Wire & Cable Manufacturer

## Marine Battery Cable

### Marine Battery Cable

is a durable, high-quality cable designed to handle the harshest marine conditions. To survive in a marine environment, battery cable needs to withstand the constant vibration that a boat is subject to, as well as survive a wide range of other environmental hazards. Additionally, an essential quality that marine battery cable needs to possess is flexibility. In a boat, wires are often run through tight spaces and make frequent bends and turns. This cable is designed for durability, flexibility, and longevity. We make our cables so durable, that they are designed to out-live the battery itself.

### Construction

Type III Class K annealed  
finely stranded tinned copper

Specialized processes are  
used to enhance conductivity

### Compliances

UL Standard 1426 BC-5W2

AWM 1232/1283 (6 - 2 AWG)

AWM 1232/1284 (1 - 4/0 AWG)

CSA: TEW

ABYC: E-11.15

Coast Guard: 33 CFR part 183

RoHS Compliant

### Resistances

Acid Resistant

Alkali Resistant

Oil Resistant

Moisture Resistant

Abrasion Resistant

Gasoline Resistant

Flame Resistant
