

SRT FAIRWAY

Four Seasons

Texas, Louisiana, Mississippi, Alabama, Georgia and Florida

How We Can Help

BSG
Universal Inc.

Our treatment program offers multiple benefits for your turf, including improved drainage and enhanced water retention, which help the soil stay balanced and productive. By lowering both salt and pH levels, it creates a healthier growing environment that supports stronger, deeper root systems. This plus our proprietary fertilizers negate additional inputs, while keeping the turf greener, healthier, and playable for longer periods.

All of this is delivered at an annual cost starting at \$1,000 per acre.

What We Do

SRT Fairway Treatment & Documentation Plan

- **Initiate treatment in the affected areas of the golf course using SaltFighter and MasterHumick.**
- **Apply treatments seven days apart, under the direct supervision of an authorized SRT representative.**
- **Supply all required soil nutrients necessary to fulfill the scope and performance objectives of the contract.**
- **Conduct post-treatment soil analysis to verify changes in soil chemistry and nutrient availability.**
- **Document the entire process with photographs to provide clear, visual evidence of turf and soil improvement.**

Our Mission

Our mission is to transform golf course nutrition and management through the combined power of SaltFighter® and MasterHumickK®, delivered within the SRT Fairway™ system. By restoring soil balance, reducing salinity stress, and unlocking naturally bound nutrients, we improve turf health from the root zone up—allowing courses to achieve superior playability with fewer inputs. SRT Fairway is designed to enhance environmental stewardship by lowering fertilizer and water demand, improving soil biology, and reducing runoff, while simultaneously strengthening the financial sustainability of course management through more efficient nutrient use, lower operating costs, and increasing long-term turf resilience.
