION

The carrying amount of the equipment should not change in 2025 except for the depreciation taken in 2025. Kodak **may not restore an impairment loss for an asset held for use**. The rationale for not writing the asset up in value is that the new cost basis puts the impaired asset on an equal basis with other assets that are unimpaired.

Impairment of Assets to Be Disposed Of

What happens if a company intends to dispose of an impaired asset, instead of holding it for use? At one time, **Kroger** recorded an impairment loss of \$54 million on property, plant, and equipment it no longer needed due to store closures. In this case, Kroger reports the impaired asset at the lower-of-cost-or-net realizable value (fair value less costs to sell). Because Kroger

intends to dispose of the assets in a short period of time, it uses net realizable value to provide a better measure of the net cash flows that it will receive from these assets.

Kroger does not depreciate assets held for disposal during the period it holds them.

- Depreciation is inconsistent with the notion of assets to be disposed of and with the use of the lower-of-cost-or-net realizable value.
- In other words, **assets held for disposal are like inventory; companies should report them at the lower-of-cost-or-net realizable value.**

Because Kroger will recover the carrying value of the assets held for disposal through sale rather than through operations, it continually revalues them. Each period, the assets are reported at the lower-of-cost-or-net realizable value. Thus, **Kroger can write up or down an asset held for disposal in future periods, as long as the carrying value after the write-up never exceeds the carrying amount of the asset before the impairment.** Companies should report losses or gains related to these impaired assets as part of **income from continuing operations.**

Illustration 10.7 summarizes the key concepts in accounting for impairments.

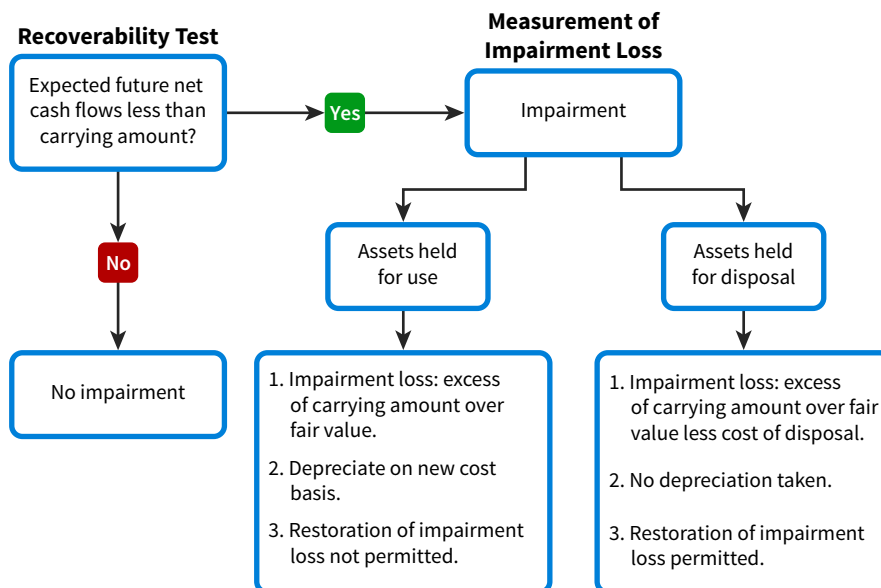

ILLUSTRATION 10.7 Accounting for Impairments

FACTS Norwel Company manufactures miniature circuit boards used in smartphones. On June 5, 2025, Norwel purchased a circuit board stamping machine at a price of \$27,000 (inclusive of taxes and installation costs). Norwel estimates the machine will have a 5-year useful life, with a salvage value of \$2,000 at the end of 5 years. Norwel uses straight-line depreciation and employs the half-year convention in accounting for partial-year depreciation. Norwel's fiscal year ends on December 31.

INSTRUCTIONS

- At what amount will the machine be reported in Norwel's balance sheet at December 31, 2026?
- During 2027, Norwel's circuit board business is experiencing significant competition from companies with more advanced low-heat circuit boards. As a result, at June 30, 2027, Norwel conducts an impairment evaluation of the stamping machine. Norwel determines that undiscounted future cash flows for the machine are estimated to be \$15,200 and the fair value of the machine, based on prices in the re-sale market, to be \$13,400. Prepare the journal entry to record an impairment, if any, on the stamping machine.
- Repeat the requirements in part (b), assuming Norwel estimates undiscounted future cash flows to be \$17,900 and the fair value of the machine is \$12,500.

Put It into Practice LO 10.2

Account for Impairments

SOLUTION

- a. The amount reported on the December 31, 2026, balance sheet is the cost of the asset less accumulated depreciation:

Machinery	\$27,000
Less: Accumulated depreciation	<u>7,500*</u>
Book value	<u>\$19,500</u>

*Depreciable base (\$27,000 – \$2,000)	\$25,000
Depreciation expense (\$25,000 ÷ 5) per year	\$5,000
2025: 1/2 year (\$5,000 × .50)	\$2,500
2026: full year	<u>5,000</u>
Accumulated depreciation	<u>\$7,500</u>

- b. Norwel first conducts the recoverability test, comparing the book value of the machine to the undiscounted future cash flows. This indicates the estimated future cash flows (\$15,200) are less than the June 30, 2027, book value (\$17,000*).

*Cost	\$27,000
Less: Accumulated depreciation (\$2,500 + \$5,000 + \$2,500)	<u>10,000</u>
Book value of machine	<u>\$17,000</u>

Therefore, Norwel will record an impairment, based on comparison of the fair value of the machine and platform to the book value. The entry is as follows.

Loss on Impairment (\$17,000 – \$13,400)	3,600	
Accumulated Depreciation—Machinery		3,600

- c. Under these facts, there is **no impairment** to be recorded. This is because the estimated undiscounted future cash flows are greater than the book value of the machinery (\$17,900 is greater than \$17,000). As a result, the recoverability test is met.

10.3 Depletion

LEARNING OBJECTIVE 3

Explain the accounting procedures for depletion of natural resources.

Some companies report natural resources, often called wasting assets, as part of property, plant, and equipment. **Natural resources**, such as petroleum, minerals, and timber, are used in a company's operations. These assets have two main features:

1. The complete removal (consumption) of the asset.
2. Replacement of the asset only by an act of nature.

Unlike plant and equipment, natural resources are consumed physically over the period of use and do not maintain their physical characteristics. But the accounting problems associated with natural resources are similar to those encountered with plant and equipment. The questions to be answered are:

- How do companies establish the cost basis of the natural resource?
- What pattern of cost allocation should companies employ?

Recall that the term **depletion** is used for the process of allocating the cost of natural resources over the period they are consumed.

Establishing a Depletion Base

How do we determine the depletion base for natural resources? For example, a company like **ExxonMobil** makes sizable expenditures to find natural resources. And for every successful discovery, there are many failures. Furthermore, the company encounters long delays between the time it incurs costs and the time it obtains the benefits from the extracted resources. As a result, a company in the extractive industries, like ExxonMobil, frequently adopts a conservative policy in accounting for the expenditures related to finding and extracting natural resources.

Computation of the depletion base involves four factors: (1) acquisition cost, (2) exploration costs, (3) development costs, and (4) restoration costs.

Acquisition Costs

Acquisition cost is the price ExxonMobil pays to obtain the property rights to search and find an undiscovered natural resource. It also can be the price paid for an already-discovered resource. A third type of acquisition cost can be lease payments for property containing a productive natural resource. Included in these acquisition costs are royalty payments to the owner of the property.

- Generally, the acquisition cost of natural resources is recorded in an account titled Undeveloped Property.
- A company later assigns that cost to the natural resource if exploration efforts are successful.
- If the efforts are unsuccessful, it writes off the acquisition cost as a loss.

Exploration Costs

As soon as a company has the right to use the property, it often incurs **exploration costs** to find the resource.

- When exploration costs are substantial, some companies capitalize them into the depletion base.
- In the oil and gas industry, where the costs of finding the resource are significant and the risks of finding the resource are very uncertain, most large companies expense these costs.
- Smaller oil and gas companies often capitalize these exploration costs.

For homework purposes, unless stated otherwise, assume that exploration costs are expensed as incurred.

Development Costs

Companies divide **development costs** into two parts: (1) tangible equipment costs and (2) intangible development costs. Tangible equipment costs include all of the transportation and other heavy equipment needed to extract the resource and get it ready for market. Because companies can move the heavy equipment from one extracting site to another, **companies do not normally include tangible equipment costs in the depletion base**. Instead, they use separate depreciation entries to allocate the costs of such equipment.

- Some tangible assets (e.g., a drilling rig foundation) cannot be moved.
- Companies depreciate these assets over their useful life or the life of the resource, whichever is shorter.

Intangible development costs, on the other hand, are such items as drilling costs, tunnels, shafts, and wells.

- These costs have no tangible characteristics but are needed for the production of the natural resource.
- **Intangible development costs are considered part of the depletion base.**

Restoration Costs

Companies sometimes incur substantial costs to restore property to its natural state after extraction has occurred. These are **restoration costs**.

- Companies consider **restoration costs part of the depletion base**.
- The amount included in the depletion base is the fair value of the obligation to restore the property after extraction.

A more complete discussion of the accounting for asset restoration costs and related liabilities (often referred to as asset retirement obligations) is provided in Chapter 9. Similar to other long-lived assets, **companies deduct from the depletion base any salvage value to be received on the property**.

Cost Allocation

Once the company establishes the depletion base, the next problem is determining how to allocate the cost of the natural resource to accounting periods. Normally, companies compute depletion (often referred to as **cost depletion**) on a **units-of-production method** (an activity approach). That means depletion is a function of the number of units extracted during the period. In this approach, the total cost of the natural resource less salvage value is divided by the number of units estimated to be in the resource deposit, to obtain a **cost per unit of product**. To compute depletion, the cost per unit is then multiplied by the number of units extracted.

Example 10.12
Depletion Cost
per Unit

FACTS Evershine Co. acquired the right to use 1,000 acres of land in Alaska to mine for silver. The lease cost is \$150,000, and the related exploration costs on the property are \$100,000 and are expensed as incurred. Intangible development costs incurred in opening the mine are \$850,000. Therefore, total costs related to the mine—before the first ounce of silver is extracted—are \$1,000,000 (\$150,000 + \$850,000). Evershine estimates that the mine will provide approximately 100,000 ounces of silver.

QUESTION What is Evershine’s depletion cost per unit for the silver?

SOLUTION

The computation of the depletion cost per unit (depletion rate) is as follows.

$$\frac{\text{Total Cost} - \text{Salvage Value}}{\text{Total Estimated Units Available}} = \text{Depletion Cost per Unit}$$
$$\frac{\$1,000,000}{100,000} = \$10 \text{ per ounce}$$

Continuing with Example 10.12, if Evershine extracts 25,000 ounces in the first year, then the depletion for the year is \$250,000 (25,000 ounces × \$10). Evershine records the depletion as follows.

Inventory (Silver)	250,000
Silver Mine	250,000

Evershine debits Inventory for the total depletion for the year and credits silver Mine to reduce the carrying amount of the natural resource. Evershine credits Inventory when it sells the inventory and debits Cost of Goods Sold. The amount not sold remains in inventory and is reported in the current assets section of the balance sheet.

Sometimes companies use an Accumulated Depletion account. In that case, Evershine’s balance sheet would present the cost of the natural resource and the amount of accumulated depletion entered to date as shown in **Illustration 10.8**.

ILLUSTRATION 10.8 Balance Sheet Presentation of Natural Resource

Silver mine (at cost)	\$1,000,000	
Less: Accumulated depletion	<u>250,000</u>	\$750,000

For purposes of homework, credit any accumulated depletion to the asset account.

Evershine may also depreciate on a units-of-production basis the tangible equipment used in extracting the silver. This approach is appropriate if it can directly assign the estimated lives of the equipment to one given resource deposit. If Evershine uses the equipment on more than one job, other cost allocation methods such as straight-line or accelerated depreciation methods would be more appropriate.

Estimating Recoverable Reserves

Sometimes companies need to change the estimate of recoverable reserves. They do so either because they have new information or because more sophisticated production processes are available. Natural resources such as oil and gas deposits and some rare metals have recently provided the greatest challenges. Estimates of these reserves are in large measure merely “knowledgeable guesses.”

