

## 1 Gathering Data

AI systems are trained on massive amounts of data.

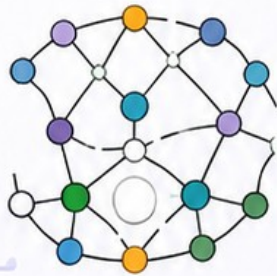

## 2 Learning Language

AI studies language patterns to understand words, phrases, and how people talk.

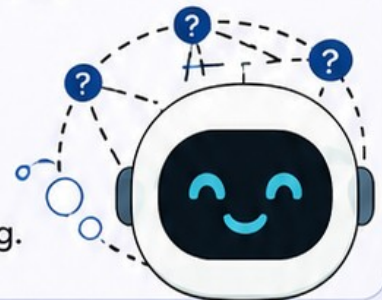

## 3 Connecting the Dots

AI finds connections in data and learns to predict what comes next.

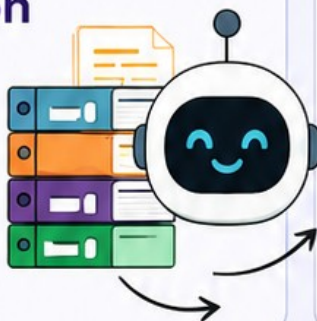

## 4 Understanding a Question

AI analyzes the words you enter and figures out what you're asking.

## 5 Searching for Information

AI quickly searches through its training data to find the most helpful answer.

## 6 Generating a Response

AI pulls together the information and responds in a natural way.

**In short:** AI uses data, spots patterns, and searches for answers to respond to you like a person.

*Isn't technology amazing?*
