

The Power of a Connected Global Network – Synaptca One Stop Shop Platform

Up to 20% cost reduction when strategy engineering and technology operate as a single platform. Synaptca integrates a qualified global network to structure and execute complex projects efficiently.

Intelligent Coordination in Highly Complex Projects

Energy and infrastructure projects have become too complex to be developed by a single player or isolated discipline. Advanced technologies global supply chains regulatory requirements and sophisticated financial structures demand precise coordination among multiple stakeholders throughout the entire project lifecycle.

The **Synaptca** One Stop Shop Platform was created to meet this challenge. Acting as an integrator, **Synaptca** connects clients to a qualified global network of technology partners equipment suppliers engineering firms EPCs and operators. This network is structured with strict technical and commercial criteria, ensuring real alignment with the needs of each project.

Integrated Governance for Cost and Risk Reduction

Industry data indicates that integrated delivery models can reduce total costs of complex projects by up to 15–20%, while also shortening timelines and increasing delivery reliability. **Synaptca** applies this approach by centralizing strategy, engineering, and technology within a single governance platform.

Building on a strong track record in large-scale projects, **Synaptca** turns complexity into efficient coordination.

Clients benefit from a clear, integrated, and results-driven model capable of accelerating decisions and enabling investments with greater confidence.
