Benefits & Uses

- Fennel seeds are rich in antioxidants, which can help protect the body against oxidative stress and inflammation.
- Fennel seeds are popular in Indian cuisine and are commonly used in cooking as well as for garnishing salads.
- Fennel seeds are a preferred remedy for digestive problems and stomach-related issues.
- Dried fennel seeds are used to make medicines that promote overall health and fitness. The nutrition facts of fennel seeds make them effective in treating gas and chronic coughs.
- Fennel seed tea is a popular herbal remedy for soothing colic in infants and relieving menstrual discomfort in women.
- They are used in traditional medicine to relieve bloating, gas, and indigestion.
- Fennel Seeds oil helps to purify blood by removing toxins from body.

"Coriander Seeds," known domestically as dhaniya or dhaniya seeds, are a mild, citrusy spice product harvested and sun-dried to preserve their delicate essential oils. Unlike ground coriander seeds, this product retains the fruit's integrity, consisting of two semi-globular mericarps (seeds) joined together to form a spherical ridge-patterned structure

Coriander is indeed one of the oldest herbs and spices known to mankind. The coriander plant produces fruits that contain two seeds, which are dried and used as a spice. The dried coriander seeds are yellowish-brown or tan in colour and have longitudinal ridges.

Coriander seeds possess a warm and subtle flavour, with a gentle hint of citrus. They have an aromatic scent that is soothingly warm, nutty, slightly fruity, and complex. This unique combination of flavours and aromas makes coriander seeds a versatile ingredient in various cuisines.

Benefits & Uses

- Coriander seeds are widely used as a flavouring agent in the food industry, infusing food items with a pleasant aroma and taste.
- These seeds are known for their remarkable ability to treat intestinal and gastric pain effectively.
- Crushed properly, the brown-coloured coriander seeds are used to enhance the taste of various food items.
- Coriander serves as a structural base for the flavour industry. They are vital for creating "Natural Flavourings." The demand here is for Chemical Yield. Specifically, high Linalool content is required. This compound is isolated for use in perfumes, cosmetics, and soaps.
- Coriander takes a front-and-centre role in global spice mixes, often constituting the bulk volume (up to 40-50%) of commercial dhaniya powder. It acts as a thickener and a flavour carrier. Its inclusion adds a layer of mild, citrusy sweetness.

Fenugreek seeds, also known as methi seeds, are obtained from the plant Trigonella foenum-graecum. These seeds are widely used as a spice and ingredient in food processing industries across many countries.

The name Fenugreek (Methi) comes from the Latin term Foenum-graecum, or Greek hay. Fenugreek is an erect annual herb native to Asia and southern Europe. Fenugreek is a tender, erect annual with three-part leaves and pea-like flowers that grows in fertile, well-drained, alkaline soil in full sun. It reaches a height of less than three feet and has a sweet hay scent when dried.

Premium fenugreek seeds known for their distinctive aroma and slightly bitter taste. Widely used in spice blends, pickles, and traditional dishes, these seeds add depth and character to recipes. Carefully cleaned and graded to ensure high purity and reliable quality for culinary and food processing industries.