This problem is the **same as accounting for changes in estimates for the useful lives of property, plant, and equipment**. The procedure is to **revise the depletion rate on a prospective basis**: A company divides the remaining cost by the new estimate of the remaining recoverable reserves. This approach has much merit because the required estimates are so uncertain.

Liquidating Dividends

A company often owns as its only major asset a property from which it intends to extract natural resources. If the company does not expect to purchase additional properties, it may gradually distribute to stockholders their capital investments by paying **liquidating dividends**, which are dividends greater than the balance in retained earnings.

The major accounting problem is to distinguish between dividends that are a return of capital and those that are not. Because the dividend is a return of the investor’s original contribution, the company issuing a liquidating dividend should debit Paid-in Capital in Excess of Par for that portion related to the original investment, instead of debiting Retained Earnings.

FACTS Callahan Mining had a retained earnings balance of \$1,650,000, accumulated depletion on mineral properties of \$2,100,000, and paid-in capital in excess of par of \$5,435,493. Callahan’s board declared a dividend of \$3 per share on the 1,000,000 shares outstanding.

QUESTION How should Callahan record this dividend?

SOLUTION

To record the \$3,000,000 cash dividend:

Retained Earnings	1,650,000	
Paid-in Capital in Excess of Par—Common Stock	1,350,000	
Cash (1,000,000 × \$3)		3,000,000

Callahan must inform stockholders that the \$3 dividend per share represents a \$1.65 ($\$1,650,000 \div 1,000,000$ shares) per share return on investment and a \$1.35 ($\$1,350,000 \div 1,000,000$ shares) per share liquidating dividend.

Example 10.13 Liquidating Dividend

Continuing Controversy

A major controversy relates to the accounting for exploration costs in the oil and gas industry. Conceptually, the question is whether unsuccessful ventures are a cost of those that are successful. There are two primary views on the issue:

- Those who support the **full-cost concept** argue that the cost of drilling a dry hole is a cost needed to find the commercially profitable wells.
- Others believe that companies should capitalize only the costs of successful projects. This is the **successful-efforts concept**. Its proponents believe that the only relevant measure

for a project is the cost directly related to that project, and that companies should report any remaining costs as period charges. In addition, they argue that an unsuccessful company will capitalize many costs that will make it appear, over a short period of time, as profitable as a successful company.

Large international oil companies such as **ExxonMobil** use the successful-efforts approach. Most of the smaller, exploration-oriented companies use the full-cost approach. The differences in net income figures under the two methods can be staggering. Analysts estimated that the difference between full-cost and successful-efforts for **Chevron** at one time was \$500 million over a 10-year period (income lower under successful-efforts).

One requirement of the full-cost approach is that companies can capitalize costs only up to a ceiling, which is the present value of company reserves. Companies must expense costs above that ceiling. When the price of oil falls, so does the present value of companies' reserves, which forces expensing of costs beyond the ceiling. Not unexpectedly, companies have lobbied for leniency, but the SEC has ruled that the write-offs had to be taken. For example, **Mesa Limited Partnerships** restated its \$31 million profit to a \$169 million loss, and **Pacific Lighting** restated its \$44.5 million profit to a \$70.5 million loss.

Currently, companies can use either the full-cost approach or the successful-efforts approach. This guidance evolved after Congress directed the FASB to develop one method of accounting for the oil and gas industry. However, when the FASB did so, the government chose not to accept it. Subsequently, the SEC attempted to develop a new approach, failed, and then urged the FASB to develop disclosure requirements in this area. After all these changes, the two alternatives still exist.

Accounting Matters

Full-Cost or Successful-Efforts?

The controversy in the oil and gas industry provides a number of lessons. First, it demonstrates the strong influence that the federal government has in financial reporting matters. Second, the concern for economic consequences places pressure on the FASB to weigh the economic effects of any required standard. Third, this controversy illustrates the difficulty of establishing standards when affected groups have differing viewpoints.

Indeed, failure to consider the economic consequences of accounting principles is a frequent criticism of the profession.

However, the neutrality concept requires that the statements be free from bias. Freedom from bias requires that the statements reflect economic reality, even if undesirable effects occur. Finally, the debate over oil and gas accounting reinforces the need for a conceptual framework with carefully developed guidelines for recognition, measurement, and reporting, so that interested parties can more easily resolve issues of this nature in the future.

Put It into Practice LO 10.3

Account for Depletion

FACTS Misey Mining Company purchased land on February 1, 2025, at a cost of \$2,380,000. It estimated that a total of 120,000 tons of mineral was available for mining. After it has removed all the natural resources, the company will be required to restore the property to its previous state because of strict environmental protection laws. It estimates the fair value of this restoration obligation at \$180,000. It believes it will be able to sell the property afterwards for \$200,000. Misey Mining incurred developmental costs of \$400,000 before it was able to do any mining. In 2025, resources removed totaled 60,000 tons. The company sold 44,000 tons.

INSTRUCTIONS

- a. Compute the following information for 2025.
 1. Per ton cost.
 2. Total cost of December 31, 2025, inventory.
 3. Total cost of goods sold for 2025.
- b. Prepare the journal entry to record the extraction (depletion) of minerals in 2025.

SOLUTION

- a.** Total cost is \$2,960,000 (\$2,380,000 + \$180,000 + \$400,000)
1. Depletion rate: $\frac{\$2,960,000 - \$200,000}{120,000 \text{ tons}} = \23 per ton
 2. December 31, 2025, inventory:
 60,000 tons removed – 44,000 tons sold = 16,000 tons remaining in inventory
 16,000 tons × \$23 per ton = \$368,000 inventory balance
 3. Cost of goods sold in 2025:
 44,000 tons sold × \$23 per ton = \$1,012,000 cost of goods sold
- b. To record depletion of minerals:**
- | | | |
|--------------------------------|-----------|-----------|
| Inventory (\$23 × 60,000 tons) | 1,380,000 | |
| Mineral Mine | | 1,380,000 |

10.4 Presentation and Decision Analysis

LEARNING OBJECTIVE 4

Demonstrate how to report and analyze property, plant, equipment, and natural resources.

Presentation of Property, Plant, Equipment, and Natural Resources

A company should disclose the basis of valuation—usually historical cost—for property, plant, equipment, and natural resources, along with pledges, liens, and other commitments related to these assets. It should not offset any liability secured by property, plant, equipment, and natural resources against these assets. Instead, this obligation should be reported in the liabilities section. The company should separate property, plant, and equipment not currently employed as producing assets in the business (such as idle facilities or land held as an investment) from assets used in operations.

When depreciating assets, a company credits the valuation account Accumulated Depreciation. Using an accumulated depreciation account permits the user of the financial statements to see the original cost of the asset and the amount of depreciation that the company has expensed in past years.

When depleting natural resources, some companies use an accumulated depletion account. Many, however, simply credit the natural resource account directly. The rationale for this approach is that the natural resources are physically consumed, making direct reduction of the cost of the natural resources appropriate.

Because of the significant impact on the financial statements of the depreciation method(s) used, companies should disclose the following.

1. Depreciation expense for the period.
2. Balances of major classes of depreciable assets, by nature and function.
3. Accumulated depreciation, either by major classes of depreciable assets or in total.
4. A general description of the method or methods used in computing depreciation with respect to major classes of depreciable assets. [2]⁶

⁶Some believe that companies should disclose the average useful life of the assets or the range of years of asset life to help users understand the age and life of property, plant, and equipment.

Special disclosure requirements relate to the oil and gas industry. Companies engaged in these activities must disclose the following in their financial statements: (1) the basic method of accounting for those costs incurred in oil and gas producing activities (e.g., full-cost versus successful-efforts), and (2) how the company disposes of costs related to extractive activities (e.g., expensing immediately versus depreciation and depletion). [3]⁷

The annual report of **International Paper Company** in **Illustration 10.9** shows a typical disclosure. It uses condensed balance sheet data supplemented with details and policies in the notes to the financial statements.

ILLUSTRATION 10.9 Disclosures for Property, Plant, Equipment, and Natural Resources

 International Paper Company Consolidated Balance Sheet (partial)		
In millions at December 31	2020	2019
Assets		
Total current assets	\$11,236	\$ 6,639
Plants, properties and equipment, net	12,217	13,004
Forestlands	311	391
Investments	1,178	1,721
Long-term financial assets	2,257	7,088
Goodwill	3,315	3,347
Right of use assets	459	434
Deferred charges and other assets	745	847
Total assets	<u>\$31,718</u>	<u>\$33,471</u>
Note 1 (partial)		
Plants, Properties and Equipment. Plants, properties and equipment are stated at cost, less accumulated depreciation. Expenditures for betterments are capitalized, whereas normal repairs and maintenance are expensed as incurred. The units-of-production method of depreciation is used for pulp and paper mills, and the straight-line method is used for other plants and equipment.		
Note 9 (partial)		
Plants, Properties and Equipment		
In millions at December 31	2020	2019
Pulp, paper and packaging facilities	\$32,439	\$32,292
Other plants, properties and equipment	1,156	1,224
Gross cost	33,595	33,516
Less: Accumulated depreciation	21,378	20,512
Plants, properties and equipment, net	<u>\$12,217</u>	<u>\$13,004</u>
Annual straight-line depreciable lives generally are, for buildings—20 to 40 years, and for machinery and equipment—3 to 20 years. Depreciation expense was \$1.2 billion for the each of the years ended December 31, 2020, 2019 and 2018. Cost of products sold excludes depreciation and amortization expense.		

⁷Public companies, in addition to these two required disclosures, must include as supplementary information numerous schedules reporting reserve quantities; capitalized costs; acquisition, exploration, and development activities; and a standardized measure of discounted future net cash flows related to proven oil and gas reserve quantities. Given the importance of these disclosures, the SEC has issued rules for disclosures to help investors better understand the nature of oil and gas company operations. These rules provide guidance on (1) estimates of quantities of proved reserves, (2) estimates of future net revenues, and (3) disclosure of reserve information. See “Modernization of Oil and Gas Reporting,” SEC Financial Reporting Release No. 78 (Release No. 33-8995) (December 31, 2008).

Decision Analysis of Property, Plant, and Equipment

Analysts evaluate assets relative to activity (turnover) and profitability. Using net sales, total assets, and net income from **Kellogg's** annual report, we can calculate three common ratios used to analyze property, plant, and equipment.

(in millions)	<u>2020</u>	<u>2019</u>	<u>2018</u>
Net sales	\$13,770	\$13,578	\$13,547
Total assets	17,996	17,564	17,780
Net income	1,264	977	1,344

Asset Turnover

How efficiently a company uses its assets to generate sales is measured by the **asset turnover**. This ratio divides net sales by average total assets for the period. The resulting number is the dollars of sales produced by each dollar invested in assets. We can calculate Kellogg's asset turnover for 2020 and 2019 as follows.

$$\text{Asset Turnover} = \frac{\text{Net Sales}}{\text{Average Total Assets}}$$

$$2020: \frac{\$13,770}{(\$17,996 + \$17,564) \div 2} = 0.774 \quad 2019: \frac{\$13,578}{(\$17,564 + \$17,780) \div 2} = 0.768$$

The asset turnover shows that Kellogg generated sales of \$0.77 per dollar of assets in 2020 and 2019.

Asset turnover ratios can vary considerably among industries. For example, a grocery chain like **Kroger** has an asset turnover ratio of 2.82 while a financial institution like **JPMorgan Chase** has a much lower turnover of .04. When evaluating this ratio, it is important to benchmark against companies in the same industries and over time within the same company.

