

## Candid cock crush

I tried something new and drilled a hole in the ground under the rubber mat in front of the cash register of a mobile ice skating rink. Then I lay down underneath and pushed my penis through the hole... It was pretty painful! Unfortunately the quality isn't that good, which was due to the endoscope camera. Still awesome.

## Candid cock crush

I built a kind of crush box on a platform to play my favorite game with girls: crushing things blindfolded and guessing what it is. What she didn't know is that there is a false bottom under which my cock is. After she put the mask on, I removed the camouflage so that you can see some of it. My good piece is in a hollow so that it is not so painful and she doesn't hear me moaning in pain, that would be too suspicious. And she shouldn't notice that there is something else there. I stretched the rubber band over it so that the little one stays in position and she doesn't squish it on the sharp edge. Unfortunately, she always took her foot away just before I was ready to cum. It was still awesome.
