

Color Theory and the Three Elements of Color

Activity Time: 30 min

Understanding color basics

1. Three Elements to Color

- Hue, Value and Saturation
- Understand and utilize each element

2. Basic Color Wheel: Primary, Secondary and Intermediate Colors

- Color Wheel showing basic 12 step hue scale. This is a hue chart showing each hue at its most intense saturation

3. Making Secondary from primary colors

All colors of the color wheel can be made by mixing primary colors. Primary colors must be exact in hue

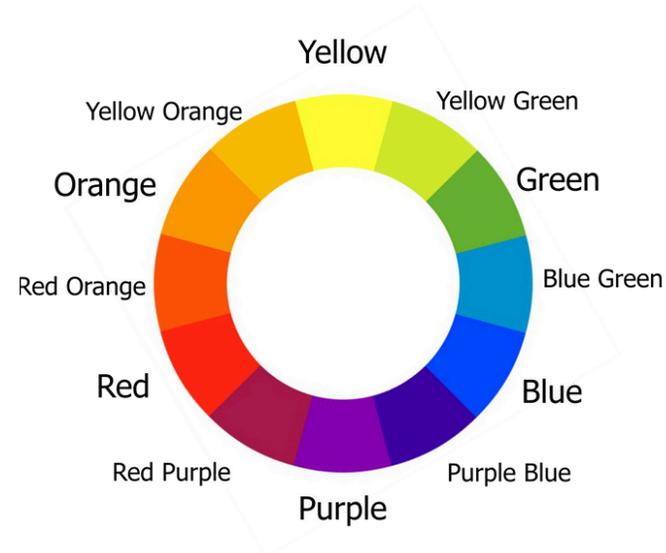

4. Tints and Shades

By adding white to a color a lighter color can be created. This is called a tint. By adding shades of gray, shades can be created