Profit Margin on Sales

Another measure for analyzing the use of property, plant, and equipment is the **profit margin on sales** (return on sales). Calculated as net income divided by net sales, this profitability ratio does not, by itself, answer the question of how profitably a company uses its assets. But by relating the profit margin on sales to the asset turnover during a period of time, we can determine how profitably the company used assets during that period of time in a measure of the return on assets. Using the above Kellogg data, we compute the profit margin on sales and the return on assets as follows.

$$\text{Profit Margin on Sales} = \frac{\text{Net Income}}{\text{Net Sales}}$$

$$2020: \frac{\$1,264}{\$13,770} = 9.18\% \quad 2019: \frac{\$977}{\$13,578} = 7.20\%$$

Return on Assets

The **return on assets (ROA)** is computed directly by dividing net income by average total assets. Using the Kellogg data, we compute the ratio as follows.

$$\text{Return on Assets} = \frac{\text{Net Income}}{\text{Average Total Assets}}$$

$$\text{2020: } \frac{\$1,264}{(\$17,996 + \$17,564) \div 2} = 7.11\% \qquad \text{2019: } \frac{\$977}{(\$17,564 + \$17,780) \div 2} = 5.53\%$$

The 2020 return on assets of 7.11% calculated here is the same result from multiplying the profit margin on sales by the asset turnover, as follows.

$$\text{Return on Assets} = \text{Profit Margin on Sales} \times \text{Asset Turnover}$$

$$\text{2020: } 9.18\% \times 0.774 = 7.11\% \qquad \text{2019: } 7.20\% \times 0.768 = 5.53\%$$

The rate of return on assets measures profitability well because it combines the effects of profit margin and asset turnover. A higher return on assets indicates a company is efficiently using its assets to generate a profit. For Kellogg, we see a positive trend in its return on assets from 2019 to 2020 such that it increased its net income without a significant investment in assets.

Analytics in Action A Better Way to Estimate

Calculating potential asset impairments is no easy task and involves a significant amount of data. Consider a company like **Marriott International**, which recently recorded impairment charges of \$116 million on its hotel assets. Marriott has over 7,500 properties (1.4 million rooms) across the globe and three tiers of quality: Luxury, Premium, and Select.

Different global and economic factors impact impairment calculations on each group of properties differently. In the footnotes to its financial statements, Marriott indicates that it estimates fair value of its property assets using an **income approach**. This reflects internally developed Level 3 discounted cash flows that include, among other things, expectations of future cash flows based on historical experience and projected growth rates, usage estimates, and demand trends. There can be significant variation in any one of those estimates, which would impact whether an impairment is recorded and the amount of loss.

Taking advantage of large amounts of data, and the tools available to analyze that data, allows companies like Marriott to

best estimate potential impairment losses. A key input to these fair value calculations is the discount rate. The following table indicates the impact the discount rate choice can have on fair value estimates, based on present value.

Fair Value Estimates (in millions)

Discount Rate	4.0%	4.5%	5.0%
Term (in years)	10	10	10
Cash Flow	\$10,500	\$10,500	\$10,500
Present Value	\$85,164	\$83,084	\$81,078
	\$2,081		\$2,005

As indicated, a 0.5% change in discount rate over a 10-year period can swing the present value calculation by over \$2 billion. Present value estimates can be very sensitive to changes in inputs, like discount rates, cash flows, and terms.

Go to the Analytics in Action Activities section at the end of the chapter, which includes Excel-based problems with data sets, to see the relevance and application of data analytics to intermediate accounting topics.

APPENDIX 10A

Income Tax Depreciation

LEARNING OBJECTIVE 5*

*Describe income tax methods of depreciation.

For the most part, a financial accounting course does not address issues related to the computation of income taxes. However, because the concepts of tax depreciation are similar to those of book depreciation and because tax depreciation methods are sometimes adopted for book purposes, we present an overview of this subject.

Congress passed the Accelerated Cost Recovery System (ACRS) as part of the Economic Recovery Tax Act of 1981. The goal was to stimulate capital investment through faster write-offs and to bring more uniformity to the write-off period. For assets purchased in the years 1981 through 1986, companies use ACRS and its preestablished “cost recovery periods” for various classes of assets.

In the Tax Reform Act of 1986 Congress enacted a **Modified Accelerated Cost Recovery System (MACRS)**. It applies to depreciable assets placed in service in 1987 and later. The following discussion is based on these MACRS rules. Realize that tax depreciation rules are subject to change annually.⁸

Modified Accelerated Cost Recovery System

The computation of depreciation under MACRS differs from the computation under GAAP in three respects: (1) a mandated tax life, which is generally shorter than the economic life; (2) cost recovery on an accelerated basis; and (3) an assigned salvage value of zero.

Tax Lives (Recovery Periods)

Each item of depreciable property belongs to a property class. The recovery period (depreciable tax life) of an asset depends on its property class. **Illustration 10A.1** presents the MACRS property classes.

3-year property	Includes small tools, horses, and assets used in research and development activities
5-year property	Includes automobiles, trucks, computers and peripheral equipment, and office machines
7-year property	Includes office furniture and fixtures, agriculture equipment, oil exploration and development equipment, railroad track, manufacturing equipment, and any property not designated by law as being in any other class
10-year property	Includes railroad tank cars, mobile homes, boilers, and certain public utility property
15-year property	Includes roads, shrubbery, and certain low-income housing
20-year property	Includes waste-water treatment plants and sewer systems
27.5-year property	Includes residential rental property
39-year property	Includes nonresidential real property

ILLUSTRATION 10A.1 MACRS
Property Classes

⁸For example, in an effort to jump-start the economy following the September 11, 2001, terrorist attacks, Congress passed the Job Creation and Worker Assistance Act of 2002 (the Act). The Act allowed a 30% first-year **bonus depreciation** for assets placed into service after September 11, 2001, but before September 11, 2004. Since then, Congress has enacted enhanced bonus depreciation provisions to encourage companies to invest in fixed assets because they can front-load depreciation expense and reduce their tax bill. The most recent tax law—the Tax Cuts and Jobs Act of 2017—allows **100%** bonus depreciation (full write-off in the year of purchase) for new and used assets placed in service before 2026. See Tax Foundation, “Preliminary Details and Analysis of the Tax Cuts and Jobs Act,” No. 241 (December 2017).

Tax Depreciation Methods

Companies compute depreciation expense using the tax basis—usually the cost—of the asset. The depreciation method depends on the MACRS property class, as shown in **Illustration 10A.2**.

ILLUSTRATION 10A.2

Depreciation Method for Various
MACRS Property Classes

MACRS Property Class	Depreciation Method
3-, 5-, 7-, and 10-year property	Double-declining-balance
15- and 20-year property	150% declining-balance
27.5- and 39-year property	Straight-line

Depreciation computations for income tax purposes are based on the **half-year convention**. That is, a half year of depreciation is allowable in the year of acquisition and in the year of disposition.⁹ A company depreciates an asset to a zero value so that there is no salvage value at the end of its MACRS life.

Use of IRS-published tables, shown in **Illustration 10A.3**, simplifies application of these depreciation methods.

ILLUSTRATION 10A.3

IRS Table
of MACRS Depreciation Rates, by
Property Class

MACRS Depreciation Rates By Class of Property						
Recovery Year	3-Year (200% DB)	5-Year (200% DB)	7-Year (200% DB)	10-Year (200% DB)	15-Year (150% DB)	20-Year (150% DB)
1	33.33	20.00	14.29	10.00	5.00	3.750
2	44.45	32.00	24.49	18.00	9.50	7.219
3	14.81*	19.20	17.49	14.40	8.55	6.677
4	7.41	11.52*	12.49	11.52	7.70	6.177
5		11.52	8.93*	9.22	6.93	5.713
6		5.76	8.92	7.37	6.23	5.285
7			8.93	6.55*	5.90*	4.888
8			4.46	6.55	5.90	4.522
9				6.56	5.91	4.462*
10				6.55	5.90	4.461
11				3.28	5.91	4.462
12					5.90	4.461
13					5.91	4.462
14					5.90	4.461
15					5.91	4.462
16					2.95	4.461
17						4.462
18						4.461
19						4.462
20						4.461
21						2.231

*Switch to straight-line depreciation.

⁹The tax law requires mid-quarter and mid-month conventions for MACRS purposes in certain circumstances.

Example of MACRS

To illustrate depreciation computations under both MACRS and GAAP straight-line accounting, assume the following facts for a computer and peripheral equipment purchased by Denise Rode Company on January 1, 2025.

Acquisition Date	January 1, 2025
Cost	\$100,000
Estimated useful life	7 years
Estimated salvage value	\$16,000
MACRS class life	5 years
MACRS method	200% declining-balance
GAAP method	Straight-line
Disposal proceeds—January 2, 2032	\$11,000

Using the rates from the MACRS depreciation rate schedule for a 5-year class of property, Rode computes depreciation for tax purposes as shown in [Illustration 10A.4](#).

MACRS Depreciation			
2025	$\$100,000 \times .20$	=	\$ 20,000
2026	$\$100,000 \times .32$	=	32,000
2027	$\$100,000 \times .192$	=	19,200
2028	$\$100,000 \times .1152$	=	11,520
2029	$\$100,000 \times .1152$	=	11,520
2030	$\$100,000 \times .0576$	=	5,760
	Total depreciation		<u>\$100,000</u>

ILLUSTRATION 10A.4
Computation of MACRS Depreciation

Rode computes the depreciation under GAAP straight-line method, with \$16,000 of estimated salvage value and an estimated useful life of 7 years, as shown in [Illustration 10A.5](#).

GAAP Depreciation	
$(\$100,000 - \$16,000) \div 7 = \$12,000$ annual depreciation	
$\times 7$ years	
1/1/25–1/2/32	<u>\$84,000 total depreciation</u>

ILLUSTRATION 10A.5
Computation of GAAP Depreciation

The MACRS depreciation recovers the total cost of the asset on an accelerated basis. But, a taxable gain of \$11,000 results from the sale of the asset at January 2, 2032. Therefore, the net effect on taxable income for the years 2025 through 2032 is \$89,000 (\$100,000 depreciation – \$11,000 gain).

Under GAAP, the company recognizes a loss on disposal of \$5,000 (\$16,000 book value – \$11,000 disposal proceeds). The net effect on income before income taxes for the years 2025 through 2032 is \$89,000 (\$84,000 depreciation + \$5,000 loss), the same as the net effect of MACRS on taxable income.

Even though the net effects are equal in amount, the deferral of income tax payments under MACRS from early in the life of the asset to later in the life is desirable. The different amounts of depreciation for income tax reporting and financial GAAP reporting in each year are a matter of timing and result in temporary differences, which require **interperiod tax allocation**. (See Chapter 18 for an extended treatment of this topic.)

Optional Straight-Line Method

An alternate MACRS method exists for determining depreciation deductions. Based on the straight-line method, it is referred to as the **optional** (elective) **straight-line method**. This method applies to the six classes of property described earlier. The alternate MACRS applies the straight-line method to the MACRS recovery periods. It ignores salvage value.

Under the optional straight-line method, in the first year in which the property is put in service, the company deducts half of the amount of depreciation that would be permitted for a full year (half-year convention). *Use the half-year convention for homework problems.*

Tax versus Book Depreciation

GAAP requires that companies allocate the cost of depreciable assets to expense over the expected useful life of the asset in a systematic and rational manner. Some argue that from a cost-benefit perspective it would be better for companies to adopt the MACRS approach in order to eliminate the necessity of maintaining two different sets of records.

However, the tax laws and financial reporting have different objectives. The purpose of taxation is to raise revenue from constituents in an equitable manner. The purpose of financial reporting is to reflect the economic substance of a transaction as closely as possible and to help predict the amounts, timing, and uncertainty of future cash flows. Because these objectives differ, the adoption of one method for both tax and book purposes in all cases is not in accordance with GAAP.

Accounting Matters

In the Bonus (Boomerang?)

As discussed, Congress has used changes in tax depreciation rules related to bonus depreciation to encourage capital investment, thereby boosting the economy in response to economic downturns. Below is a summary of the bonus depreciation history.

Businesses love bonus depreciation. It allows them to front-load depreciation expense, which lowers taxable income

and the amount of taxes companies pay in the early years of an asset's life. Investors need to beware. Although bonus depreciation may be a good thing for the economy, it can distort cash flow measures—making them look artificially strong when the allowances are in place but reversing once the bonus depreciation expires.

