

CONFIDENTIAL: SMALL BUSINESS SECURITY AUDIT

10+ Years of Enterprise-Grade Security Expertise, Simplified for Your Team

1) Identity Hardening	Is Multi-Factor Authentication (MFA) mandated for every cloud login? If you aren't using a "push" notification or hardware key, your passwords are a liability.
2) The 3-2-1 Data Sovereignty	Do you have 3 copies of your data, on 2 different mediums, with 1 immutable copy stored off-site? (If your backup can be deleted by a hacker, it isn't a backup.)
3) The Perimeter Gap	Is your network guarded by a managed, enterprise-grade firewall, or a standard ISP-provided router with limited visibility?
4) EDR vs. Antivirus	Are you utilizing Endpoint Detection & Response (EDR) with behavioral AI? Standard antivirus is reactive. EDR is proactive.
5) The Human Firewall	Has your staff undergone Phishing Simulation training in the last 180 days? The team is your first and last line of defense.
6) Automated Patch Hygiene	Are critical OS and third-party software updates (ie Chrome, Adobe, Zoom) deployed automatically with 48 hours of release?
7) The Principle of Least Privilege	Do your employees operate as Standard Users? Restricting administrative rights is the #1 way to stop malware from spreading.
8) Vulnerability Awareness	When was your last professional network scan for "open doors"? Knowing your vulnerabilities is the first step to closing them.
9) Managed Mobility (MDM)	Do you have the ability to remotely wipe company data from a lost phone or laptop within 5 minutes of notice?
10) The "Hour Zero" Plan	Do you have a written, tested Incident Response Plan? Knowing who to call before the screen goes dark is the difference between an afternoon of downtime and a total business loss.

Final Grade: _____

- **8-10 points:** You are in a strong position. Let's keep it that way.
- **5-7 points:** You have significant "Open Doors."
- **Under 5:** Your business is at high risk for a major disruption.
