

Protect Your Home from Wildfires with the Fire Defense Unit (FDU)

By Fire-Pro USA

Defend Smarter. Defend Safer.

When wildfire threatens, you need more than a hose and water.

The Fire Defense Unit (FDU) enables homeowners to apply fire-retardant gel to the home—a proven method used by firefighting professionals.

- Prevent embers from igniting your home
- Create a fire-resistant zone around your home
- Safer and more effective than water alone
- Easy-to-use with included training

This is the same strategy Fire-Pro USA uses to protect client homes.

Included with the FDU:

275 Gallon Water Tank

100 PSI Fire Pump

1" Fire Hose & Nozzle

Suction Hose

5 FDU Training

Fire-Pro USA training is included with the FDU purchase. You will learn about preparing the FDU for application, spraying techniques, and maintenance checks.

The training and assessment will last approximately 1.5 hours. There is no additional cost for these services.

6 Fire-Threat Assessment

A Fire-Pro USA assessor will walk your property to analyze fire risks and recommend additional actions to better defend your home.

Sold Separately

Firelce® gel by Firelce Solutions (25-lb)

The FDU is used to apply fire-retardant gel to the home to prevent ember ignitions. Firelce gel is a powder-based product that's added to water. This creates a thick jelly-like substance that adheres to vertical surfaces and absorbs heat due to its ability to increase the coagulability of water. In simpler terms, the gel doesn't evaporate like water alone does.

A 25-lb bucket makes 250 gallons of gel to cover a 2,500 sq. ft. home.

\$400 + Shipping

Pricing & Conditions

\$2,000 + delivery fees, if applicable

Delivery is free to most Southern Arizona locations. Call for delivery fees for other locations in Arizona and California.

Fire-Pro USA will only sell FDUs to customers who agree to be trained to use the FDU. There is no additional cost for this service.