Law	Provisions
Job Creation and Worker Assistance Act of 2002	Allowed a 30% deduction for assets purchased before September 2004.
Amendment to Job Creation and Worker Assistance Act of 2002 (enacted in 2003)	Extended bonus depreciation provisions to 2005.
Small Business Jobs Act of 2010	Enacted 50% bonus depreciation for smaller companies for assets purchased in 2010.
Tax Cuts and Jobs Act of 2017	Allows 100% bonus depreciation for new and used assets placed in service before 2026.

depreciation 10-2	natural resources 10-20	

Learning Objectives Review

1 Describe depreciation concepts and methods of depreciation.

Depreciation allocates the cost of tangible assets to expense in a systematic and rational manner to those periods expected to benefit from the use of the asset. Three factors involved in the depreciation process are (1) determining the depreciation base for the asset, (2) estimating service lives, and (3) selecting a method of cost apportionment (depreciation).

Methods of depreciation are as follows.

1. **Activity method.** Assumes that depreciation is a function of use or productivity instead of the passage of time. The life of the asset is considered in terms of either the output it provides, or an input measure such as the number of hours it works.
2. **Straight-line method.** Considers depreciation a function of time instead of a function of usage. The straight-line procedure is often the most conceptually appropriate when the decline in usefulness is constant from period to period.
3. **Decreasing-charge methods.** Provide for a higher depreciation cost in the earlier years and lower charges in later periods. The main justification for this approach is that the asset is the most productive in its early years.
4. **Group and composite methods.** The group method is frequently used when the assets are fairly similar in nature and have approximately the same useful lives. The composite method may be used when the assets are dissimilar and have different lives. These methods may combine straight-line/activity approaches. **Other depreciation issues** relate to partial period depreciation and changes in depreciation estimates.

2 Identify the accounting issues related to asset impairment.

The process to determine an impairment loss is as follows. (1) Review events and changes in circumstances for possible impairment. (2) If events or changes suggest impairment, determine if the sum of the expected future net cash flows from the long-lived asset is less than the carrying amount of the asset. If less, measure the impairment loss. (3) The impairment loss is the amount by which the carrying amount of the asset exceeds the fair value of the asset.

After a company records an impairment loss, the reduced carrying amount of the long-lived asset is its new cost basis. **Impairment losses may not be restored for assets held for use.** If the company expects to dispose of the asset, it should report the impaired asset at the lower-of-cost-or-net realizable value. It is not depreciated. It can be continuously revalued, as long as the write-up is never to an amount greater than the carrying amount before impairment.

3 Explain the accounting procedures for depletion of natural resources.

To account for depletion of natural resources, companies (1) establish the depletion base and (2) write off resource cost. Four factors are part of establishing the depletion base: (a) acquisition costs, (b) exploration costs, (c) development costs, and (d) restoration costs. To write off resource cost, companies normally compute depletion on the units-of-production method. Thus, **depletion is a function of the number of units withdrawn during the period.** To obtain a cost per unit of product, the total cost of the natural resource less salvage value is divided by the number of units estimated to be in the resource deposit. To compute depletion, this cost per unit is multiplied by the number of units withdrawn.

4 Demonstrate how to report and analyze property, plant, equipment, and natural resources.

The basis of valuation for property, plant, and equipment and for natural resources should be disclosed along with pledges, liens, and other commitments related to these assets. Companies should not offset any liability secured by property, plant, and equipment or by natural resources against these assets, but should report it in the liabilities section. When depreciating assets, credit a valuation account normally called Accumulated Depreciation. When depleting assets, use an accumulated depletion account, or credit the depletion directly to the natural resource account. Companies engaged in significant oil and gas producing activities must provide additional disclosures about these activities. Analysis may be performed to evaluate the **asset turnover, profit margin on sales, and return on assets.**

*5 Describe income tax methods of depreciation.

Congress enacted a Modified Accelerated Cost Recovery System (MACRS) in the Tax Reform Act of 1986. It applies to depreciable assets placed in service in 1987 and later. The computation of depreciation under MACRS differs from the computation under GAAP in three respects: (1) a mandated tax life, which is generally shorter than the economic life; (2) cost recovery on an accelerated basis; and (3) an assigned salvage value of zero.

Enhanced Review and Practice

Go to Wiley Course Resources for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley Course Resources.

Questions

1. Distinguish among depreciation, depletion, and amortization.
2. Identify the factors that are relevant in determining the annual depreciation charge, and explain whether these factors are determined objectively or whether they are based on judgment.
3. Some believe that accounting depreciation measures the decline in the value of fixed assets. Do you agree? Explain.
4. Explain how estimation of service lives can result in unrealistically high carrying values for fixed assets.
5. The plant manager of a manufacturing firm suggested in a conference of the company's executives that accountants should speed up depreciation on the machinery in the finishing department because improvements were rapidly making those machines obsolete, and a depreciation fund big enough to cover their replacement is needed. Discuss the accounting concept of depreciation and the effect on a business concern of the depreciation recorded for plant assets, paying particular attention to the issues raised by the plant manager.
6. For what reasons are plant assets retired? What are physical and economic factors?
7. What basic questions must be answered before the amount of the depreciation charge can be computed?
8. Workman Company purchased a machine on January 2, 2025, for \$800,000. The machine has an estimated useful life of 5 years and a salvage value of \$100,000. Depreciation was computed by the 150% declining-balance method. What is the amount of accumulated depreciation at the end of December 31, 2026?
9. Silverman Company purchased machinery for \$162,000 on January 1, 2025. It is estimated that the machinery will have a useful life of 20 years, salvage value of \$15,000, production of 84,000 units, and working hours of 42,000. During 2025, the company uses the machinery for 14,300 hours, and the machinery produces 20,000 units. Compute depreciation under the straight-line, units-of-output, working hours, sum-of-the-years'-digits, and double-declining-balance methods.
10. What are the major factors considered in determining what depreciation method to use?
11. Under what conditions is it appropriate for a business to use the composite method of depreciation for its plant assets? What are the advantages and disadvantages of this method?
12. If Remmers, Inc. uses the composite method and its composite rate is 7.5% per year, what entry should it make when plant assets that originally cost \$50,000 and have been used for 10 years are sold for \$14,000?
13. A building that was purchased on December 31, 2011, for \$2,500,000 was originally estimated to have a life of 50 years with no salvage value at the end of that time. Depreciation has been recorded through 2025. During 2026, an examination of the building by an engineering firm discloses that its estimated useful life is 15 years after 2025. What should be the amount of depreciation for 2026?
14. Charlie Parker, president of Spinners Company, has recently noted that depreciation increases cash provided by operations and therefore depreciation is a good source of funds. Do you agree? Discuss.
15. Andrea Kremer purchased a computer for \$8,000 on July 1, 2025. She intends to depreciate it over 4 years using the double-declining-balance method. Salvage value is \$1,000. Compute depreciation for 2026.
16. Walkin Inc. is considering the write-down of its long-term plant because of a lack of profitability. Explain to the management of Walkin how to determine whether a write-down is permitted.
17. Last year, Wyeth Company recorded an impairment on an asset held for use. Recent appraisals indicate that the asset has increased in value. Should Wyeth record this recovery in value under GAAP?
18. Toro Co. has equipment with a carrying amount of \$700,000. The expected future net cash flows from the equipment are \$705,000, and its fair value is \$590,000. The equipment is expected to be used in operations in the future. What amount (if any) should Toro report as an impairment to its equipment?
19. Explain how gains or losses on impaired assets should be reported in income.
20. It has been suggested that plant and equipment could be replaced more quickly if depreciation rates for income tax and accounting purposes were substantially increased. As a result, business operations would receive the benefit of more modern and more efficient plant facilities. Discuss the merits of this proposition.
21. List (a) the similarities and (b) the differences in the accounting treatments of depreciation and depletion.
22. In the extractive industries, businesses may pay dividends in excess of net income. How can this practice be justified?
23. Shumway Oil uses successful-efforts accounting and also provides full-cost results as well. Under full-cost, Shumway Oil would have reported retained earnings of \$42 million and net income of \$4 million. Under successful-efforts, retained earnings were \$29 million, and net income was \$3 million. Explain the difference between full-costing and successful-efforts accounting.
24. **Target** in 2020 reported net income of \$3,281 million, net sales of \$77,130 million, and average total assets of \$42,035 million. What is Target's asset turnover? What is Target's return on assets?
- *25. What is a modified accelerated cost recovery system (MACRS)? Speculate as to why this system is now required for tax purposes.

Brief Exercises

(Unless otherwise instructed, round all answers to the nearest dollar.)

BE10.1 (LO 1) Fernandez Corporation purchased a truck at the beginning of 2025 for \$50,000. The truck is estimated to have a salvage value of \$2,000 and a useful life of 160,000 miles. It was driven 23,000 miles in 2025 and 31,000 miles in 2026. Compute depreciation expense using the units-of-production method for 2025 and 2026.

BE10.2 (LO 1) Lockard Company purchased machinery on January 1, 2025, for \$80,000. The machinery is estimated to have a salvage value of \$8,000 after a useful life of 8 years. (a) Compute 2025 depreciation expense using the straight-line method. (b) Compute 2025 depreciation expense using the straight-line method assuming the machinery was purchased on September 1, 2025.

BE10.3 (LO 1) Use the information for Lockard Company given in BE10.2. (a) Compute 2025 depreciation expense using the sum-of-the-years'-digits method. (b) Compute 2025 depreciation expense using the sum-of-the-years'-digits method, assuming the machinery was purchased on April 1, 2025.

BE10.4 (LO 1) Use the information for Lockard Company given in BE10.2. (a) Compute 2025 depreciation expense using the double-declining-balance method. (b) Compute 2025 depreciation expense using the double-declining-balance method, assuming the machinery was purchased on October 1, 2025.

BE10.5 (LO 1) Cominsky Company purchased a machine on July 1, 2026, for \$28,000. Cominsky paid \$200 in title fees and county property tax of \$125 on the machine. In addition, Cominsky paid \$500 shipping charges for delivery, and \$475 was paid to a local contractor to build and wire a platform for the machine on the plant floor. The machine has an estimated useful life of 6 years with a salvage value of \$3,000. Determine the depreciation base of Cominsky's new machine. Cominsky uses straight-line depreciation.

BE10.6 (LO 1) Dickinson Inc. owns the following assets.

Asset	Cost	Salvage	Estimated Useful Life
A	\$70,000	\$7,000	10 years
B	50,000	5,000	5 years
C	82,000	4,000	12 years

Compute the composite depreciation rate and the composite life of Dickinson's assets.

BE10.7 (LO 1) Holt Company purchased a computer for \$8,000 on January 1, 2024. Straight-line depreciation is used, based on a 5-year life and a \$1,000 salvage value. In 2026, the estimates are revised. Holt now feels the computer will be used until December 31, 2027, when it can be sold for \$500. Compute the 2026 depreciation.

BE10.8 (LO 2) Jurassic Company owns equipment that cost \$900,000 and has accumulated depreciation of \$380,000. The expected future net cash flows from the use of the asset are expected to be \$550,000. The fair value of the equipment is \$400,000. Prepare the journal entry, if any, to record the impairment loss.

BE10.9 (LO 2) Use the information in BE10.8. Assume that the expected net cash flows are expected to be \$500,000. Prepare the journal entry, if any, to record the impairment loss.

BE10.10 (LO 3) Everly Corporation acquires a coal mine at a cost of \$400,000. Intangible development costs total \$100,000. After extraction has occurred, Everly must restore the property (estimated fair value of the obligation is \$80,000), after which it can be sold for \$160,000. Everly estimates that 4,000 tons of coal can be extracted. If 700 tons are extracted the first year, prepare the journal entry to record depletion.

BE10.11 (LO 4) In its recent annual report, **Campbell Soup Company** reports beginning-of-the-year total assets of \$13,148 million, end-of-the-year total assets of \$12,372 million, total sales of \$8,691 million, and net income of \$1,628 million. (a) Compute Campbell's asset turnover. (b) Compute Campbell's profit margin on sales. (c) Compute Campbell's return on assets using (1) asset turnover and profit margin and (2) net income. (Round to two decimal places.)

***BE10.12 (LO 5)** Francis Corporation purchased an asset at a cost of \$50,000 on March 1, 2025. The asset has a useful life of 8 years and a salvage value of \$4,000. For tax purposes, the MACRS class life is 5 years. Compute tax depreciation for each year 2025–2030.