Three Elements of Color

Three Problems to Solve in the mixing and application process

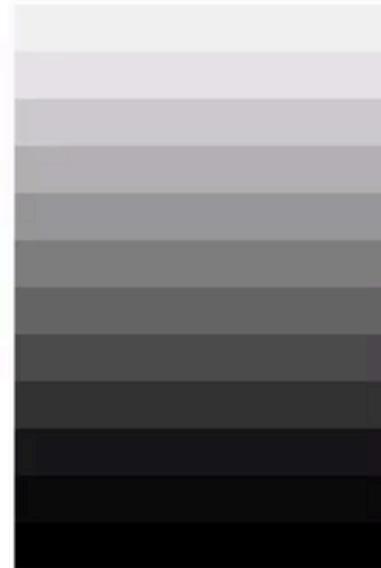

HUE

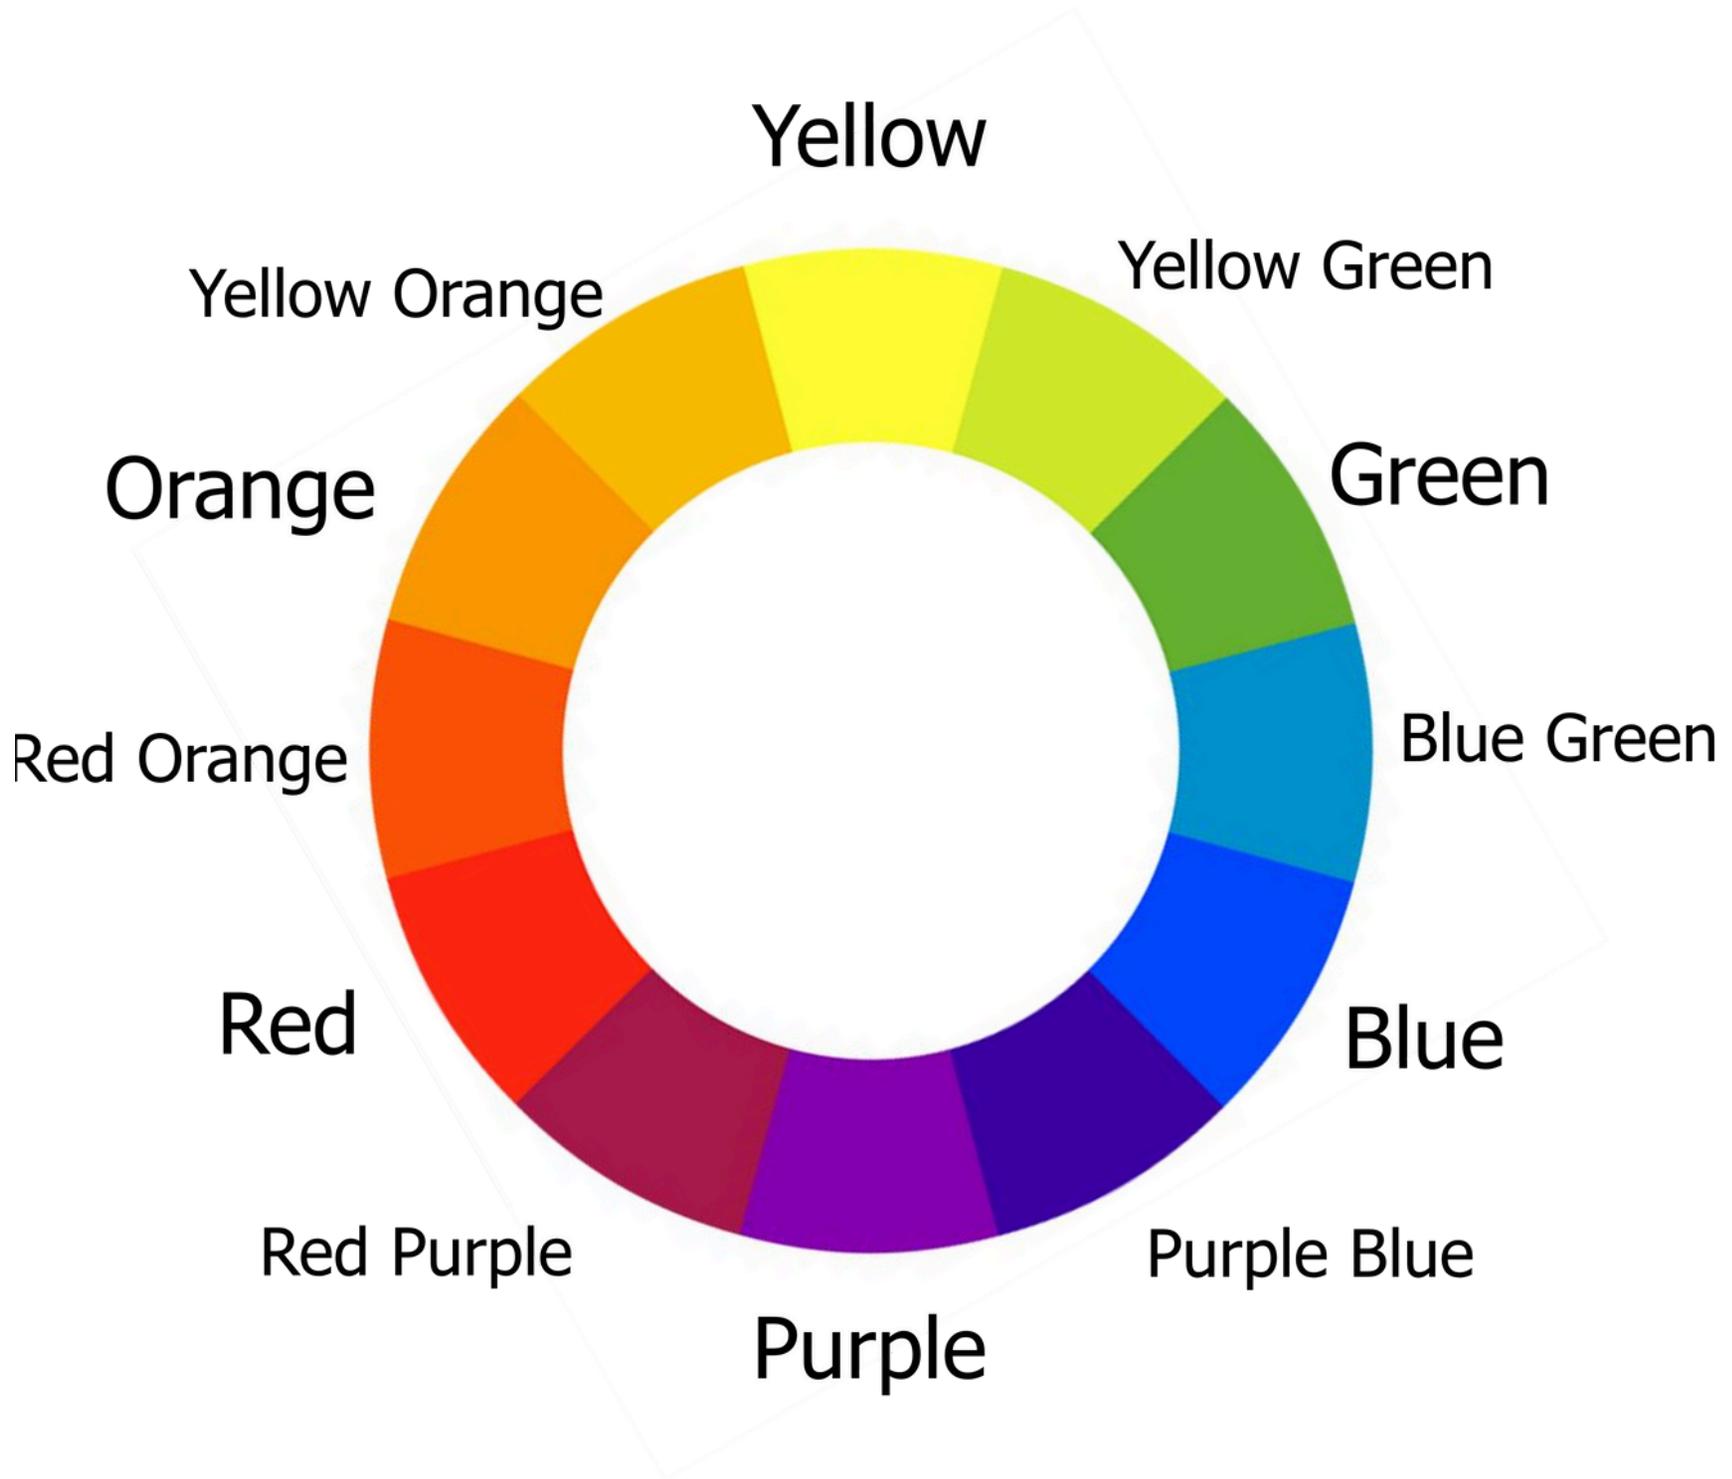

