General information about this template	This template is the required form to submit service line inventories for public drinking water systems in Idaho. No other form is permitted. You may include additional columns at the end of the existing columns as needed. Be aware, some cells are locked to protect formulas and other information.
Summary information sheet	This sheet is for general information about the water system and the summary for the service line inventory. Every blank cell, highlighted in gray, next to informational text is required. You will note - some cells are locked. Locked cells are to prevent modification of formulas used to calculate reporting information.
Inventory sheet	This sheet is for line by line entry of the PWS/private side service line materials inventory. Headers are locked to prevent modification. When printed, the columns will span at least 2 pages (more if you add to them).
Locational information, columns A through E	Water systems are required to provide locational specific information for every service line. This information is required for service lines that are not serving consumers (such as those for fire flow or irrigation) but are connected to the drinking water system. Not every column is required, however water systems must provide enough information to adequately identify each individual connection.
Overall Service Line Category, column F	Column F is not editable. This column is automatically filled based on information from columns G and H to determine the overall service line category based on EPA guidance.
Columns G through O	These columns are required information to ensure compliance. Column K is the new connector information. If there are multiple connectors, indicate the connector of the most hazardous material and add an additional column at the end with relevant details.
Column Q	This column meets the requirements for the baseline inventory which requires connector information
Questions? Need assistance?	For specific questions about your lead service line inventories, or anything else about your drinking water system, please contact your Regional DEQ or local Health District office.