Exercises

E10.1 (LO 1) Excel (Depreciation Computations—SL, SYD, DDB) Deluxe Ezra Company purchases equipment on January 1, Year 1, at a cost of \$469,000. The asset is expected to have a service life of 12 years and a salvage value of \$40,000.

Instructions

- Compute the amount of depreciation for each of Years 1 through 3 using the straight-line depreciation method.
- Compute the amount of depreciation for each of Years 1 through 3 using the sum-of-the-years'-digits method.
- Compute the amount of depreciation for each of Years 1 through 3 using the double-declining-balance method. (In performing your calculations, round constant percentage to the nearest one-hundredth of a point and round answers to the nearest dollar.)

E10.2 (LO 1) (Depreciation—Conceptual Understanding) Rembrandt Company acquired a plant asset at the beginning of Year 1. The asset has an estimated service life of 5 years. An employee has prepared depreciation schedules for this asset using three different methods to compare the results of using one method with the results of using other methods. You are to assume that the following schedules have been correctly prepared for this asset using (1) the straight-line method, (2) the sum-of-the-years'-digits method, and (3) the double-declining-balance method.

Year	Straight-Line	Sum-of-the-Years'-Digits	Double-Declining-Balance
1	\$ 9,000	\$15,000	\$20,000
2	9,000	12,000	12,000
3	9,000	9,000	7,200
4	9,000	6,000	4,320
5	9,000	3,000	1,480
Total	<u>\$45,000</u>	<u>\$45,000</u>	<u>\$45,000</u>

Instructions

Answer the following questions.

- What is the cost of the asset being depreciated?
- What amount, if any, was used in the depreciation calculations for the salvage value for this asset?
- Which method will produce the highest charge to income in Year 1?
- Which method will produce the highest charge to income in Year 4?
- Which method will produce the highest book value for the asset at the end of Year 3?
- If the asset is sold at the end of Year 3, which method would yield the highest gain (or lowest loss) on disposal of the asset?

E10.3 (LO 1) (Depreciation Computations—SYD, DDB—Partial Periods) Judds Company purchased a new plant asset on April 1, 2025, at a cost of \$711,000. It was estimated to have a service life of 20 years and a salvage value of \$60,000. Judds' accounting period is the calendar year.

Instructions

- Compute the depreciation for this asset for 2025 and 2026 using the sum-of-the-years'-digits method.
- Compute the depreciation for this asset for 2025 and 2026 using the double-declining-balance method.

E10.4 (LO 1) Excel (Depreciation Computations—Five Methods) Jon Seceda Furnace Corp. purchased machinery for \$315,000 on May 1, 2025. It is estimated that it will have a useful life of 10 years, salvage value of \$15,000, production of 240,000 units, and working hours of 25,000. During 2026, Seceda Corp. uses the machinery for 2,650 hours, and the machinery produces 25,500 units.

Instructions

From the information given, compute the depreciation charge for 2026 under each of the following methods. (Round to the nearest dollar.)

- Straight-line.
- Units-of-output.
- Working hours.
- Sum-of-the-years'-digits.
- Declining-balance (use 20% as the annual rate).

E10.5 (LO 1) (Depreciation Computations—Four Methods) Robert Parish Corporation purchased a new machine for its assembly process on August 1, 2025. The cost of this machine was \$117,900. The company estimated that the machine would have a salvage value of \$12,900 at the end of its service life. Its life is estimated at 5 years, and its working hours are estimated at 21,000 hours. Year-end is December 31.

Instructions

Compute the depreciation expense under the following methods. Each of the following should be considered unrelated.

- Straight-line depreciation for 2025.
- Activity method for 2025, assuming that machine usage was 800 hours.
- Sum-of-the-years'-digits for 2026.
- Double-declining-balance for 2026.

E10.6 (LO 1) (Depreciation Computations—Five Methods, Partial Periods) Muggsy Bogues Company purchased equipment for \$212,000 on October 1, 2025. It is estimated that the equipment will have a useful life of 8 years and a salvage value of \$12,000. Estimated production is 40,000 units and estimated working hours are 20,000. During 2025, Bogues uses the equipment for 525 hours and the equipment produces 1,000 units.

Instructions

Compute depreciation expense under each of the following methods. Bogues is on a calendar-year basis ending December 31.

- Straight-line method for 2025.
- Activity method (units of output) for 2025.
- Activity method (working hours) for 2025.
- Sum-of-the-years'-digits method for 2027.
- Double-declining-balance method for 2026.

E10.7 (LO 1) (Different Methods of Depreciation) Jackel Industries presents you with the following information.

Description	Date Purchased	Cost	Salvage Value	Life in Years	Depreciation Method	Accumulated	Depreciation for 2027
						Depreciation to 12/31/26	
Machine A	2/12/25	\$142,500	\$16,000	10	(a)	\$33,350	(b)
Machine B	8/15/24	(c)	21,000	5	SL	29,000	(d)
Machine C	7/21/23	75,400	23,500	8	DDB	(e)	(f)
Machine D	10/15/(g)	219,000	69,000	5	SYD	70,000	(h)

Instructions

Complete the table for the year ended December 31, 2027. The company depreciates all assets using the half-year convention.

E10.8 (LO 1) (Depreciation Computation—Replacement, Nonmonetary Exchange) George Zidek Corporation bought a machine on June 1, 2023, for \$31,000, f.o.b. the place of manufacture. Freight to the point where it was set up was \$200, and \$500 was expended to install it. The machine's useful life was estimated at 10 years, with a salvage value of \$2,500. On June 1, 2024, an essential part of the machine is replaced, at a cost of \$1,980, with one designed to reduce the cost of operating the machine. The cost of the old part and related depreciation cannot be determined with any accuracy.

On June 1, 2027, the company buys a new machine of greater capacity for \$35,000, delivered, trading in the old machine which has a fair value and trade-in allowance of \$20,000. Preparing the old machine for removal from the plant cost \$75, and expenditures to install the new one were \$1,500. It is estimated that the new machine has a useful life of 10 years, with a salvage value of \$4,000 at the end of that time. (The exchange has commercial substance.)

Instructions

Assuming that depreciation is to be computed on the straight-line basis, compute the annual depreciation on the new equipment that should be provided for the fiscal year beginning June 1, 2027. (Round to the nearest dollar.)

E10.9 (LO 1) (Composite Depreciation) Presented below is information related to LeBron James Manufacturing Corporation.

Asset	Cost	Estimated Salvage	Estimated Life (in years)
A	\$40,500	\$5,500	10
B	33,600	4,800	9
C	36,000	3,600	9
D	19,000	1,500	7
E	23,500	2,500	6

Instructions

- Compute the rate of depreciation per year to be applied to the plant assets under the composite method.
- Prepare the adjusting entry necessary at the end of the year to record depreciation for the year.
- Prepare the entry to record the sale of asset D for cash of \$4,800. It was used for 6 years, and depreciation was entered under the composite method.

E10.10 (LO 1) (Depreciation Computations, SYD) Five Satins Company purchased a piece of equipment at the beginning of 2022. The equipment cost \$430,000. It has an estimated service life of 8 years and an expected salvage value of \$70,000. The sum-of-the-years'-digits method of depreciation is being used. Someone has already correctly prepared a depreciation schedule for this asset. This schedule shows that \$60,000 will be depreciated for a particular calendar year.

Instructions

Show calculations to determine for what particular year the depreciation amount for this asset will be \$60,000.

E10.11 (LO 1) (Depreciation—Change in Estimate) Machinery purchased for \$60,000 by Tom Brady Co. in 2021 was originally estimated to have a life of 8 years with a salvage value of \$4,000 at the end of that time. Depreciation has been entered for 5 years on this basis. In 2026, it is determined that the total estimated life should be 10 years with a salvage value of \$4,500 at the end of that time. Assume straight-line depreciation.

Instructions

- Prepare the entry to correct the prior years' depreciation, if necessary.
- Prepare the entry to record depreciation for 2026.

E10.12 (LO 1) (Depreciation Computation—Addition, Change in Estimate) In 1998, Herman Moore Company completed the construction of a building at a cost of \$2,000,000 and first occupied it in January 1999. It was estimated that the building will have a useful life of 40 years and a salvage value of \$60,000 at the end of that time.

Early in 2009, an addition to the building was constructed at a cost of \$500,000. At that time, it was estimated that the remaining life of the building would be, as originally estimated, an additional 30 years, and that the addition would have a life of 30 years and a salvage value of \$20,000.

In 2027, it is determined that the probable life of the building and addition will extend to the end of 2058, or 20 years beyond the original estimate.

Instructions

- Using the straight-line method, compute the annual depreciation that would have been charged from 1999 through 2008.
- Compute the annual depreciation that would have been charged from 2009 through 2026.
- Prepare the entry, if necessary, to adjust the account balances because of the revision of the estimated life in 2027.
- Compute the annual depreciation to be charged, beginning with 2027.

E10.13 (LO 1) (Depreciation—Replacement, Change in Estimate) Greg Maddox Company constructed a building at a cost of \$2,200,000 and occupied it beginning in January 2006. It was estimated at that time that its life would be 40 years, with no salvage value.

In January 2026, a new roof was installed at a cost of \$300,000, and it was estimated then that the building would have a useful life of 25 years from that date. The cost of the old roof was \$160,000.

Instructions

- What amount of depreciation should have been charged annually from the years 2006 to 2025? (Assume straight-line depreciation.)
- What entry should be made in 2026 to record the replacement of the roof?
- Prepare the entry in January 2026 to record the revision in the estimated life of the building, if necessary.
- What amount of depreciation should be charged for the year 2026?

E10.14 (LO 1) (Error Analysis and Depreciation, SL and SYD) Mike Devereaux Company shows the following entries in its Equipment account for 2026. All amounts are based on historical cost.

Equipment			
2026		2026	
Jan. 1	Balance	134,750	
Aug. 10	Purchases	32,000	
12	Freight on equipment purchased	700	
25	Installation costs	2,700	
Nov. 10	Repairs	500	
			2026
			June 30
			Cost of equipment sold (purchased prior to 2026)
			23,000

Instructions

- Prepare any correcting entries necessary.
- Assuming that depreciation is to be charged for a full year on the ending balance in the asset account, compute the proper depreciation charge for 2026 under each of the methods listed below. Assume an estimated life of 10 years, with no salvage value. The machinery included in the January 1, 2026, balance was purchased in 2024.
 - Straight-line.
 - Sum-of-the-years'-digits.

E10.15 (LO 1) (Depreciation for Fractional Periods) On March 10, 2027, Lost World Company sells equipment that it purchased for \$192,000 on August 20, 2020. It was originally estimated that the equipment would have a life of 12 years and a salvage value of \$16,800 at the end of that time, and depreciation has been computed on that basis. The company uses the straight-line method of depreciation.

Instructions

- Compute the depreciation charge on this equipment for 2020, for 2027, and the total charge for the period from 2021 to 2026, inclusive, under each of the six following assumptions with respect to partial periods.
 - Depreciation is computed for the exact period of time during which the asset is owned. (Use 365 days for base and record depreciation through March 9, 2027.)
 - Depreciation is computed for the full year on the January 1 balance in the asset account.
 - Depreciation is computed for the full year on the December 31 balance in the asset account.
 - Depreciation for one-half year is charged on plant assets acquired or disposed of during the year.
 - Depreciation is computed on additions from the beginning of the month following acquisition and on disposals to the beginning of the month following disposal.
 - Depreciation is computed for a full period on all assets in use for over one-half year, and no depreciation is charged on assets in use for less than one-half year. (Use 365 days for base.)
- Briefly evaluate the methods above, considering them from the point of view of basic accounting theory as well as simplicity of application.

E10.16 (LO 2) (Impairment) Presented below is information related to equipment owned by Suarez Company at December 31, 2025.

Cost	\$9,000,000
Accumulated depreciation to date	1,000,000
Expected future net cash flows	7,000,000
Fair value	4,800,000

Assume that Suarez will continue to use this asset in the future. As of December 31, 2025, the equipment has a remaining useful life of 4 years.

Instructions

- Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2025.
- Prepare the journal entry to record depreciation expense for 2026.
- The fair value of the equipment at December 31, 2026, is \$5,100,000. Prepare the journal entry (if any) necessary to record this increase in fair value.