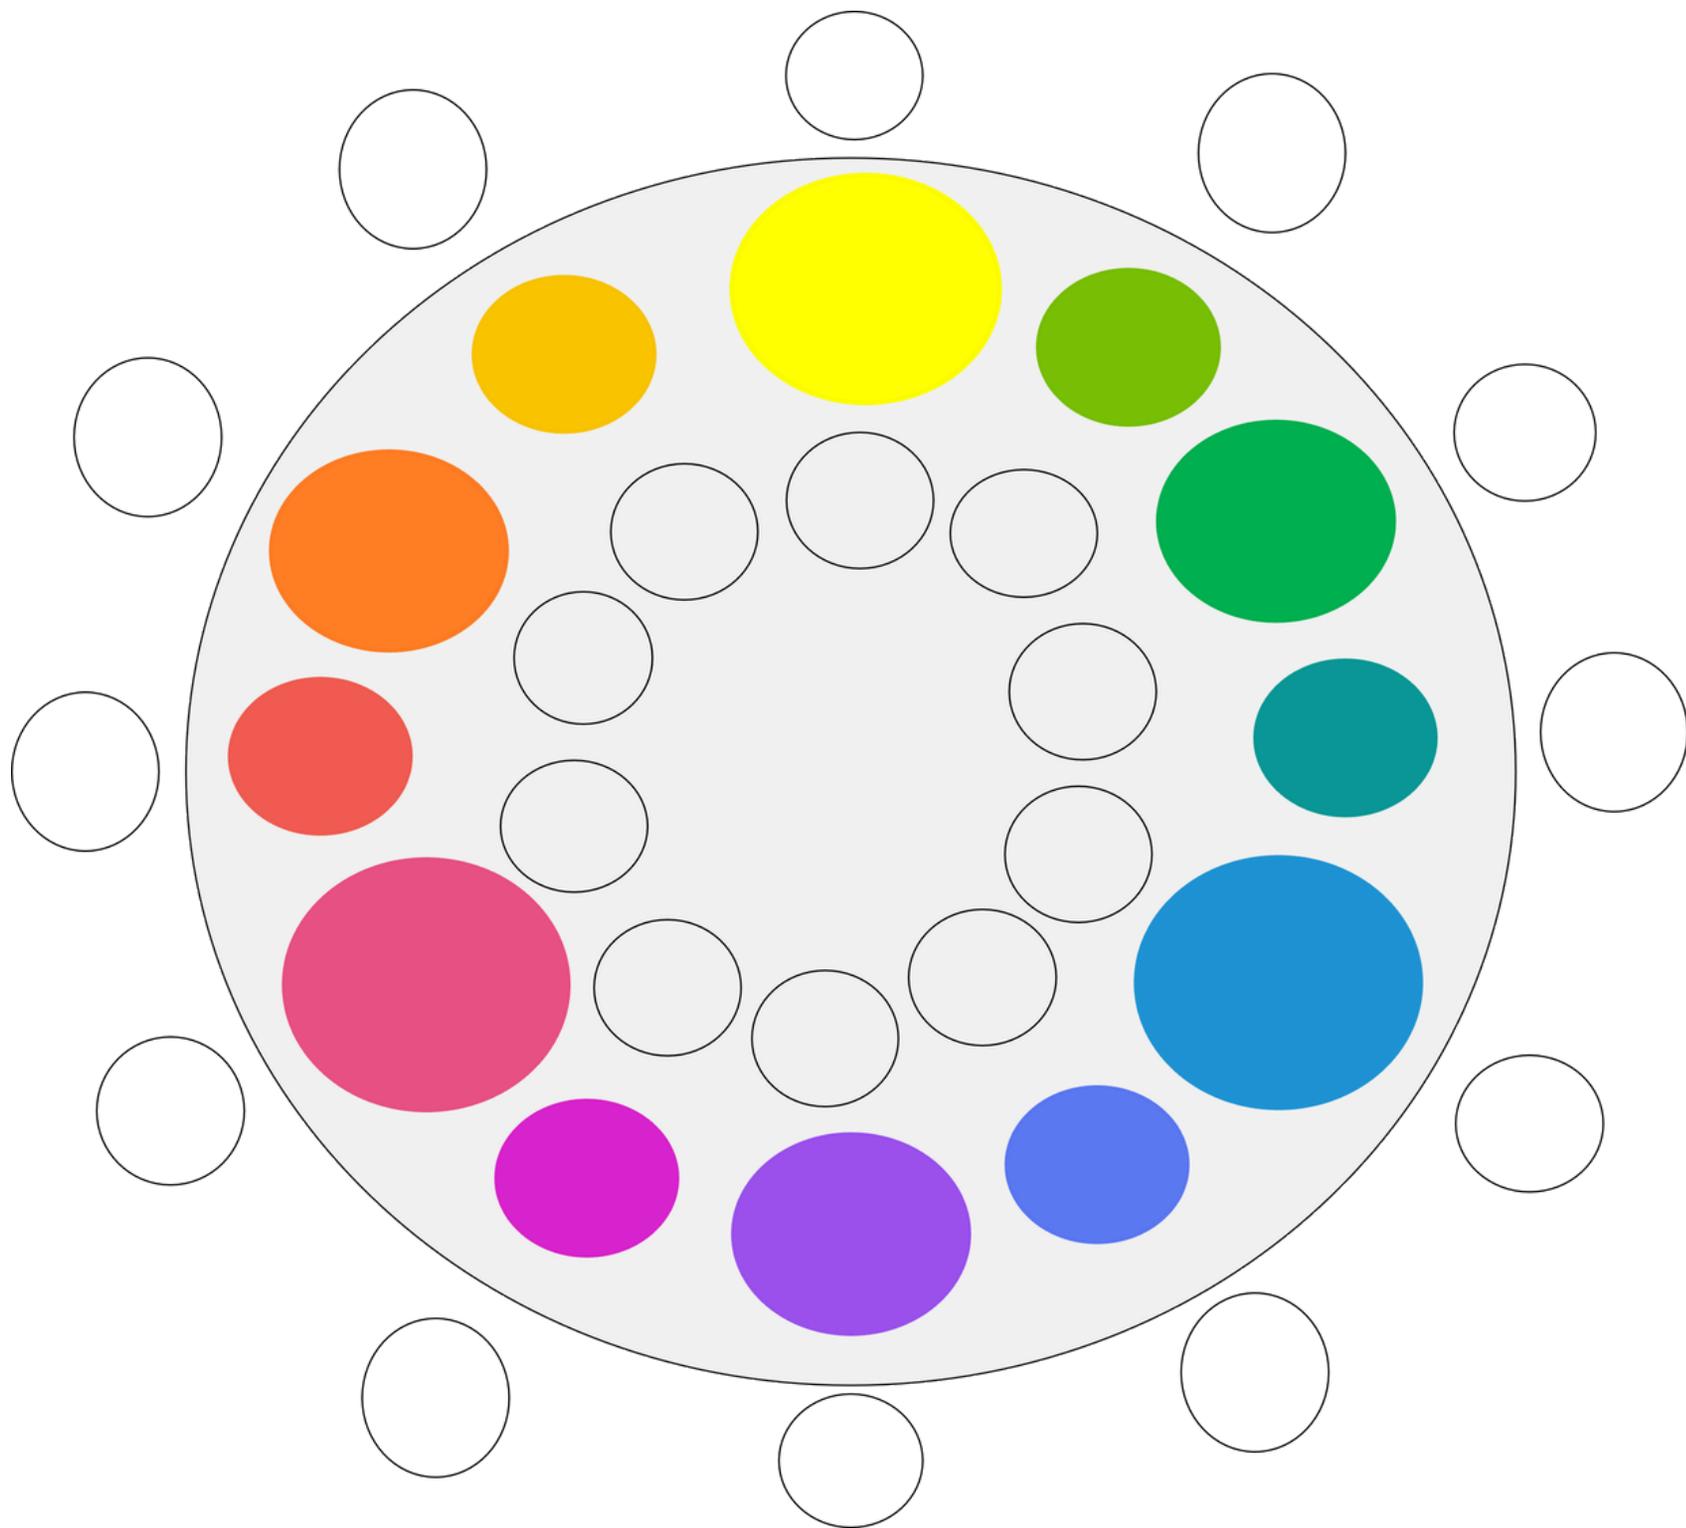

SATURATION

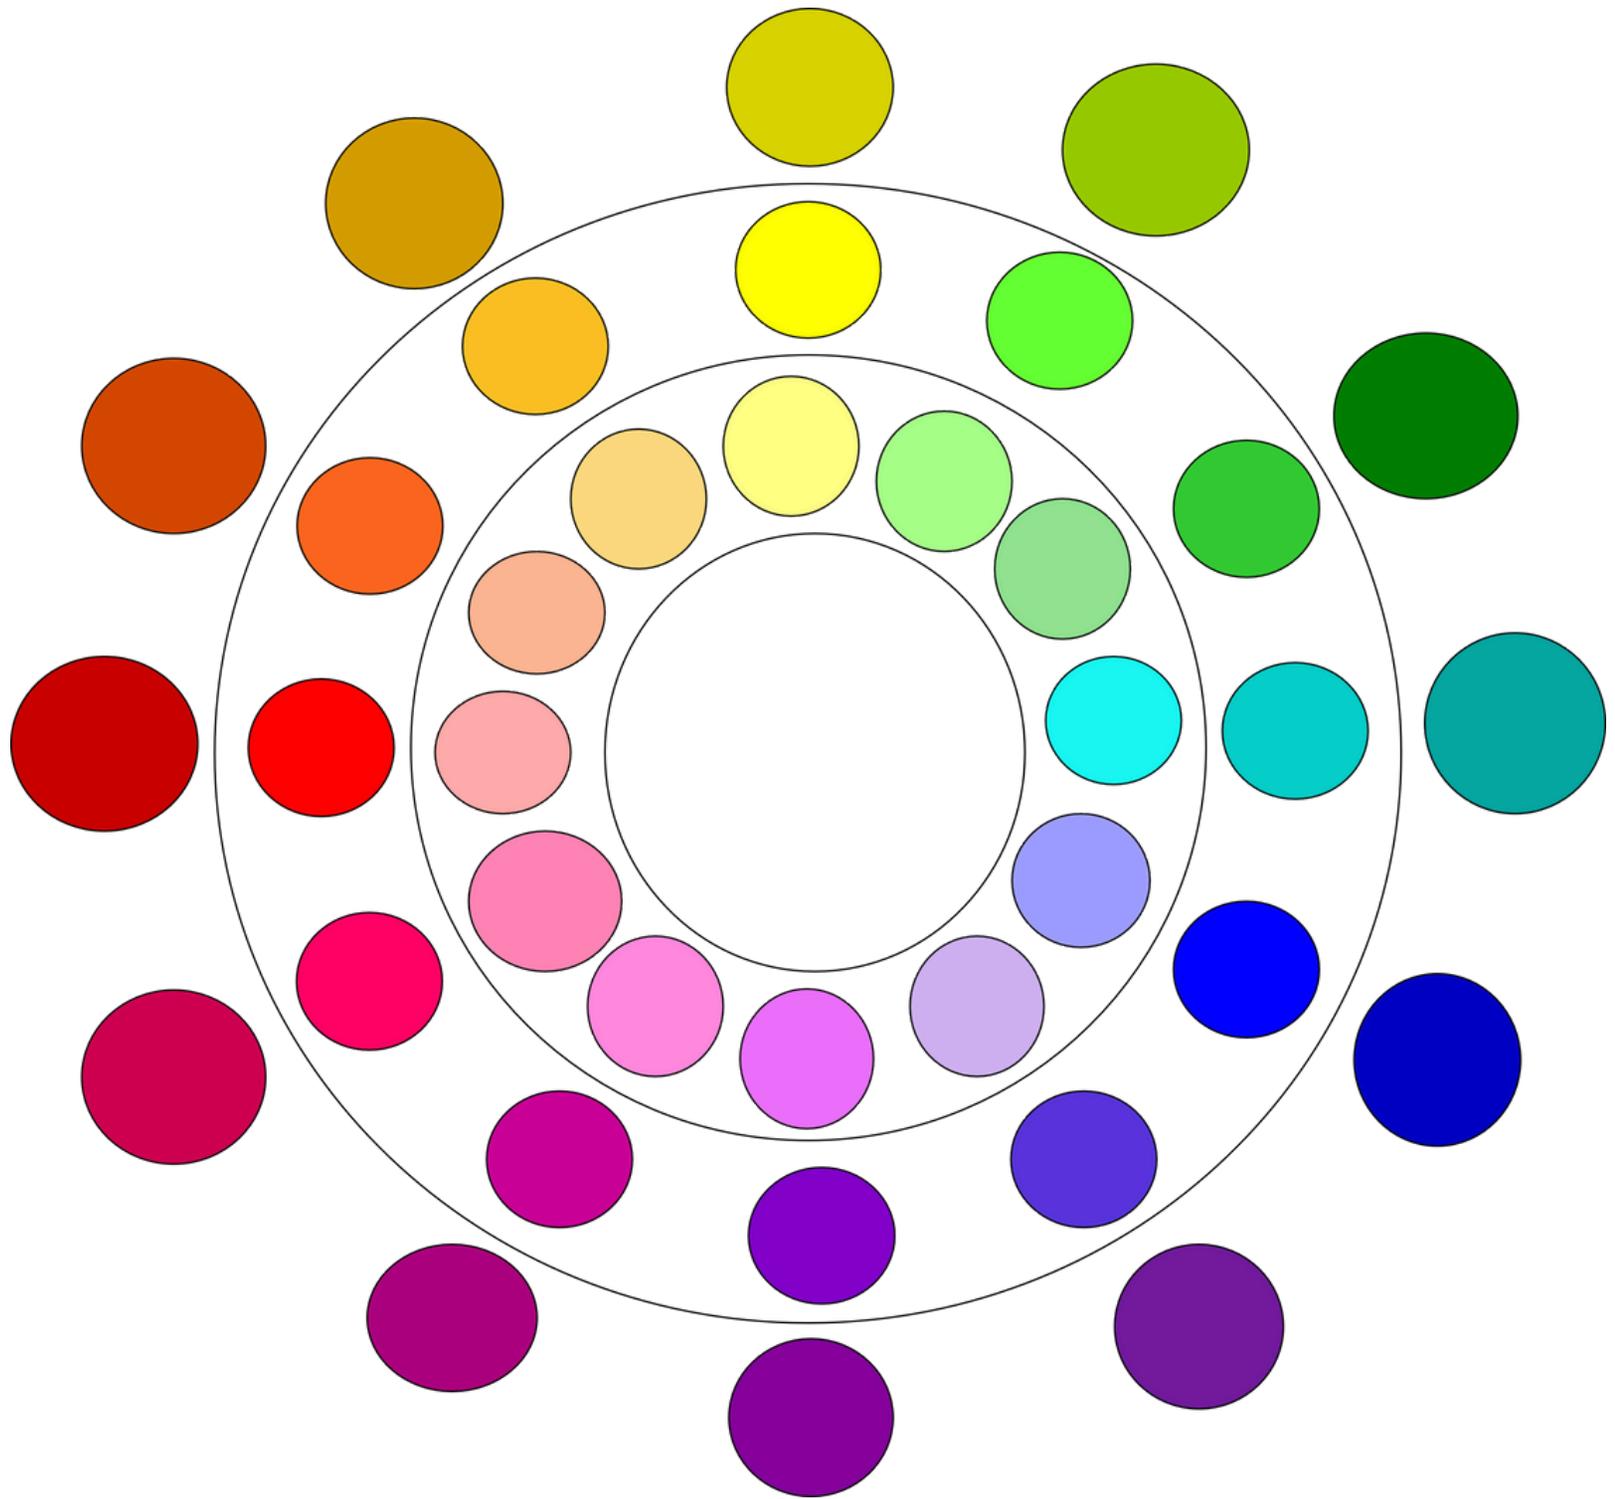

VALUE

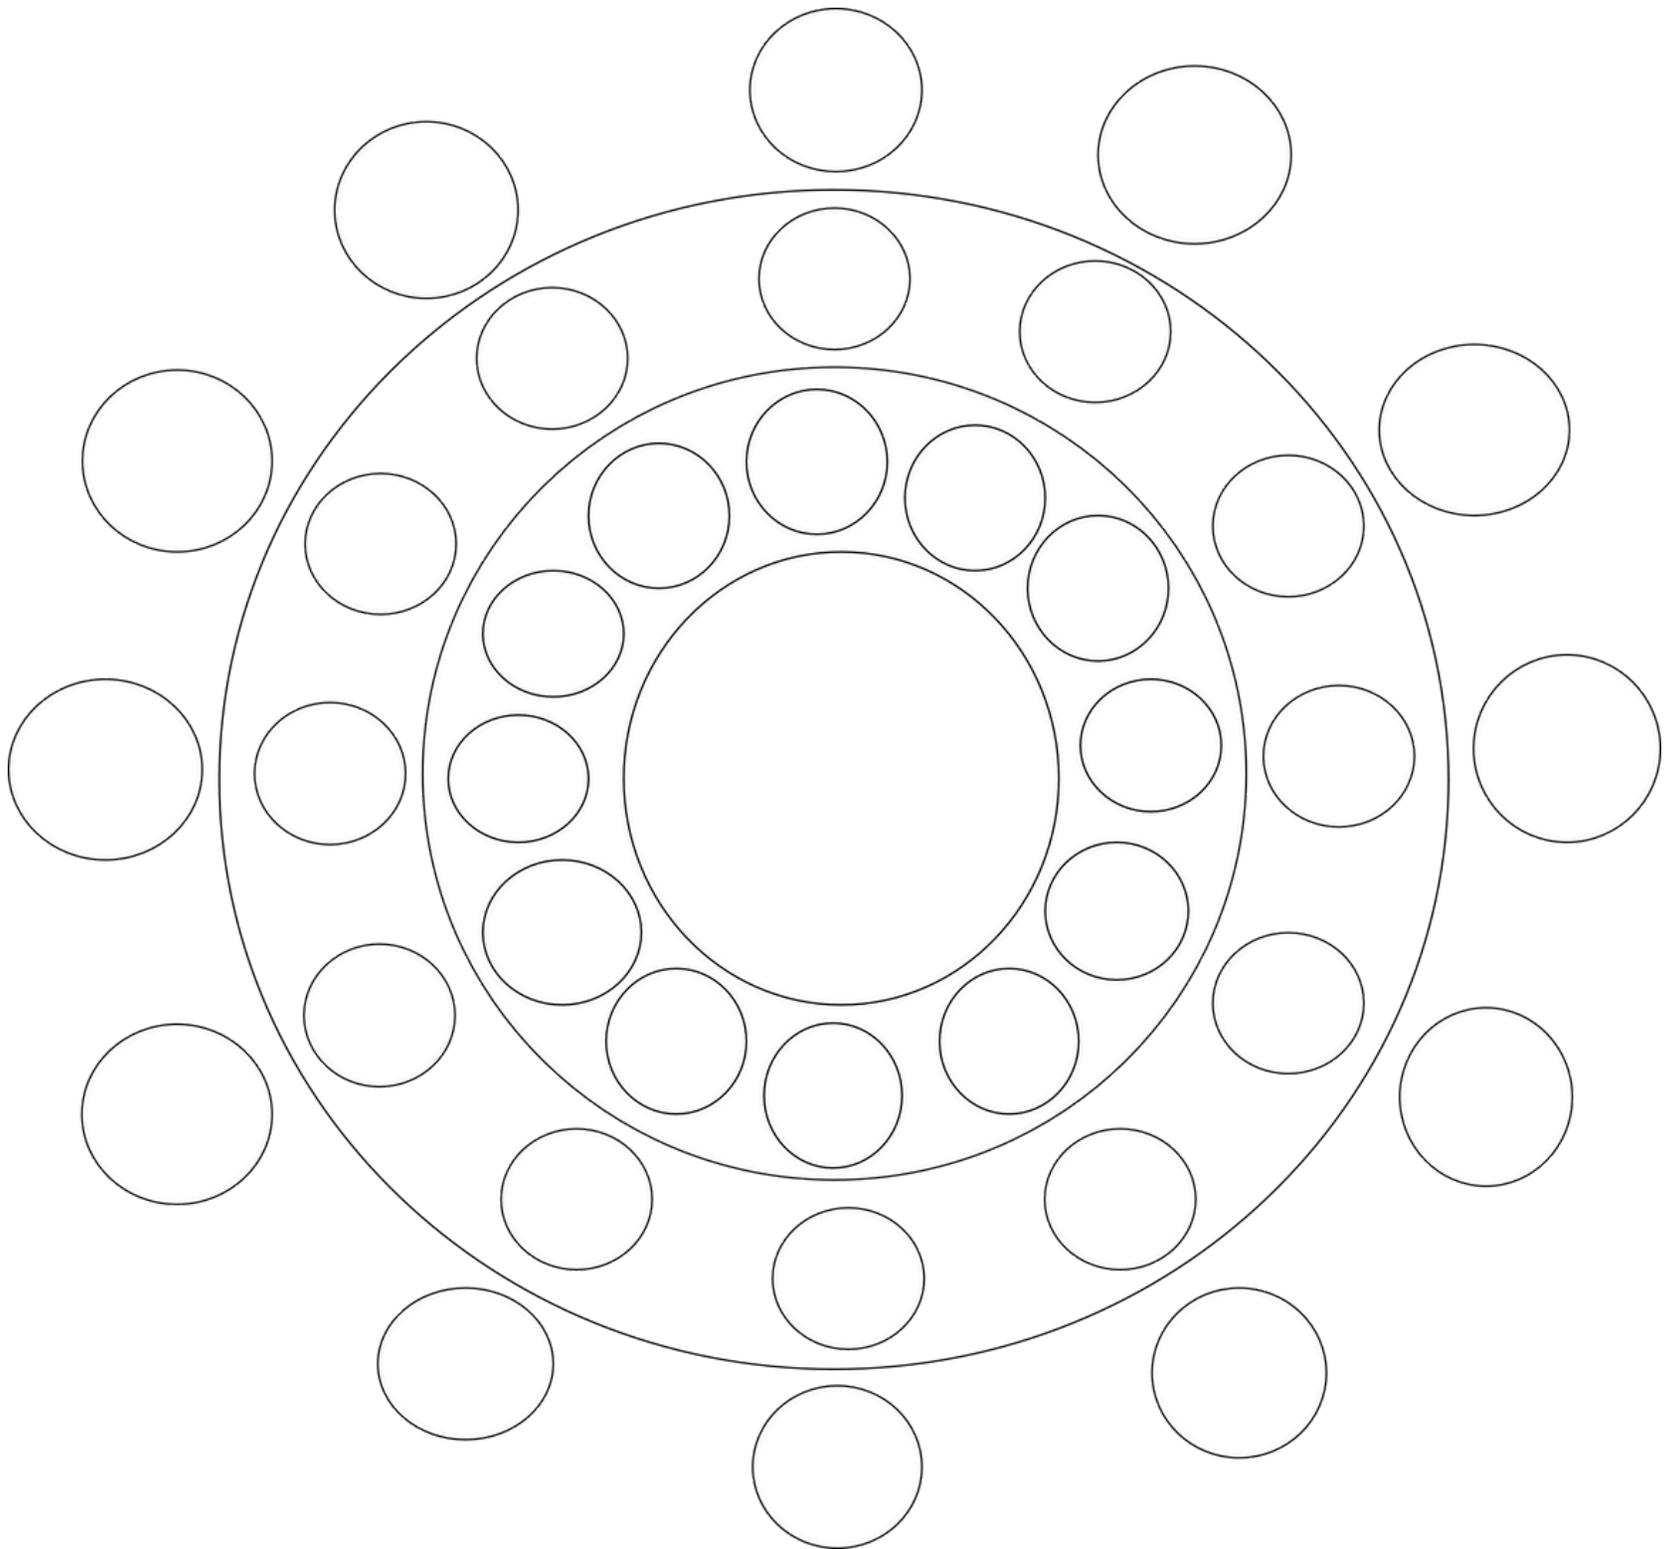

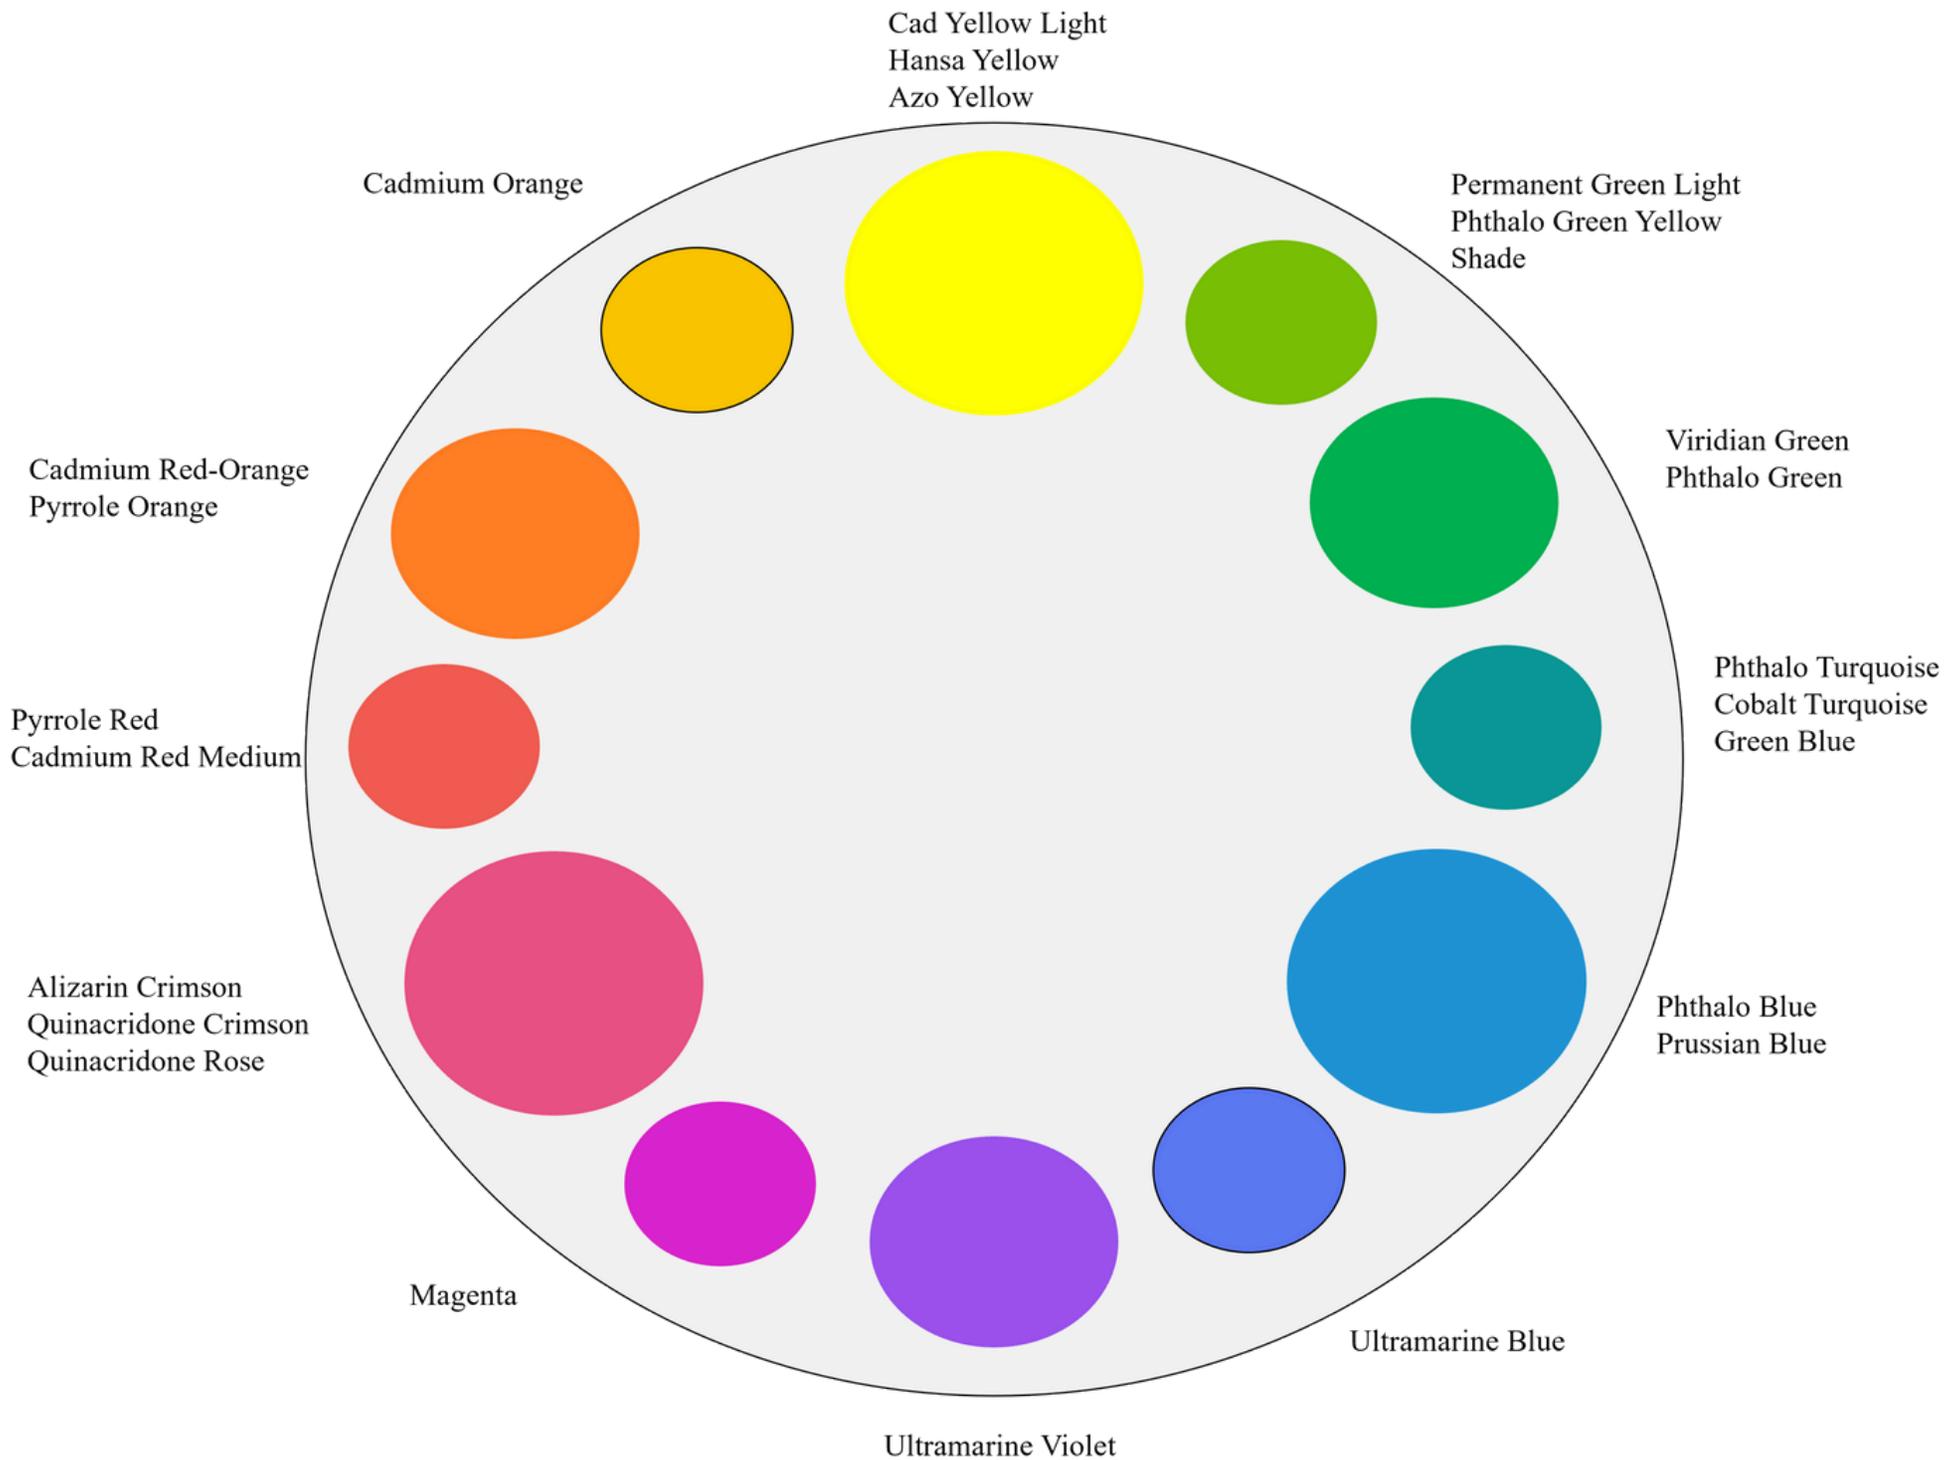

