

Waipuna Terminal

Maximizing your grass into dollars

Waipuna Terminal is a highly productive and proven terminal which focuses on growth, meat yield, survival and eating quality

Waipuna Terminal rams are bred on the hard hills of Waipuna Farms by Donald and Liz in the Mangamahu Valley north of Whanganui and are used over their commercial ewes, if not sold as ram hoggets

After being used for mating, Waipuna Terminal rams are run at Cheltenham by Norm and Dani, to get ready for sale as 2th rams

Expertise & Passion

In our passionate team we have over 60 years of experience in sheep breeding. Our experience ranges from farming sheep to client relationships and genetics – we are breeding for value

Perfect fit

Waipuna Terminal is the perfect fit for the Waipuna Maternal. Using Waipuna Terminal sires over a proportion of your breeding ewes is playing to the strengths of both Waipuna's Maternal and Terminal programmes, not even taking the bonus of hybrid vigour or heterosis in terminally sired lambs into consideration

Proven Performance over Ewe Hoggets

Waipuna Terminal sires are proven over ewe hoggets. Enabling you to commercialize financial returns from ewe hoggets onwards

Open Composite

The Waipuna Terminal is an open composite. We source the best terminal stud sires that will give us the best growth and meat yield traits for the Waipuna Terminal

Milking Ability

The potential of the Waipuna Terminal sired lambs to grow in combination with the milking ability of the Waipuna Maternal is another example of adding value

Marker

We are focusing on stud sires that are darker and have a downier type of fleece. Ensuring marking at birth and reduce the need of shearing

PERFECT
FOR
ADDING VALUE

Waipuna Terminal

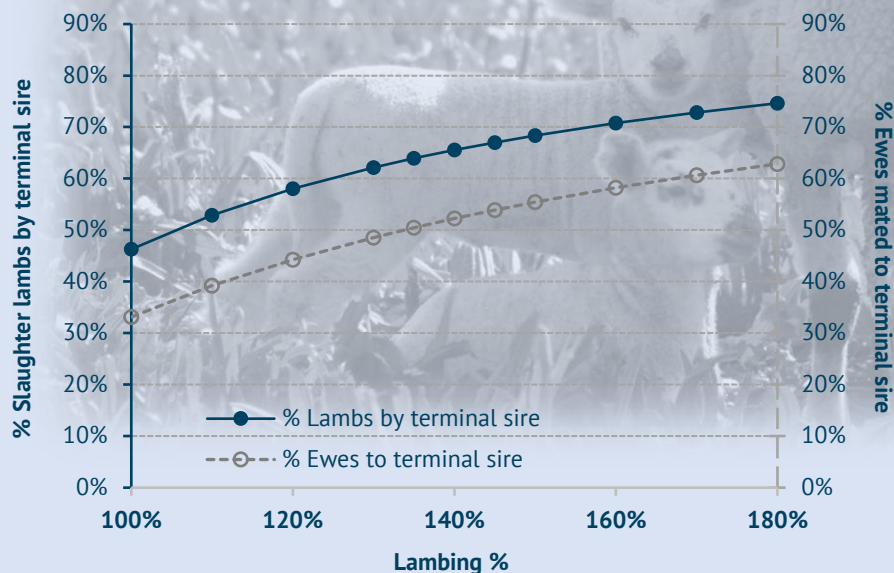

Lambing Percentage

If your lambing percentage is high, a higher ratio of Waipuna Terminal sires can be used at mating. Some of our clients use Waipuna Terminal rams over 50% of their breeding ewes

Heavier Lambs Earlier

The big advantage of mating a greater portion of ewes to a Waipuna Terminal sire is more and heavier lambs away in the first and subsequent drafts

Effect of Lambing Percentage on Use of Terminal Sires

Production Efficiency

Production efficiencies can be optimized with Waipuna Terminal rams, as large lambs can be produced at weaning from moderately sized efficient (Waipuna Maternal) ewes

Optimized Growth

Waipuna Terminal rams have been purposely bred for growth and meat yield, so their offspring are always going to outperform straight maternal offspring

Excellent carcass weights

We have many clients killing lambs at 24kg carcasses