E10.17 (LO 2) (Impairment) Assume the same information as E10.16, except that Suarez intends to dispose of the equipment in the coming year. It is expected that the cost of disposal will be \$20,000.

Instructions

- Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2025.
- Prepare the journal entry (if any) to record depreciation expense for 2026.
- The asset was not sold by December 31, 2026. The fair value of the equipment on that date is \$5,300,000. Prepare the journal entry (if any) necessary to record this increase in fair value. It is expected that the cost of disposal is still \$20,000.

E10.18 (LO 2) (Impairment) The management of Petro Garcia Inc. was discussing whether certain equipment should be written off as a charge to current operations because of obsolescence. This equipment has a cost of \$900,000 with depreciation to date of \$400,000 as of December 31, 2025. On December 31, 2025, management projected its future net cash flows from this equipment to be \$300,000 and its fair value to be \$230,000. The company intends to use this equipment in the future.

Instructions

- Prepare the journal entry (if any) to record the impairment at December 31, 2025.
- Where should the gain or loss (if any) on the write-down be reported in the income statement?
- At December 31, 2026, the equipment's fair value increased to \$260,000. Prepare the journal entry (if any) to record this increase in fair value.
- What accounting issues did management face in accounting for this impairment?

E10.19 (LO 3) (Depletion Computations—Timber) Stanislaw Timber Company owns 9,000 acres of timberland purchased in 2014 at a cost of \$1,400 per acre. At the time of purchase, the land without the timber was valued at \$400 per acre. In 2015, Stanislaw built fire lanes and roads, with a life of 30 years, at a cost of \$84,000. Every year, Stanislaw sprays to prevent disease at a cost of \$3,000 per year and spends \$7,000 to maintain the fire lanes and roads. During 2016, Stanislaw selectively logged and sold 700,000 board feet of timber, of the estimated 3,500,000 board feet. In 2017, Stanislaw planted new seedlings to replace the trees cut at a cost of \$100,000.

Instructions

- Determine the depreciation expense and the cost of timber sold related to depletion for 2016.
- Stanislaw has not logged since 2016. If Stanislaw logged and sold 900,000 board feet of timber in 2027, when the timber cruise (appraiser) estimated 5,000,000 board feet, determine the cost of timber sold related to depletion for 2027.

E10.20 (LO 3) (Depletion Computations—Oil) Diderot Drilling Company has leased property on which oil has been discovered. The oil wells on this property produced 18,000 barrels of oil during the past year that sold at an average sales price of \$55 per barrel. Total oil resources of this property are estimated to be 250,000 barrels.

The lease provided for an outright payment of \$500,000 to the lessor (owner) before drilling could be commenced and an annual rental of \$31,500. A premium of 5% of the sales price of every barrel of oil removed is to be paid annually to the lessor. In addition, Diderot (lessee) is to clean up all the waste and debris from drilling and to bear the costs of reconditioning the land for farming when the wells are abandoned. The estimated fair value, at the time of the lease, of this clean-up and reconditioning is \$30,000.

Instructions

From the provisions of the lease agreement, you are to compute the cost per barrel for the past year, exclusive of operating costs, to Diderot Drilling Company. (Round to the nearest cent.)

E10.21 (LO 3) (Depletion Computations—Timber) Forda Lumber Company owns a 7,000-acre tract of timber purchased in 2011 at a cost of \$1,300 per acre. At the time of purchase, the land was estimated to have a value of \$300 per acre without the timber. Forda Lumber Company has not logged this tract since it was purchased. In 2025, Forda had the timber cruised. The cruise (appraiser) estimated that each acre contained 8,000 board feet of timber. In 2025, Forda built 10 miles of roads at a cost of \$7,840 per mile. After the roads were completed, Forda logged and sold 3,500 trees containing 850,000 board feet.

Instructions

- Determine the cost of timber sold related to depletion for 2025.
- If Forda depreciates the logging roads on the basis of timber cut, determine the depreciation expense for 2025.
- If Forda plants five seedlings at a cost of \$4 per seedling for each tree cut, how should Forda treat the reforestation?

E10.22 (LO 3) (Depletion Computations—Mining) Alcide Mining Company purchased land on February 1, 2025, at a cost of \$1,190,000. It estimated that a total of 60,000 tons of mineral was available for mining. After it has removed all the natural resources, the company will be required to restore the property to its previous state because of strict environmental protection laws. It estimates the fair value of this restoration obligation at \$90,000. It believes it will be able to sell the property afterwards for \$100,000. It incurred developmental costs of \$200,000 before it was able to do any mining. In 2025, resources removed totaled 30,000 tons. The company sold 22,000 tons.

Instructions

Compute the following information for 2025.

- Per unit material cost.
- Total material cost of December 31, 2025, inventory.
- Total material cost in cost of goods sold at December 31, 2025.

E10.23 (LO 3) (Depletion Computations—Minerals) At the beginning of 2025, Aristotle Company acquired a mine for \$970,000. Of this amount, \$100,000 was ascribed to the land value and the remaining portion to the minerals in the mine. Surveys conducted by geologists have indicated that approximately 12,000,000 units of ore appear to be in the mine. Aristotle incurred \$170,000 of development costs associated with this mine prior to any extraction of minerals. It also determined that the fair value of its obligation to prepare the land for an alternative use when all of the mineral has been removed was \$40,000. During 2025, 2,500,000 units of ore were extracted and 2,100,000 of these units were sold.

Instructions

Compute the following.

- The total amount of depletion for 2025.
- The amount that is charged as an expense for 2025 for the cost of the minerals sold during 2025.

E10.24 (LO 4) Groupwork (Ratio Analysis) A recent annual report of **Tootsie Roll Industries** contains the following information.

(in millions)	<u>Current Year</u>	<u>Prior Year</u>
Total assets	\$930.9	\$920.1
Total liabilities	197.1	208.6
Net sales	515.6	517.4
Net income	80.7	67.3

Instructions

Compute the following ratios for Tootsie Roll for the current year.

- Asset turnover.
- Return on assets.
- Profit margin on sales.
- How can the asset turnover be used to compute the return on assets?

***E10.25 (LO 5) (Book vs. Tax (MACRS) Depreciation)** Futabatei Enterprises purchased a delivery truck on January 1, 2025, at a cost of \$27,000. The truck has a useful life of 7 years with an estimated salvage value of \$6,000. The straight-line method is used for book purposes. For tax purposes, the truck, having an MACRS class life of 7 years, is classified as 5-year property; the optional MACRS tax rate tables are used to compute depreciation. In addition, assume that for 2025 and 2026 the company has revenues of \$200,000 and operating expenses (excluding depreciation) of \$130,000.

Instructions

- Prepare income statements for 2025 and 2026. (The final amount reported on the income statement should be income before income taxes.)
- Compute taxable income for 2025 and 2026.
- Determine the total depreciation to be taken over the useful life of the delivery truck for both book and tax purposes.
- Explain why depreciation for book and tax purposes will generally be different over the useful life of a depreciable asset.

***E10.26 (LO 5) (Book vs. Tax (MACRS) Depreciation)** Shimei Inc. purchased computer equipment on March 1, 2025, for \$31,000. The computer equipment has a useful life of 10 years and a salvage value of \$1,000. For tax purposes, the MACRS class life is 5 years.

Instructions

- Assuming that the company uses the straight-line method for book and tax purposes, what is the depreciation expense reported in (1) the financial statements for 2025 and (2) the tax return for 2025?
- Assuming that the company uses the double-declining-balance method for both book and tax purposes, what is the depreciation expense reported in (1) the financial statements for 2025 and (2) the tax return for 2025?
- Why is depreciation for tax purposes different from depreciation for book purposes even if the company uses the same depreciation method to compute them both?

Problems

P10.1 (LO 1) Excel Groupwork (Depreciation for Partial Period—SL, SYD, and DDB) Alladin Company purchased Machine #201 on May 1, 2025. The following information relating to Machine #201 was gathered at the end of May.

Price	\$85,000
Credit terms	2/10, n/30
Freight-in	\$800
Preparation and installation costs	\$3,800
Labor costs during regular production operations	\$10,500

It is expected that the machine could be used for 10 years, after which the salvage value would be zero. Alladin intends to use the machine for only 8 years, however, after which it expects to be able to sell it for \$1,500. The invoice for Machine #201 was paid May 5, 2025. Alladin uses the calendar year as the basis for the preparation of financial statements.

Instructions

- Compute the depreciation expense for the years indicated using the following methods. (Round to the nearest dollar.)
 - Straight-line method for 2025.
 - Sum-of-the-years'-digits method for 2026.
 - Double-declining-balance method for 2025.
- Suppose Kate Crow, the president of Alladin, tells you that because the company is a new organization, she expects it will be several years before production and sales reach optimum levels. She asks you to recommend a depreciation method that will allocate less of the company's depreciation expense to the early years and more to later years of the assets' lives. What method would you recommend?

P10.2 (LO 1) (Depreciation for Partial Periods—SL, ACT, SYD, and DB) The cost of equipment purchased by Charleston, Inc., on June 1, 2025, is \$89,000. It is estimated that the machine will have a \$5,000 salvage value at the end of its service life. Its service life is estimated at 7 years, its total working hours are estimated at 42,000, and its total production is estimated at 525,000 units. During 2025, the machine was operated 6,000 hours and produced 55,000 units. During 2026, the machine was operated 5,500 hours and produced 48,000 units.

Instructions

Compute depreciation expense on the machine for the year ending December 31, 2025, and the year ending December 31, 2026, using the following methods.

- Straight-line.
- Units-of-output.
- Working hours.
- Sum-of-the-years'-digits.
- Double-declining-balance

P10.3 (LO 1) (Depreciation—SYD, ACT, SL, and DDB) The following data relate to the Machinery account of Eshkol, Inc. at December 31, 2025.

	Machinery			
	A	B	C	D
Original cost	\$46,000	\$51,000	\$80,000	\$80,000
Year purchased	2020	2021	2022	2024
Useful life	10 years	15,000 hours	15 years	10 years
Salvage value	\$ 3,100	\$ 3,000	\$ 5,000	\$ 5,000
Depreciation method	Sum-of-the-years'-digits	Activity	Straight-line	Double-declining-balance
Accum. depr. through 2025*	\$31,200	\$35,200	\$15,000	\$16,000

*In the year an asset is purchased, Eshkol, Inc. does not record any depreciation expense on the asset. In the year an asset is retired or traded in, Eshkol, Inc. takes a full year's depreciation on the asset.

The following transactions occurred during 2026.

- a. On May 5, Machine A was sold for \$13,000 cash. The company's bookkeeper recorded this retirement in the following manner in the cash receipts journal.

Cash	13,000	
Machinery (Machine A)		13,000

- b. On December 31, it was determined that Machine B had been used 2,100 hours during 2026.
- c. On December 31, before computing depreciation expense on Machine C, the management of Eshkol, Inc. decided the useful life remaining from January 1, 2026, was 10 years.
- d. On December 31, it was discovered that a machine purchased in 2025 had been expensed completely in that year. This machine cost \$28,000 and has a useful life of 10 years and no salvage value. Management has decided to use the double-declining-balance method for this machine, which can be referred to as "Machine E."

Instructions

Prepare the necessary correcting entries for the year 2026. Record the appropriate depreciation expense on the above-mentioned machines. No entry is necessary for Machine D.

P10.4 (LO 1) (Depreciation and Error Analysis) A depreciation schedule for semi-trucks of Ichiro Manufacturing Company was requested by your auditor soon after December 31, 2026, showing the additions, retirements, depreciation, and other data affecting the income of the company in the 4-year period 2023 to 2026, inclusive. The following data were ascertained.

Balance of Trucks account, Jan. 1, 2023	
Truck No. 1 purchased Jan. 1, 2020, cost	\$18,000
Truck No. 2 purchased July 1, 2020, cost	22,000
Truck No. 3 purchased Jan. 1, 2022, cost	30,000
Truck No. 4 purchased July 1, 2022, cost	24,000
Balance, Jan. 1, 2023	<u>\$94,000</u>

The Accumulated Depreciation—Trucks account previously adjusted to January 1, 2023, and entered in the ledger, had a balance on that date of \$30,200 (depreciation on the four trucks from the respective dates of purchase, based on a 5-year life, no salvage value). No charges had been made against the account before January 1, 2023.