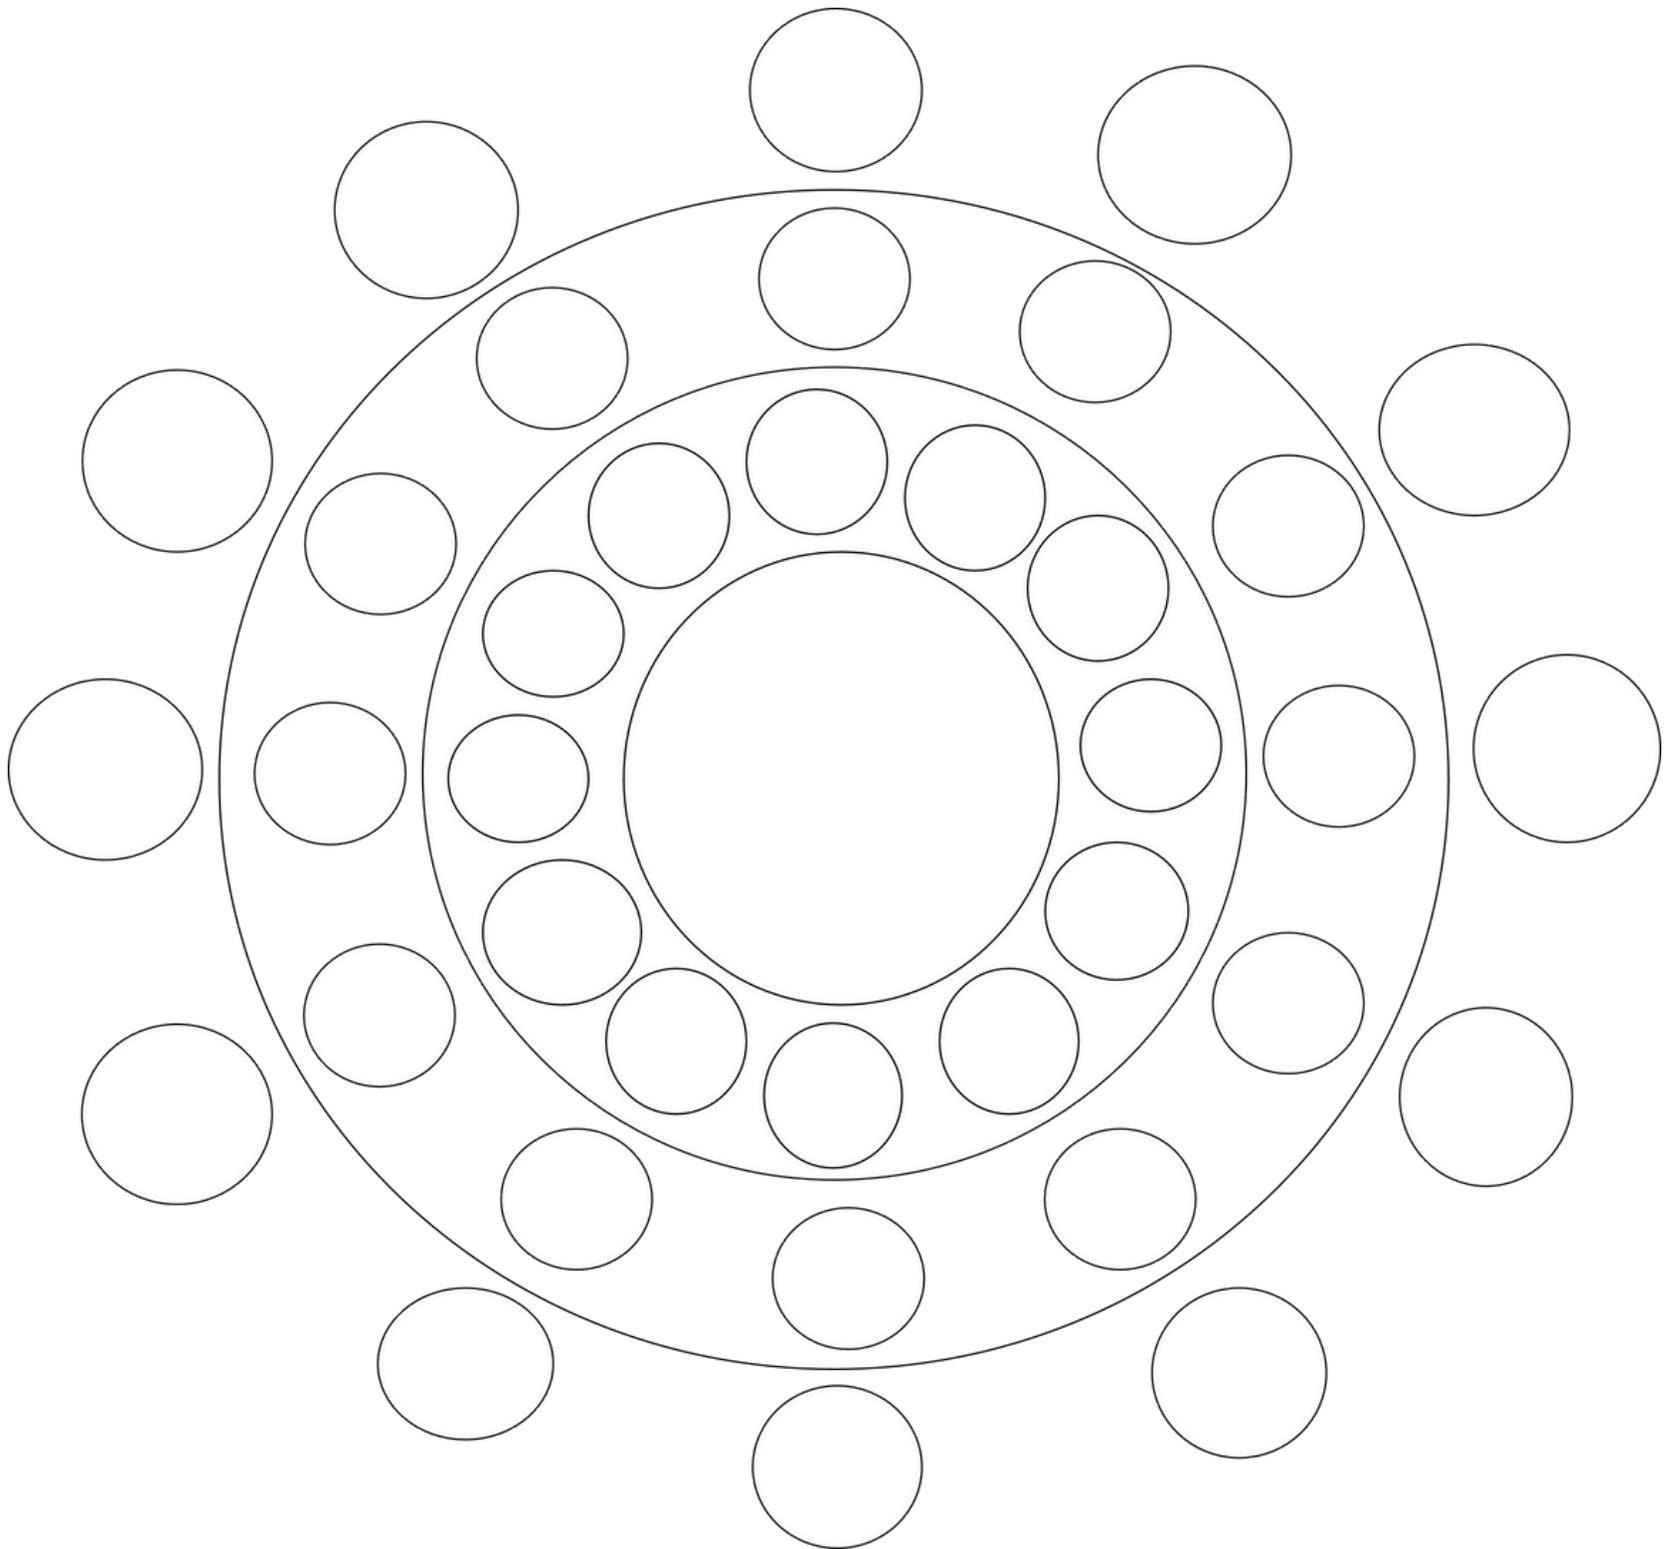

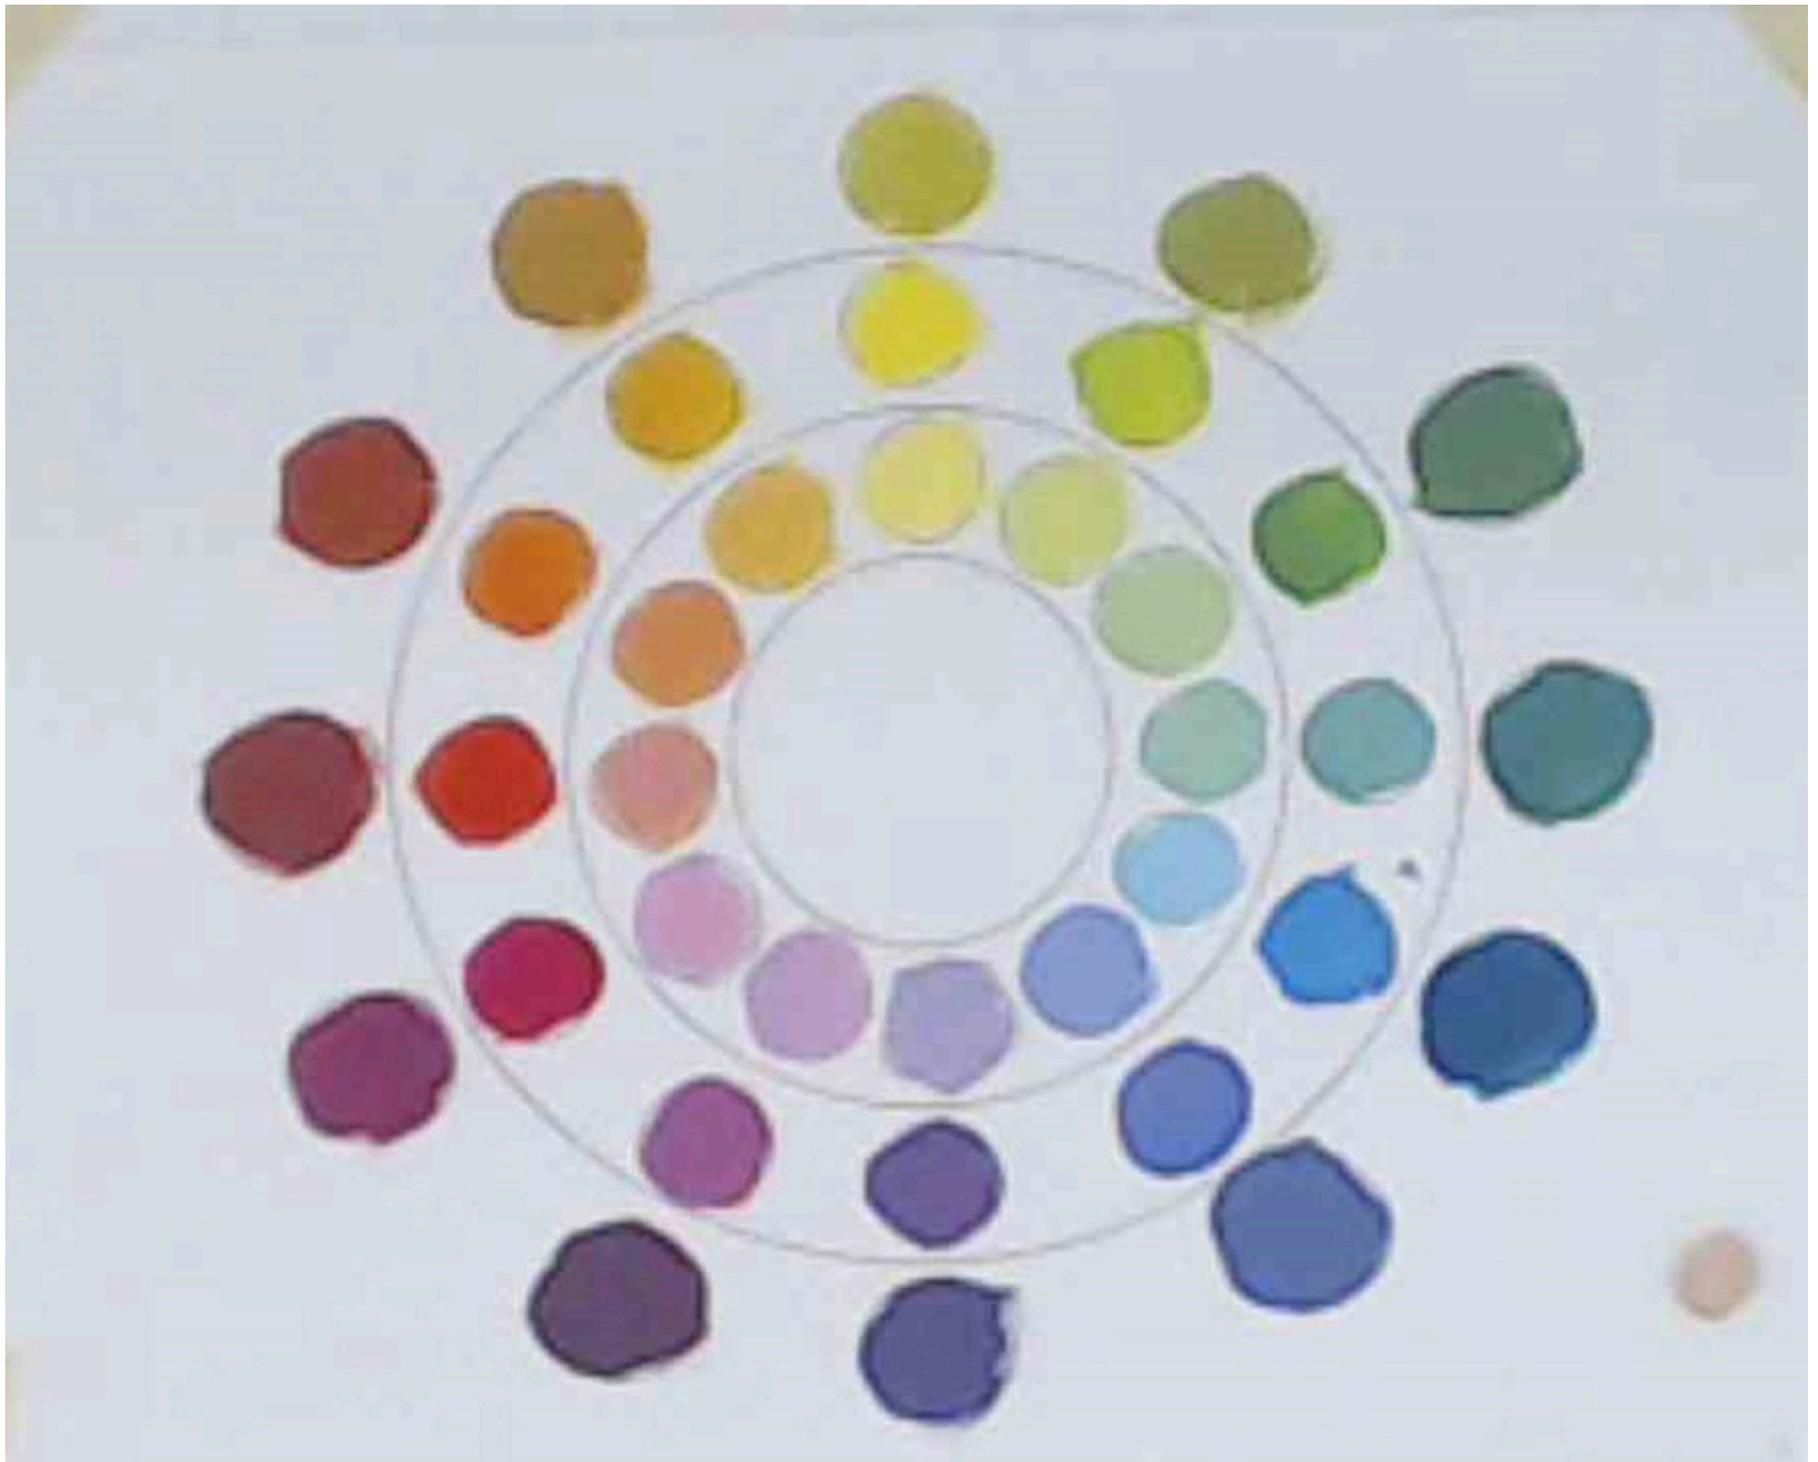

Color Theory: Munsell Color System

Activity Time: 30 min

Mapping hue, saturation and value

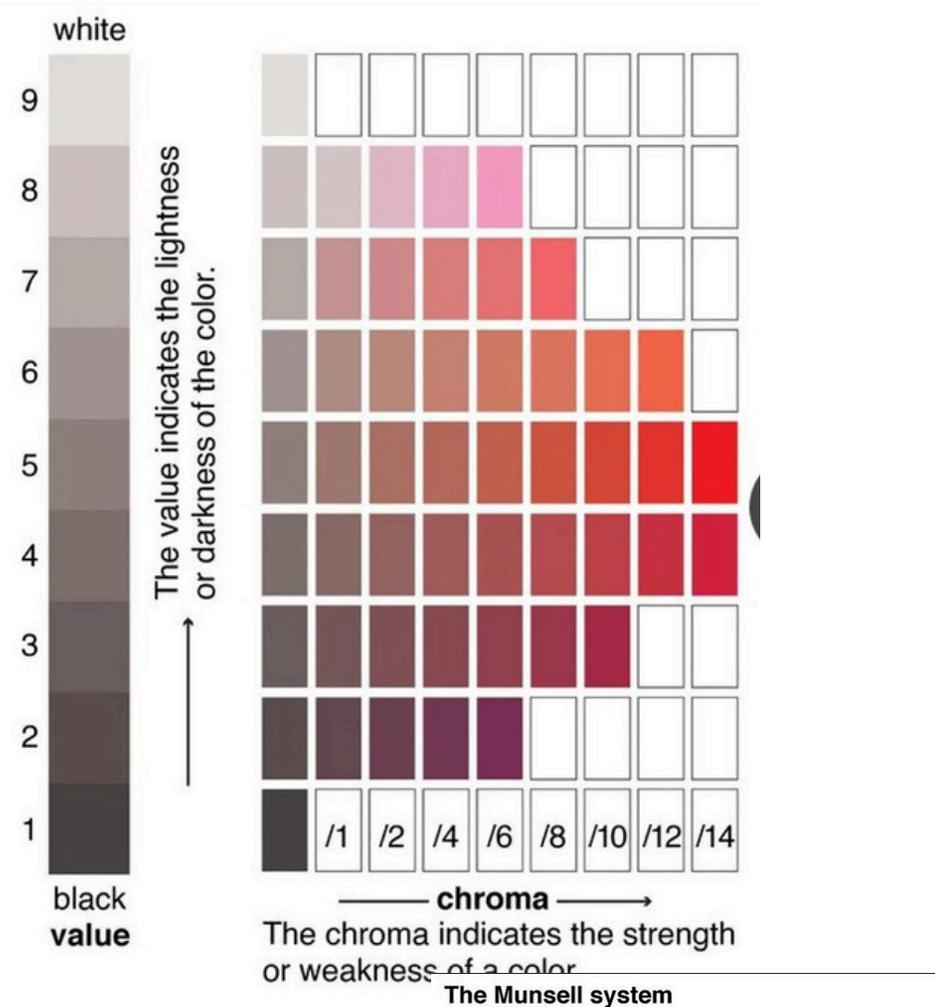

