

Instruction sheet BS901

Use PVA glue

Using glue is optional

Do not use glue

PVA Glue should be used sparingly. Beading should be avoided.

Before using any glue, stack one base to make a complete example. This will help you understand and recognize top, front and left/right sides of the different items.

Only apply glue to the part marked "A", never to the other parts. This helps avoiding beading and glue use in unwanted spaces like in the rooms for the wheels. Apply glue using a brush.

Give the glue 1 hour time to dry after completing step 1.

If a wheel becomes stuck or glued, use a screwdriver to restore the turning capability.