Transactions between January 1, 2023, and December 31, 2026, which were recorded in the ledger, are as follows.

July 1, 2023	Truck No. 3 was traded for a larger one (No. 5), the agreed purchase price of which was \$40,000. Ichiro paid the automobile dealer \$22,000 cash on the transaction. The entry was a debit to Trucks and a credit to Cash, \$22,000. The transaction has commercial substance.
Jan. 1, 2024	Truck No. 1 was sold for \$3,500 cash; entry debited Cash and credited Trucks, \$3,500.
July 1, 2025	A new truck (No. 6) was acquired for \$42,000 cash and was charged at that amount to the Trucks account. (Assume truck No. 2 was not retired.)
July 1, 2025	Truck No. 4 was damaged in a wreck to such an extent that it was sold as junk for \$700 cash. Ichiro received \$2,500 from the insurance company. The entry made by the bookkeeper was a debit to Cash, \$3,200, and credits to Miscellaneous Income, \$700, and Trucks, \$2,500.

Entries for straight-line depreciation had been made at the close of each year as follows: 2023, \$21,000; 2024, \$22,500; 2025, \$25,050; and 2026, \$30,400.

Instructions

- For each of the 4 years, compute separately the increase or decrease in net income arising from the company's errors in determining or entering depreciation or in recording transactions affecting trucks, ignoring income tax considerations.
- Prepare one compound journal entry as of December 31, 2026, for adjustment of the Trucks account to reflect the correct balances as revealed by your schedule, assuming that the books have not been closed for 2026.

P10.5 (LO 1, 3) (Depletion and Depreciation—Mining) Khamsah Mining Company has purchased a tract of mineral land for \$900,000. It is estimated that this tract will yield 120,000 tons of ore with sufficient mineral content to make mining and processing profitable. It is further estimated that 6,000 tons of ore will be mined the first and last year and 12,000 tons every year in between. (Assume 11 years of mining operations.) The land will have a salvage value of \$30,000.

The company builds necessary structures and sheds on the site at a cost of \$36,000. It is estimated that these structures can serve 15 years but, because they must be dismantled if they are to be moved, they have no salvage value. The company does not intend to use the buildings elsewhere. Mining machinery installed at the mine was purchased secondhand at a cost of \$60,000. This machinery cost the former owner \$150,000 and was 50% depreciated when purchased. Khamsah Mining estimates that about half of this machinery will still be useful when the present mineral resources have been exhausted, but that dismantling and removal costs will just about offset its value at that time. The company does not intend to use the machinery elsewhere. The remaining machinery will last until about one-half the present estimated mineral ore has been removed and will then be worthless. Cost is to be allocated equally between these two classes of machinery.

Instructions

- As chief accountant for the company, you are to prepare a schedule showing estimated depletion and depreciation costs for each year of the expected life of the mine.
- Also compute the depreciation and depletion for the first year assuming actual production of 5,000 tons. Nothing occurred during the year to cause the company engineers to change their estimates of either the mineral resources or the life of the structures and equipment.

P10.6 (LO 3) (Depletion, Timber, and Unusual Loss) Conan O'Brien Logging and Lumber Company owns 3,000 acres of timberland on the north side of Mount Leno, which was purchased in 2013 at a cost of \$550 per acre. In 2025, O'Brien began selectively logging this timber tract. In May 2025, Mount Leno erupted, burying the timberland of O'Brien under a foot of ash. All of the timber on the O'Brien tract was downed. In addition, the logging roads, built at a cost of \$150,000, were destroyed, as well as the logging equipment, with a net book value of \$300,000.

At the time of the eruption, O'Brien had logged 20% of the estimated 500,000 board feet of timber. Prior to the eruption, O'Brien estimated the land to have a value of \$200 per acre after the timber was harvested. O'Brien includes the logging roads in the depletion base.

O'Brien estimates it will take 3 years to salvage the downed timber at a cost of \$700,000. The timber can be sold for pulp wood at an estimated price of \$3 per board foot. The value of the land is unknown, but must be considered nominal due to future uncertainties.

Instructions

- Determine the depletion cost per board foot for the timber harvested prior to the eruption of Mount Leno.
- Prepare the journal entry to record the depletion prior to the eruption.
- If this tract represents approximately half of the timber holdings of O'Brien, determine the amount of the unusual loss due to the eruption of Mount Leno for the year ended December 31, 2025.

P10.7 (LO 1, 3) (Natural Resources—Timber) Bronson Paper Products purchased 10,000 acres of forested timberland in March 2025. The company paid \$1,700 per acre for this land, which was above the \$800 per acre most farmers were paying for cleared land. During April, May, June, and July 2025, Bronson cut enough timber to build roads using moveable equipment purchased on April 1, 2025. The cost of the roads was \$250,000, and the cost of the equipment was \$225,000; this equipment was expected to have a \$9,000 salvage value and would be used for the next 15 years. Bronson selected the straight-line method of depreciation for the moveable equipment. Bronson began actively harvesting timber in August and by December had harvested and sold 540,000 board feet of timber of the estimated 6,750,000 board feet available for cutting.

In March 2026, Bronson planted new seedlings in the area harvested during the winter. Cost of planting these seedlings was \$120,000. In addition, Bronson spent \$8,000 in road maintenance and \$6,000 for pest spraying during calendar-year 2026. The road maintenance and spraying are annual costs. During 2026, Bronson harvested and sold 774,000 board feet of timber of the estimated 6,450,000 board feet available for cutting.

In March 2027, Bronson again planted new seedlings at a cost of \$150,000, and also spent \$15,000 on road maintenance and pest spraying. During 2027, the company harvested and sold 650,000 board feet of timber of the estimated 6,500,000 board feet available for cutting.

Instructions

Compute the amount of depreciation and depletion expense for each of the 3 years (2025, 2026, and 2027). Assume that the roads are usable only for logging and therefore are included in the depletion base.

P10.8 (LO 1) Groupwork (Comprehensive Fixed-Asset Problem) Darby Sporting Goods Inc. has been experiencing growth in the demand for its products over the last several years. The last two Olympic Games greatly increased the popularity of basketball around the world. As a result, a European sports retailing consortium entered into an agreement with Darby's Roundball Division to purchase basketballs and other accessories on an increasing basis over the next 5 years.

To be able to meet the quantity commitments of this agreement, Darby had to obtain additional manufacturing capacity. A real estate firm located an available factory in close proximity to Darby's Roundball manufacturing facility, and Darby agreed to purchase the factory and used machinery from Encino Athletic Equipment Company on October 1, 2024. Renovations were necessary to convert the factory for Darby's manufacturing use.

The terms of the agreement required Darby to pay Encino \$50,000 when renovations started on January 1, 2025, with the balance to be paid as renovations were completed. The overall purchase price for the factory and machinery was \$400,000. The building renovations were contracted to Malone Construction at \$100,000. The payments made, as renovations progressed during 2025, are shown below. The factory was placed in service on January 1, 2026.

	<u>1/1</u>	<u>4/1</u>	<u>10/1</u>	<u>12/31</u>
Encino	\$50,000	\$90,000	\$110,000	\$150,000
Malone		30,000	30,000	40,000

On January 1, 2025, Darby secured a \$500,000 line-of-credit with a 12% interest rate to finance the purchase cost of the factory and machinery, and the renovation costs. Darby drew down on the line-of-credit to meet the payment schedule shown above; this was Darby's only outstanding loan during 2025.

Bob Sprague, Darby's controller, will capitalize the maximum allowable interest costs for this project. Darby's policy regarding purchases of this nature is to use the appraisal value of the land for book purposes and prorate the balance of the purchase price over the remaining items. The building had originally cost Encino \$300,000 and had a book value of \$50,000, while the machinery originally cost \$125,000 and had a book value of \$40,000 on the date of sale. The land was recorded on Encino's books at \$40,000. An appraisal, conducted by independent appraisers at the time of acquisition, valued the land at \$290,000, the building at \$105,000, and the machinery at \$45,000.

Angie Justice, chief engineer, estimated that the renovated plant would be used for 15 years, with an estimated salvage value of \$30,000. Justice estimated that the productive machinery would have a remaining useful life of 5 years and a salvage value of \$3,000. Darby's depreciation policy specifies the 200% declining-balance method for machinery and the 150% declining-balance method for the plant. One-half year's depreciation is taken in the year the plant is placed in service, and one-half year is allowed when the property is disposed of or retired. Darby uses a 360-day year for calculating interest costs.

Instructions

- Determine the amounts to be recorded on the books of Darby Sporting Goods Inc. as of December 31, 2025, for each of the following properties acquired from Encino Athletic Equipment Company.
 - Land.
 - Buildings.
 - Machinery.
- Calculate Darby Sporting Goods Inc.'s 2026 depreciation expense for each of the properties acquired from Encino Athletic Equipment Company.

(CMA adapted)

P10.9 (LO 2) (Impairment) Roland Company uses special strapping equipment in its packaging business. The equipment was purchased in January 2024 for \$10,000,000 and had an estimated useful life of 8 years with no salvage value. At December 31, 2025, new technology was introduced that would accelerate the obsolescence of Roland's equipment. Roland's controller estimates that expected future net cash flows on the equipment will be \$6,300,000 and that the fair value of the equipment is \$5,600,000.

Roland intends to continue using the equipment, but it is estimated that the remaining useful life is 4 years. Roland uses straight-line depreciation.

Instructions

- Prepare the journal entry (if any) to record the impairment at December 31, 2025.
- Prepare any journal entries for the equipment at December 31, 2026. The fair value of the equipment at December 31, 2026, is estimated to be \$5,900,000.
- Repeat the requirements for (a) and (b), assuming that Roland intends to dispose of the equipment and that it has not been disposed of as of December 31, 2026.

P10.10 (LO 1) Groupwork (Comprehensive Depreciation Computations) Kohlbeck Corporation, a manufacturer of steel products, began operations on October 1, 2024. The accounting department of Kohlbeck has started the fixed-asset and depreciation schedule presented as follows.

Kohlbeck Corporation Fixed-Asset and Depreciation Schedule For Fiscal Years Ended September 30, 2025, and September 30, 2026							
Assets	Acquisition Date	Cost	Salvage	Depreciation Method	Estimated Life in Years	Depreciation Expense	
						Year Ended September 30, 2025	Year Ended September 30, 2026
Land A	October 1, 2024	\$ (1)	N/A*	N/A	N/A	N/A	N/A
Building A	October 1, 2024	(2)	\$40,000	Straight-line	(3)	\$13,600	(4)
Land B	October 2, 2024	(5)	N/A	N/A	N/A	N/A	N/A
Building B	Under Construction	\$320,000 to date	—	Straight-line	30	—	(6)
Donated Equipment	October 2, 2024	(7)	3,000	150% declining-balance	10	(8)	(9)
Machinery A	October 2, 2024	(10)	6,000	Sum-of-the-years-digits	8	(11)	(12)
Machinery B	October 1, 2025	(13)	—	Straight-line	20	—	(14)

*N/A—Not applicable

You have been asked to assist in completing this schedule. In addition to ascertaining that the data already on the schedule are correct, you have obtained the following information from the company's records and personnel.

- Depreciation is computed from the first of the month of acquisition to the first of the month of disposition.
- Land A and Building A were acquired from a predecessor corporation. Kohlbeck paid \$800,000 for the land and building together. At the time of acquisition, the land had an appraised value of \$90,000, and the building had an appraised value of \$810,000.
- Land B was acquired on October 2, 2024, in exchange for 2,500 newly issued shares of Kohlbeck's common stock. At the date of acquisition, the stock had a par value of \$5 per share and a fair value of \$30 per share. During October 2024, Kohlbeck paid \$16,000 to demolish an existing building on this land so it could construct a new building.
- Construction of Building B on the newly acquired land began on October 1, 2025. By September 30, 2026, Kohlbeck had paid \$320,000 of the estimated total construction costs of \$450,000. It is estimated that the building will be completed and occupied by July 2027.
- Certain equipment was donated to the corporation by a local university. An independent appraisal of the equipment when donated placed the fair value at \$40,000 and the salvage value at \$3,000.
- Machinery A's total cost of \$182,900 includes installation expense of \$600 and normal repairs and maintenance of \$14,900. Salvage value is estimated at \$6,000. Machinery A was sold on February 1, 2026.
- On October 1, 2025, Machinery B was acquired with a down payment of \$5,740 and the remaining payments to be made in 11 annual installments of \$6,000 each beginning October 1, 2025. The prevailing interest rate was 8%. The following data were abstracted from present value tables (rounded).