Munsell system

- Identifies relationship between the main elements within a color. Hue, saturation and value

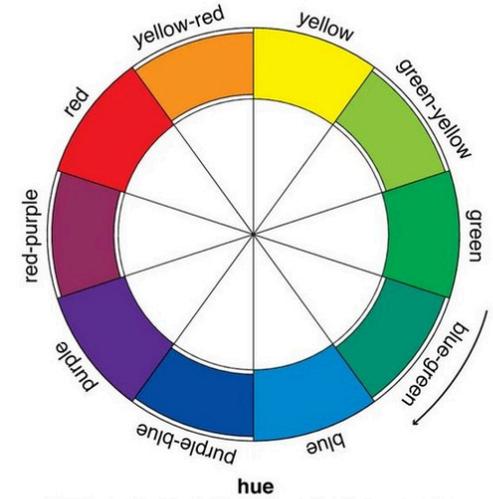

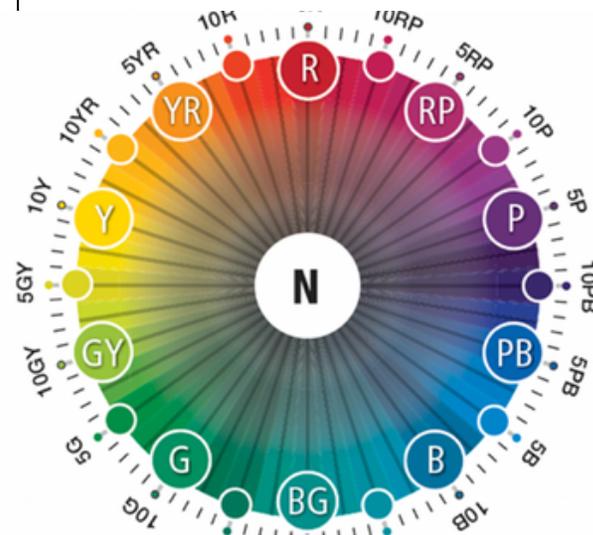

Vertical scale equals value

Horizontal scale equals saturation

Each scale works off one of 10 hues that are complementary to the color directly opposite on the color wheel

