Bridging Consumption and Speculation: A New Paradigm for Value
Creation in the Web3 Era.

The Economic Engine

A unique mechanism where real-world consumption directly drives asset valuation.

Shopping is Investing

Traditional tokens rely solely on market sentiment. PNG introduces a structural shift:

- ✓ **Real Buying Pressure:** Every purchase on the Pangea platform triggers an automatic buy-back of tokens from exchanges.
- ✓ **Organic Valuation:** Price discovery is fueled by retail volume, not just speculative trading.
- ✓ **Consumer Rewards:** Users receive a portion of their spending back in PNG, fostering loyalty.

The PNG Virtuous Cycle

Consumption

Users purchase everyday goods and services within the Pangea ecosystem.

Automatic Conversion

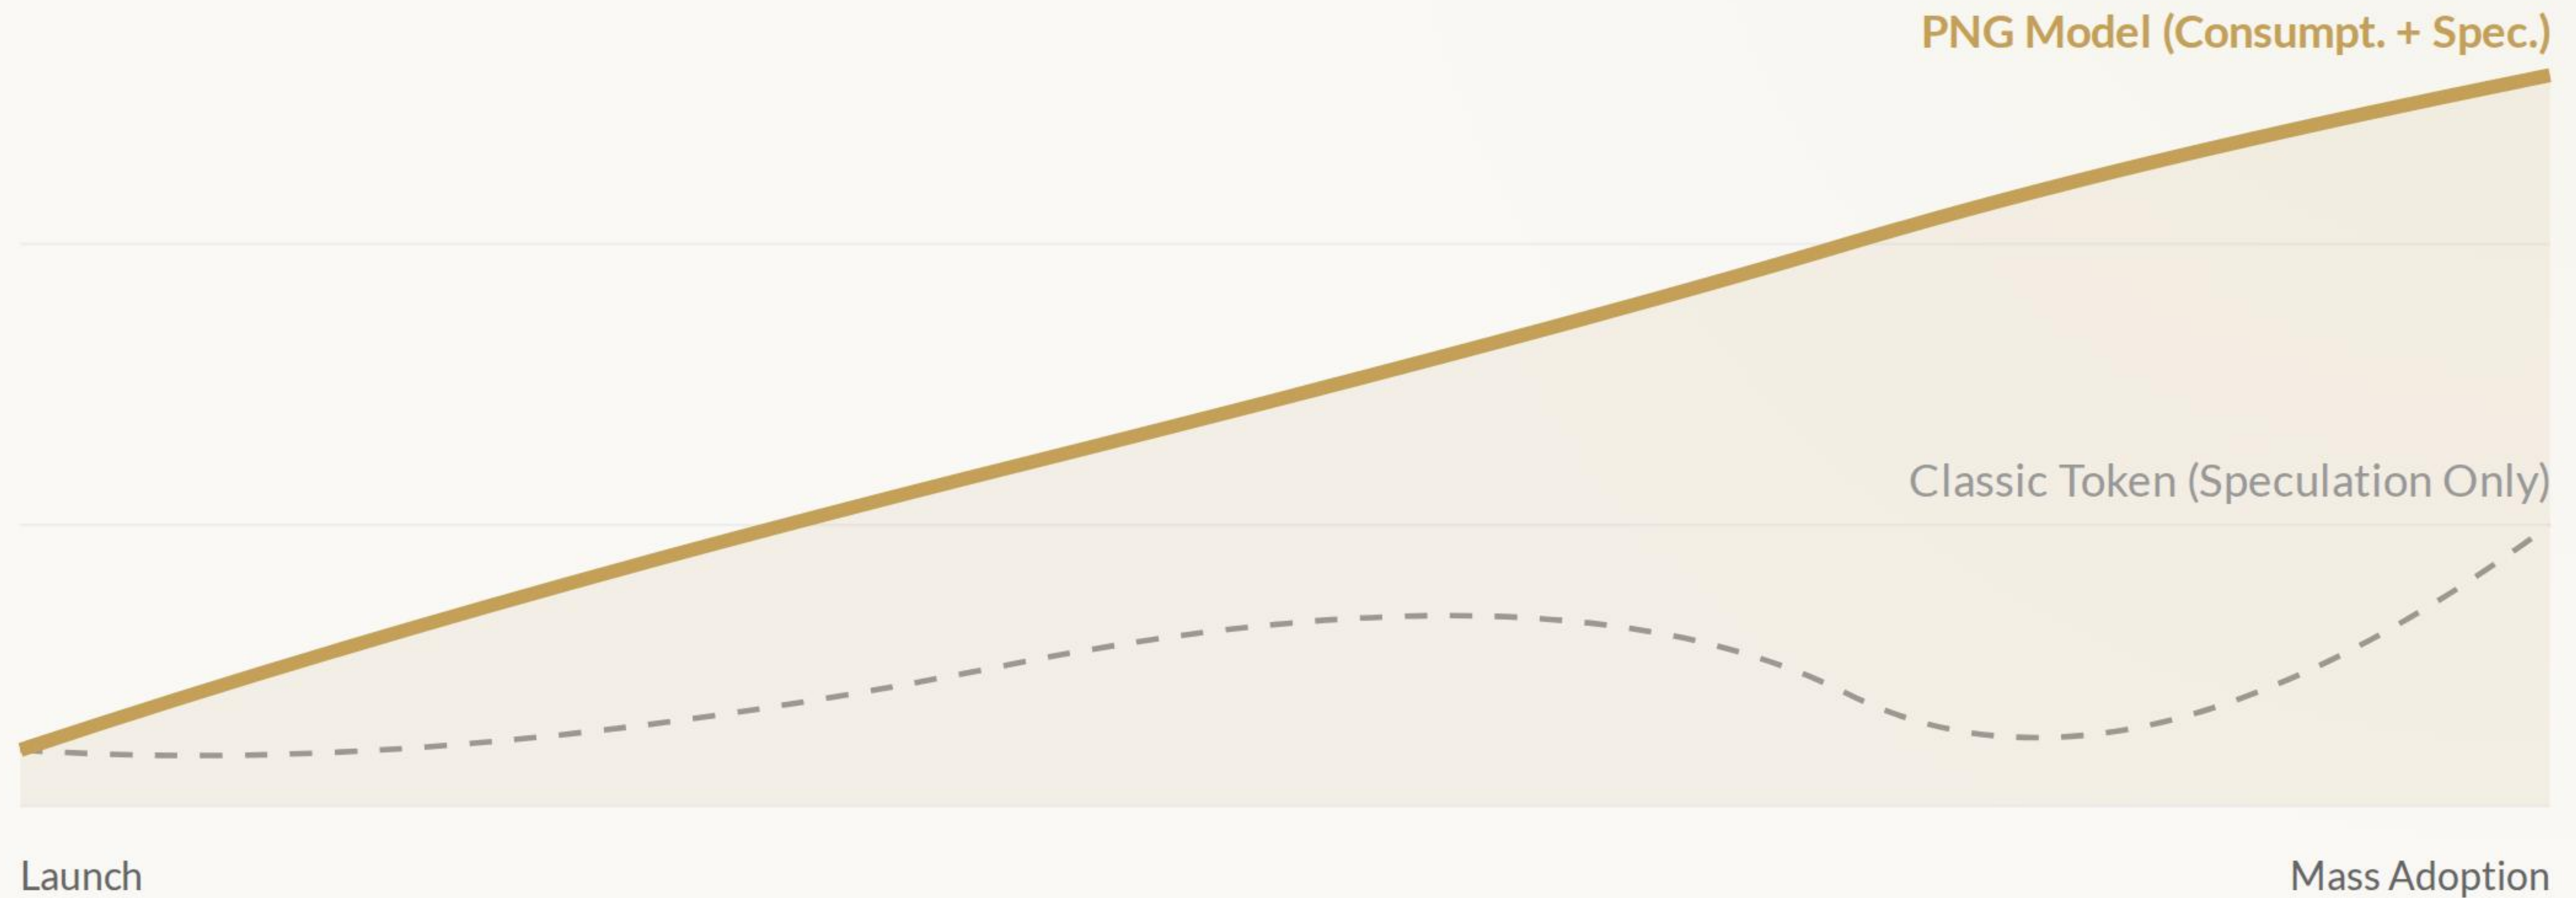

A percentage of sales is instantly converted into PNG via partner exchanges.

Price Floor

Consistent retail demand creates a resilient price floor and long-term appreciation.

Market Performance Projection

The hybrid model mitigates volatility and ensures sustainable growth through real utility.

Seamless Mass Adoption

Zero Friction UX

The complexity of blockchain is hidden behind a familiar interface:

- Automatic wallet generation for new users.
- Instant token rewards upon payment.
- Direct use of tokens for subsequent purchases.

Scaling Web3 for the non-crypto native audience.

Strategic Roadmap