Present Value of \$1.00 at 8%

10 years	.463
11 years	.429
15 years	.315

Present Value of an Ordinary Annuity of \$1.00 at 8%

10 years	6.710
11 years	7.139
15 years	8.559

Instructions

For each numbered item on the schedule, supply the correct amount. (Round each answer to the nearest dollar.)

P10.11 (LO 1) (Depreciation for Partial Periods—SL, ACT, SYD, and DDB) On January 1, 2023, a machine was purchased for \$90,000. The machine has an estimated salvage value of \$6,000 and an estimated useful life of 5 years. The machine can operate for 100,000 hours before it needs to be replaced. The company closed its books on December 31 and operates the machine as follows: 2023, 20,000 hours; 2024, 25,000 hours; 2025, 15,000 hours; 2026, 30,000 hours; and 2027, 10,000 hours.

Instructions

- a. Compute the annual depreciation charges over the machine's life assuming a December 31 year-end for each of the following depreciation methods.
 1. Straight-line method.
 2. Activity method.
 3. Sum-of-the-years'-digits method.
 4. Double-declining-balance method.
- b. Assume a fiscal year-end of September 30. Compute the annual depreciation charges over the asset's life applying each of the following methods.
 1. Straight-line method.
 2. Sum-of-the-years'-digits method.
 3. Double-declining-balance method.

***P10.12 (LO 1, 5) Groupwork (Depreciation—SL, DDB, SYD, ACT, and MACRS)** On January 1, 2024, Locke Company, a small machine-tool manufacturer, acquired for \$1,260,000 a piece of new industrial equipment. The new equipment had a useful life of 5 years, and the salvage value was estimated to be \$60,000. Locke estimates that the new equipment can produce 12,000 machine tools in its first year. It estimates that production will decline by 1,000 units per year over the remaining useful life of the equipment.

The following depreciation methods may be used: (1) straight-line, (2) double-declining-balance, (3) sum-of-the-years'-digits, and (4) units-of-output. For tax purposes, the class life is 7 years. Use the MACRS tables for computing depreciation.

Instructions

- a. Which depreciation method would maximize net income for financial statement reporting for the 3-year period ending December 31, 2026? Prepare a schedule showing the amount of accumulated depreciation at December 31, 2026, under the method selected. Ignore present value, income tax, and deferred income tax considerations.
- b. Which depreciation method (MACRS or optional straight-line) would minimize taxable income for the 3-year period ending December 31, 2026? Determine the amount of accumulated depreciation at December 31, 2026. Ignore present value considerations.

(AICPA adapted)

Using Your Judgment

Financial Reporting Problem: The Procter & Gamble Company (P&G)

UYJ10.1 The financial statements of **P&G** are presented in Appendix B. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- a. What descriptions are used by P&G in its balance sheet to classify its property, plant, and equipment?
- b. What method or methods of depreciation does P&G use to depreciate its property, plant, and equipment?

- c. Over what estimated useful lives does P&G depreciate its property, plant, and equipment?
- d. What amounts for depreciation and amortization expense did P&G charge to its income statement in 2020, 2019, and 2018?
- e. What were the capital expenditures for property, plant, and equipment made by P&G in 2020, 2019, and 2018?

Comparative Analysis Case: The Coca-Cola Company and PepsiCo., Inc.

UYJ10.2 The financial statements of **Coca-Cola** and **PepsiCo** are presented in Appendices C and D, respectively. The companies' complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What amount is reported in the balance sheets as property, plant, and equipment (net) of Coca-Cola at December 31, 2020, and of PepsiCo at December 31, 2020? What percentage of total assets is invested in property, plant, and equipment by each company?
- b. What depreciation methods are used by Coca-Cola and PepsiCo for property, plant, and equipment? How much depreciation and amortization was reported by Coca-Cola and PepsiCo in 2020? In 2019? (Use cash flow statement amounts.)
- c. Compute and compare the following ratios for Coca-Cola and PepsiCo for 2020.
 - 1. Asset turnover.
 - 2. Profit margin on sales.
 - 3. Return on assets.
- d. What amount was spent in 2020 for capital expenditures by Coca-Cola and PepsiCo?

Financial Statement Analysis Case: McDonald's Corporation

UYJ10.3 McDonald's is the largest and best-known global food-service retailer, with more than 32,000 restaurants in over 115 countries. On any day, McDonald's serves approximately 1% of the world's population. The following is information related to McDonald's property and equipment.

Summary of Significant Accounting Policies Section

Property and Equipment. Property and equipment are stated at cost, with depreciation and amortization provided using the straight-line method over the following estimated useful lives: buildings—up to 40 years; leasehold improvements—the lesser of useful lives of assets or lease terms, which generally include option periods; and equipment—three to 12 years.

Property and Equipment

Net property and equipment consisted of:

(In millions)	December 31	
	2020	2019
Land	\$ 6,349.1	\$ 6,026.4
Buildings and improvements on owned land	18,218.9	17,003.7
Buildings and improvements on leased land	13,364.5	12,605.9
Equipment, signs and seating	3,119.0	2,994.5
Other	425.0	420.4
	41,476.5	39,050.9
Accumulated depreciation and amortization	(16,518.3)	(14,890.9)
Net property and equipment	<u>\$ 24,958.2</u>	<u>\$24,160.0</u>

Depreciation and amortization expense for property and equipment was (in millions): 2020—\$1,469.4; 2019—\$1,392.2; 2018—\$1,302.9.

(in millions)	2020	2019	2018
Cash provided by operations	\$6,265.2	\$8,122.1	\$6,966.7
Capital expenditures	1,640.8	2,393.7	2,741.7

Instructions

- What method of depreciation does McDonald's use?
- Does depreciation and amortization expense cause cash flow from operations to increase? Explain.
- What does the schedule of cash flow measures indicate?

Accounting, Analysis, and Principles

UYJ10.4 Electroboy Enterprises, Inc. operates several stores throughout the western United States. As part of an operational and financial reporting review in a response to a downturn in its markets, the company's management has decided to perform an impairment test on five stores (combined). The five stores' sales have declined due to aging facilities and competition from a rival that opened new stores in the same markets. Management has developed the following information concerning the five stores as of the end of fiscal 2024.

Original cost	\$36 million
Accumulated depreciation	\$10 million
Estimated remaining useful life	4 years
Estimated expected future annual cash flows (not discounted)	\$4.0 million per year
Appropriate discount rate	5%

Accounting

- Determine the amount of impairment loss, if any, that Electroboy should report for fiscal 2024 and the book value at which Electroboy should report the five stores on its fiscal year-end 2024 balance sheet. Assume that the cash flows occur at the end of each year.
- Repeat part (a), but instead assume that (1) the estimated remaining useful life is 10 years, (2) the estimated annual cash flows are \$2,720,000 per year, and (3) the appropriate discount rate is 6%.

Analysis

Assume that you are a financial analyst and you participate in a conference call with Electroboy management in early 2025 (before Electroboy closes the books on fiscal 2024). During the conference call, you learn that management is considering selling the five stores, but the sale won't likely be completed until the second quarter of fiscal 2025. Briefly discuss what implications this would have for Electroboy's 2024 financial statements. Assume the same facts as in part (b) above.

Principles

Electroboy management would like to know the accounting for the impaired asset in periods subsequent to the impairment. Can the assets be written back up? Briefly discuss the conceptual arguments for this accounting.

Developing Your Professional Skills

Critical-Thinking Cases

CT10.1 (LO 1) (Depreciation Basic Concepts) Burnitz Manufacturing Company was organized on January 1, 2025. During 2025, it has used in its internal reports the straight-line method of depreciating its plant assets.

On November 8, you are having a conference with Burnitz's officers to discuss the depreciation method to be used for income tax and external (GAAP) reporting. James Bryant, president of Burnitz, has suggested the use of a new method, which he feels is more suitable than the straight-line method for the needs of the company during the period of rapid expansion of production and capacity that he foresees. Following is an example in which the proposed method is applied to a fixed asset with an original cost of \$248,000, an estimated useful life of 5 years, and a salvage value of approximately \$8,000.

Year	Years of Life Used	Fraction Rate	Depreciation Expense	Accumulated Depreciation at End of Year	Book Value at End of Year
1	1	1/5	\$ 49,600	\$ 49,600	\$ 198,400
2	2	2/5	99,200	99,200	148,800
3	3	3/5	148,800	148,800	99,200
4	4	4/5	198,400	198,400	49,600
5	5	5/5	248,000	248,000	\$ 8,000

The president favors the new method because he has heard that:

1. It will increase the funds recovered during the years near the end of the assets' useful lives when maintenance and replacement disbursements are high.
2. It will result in increased write-offs in later years and thereby will reduce taxes.

Instructions

- a. What is the purpose of accounting for depreciation?
- b. Is the president's proposal within the scope of generally accepted accounting principles? In making your decision, discuss the circumstances, if any, under which use of the method would be reasonable and those, if any, under which it would not be reasonable.
- c. The president wants your advice on the following issues.
 1. Do depreciation charges recover or create funds? Explain.
 2. Assume that the Internal Revenue Service accepts the proposed depreciation method in this case. If the proposed method were used for stockholder and tax reporting purposes, how would it affect the availability of cash flows generated by operations?

CT10.2 (LO 1) Writing (Unit, Group, and Composite Depreciation) The certified public accountant is frequently called upon by management for advice regarding methods of computing depreciation. Of comparable importance, although it arises less frequently, is the question of whether the depreciation method should be based on consideration of the assets as units, as a group, or as having a composite life.

Instructions

- a. Briefly describe the depreciation methods based on treating assets as (1) units and (2) a group or as having a composite life.
- b. Present the arguments for and against the use of each of the two methods.
- c. Describe how retirements are recorded under each of the two methods.

(AICPA adapted)

CT10.3 (LO 1) (Depreciation—Strike, Units-of-Production, Obsolescence) The following are three different and unrelated situations involving depreciation accounting. Answer the question(s) at the end of each situation.

Situation I: Recently, Broderick Company experienced a strike that affected a number of its operating plants. The controller of this company indicated that it was not appropriate to report depreciation expense during this period because the equipment did not depreciate and an improper matching of costs and revenues would result. She based her position on the following points.

1. It is inappropriate to charge the period with costs for which there are no related revenues arising from production.
2. The basic factor of depreciation in this instance is wear and tear. Because equipment was idle, no wear and tear occurred.

Instructions

Comment on the appropriateness of the controller's comments.

Situation II: Etheridge Company manufactures electrical appliances, most of which are used in homes. Company engineers have designed a new type of blender which, through the use of a few attachments, will perform more functions than any blender currently on the market. Demand for the new blender can be projected with reasonable probability. In order to make the blenders, Etheridge needs a specialized machine that is not available from outside sources. It has been decided to make such a machine in Etheridge's own plant.

Instructions

- a. Discuss the effect of projected demand in units for the new blenders (which may be steady, decreasing, or increasing) on the determination of a depreciation method for the machine.
- b. What other matters should be considered in determining the depreciation method? (Ignore income tax considerations.)

Situation III: Haley Paper Company operates a 300-ton-per-day kraft pulp mill and four sawmills in Wisconsin. The company is in the process of expanding its pulp mill facilities to a capacity of 1,000 tons per day and plans to replace three of its older, less efficient sawmills with an expanded facility. One of the mills to be replaced did not operate for most of 2025 (current year), and there are no plans to reopen it before the new sawmill facility becomes operational.

In reviewing the depreciation rates and in discussing the salvage values of the sawmills that were to be replaced, it was noted that if present depreciation rates were not adjusted, substantial amounts of plant costs on these three mills would not be depreciated by the time the new mill came on stream.

Instructions

What is the proper accounting for the four sawmills at the end of 2025?