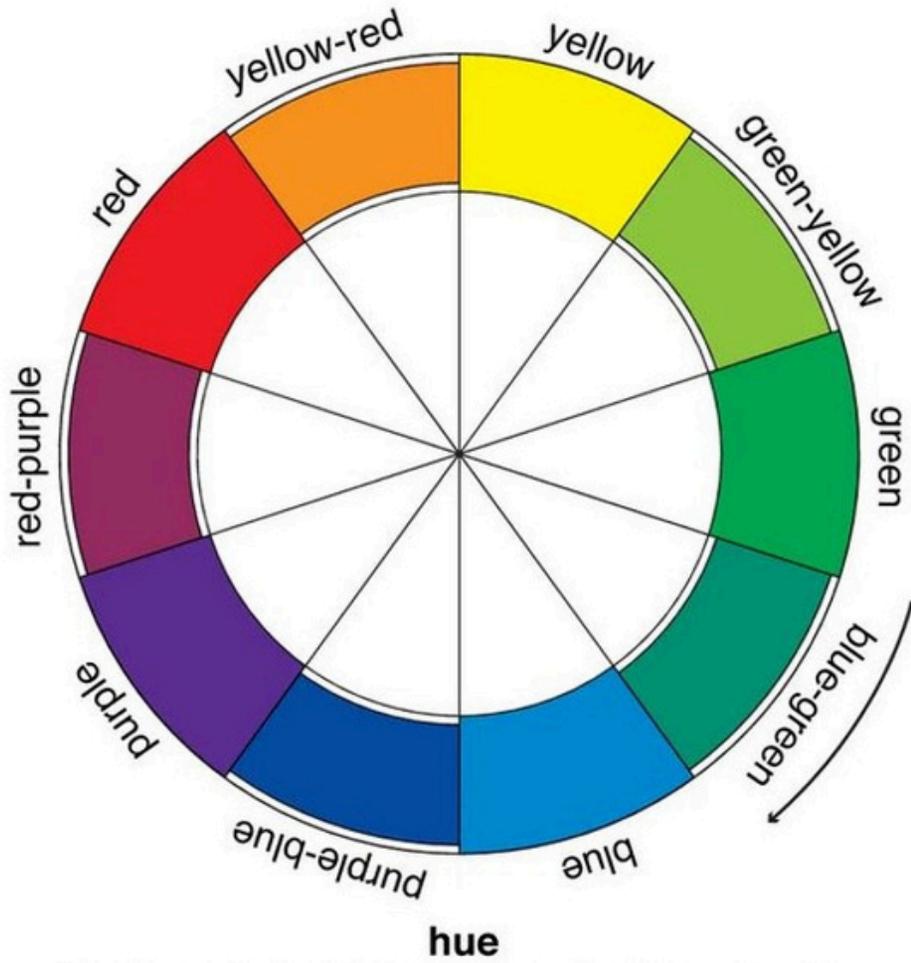

The Munsell system

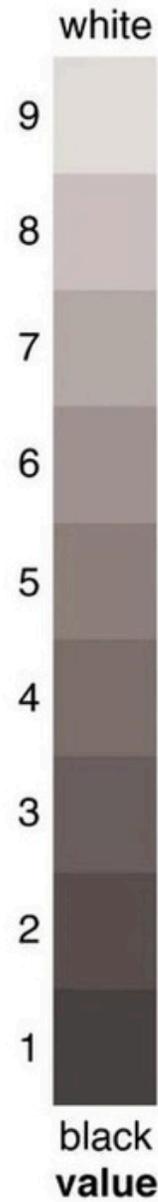

The hue distinguishes one color from another.

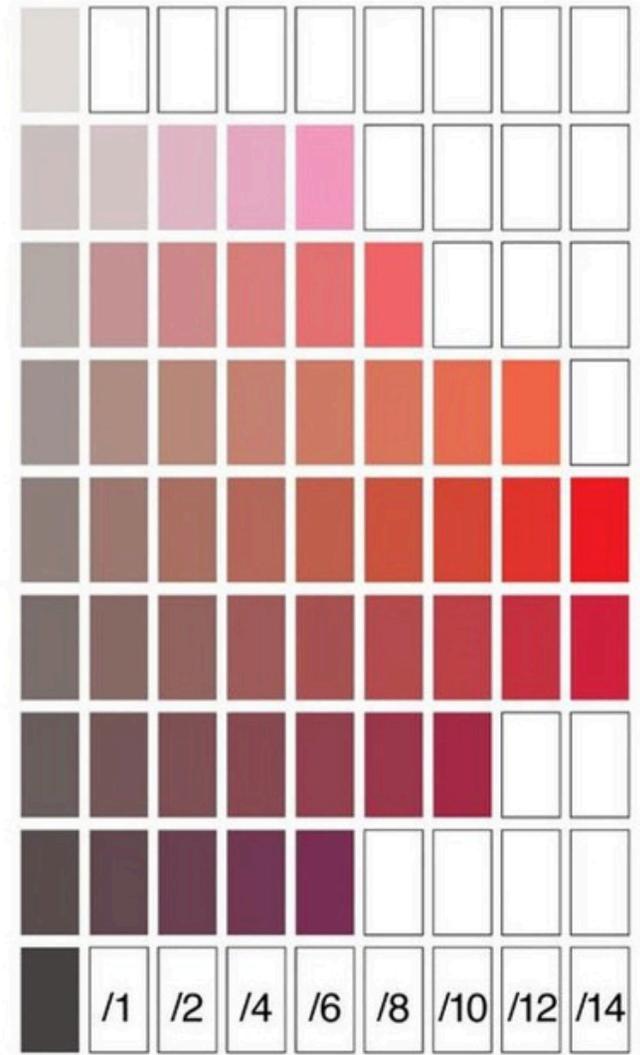

The Munsell system

The hue distinguishes one color from another.

The value indicates the lightness or darkness of the color.

chroma

The chroma indicates the strength or weakness of a color.

Color Theory: Desaturate colors with complementary

Activity Time: 30 min

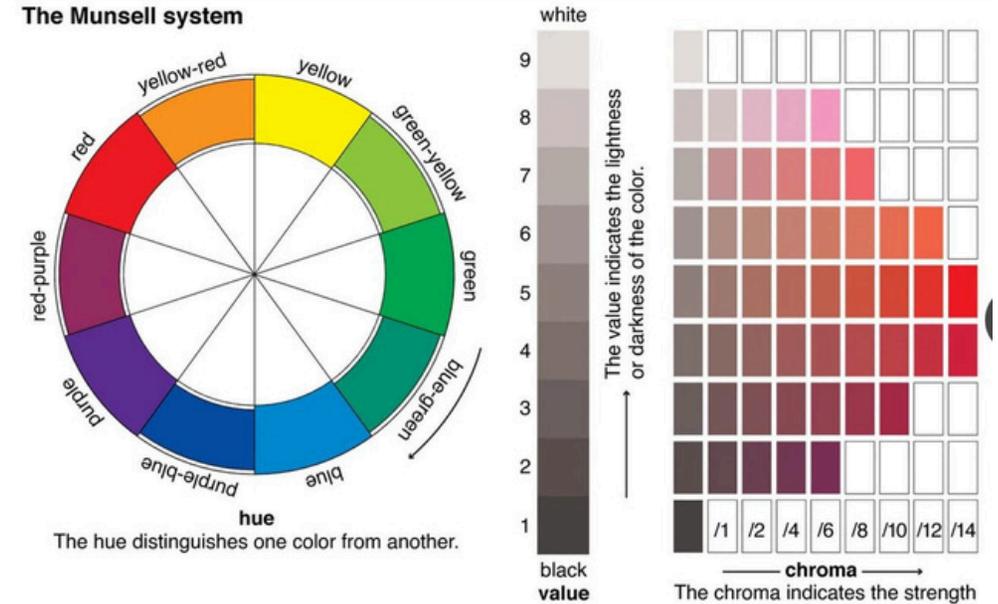

Pigment Primaries

Paint in primary and secondary colors.

- Start with the three basic primary colors paint in circles
- Mix and paint secondary colors and paint in outer circle.

