

ADE-1 Autonomous Decision Engineering

INVESTMENT

We are addressing a large, underserved industrial optimization market.

Key strengths:

- **Strong technological differentiation**
- **High entry barriers**
- **High switching costs once deployed**

The system is already functional and validated.

The current investment is not for research —it is for **finalization and market deployment.**

The core architecture is stable and extensible.

ADE-1 Autonomous Decision Engineering

INVESTMENT

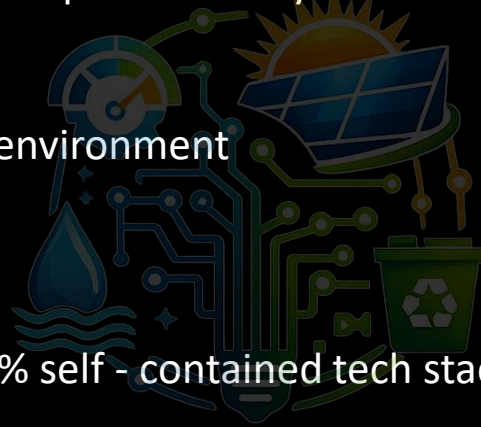

Development Status

- The framework has been developed over 20 years.
- €3.7 million invested
- Fully functional system
- Validated in a real industrial environment

Ongoing steps

- Currently transcoding to 100% self - contained tech stack
- Patent pending
- Preparing open sourcing of the base framework on Github
- Preparing for investors / crowd funding campaign
- Target of \$100.000 USD can be achieved through investors and/or crowdfunding

The core architecture is stable and extensible.

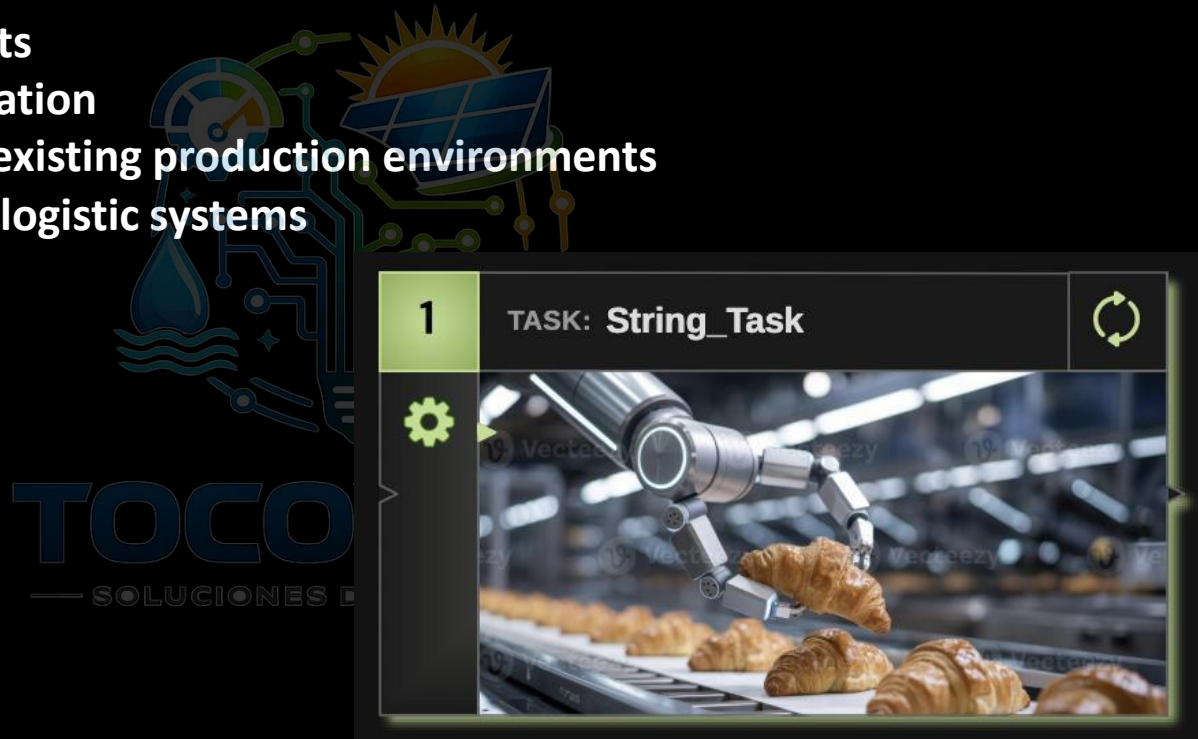

ADE-1 Autonomous Decision Engineering

Go-To-Market

The initial focus is on high-value industrial applications.

- pilot deployments
- vertical specialization
- integration into existing production environments
- integration with logistic systems

The business model includes licensing and long-term system integration.

ADE-1 Autonomous Decision Engineering

Valuation

Current valuation reflects development investment and validated technology. According to external valuations, current value of the system is \$1.5 M USD, final value once finished is \$3.5 to \$6.2 M USD

The requested \$100,000 will be used to:

Finalize the product

Prepare market deployment

Launch pilot implementations

The goal is to position the technology for:

Licensing

Strategic partnerships

Acquisition by major industrial players

Our aim is to sell the software at this stage, Tocotech has no intention to become an integration company, installing the software in industries, any company becoming the new “Siemens” can easily be adding valued up to \$200 million USD just with the first clients.

ADE-1 Autonomous Decision Engineering

Valuation

Our strategy combines open innovation with proprietary value:

- Core framework partially open-sourced on GitHub
- Commercial layer built on top
- Community-driven validation and adoption

This approach:

- Accelerates trust
- Reduces adoption friction
- Expands ecosystem growth
- While preserving strong monetization potential

TOCOTECH
— SOLUCIONES DE INGENIERÍA —

The framework represents a new category rather than a marginal improvement.

THANKS FOR YOUR CHOICE!