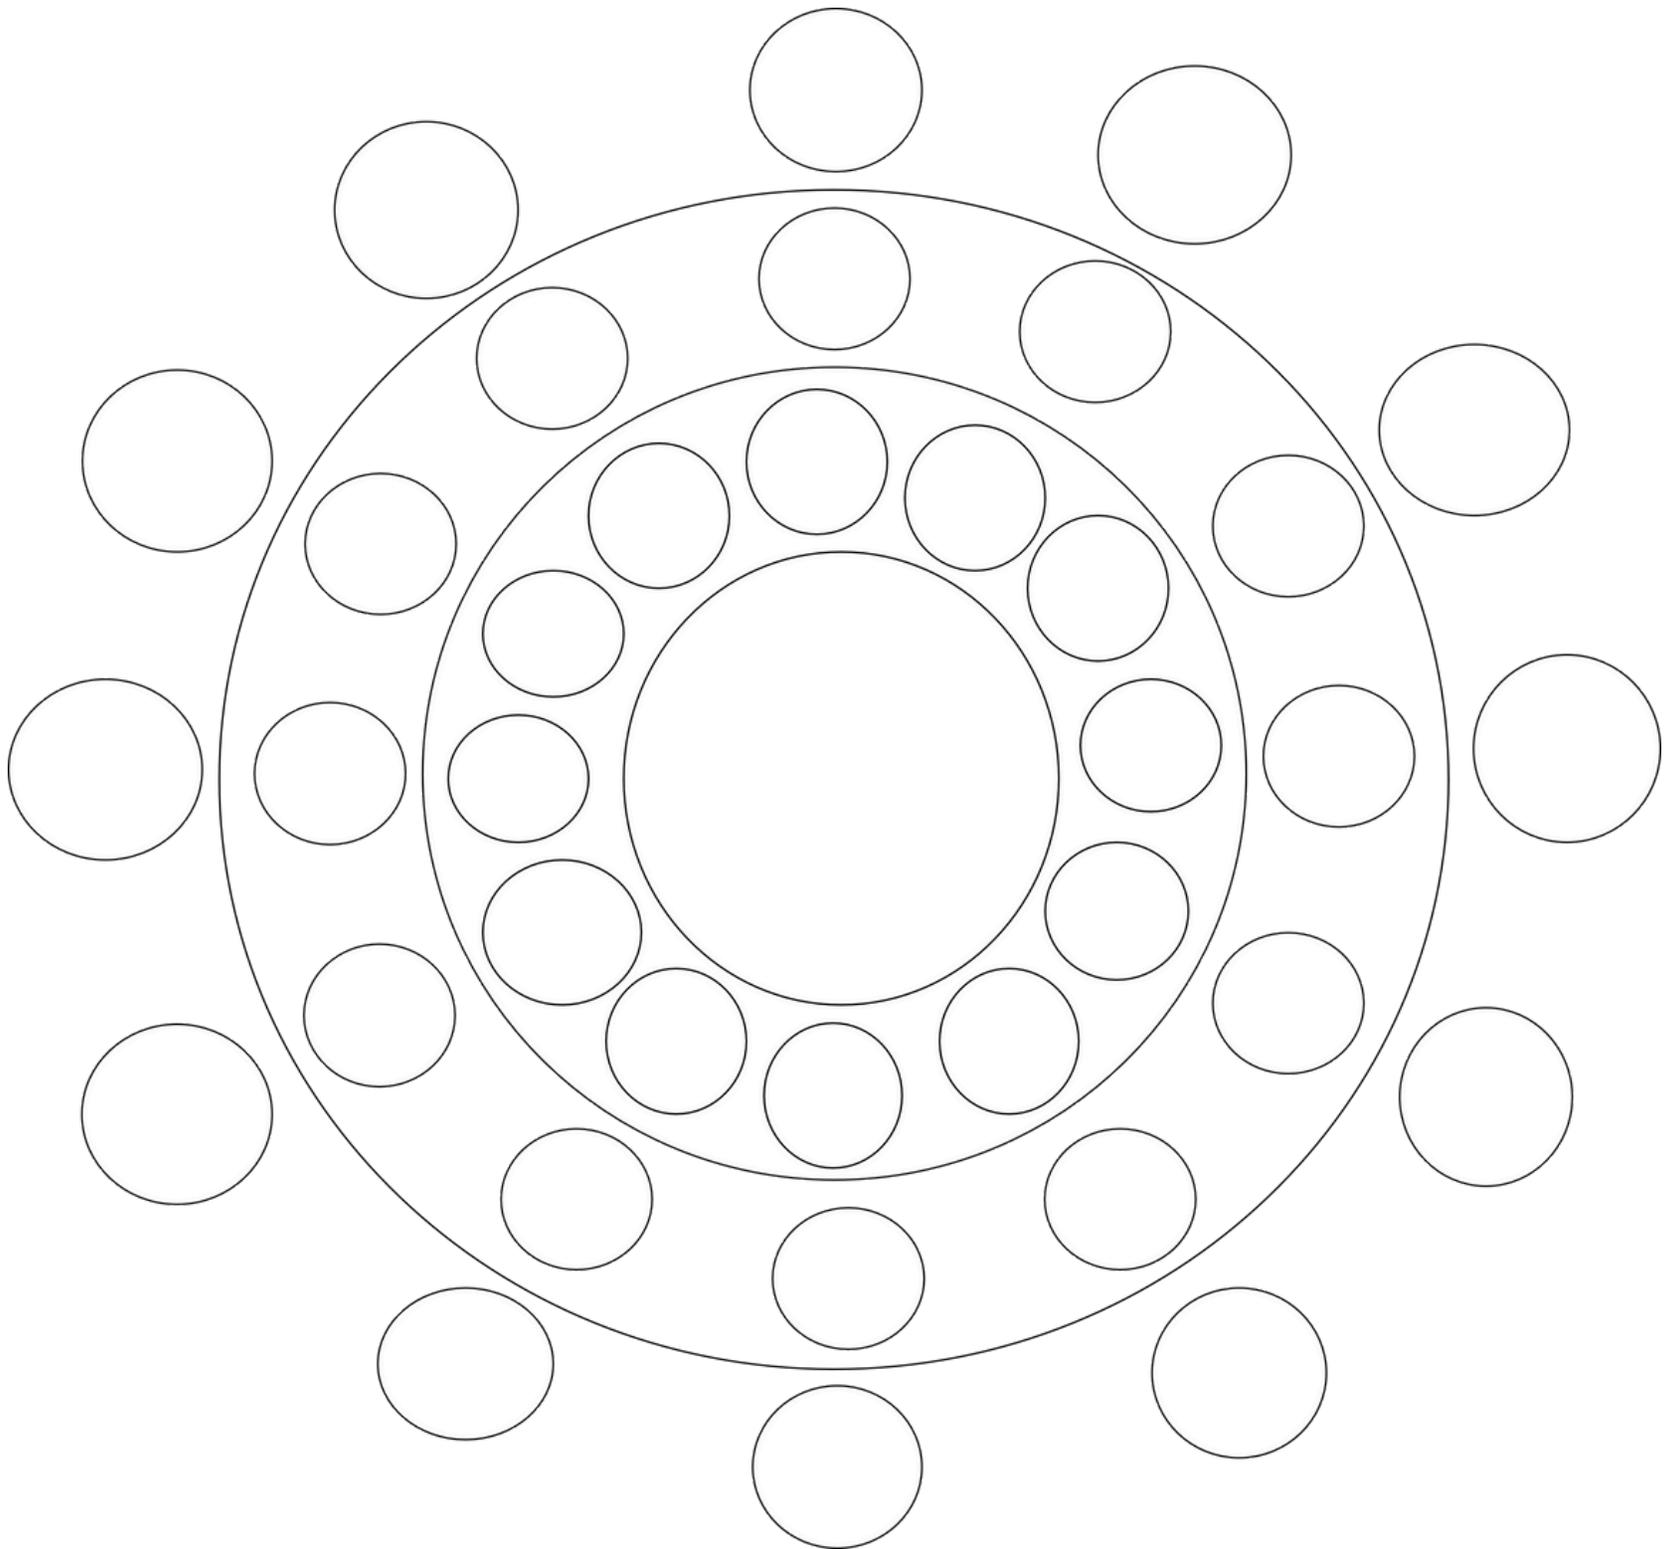

2. Mixing complements to desaturate a color

- Mix start with the warm side of the wheel and pick one color. Using its complement mix into the original color a little paint to desaturate the color. Paint in the second circle. Add a little more complement and paint into the third square showing greater desaturation.

Color matching and creating a color scheme

Activity Time: 30 min

Creating a color scheme and sketch

Assess if image is dominantly warm or cool

- Look over photo and decide what set of colors dominant the image. Either cool or warm.

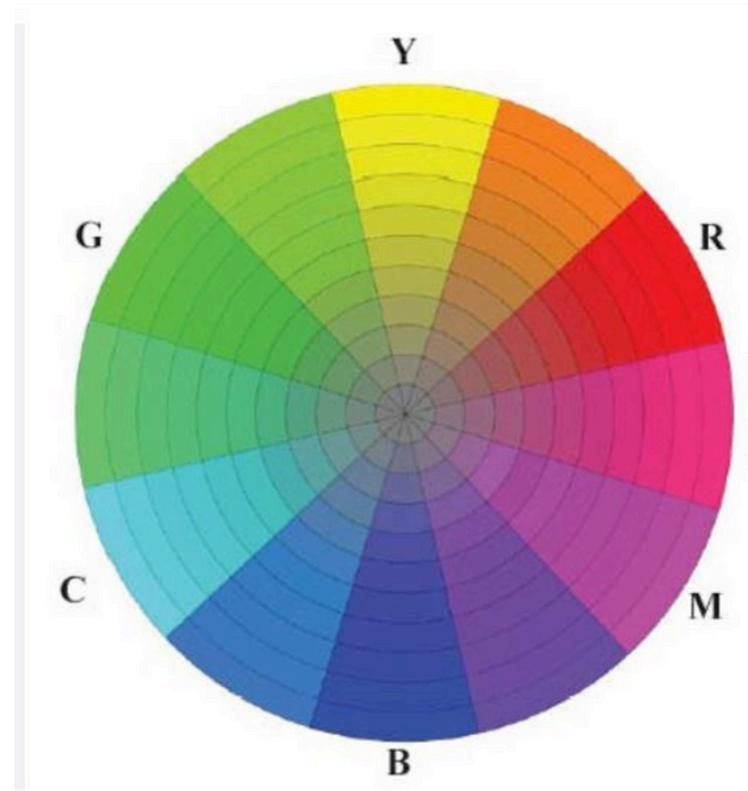

What color from the color wheel matches the most dominant color of either the warm or cool color group

- Look for a color that is apparent and is biased or mixed in other colors of the dominant group

What is the dominant color complementary on the opposite side of the wheel

- Choose one color from the color wheel that is most dominant and find its complementary on the subtractive color wheel.
- Two steps removed from the dominant color are possible accent colors you can use in your color scheme.

Identify dominant color, complementary color, and two accent colors

Choosing pigments and setting up your palette

Activity Time: 30 min

Set up palette colors from chosen color scheme

Enough by not too many colors

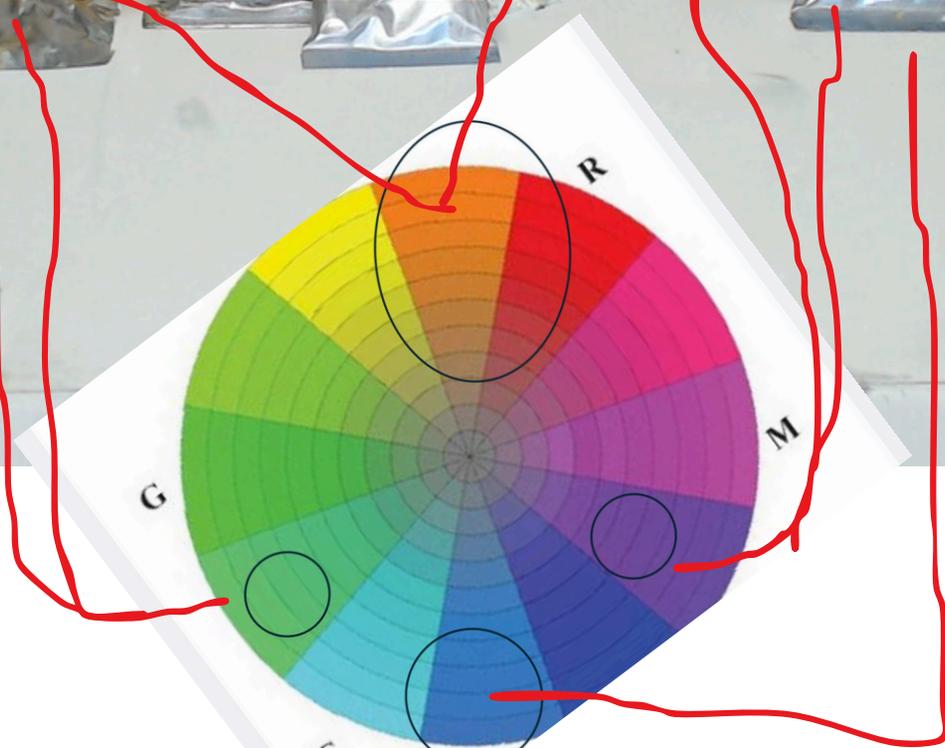

- Primary colors with two desaturated colors
- White, Yellow medium or light, Yellow Ochre, Cad Red, Burnt Sienna Rose or Majenta, Thalo Blue, Black

Mix a 6 value scale in black and white on the right side of the palette with black at the top.

Mix a three value pile of paint for each color. One underneath the other

- one medium dark, one middle value and one light value
- Dont mix for Yellow Light.

Blocking in the base colors to begin a painting

Using a three value system for blocking in color

**Transfer image to canvas paper.
Redraw lines to make dark**

Step 1. Block in middle tone area. Vary color within the dominant color hue group

Step 2. Block in light value colors.

Step 3. Block in dark color values.

Choosing reference for your painting

Activity Time: 30 min

What to look for in a photo

Large to small shapes

- Start with the three basic primary colors pint in circles
- Mix and paint secondary colors and paint in outer circle.

Center of interest

- Mix start with the warm side of the wheel and pick one color. Using its complement mix into the original color a little paint to desaturate the color. Paint in the second circle. Add a little more complement and paint into the third square showing greater desaturation.

•

Light to dark large shapes

- Start with the three basic primary colors pint in circles
- Mix and paint secondary colors and paint in outer circle.
